2.4 SHOP AND FIELD QUALITY CONTROL

A. The independent testing laboratory shall conduct and interpret test and state in each report whether test specimens comply with requirements, and specifically state any deviations there from.

B. Provide access to all places where structural steel Work is being fabricated or produced so required inspection and testing can be performed.

C. The independent testing laboratory may inspect and/or test structural steel at plant before shipment; however, Architect reserves the right at any time before Final Completion to deem materials not in compliance with the specified requirements as defective Work.

D. Correct defects in structural Work when inspections and laboratory test reports indicate noncompliance with specified requirements. Perform additional tests as may be required to reconfirm noncompliance of original Work, and as may be required to show demonstrate compliance of corrected Work.

E. Welding: Inspect and test during fabrication and erection of structural steel assemblies as follows:

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in the Work. Record Work required and performed to correct deficiencies.

2. Inspect welds. Welds shall be visually inspected before performing any non-destructive testing. Groove weld shall be inspected by ultrasonic or other approved non-destructive test methods. Testing shall be performed to AWS D1.1 Table 6.3 cyclically loaded non-tubular connections.

3. Ultrasonic testing shall be performed by a specially trained and qualified technician who shall operate the equipment, examine welds, and maintain a record of welds examined, defects found, and disposition of each defect. Repair and test defective welds.

4. Rate of Testing: Completed welds contained in joints and splices shall be tested 100 percent either by ultrasonic testing or by radiography.

5. Welds, when installed in column splices, shall be tested by either ultrasonic testing or radiography.

6. Base metal thicker than 1-1/2 inches, when subjected to through-thickness weld shrinkage strains, shall be ultrasonically inspected by shear wave methods for discontinuities directly behind such welds. Tests shall be performed at least 48 hours after completed joint has cooled down to ambient air temperature.

7. Any material discontinuities shall be reviewed based on the defect rating in accordance with the criteria of AWS D1.1 table 6.3 by the Architect.

8. Other method of non-destructive testing and inspection, for example, liquid dye penetrate testing, magnetic particle inspection or radiographic inspection may be performed on weld if required.

9. Lamellar Tearing: Lamellar-tearing resulting from welding is a crack (with zero tolerance) and shall be repaired in accordance with AWS D1.1.

10. Lamination: The rejection criteria shall be based on ASTM A 435.

11. Where testing reveals lamination or conditions of lamellar tearing in base metal, the steel fabricator shall submit a proposed method of repair for review by the Architect. Test repaired areas as required.

12. Magnetic Particle Testing: Magnetic particle testing when required shall be provided in accordance with AWS D1.1 for procedure and technique. The standards of acceptance shall be in accordance with AWS D1.1 – Qualification.

H. Lamellar Tearing: Prior to welding plates 1 to 1-1/2 inches thick and greater and rolled shapes within the distance from 6 inches above the top of the joint to 6 inches below the bottom of the joint shall be checked by ultrasonic testing for laminations in base metal which may interfere with the inspection of the completed joint. Should these defects occur, members will be reviewed by the Architect. Welding procedure specifications in sub-section 1.5G specify welding practices to minimize lamellar tearing.

I. Prior Testing of Base Material: Test material before fabrication.

J. Lines and levels of erected steel shall be certified by a State of California licensed surveyor as set forth in related Division 01 section.

K. Welded studs shall be tested and inspected by the special inspector in accordance with requirements of AWS D1.1 – Stud Welding.

L. Record Drawings: After steel has been erected, correct or revise Shop Drawings and erection diagrams to correspond with reviewed changes performed in the field.

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify governing dimensions and conditions of the Work before commencing erection Work.

1. Report discrepancies between drawings and field dimensions to Architect before commencing work.

2. Beginning of installation means erector accepts existing conditions and surfaces underlying or adjacent to work of this section.

B. Provide temporary shoring and bracing, and other support during performance of the Work. Remove after steel is in place and connected, and after cast-in-place concrete has reached its design strength.

3.2 ERECTION

A. Install structural steel accurately in locations, to elevations indicated, and according to AISC specifications and CBC requirements.

B. Clean surfaces of base plates and bearing plates.

1. Install base and bearing plates for structural members on wedges, shims, or setting nuts as required.

2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims; cut off flush with edge of base or bearing plate before packing with grout.

C. Maintain erection tolerances of structural steel within AISC Code of Standard Practice for Steel Buildings and Bridges.

1. Members and components, plumbed, leveled and aligned to a tolerance not to exceed one-half the amount permitted for structural steel. Contractor to provide adjustable connections between Architecturally Exposed Structural Steel and the structural steel frame or the masonry or concrete supports, in order to provide the erector with means for adjustment.

D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact after assembly. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

E. Do not permit thermal cutting during erection of structural steel.

F. Where indicated for field connections, provide standard bolts complying with ASTM A 307.

G. Install high strength steel bolts at locations indicated. Assembly and installation shall be in accordance with CBC requirements.

1. Allowable hole sizes: 1/16 inch larger than bolt size.

2. Use friction type connection with standard hardened steel circular, square or rectangular washer under bolt nut.

3. Thoroughly clean area under bolt head, nut and washer. Remove all paint, lacquer, oil or other coatings except organic zinc-rich paints in accordance with SSPC, SP-2.

4. Tighten bolts by power torque wrench or hand wrench until twist-off.

H. Contractor shall be responsible for correcting detailing and fabrication errors and for correct fitting of all members and components.

I. Erect structural steel plumb and level and to proper tolerances as set forth in the AISC Manual. Provide temporary bracing, supports or connections required for complete safety of structure until final permanent connections are installed.

J. Install column bases within a tolerance of 1/8 inch of detailed centerlines, level at proper elevations. Support bases on double nuts and solidly fill spaces under bases with dry-pack cement grout.

K. Provide anchor bolts with templates and diagrams. Contractor shall be responsible for proper location and installation of bolts. Correct deficiencies and errors.

L. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and apply galvanizing repair paint according to ASTM A780.

3.3 FITTING

A. Closely fit members, finished true to line and in precise position required to allow accurate erection and proper joining in the field.

B. Drilling to enlarge unfair holes will not be allowed. Allow only enough drifting during assembly to bring parts into position, but not sufficient enough to enlarge holes or distort the metal. Do not heat rolled sections, unless approved by Architect.

3.4 PUNCHING AND DRILLING

A. Punch material 1/16 inch larger than nominal diameter of bolt, wherever thickness of metal is equal to or less than the diameter of the bolt plus 1/8 inch.

B. Drill or sub-punch and ream where metal is equal to or more than the diameter of the bolt plus 1/8 inch. Make diameter for sub-punched and sub-drilled holes 1/16 inch larger than nominal diameter of bolt.

C. Precisely locate holes to ensure passage of bolt through assembled materials without drifting. Enlarge holes when necessary to receive bolts by reaming; flame cutting to enlarge holes is not acceptable. Structural Steel members with poorly matched holes will be rejected.

3.5 FINISHING

A. After erection, spots or surfaces where paint has been removed, damaged, or burned off and field rivets, bolts, and other field connections not concealed in the work, shall be cleaned of dirt, oil, grease, and burned paint and furnished with a spot coat of the same primer installed during shop priming.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Install paint to exposed areas with the same material installed during shop painting. Install by brush or spray to provide a minimum dry film thickness of 1.5 mils.

3.6 FIELD QUALITY CONTROL

A. Owner will provide a special inspector and independent testing laboratory to perform field inspections and tests and to prepare test reports.

B. Correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.

3.7 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project Site.

3.8 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.9 HANDLING

A. Both in shop and in the field, transport, handle and erect to prevent damage or overstressing of any component.

END OF SECTION

SECTION 05 30 00
METAL DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal decking.

2. Shear connectors.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 01 45 23 - Testing and Inspection.

3. Section 05 12 00 - Structural Steel Framing.

1.2 REFERENCES

A. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

B. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

C. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.

D. ASTM D1056 - Standard Specification for Flexible Cellular Materials—Sponge or Expanded Rubber.

E. AWS D1.3 – Structural Welding Code Sheet – Steel.

F. AISI – Specifications for the Design of Cold-Formed Steel Structural Members.

1.3 PERFORMANCE REQUIREMENTS

A. Compute properties of deck sections on basis of effective design width as limited by provisions of the AISI specifications. Provide no less than deck section properties specified, including section modulus and moment of inertia per foot of width.

B. Regulatory Requirements:

1. Requirements of Regulatory Agencies: DSA and Underwriters Laboratories Inc. (UL) approval for the decking when installed as a part of an assembly indicated on Drawings in which fire resistive construction ratings are required.

2. Work of this section shall be in accordance with CBC.

C. Manufacturers shall be members of Steel Deck Institute (SDI).

1.4 SUBMITTALS

A. Shop Drawings: Drawings, sections and details indicate type of decking, location, finish, gage of metal, arrangement of sheets, necessary fabrication to incorporate decking into the Work, and relationship to openings and flashing.

1.5 QUALITY ASSURANCE

A. General: Metal decking steel shall conform to requirements of strengths and properties of standards specified.

B. Qualifications of Welders: Properly certified for the type of Work involved in compliance with CBC requirements.

C. Continuous inspection of welding will be performed by a special inspector, approved by DSA to inspect the Work of this section. Refer to Section 01 4523 - Testing and Inspection. The Project Inspector shall be responsible for monitoring the work of the special inspector to ensure that the inspection program is satisfactorily completed.

D. Identification of metal decking steel shall conform to the standards specified in Section 01 4523 - Testing and Inspection.

1. Fabricator shall furnish sufficient evidence to the Architect attesting compliance with specified requirements.

2. Conform to CBC requirements. Unclassified or unidentified decking is not permitted. Furnish deck manufacturer's certified mill analyses and test reports for each heat covering decking having a minimum Fy of 33 Ksi. In addition, for decking having F_y greater than 33 Ksi, testing laboratory shall perform one tension and elongation test and one bend or flattening test for each gage.

E. Unidentifiable Steel: Steel which is not readily identifiable as to grade from markings and test records is not permitted to be provided as part of the Work of this section.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. ASC Steel Deck.

B. Verco Manufacturing Co.

C. Epic Metals Corporation.

D. Equal.

2.2 MATERIALS

A. Metal Decking: Roll-formed sheets conforming to ASTM A653, with G90 zinc coating.

1. Section properties shall conform to applicable provisions of latest edition of AISI - Specification for the Design of Cold-Formed Steel Structural Members.

B. Flexible Closure Strips for Deck: Vulcanized, closed-cell, expanded chloroprene elastomer, complying with ASTM D1056, Grade SCE #41.

1. Brittleness Temperature: Minus 40 degrees F, ASTM D746.

2. Flammability Resistance: Self-extinguishing,

C. Metal Flashing and Closures: 22 gage minimum, with ASTM A653, G90 zinc coating.

D. Shear Connectors: Headed stud type, ASTM A108 Grade 1015, cold-finished carbon steel complying with AISC specifications.

2.3 FABRICATION

A. Corrugated sheets or sections shall be designed to support required live load between supporting members.

B. Provide decking in lengths to span over three or more supports.

C. Except as detailed otherwise, provide decking with interlocking side laps, 2 ½-inch minimum end bearing, and 1 ½-inch minimum side bearing.

D. Welding: Provide materials and methods in accordance with recommendations of steel decking manufacturer and reviewed submittals. Hold decking tight to the supporting elements with screws or other means for proper welding or crimping of the decking edges. Conform to AWS D1.3, and to the patterns and weld types indicated, with welds free from sharp edges and protrusions. Field coat welds and abraded surfaces at completion with an anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.

PART 3 - EXECUTION

3.1 OPENINGS

A. Cut and reinforce units to provide openings which are located and dimensioned on the structural and mechanical Drawings.

B. Provide openings, or other Work not indicated on the Drawings.

3.2 INSTALLATION

A. Install metal decking in accordance with decking manufacturers' recommendations, requirements of Drawings, Shop Drawings, and Specifications.

B. Install metal decking on supporting steel framework and adjust to final position before permanently fastening in place.

1. Install each unit to proper bearing on supports.

2. Install units in straight alignment for entire length of run of cells with close registration of cells of one unit with those of abutting unit.

C. Fasten decking to steel framework at ends of units and at intermediate supports. Welding shall be as indicated on Drawings.

D. Fasten side laps between supports as indicated on Drawings.

E. Perform field cutting parallel with cells in area between cells, leaving sufficient horizontal material to permit welding to support steel.

F. Weld shear connectors to supports thru decking units as required by Drawings. Weld only on clean, dry surfaces. Do not weld shear connectors thru two layers of decking units.

3.3 METAL FLASHINGS AND CLOSURES

A. Furnish, install, and weld in position, sheet metal closure flashing, closure angles, closure plates, profile plates, and shear plates.

B. Close open ends of cell runs at columns, openings, walls, similar interruptions and termination.

3.4 FIELD QUALITY CONTROL

A. Inspection: Install steel decking under continuous inspection according to CBC Chapter 1704A.3.

1. Welding inspection for steel deck diaphragms shall conform to CBC Section 2204A.1.

3.5 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.6 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 40 00
COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Furring
   2. Stud framing.
   3. Specialty framing.
   4. Connectors.
   5. Wall backings.
   6. Slot metal channel framing.
   7. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 09 22 16 for lightgage metal framing.

1.02 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install framing that conforms to the profiles indicated and other Contract Document requirements; meets specified performance criteria; and results in structurally sound, non-corroding, and weathertight assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes, profiles, and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing framing for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Welders: Welding personnel and supervisors must comply with, and welding procedures must conform to, the "*Qualification*" requirements of American Welding Society publications AWS D1.3, "*Structural Welding Code – Sheet Steel*" and AWS D19.0, "*Welding Zinc Coated Steel*" applicable to the project. Only certified welders current in their certification may perform or supervise any welding work.
   3. Supervisors: Individuals must have at least 7 years' experience installing framing for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading framing installers.
   4. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, shop drawings, written descriptions of specified qualifications, and delegated design submittals.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate framing into the mockup as part of the work of this specification section.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. California Expanded Metal Products Co. (CEMCO)
   2. Clarkwestern Dietrich Building Systems LLC.
   3. Olmar Supply Inc.
   4. SCAFCO Corp.

2.02 MATERIALS

A. HDG Metallic-Coated Steel Sheet for Cold-Formed Framing: ASTM A 1003, ST50 (Structural Grade 50), with at least a G60 coating weight designation (mass designation) on both surfaces with equal coating weight on each surface.

2.03 COLD-FORMED FURRING

A. Hat Furring Channels:
   1. Products: “FC Series Furring Channel” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
   2. Requisite Properties:
      a. Depth: 7/8- or 1-1/2-inch deep channels, as indicated.
      b. Minimum Thickness: At least 43 mils BMT (MSG 18).
      c. Web: 1-1/4 inches wide.
      d. Screw Flanges: 3/4-inch wide.

B. Z-shaped Furring Channels:
   1. Products: “Z-Furring (ZF-Series)” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
   2. Requisite Properties:
      a. Depth: One to 3 inches deep, as indicated.
      b. Minimum Thickness: At least 43 mils BMT (MSG 18).
      c. Screw Flanges: 1-1/4 inches wide.

2.04 COLD-FORMED STUD FRAMING

A. Studs:
   1. Description: Pre-punched roll-formed C-shaped framing members with manufacturer’s standard knockout sizing and spacing.

2. Product: “Structural Stud S162 (CSJ)” manufactured by ClarkDeitrich Building Systems, or equal.
3. Requisite Properties:

    a. Depth: Indicated on the Drawings.

    b. Minimum Thickness: At least 54 mils BMT (MSG 16).

    c. Flanges: At least 2-inch (1-1/4- to 3-1/2-inch) wide stiffened flanges with at least 1/2-inch returns (lip).

B. Tracks (Top and Bottom Runners):
1. Description: Un-punched roll-formed U-shaped runners manufactured from the same material to corresponding stud sizes and gages.
2. Product: “Structural Track” manufactured by ClarkDeitrich Building Systems, or equal.
3. Requisite Properties:

    a. Depth: Indicated on the Drawings.

    b. Minimum Thickness: At least 54 mils BMT (MSG 16).

    c. Flanges: At least 1-1/2-inch wide unstiffened flanges.

C. Deflection Track Systems:
1. Description: Slotted roll- or brake-formed track installed in head-of-wall deflection conditions to accommodate vertical movement caused by normal head-of-wall and floor extension or compression.
2. Product: one of the following, or equal.

    a. “MaxTrack” slotted deflection track or “BlazeFrame” fire stop deflection track manufactured by Clarkwestern Dietrich Building Systems LLC.

    b. “CEMCO Slotted Track (CST)” manufactured by CEMCO.

D. Manufactured Bridging Channels:
1. Description: Roll-formed channel- or L-shaped stiffeners with pre-notched slots installed in both load-bearing and non-load bearing walls to help resist stud twisting.
2. Products: “Spazzer 5400” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
3. Requisite Properties:

    a. Size: 1-1/2-inch wide by 1/2-inch deep.

    b. Minimum Thickness: At least 54 mils BMT (MSG 16).
4. Bridging Clips: “Spazzer Bar Guard” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
5. Alternative Bridging Clips: As an alternate to manufactured bridging clips, 1-1/2-inch wide by 1/2-inch deep by full stud width cold-rolled angle clips manufactured from at least 54-mil (MSG 16) BMT HDG metallic-coated steel sheet may be provided.

E. Cold Rolled Channel (CRC) Bridging:
1. Description: Un-punched roll-formed U-shape stiffeners installed in both load-bearing and non-load bearing walls to help resist stud twisting.
2. Requisite Properties:

a. Size: 1-1/2-inch wide by 1/2-inch deep.

b. Minimum Thickness: At least 54 mils BMT (MSG 16).

c. Flanges: 1-1/2 inches wide unstiffened flanges.

3. Manufactured Bridging Clips: “EasyClip U-, B-, or X-Series Clip Angles” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.

F. Flat Strap Bridging (Strapping):

1. Application: Flat sheet installed to provide resistance to stud rotation and minor axis buckling under loads for studs deeper than 6 inches.
2. Requisite Properties:

a. Width: Between 2 and 20 inches, as indicated or necessary.

b. Minimum Thickness: At least 54 mils BMT (MSG 16).

G. Built-Up Headers:

1. Built-Up Curtain Wall Headers: Un-punched roll-formed C-shaped framing members and U-channel runners.
2. Load-Bearing Box Beam Headers: Un-punched roll-formed C-shaped framing members.
3. Requisite Properties:

a. Depth: Indicated on the Drawings.

b. Minimum Thickness: At least 54 mils BMT (MSG 16).

c. Flanges: 1-5/8-inch wide stiffened flanges with at least 1/2-inch returns (lip).

4. Header Connectors:

a. Description: Connectors to attach either beams to columns or headers to jambs.

b. Product: “DROP'N LOCK CLIP” connectors manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.

2.05 SPECIALTY FRAMING

A. KCS Studs (King Kong Studs):

1. Description: Pre-punched C-shaped framing members with manufacturer’s standard knockout sizing and spacing.
2. Requisite Properties:

a. Depth: Indicated on the Drawings.

b. Minimum Thickness: At least 54 mils BMT (MSG 16).

c. Flanges: 3-inch wide stiffened flanges with at least 7/8-inch returns (lip).

B. Manufactured Headers:

1. Description: One- or 2-piece pre-engineered header with associated inserts and clips.
2. Products: one of the following, or equal.

a. “RedHeader RO Rough Opening System” manufactured by Clarkwestern Dietrich Building Systems LLC.

b. “Pro-X” manufactured by Brady Construction Innovations, Inc.

C. Corner Angles:
1. Description: Utility angles installed as a connection strut or angle, as corner reinforcement, or other various framing applications.
2. Requisite Properties:

a. Minimum Thickness: At least 30 mils BMT (MSG 20).

b. Legs: 2- or 3-inch wide legs, as indicated, unless a wider or uneven leg size is explicitly indicated; or is otherwise supplied, required, recommended, authorized, or accepted by the manufacturer.

2.06 CONNECTORS

A. Bypass Connectors:
1. Description: Clips used to attach exterior curtain wall studs to building superstructure and to provide vertical building movement independent of metal stud framing.
2. Bypass Slab Connectors: “Slide Clip” (minimal or no standoff conditions) or “Fast Clip Slide Clip” (medium standoff conditions) manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
3. Bypass Structure Connectors: “Quick Clip” (medium standoff conditions) and “Extended Fast Clip Slide Clip” or “Fast Strut” (large standoff conditions) manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.

B. Multipurpose Connectors Rigid Connectors: “Uni-Clip” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.

2.07 WALL BACKINGS

A. Metal Wall Backings:
1. Description: General multipurpose flat sheet and formed metal stock used as backing to support shelves, cabinets, fixtures or handrails when applied to framing. Provide wall backing in addition to, not as a replacement for, tension strapping or cross bracing.
2. Heavy-Duty Backing: Installed to support items distributing not more than 80 pounds per stud.

a. Material: 6-inch wide un-punched U-shaped runners manufactured from minimum 54-mil BMT (MSG 16) HDG metallic-coated steel sheet.

b. Provide individual runner in lengths long enough to span across at least 3 studs.

c. Notch and bend track legs so that backing plate is flush with exterior face of stud.

d. Do not cut track legs between supporting studs.

e. Fasten backing track to each stud with at least 3 screw fasteners per stud.
3. Medium-Duty Backing: Installed to support items distributing not more than 20 pounds per stud.

a. Material: Minimum 6-inch wide un-punched U-shaped runners manufactured from minimum 54-mil BMT (MSG 16) HDG metallic-coated steel sheet.

b. Provide individual runner in lengths long enough to span across at least 2 studs.

c. Fasten backing track to each stud with at least 3 screw fasteners per stud.

4. Light-Duty Backing: Installed to support items distributing not more than 5 pounds per stud.

   a. Backing Material: Minimum 6-inch wide backing strip manufactured from minimum 54-mil BMT (MSG 16) HDG metallic-coated steel sheet.

   b. Provide individual runner in lengths long enough to span across at lreast 3 studs.

   c. Fasten backing track to each stud with at least one screw fasteners per stud.

B. Wood Wall Backings:
   1. Description: Fire-retardant treated wood (FRT) backing system.
   2. Product: “Danback Flexible Wood Backing System” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
   3. Requisite Properties:

      a. Material: Nominal 3/4-inch thick CDX Douglas fir fire-retardant treated wood

      b. Dimensions: 48 inches long by 5-1/8 inches high.

2.08 SLOT METAL CHANNEL FRAMING

A. Description: Continuous slot metal channel framing conforming to MFMA-4, and associated fittings and hardware necessary for supporting cable trays, conduit, pipes and similar items.

B. Material: At least 0.0747-inch BMT (MSG 14) HDG metallic-coated steel sheet complying with ASTM A 653, structural steel (SS), Grade 33 or better, at least a G90 zinc coating designation on both surfaces with equal coating weight on each surface.

C. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Flex-Strut, Inc.
   2. PHD Manufacturing, Inc.
   3. Unistrut Corp.

D. Product: “P300 SL” manufactured by Unistrut Corp., or equal.

E. Requisite Properties:
   1. Types: standard and welded combination channels as required by conditions of installation and service.
   2. Height: heights as required by engineering calculations to meet load capacities, but not less than 1-3/8 inches.
   3. Suspension System: Hot-dip galvanized coarse-threaded (UNC) carbon steel rods having diameters as required by engineering calculations to meet load capacities, but not less than 3/8-inch.

F. Accessories: kickers, perimeter angle pieces and other accessories as supplied, required, recommended, or accepted by the slotted channel framing manufacturer and necessary for a complete and structurally-sound installation.

G. Finish: Chemically treated where retaining natural zinc finish; bonderized where painted finish is indicated.

2.09 ACCESSORIES

A. Sill Sealer and Liner Gaskets:
   1. Description: Self-adhering closed cell polyethylene foam air and moisture barrier.
   2. Applications:
      a. Sill Sealer: Install on the top of foundation wall, slab-on-grade. or curbs beneath exterior wall runner track or sill plates.
      b. Plate Liner: Install between floor deck and interior wall runner track or sill plates at shafts, hoistways, and other locations where necessary or indicated.
   3. Products: the following products manufactured by Protecto Wrap Co.
      a. Sill Sealer: 3/8-inch thick “Protecto Triple Guard Energy Sill Sealer”, or equal.
      b. Plate Liner: 1/4-inch thick “Protecto Energy Plate Liner”, or equal.

B. Shims: Load bearing, non-leaching, high-density multimonomer plastic.

C. Screw Fasteners: #8- and #10-32 UNC 2B (0.164- and 0.190-inch shank diameter, 32 threads per inch) by at least one-inch long, pan head, coarse thread, self-drilling uncoated bi-metal screw fasteners, unless another fastener type is explicitly indicated; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

D. Power-Actuated Fasteners:
   1. Description: ICC-ES-approved anchors conforming to California Building Code Category 1, Seismic Zones A-F.
   2. Manufacturer: products manufactured by Hilti, Inc., or equal.

E. Fastenings: backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

F. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items. Securely attach framing in place to supporting construction.
   3. Install framing using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set framing true to line; plumb, level, and square without warp or rack; with flush, well-fitted joints; and in alignment with adjacent construction.

5. Securely attach framing in place to supporting construction.

B. Installation Tolerances: Install framing within the following tolerance variations.
   1. Maximum Out of Plumb: Not more than L/960 of span, or 1/8-inch in 10 feet.
   2. Maximum Out of Level: Not more than L/960 of span, or 1/8-inch in 10 feet,
   3. Maximum Out of Plane: Fastening surfaces of adjacent framing members may not vary by more than 1/8-inch.
   4. Maximum Stud Spacing Variance: Not more than 1/8-inch. Cumulative error may not exceed minimum fastening requirements of sheathing or other finishing materials.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged, and defective work.
   3. Installed framing must be warrantable. Do not install, correct, or replace framing in a manner that is un-warrantable by the manufacturer or that results in any warranty or guarantee becoming void.

D. Protection:
   1. Protect installed framing in place from deterioration and damage until covering framing.
   2. Remove protection when it's no longer needed and before covering framing.

SECTION 05 4100
STRUCTURAL METAL STUD FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Load-bearing metal stud systems.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 01 4523 - Testing and Inspection.

3. Section 05 1200 - Structural Steel Framing.

4. Section 09 2216 - Non-Structural Metal Framing.

1.02 SUBMITTALS

A. Shop Drawings: Submit drawings showing framing, connection details, accessories and anchorage. Indicate location of assemblies, size and spacing of framing components.

B. Product Data: Submit manufacturer's catalog data for each item proposed for installation.

C. Certificates: Furnish manufacturer's certification that materials meet or exceed Specification requirements.

1.03 QUALITY ASSURANCE

A. Comply with following as a minimum requirement:

1. AISI - Specifications for Design of Cold Formed Steel Structural Members.

2. Welds shall be performed by AWS certified welders. Welding shall be performed in accordance with requirements of American Welding Society (AWS) Structural Welding Code-Steel D1.1 and D1.3. Structural welding Code-Sheet Steel.

3. Welding shall be inspected by a special inspector, approved by DSA to inspect Work of this section. The Project Inspector shall be responsible for monitoring work of special inspector to ensure that inspection program is satisfactorily completed.

4. ASTM A653 – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by Hot Dip Process.

5. ASTM A924 – Standard Specification for General Requirements for Steel Sheet Metallic-Coated by Hot-Dip Process.

6. ASTM A1003 – Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members.

7. ASTM A1008 – Standard Specification for Steel Sheet and Strip, Hot-Rolled, Carbon, Structural High-Strength Low-Alloy, and High-Strength Low-Alloy with Improved Formability.

8. ASTM C954 – Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks) and Bracing or Bridging for Screw Application of Gypsum Panel Products and Plaster Bases.

9. ASTM C955 – Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases.

10. ASTM C1007 – Standard Specification for Installation of Structural (Axial and Transverse) Steel Framing Members and Accessories.

11. ASTM E488 – Standard Test Methods of Strength Anchors in Concrete and Masonry.

12. ASTM E1190 – Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members.

13. Manufacturer shall be a member of the Steel Stud Manufacturers Association (SSMA).

B. Tolerances: Install walls and partitions on straight lines, plumb, free of twists or other defects, and contacting a 10-foot straight edge for its entire length at any location within a 1/8 inch tolerance. Install horizontal framing level within a tolerance of 1/8 inch in 12 feet in any direction.

1.04 DELIVERY, STORAGE AND HANDLING

A. Materials shall be delivered in their original unopened packages and stored protected from damage. Do not store material directly on grade. Provide adequate support to prevent bowing of material prior to installation.

B. Store welding electrodes in accordance with AWS D12.1.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Provide studs, tracks, joists, header, and accessories manufactured by one of following:

1. ClarkWestern Building Systems.

2. Dietrich Industries, Inc.

3. Marino/WARE.

4 Cemco.

5. Equal.

B. Special Connection Accessories: Products manufactured by The Steel Network, Inc., or equal.

2.02 MATERIALS

A. Light Gage Metal Framing:

1. Metal framing shall be formed from corrosion resistant-steel conforming to requirements of ASTM A653, 50 ksi minimum.

2. Metal framing shall be zinc coated in conformance to requirements of ASTM A926, G60.

3. Metal framing shall be manufactured in conformance to ASTM C955.

4. Install metal framing per ASTM C1007, Standard Specification for Installation of Load-Bearing (Transverse and Axial) Steel Studs and Related Accessories.

B. Gages and properties of studs shall be as indicated on Drawings.

C. Mechanical anchors to concrete and masonry shall be metal cinch at least 3/8 inch in diameter threaded bolt head type. Anchor bolts to be installed in concrete shall be hook type ½ inch diameter or more. Unless otherwise indicated.

D. Mechanical anchors to metal framing shall be No. 10 self-tapping and self-drilling wafer-head screws.

E. Accessories: Special top tracks, angles, fasteners, and strips of gypsum wallboard, as required for fire rating assembly required at each condition.

F. Mineral Wool Safing Insulation: 4.0 pcf density. Thermafiber, Fibrex, or equal.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install plumb and true. Install necessary accessories for proper installation.

B. Anchor top and bottom runner track to ceiling or roof structure overhead and to floor structure below.

C. Install studs squarely in top and bottom runner track with firm abutment against track webs.

D. Align and plumb studs, and fasten to flanges of both top and bottom runner tracks.

E. Provide three studs minimum at corners of stud walls. Locate so as to provide surfaces for attachment of interior and exterior facing materials.

F. Members not indicated to be welded together shall be attached with manufacturer recommended screws with minimum one screw at each flange of stud to top and bottom track. Wire tying of framing members is not permitted.

G. Provide lateral bracing and bridging in accordance with manufacturer's written recommendations or as required by CBC.

H. Intersecting walls and partitions, whether load-bearing or not, shall be connected.

I. Splices in axially loaded studs are not permitted.

J. Splice or butt weld butt joints in runner tracks. No splices are permitted in tracks over lintels, diaphragm sheathing, or diagonal bracing.

K. Weld connections by fillet welds or plug welds in accordance with AWS recommended procedures and practices.

L. Touch-up field abrasions and welds with galvanizing touch-up material.

M. Studs that frame door openings shall be clipped to floor with 14 gage angle clips. Each clip to have two fasteners into studs and two fasteners into floor.

N. Provide additional joists or blocking adjacent to exterior and interior walls, openings and elsewhere as required to provide support for indicated ceiling construction.

O. Provide an additional joist under parallel partitions where partition length exceeds ½ joist span and around floor and roof openings which interrupt one or more spanning members.

3.02 CONNECTIONS TO METAL DECKING

A. Provide premolded neoprene filler strips matching flute profile for non-fire-rated walls and partitions covered on one or both sides up to metal decking.

B. Top runner track of fire-rated partitions shall be a minimum of 36 mils (20 gage), unless noted otherwise, and attached to metal deck with required fasteners at spacing required for fire rating, but in no case over 16 inches on center. Areas above runner shall be friction fit with a minimum depth of 2 ½ inches of 4 pounds per cubic foot density mineral wool insulation. A minimum of ½ inch of firestopping compound shall be installed to each side of mineral wool insulation for a one-hour system, and one inch of firestopping for a two-hour system. Install required special tracks, angles, fasteners and strips of gypsum wallboard to provide required fire resistance rating.

C. Fire-rated top tracks shall be installed in accordance with manufacturer's recommendations and fire rating approval requirements.

3.03 QUALITY CONTROL

A. Welding Inspection:

1. Inspection of field welding operations shall be performed by special inspector.

2. The special inspector shall inspect material, equipment, procedures, welds, and welder qualifications.

3.04 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off Project site.

3.05 PROTECTION

A. Protect Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 50 00
METAL FABRICATIONS

PART 1 - GENERAL

1.01 SUMMARY

A. This section includes the following metal fabrications:

1. Rough hardware
2. Ladders
3. Ladder safety cages
4. Miscellaneous framing, supports and trim
5. Metal bar gratings
6. Steel pipe guardrails and handrails
7. Metal stairs

B. Related Sections: Refer to Section 05 12 00, "Structural Steel" for structural steel framing components as applicable.

1.02 REFERENCES

A. Aluminum Association (AA)

B. American National Standards Institute (ANSI)

C. American Society of Testing and Materials (ASTM)

D. American Welding Society (AWS)

1. D1.1 - Structural Welding Code - Steel
2. D1.3 - Structural Welding Code - Sheet Steel

E. National Association of Architectural Metal Manufacturers (NAAMM)

1. AMP 500 Metal Finishes Manual
2. AMP 510 Metal Stair Manual
3. MBG 531 Metal Bar Grating Manual
4. MBG 532 Heavy Duty Metal Bar Grating Manual and Pipe Railing Manual

F. Steel Structures Painting Council (SSPC)

1.03 DEFINITIONS

A. Refer to ASTM E985 for railing-related terms that apply to this section.

B. Refer to the NAAMM publications listed in Article 1.02 "References" for definition of terms that apply to this section.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Section 01 33 00, "Submittal Procedures".

B. Product Data: Submit product data for products used in metal fabrications, including paint products, grout and fasteners.04-29-11 Issuance UTD - Section 05 50 00 Page 2 of 12 Metal Fabrications

C. Shop Drawings: Submit detailed shop and erection drawings of each metal fabrication indicated. Includeplans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

D. Welder certificates signed by the Contractor certify that welders comply with requirements specified in 1.05C.

E. Welding Procedures: Provide written welding procedure specification (WPS) document per AWS Code requirements.

F. Qualification data for firm specified in 1.05B to demonstrate their capabilities and experience.

1.05 QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of the following, except as otherwise indicated. Where conflicts occur, comply with the more stringent requirements.

1. ANSI 14.3

2. AWS D1.1 and D1.3

3. NFPA 101

B. Fabricator Qualifications: Firm experienced in successfully producing metal fabrications similar to that shown on the drawings, with sufficient production capacity to produce required units without causing delay in the work.

C. Qualify welding processes and welding operators in accordance with AWS D1.1 and D1.3. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

D. All materials used shall be free of lead and asbestos fibers.

PART 2 - PRODUCTS

2.01 FERROUS METALS

A. Metal Surfaces, General: Form metal fabrications exposed to view upon completion of the work, provide materials selected for their surface flatness, smoothness, and freedom from surface blemishes. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, rolled trade names, roughness, and, for steel sheet, variations in flatness exceeding those permitted by referenced standards for stretcher leveled sheet.

B. Steel Plates, Shapes, and Bars: ASTM A36.

C. Rolled Steel Floor Plates: ASTM A786.

D. Steel Bars for Gratings: ASTM A569 or ASTM A36.

E. Wire Rod for Grating Cross Bars: ASTM A510.

F. Steel Tubing: Cold-formed, ASTM A500, Grade B, unless otherwise indicated.

G. Uncoated Structural Steel Sheet: Hot-rolled, ASTM A570, Grade 30 unless otherwise indicated.

H. Uncoated Steel Sheet (Commercial quality): Cold-rolled, ASTM A366.

I. Galvanized Steel Sheet: Quality as follows:

1. Structural Quality: ASTM A446; Grade A, unless another grade required for design loading, and G90 coating designation unless otherwise indicated.

2. Commercial Quality: ASTM A526, G90 coating designation unless otherwise indicated.

J. Steel Pipe: ASTM A53, Type S, Grade B, standard weight (schedule 40), black finish, unless otherwise indicated.

K. Gray Iron Castings: ASTM A48, Class 30.

L. Malleable Iron Castings: ASTM A47, Grade 32510.

M. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

N. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A47,or cast steel, ASTM A27. Provide bolts, washers, and shims as required, hot-dip galvanized per ASTMA153.

O. Welding Rods and Bare Electrodes: Select in accordance with AWS specifications for the metal alloy to be welded.

2.02 STAINLESS STEEL

A. Bar Stock: ASTM A276, Type 302 or 304.

B. Plate: ASTM A167, Type 302 or 304.

2.03 ALUMINUM

A. Extruded Bars and Shapes: ASTM B221, alloy 6061-T6 or 6063-T6 for bearing bars of gratings and shapes and 6061-T6 for grating cross bars.

B. Aluminum-Alloy Rolled Tread Plate: ASTM B632, alloy 6061-T4 for treads and 6061-T6 for platforms.

2.04 GROUT

A. Non-shrink Nonmetallic Grout: Premixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with ASTM C1107. Provide grout specifically recommended by manufacturer for interior and exterior applications of type specified in this section. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to the following:

1. Euco N-S Grout - Euclid Chemical Co

2. Kemset - Chem-Masters Corp

3. Crystex - L & M Construction Chemicals, Inc

4. Sonogrout - Sonneborn Building Products Div., Rexnord Chemical Products, Inc

2.05 FASTENERS

A. General: Provide zinc-coated fasteners for exterior use or where built into exterior walls. Select fasteners for the type, grade, and class required. Suspect/counterfeit bolts will not be accepted and will be replaced at Contractor's expense.

2.06 PAINT

A. Shop Primer for Ferrous Metal: Red oxide, lead- and cadmium-free, corrosion- inhibiting primer complying with performance requirements of FS TT-P-664.

B. Galvanizing Repair Paint: High zinc dust content paint for galvanizing welds in galvanized steel, with dry film containing not less than 94% zinc dust by weight, and complying with SSPC- Paint-

C. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint-12 except containing no asbestos fibers.

D. Zinc Chromate Primer: FS TT-P-645.

2.07 CONCRETE FILL

A. Concrete Materials and Properties: Comply with requirements for Section 03 30 00, "Cast-in-Place Concrete" for normal weight, ready-mix concrete with minimum 28- day compressive strength of 3000 psi (21 MPa), unless higher strength indicated.

B. Nonslip Aggregate Finish: Factory-graded, packaged material containing fused aluminum oxide grits or crushed emery as abrasive aggregate; rust-proof and non- glazing; unaffected by freezing, moisture, or cleaning materials.

2.08 FABRICATION - GENERAL

A. Form metal fabrications from materials of size, thickness, and shapes indicated but not less than that needed to comply with performance requirements indicated. Work to dimensions indicated or accepted on shop drawings, using proven details of fabrication and support. Use type of materials indicated or specified for various components of each metal fabrication.

B. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.

C. Allow for thermal movement resulting from the following maximum change (range) in ambient temperature in the design, fabrication, and installation of installed metal assemblies to prevent buckling, opening up of joints, and overstressing of welds and fasteners. Base design calculations on actual surface temperatures of metals due to both solar heat gain and nighttime sky heat loss. Temperature change (Range): 100 ° F (38 °C).

D. Shear and punch metals cleanly and accurately. Remove burrs.

E. Ease exposed edges to a radius of approximately 1/32” (0.794 mm), unless otherwise indicated. Form bent metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

F. Remove sharp or rough areas on exposed traffic surfaces.

G. Weld corners and seams continuously to comply with AWS recommendations and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matched those adjacent.

H. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners wherever possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to provide adequate support for intended use.

J. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling

limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

K. Cut, reinforce, drill and tap miscellaneous metal work as indicated to receive finish hardware, screws, and similar items.

L. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.

2.09 ROUGH HARDWARE

A. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as required. Fabricate items to sizes, shapes, and dimensions required.

2.10 STEEL LADDERS

A. General: Exterior fixed ladders shall meet OSHA requirements found in 29CFR1910.27, with the exception that #6 rebar is not to be used. Fabricate ladders for the locations shown, with dimensions, spacing's, details and anchorages as indicated. Comply with requirements of ANSI A14.3 where conflicts occur, comply with the more stringent requirements.

B. Side Rails: Continuous steel flat bars, minimum size (cross section) 2½" x ⅜" (63.5 mm x 9.5 mm), with eased edges, spaced 18" (0.46 m) apart.

C. Bar Rungs: Round steel bars, minimum ¾" (19.1 mm) diameter spaced no greater than 12" (305 mm) o.c. and uniform throughout the length of the ladder. Individual metal rungs embedded in concrete which serve as access to pits and other areas under floors, should have a minimum diameter of 1" (25 mm) or shall otherwise be treated to resist corrosion and rusting.

D. Fit rungs in centerline of side rails, plug weld and grind smooth on outer rail faces.

E. Support each ladder at top and bottom and at intermediate points spaced not more than 5'-0" (1.5 m) o.c. by means of welded brackets, unless otherwise indicated.

1. Size brackets to support design dead and live loads indicated and to hold centerline of ladder rungs clear of the wall surface by not less than 7" (178 mm).

2. Extend side rails 42" (1.1 m) above top rung, and return rails to wall or structure unless other secure handholds are provided. If the adjacent structure does not extend above the top rung, goose-neck the extended rails back to the structure to provide secure ladder access.

2.11 LADDER SAFETY CAGES

A. General: Fabricate ladder safety cages to comply with requirements of ANSI A14.3; where conflicts occur, comply with the more stringent requirements. Assemble safety cages by welding.

B. Primary Hoops: Steel bars, 3" x ¼" (76 mm x 6.4 mm), for top, bottom, and for cages longer than 20' (6.1m), intermediate hoops spaced not more than 20'-0" (6.1 m) o.c.

C. Secondary Intermediate Hoops: Steel bars, 2" x ¼" (51 mm x 6.4 mm) hoops spaced not more than 4'-0" (1.2 m) o.c. between primary hoops.

D. Vertical Bars: Steel bars, 1½" x ¼" (38.1 mm x 6.4 m), secured to each hoop, spaced at intervals not more than 40° (0.7 rad) o.c. around the circumference of the cage, maximum spacing of approximately 9½" (241mm) o.c.

E. Fasten assembled safety cage to ladder rails and adjacent construction as indicated.

2.12 MISCELLANEOUS METAL ITEMS

A. Miscellaneous Framing and Supports: Provide steel framing and supports for applications indicated, which are not parts of structural steel framework, as required to complete work.

1. Fabricate units to sizes, shapes, and profiles indicated and required to receive adjacent other construction retained by framing and supports. Fabricate from structural steel shapes, plates, and steel bars of welded construction using mitered joints for field connection. Cut, drill, and tap units to receive hardware, hangers, and similar items.

2. Equip units with integrally welded anchors for casting into concrete or building into masonry. Furnish inserts if units must be installed after concrete is placed. Except as otherwise indicated, space anchors 24” (61 cm) o.c. and provide minimum anchor units in the form of steel straps 1¼" wide x ¼" x 8" long (31.8 mm x 6.4 mm x 203 mm).

B. Miscellaneous Steel Trim: Provide shapes and sizes indicated for profiles shown. Unless otherwise indicated, fabricate units from structural steel shapes, plates, and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings, and anchorages as required for coordination for assembly and installation with other work.

2.13 METAL BAR GRATINGS

A. General: Produce metal bar gratings of description indicated per NAAMM marking system that complies with the following:

1. Metal Bar Grating Standard: "Standard Specifications for Metal Bar Grating and Metal Bar Grating Treads" published in ANSI/NAAMM MBG 531.

2. Heavy Duty Metal Bar Grating Standard: "Guide Specifications for Heavy Duty Metal Bar Grating" published in ANSI/NAAMM MBG 532.

B. If gratings are located in walking surfaces, gratings shall have spaces no greater than ½” (12.7 mm) wide in one direction. If gratings have elongated openings, then they shall be placed so that the long dimension is perpendicular to the dominant direction of travel.

C. Fabricate steel gratings to comply with requirements as indicated on the drawings.

D. Traffic Surface for Steel and Aluminum Bar Gratings: Plain, unless otherwise indicated.

E. Steel Finish: Shop prime paint applied in accordance with manufacturer's standard practice.

F. Aluminum Finish: Mill (as fabricated), unless otherwise indicated.

G. Fabricate removable grating sections with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners of type indicated, or if not indicated, as recommended by manufacturer, for attachment to supports.

1. Heavy Duty Grating: Provide not less than 4 anchor blocks, ¼” (6.4 mm) minimum thickness, for each section of grating composed of bearing bars over 3/16” (4.8 mm) in thickness, with each block shop welded to 2 bearing bars.

2. Non-heavy Duty Grating: Provide not less than 4 saddle clips for each grating section composed of rectangular bearing bars 3/16” (4.8 mm) or less in thickness and spaced not less than 15/16” (23.8 mm) o.c., with each clip designed and fabricated to fit over 2 bearing bars. Furnish threaded bolts with nuts and washers for each clip required, unless otherwise indicated.

H. Attach toe plates to grating by welding, unless otherwise indicated. Toe plate height: 4” (102 mm), unless a greater height indicated. Fabrications

I. Fabricate cutouts in grating sections for penetrations indicated. Arrange layout of cutouts to permit grating removal without disturbing items penetrating gratings.

1. Edge band openings in grating that interrupt 4 or more bearing bars with bars of same size and material as bearing bars.

2. Do not notch bearing bars at supports to maintain elevation.

J. Available Manufacturers: Subject to compliance with requirements, manufacturers offering metal bar gratings that may be incorporated in the work include, but are not limited to, the following:

1. Alabama Metal Industries Corp

2. Barnet/Bates Corp

3. Big D Metals

4. McNichols

2.14 STEEL PIPE GUARDRAILS AND HANDRAILS

A. General: Fabricate pipe guardrails and handrails to comply with requirements indicated for dimensions, details, finish, and member sizes, including wall thickness of pipe, post spacing's, and anchorage.

B. Interconnect guardrails and handrail members by butt-welding or welding with internal connectors, at fabricator's option, unless otherwise indicated. At tee and cross intersections, cope ends of intersecting members to fit contour of pipe to which end is joined, weld all around and grind smooth.

C. Form changes in directions of railing members as follows:

1. By use of welded prefabricated steel elbow fittings

2. By bending, of radius indicated

3. By mitering at elbow bends

D. Form simple and compound curves by bending pipe in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross- section of pipe throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of pipe.

E. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated.

F. Close exposed ends of pipe by welding 3/16" (4.8 mm) thick steel plate in place or by use of prefabricated fittings, except where clearance of end of pipe and adjoining wall surface is ¼" (6.4 mm) or less.

G. Toe Boards: Where indicated, provide toe boards at railings around openings and at the edge of open-sided floors and platforms. Fabricate to dimensions and details indicated, or if not indicated, use 4 inches high x ¼" (102 mm x 6.4 mm) steel bar welded to each railing post.

H. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnections of pipe and attachment of guardrails and handrails to other work. Furnish inserts and other anchorage devices for connecting guardrails and handrails to concrete or masonry work.

1. For railing posts set in concrete, fabricate sleeves from steel pipe not less than 6" (152 mm) long and with an inside diameter not less than ½" (12.7 mm) greater than the outside diameter of post, with steel plate closure welded to bottom of sleeve.

2. For removable railing posts, fabricate slip-fit sockets from steel pipe whose inside diameter is sized for a close fit with posts and to limit deflection of post without lateral load, measured at top, to not more than 1/12” of post height. Provide socket covers designed and fabricated to resist accidental dislodgement.

I. Fillers: Provide steel sheet or plate fillers of thickness and size indicated or required to support structural loads of handrails where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses. Size fills to produce adequate bearing to prevent bracket rotation and overstressing of substrate.

2.15 STEEL FRAMED STAIRS

A. General: Construct stairs to conform to sizes and arrangements indicated with welded connections, unless otherwise indicated. Provide complete stair assemblies, including metal framing, hangers, columns, railings, newels, balusters, struts, clips, brackets, bearing plates, and other components necessary for the support of stairs and platforms, and as required to anchor and contain the stairs on the supporting structure.

1. Fabricate treads and platforms of exterior stairs to accommodate slopes to drain in finished traffic surfaces.

B. Stair Framing: Fabricate stringers of structural steel channels, or plates, or a combination thereof, as indicated. Provide closures for exposed ends of stringers. Construct platforms of structural steel channel headers and miscellaneous framing members as indicated. Bolt or weld headers to stringers, newels, and framing members to stringers and headers; fabricate and join so that bolts, if used, do not appear on finish surfaces.

C. Metal Pan Risers, Sub-treads, and Sub-platforms: Shape metal pans for risers and sub-treads to conform to configuration shown. Provide thickness of structural steel sheet for metal pans as indicated.

1. Form metal pans of uncoated cold-rolled steel sheet, unless otherwise indicated.

2. Form metal pans of galvanized steel sheet, where indicated on the drawings.

3. Attach Risers and Sub-treads to Stringers by the following methods:

a) Directly weld risers and sub-treads to stringers; locate welds on side of metal pans to be concealed by concrete fill.

b) Attach by means of brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding or bolting.

4. Provide sub-platforms of configuration and construction shown, with thickness of structural steel sheet as indicated. Attach sub-platform to platform framing members with welds or as otherwise indicated. Construct sub-platforms with smooth soffits.

D. Steel Floor Plate Treads and Platforms: Provide raised pattern steel floor plate in pattern indicated or, if not indicated, as selected from manufacturer's standard patterns.

1. Form treads of ¼” (6.4 mm) thick raised pattern steel floor plate with integral nosing and back edge stiffener. Weld steel supporting brackets to stringers and treads to brackets.

2. Fabricate platforms of raised pattern steel floor plate of thickness indicated. Provide nosing matching that on treads at all landings. Secure to platform framing members with welds.

E. Floor Grating Treads and Platforms: Provide patterns, spacing, and bar sizes indicated; fabricate to comply with NAAMM MBG 531.

1. Finish being shop prime paint, unless otherwise indicated.

2. Fabricate grating treads with steel plate nosing on one edge and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts or as otherwise indicated.

3. Fabricate grating platforms, with nosing matching that on grating treads, at all landings. Provide toe plates at open-sided edges of grating platform. Secure grating to platform frame with welds or as otherwise indicated.

F. Stair Guardrails and Handrails: Comply with applicable requirements specified elsewhere in this section for steel pipe guardrails and handrails, and as follows:

1. Fabricate newels of steel tubing and provide newel caps of gray-iron castings, as shown.

2. Railings may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.

3. Connect railing posts to stair framing by direct welding, unless otherwise indicated.

2.16 PIPE BOLLARDS

A. Fabricate pipe bollards from 4” (102 mm) standard black steel pipe, Schedule 40, unless otherwise indicated. Cap bollards with ¼” (6.4 mm) minimum thickness steel base plate, or as otherwise indicated.

2.17 FINISHES

A. General: Comply with NAAMM AMP 500 "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

B. Finish metal fabrications after assembly.

2.18 STEEL AND IRON FINISHES

A. General: Shop-paint uncoated surfaces of metal fabrications, except those to be embedded in concrete or masonry or to receive sprayed-on fireproofing, surfaces and edges to be welded, and galvanized surfaces, unless otherwise indicated. Comply with requirements of SSPC-PA 1 for shop painting.

B. Galvanizing: For those items indicated for galvanizing, apply zinc-coating by the hot- dip process in compliance with the following requirements:

1. ASTM A123 for galvanizing both fabricated and non-fabricated iron and steel products made of uncoated rolled, pressed, and forced shapes, plates, bars, and strip 0.0299” (0.7595 mm) thick and heavier.

2. ASTM A153 for galvanizing iron and steel hardware.

C. Surface Preparation for Shop Priming: Prepare uncoated ferrous metal surfaces to comply with minimum requirements indicated below.

1. Remove oil, grease and similar contaminants in accordance with SP-1, "Solvent Cleaning".

2. Remove loose rust, scale, spatter, slag and other deleterious materials in accordance with SSPC.

D. Painting: Immediately after surface preparation, apply structural steel primer paint in accordance with manufacturer's instructions and at a rate to provide dry film thickness of not less than 3.0 mils (0.076 mm). Use painting methods that result in full coverage of joints, corners, edges, and exposed surfaces. Apply 2 coats of paint to surfaces that are inaccessible after assembly or erection.

2.19 ALUMINUM FINISH

A. Mill (as fabricated) finish, unless otherwise indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Installer shall examine the areas and conditions under which metal fabrication items are to be installed. Notify the Architect in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the Installer and Architect.

3.02 PREPARATION

A. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

B. Center nosing's on tread widths with noses flush with riser faces and tread surfaces.

C. Set sleeves in concrete with tops flush with finish surface elevations; protect sleeves from water and concrete entry.

3.03 INSTALLATION - GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction; include threaded fasteners for concrete and masonry inserts, toggle bolts, and through-bolts, lag bolts, wood screws and other connectors as required.

B. Cutting, Fitting and Placement: Perform cutting, drilling, and fitting required for installation of miscellaneous metal fabrications. Set metal fabrication accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete masonry or similar construction.

D. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop-welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.

E. Field Welding: Comply with AWS Code for procedures of manual shielded metal- arch welding, appearance and quality of welds made, methods used in correcting welding work, and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surfaces matches those adjacent.

F. Grout: Follow manufacturer's recommendations for substrate preparation and application.

G. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint or zinc chromate primer.

3.04 INSTALLATION OF METAL BAR GRATINGS

A. General: Install gratings to comply with requirements of NAAMM grating standard that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.

B. Secure removable units to supporting members with type and size of clips and fasteners indicated, or if not indicated, as recommended by grating manufacturer for type of installation conditions shown.

C. Secure non-removable units to supporting members by welding where both materials are the same; otherwise, fasten by bolting as indicated above.

D. Attach toe plates to gratings by welding, at locations indicated.

3.05 INSTALLATION OF STEEL PIPE GUARDRAILS AND HANDRAILS

A. Adjust railings prior to anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated, or if not indicated, as required by design loadings. Plumb posts in each direction. Secure posts and railing ends to building construction as follows:

1. Anchor posts in concrete by means of pipe sleeves preset and anchored into concrete. After posts have been inserted into sleeves, fill annular space between post and sleeve solid with non-shrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's directions.

2. Anchor posts and rail ends to steel with welded connections, unless otherwise indicated.

3. Anchor posts and rail ends into concrete and masonry with steel round flanges welded to post and rail ends, and anchored into wall construction with expansion shields and bolts.

4. Install removable railing sections where indicated in slip-fit metal sockets cast into concrete.

5. Accurately locate sockets to match post spacing.

B. Secure handrails to wall with wall brackets and end fittings. Provide bracket with not less than 1½” (38.1 mm) clearance from inside face of handrail and finished wall surface. Locate brackets at spacing not less than 5'-0" (1.5 m) o.c., unless otherwise indicated. Secure wall brackets and wall return fittings to building construction as follows:

1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.

2. For concrete and solid masonry anchorage, use drilled-in expansion shield and either concealed hanger bolt or exposed lag bolt, as applicable.

3. For hollow masonry anchorage, fasten brackets directly on masonry wall using toggle bolts.

4. For steel framed gypsum board assemblies, fasten brackets to wood blocking using lag bolts or to metal blocking using self-tapping screws, of size and type required to support structural loads.

C. Expansion Joints: Provide expansion joints at locations indicated, or if not indicated, at intervals not to exceed 40’ (12.2 m). Provide slip joint with internal sleeve extending 2”

(51 mm) beyond joint on either side; fasten internal sleeve securely to one side; locate joint within 6” (152mm) of posts.

3.06 INSTALLATION OF PIPE BOLLARDS

A. General: Install bollards at locations shown on drawings. After installation, fill pipe with concrete and provide a smooth convex curve at the top of the pipe.

B. Backfill: The backfill in the annular space around bollards not embedded in poured footings shall be by the following methods:

1. Clean excess soil from hole. Do not leave loose soil at bottom of hole.

2. Backfill shall be of concrete with an ultimate strength of 3,000 pounds per square inch (210.92 kgs/sq.cm) at 28 days. The hole shall not be less than 4” (101.6 mm) larger than the diagonal dimension of a round, square or rectangular bollard.

3.07 ADJUSTING AND CLEANING

A. Touch-Up Painting of Steel Items: Immediately after erection, clean field welds, bolted connections, abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 requirements for touch- up of field painted surfaces. Apply by brush or spray to provide a minimum dry film thickness of 3.0 mils (0.076 mm).

B. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A780.

END OF SECTION

SECTION 05 55 00
STAIR TREADS AND NOSINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Precast concrete stair treads.
   2. Cast metal stair nosings.
   3. Extruded aluminum stair nosings
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, and samples.

PART 2 - PRODUCTS

2.1 PRECAST CONCRETE STAIR TREADS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Stepstone, Inc.
   2. Concrete Designs Inc.

B. Requisite Properties:
   1. Style: Modern.
   2. Color: Match Stepstone color #501, “GRANADA WHITE” or color #1804, “FRENCH GRAY”.
   3. Finish. Light sandblast.
   4. Nosing: Provide integral aggregate black stripe.

2.2 CAST METAL STAIR NOSINGS

A. Description: Cast metal abrasive stair nosings.

B. Application: Used at cast-in-place concrete stairs.

C. Products: Provide one of the following, or equal.
   1. “Style 801” manufactured by American Safety Tread Co., Inc.
   2. “CF-300” manufactured by Balco USA.
   3. “SuperTread Type C-01” manufactured by Grating Pacific, Inc.

D. Requisite Properties:
   1. Minimum Width: At least 3 inches wide.
   2. Nominal Length: Match stair tread width, less 3 inches clearance.

3. Minimum Thickness: At least 5/16-inch thick.
4. Surface: Cross hatched.

E. Materials: Gray iron castings conforming to ASTM A 48, minimum Class No. 35 sand finish castings with abrasive embedded to a minimum depth of at least 1/16-inch in the wear surface; and at least1/16-inch clean and well-defined cross hatching. Provide the manufacturer's standard shop-applied black paint finish.

2.3 EXTRUDED ALUMINUM STAIR NOSINGS

A. Description: Single-component abrasive stair nosing assemblies consisting of an extruded aluminum base container with integral anchoring lugs or studs, and an abrasive filler.

B. Application: Used at concrete filled metal pan stairs.

C. Products: Provide one of the following, or equal.
1. Ribbed Abrasive Products:
   a. "Type 9511" manufactured by American Safety Tread Co.
   b. "Type R-315P" manufactured by Balco USA.
   c. "SuperTread Type XRS-3" manufactured by Grating Pacific, Inc.
2. Full Abrasive Products:
   a. "Type BF-311D" manufactured by American Safety Tread Co.
   b. "Type HS-338" manufactured by Balco USA.
   c. "SuperTread Type XSS-3-BF" manufactured by Grating Pacific, Inc.

D. Requisite Properties:
1. Width: 3 inches wide.
2. Nominal Length: Match stair tread width, less 1/8-inch clearance.
3. Minimum Lip: At least 3/8-inch.
4. Minimum Thickness: At least 1/4-inch thick.
5. Color: Black.

E. Materials:
1. Aluminum Base Container: ASTM B 221 Alloy 6061-T5 or Alloy 6063-T5; provide manufacturer's standard mill finish with clear acrylic lacquer coated for components embedded in concrete.
2. Abrasive Filler: Aluminum oxide and silicon carbide granules mixed into an integral-color 2-part epoxy matrix. Abrasives with cementitious-based resins are prohibited.

2.4 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed treads and nosings and adjacent items.
   3. Install treads and nosings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Securely attach treads and nosings in place to supporting construction.
   6. Installed treads and nosings must be warrantable. Do not install, correct, or replace treads and nosings in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install treads and nosings to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
   1. Protect installed treads and nosings in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 05 73 00
DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shop-fabricated decorative metal railings.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 05 05 13 for shop-applied primer.
   2. Section 05 05 23 for non-structural metal fastenings.
   3. Section 05 50 00 for dissimilar metal corrosion protection.

1.02 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install metal railings that conform to the profiles indicated and other Contract Document requirements; meets specified performance criteria; and result in structurally sound non-corroding assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes, profiles, and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Fabricator: Company or individuals must have at least 10 years' experience fabricating metal railings installed on at least 100 previous projects similar to this project in size, material, design, and complexity
   2. Installer: Company or individuals must have at least 5 years' experience installing metal railings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Welders: Welding personnel and supervisors must comply with the "*Qualification*" requirements of AWS quality standard publications. Only certified welders current in their certification may perform or supervise any welding work.
   4. Supervisors: Individuals must have at least 7 years' experience installing metal railings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading metal railing installers.
   5. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, shop drawings, written descriptions of specified qualifications, and delegated design submittals.

PART 2 - PRODUCTS

2.01 METAL RAILINGS

A. Posts and Rails: Indicated on the Drawings.

B. Infill: Indicated on the Drawings.

C. Handrails: Fabricate from at least 0.1196-inch BMT (MSG 11) steel mechanical tubing.

D. Guardrail Brackets: Indicated on the Drawings.

E. Wall Handrail Brackets: “1701-2” cast ductile iron wall mount handrail bracket, Style U, with a projection of 2-1/2 inches from wall to center of handrail, and one 3/8-16 tapped mounting hole for use with flat or round handrail, unfinished; manufactured by R&B Wagner, Inc., or equal. Provide “B1416” anchor plate; or “1722” wall mount filler for 5/8-inch drywall where required to prevent crushing finish material.

2.02 MATERIALS

A. Steel:
1. Steel Plate: ASTM A 36 (mild steel).
2. Uncoated Steel Coil, Sheet, and Strip: Finished cold-rolled steel coil, sheet, and strip conforming to ASTM A 1008, CS Type B (commercial steel), unexposed (interior items) and exposed, temper rolled (exterior items), regular matte finish (40 to 59 AA), mill phosphatized.
3. Hot-Rolled Steel Rods, Bars, and Shapes: ASTM A 36 (mild steel), merchant quality.
4. Steel Pipe: ASTM A 53, black pipe, Type and Grade as indicated below, size and weight class, schedule number, or outside diameter indicated and wall thickness as required by engineering calculations for type of use indicated.

    a. Appearance: Type S (seamless).

    b. Bending: Provide Grade A pipe when cold bending is required; otherwise provide Grade B pipe.

5. Steel Structural Tubing: ASTM A 500, Grade A, black, round or shaped hot-formed tubing as indicated, outside diameter or dimensions as indicated, and calculated wall thickness as required by engineering calculations for type of use indicated. Provide seamless tubing.
6. Mechanical Tubing: ASTM A 513, black, Type 5 M.D. (mandrel drawn or Drawn over a Mandrel).

B. Stainless Steel;
1. Stainless Steel Bars, Hot-Rolled or Extruded Shapes: ASTM A 276, Condition T (hardened and tempered at a relatively high temperature), Type 304L (for welded applications) or Type 304 (for all other applications) No. 4 (directional) finish, passivated in conformance with ASTM A 967.
2. Stainless Steel Pipe: ASTM A 312, Grade TP (pipe), Type 304L (for welded applications) or Type 304 (for all other applications) No. 4 (directional) finish, passivated in conformance with ASTM A 967.
3. Stainless Steel Plate and Flat Bar:

    a. Exposed Locations: ASTM A 666 (annealed and tempered), Type 304L (for welded applications) or Type 304 (for all other applications) No. 2 (half hard) temper (hardness

between Rockwell B-65 and B-70; can be bent 90 degrees across the direction of rolling around a radius equal to its thickness), passivated in conformance with ASTM A 967.

b. Concealed Locations: ASTM A 240 (annealed) Type 304L (for welded applications) or Type 304 (for all other applications), No. 2 (half hard) temper (hardness between Rockwell B-65 and B-70; can be bent 90 degrees across the direction of rolling around a radius equal to its thickness), passivated in conformance with ASTM A 967.

4. Stainless Steel Tubing: ASTM A 554, Grade MT (tubing), Type 304L (for welded applications) or Type 304 (for all other applications), No. 4 (directional) finish, passivated in conformance with ASTM A 967.

C. Aluminum:

1. Standard Structural Profiles (Alloy 6061-T6): ASTM B 308.
2. Extruded Bars, Shapes and Tubes:

a. Standard Structural Profiles (Alloy 6061-T6): ASTM B 308.

b. Extruded Aluminum Bars and Shapes: ASTM B 221.

1) Alloy and Temper: 6063-T5 or T6 for primary components; 6063-T5 or T6, 6005-T5, 6105-T5 or 6061-T6 for structural components.

2) Minimum Thickness: At least 0.125-inch.

3. Sheet and Plate: ASTM B 209.

a. Alloy and Temper: 5005-H32 (for anodic finishing), or alloy 3003-H14 (for painted or unfinished sheet).

b. Minimum Thickness: At least 0.060-inch.

4. Aluminum Tubing:

a. Seamless Drawn Aluminum Tubes: ASTM B 210.

b. Extruded Aluminum Tubes: ASTM B 221 or ASTM B 483.

2.03 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Flanges and Anchors: Unless otherwise indicated, provide cast or formed metal of the same type, material, and finish as the supported metal fabrications.

C. Grout:

1. Description: Pre-packaged, non-shrink, non-metallic, non-corrosive, non-staining, non-gaseous grout conforming to ASTM C 1107, Grade A (drypack) and Grades B and C (flowable grout) of a consistency suitable for application within a 30-minute working time.
2. Type: Grout specifically recommended by the manufacturer for interior and exterior applications.
3. Minimum 28-day Compressive Strength: At least 7,500 pounds per square inch.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.04 FINISHES

A. Hot-Dip Galvanizing: Specified in Section 05 05 12.

B. Shop Priming: Specified in Section 05 05 13.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify that in-place construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed items
   3. Set metal railings true to line, to required levels and lines, plumb, square, and cut and fitted without warp or rack; sloped or level as required; with flush well-fitted joints; and in alignment with adjacent construction.
   4. Shim as required with concealed shims.
   5. Dry-pack metal railings supported on concrete and masonry to provide firm, level bearing surfaces.
   6. Provide temporary bracing or anchors for items indicated as built into concrete, masonry, or similar construction.
   7. Fit exposed connections accurately to form flush hairline joints.
   8. Securely attach metal railings in place to supporting construction.

B. Installation Tolerances: Install metal railings to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged, and defective work.

D. Protection:
   1. Protect installed metal railings in place from deterioration and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 05 78 00
METAL FABRIC

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Welded wire mesh.
   2. Woven wire mesh.
   3. Perforated sheet metal.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, samples.

PART 2 - PRODUCTS

2.01 WELDED WIRE MESH

A. Manufacturers: Provide products manufactured by WireCrafters LLC, or equal.

B. Requisite Properties:
   1. Construction: Welded wire.
   2. Material: Aluminum.
   3. Wire Diameter: 0.080-inch.
   4. Wire Spacing: Square configuration with 1/4-inch center-to-center wire spacing.
   5. Sizes: Indicated on the Drawings.

2.02 WOVEN WIRE MESH

A. Manufacturers: Provide products manufactured by WireCrafters LLC, or equal.

B. Requisite Properties:
   1. Construction: Woven wire, manufactured with Type IC (intercrimp) style.
   2. Material: Steel galvanized before being woven.
   3. Wire Diameter: 0.187-inch.
   4. Wire Spacing: Square configuration with 1/4-inch center-to-center wire spacing.
   5. Sizes: Indicated on the Drawings.

2.03 PERFORATED SHEET METAL

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. McNichols Co.

2. Harrington & King Perforating Co.

B. Requisite Properties:
1. Material: Aluminum.
2. Perforation Size and Shape: 1/8-inch diameter round perforations.
3. Perforation Arrangement: Staggered.
4. Perforation Spacing: 2 inches on center.
5. Minimum Open Area: At least 40 percent.

2.04 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed metal fabric and adjacent items.
3. Install metal fabric using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
5. Securely attach metal fabric in place to supporting construction.
6. Installed metal fabric must be warrantable. Do not install, correct, or replace metal fabric in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install metal fabric to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed metal fabric in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

DIVISION 06

WOOD, PLASTICS, AND COMPOSITES

SECTION 06 10 00
ROUGH CARPENTRY

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Furnish all labor, material, and equipment required to complete the Work shown on the Drawings and specified herein, including but not limited to the following:
   1. Wood framing.
   2. Blocking, backing, nailers, sleepers and wood grounds required for securing other Work.
   3. Wood furring.
   4. Sheathing.
   5. Sub-flooring.
   6. Under-layment.
   7. Rough Hardware and Connectors.
   8. Installation of Special Connectors, Seats, Plates, Anchors and Hangers furnished by other trades.

1.2 RELATED SECTIONS

A. Section 03 10 00 - Concrete Formwork.

B. Section 03 30 00 – Concrete

C. Section 04 22 00 – Masonry

D. Section 05 12 00 - Structural Steel.

E. Section 0 550 00 – Metal Fabrications

F. Section 05 40 00 - Cold Formed Metal Framing

G. Section 09 25 00 - Gypsum Wallboard.

1.3 SUBMITTALS

A. Comply with pertinent provisions of Section 01 33 00.

B. Certification:
   1. Pressure Treated Wood: Submit certification by treating plant stating chemicals and process used, net amount of preservative retained, and conformance with applicable standards.

1.4 QUALITY ASSURANCE

A. Wood Product Quality Standards:
   1. Lumber Standards: Comply with Product Standards, PS 20, American Softwood Lumber Standards and West Coast Lumber Inspection Bureau (WCLIB).
   2. Plywood Standard: Comply with Product Standards, PS 1, Construction and Industrial Plywood.

3. Pressure Treated Material: American Wood Preservers Association Standards (AWPA).
4. Factory-mark each piece of lumber and plywood with type, grade, mill and grading agency, except omit marking from surfaces to be exposed with transparent finish or without finish.

B. Requirements of Regulatory Requirements:
1. California Building Code (CBC) Chapter 23.

C. Do not use power driven fasteners unless approved by Structural Engineer and the City Inspector.

D. Grade Marking:
1. Lumber: Each piece of lumber shall bear the grade mark of at least one of the two agencies, (WCLIB and WWPA) listed above in accordance to CBC Section 2304 and UBC Standard No. 23-1.
2. Plywood: Each sheet shall bear the grade stamp of the American Plywood Association (APA) in accordance to CBC Section 2303.4 and UBC Standard No. 23-2 or 23-3.

E. Contaminated Lumber:
1. Lumber shall not contain any visible mold, mildew, or moisture related spore producing contamination. Lumber shall be inspected before delivery to the site. Lumber delivered to the site with visible signs of contamination shall be removed from the site and shall not be placed into the building structure in any location. On site or off site bleaching or cleaning of lumber showing contamination is not acceptable. If some pieces are contaminated it is assumed that all units in the stack are contaminated.

1.5 PRODUCT HANDLING

A. Delivery and Storage: Keep materials under cover and dry. Protect against exposure to weather and contact with damp or wet surfaces. Stack lumber as well as plywood and other panels; provide for air circulation within and around stacks and under temporary coverings including polyethylene and similar materials.

1.6 PROJECT CONDITIONS

A. Coordination: Fit carpentry-work to other Work; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds and similar supports to allow attachment of other Work.
1. Cooperate with other trades, especially Concrete, Masonry and Miscellaneous Metal, to prevent duplication of rough hardware furnished.

1.7 LEED REQUIREMENTS

1.1 See Division 1 Section “LEED Requirements” for additional LEED requirements.

1.2 LEED Submittals

1. Credit MR7: Certified Wood:
a. Preferably provide all currently available FSC-Certified wood products for the project.
b. Provide chain of custody documentation.

2. Credit MR 4.1, 4.2 - Recycled Content:
   a. Indicate recycled content; indicate percentage of pre-consumer and post-consumer recycled content per unit of product.
   b. Indicate relative dollar value of recycled content product to total dollar value of product included in project.

PART 2 – PRODUCTS

2.1 LUMBER, GENERAL

A. Grade Stamps: Factory-mark each piece of lumber with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.

B. Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.
   1. Provide dressed lumber, S4S, unless otherwise indicated.
   2. Provide seasoned lumber with 19 percent maximum moisture content at time of dressing and shipment for sizes 2" or less in nominal thickness, unless otherwise indicated.

C. Framing Lumber: Comply with WCLIB, "Standard Grading Rules for West Coast Lumber", No. 17. Stress grades and wood species as noted on Structural Drawings.

2.2 MISCELLANEOUS LUMBER

A. Provide wood for support or attachment of other work including rooftop equipment curbs and support bases, cant strips, bucks, nailers, blocking, furring, grounds, stripping and similar members. Provide lumber of sizes indicated, worked into shapes shown.

B. Light Framing and Standard Grade lumber of any species or board size lumber as required. No. 3 Common or Standard grade boards per WCLIB or WWPA rules or No. 3 boards per SPIB rules.

2.3 CONSTRUCTION PANELS

A. Construction Panel Standards: Comply with PS 1 "U.S Product Standard for Construction and Industrial Plywood" for plywood panels and, for products not manufactured under PS 1 provisions, with American Plywood Association (APA) "Performance Standard and Policies for Structural-Use Panels", Form No. E445.

B. Trademark: Factory-mark each construction panel with APA trademark evidencing compliance with grade requirements.

C. Structural Sheathing: Structural I.

D. Plywood Backing Panels: For mounting electrical or telephone equipment, provide fire-retardant treated plywood panels with grade designation. APA C-D PLUGGED INT with exterior glue, in thickness indicated, or, if not otherwise indicated, not less than 15/32".

2.4 MISCELLANEOUS MATERIALS

A. Fasteners and Anchorages: Provide size, type, material and finish as indicated and as recommended by applicable standards, complying with applicable Federal Specifications for nails, staples, screws, bolts, nuts, washers and anchoring devices. Provide metal hangers and framing anchors of the size and type recommended by the manufacturer for each use including recommended nails.
   1. Where rough carpentry work is exposed to weather, in ground contact, or in area of high relative humidity, provide fasteners and anchorages with a hot-dip zinc coating (ASTM A 153).

2.5 ROUGH HARDWARE

A. Furnish bolts and attachments to other trades for installation in masonry and concrete work.

B. Lag Screws:
   1. General: Conforming to CBC latest edition.
   2. Sizes as indicated on Drawings: Minimum yield point 45,000 psi; minimum tensile strength 77,000 psi.
      a. Dimensions: Standard per Appendix L National Design Specification.
      b. Provide standard cut washer not less in size than screw head, where screw head bears on wood.
      c. Lag screws shall be galvanized where exposed to weather.

C. Washers:
   1. Provide not less than a standard cut washer between bolt head, lag screw head, nut and the wood.
   2. Washers shall be galvanized where exposed to weather.

D. Framing Connectors: "National Design Specifications for Stress Grade Lumber and Its Fastenings", by the NFPA. , Simpson "Strong Tie", or equal, complete with required nails.
   1. Galvanize or shop paint with rust-inhibitive paint.
   2. Model Nos. indicated on Drawings.

2.6 WOOD TREATMENT BY PRESSURE PROCESS

A. Preservative Treatment: Where lumber or plywood is indicated as "Trt-Wd" or "Treated", or is specified herein to be treated, comply with applicable requirements of AWPA Standards C2 (Lumber and C9 Plywood) and of AWPA Standards listed below. Mark each treated item with the AWPA Quality Mark Requirements. Each piece shall bear the stamp of an approved independent agency operating under ALSC overview

B. Preservative Treated Wood Products:
   1. Water-borne salt preservatives for painted, stained, or exposed natural wood product:
      a. AWPA C-2, above ground application.
      b. AWPC LP-22, ground contact application.
   2. Do not use creosote.
   3. Whenever necessary to cut, notch, dap, or drill treated lumber. Paint new surfaces thoroughly with two saturating coats with the preservative material used in the treatment of lumber.
   4. Re-dry items to maximum moisture content of 19%, stamped "dry".
   5. Do not treat Douglas Fir Coast Region with ACC or CCA.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify that surfaces to receive rough carpentry materials are prepared to require grades and dimensions.

3.2 GENERAL

A. Conduct Work under direction of capable experienced foreman.

B. Accurately locate members to line and dimension. Ensure full contact of timbers framed together. Ensure let-in members in full contact on two surfaces.

C. Discard units of material with defects, which might impair quality of Work, and units, which are too small to use in fabricating Work with minimum joints or optimum joint arrangement.

D. Set carpentry works to required levels and lines, with members plumb and true and cut and fitted.

E. Securely attach carpentry work to substrate by anchoring and fastening as shown and as required by recognized standards.

F. Counter-sink the nail heads on exposed carpentry work and fill holes.

G. Cutting and Fitting: Take care to fit members carefully into their respective positions. Do cutting and fitting in framing required by tradesmen engaged on the operation to enable them to properly carry out their work, but do not curring that may weaken any vital parts of the building. Exercise due care in framing so that structural timbers will not require to be cut for pipes, vents and ducts. Obtain approval of Architect prior to cutting or notching structural members.

H. Bracing and Shoring: Provide all supports, guys and braces, required to stabilize structure during construction.

I. Accurately saw-cut and fit lumber into position and securely nail, spike, lag bolt, or bolt as required.

J. Nailing: Refer to details and tables on Drawings for specific nailing requirements. In absence of specific instructions, use 16d nails for two-inch thick material and 8d for one-inch thick material. Drill nail holes 75% of nail diameter where splitting occurs, and for 20d and larger nails. Replace split or otherwise damaged structural members. Machine applied nailing shall be allowed provided satisfactory installation is demonstrated on the job and the acceptance of the Structural Engineer obtained prior to the use of machine applied nails. Approval is subject to continued satisfactory performance. All "shiners" shall be removed.

K. Bolting: Provide and install all bolts extending through one or more wood members. Drill bolt holes 1/32 inch larger than bolt diameter, with member held in place true to line. Ensure full engagement or nut, but projection of bolt beyond shall not exceed one bolt diameter. Tighten bolts when installed and again immediately before concealing with further construction, or upon completion of Work. Provide malleable iron or steel plate washers under the head and nuts of bolts, where bearing on wood.

L. Lag Screws: Lubricate with soap or other lubricant to facilitate insertion. Turn lag screws into place without driving. Ensure penetration into the lagged member of eight diameters minimum. Provide lead holes for lag screws as follows:
1. Shank Portion - Same diameter and length as shank.
2. Thread Portion - 60-75 percent of shank diameter and at least same length as threaded portion.

Tighten lag screws at installation; carefully retighten just prior to concealing with further construction, or upon completion of Work.

M. Bolts:
1. Machine and carriage bolts conforming to ASTM A 307, Grade A.
   a. Sizes and type as indicated on Drawings.
   b. Provide washers not less in size than bolt heads or nuts bearing on wood.
   c. All bolts, nuts, and washers exposed to weather shall be galvanized in compliance with ASTM A153.

N. Nails:
1. Conforming to CBC Section 2304.8.3.2 and Table 23-II-B-1 (based on Federal Specification FF-N-105B), sizes as indicated on drawings and type as noted below.
   a. Wood framing connections: Bright steel common wire nails. Use galvanized steel common wire nails where connection is exposed.
   b. Plywood floor sheathing to wood framing: Bright steel annulary grooved nails.
   c. Gypsum wallboard to wood framing: Cement coated cooler nails.
   d. Cabinetry: bright steel finishing nails.

O. Wood Screws:
1. Conforming to the NDS (based on Federal Specification FF-N-105B).
   a. Sizes and types as indicated on Drawings.
   b. Screws shall be zinc plated.
   c. Screws shall be of sufficient strength to cause failure in the wood rather than the metal.

3.3 WOOD GROUNDS, NAILERS, BLOCKING AND SLEEPERS

A. Provide wherever shown and where required for screeding or attachment of other Work. Form to shapes as shown and cut as required for true line and level of Work to be attached. Coordinate location with other Work involved.

B. Attach to substrates as required to support applied loading. Counter-sink bolts and nuts flush with surfaces, unless otherwise indicated. Build into masonry during installation of masonry work. Where possible, anchor to formwork before concrete placement.

C. Provide permanent grounds of dressed, preservative treated, key-beveled lumber not less than 1-1/2" wide and of thickness required to bring face of ground to exact thickness of finish material involved. Remove temporary grounds when no longer required.

D. Provide backing and blocking for installation of mechanical, electrical, plumbing, panels, equipment, cabinets, and hardware. Securely nail accurately in position as

required. Use metal framing anchors for connection of blocking and stripping for support of suspended fixtures.

E. Back prime wood bucks and screeds for doors and openings before installation.

F. Securely nail furring and stripping as required, shim accurately to line, level and surface.

3.4 WOOD FURRING

A. Install plumb and level with closure strips at edges and openings. Shim with wood as required tolerance of finished Work.
   1. Fire-stop furred spaces on walls at each floor level and at ceiling line of top story, with wood blocking or noncombustible materials, accurately fitted to close furred spaces.

B. Furring to Receive Plaster Lath: Unless otherwise indicated, provide 1" x 2" furring at 16" o.c., vertically.

C. Suspended Furring: Provide size and spacing shown, including hangers and attachment devices. Level to a tolerance of 1/8" in 10', except 1/4" in 10' for thick-coat plasterwork.

3.5 SILLS AND PLATES

A. Install pressure preservative treated lumber for plates and sills in conformance with CBC latest edition.

3.6 WOOD FRAMING, GENERAL

A. Anchor and nail as shown, and to comply with "Recommended Nailing Schedule"

B. Fire-stop concealed spaces of wood framed walls and partitions at each floor level and at the ceiling line of the top story. Where fire-stops are not automatically provided by the framing system used, use closely fitted wood blocks of nominal 2" thick lumber of the same width as framing members.

3.7 STUD WALLS, PARTITIONS, AND FURRING

A. Provide studs in continuous lengths without splices.

B. Plates: Provide single bottom plate and double top plate unless noted otherwise on drawings and details. Stagger joints four feet in top plates.

C. Nail or anchor plates to supporting construction.

D. Corners and Intersections: Frame with three studs or as detailed.

E. Openings: Frame with double studs each side and double headers placed on edge, resting on cripple studs. Truss or block over headers.

F. Provide continuous horizontal blocking row at mid-height of single-story partitions over eight feet high and at midpoint of multi-story partitions, using two inch thick members of same width as wall or partitions.

G. Cut-in blocks wherever necessary for bracing or backing for applied finish or fixtures. Cut-in two-inch solid blocking between studs at all horizontal joints in non-structural plywood wall sheathing.

H. Provide continuous perimeter backing at ceiling plane for longitudinal forces of wall-secured suspended ceiling system.

3.8 ROOF AND CEILING FRAMING

A. Joists and Rafters: Lay with crowning edge up with full end bearing.

B. Openings: Frame for hatches, vents, and other openings as required.

C. Bridging: Install 2 x 3 bridging at ten feet maximum on centers at joists over eight inches in depth. Install 2 x 3 cross bridging or two inch solid blocking, between roof rafters and ceiling joists. Approved metal cross-bridging nailed using all nail holes may be used in lieu of 2 x 3 bridging. Do not nail bottom of cross bridging at roof rafters until after installation of roof sheathing.

D. Solid Blocking: Install between roof rafters and ceiling joists over partitions and at end supports as indicated.

E. Plywood Roof Sheathing: Install plywood over rafters or decking as indicated on Drawings. Thickness, nailing and layout shall be as indicated on Structural Drawings.

F. Provide special framing as shown for eaves, overhangs, dormers and similar conditions, if any.

3.9 MISCELLANEOUS FRAMING

A. Framing for Mechanical Work:
1. Install where indicated and as required to conceal piping, structural metal work and other unfinished Work where metal furring is not indicated. Furring shall be 2 x studs or as required.
2. Frame members for passage of pipes and ducts to avoid cutting structural members.
3. Do not cut, notch, or bore framing members for passage of pipes or conduits except as detailed on approved Structural Drawings.
4. Reinforce framing members where damaged by cutting

END OF SECTION

SECTION 06 10 53
MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Utilitarian lumber and plywood not specified in other sections.
   2. Telephone and electrical equipment backing panels.
   3. Preservative treated wood.
   4. Fire-retardant treated wood.
   5. Rough hardware.
   6. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Provide lumber and plywood manufactured by one of the following, or equal.
   1. Boise Cascade LLC.
   2. Georgia-Pacific Wood Products LLC.
   3. Louisiana-Pacific Corp.
   4. Weyerhaeuser NR Co.

2.02 SAWN LUMBER

A. Timber for Wood Beams, Stair Stringers, and Posts: “SELECT STRUCTURAL” grade Douglas fir conforming to WCLIB Grading Rules, S4S, seasoned to a moisture content of not more than 19 percent, and stamped showing only the appropriate fiber stress in bending “f”.

B. Rough Sawn Lumber: “#1” or “#2” grade Douglas conforming to WCLIB Grading Rules, rough sawn, dried to a moisture content of not more than 19 percent, and stamped “S-DRY” or “KD”.

C. Full-Dimension Lumber: “#1” or “#2” grade Douglas conforming to WCLIB Grading Rules, S4S, seasoned to a moisture content of not more than 19 percent, and stamped “S-DRY” or “KD”.

2.03 SOFTWOOD PLYWOOD

A. Softwood Plywood:
   1. Minimum Sheathing Grade: “APA C-C Plugged & Touch Sanded EXT” grade plywood, unless otherwise indicated. Plywood panels must have a visible APA grade mark.

2. Minimum Underlayment Grade: “APA Tongue & Groove” grade plywood, unless otherwise indicated. Plywood panels must have a visible APA grade mark.
3. Minimum Size: At least 4- by 8-foot nominal sheet size.
4. Minimum Thickness: At least 1/2-inch nominal thickness, unless otherwise indicated.
5. Construction:
    a. 3/4-inch plywood: 7-ply veneer core.
    b. 1/2-inch plywood: 5-ply veneer core.
6. Panel Edges: Square-edged.

B. Telephone and Electrical Equipment Backing Panels:
1. Minimum Grades: “APA Type A-D” grade sanded plywood. Plywood panels must have a visible APA grade mark.
2. Minimum Thickness: At least 3/4-inch nominal thickness, unless otherwise indicated.
3. Construction: 7-ply veneer core.
4. Panel Edges: Square-edged.
5. Finish: Field-applied intumescent white paint finish. Paint both sides of plywood to prevent warping.

2.04 PRESERVATIVE TREATED WOOD (PTW)

A. Description: Wood products conforming to the AWPA U1 manufactured with ACQ wood preservative. PTW containing arsenic or CCA are prohibited.
1. Interior wood construction not in contact with the ground must conform to Use Category UC2.
2. Exterior wood construction not in contact with the ground must conform to Use Category UC3b.
3. Wood contacting the ground must conform to Use Category UC4a.

B. Application: Provide PTW at the following locations and where indicated.
1. Concealed rough carpentry items in contact with concrete or masonry.
2. Miscellaneous wood framing attached directly to the interior of below-grade exterior masonry or concrete walls.
3. Rough carpentry in contact with roofing, metal flashings, vapor retarders or barriers, air barriers, or waterproofing.
4. Wood framing members less than 18 inches above the ground in crawl spaces or unexcavated areas.
5. Wood floor plates installed on concrete slabs-on-grade.
6. Wood items exposed to weather.

C. Products: Provide the following products manufactured by Sunbelt Forest Products Corp., or equal.
1. Termite Resistant Wood: “Timbersave PT”, or equal.
2. Decay and Termite Resistant Wood: “Preserve”, or equal.
3. Decay, Termite, and Water Resistant Wood: “Preserve Plus”, or equal.

D. Requisite Properties:
1. Minimum Retention: At least 0.25 pounds per cubic foot in conformance with AWPA C2 for lumber and timber and AWPA C9 for plywood.
2. Maximum Moisture Content: Kiln dry after treatment to a moisture content of not more than 19 percent for lumber, and not more than 15 percent for plywood.

2.05 FIRE-RETARDANT TREATED WOOD (FRTW)

A. Description: Wood products conforming to AWPA C20 and AWPA C27, manufactured with fire-retardant materials for which the fire-retardant manufacturer publishes physical properties of treated wood after exposure to elevated temperatures, when tested in conformance with ASTM D 5664 and ASTM D 5516.
   1. Provide exterior type wood at exterior locations.
   2. Provide Type A High Temperature (HT) wood at interior locations.

B. Application: Provide FRTW at the following locations and elsewhere where indicated.
   1. Framing for raised platforms.
   2. Concealed blocking.
   3. Roof construction.
   4. Plywood backing panels.
   5. Other wood items installed within fire-resistive construction.
   6. Elsewhere where indicated.

C. Restrictions: Fire-retardant products must not develop or advance metal fastener corrosion.

D. Products: Provide the following products manufactured by Hoover Treated Wood Products, Inc., or equal
   1. Interior Locations: “Pyro-Guard”, or equal.
   2. Exterior Locations: “Exterior Fire-X”, or equal.

2.06 ROUGH HARDWARE

A. Uncoated (Bare) Carbon Steel Fasteners:
   1. Screws: Manufactured from carbon steel wire rods and uncoated coarse round wire conforming to ASTM A 510, Grades 1018 to 1022.
   2. Bolts: ASTM A 307, Grade A.
   3. Nuts and Flat Washers: ASTM A 563, Grade C3.

B. HDG Zinc-Coated Steel Fasteners:
   1. Description: Carbon steel fasteners with hot dip galvanized coating conforming to

      a. ASTM A 153 minimum zinc coating weight requirements for Class C materials (fasteners over 3/8-inch diameter and similar articles; washers 3/16-inch and 1/4-inch thick) or Class D materials (fasteners 3/8-inch diameter and under, rivets, nails and similar articles; washers under 3/16-inch thick); and

      b. ASTM F 2329 for coating of threaded fasteners and washers by hot-dip zinc galvanizing.
   2. Performance Requirements: No sign of surface red rust after at least 32 hours of ASTM B117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

C. Stainless Steel Fasteners:
   1. Description: Austenitic stainless-steel screws, bolts, and studs conforming to ASTM F 593 and nuts conforming to ASTM F 594 requirements for Alloy Group 1 (304 Series) or Alloy Group 2 (316 Series).
   2. Performance Requirements:

a. Type 304: No sign of surface red rust after at least 1,000 hours of ASTM B117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

b. Type 316: No sign of surface red rust after at least 1,500 hours of ASTM B117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

D. Ceramic-Coated Anti-Corrosive Steel Fastener Material:

1. Description: Carbon steel fasteners having 3-coat finish that provides electrolytic corrosion protection by combining the sacrificial protection of zinc with the barrier protection of a ceramic topcoat and having a current evaluation report from the ICC-ES demonstrating code compliance.
2. Application: Use ceramic-coated anti-corrosive steel fasteners

   a. with pressure treated wood, including alkaline copper quaternary (ACQ), ammoniacal copper arsenate (ACA), chromated copper arsenate (CCA), ammoniacal copper zinc arsenate (ACZA), copper azole (CBA-A and CA-B), copper citrate (CC), and disodium octaborate tetrahydrate (DOT);

   b. when attaching to exotic hardwood lumber base material;

   c. with composite lumber; and

   d. when attaching cement board, high-density exterior sheathing, and tile backer board to framing members at exterior walls, at high-moisture interior walls, and in high-corrosion environments.
3. Product: “Grabber” screws manufactured by Grabber Construction Products, or equal.
4. Requisite Properties:

   a. Basecoat An 8- to 10-micron (0.0003- to 0.0004-inch) mechanically deposited zinc-alloy coating.

   b. Intermediate Coat: Chromate conversion coating.

   c. Topcoat: Corrosion-resistant baked ceramic surface coating.
5. Performance Requirements: No sign of surface red rust after at least 1,000 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

E. Nails, Brads, and Staples: Provide fasters conforming to ASTM F 1667.

1. Fastening Lumber to Lumber: Cement-coated or annular (ringed-shank) threaded nails of sufficient length to penetrate at least1-1/4-inches into adjoining items; or stove or lag bolts used with washers.
2. Fastening Plywood to Lumber: Annular (ringed-shank) threaded nails; at least size 8d for 1/2-inch panels and at least size 10d for 3/4-inch panels.

F. Power-Driven Staples, Nails, P-nails, and Allied Fasteners: Must conform to ICC-ES Evaluation Report No. 1539.

G. Wood Screws: Must conform to ASME B18.6.1.

H. Steel Drill Screws for Fastening Wood to Cold-Formed Metal Framing: Must conform to ASTM C 954, except with wafer heads and reamer wings, length as recommended by the screw manufacturer for material being fastened.

I. Bolts:

1. Steel Bolts: ASTM A 307 Grade A with hex nuts conforming to ASTM A 563, and flat washers where indicated.
2. Anchor Bolts: ASTM F 1554 Grade 36. Provide hot-dip zinc-coated anchor bolts where item being fastened is galvanized.
3. Lag Bolts: Must conform to ASME B18.2.1.

2.07 ACCESSORIES

A. Wood Glue:

1. Description: Yellow aliphatic resin polyvinyl acetate (PVA) glue.
2. Manufacturers: Provide products manufactured by one of the following, or equal.
    a. Elmer's Products Inc.
    b. Franklin International.
    c. Gorilla Glue, Inc.
3. Products: Provide the following products manufactured by Franklin International, or equal.
    a. Interior Grade Glue: "Titebond Original" , or equal.
    b. Exterior Grade Glue: "Titebond III Ultimate", or equal.
    c. Moulding and Trim Glue: "Titebond Quick & Thick Mutisurface Glue", or equal.

B. Construction Adhesive:

1. Description: General purpose, indoor or outdoor, drillable, moisture resistant, sandable, heavy duty construction adhesive.
2. Product: "Titebond PROvantage" manufactured by Franklin International, or equal.

C. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction satisfies all conditions that might affect the quality of installation or the durability or performance of installed and adjacent items.
3. Fit rough carpentry to other construction. Scribe and cope as needed for accurate fit. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
4. Set rough carpentry true to line; plumb, level, and square without warp or rack; with flush, well-fitted joints; and in alignment with adjacent construction.
5. Securely attach rough carpentry in place to supporting construction.

B. Special Techniques:

1. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
2. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
3. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Do not space clips more than 16 inches on center.
4. Install wood furring, sleeper, blocking, grounds, nailers, and other items where indicated and where required for attaching other work.
5. Make tight connections between members.
6. Select fasteners of size that will not fully penetrate members where opposite side is exposed to view or will receive finish materials.
7. Recess bolts and nuts flush with surfaces, unless otherwise indicated. Do not countersink nail heads, unless otherwise indicated.
8. Install fasteners without splitting wood.

C. Installation Tolerances: Install framing within the following tolerance variations.

1. Maximum Out of Plumb: Not more than 1/4-inch in 10 feet.
2. Maximum Out of Plane: Fastening surfaces of adjacent framing members may not vary by more than 1/8-inch.
3. Maximum Positional Tolerance: Not more than 1/4-inch. Cumulative error may not exceed minimum fastening requirements of sheathing or other finishing materials.

D. Correction and Repair:

1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

Section 06 18 13
Glued-laminated Beams

PART 1 - GENERAL

1.01 SUMMARY

A. Glue laminated structural beams complete with required attachment brackets and hardware.

1.02 RELATED WORK: GENERAL PROVISIONS OF THE CONTRACT DOCUMENTS

A. Anchorage angles cast in masonry as required for glue laminated structural units.

1.03 CODES AND STANDARDS

A. Codes and Standards: All members shall be fabricated and inspected in accordance with Title 24, Part 2, C.C.R. 2013 CBC Chapter 23.

1. Structural Glue Laminated Timber Design Title 24, Section 2303.1.3.

2. Preservative Treatment of Lumber Title 24, Section 2304.11 and American Wood Preservers Association Standards.

B. Inspection: Continuous inspection of an inspector specially approved for this purpose by the governing jurisdiction will be required during fabrication of al structural glued laminated lumber. Inspection shall be in compliance with Title 24, Section 1705A.5. A WCLIB or APA certificate will not meet this requirement.

C. Certification: Each structural glued laminated member will be stamped with an identifying number accompanied by a certificate of inspection showing the grade and species of lumber, type of glue and other information as required. Certificates will bear a signed statement by the inspector, that the work has been executed in strict accordance with the approved drawings and specifications. A WCLIB or APA certificate will not meet this requirement.

D. Fabrication: Per Title 24, Part 2, 2303.1.

E. Comply with Section 01 45 29 Testing Laboratory Services

1.04 SUBMITTALS

A. Submit in accordance with other the General Provisions of the General Conditions and Section 01 33 00 Submittal Procedures.

B. Shop Drawings:

1. Indicate pertinent dimensions, grades shop applied finishes, cuts, and drilled holes, fasteners, erection details, and connection materials and finished. Provide one reproducible and two prints of the shop drawings.

C. Certificates: Certify compliance with ANSI/AITC A190.1.

1.05 DELIVERY, STORAGE AND HANDLING

A. Arrange delivery of glue laminated members in accordance with construction schedule to avoid double handling.

B. Deliver members to site with opaque wrappings, for protection. Maintain in place until immediately prior to installation of roof deck.

C. If double handling is necessary, store members well off ground and separate to allow complete air circulation. Cover members with an opaque moisture resistant membrane.

D. Use padded, non-marring slings when handling members.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Manufacturer: Western Wood Structures, Inc., Standard Structures

B. Other acceptable manufacturers:

1. Timber Components, Inc.

2. Timfab, Inc.

2.02 MATERIALS AND COMPONENTS

A. Glue laminated members: Douglas fir laminating stock and adhesive of type to suit service grade 24F-V8. 24F-V4 may be used at simple span conditions - Alaska yellow cedar laminating stock and adhesive of type to suit service grade 20F-V12 per Title 24, 2303.1.3 shall be used for all exposed conditions.

1. It is assumed that each lamination is graded on the basis of the requirements of the nominal size of the individual lamination. When lumber is resawn - regrade on the basis of the new size at no expense to the Owner.

2. Joints: All end joints pre-glued, plain scarf joints. All portions of scarfs in adjacent laminations within 1/6 of the depth of the top or bottom of the beam separated by a minimum of 6 inches. Strength reducing defects such as wane are not permitted in or near an end joint. The sum of all knots, which appear in the beveled surface of a scarf, not to exceed one-fourth the nominal width of lamination when the laminations are one and five-eighths inches in thickness. The requirements of pre-glued scarf joints may be waived by the architect or structural engineer with the approval of the governing jurisdiction when a peg or positive mechanical device other than a nail or nails is used to maintain proper contact and alignment of the mating surfaces. The requirement for plain scarf joints may be waived by the architect or structural engineer if the joint to be used is specifically approved by the governing jurisdiction. In evaluating other types of joints for this purpose the procedures recommended by the "Standard Specifications" will be used as a guide but the qualification criteria is not necessarily the same and all test values must exceed 5200 psi.

3. Standard "Peg-Scarf" and "Finger Joints," of type approved by the governing jurisdiction may be used.

4. Pre-glue edge joints together edgewise when used in the top and bottom laminations for exterior use and for any lamination when the direction of load is parallel to the wide face of the lamination. Other laminations may consist of two or more pieces placed side by side provided all longitudinal edge joints in adjacent laminations are staggered at least two inches laterally.

5. Moisture Content: Not less than 7% or more than 12% at time of gluing. Range of moisture content of various laminations assembled into a single member not to exceed 5%. Comply with Section 2316A.2 (9), Title 24.

6. Adhesives: Mixing, spreading, storage life, pot life, working life and assembly life in accordance with 2316A.6 (28), and the manufacturer's recommendations. Use exterior type of adhesive for all members, ASTM D3024.

B. Hardware and Connections: Type general construction steel. Hot-dip galvanize where exposed to weather.

C. Bolts, Nuts and Washers: High strength type recommended for structural steel joints: ASTM A307; of medium carbon steel; galvanized.

2.03 FABRICATION

A. Glued-laminated timbers shall be manufactured and identified as required in ANSI/AITC A190.1 and ASTM D3737. Additional requirements per Title 24, Section 2303.1.3.1. Make adequate provision for possible erection stresses.

1. Grade 24F-V4 at simple span beams is acceptable.

2. Exposed beams shall be Alaskan Yellow Cedar, grade 20F-V12.

B. Laminated machine finished, but not sanded, to a smooth surface and to a uniform thickness with a maximum allowable variation of 1/64". Warp, twist, or other characteristics which will prevent intimate contact of adjacent glued faces of interfering with uniform bending to a required curvature when clamping pressure is not permitted. Surfaces to be glued must be clean and free from oil, dust and other foreign material detrimental to satisfactory gluing.

C. Employ clamping methods which provide uniform pressure over entire surface area. Nailing in lieu of clamping for pressure is not permitted. Clamping may start at any point but must progress to an end or ends. Apply sufficient gluing pressure to assure close contact of the surfaces and provide a uniformly thin glue line; minimum pressure 100 pounds per square inch. Maintain pressure until adhesive has set. Clamping time and gluing process in strict accordance with adhesive manufacturer's recommendations.

D. Handling or erection tools, equipment and methods designed to prevent scarring the corners and faces or otherwise injuring the member. Sharp instruments or unprotected wire rope or chain slings are not permitted.

E. Fabricate steel hardware and connections with joints neatly fitted, welded and ground smooth.

F. Clean, prepare, and shop prime steel hardware and connections. Provide minimum G60 galvanized coating.

G. Beams, fascias, trim, trellage and other architectural appearing members shall be architectural appearance grade for all exposed members.

PART 3 - ERECTION

3.01 ERECTION

A. Set structural laminated members level and plumb and in correct positions.

B. Provide temporary bracing and anchorage required to hold members in place until permanently secured.

C. Fit members together properly and accurately without trimming, cutting, or any other unauthorized modification. Report discrepancies to architect immediately upon discovery.

END OF SECTION

SECTION 06 41 23
SOLID PHENOLIC CORE CASEWORK

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Shop-fabricated SPC panel cabinets and casegoods.
2. Shop-fabricated SPC panel countertops.
3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
1. Section 06 41 00 for shop-fabricated wood casework.

1.02 REFERENCES

A. Abbreviations and Acronyms:
1. SPC: Solid Phenolic Core.
2. WI: Woodwork Institute.

B. Definitions:
1. Manufacturer: Means plastic laminate, finish hardware, or accessory manufacturer, as the context admits, unless otherwise indicated.
2. Fabricator: Means the casework fabricator, unless otherwise indicated.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate casework finish hardware with adjacent hardware finishes.
2. Coordinate casework design with countertops. Provide reinforcement as required to support countertops and backing. Countertops must not deflect to the point of cracking when subjected to in-service loads.

B. Shelving Performance Requirements:
1. Design Load: Shelving must support at least 50 pounds per square foot uniformly distributed load; not more than 200 pounds total load per shelf.
2. Deflection: Limit deflection under maximum design load to L/200, except that all shelving in the same room, or space must have the same thickness where not concealed by doors. Minimum shelving thickness must be at least 3/4-inch.
3. Permanent Deformation: No permanent deformation at maximum design load after 48 hours continuous loading.

C. Sequencing:
1. Schedule casework deliveries to the project site only after the building is enclosed with a permanent enclosure; “wet work” within storage areas (including concrete, cast underlayment, mortaring, grouting, plastering, and gypsum board finishing) is complete and cured or dried to a

condition of equilibrium; storage areas are broom- and vacuum-clean; and the HVAC system is activated, operating, and maintaining ambient conditions at occupancy levels.

2. Install casework only after all other finishing operations are complete, especially overhead finishes.
3. After casework installation, maintain ambient conditions within design range until Final Completion.

D. Scheduling:

1. Acclimation: Allow sufficient time in the construction schedule to acclimate casework to specified ambient conditions for between 72 hours and 6 weeks before installation begins, or until moisture content is not more than 8 percent, when measured with a moisture meter at specified ambient conditions.

1.04 SUBMITTALS

A. Action Submittals: Submit the following for responsive action (formal review and approval).

1. Product Data: For manufactured items, submit manufacturer's product data, specifications, and all other information necessary to show conformance to the Contract Documents, excluding material safety data sheets (MSDSs), which are returned to the Contractor without review or responsive action.
2. Shop Drawings:

    a. Submit dimensioned plans and elevations drawn to scale and showing casework layout and types. Show locations, sizes, and extents of all casework, accessories, and trim. Label manufactured items by product name.

    b. Include project-specific dimensioned details drawn to scale showing profiles, shapes, joints, seams, and dimensions, including coves, miters, and corner conditions specific to the project. Cross-reference details to plans and elevations.

    c. Indicate method of attaching, fastening, joining, adhering, and anchoring to adjacent construction.
3. Samples: Submit at least one 8-inch square representative fabrication sample for each casework type, color, finish, and variety, including core panels, facings, and edgings.

B. Informational Submittals: Submit written descriptions confirming experience specified in QUALITY ASSURANCE article below for information (informal review: responsive action not expected or required, except to record non-conformance with submittal requirements).

1.05 QUALITY ASSURANCE

A. Regulatory Requirements: Casework must conform to the requirements of CBC section 1407 and have a maximum FSI Value of 25 or less and a maximum SDI Value of less than 10 (Class A), when tested in conformance with ASTM E 84.

B. Quality Standard: Provide casework conforming to Architectural Woodwork Institute/ Architectural Woodwork Manufacturer's Association of Canada/ Woodwork Institute publication "*Architectural Woodwork Standards*" requirements for each specified Grade.

C. Qualifications:

1. Fabricators: Company or individuals must have at least 10 years' experience fabricating casework installed on at least 100 previous projects similar to this project in size, material, design, and complexity.

2. Installer: Company or individuals must have at least 5 years' experience installing casework for at least 30 previous projects similar to this project in size, material, design, and complexity.
3. Supervisors: Individuals must have at least 7 years' experience installing casework for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading casework installers.

1.06 HANDLING

A. Receiving: Inspect all deliveries for deteriorated, damaged, and defective items.
   1. Reject items that are not packaged in a manner that prevents damage; or that exhibit deterioration or damage or have damaged or open packaging or containers.
   2. Unload and store only inspected and accepted items.

B. Storage: Store unloaded items indoors as shipped, upright in their original packaging or containers, within dry, well-ventilated, broom-cleaned and enclosed storage areas.
   1. Furnish adequate dunnage and bracing during storage.
   2. Prevent stored items from contacting the floor, from soiling and staining, and from deterioration and damage.
   3. Do not leave items uncovered where they might become wet; or exposed to heat or sudden changes in temperature or relative humidity; or other sources of deterioration and damage, including dust and other airborne contaminants.

C. Handling: Handle items in a manner that that prevents damage.

D. Damaged Item Replacement: Promptly remove and replace deteriorated, damaged, or defective casework with undamaged casework that does not exhibit deterioration, damage, or defects.

E. Packaging Waste Management: Do not burn or bury construction waste at the project site. Remove and legally dispose of all construction waste away from the project site.

PART 2 - PRODUCTS

2.01 ARCHITECTURAL CASEWORK

A. Cabinets and Casegoods: SPC panel casework conforming to the referenced quality standard, Section 10 requirements for Custom Grade, Construction Type B (face frame) single-length cabinet sections with Interface Style 1 flush overlay cabinet doors and drawers.

2.02 SOLID PHENOLIC CORE PANEL CONSTRUCTION

A. Description: SPC panel material consisting of Phenolic impregnated Kraft paper core and an integrated face sheet of clear melamine over melamine-impregnated decorative paper surfaces.

B. Products: Provide the following manufactured by Trespa International B.V., or equal., or equal.
   1. Countertops, Drawer Faces, and Doors: "Athlon FR" panels, or equal.
   2. Backs, Shelves, and End Panels: "Athlon FR" panels, or equal.

C. Requisite Properties:
   1. Minimum Weight: At least 93 pounds per cubic foot.
   2. Minimum Thickness:

a. Cabinet Sides and Bottoms: At least 1/2-inch.

b. Door and Drawer Heads: At least 1/2-inch.

c. Drawer Bottoms: At least 1/4-inch.

d. Horizontal Rail Supports: At least 1/2-inch.

e. Cabinet Backs: At least 1/4-inch.

f. Wall Cabinet Backs: At least 1/4-inch.

g. Cabinet Shelves: At least 3/4-inch.

h. Work Surfaces: Indicated on the Drawings or selected by the Architect, or equal.

3. Grade: Fire resistant grade.
4. Edges: Provide eased exposed edges.
5. Color: Selected by the Architect.
6. Pattern:
7. Finish: Double Sided Crystal (smooth). Double Sided Quartz (

D. Performance Requirements:
1. Minimum Modulus of Elasticity: At least 1.5 million pounds per square inch.
2. Minimum Shear Strength: At least 2,000 pounds per square inch.
3. Minimum Compressive Strength: At least 24.000 pounds per square inch.
4. Maximum Water Absorption: Not more than 3 percent.

2.03 FINISH HARDWARE

A. General:
1. Provide all hardware indicated, specified, and necessary for a complete installation.
2. Hardware finish must match the door hardware specified in Section 08 71 00, unless otherwise noted.

B. Manufacturers: Provide products manufactured by one of the following, or equal.
1. Accuride.
2. Blum, Inc.
3. Doug Mockett & Co., Inc.
4. Häfele America Co.
5. Sugastune Corp.

C. Pulls:
1. Description: Back-mounted pulls conforming to BHMA A156.9 Hardware Type No. A09021.
2. Products: Provide “DP128 Series” pulls manufactured by Doug Mockett & Co., Inc., or equal.
3. Requisite Properties:

a. Finish: Indicated on the Drawings or selected by the Architect

D. Hinges:
1. Description: Frameless, self-closing concealed hinges (European cup style) conforming to BHMA A156.9, B01601 with integrated soft-close mechanism in the hinge cup.

2. Product: “Salice Silentia Series” manufactured by Häfele America Co., or equal.
3. Requisite Properties:

    a. Provide hinges with between 95 and 100 degrees of opening for cabinets having retractable doors; and for cabinets next to walls or similar obstructions.

    b. Provide hinges with between 100 and 120 degrees of opening for cabinets requiring additional cabinet access.

    c. Provide hinges with between 165 and 175 degrees of opening for cabinets requiring the most cabinet access; and for installations where there are drawer pullouts in the cabinets.

    d. Provide at least 3 hinges for doors at least 24 inches wide or at least 36 inches high.

    e. Provide either screw- or rapido-mounted hinges.

E. Full Extension Drawer Slides:
1. Description: Heavy Duty full extension slides conforming to BHMA A156.9 Hardware Type No. B05091, with decelerated closing
2. Products: Provide the following supplied by Häfele America Co., or equal.

    a. Light Duty Side Mount Slides: “Accuride 2632” slides, or equal.

    b. Medium Duty Side Mount Slides: “Accuride 3832EC” slides, or equal.

    c. Heavy Duty Side Mount Slides: “Accuride 3657” slides, or equal.

    d. Medium Duty Bottom Mount Slides: “Accuride 3132EC Eclipse Easy-Close” slides, or equal.

    e. Heavy Duty S Bottom Mount Slides: “Accuride 9307” slides, or equal.
3. Grades:

    a. Light Duty Slides: Provide BHMA-certified Grade 1, rated to at least 50 pounds per pair, for pencil drawers; and rated to at least 75 pounds per pair for general purpose drawers.

    b. Medium Duty Slides: Provide BHMA-certified Grade 1HD-100, rated to at least 100-pounds per pair for file drawers up to 24 inches wide.

    c. Heavy Duty Slides: BHMA-certified Grade 1HD-200, rated to at least 200 pounds per pair for lateral file drawers greater than 24 inches wide.
4. Mounting Style:

    a. Provide side-mount slides for cabinet trays and drawers.

    b. Provide bottom-mount slides for cabinet pullouts and heavy duty storage platforms.
5. Finish: Indicated on the Drawings or selected by the Architect.
6. Accessories: Provide stops to prevent accidental removal.

F. Shelf Brackets:
1. Description: Spoon-shaped 1/4-inch nickel-plated steel shelf supports.
2. Product: “Item No. 282.04.739” manufactured by Häfele America Co., or equal.

G. Locks:

1. Description: Cylinder locks that separate the lock core from the cylinder housing, allowing any combination of locking systems.
2. Product: “Cylinder Module System” manufactured by Häfele America Co., or equal.
3. Requisite Properties:

    a. All cabinet doors and drawers must be lockable.

    b. Certain areas may be keyed separate. Everywhere else must be keyed the same.

    c. Provide master keying.

H. Grommets:
1. Standard Grommet Liner and Cap: “MM5A” solid brass grommet liner (fits a 2-7/8-inch hole) and “MM5” solid brass grommet cap (fits a 2-3/4-inch hole).
2. No Gap Small Grommets: “BRV1 Brava Grommet – Small”, or equal (fits a 2-3/8-inch hole size).
3. No Gap Large Grommets: “BRV2 Brava Grommet – Large”, or equal (fits a 3-5/32-inch hole size).
4. Trash Grommet: “TM-1 Steel” stainless steel trash grommet, or equal (fits a 6-inch hole size).
5. Finish: Satin Chrome.

2.04 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the fabricator for actual in-service conditions applicable to the project.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.05 FABRICATION

A. Fabricate items to the dimensions, profiles, and details shown, and in conformance with the specified quality standards requirements, unless otherwise noted or indicated.
1. Shop-assemble work in as large units as practicable to minimize field cutting and jointing.
2. Where necessary to fit at the project site, allow ample allowance for cutting and fitting. Create sufficient scribe where items intersect walls and partitions.
3. Conceal means of fastening various items together.
4. Assemblies must be free from open joints, hammer and machine marks, structural defects, and surface blemishes.

B. Finish Hardware:
1. Accurately fit hardware and install in conformance with the manufacturer's instructions.
2. Accurately fit doors and drawers with uniform clearance at all edges.
3. Doors and drawers must operate freely, but not loosely, without sticking or binding, with all hardware adjusted and functioning properly.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Oversight: Ensure an adequate number of supervisors are present and proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Verification: Verify that in-place construction satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.

C. Evaluation and Assessment:
   1. Identify deficient and non-conforming project conditions.
   2. Perform or arrange and pay costs without reimbursement from Owner for all remedial work necessary to correct or improve deficient conditions, without limitation, before the installer begins work.

3.02 INSTALLATION

A. General Requirements:
   1. Scribe and cope items as necessary for an accurate fit. Perform required cutting, drilling, and fitting for casework installation.
   2. Set casework true to line, to required levels and lines, plumb, square, and cut and fitted without warp or rack; sloped or level as required; with flush well-fitted joints; and in alignment with adjacent construction.
   3. Shim as required with concealed shims.
   4. Fit exposed connections accurately to form flush hairline joints

B. Special Techniques:
   1. Install casework in a manner consistent with the specified grade; and plumb, level, true, and straight with no distortions.
   2. Shim using concealed shims.
   3. Secure to ground, stripping, and blocking with countersunk, concealed fasteners and blind nailing as required for a satisfactory installation.
   4. At gypsum board construction, anchor through wall surface to wood blocking or wood studs only.
   5. Furnish fillers, closures and trim as required for a complete installation. Scribe in place where required.

C. Interface with Adjacent Items:
   1. Provide materials, components, and accessories normally furnished or necessary to securely attach casework to supporting construction.
   2. Casework taller than 42 inches must be seismically anchored.

D. Installation Tolerances: Install casework to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

3.03 CORRECTION AND REPAIR

A. Non-conforming, damaged, and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all

correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
   1. written descriptions of non-conforming, damaged, and defective work;
   2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
   3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

3.04 ADJUSTING

A. Verify smooth and quiet door, drawer, and finish hardware operation.

B. Lubricate and adjust operating parts and finish hardware to function properly, free from warp, twist, binding, and distortion. Confirm latches and locks engage securely without forcing or binding.

C. Rehang or replace doors, drawers, and finish hardware that do not operate freely in a safe and reliable manner.

3.05 CLEANING

A. Cleaning Work: Remove from exposed casework surfaces anything that might interfere with uniform oxidation or weathering. Clean all visible casework surfaces in a manner that does not result in any warranty or guarantee becoming void.
   1. Use cleaning materials, equipment, and accessories supplied, and means, methods, techniques, and procedures required, recommended, or accepted by the manufacturer.
   2. Do not use cleaning materials or procedures known to change, or that might change, the appearance of exposed finishes or adjacent surfaces; or cause deterioration or damage to exposed finishes or adjacent surfaces.
   3. Protect adjacent surfaces not being cleaned from staining, deterioration, damage, or other detrimental effects caused by cleaning.
   4. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be cleaned to the Architect's acceptance.

B. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

3.06 PROTECTION

A. Protect installed casework in place from soiling, deterioration, and damage until Substantial Completion.

B. Do not store anything in, on, adjacent to, or against installed casework unless it is protected from damage. Do not use installed casework as work surfaces.

C. Remove protection when it's no longer needed and before Substantial Completion.

DIVISION 07

THERMAL AND MOISTURE PROTECTION

SECTION 07 11 13
BITUMINOUS DAMPPPROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Bituminous dampproofing.
   2. Protection board and drainage panels.
   3. Surface preparation.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing dampproofing for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing dampproofing for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading dampproofing installers.

B. Submittals: Submit product data and written descriptions of specified qualifications.

C. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
   1. Install at least one 100-square-foot field sample of each waterproofing membrane installation to verify selections made under sample submittal and to set quality standards for installation. Demonstrate surface preparation, crack repair, and joint and corner preparation.
   2. Test dampproofing membrane adhesion to verify surface preparation.
   3. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
   4. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of dampproofing is made from field samples.
   5. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
   6. Approved field samples may remain part of the work after being identified for future reference.

PART 2 - PRODUCTS

2.01 BITUMINOUS DAMPROOFING

A. Description: Solvent-free, cold-applied, emulsified-asphalt dampproofing conforming to one of the following.
   1. Trowel Coats: ASTM D 1227, Type II, Class 1.

2. Brush and Spray Coats: ASTM D 1227, Type III, Class 1.
3. Fibered Brush and Spray Coats: ASTM D 1227, Type II, Class 1.

B. Applications:
1. Below Grade: Used for dampproofing foundations and subgrade walls not subject to hydrostatic pressure; and for lining concrete and masonry planters.
2. Above Grade: Used for dampproofing the exterior face of interior face of masonry, concrete, CMU, and gypsum sheathing walls in cavity wall construction.

C. Products: Provide one of the following manufactured by Henry Co., or equal.
1. Trowel Coats: “HE785”, or equal, asphalt emulsion dampproofing.
2. Brush and Spray Coats: “HE788”, or equal, non-fibered asphalt emulsion dampproofing.
3. Fibered Brush and Spray Coats: “HE789”, or equal, fibered asphalt emulsion dampproofing.

D. Requisite Properties:
1. Minimum Thickness: Between 1/16- and 1/8-inch per coat. Apply one coat typically. Apply 2 coats if installing by spray and in severe conditions
2. Maximum UV Exposure Limit: Not more than 14 calendar days.
3. Maximum High Temperature Application: Up to 120 deg. F.
4. Color: Black.

2.02 PROTECTION BOARD AND DRAINAGE PANELS

A. Protection Board:
1. Description: Pre-fabricated asphaltic board consisting of mineral filled, high-melt-point asphalt core sandwiched between non-woven glass fiber mats.
2. Products: Provide one of the following, or equal.
    a. “Perma-Board GG3 FF” manufactured by HAL Industries, Inc.
    b. “Protection Course” manufactured by WR Meadows.
3. Requisite Properties:
    a. Thickness: At least 3mm.
    b. UV Exposure Limit: Not more than 21 calendar days.
4. Adhesive:
    a. Description: fast drying solvent-based rubber cement
    b. Application Used for adhering protection boards to waterproofing membranes.
5. Product: As supplied, required, recommended, or accepted by the manufacturer.

B. Drainage Panels:
1. Description: Preformed 0.375-inch thick geocomposite drainage sheet system consisting of a hollow studded polystyrene core covered on one side with a non-woven, needle punched polypropylene filter fabric; and on the other side with a smooth polymeric sheet (vertical applications) or a high backing film (horizontal applications).
2. Product: “DB 6000” (vertical applications) or “DB 6200” (horizontal applications) manufactured by Henry Co., or equal.
3. Maximum UV Exposure Limit: Not more than 10 calendar days.

2.03 ACCESSORIES

A. Porous Surface Primers:
   1. Trowel Coats: “Henry Emulsion Primer” or “HE788”, or equal, non-fibered asphalt emulsion dampproofing cut 20 percent by volume with mix water.
   2. Brush and Spray Coats: “HE788”, or equal, non-fibered asphalt emulsion dampproofing cut 20 percent by volume with mix water.
   3. Fibered Brush and Spray Coats: “HE789”, or equal, fibered asphalt emulsion dampproofing cut 20 percent by volume with mix water.

B. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect tile quality, durability, or performance.

C. Fiberglass Reinforcing:
   1. Description: inert, acid- and heat-resistant, 20x10 mesh woven glass fiber fabric having a tensile strength of at least 75 pounds per inch.
   2. Product: “HE183” manufactured by Henry Co., or equal.

D. Liquid Flashing: “HE225F’, or equal, neoprene flashing sealant.

A. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer’s instructions and other requirements and recommendations.
   3. Verify substrates are dry and free of curing compounds, sealers, hardeners, and deleterious and other substances that might interfere with dampproofing adhesion,
   4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
   5. Install dampproofing using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   6. Completed work must match approved samples and mockups, as accepted by the Architect.
   7. Installed dampproofing must be warrantable. Do not install, correct, or replace dampproofing in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.

C. Protection:

1. Protect installed dampproofing in place from deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 07 19 00
WATER REPELLENTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Penetrating water repellent.
   2. Surface preparation.
   3. Site tests and inspections.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing water repellents for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing water repellents for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading water repellent installers.

B. Submittals: Submit product data and written descriptions of specified qualifications.

C. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate water repellents into the mockup as part of the work of this specification section.

D. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
   1. Install at least one 100-square-foot field sample of each water repellent installation to verify selections made under sample submittal and to set quality standards for installation.
   2. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
   3. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of water repellents is made from field samples.
   4. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
   5. Approved field samples may remain part of the work after being identified for future reference.

PART 2 - PRODUCTS

2.01 PENETRATING WATER REPELLENT

A. Description: Clear-drying, water-based silane or siloxane water repellent for weatherproofing (dampproofing) exterior walls exposed to normal weathering.

B. Manufacturer: Provide products manufactured by PROSOCO, Inc., or equal.

C. Products:
1. Cast-in-Place Concrete and CMU Surfaces: “Sure Klean Weather Seal Siloxane WB Concentrate”, or equal.

a. Porous Surfaces (e.g., CMU): Dilute to 1 part concentrate to not more than 9 parts water.

b. Semi-Porous Surfaces (e.g., Cast-in-Place Concrete and Precast Concrete): Dilute to 1 part concentrate to not more than 14 parts water.

c. Dense Surfaces: Dilute to 1 part concentrate to not more than 19 parts water.

D. Requisite Properties:
1. Visual Appearance: When compared visually to an untreated sample under the same lighting conditions, water repellents may not alter the color or sheen of the coated substrate, and must be invisible after application and over the life of the substrate. Confirm visual appearance by mockups and adjust products and applications as required.

2.02 ACCESSORIES

A. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect tile quality, durability, or performance.

A. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer’s instructions and other requirements and recommendations.
3. Verify substrates are dry and free of curing compounds, sealers, hardeners, and deleterious and other substances that might interfere with water repellent absorption.
4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
5. Install water repellents using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
6. Do not exceed the application rate recommended by the manufacturer.
7. Completed work must match approved samples and mockups, as accepted by the Architect.
8. Installed water repellents must be warrantable. Do not install, correct, or replace water repellents in a manner that results in any warranty or guarantee becoming void.

B. Site Tests and Inspections:

1. General: Include site tests and inspections as part of the work of this specification section. The Owner's testing and inspection agency performs tests and inspections.

    a. Through-Wall Water Penetration Testing: Provide water absorption laboratory testing in conformance with the requirements of ASTM E 514.

    b. Surface Water Penetration Testing: Provide water absorption field testing in conformance with the requirements of ASTM Test Method C 1601.

    c. Water Absorption Testing: Provide RILEM Tube absorption field testing.

C. Correction and Repair:
    1. Correct deficiencies that do not conform to the Contract Documents.
    2. Repair non-conforming, damaged and defective work.

TAGDSC, ELMTB, CLSB2010, CLSB3090

SECTION 07 21 50
BUILDING ENCLOSURE INSULATION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Stud bay concealed insulation.
   2. Installation materials.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 09 81 33 for acoustical insulation.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Fiberglass Blanket Insulation: Provide products manufactured by one of the following, or equal.
   1. CertainTeed Corp.
   2. Johns Manville.
   3. Knauf Insulation.
   4. Owens Corning Fiberglass Corp.

B. Rock Wool Blanket Insulation: Provide products manufactured by one of the following, or equal.
   1. Fibrex Insulations, Inc.
   2. ROXUL, Inc.
   3. Thermafiber, Inc.

2.02 CONCEALED STUD BAY INSULATION

A. Description: Asbestos-free mineral fiber blanket insulation conforming to ASTM C 665 requirements for Type I insulation requirements (blankets without membrane coverings), manufactured from slag and naturally occurring rock.

B. Mineral Wool Blanket Insulation: Provide one of the following, or equal.
   1. “COMFORTBATT” manufactured by ROXUL, Inc.
   2. “Thermafiber UltraBatt” manufactured by Owens Corning.

C. Requisite Properties:
   1. Minimum Thermal Resistance: Provide material having an R-value of at least R-4.2 per inch of thickness.

2. Minimum Size: Provide sizes required for a self-supporting friction fit.
3. Minimum Thickness: At least 6-1/4 inches.
4. Minimum Density: At least 0.75 pounds per cubic foot.
5. Facing: None.

2.03 INSTALLATION MATERIALS

A. Insulation Hangers:
1. Application: Used to attach insulation to clean, dry, smooth, non-porous solid surfaces.
2. Manufacturer: Provide products manufactured by AGM Industries, Inc., or equal.
3. Products: Provide the following, or equal.

a. Anchors: “TACTOO Insul-Hangers” adhesively attached spindle-type anchors.

b. Adhesive: “BOSS 348 Multi-Purpose Construction Adhesive” manufactured by Accumetric, LLC or other VOC-compliant insulation hanger adhesive.

c. Insulation Standoff: One-inch “Clutch Clip”.

d. Insulation Retaining Washers: “Style RC 200” round or “SC 250” square washers.

4. Requisite Properties:

a. Base Plate and Insulation Standoff and Retaining Washers: At least 2-inch square by at least 0.149-inch (MSG 28) base metal thickness galvanized perforated steel sheet.

b. Retaining Washers: At least 1-1/2-inch square or diameter by at least 0.149-inch (MSG 28) base metal thickness galvanized perforated steel sheet.

c. Spindle: At least 0.106-inch diameter (SWG 12), zinc-coated wire, depth to suit depth of insulation indicated.

d. Adhesive: Adhesive used with impaling pins must either be manufactured or accepted by the insulation hanger manufacturer. “Peel and press” hangers with self-adhering adhesive backings are prohibited.

B. Mechanical Fasteners: Tape, staples, and other devices for fastening insulation supplied, required, recommended, or accepted by the insulation manufacturer.

C. Hanger Wire: At least 0.106-inch diameter (SWG 12) soft temper zinc-coated wire conforming to ASTM A 641, Class 3 or A coating.

D. Vapor-Retarder Tape: At least 4-inch wide pressure-sensitive tape supplied, required, recommended, or accepted by the manufacturer for sealing insulation facings at joints and penetrations.

E. Adhesive: Supplied, require, recommended, or accepted by the insulation manufacturer to bond insulation securely to substrates indicated without damaging insulation or substrates.

2.04 ACCESSORIES

A. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed insulation and adjacent items.
3. Install insulation using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Extend insulation to envelop entire area insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
5. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.
6. Installed insulation must be warrantable. Do not install, correct, or replace insulation in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Stud Bay Insulation: Install insulation in cavities formed by framing members.
    a. Use insulation that fills the cavities. If more than one length is required to fill the cavities, then provide lengths that will produce a snug fit between ends.
    b. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
    c. Maintain 3-inch clearance around recessed lighting fixtures not rated for or protected from contact with insulation.
    d. Stuff loose-fill insulation into miscellaneous voids and cavity spaces where shown. Compact to roughly 40 percent of normal maximum volume.
    e. For metal-framed wall cavities higher than 96 inches, support unfaced blankets mechanically and support faced blankets by taping insulation flanges to metal stud flanges.
2. Ceiling Insulation:
    a. Install blanket insulation above ceilings where indicated.
    b. Maintain 3-inch clearance of insulation around recessed lighting fixtures.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

D. Protection:
1. Protect installed insulation in place from deterioration and damage until covered.
2. Remove protection when it’s no longer needed and before Substantial Completion.

END OF SECTION

SECTION 07 25 13
SHEET WEATHER-RESISTIVE BARRIERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Polyethylene sheet weather-resistive barriers.
   2. Asphalt-saturated sheet weather-resistive barriers.
   3. Self-adhering sheet flashings integral to sheet weather-resistive barriers.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 07 65 26 for through-wall, opening, penetration, and transition SASM flashings, installation materials, and accessories not integral to WRB installation.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing WRBs installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing WRBs for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing WRBs for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading WRB installers.
   4. Manufacturer's Representative: Individuals must have at least 5 years' technical field experience performing manufacturer's services for at least 50 previous projects similar to this project in size, material, design, and complexity.

B. Submittals: Submit product data, shop drawings, and written descriptions of specified qualifications.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, or performance of installed WRBs. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate WRBs into the mockup as part of the work of this specification section.

E. Warranty:
   1. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 10 years.
   2. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 2 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.01 POLYETHYLENE SHEET WRB

A. Description: Non-woven, non-perforated, non-absorbing, breathable spunbonded HDPE WRB that that (1) resists air flow, bulk water, and wind driven rain; (2) channels water and moisture to the outside of the building envelope; and (3) has a current evaluation report from the NES or ICC-ES demonstrating code compliance when installed as a WRB.

B. Application: Applied to the exterior side of exterior building walls directly over the exterior wall sheathing as a base layer WRB.

C. Products: “Tyvek CommercialWrap” (ICC-ES Report No. ESR-2375) manufactured by E.I. DuPont de Nemours & Co. (Dupont), or equal.

D. Requisite Properties:
   1. Minimum Basis Weight: At least 2.7 ounces per square yard, when measured in compliance with TAPPI Test Method T 410.
   2. Minimum Roll Width: 10 feet.
   3. Maximum UV Exposure Limit: Cover within 365 days.

E. Performance Requirements:
   1. Maximum Water Vapor Permeance: Not more than 23 perms, when measured in compliance with ASTM E 96, Procedure A.
   2. Minimum Water Resistance: At least 280, when tested in compliance with AATCC 127.
   3. Minimum Tensile Strength: At least 35 lbf per inch, when tested in compliance with ASTM D 882.
   4. Surface-Burning Characteristics: wall surfacing having a maximum FSI Value of 10 or less and a maximum SDI Value of less than 10 (Class A), when tested in conformance with ASTM E 84.

F. Accessories:
   1. Primer: “Super 77” multi-purpose adhesive manufactured by 3M Corp., or equal.
   2. Straight Flashing Material:

      a. Description: 30-mil thick self-adhering flashing material with an elasticized polyethylene laminate face coated with butyl adhesive.

      b. Application: Applied to rectangular window flanges, sill plates, corners, and joints.

      c. Product: “StraightFlash”, or equal,

      d. UV Exposure Limit: Cover within 120 calendar days.

3. Flexible Flashing Material:

    a. Description: 70-mil thick self-adhering elastic flexible flashing tape with a spunbonded polyethylene laminate face coated with butyl adhesive.

    b. Application: Applied to recessed and curved window flanges, sill plates, corners, and joints.

    c. Product: “FlexWrap NF”, or equal.

    d. UV Exposure Limit: Cover within 120 calendar days.
4. Seam Tape:

    a. Description: Oriented polypropylene film coated with acrylic adhesive

    b. Product: “Tyvek Tape”, or equal.
5. Transition Flashing Material:

    a. Description: Used where WRB transitions to another system or parapet.

    b. Products: Specified in Section 07 65 26.
6. Fasteners:

    a. Metal Stud Construction: “Tyvek Wrap Cap” fastening system, including “Wrap Cap Screws” and 2-inch diameter “Wrap Cap” HDPE washers.

    b. Wood Stud Construction: “Tyvek Wrap Cap” fastening system, including #4 nails with large one-inch plastic cap fasteners.
7. Primer, Adhesive, Sealant, and Other Accessories: Provide primer, adhesive, sealant, other accessories, and similar secondary items supplied, required, recommended, or accepted by the manufacturer and as necessary for a complete installation.

2.02 ASPHALT-SATURATED SHEET WRB

A. Description: Weather-resistant building paper conforming to Federal Specification FS UU-B-790a Type I (barrier paper), Grade D (water vapor permeable), Style 2 (uncreped, not reinforced, saturated) and having a current evaluation report from the NES or ICC-ES demonstrating code compliance when installed as a WRB.

B. Application: Applied to the exterior side of exterior building walls directly behind exterior Portland cement plaster to separate the plaster assembly from the base layer WRB.

C. Products: Provide one of the following, or equal.
    1. “Davis Wire 60 Minute” (ICC-ES Report No. ESR-2595) manufactured by Davis Wire Corp.
    2. “Super Jumbo Tex 60 Minute” (ICC-ES Report No. ESR-1027) manufactured by Fortifiber Corp.
    3. “GMCraft 60 Minute” (ICC-ES Report No. ESR-2376) manufactured by GMC Roofing & Building Paper Products, Inc.

D. Requisite Properties:
    1. Minimum Basis Weight: At least 6 pounds per 100 square feet (approximately 9.0 ounces per square yard).
    2. Minimum Roll Width: At least 40 inches.
    3. Maximum UV Exposure Limit: Cover within 30 days.

E. Performance Requirements:
   1. Minimum Water Vapor Permeance: At least 5 perms, when measured in compliance with ASTM E 96, Procedure B.
   2. Minimum Water Resistance: At least 60 minutes, when tested in compliance with ASTM D 779.
   3. Minimum Tensile Strength: At least 70 lb^f per inch, when tested in compliance with ASTM D 882.

F. Accessories:
   1. Fasteners: At least 2-inch long, finishing washer head, zinc-plated steel screw fasteners specified in Section 05 05 23, with at least 2-inch diameter HDPE washers.
   2. Sealing Material, Repair Tape, and Other Accessories: Provide mastic, adhesive, pressure-sensitive adhesive tape, and other items supplied, required, recommended, or accepted by the manufacturer and compatible with base layer WRB where in contact.
   3. Sealant: Specified in Section 07 92 00 Joint Sealants. Verify sealant's compatibility with and adequate adhesion to substrates prior to installing sealant in the field. Perform testing in conformance with ASTM C1193, Appendix X.1, Method B.

2.03 ACCESSORIES

A. UV Stable Sheet:
   1. Application: Used to cover primary WRB where primary WRB might be permanently exposed to UV.
   2. Product: Provide one of the following, or equal.
      a. "DELTA-FASSADE S" manufactured by Dörken Systems Inc.
      b. "RevealShield SA" manufactured by VaproShield USA.

B. Sealant:
   1. Description: Silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 25.
   2. Product: "758" manufactured by Dow Corning Corp., or equal.
   3. Color: White.

C. Other Accessories: accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed WRBs and adjacent items.
   3. Install WRBs using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.

4. Perform cutting and fitting as required or necessary for an accurate fit and complete installation.
5. Securely attach WRBs in place to supporting construction.
6. Installed WRBs must be warrantable. Do not install, correct, or replace WRBs in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Placing:

    a. Starting at the bottom of the wall, install WRB horizontally over sheathing and securely attach with a minimum of fasteners.

    b. Lap WRB in shingle fashion at least 3 inches at horizontal seams, and 6 inches at vertical seams. Stagger vertical joints.

    c. To prevent direct contact between metal lath and accessories, and to ensure water tightness, lap the WRB over flanges of plaster accessories. Continue weather barrier uninterrupted behind plaster control joints.

    d. Integrate WRB with flashing materials at windows, doors, and other penetrations to properly discharge water to the exterior face of the wall. Omitted or improperly installed flashing must be corrected prior to installing the WRB.

    e. Seal all joints and penetrations through the WRB with tape.

    f. Continuously tape WRB at window and door openings, and to through-wall flashings.
2. Penetrations: To create an airtight seal between penetrating items and WRBs, seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating WRBs with vapor-retarder tape.

    a. Cut WRB to fit closely and neatly.

    b. Continuously seal edges around penetrations.
3. Repair: Repair tears, holes and other damage with tape; or if too large, with at least 12-inch wide strips or remnants of WRB material centered over damaged areas and at least 6 inches larger all around, whichever is greater.

    a. Continuously tape or seal top layer edges of repair material to bottom layer.

    b. Weather barrier must be free from holes, tears, and punctures at the end of installation.

C. Interface with Adjacent Items: Provide materials, components, and accessories normally furnished or necessary to attach WRB tightly and flat with as few fasteners as possible, and only enough to hold the WRB in place until the final wall finish material is installed.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed WRBs in place from soiling, deterioration, and damage until covering.
2. Remove protection when it’s no longer needed and before covering.

SECTION 07 31 13

ASPHALT SHINGLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Asphalt shingles.
   2. Underlayment.
   3. Roof and eave vents.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing shingles installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing shingles for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing shingles for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading shingle installers.

B. Submittals: Submit product data, shop drawings, samples, and written descriptions of specified qualifications.

C. Maintenance Material Submittals:
   1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish at least 2 percent of the total installed for each shingle type, color, composition, grade, finish, and variety, but not less than one unopened box or container.

D. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed shingles. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

E. Regulatory Requirements:
   1. Fire Resistance Rating: Roof coverings must conform to UL 790 fire resistance requirements for Class A rating. (effective against severe fire test exposures)

F. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 25 years; and for finishes against color fading, chalking, cracking, checking, peeling, and adhesive failure for 20 years.

G. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 5 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Owens Corning.
   2. GAF Materials Corp.
   3. Atlas Roofing Corp.

2.2 COMPOSITE SHINGLES

A. Description: Glass-fiber reinforced, SBS-modified, mineral-granule surfaced asphalt shingles conforming to ASTM D 3462.

B. Product: “TruDefinition Duration Cool Shingles” manufactured by Owens Corning, or equal.

C. Requisite Properties:
   1. Color: “Sand Castle” and “Shasta White”.

2.3 ACCESSORIES

A. Ventilation and Attic Vents:
   1. Products: Indicated on the Drawings or selected by the Architect, or equal.
   2. Requisite Properties:
      a. Size: Indicated on the Drawings or selected by the Architect.
      b. Finish: Indicated on the Drawings or selected by the Architect.

B. Roofing Underlayment: ASTM D 226, Type I, #15 composite-saturated and coated organic felt.

C. Flashing: Specified in Section 07 62 00.

D. Nails: Hot-dip galvanized, conforming to ASTM A 641, Class 1 and sized to penetrate deck at least 3/4-inch or through thickness of deck or batten, or as otherwise required by the shingle manufacturer.

E. Asphalt Roofing Cement: ASTM D 4586, Type II, asbestos free.

F. Elastomeric Sealant: ASTM C 920, silicone-based joint sealant; of Type M or S, Grade NS, Class 25, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O.

G. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   3. Install shingles using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Securely attach shingles in place to supporting construction.
   6. Installed shingles must be warrantable. Do not install, correct, or replace shingles in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Underlayment Installation:
      a. General: Install underlayment in conformance with shingle manufacturer's written recommendations and recommendations in NRCA publication, "*The NRCA Roofing and Waterproofing Manual*".
      b. Double-Layer Roof Felt Underlayment: Install perpendicular to roof slope in parallel courses. Install a 19-inch- wide starter course at eaves and completely cover with full-width second course. Install succeeding courses lapping previous courses 19 inches in shingle fashion. Lap ends a minimum of 6 inches. Stagger end laps between succeeding courses at least 72 inches. Fasten with felt underlayment nails.
      c. Metal-Flashed Open-Valley Underlayment: Install 2 layers of 36-inch- wide roof felt underlayment centered in valley. Stagger end laps between layers at least 72 inches. Lap ends of each layer at least 12 inches in direction to shed water, and seal with asphalt roofing cement. Fasten each layer to roof deck with felt underlayment nails. Lap roof-deck underlayment over first layer of valley underlayment at least 6 inches.
   2. Metal Flashing Installation:
      a. Install metal flashings and other sheet metal to conform to requirements in Section 07 62 00.
      b. Install metal flashings in conformance with shingle manufacturer's written recommendations and recommendations in NRCA publication, "*The NRCA Roofing and Waterproofing Manual*".
      c. Step Flashings: Install with 3-inch headlap extending over the underlying shingle and up the vertical surface. Install with lower edge of flashing just upslope of, and concealed by, butt of overlying shingle. Fasten to roof deck only.
      d. Open-Valley Flashings: Install centered in valleys, lapping ends at least 8 inches in direction to shed water. Fasten upper end of each length to roof deck beneath overlap.

3. Shingle Installation:
    a. Install shingles in conformance with manufacturer's instructions and recommendations and in conformance with NRCA publication, "*The NRCA Roofing and Waterproofing Manual*".
    b. Maintain uniform shingle exposure and coursing throughout roof.
    c. Extend shingles 2 inches over eave fasciae.

C. Correction and Repair:
    1. Correct deficiencies that do not conform to the Contract Documents.
    2. Repair non-conforming, damaged and defective work.
    3. Repair damaged finishes. Restore finishes so that no evidence remains of corrective work. Return to the factory those items that either cannot be refinished in the field, or that contain components that cannot be refinished in the field. Make required alterations and either refinish the entire item or provide a new item.

D. Protection:
    1. Protect installed shingles in place from soiling, deterioration, and damage until Substantial Completion.
    2. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

SECTION 07 54 19
PVC ROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. PVC membrane roofing.
   2. Roofing insulation and cover board.
   3. Installation materials.
   4. Site tests and inspections.
   5. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing roofing installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing roofing for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing roofing for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading roofing installers.
   4. Manufacturer's Representative: Individuals must have at least 5 years' technical field experience performing manufacturer's services for at least 50 previous projects similar to this project in size, material, design, and complexity.

B. Submittals: Submit product data, shop drawings, samples, written descriptions of specified qualifications, and manufacturer's representative reports.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, or performance of installed roofing. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

D. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
   1. Install at least one 100-square-foot field sample of each roofing membrane installation to verify selections made under sample submittal and to set quality standards for installation. Demonstrate surface preparation, crack repair, and joint, and corner preparation.

2. Perform sheet moisture test in conformance with ASTM D 4263.
3. Test roofing membrane adhesion to verify surface preparation.
4. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
5. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of roofing is made from field samples.
6. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
7. Approved field samples may remain part of the work after being identified for future reference.

E. Warranty:
1. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 10 years.
2. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 2 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Provide products manufactured by one of the following, or equal.
1. Carlisle SynTec.
2. Sika Sarnafil, Inc.

2.02 ROOFING MEMBRANE

A. Description: Feltback reinforced PVC roofing membrane conforming to ASTM D 4434, Type II, Grade 1.
1. Unreinforced membranes are prohibited.
2. Private l.abel and third-party-manufactured membranes are prohibited.

B. Product: Provide “Sarnafil G410-15” membrane manufactured by Sika Corp., or equal. (ICC-ES Report No. ESR-1157 and Los Angeles Research Report No. RR 24852).

C. Requisite Properties:
1. Thickness: 60 mils (1.5mm), when measured in conformance with ASTM D 638.
    a. Actual thickness must be at least 60 mils.
    b. Thickness variations permitted in ASTM D 4434 are prohibited for this project.
    c. At least 45 percent of the overall polymer actual thickness must be above the reinforcement scrim.
2. Color: White.
3. Backing: At least 9-ounce-per-square-yard factory-applied felt backing (fleece backed).
4. Reinforcing Scrim: Fiberglass.
5. Roof System Attachment Method: Fully-adhered system.

D. Performance Requirements:

1. Minimum Tensile Strength: At least 1,500 pounds per square inch, when tested in conformance with ASTM D 638.
2. Minimum Elongation: At least 250 percent (machine direction) and 200 percent (cross direction), when tested in conformance with ASTM D 638.
3. Minimium Seam Strength: At least 75 percent of tensile strength, when tested in conformance with ASTM D 638.
4. Minimum Tearing Resistance: At least 15 pounds-force, when tested in conformance with ASTM D 1004.
5. Maximum Water Absorption: Not more than 2.0 percent by weight, when tested in conformance with ASTM D 570.

2.03 ROOFING INSULATION AND COVER BOARD

A. Polyisocyanurate Insulation:
1. Description: Rigid, closed-cell board insulation consisting of a polyisocyanurate (polyiso) foam bonded to glass fiber reinforced organic mat facers on both sides.
2. Products:
    a. Flat Insulation: “Sarnatherm”, or equal.
    b. Tapered Insulation: “Tapered Sarnatherm”, or equal.
3. Requisite Properties:
    a. Long Term Thermal Resistance: Assumed LTTR value of 5.6 per inch of thickness. If proposed insulation LTTR is less than 5.6 per inch, seek a written interpretation from the Architect to determine the necessary minimum thickness required to achieve specified R-values.
    b. Minimum Compressive Strength: At least 20 pounds per square inch, when measured at either 5 percent deformation or yield, whichever occurs first.
    c. Minimum Density: At least nominal 2.0 pounds per cubic foot when measure in conformance with ASTM 1622.
    d. Minimum Tapered Insulation Thickness: At least 1-1/2 inches.
    e. Tapered Insulation Main Slope: 1:48 (1/4-inch in 12 inches).

B. Cover Board:
1. Application: Used in horizontal applications as an overlayment for roof insulation and in vertical applications as a liner for the roof side of parapet walls.
2. Description: Commercial glass mat faced exterior sheathing conforming to ASTM C 1177 requirements for glass mat gypsum substrate.
3. Products:
    a. Bareback Adhered Membrane and Vertical Applications: Provide “DensDeck Prime” manufactured by GP Building Products, or equal.
    b. Mechanically Fastened and Feltback Membrane Applications: Provide “DensDeck” manufactured by GP Building Products, or equal.
4. Horizontal Applications: Provide 1/4-inch thick panels over insulation; provide at least 1/2-inch thick cover board directly over metal decks without insulation.
5. Vertical Applications: Provide 1/2-inch thick panels.
    a. 1/4-inch roof cover board and gypsum sheathing are prohibited for vertical applications.

b. Roof cover boards installed in vertical applications (including as a liner for the roof side of parapet walls) must be installed by the same roofing installer that installs roof cover boards in horizontal applications (including as an overlayment for roof insulation).

c. Non-conformance with the above may negatively affect the specified warranty.

6. Wall Backings:

a. Light-duty wall backings specified in Section 05 40 00 must be installed to support reglets or termination bars in vertical applications, including on the roof side of parapet walls.

b. Wall backings must be installed over metal stud framing members before the roofing installer installs roof cover boards.

2.04 INSTALLATION MATERIALS

A. Tape:
1. Contaminated Material Locations: “Aluminum Tape”, or equal, aluminum foil tape with a pressure sensitive adhesive applied to one side for bonding to substrates.
2. Elsewhere: Provide “Multi-Purpose Tape”, or equal, high rubber content isobutylene-isoprene copolymer tape supplied, required, recommended, approved, or accepted by the manufacturer.

B. Adhesive: The following, or as supplied, required, recommended, approved, or accepted by the manufacturer for the substrate indicated and the environmental conditions under which the roofing membrane is installed.
1. Insulation and Roof Cover Board Adhesive: “Sarnacol 2163 Board Adhesive” or “Sarnacol OM Board Adhesive”, or equal, 2-component foamable polyurethane adhesive.
2. Bareback Membrane Adhesive: “Sarnacol 2121” water-based dispersion adhesive.
3. Feltback Membrane Adhesive: “Sarnacol AD Feltback Membrane Adhesive” or “Sarnacol OM Feltback Membrane Adhesive”, or equal, 2-component foamable polyurethane adhesive.
4. Flashing Adhesive: “Stabond U148A” low-VOC reactivating-type adhesive used to attach membrane to flashing substrate.

C. Sealant: “Multi-Purpose Sealant” single-component urethane sealant, or other sealant supplied, required, recommended, or accepted by the manufacturer.

D. Solvent Cleaner: “Sarnasolv” VOC-compliant solvent cleaner or other cleaning agent supplied, required, recommended, or accepted by the manufacturer.

2.05 ACCESSORIES

A. Flashing Membranes: “Sarnafil G410 Flashing Membrane”, or equal, fiberglass reinforced PVC membrane.
1. Thickness: 60 mils (1.5mm).
2. Color: Match roofing membrane color.

B. Membrane-Clad Flashings:
1. Stainless Steel: “Sarnaclad-SS”, or equal, membrane-clad flashings consisting of at least a 34-mil thick roofing membrane material laminated to one side of at least 0.0250-inch thick (USSG 24) stainless steel. Except for 300 series stainless steel, uncoated and painted metal flashings and accessories are prohibited.

C. Flashing Accessories:

1. Reglets: “Sarnareglet”, or equal, 2-1/4-inch wide extruded aluminum profile with pre-drilled holes for anchors. Attach termination bar to substrate with stainless steel fasteners installed into the pre-drilled holes.
2. Termination Bars:

    a. Attaching Membrane to Roof Deck or Walls and Curbs at Terminations, Penetrations, and at Incline Changes of the Substrate: Provide “Sarnastop”, or equal, low profile, one-inch wide by 1/8-inch thick flat extruded aluminum bar having predrilled holes every 6 inches on center.

    b. Secondary Membrane Attachment for High Wind Conditions: Provide “Sarnabar”, or equal, FMG-approved, heavy-duty, 14-gage, galvanized roll-formed steel bar having pre-punched holes every inch on center to allow various spacing options.
3. Prefabricated Flashings:

    a. Prefabricated Corners: “Sarnacorners”, or equal, 60-mil prefabricated corners.

    b. Single-Pipe Penetration Pipe Boots: “Sarnastack Universal”, or equal, 60-mil thick prefabricated membrane flashings for flashing single rooftop vent stacks and pipes.

    c. Single Penetration: “Open Post Flashing”, or equal, 60-mil thick prefabricated membrane flashings for flashing single obstructed rooftop conduits and pipes.

    d. Multiple Penetrations: Provide cone or pelican hood flashing details fashioned from membrane-clad flashings or from roofing membrane material, as required, recommended, or accepted by the manufacturer.

D. Roof Walkways:
1. Description: High-percentage recycled content PVC heavily textured and profiled rolled-out walkway protection mat
2. Application: Used to protect roofing membrane from mechanical abuse.
3. Product: “Crossgrip Walkway”, or equal, rolled-out walkway protection mat.
4. Requisite Properties:

    a. Size: 36 inches wide by 9/16-inch thick.

    b. Color: Provide light gray walkways; dark-colored walkways are prohibited.

    c. Layout: Conform to the lengths and locations indicated on shop drawings.

    d. Installation: Where design wind speeds exceed 94 miles per hour, and where finished roof slopes exceed 1/2-inch per foot, secure with loops of roofing membrane welded to field sheet. Elsewhere, loose lay on top of installed roof membrane.

E. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
3. Verify substrates are dry and free of curing compounds, sealers, hardeners, and deleterious and other substances that might interfere with roofing adhesion,
4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
5. Install roofing using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
6. Only install roofing under conditions that ensure membrane is free from blemishes and defects.
7. Completed work must match approved samples and mockups, as accepted by the Architect.
8. Installed roofing must be warrantable. Do not install, correct, or replace roofing in a manner that results in any warranty or guarantee becoming void.

B. Site Tests and Inspections:
1. General: Include site tests and inspections as part of the work of this specification section. The Owner's testing and inspection agency performs tests and inspections.
2. Required Tests:

    a. Adhesion Testing: Before beginning work in each area, conduct adhesion tests with manufacturer's representative present at start of installation over each new substrate.

    b. Weld Testing: To ensure properly-welded seams, perform test welds in the morning before starting, after lunch, and anytime there is a change in weather. Before Final Completion, deliver to the Owner signed, dated, and time stamped test welds as a condition of project closeout.

    c. Electric Field Vector Mapping (EFVM) Testing: After roofing is complete, but before overlying construction is placed perform EFVM testing.

    d. Flood Testing: After roofing is complete, but before overlying construction is placed, each deck area is flood tested for leaks in conformance with ASTM D 5957.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

D. Protection:
1. Protect installed roofing in place from deterioration and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

RSTLNE, TAGDSC, ELMTB, CLSB3010, CLSB3090

SECTION 07 62 00
SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shop-fabricated or field-flashings used for roofing and flashing applications.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install flashings that conform to the profiles indicated and other Contract Document requirements; meets specified performance criteria; and result in structurally sound non-corroding assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes, profiles, and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Fabricator: Company or individuals must have at least 10 years' experience fabricating flashings installed on at least 100 previous projects similar to this project in size, material, design, and complexity
   2. Installer: Company or individuals must have at least 5 years' experience installing flashings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing flashings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading flashing installers.
   4. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, shop drawings, written descriptions of specified qualifications, and delegated design submittals.

D. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed flashings. Resolve each condition.
   4. Finalize construction schedule.

5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

E. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate flashing into the mockup as part of the work of this specification section.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Hot-Dip Galvanized and Galvannealed Steel Sheet: ASTM A 653, CS Type B (commercial steel), with equal coating weight on each surface, coating weight designation (mass designation) indicated below on both surfaces.
   1. Natural Finish (Galvanized): Provide material with at least a G90 coating weight, regular spangle, chemically treated (desired for humid-storage stain resistance; can still be painted; recommended for sheet that will be used unpainted), and oiled (intended as a corrosion inhibitor; sheet must be thoroughly cleaned to remove the oil prior to painting).
   2. Shop-Painted Finish (Galvanized): Provide material with at least a G90 coating weight, minimized spangle, chemically treated (desired for humid-storage stain resistance; can still be painted; recommended for sheet that will be used unpainted), and oiled (for enhanced formability; sheet must be thoroughly cleaned to remove the oil prior to painting).
   3. Field-Painted Finish (Galvannealed): Provide material with at least an A60 coating weight, not chemically treated, not oiled, and mill phosphatized (paint-grip finish; provides enhanced lubricating characteristics).

B. Stainless Steel Sheet:
   1. Exposed Locations: ASTM A 666 (annealed and tempered), Type 304L (for welded applications) or Type 304 (for all other applications), annealed, No. 2 (half hard) temper (hardness between Rockwell B-65 and B-70; can be bent 90 degrees across the direction of rolling around a radius equal to its thickness), passivated in conformance with ASTM A 967.
      a. Natural Finish: Furnish materials having a No. 2B (bright) finish.
      b. Painted Finish: Furnish materials having a No. 2D (matte) finish.
   2. Concealed Locations: ASTM A 240 (annealed) Type 304L (for welded applications) or Type 304 (for all other applications), annealed, No. 2 (half hard) temper (hardness between Rockwell B-65 and B-70; can be bent 90 degrees across the direction of rolling around a radius equal to its thickness), passivated in conformance with ASTM A 967.
   3. Natural Finish: Furnish materials having a No. 4 (bright) finish.

C. Aluminum Sheet: ASTM B 209, 5005-H32 (for anodic finishing) and 3003-H14 (for painted or unfinished sheet).

D. Pre-Painted Coated Steel Coil and Sheet: ASTM A 755.
   1. Sheet: Hot-dip galvanized and galvannealed steel sheet.
   2. Top Side Finish: 70-percent by weight liquid polyvinylidene fluoride (PVDF) coating system conforming to AAMA 2605 and consisting of a prime coat applied to a DFT of at least 0.2-mil and solid color coat applied to a DFT of at least 0.75-mil; or metallic color coat applied to a DFT of at least 0.75-mil and a clear top coat applied to a DFT of at least 0.50-mil.
   3. Reverse Side Finish: 0.25-mil DFT acrylic bottom side primer and polyester wash coat (backercoat).
   4. Painted Metallic Finishes: Panels, components, and accessories having a painted metallic finish must be finished such that the metallic finish directionality (grain) of all components runs

in the same direction when installed. Color variation caused by failurein conformane with this requirement is rejected as non-conforming work.

2.02 FABRICATION

A. Roofing and Roof Edge Flashings and Trim:
   1. Copings: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   2. Gravel Stops: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   3. Scuppers and Conductor Heads: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   4. Gutters: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   5. Downspouts: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.

B. Other Sheet Metal Flashings and Trim:
   1. Interlocking Counterflashing: Provide same material and thickness as reglets.
   2. Through-Wall Flashings: Fabricate from at least 0.0250-inch thick (USSG 24) stainless steel sheet.
   3. Opening Flashings in Framed Construction: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   4. Equipment Support Flashings: Fabricate from at least 0.0299-inch BMT (MSG 22) hot-dip galvanized and galvannealed steel sheet.
   5. Overhead-Piping Drip Pans: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   6. Elevator Hoistway Guards: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet.
   7. Backpans: Fabricate from at least 0.0359-inch BMT (MSG 20) hot-dip galvanized and galvannealed steel sheet, with equal coating weight on each surface, coating designation G90, not chemically treated, not oiled. Stiffen back pans as necessary to prevent “oil canning” or excessive deflection under load.
   8. Flashings and Trim in Contact with Aluminum Components: Fabricate from at least 0.032-inch aluminum sheet.
   9. Flashings and Trim in Contact with Concrete, Gravel, or Soil and Elsewhere Indicated: Fabricate from at least 26-ga. stainless steel Type 316 sheet.
   10. Other Flashings and Trim: Unless otherwise noted, At least 24-ga. inch BMT (MSG 24) G90 Hot-dip galvanized and galvannealed steel sheet, or from at least 26-ga. stainless steel Type 316 stainless steel sheet.

C. Requisite Properties:
   1. Profiles, Edge Styles, and Attachments: Indicated on the Drawings.
   2. Joint Style: J2 (butt and backup plate).
   3. Fabrication: Provide standard profiles from the SMACNA quality standard publication, Chapter 1.

      a. Fabricate in sections at least 8-feet but not more than 10-feet long,

      b. Fabricate backup plates from the same material and thickness as copings.

      c. Miter corners, seal, mechanically fasten, and solder or weld watertight.

d. All corners and transitions must be shop or factory fabricated. Corner pieces shall extend minimum 12 inches beyond corner in both directions.

e. Only linear transitions may be field fabricated.

f. Finish: Filed-applied duplex coating.

2.03 ACCESSORIES

A. Splash Pans: Standard precast concrete units cast from at least 4,000 pounds per square inch concrete. Precast units must have rounded corners and smooth and dense surfaces free of honeycombs.

B. Soldering Materials:
1. HDG Sheet Metal Solder and Flux: 50-percent tin solder conforming to ASTM B 32 Grade Sn50 and used with a non-corrosive flux.
2. Stainless Steel Sheet Metal Solder and Flux: 60-percent tin solder conforming to ASTM B 32 Grade Sn60 and used with an acid flux.

C. Fasteners: Provide fasteners and accessory materials suitable to the type of use and conditions of installation and service indicated; and as required for producing secure attachment to supporting construction without staining or deterioration of either the base materials or fastened materials; or deterioration of the fastener itself when in contact with base materials or fastened materials.
1. Pop rivet attachment is prohibited.
2. Provide fasteners are made of the same material as the fastened material or have a suitable barrier protection coating.

a. Apply corrosion-inhibiting material (e.g., pastes, washers, compounds, etc.) under the heads of screws or bolts inserted into dissimilar metal, even if they are already treated or have a protective coating.

b. Washers, gaskets, and sleeves must be made of plastic or closed-cell polychloroprene (Neoprene).
3. Verify fasteners and accessories that are galvanically compatible with fastened materials under conditions of installation and service, as demonstrated by the fastener manufacturer based on testing and field experience. Do not use fasteners that are corrosive or otherwise incompatible with fastened materials.
4. Where fasteners are subject to loosening or turning out due to thermal and structural movements, wind loads, vibration, and other causes, provide self-locking devices that either maintain tension in the fastener assembly or remain locked even if tension in the assembly is lost. (e.g. washers, locknuts, and similar items)
5. Exposed fasteners are prohibited on faces exposed to view. Provide concealed fasteners and expansion provisions. Where unavoidable, provide flat head cap screws (type FHCS) with drive slots filled and finished flush and smooth with adjacent surfaces.

D. Underlayment:
1. Description: Self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/non-asphaltic butyl adhesive flashing membrane, with release liner on the adhesive side. Adhesive may not contain any asphalt.
2. Product: “Grace Ultra” manufactured by GCP Applied Technologies, or equal.
3. Requisite Properties:

a. Minimum Thickness: At least 30 mils.

b. Minimum Roll Width: 36 inches.

c. Maximum UV Exposure Limit: Not more than 100 days.

d. Maximum High Temperature Application: Up to 300 deg F.

E. Sealant:

1. Exposed Sealant: “756 SMS” neutral-curing silicone sealant manufactured by Dow Corning Corp., or equal conforming to ASTM C 920.
2. Concealed Sealant: Single-component, solvent-release plasticized polyisobutylene (butyl rubber) conforming to ASTM C 1311; black color.

F. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, non-sag, nontoxic, non-staining tape 1/2-inch wide and 1/8-inch thick.

G. Bituminous Coating: Cold-applied asphalt emulsion conforming to ASTM D 1187.

H. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify that in-place construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed items
3. Scribe and cope items as necessary for an accurate fit. Perform required cutting, drilling, and fitting for flashing installation.
4. Set flashings true to line, to required levels and lines, plumb, square, and cut and fitted without warp or rack; sloped or level as required; with flush well-fitted joints; and in alignment with adjacent construction.
5. Shim as required with concealed shims.
6. Securely attach flashings in place to supporting construction.

B. Special Techniques:

1. Roof Drainage System: Install sheet metal roof drainage components as indicated to produce a complete roof drainage system conforming to the referenced standard.
2. Roof Flashing: Install sheet metal flashing and trimin conformane with performance requirements and the SMACNA quality standard publication requirements. Provide concealed fasteners where possible, set units true to line, and level. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
3. Roof Edge Flashing: Anchor to resist uplift and outward forces in conformance with the recommendations of the SMACNA quality standard publication. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch centers.
4. Copings: Anchor to resist uplift and outward forces in conformance with the recommendations of the SMACNA quality standard publication requirements.

a. Interlock exterior bottom edge of coping with continuous cleat anchored to the supporting substrate at not more than 24-inches on center.

b. Anchor the interior leg of copings with washers and screw fasteners through slotted holes at not more than 24 inches on center.

5. Pipe and Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending a minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.
6. Counterflashing: Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with sealant. Secure in a waterproof manner by means of snap-in installation and sealant.
7. Roof-Penetration Flashing: Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof. All penetrations must receive umbrella flashings.
8. Wall Flashing: Install sheet metal wall flashing as indicated, and to intercept and exclude penetrating moisture in conformance with the referenced standard's recommendations.
9. Opening Flashing in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend beyond wall openings as indicated on the shop drawings.
10. Miscellaneous Flashing:

a. Equipment Support Flashing: Weld or seal flashing with elastomeric sealant to equipment support members.

b. Overhead-Piping Safety Pans: Suspend pans independent from structure above as indicated. Pipe and install drain lines to plumbing waste or drainage system as indicated on the plumbing drawings.

C. Installation Tolerances: Shim and align flashing within an installed tolerance of 1/4-inch in 20 feet on slope and location lines indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged, and defective work.

E. Protection:
1. Protect installed flashings in place from deterioration and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 07 65 26
SASM FLASHING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Through-wall, opening, penetration, and transition SASM flashings that are not integral to WRB or AB installation.
   2. Roof and façade SASM underlayment.
   3. Installation materials.
   4. Surface preparation.
   5. Site tests and inspections.
   6. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 07 25 13 for self-adhering sheet flashings, installation materials, and accessories integral to sheet WRB installation.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing flashings installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing flashings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing flashings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading flashing installers.
   4. Manufacturer's Representative: Individuals must have at least 5 years' technical field experience performing manufacturer's services for at least 50 previous projects similar to this project in size, material, design, and complexity.

B. Submittals: Submit product data, shop drawings, and written descriptions of specified qualifications.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, or performance of installed WRBs. Resolve each condition.
   4. Finalize construction schedule.

5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate flashings into the mockup as part of the work of this specification section.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
1. Carlisle Coatings and Waterproofing Inc.
2. GCP Applied Technologies.
3. Henry Co.

2.02 THROUGH-WALL SASM FLASHING

A. Standard Through-Wall Flashing:
1. Description: Self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/rubberized asphalt adhesive flashing membrane, with release liner on the adhesive side, conforming to AAMA 711 requirements for self-adhered flashing materials.
2. Applications: Through-wall flashing for cavity wall applications.
3. Products: “Perm-A-Barrier Wall Flashing” manufactured by GCP Applied Technologies, or equal.
4. Requisite Properties:
    a. Minimum Thickness: At least 40 mils.
    b. Minimum Roll Width: At least 12 inches.
    c. Maximum UV Exposure Limit: Not more than 45 days.
    d. Color: Green with repeated logo imprint.
5. Performance Requirements:
    a. Maximum Water Vapor Transmission: Not more than 0.05-perm, when tested in conformance with ASTM E 96 method B.
    b. Minimum Pull Adhesion to Concrete: At least 60 pounds per foot, when tested in conformance with ASTM D 903 modified.
    c. Minimum Low Temperature Flexibility: Unaffected at minus 45 deg. F, when tested in conformance with ASTM D 1970.
    d. Minimum Elongation: At least 200 percent, when tested in conformance with ASTM D 412 die C modified.

B. Aluminum-Faced Detail Membrane:
1. Description: Aluminum-faced self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/rubberized asphalt adhesive, with release liner on the adhesive side, conforming to AAMA 711 requirements for self-adhered flashing materials.
2. Applications: Detail membrane for air and vapor barrier applications.

3. Restrictions: May not be used when aluminum facing might contact cementitious materials (e.g., Portland cement plaster) or dissimilar metals.
4. Products: “Perm-A-Barrier Aluminum Flashing” manufactured by GCP Applied Technologies, or equal.
5. Requisite Properties:
    a. Minimum Thickness: At least 40 mils.
    b. Minimum Roll Width: At least 9 inches.
    c. Maximum UV Exposure Limit: Not more than 270 days.
    d. Color: Natural finish aluminum.
6. Performance Requirements:
    a. Maximum Water Absorption: Not more than 0.1 percent, when tested in conformance with ASTM D 570.
    b. Minimum Puncture Resistance: At least 80 pounds, when tested in conformance with ASTM E 154.
    c. Minimum Elongation: At least 200 percent, when tested in conformance with ASTM D 412 die C modified.

2.03 OPENING AND PENETRATION SASM FLASHING

A. Standard SASM Flashing:
1. Description: Self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/rubberized asphalt adhesive flashing membrane, with release liner on the adhesive side, conforming to AAMA 711 requirements for self-adhered flashing materials.
2. Applications: Deck-to-wall intersections, inside and outside corners of sheathing, wall-to-wall tie-ins, foundation sill plates, sheathing panel seams, and other non-roof detail areas.
3. Restrictions: May not be used
    a. in hot desert areas in the southwestern United States;
    b. in contact with with flexible PVC or vinyl windows; and
    c. with certain metal windows having integral nail fins.
4. Products: “Vycor Plus” manufactured by GCP Applied Technologies, or equal.
5. Requisite Properties:
    a. Minimum Thickness: At least 25 mils.
    b. Minimum Roll Width: At least 9 inches.
    c. Maximum UV Exposure Limit: Not more than 21 days.
    d. Color: Black-gray.
6. Performance Requirements:
    a. Maximum Water Vapor Transmission: Not more than 0.05-perm, when tested in conformance with ASTM E 96 method B.

b. Minimum Pull Adhesion to Plywood: At least 3 pounds per inch, when tested in conformance with ASTM D 903 modified.

c. Minimum Low Temperature Flexibility: Unaffected at minus 20 deg. F. , when tested in conformance with ASTM D 1970.

d. Minimum Elongation: At least 250 percent, when tested in conformance with ASTM D 412 die C modified.

B. Aluminum-Faced SASM Flashing:

1. Description: Aluminum surfaced self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/rubberized asphalt adhesive, with release liner on the adhesive side, conforming to AAMA 711 requirements for self-adhered flashing materials.
2. Applications: Deck-to-wall intersections, inside and outside corners of sheathing, wall-to-wall tie-ins, foundation sill plates, sheathing panel seams, and other non-roof detail areas.
3. Restrictions: May not be used

   a. in hot desert areas in the southwestern United States;

   b. in contact with flexible PVC or vinyl windows;

   c. with certain metal windows having integral nail fins; and

   d. when aluminum facing may contact cementitious materials (e.g., Portland cement plaster) or dissimilar metals.
4. Products: “Vycor Aluminum Flashing” manufactured by GCP Applied Technologies, or equal.
5. Requisite Properties:

   a. Minimum Thickness: At least 25 mils.

   b. Minimum Roll Width: At least 6 inches.

   c. Maximum UV Exposure Limit: Not more than 350 days.

   d. Color: Natural finish aluminum.

C. Butyl SASM Flashing:

1. Description: Self-adhering cross-laminated polypropylene sheet/non-asphaltic butyl adhesive flashing membrane, with release liner on the adhesive side, conforming to AAMA 711 Level 3 requirements for elevated exposure self-adhered flashing materials. Adhesive may not contain any asphalt.
2. Applications: Used for flashing around window and door headers, sills, jambs, thresholds, and nailing flanges; and under exterior plaster (stucco) trims.
3. Products: “Vycor PRO” manufactured by GCP Applied Technologies, or equal.
4. Requisite Properties:

   a. Minimum Thickness: At least 14 mils.

   b. Minimum Roll Width: At least 9 inches.

   c. Maximum UV Exposure Limit: Not more than 100 days.

   d. Color: White with green paint.

2.04 SASM ROOF AND FAÇADE UNDERLAYMENT

A. High Temperature SASM Underlayment:
   1. Description: Self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/butyl adhesive flashing membrane, with release liner on the adhesive side.
   2. Applications: Roof detail areas, including under equipment flashings, as ice dam protection, at roof valleys and rake edges, and around chimneys and skylights.
   3. Restrictions: May not be used
      a. folded over roof edges, unless protected by a drip edge, gutter, or other flashing material;
      b. on chamfered edges of wood planks;
      c. installed directly over old roof coverings;
      d. installed directly under roof coverings that are especially sensitive to corrosion, including zinc, without providing proper ventilation; and
      e. installed under copper, Cor-Ten, or zinc metal roofing in high altitudes.
   4. Products: “Grace Ice & Water Shield HT” manufactured by GCP Applied Technologies, or equal.
   5. Requisite Properties:
      a. Minimum Thickness: At least 40 mils.
      b. Minimum Roll Width: 36 inches.
      c. Maximum UV Exposure Limit: Not more than 100 days.
      d. Maximum High Temperature Application: Up to 260 deg F.
      e. Color: Gray-black.
   6. Performance Requirements:
      a. Minimum Membrane Tensile Strength: At least 31 pound feet per inch, when tested in conformance with ASTM D 412, Die C modified.
      b. Minimum Membrane Elongation: At least 250 percent, when tested in conformance with ASTM D 412, Die C modified.
      c. Minimum Low Temperature Flexibility: Unaffected to at least -20 deg. F, when tested in conformance with ASTM D 1970.
      d. Minimum Adhesion to Plywood: At least 5.0 pounds per inch of width, when tested in conformance with ASTM D 903.
      e. Maximum Permeance: Not more than 0.05 perms, when tested in conformance with ASTM E 96 method B

B. Butyl SASM Underlayment:
   1. Description: Self-adhering cross-laminated high-density polyethylene (HDPE) composite sheet/non-asphaltic butyl adhesive flashing membrane, with release liner on the adhesive side. Adhesive may not contain any asphalt.
   2. Applications: Roof detail areas, including under equipment flashings, as ice dam protection, at roof valleys and rake edges, and around chimneys and skylights.

3. Restrictions: May not be used

    a. in contact with polysulfides;

    b. in contact with flexible PVC or vinyl windows; and

    c. with high concentrations of resin (pitch) that may be found in some wood plank decks.
4. Products: “Grace Ultra” manufactured by GCP Applied Technologies, or equal.
5. Requisite Properties:

    a. Minimum Thickness: At least 30 mils.

    b. Minimum Roll Width: 36 inches.

    c. Maximum UV Exposure Limit: Not more than 100 days.

    d. Maximum High Temperature Application: Up to 300 deg F.

    e. Color: Gray-black.
6. Performance Requirements:

    a. Minimum Membrane Tensile Strength: At least 250 pounds per square inch, when tested in conformance with ASTM D 412, Die C modified.

    b. Minimum Membrane Elongation: At least 250 percent, when tested in conformance with ASTM D 412, Die C modified.

    c. Minimum Low Temperature Flexibility: Unaffected to at least -2 deg. F , when tested in conformance with ASTM D 1970.

    d. Minimum Adhesion to Plywood: At least 3.0 pounds per inch of width, when tested in conformance with ASTM D 903.

    e. Maximum Permeance: Not more than 0.05-perm, when tested in conformance with ASTM E 96 method B

2.05 INSTALLATION MATERIALS

A. Liquid Flashing:
1. Description: Trowel grade, asphalt modified urethane.
2. Application: Used as repair material for defects on concrete surfaces; as fillet and reinforcement material at inside corners; as flashing material at outside corners and around drains, protrusions, curbs and parapets; and as sealing material at membrane terminations.
3. Product: “Bituthene Liquid Membrane” manufactured by GCP Applied Technologies, or equal.

B. Green Concrete Primer:
1. Description: Low-VOC solvent-based primer.
2. Applications: Used to prime green concrete cured less than 7 days; and to prime damp concrete, masonry, sheathing or wood surfaces to which SASMs are applied.
3. Product: “Bituthene Primer B2 LVC" manufactured by GCP Applied Technologies, or equal.

C. Sheathing Primer:
1. Description: Water-based primer.
2. Application: Used to prime fiber cement and GMF gypsum sheathing.

3. Product: “Perm-A-Barrier WB Primer” manufactured by GCP Applied Technologies, or equal.

2.06 ACCESSORIES

A. Sealant:
   1. Description: Silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 25.
   2. Product: “758” manufactured by Dow Corning Corp., or equal.
   3. Color: White.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer’s instructions and other requirements and recommendations.
   3. Verify substrates are dry and free of curing compounds, sealers, hardeners, and deleterious and other substances that might interfere with flashing adhesion,
   4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
   5. Install flashings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   6. Only install flashings under conditions that ensure they are free from blemishes and defects.
   7. Completed work must match approved samples and mockups, as accepted by the Architect.
   8. Installed flashings must be warrantable. Do not install, correct, or replace flashings in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Accurately align flashing membranes and maintain uniform side and end laps at least 3 inches or as specifically depicted in the project details. Apply flashing membranes with side laps shingled in the direction of bulk water flow.
   2. Clean seam areas, overlap flashing membranes, and roll side and end laps in conformance with the flashing manufacturer's installation instructions to ensure a watertight seam installation.
   3. Press and form material tightly against the substrate.
      a. Pressure is essential to eliminate wrinkles and bubbles.
      b. Ensure complete and continuous adhesion by using a hard neoprene or stainless steel hand roller.
      c. Apply sealant or liquid membrane at flashing membrane leading edges.
   4. Install flashing around windows in the following order.

a. Install in conformance with details indicated on Drawings.

b. Install in conformance with the flashing membrane manufacturer, and the door and window manufacturers' installation instructions.

c. Install in conformance with ASTM E 2112.

5. Install flashing under copings over wall flashing, WRBs, and roof membranes.

a. Provide aluminum-faced flashing separation at incompatible materials.

b. Lap joints at least 3 inches.

c. Hand-roll seams for complete adherence to substrate.

C. Site Tests and Inspections:

1. General: Include site tests and inspections as part of the work of this specification section. The Owner's testing and inspection agency performs tests and inspections.
2. Adhesion Testing: Before beginning work in each area, conduct adhesion tests with manufacturer's representative present at start of installation over each new substrate.

D. Correction and Repair:

1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

E. Protection:

1. Protect installed equipment in place from deterioration, and damage until covering.
2. Remove protection when it's no longer needed and before covering.

SECTION 07 92 00
JOINT SEALANTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Traffic sealants.
   2. Exterior façade sealants.
   3. Interior joint sealants.
   4. Joint sealant backings.
   5. Surface preparation.
   6. Site tests and inspections.
   7. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 08 81 00 for structural sealants.
   2. Section 09 81 33 for acoustical sealants.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing joint sealants for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing joint sealants for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading joint sealant installers.

B. Submittals: Submit product data, samples, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acrylic Latex Sealant Manufacturers:
   1. LATICRETE International, Inc.
   2. Pecora Corp.
   3. Tremco, Inc.

B. Polyurethane Sealant Manufacturers: Provide products manufactured by one of the following, or equal.
   1. BASF Building Systems.
   2. Pecora Corp.
   3. Sika Corp.

C. Silicone Sealant Manufacturers: Provide products manufactured by one of the following, or equal. Private label and third-party-manufactured sealants are prohibited.
   1. Dow Corning Corp.
   2. Momentive Performance Materials, Inc.

2.02 TRAFFIC JOINT SEALANTS

A. High Modulus Polyurethane Traffic Sealant:
   1. Application: Used to weather seal interior and exterior walkways, plazas, decks, parking garages, and similar horizontal installation joints subject to pedestrian or vehicular traffic.
   2. Description: Polyurethane sealant conforming to ASTM C 920 requirements for Type S, Grade P, Class 25, Use T, M or O sealant, as applicable.
   3. Product: Provide one of the following, or equal.
      a. “Sonneborn Sonolastic SL 1” manufactured by BASF Building Systems.
      b. “Urexpan NR-201” manufactured by Pecora Corp.
      c. “Sikaflex-1C SL” manufactured by Sika Corp.
   4. Colors: Selected by the Architect from the manufacturer’s standard colors.

2.03 EXTERIOR FACADE SEALANTS

A. Ultra-Low Modulus Silicone Sealant:
   1. Description: Neutral-curing silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 100/50, Use NT, A or O sealant, as applicable.
   2. Application: Used for sealing expansion and control joints, precast concrete panel joints, EIFS joints, curtainwall joints, mullion joints, stone pavers, and other exterior building joints subject to extreme or dynamic movement.
   3. Products: Provide one of the following, or equal.
      a. “790” manufactured by Dow Corning Corp.
      b. “GE SCS 2700 SilPruf LM” manufactured by Momentive Performance Materials, Inc.
   4. Colors: Selected by the Architect from the manufacturer’s standard colors.

B. Low Modulus Silicone Sealant:
   1. Description: Neutral-curing silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 50, Use NT, M, G, A or O sealant, as applicable.
   2. Application: Used for weatherproofing building facade materials, including glass, aluminum, steel, painted metal, EIFS, granite and other stone, concrete, brick and plastics.
   3. Products: Provide one of the following, or equal.
      a. “795” manufactured by Dow Corning Corp.
      b. “GE SCS 2000 SilPruf LM” manufactured by Momentive Performance Materials, Inc.
   4. Colors: Selected by the Architect from the manufacturer’s standard colors.

C. Butyl Sealant:
   1. Description: Single-component, solvent-release plasticized polyisobutylene (butyl rubber) conforming to ASTM C 1311.
   2. Application: Applied to weather seal joints between sheet metal flashings and substrates.

3. Color: Black.

2.04 SPECIALTY JOINT SEALANTS

A. Low Modulus Porous Surface Sealant:
   1. Description: Neutral-curing silicone sealant conforming to ASTM C 920 for Type S, Grade NS, Class 50, Use NT, M, G, A or O sealant, as applicable.
   2. Application: Used for weatherproofing exterior building joints in sensitive porous stone requiring reduced substrate staining; and with metal panel substrates requiring reduced residue rundown.
   3. Products: Provide one of the following, or equal.
      a. “756 SMS” manufactured by Dow Corning Corp.
      b. “GE SCS 9000 SilPruf NB” manufactured by Momentive Performance Materials, Inc.
   4. Colors: Selected by the Architect from the manufacturer’s standard colors.

2.05 INTERIOR JOINT SEALANTS

A. Single-Component Damp Location Sealant:
   1. Description: Medium or high modulus mildew-resistant silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 25, Use NT, A or O sealant, as applicable.
   2. Products: Provide one of the following, or equal.
      a. “786” manufactured by Dow Corning Corp.
      b. “Sanitary SCS 1700” manufactured by Momentive Performance Materials, Inc.
   3. Colors: White or clear, as selected by the Architect.

B. General Purpose Interior Sealant:
   1. Description: Siliconized acrylic-latex sealant conforming to ASTM C 834 requirements for Type OP, Grade NF classification, as required.
   2. Products: Provide one of the following, or equal.
      a. “Sonneborn Sonolac” manufactured by BASF Building Systems.
      b. “AC-20+Silicone” manufactured by Pecora Corp.
      c. “Tremflex 834” manufactured by Tremco, Inc.
   3. Colors: Selected by the Architect from the manufacturer’s standard colors.

2.06 JOINT SEALANT BACKINGS

A. Closed Cell Foam Joint Backing:
   1. Description: Extruded polyethylene foam cylindrical sealant backings conforming to ASTM C 1330, Type C.
   2. Application: Provide closed-cell backer rod at all exterior applications unless otherwise indicated on the Drawings.
   3. Products: Provide one of the following, or equal.
      a. “Mile High Foam” manufactured by Backer Rod Mfg. Inc.

b. “HBR” or “Green Rod” manufactured by Nomaco, Inc.

c. “NuFlex 870” manufactured by TVM Building Products.

4. Performance Requirements:

a. Maximum Water Absorption: Not more than 0.10 grams per cubic centiliter when tested in conformance with conformance with ASTM C 1016, Procedure B.

b. Minimum Density: At least 24 per cubic meter when tested in conformance with conformance with ASTM D 1622.

c. Maximum Outgassing: Less than 1 bubble when tested in conformance with conformance with ASTM D 1253.

d. Minimum Compression Recovery: At least 90 percent, when tested in conformance with conformance with ASTM D 5249.

e. Minimum Compression Deflection: At least 20.5 percent, when tested in conformance with conformance with ASTM D 5249.

f. Minimum Tensile Strength: At least 200 kPa, when tested in conformance with conformance with ASTM D 1623.

B. Open Cell Foam Joint Backing:

1. Restrictions: Permitted only for interior use, and as the second (interior) line of a double-line sealant application.

C. Bi-Cellular (Dual-Cell) Foam Joint Backings:

1. Description: Extruded polyethylene foam cylindrical sealant backings conforming to ASTM C 1330, Type B.
2. Restrictions: Permitted only for interior use. Only bi-cellular (dual-cell) foam may be used as a backing for single-component (air-cure) materials.
3. Products: “Sof Rod” or “Dual Rod” manufactured by Nomaco, Inc., or equal.
4. Performance Requirements:

a. Maximum Water Absorption: Not more than 0.10 grams per cubic centiliter when tested in conformance with conformance with ASTM C 1016, Procedure B.

b. Density: At least 24 kilograms per cubic meter when tested in conformance with conformance with ASTM D 1622.

c. Maximum Outgassing: Less than 1 bubble when tested in conformance with conformance with ASTM D 1253.

d. Minimum Compression Recovery: At least 90 percent, when tested in conformance with conformance with ASTM D 5249.

e. Minimum Compression Deflection: At least 20.5 percent, when tested in conformance with conformance with ASTM D 5249.

f. Minimum Tensile Strength: At least 200 kPa, when tested in conformance with conformance with ASTM D 1623.

D. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

E. Prefabricated Backer Seal: “BackerSeal” manufactured by Emseal Joint Systems, Ltd., or equal.

2.07 TAPE SEALANTS

A. Foam Tape:
   1. Description: Closed-cell, compressible PVC foam with pressure-sensitive adhesive.
   2. Product: “NORSEAL” foam tape manufactured by Saint-Gobain Performance Plastics, or equal.

B. Pre-Formed Silicone Sheet:
   1. Applications: Used at barrier transitions to rough openings.
   2. Product: “Dow Corning 123 Silicone Seal” manufactured by Dow Corning Corp., or equal.
   3. Colors: Selected by the Architect from the manufacturer’s standard colors.

2.08 ACCESSORIES

A. Primer and Surface Cleaners:
   1. Application: Applied to enhance and strengthen sealant adhesion to porous and nonporous substrates; and help ensure proper joint preparation
   2. Porous and Cementitious Surfaces: “1200 OS Primer” manufactured by Dow Corning Corp., or equal.
   3. Other Surfaces: “Construction Primer P” manufactured by Dow Corning Corp., or equal.

B. Masking Tape: Provide paper masking tape manufactured by 3M, or equal, unless another kind is supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project

C. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer’s instructions and other requirements and recommendations.
   3. Protect work areas from dust and other airborne contaminants during surface preparation and joint sealant installation. Protect adjacent surfaces against soiling and damage.
   4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
   5. Install joint sealants in conformance with ASTM C 1193 using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   6. Only install joint sealants under conditions that ensure finishes are free from blemishes and defects.

7. Provide smooth surfaces of uniform finish, color, appearance, and coverage. Joint sealant surfaces with cloudiness, spotting, holidays, runs, or other imperfections are prohibited and are rejected as non-conforming work. Produce sharp and even lines and color breaks.
8. Completed work must match approved samples and mockups, as accepted by the Architect.
9. Installed joint sealants must be warrantable. Do not install, correct, or replace joint sealants in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Install sealant backings to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
2. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
3. Size materials to achieve required width/depth ratio.
4. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
5. Promptly after sealant application, and before skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

C. Site Tests and Inspections:
1. General: Include site tests and inspections as part of the work of this specification section. The Owner's testing and inspection agency performs tests and inspections.
2. Non-Destructive Testing:

    a. The center of sealant beads are depressed with a probing tool to depth of 50 percent of the bead width.

    b. If sealant fails, then the failure is recorded along with whether the failure was an adhesive or cohesive failure, and the maximum surface depression as a percentage of joint width.

    c. Tests are performed every 12 inches for first 10 linear feet of each joint; if test failure is not observed, then tests are performed every 24 inches thereafter.
3. Destructive Testing:

    a. A 6-inch-long tail of sealant is cut loose from substrate.

    b. The tail is marked one inch from the beginning of the adhesive bond away from the cut tail.

    c. The tail is grasped one inch from the beginning of the adhesive bond and pulled until it extends to 2 times the published movement capability of the sealant. If sealant does not fail, it is then pulled to failure.

    d. Elongation at the point of failure is recorded along with whether the failure was an adhesive or cohesive failure.

    e. Sealant is then observed during the complete filling of the joint for the presence of voids, for joint configuration, and for conformance with specified requirements. Observations and sealant dimensions are recorded.

    f. 10 tests are performed for the first 1,000 linear feet of joint for each type of sealant and substrate; if failure at two times the movement capability is not observed, then one test is performed for either every 1,000 linear feet thereafter or at a rate of one test per floor per building elevation, whichever is more frequent.

4. After testing is complete, promptly replace failed sealants in test areas.

    a. Neatly cut out and remove failed sealant, prepare and prime surfaces, and install new sealant.

    b. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

D. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled joint sealants that cannot be cleaned to the same condition as new.

E. Protection: Protect installed joint sealants in place from soiling, deterioration, and damage until Substantial Completion.

DIVISION 08

OPENINGS

SECTION 08 12 13
STANDARD HOLLOW METAL FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Standard hollow metal door frames.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 08 71 00 for door hardware.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing door frames installed on at least 200 previous projects similar to this project in size, material, design, and complexity. Manufacturer must be a current member of SDI.
   2. Installer: Company or individuals must have at least 5 years' experience installing door frames for at least 30 previous projects similar to this project in size, material, design, and complexity. Installer must be a current member of SDI.
   3. Supervisors: Individuals must have at least 7 years' experience installing door frames for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading door frame installers.

B. Submittals: Submit product data, door schedule, shop drawings, and written descriptions of specified qualifications.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed door frames. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.

1. Allegion PLC.
2. ASSA ABLOY.
3. Door Components, Inc.
4. MPI Custom Steel Doors and Frames.
5. Republic Doors and Frames.

2.02 STANDARD HOLLOW METAL FRAMES

A. Description: 3-sided (open), welded, masonry (universal) and flush drywall standard HM frames conforming to the requirements of Steel Door Institute publication SDI-100, "*Recommended Specifications for Standard Steel Doors and Frames"*.

B. Products: Provide the following "Steelcraft" brand frames manufactured by Allegion, or equal.
   1. Single Egress Door HM Frames: "F-Series" frames.
   2. Double Egress Door HM Frames: "FE-Series" frames.
   3. Cross-Corridor Door HM Frames: "DE-Series" frames.
   4. Stainless Steel HM Frames: "FS-Series" frames.

C. Requisite Properties:
   1. HM Frame Materials:
      a. Frames with an Uncoated Finish (Bare or Natural Finish): Fabricate from zinc coated (HDG) steel sheet or from stainless steel sheet, as indicated.
      b. Exterior Frames with a Painted Finish and Interior Frames Installed in Wet or High Humidity Locations (including shower rooms and toilet rooms): May be fabricated from either zinc-iron alloy coated (galvannealed) steel sheet or stainless steel sheet.
      c. Interior Frames Installed Elsewhere: Fabricate from uncoated CRS sheet.
      d. Sidelight and Transom Frames: Fabricate from the same material, thickness, and finish as the adjacent door frame.
   2. HM Frame Material Thickness:
      a. HM Frames for Level 3 and Physical Performance Level B (Extra Heavy Duty) Doors: Fabricate from at least 0.0598-inch BMT (MSG 16) uncoated steel and zinc-coated steel BMT; or from at least 0.0625-inch BMT (USSG 16) stainless steel sheet.
      b. HM Frames for Level 4 and Physical Performance Level A (Maximum Duty) Doors: Fabricate from at least 0.0747-inch BMT (MSG 14) uncoated and zinc-coated steel sheet, or at least 0.0781-inch (USSG 14) stainless steel sheet.
      c. Other HM Frames: Fabricate from at least 0.0598-inch BMT (MSG 16) uncoated steel and zinc-coated steel BMT; or from at least 0.0625-inch BMT (USSG 16) stainless steel sheet.
   3. HM Frame Profiles:
      a. Types: Indicated on the Drawings.
      b. Throat Openings:
         1) Butted Frames: Equal to the wall or partition type thickness minus twice the frame return dimension, unless otherwise indicated.

2) Wrap-Around Frames: Equal to the wall or partition thickness, unless otherwise indicated.

c. Frame Depth:

1) Butted Frames: Equal to the wall or partition thickness.

2) Wrap-Around Frames: Equal to the throat opening plus twice the frame return dimension.

d. Frame Return Dimension: 1/2-inch.

e. Backbend Dimension (Second, Double, or Drywall Return Dimension): At least 3/8-inch.

f. Backbend Type: Indicated on the Drawings.

g. Face Dimension: Provide 4-inch face dimension at heads in CMU construction where required to maintain a masonry module; provide 2-inch face dimension at jambs. Provide 2-inch face dimension elsewhere, unless otherwise indicated.

h. Stop Dimension: 5/8-inch.

i. Rabbet Depth Dimension: Equal to 3/16-inch greater than the door thickness.

j. Opposite Door Rabbet Depth Dimension: 1-9/16 inches .

k. Soffit Dimension: Equal to the frame depth minus the sum of the rabbet dimensions.

4. HM Frame Corners:

a. Welded HM Door Frames: Provide square-cut mitered or coped and mitered, set-up arc welded (SUA) and ground smooth, full profile welded frames (fully welded or continuously welded frames) for installation of frames as a complete unit. All corners must be watertight.

b. HM Frame Glazing Beads: Provide butted corners.

5. HM Frame Hardware Preparations and Reinforcement: Provide HM frame hardware reinforcing and preparations in conformance with ANSI/SDI publications A250.6, "*Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames"* and A250.8, "*Recommended Specifications for Standard Steel Doors and Frames"*.

2.03 ACCESSORIES

A. Head Reinforcement: For opening widths greater than 48 inches wide, provide channel or angle stiffeners fabricated from at least 0.0747-inch BMT (MSG 14) zinc coated (HDG) steel sheet or at least 0.0781-inch BMT (USSG 14) stainless steel sheet, as applicable.

B. Anchors:

1. Masonry Anchors: Provide either 3/16-inch minimum diameter (SWG 7) galvanized carbon steel masonry wire anchors or at least 0.0598-inch BMT (MSG 16) zinc coated (HDG) steel sheet masonry tee anchors, as applicable.
2. Existing Opening Anchors: Provide at least 16-gage welded pipe sleeve anchors with 0.0598-inch BMT (MSG 16) zinc coated (HDG) steel sheet straps designed specifically to add support for bolting frames into rough openings of an existing walls.
3. Wood Stud Anchors: Provide either at least 0.0598-inch BMT (MSG 16) zinc coated (HDG) steel sheet anchors designed specifically for attachment to the wood studs of a rough opening.

4. Metal Stud Anchors: Provide either at least 0.0598-inch BMT (MSG 16) zinc coated (HDG) steel sheet anchors designed specifically for attachment to the webbing of the closed steel studs built around the frame.
5. Universal Stud Wall Anchors: Provide either at least 0.0598-inch BMT (MSG 16) zinc coated (HDG) steel sheet universal lock-in jamb anchors designed specifically for use in either wood or steel stud wall applications, as applicable.
6. Base Anchors: Provide either at least 0.0598-inch (MSG 16) BMT zinc coated (HDG) steel sheet or at least 0.0625-inch BMT (USSG 16) stainless steel sheet base anchors, as applicable. Provide adjustable base anchors that allow for installation adjustment when the floor is not level.

C. Electrical Device Requirements: Make provisions for installation of electrified hardware and door electrical devices, and arrange so that wiring is readily installed, removed, and replaced.
1. Provide cutouts and reinforcement required for installation of devices.
2. Provide metal conduits or raceways to accommodate wiring between devices. (e.g., from electric hinge to other electric door hardware)

D. Glazing Stops:
1. Fire-Rated Conditions: Provide 3/4-inch square channel glazing beads.
2. Elsewhere: Provide 5/8-inch square channel glazing beads.
3. Material Thickness: Fabricate from at least 0.0478-inch BMT (MSG 18) uncoated and zinc-coated steel sheet.

E. Silencers: Provide loose, 1/8-inch thick by 1/2-inch wide pressure-sensitive-adhesive-backed polychloroprene (Neoprene) or ethylene propylene diene monomer (EPDM) rubber silencers for field installation. Furnish at least 3 for each strike jamb and at least 2 for double door head. Do not provide silencers where they may interfere with other seals, including smoke & draft seals.

F. Filler: Provide material conforming to the requirements of ANSI/SDI publication A250.8, "*Recommended Specifications for Standard Steel Doors and Frames"*. Use UL-listed materials in frames scheduled as having a fire-resistance rating.

G. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.04 MATERIALS

A. Uncoated Carbon Steel Sheet:
1. Frame Material: Finished CRS coil, sheet, and strip conforming to ASTM A 1008, CS Type B (commercial steel), exposed, temper rolled, regular matte surface finish (40 to 59 AA), and oiled (sheet must be thoroughly cleaned to remove the oil prior to painting).
2. Hardware Reinforcements: HRS coil, sheet, and strip conforming to ASTM A 1011, CS Type B (commercial steel), as-rolled surface finish, with cut edges.

B. Zinc-Iron Alloy Coated (Galvannealed) Steel Sheet: ASTM A 653, CS Type B (commercial steel), with equal coating weight on each surface.
1. Coating Weight (Mass) Designation: Provide at least a A60 (galvannealed) minimum coating weight (mass) designation.
2. Surface Finish: Non-spangled matte finish.
3. Surface Treatment: Provide mill phosphate surface treatment (paint-grip finish - provides enhanced lubricating characteristics).

C. Zinc Coated (HDG) Steel Sheet: ASTM A 653, CS Type B (commercial steel), with equal coating weight on each surface.
   1. Coating Weight (Mass) Designation: Provide at least a G90 (galvanized) minimum coating weight (mass) designation.
   2. Surface Finish: Provide regular spangle surface finish.
   3. Surface Treatment:
      a. Exterior Frames: Provide oil over chemical surface treatment (chemical treatment desired for humid-storage stain resistance and oil treatment needed for enhanced formability).
      b. Interior Frames: Provide oiled surface treatment (needed for enhanced formability).

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed door frames and adjacent items.
   3. Install door frames in conformance with the quality standards publications using using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Perform drilling and fitting as required or necessary for an accurate fit and complete installation.
   6. Securely attach door frames in place to supporting construction.
   7. Installed door frames must be warrantable. Do not install, correct, or replace door frames in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Frames: Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
      a. Install frames with removable glazing stops located on secure side of opening.
      b. Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
      c. Install door silencers in frames before grouting.
      d. Provide setting spreaders, supplied by the installer, and leave intact until frames are set square and plumb within specified tolerances, and all anchors are securely attached and grouted where required.
      e. Remove frame spreader bars only after frames re properly set and secured. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
4. Concrete Walls: Solidly fill space between frames and concrete with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
5. Ceiling Struts: Except where anchored to masonry or to other structural support at each jamb, extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame.

    a. Bend top of struts to provide flush contact for securing to supporting construction.

    b. Provide adjustable wedged or bolted anchorage to frame jamb members.
6. Glazing: Comply with installation requirements in Section 08 81 00 and with the manufacturer's instructions. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches O.C. and not more than 2 inches on center from each corner.

C. Installation Tolerances: Install frames within the following tolerance variations.
1. Maximum Out of Square: Not more than 1/16-inch, measured at rabbet on 90 degrees from jamb perpendicular to frame head.
2. Maximum Out of Alignment: Not more than 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
3. Maximum Twist: Not more than 1/16-inch, measured at at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
4. Maximum Out of Plumb: Not more than 1/16-inch, measured on floor at jambs.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed door frames in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it’s no longer needed and before Substantial Completion.

SECTION 08 13 13
STANDARD HOLLOW METAL DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Standard hollow metal doors.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 08 71 00 for door hardware.

1.2 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing doors installed on at least 200 previous projects similar to this project in size, material, design, and complexity. Manufacturer must be a current member of SDI.
   2. Installer: Company or individuals must have at least 5 years' experience installing doors for at least 30 previous projects similar to this project in size, material, design, and complexity. Installer must be a current member of SDI.
   3. Supervisors: Individuals must have at least 7 years' experience installing doors for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading door installers.

B. Submittals: Submit product data, door schedule, shop drawings, and written descriptions of specified qualifications.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed doors. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Allegion PLC.
   2. ASSA ABLOY.
   3. Door Components, Inc.
   4. MPI Custom Steel Doors and Frames.
   5. Republic Doors and Frames.

2.2 STANDARD HOLLOW METAL DOORS

A. Description: Extra heavy- and maximum-duty, commercial full flush and seamless steel-stiffened doors.

B. Products: Provide the following “Steelcraft” brand doors manufactured by Allegion, or equal.
   1. Interior Doors: “BW-16” doors.
   2. Exterior Doors: “BW-14” doors.
   3. Temperature Rise Rated Doors: “T-14” doors.

C. Requisite Properties:
   1. Construction: SDI 108 Level 3 (extra heavy-duty) or Level 4 (maximum-duty), Model 2 (seamless with welded edge construction).
   2. Type: SDI 106, Type F (seamless).
   3. Thickness: 1-3/4 inches.
   4. Face Sheets:
      a. Exterior Doors: Fabricate from at least 0.0747-inch BMT (MSG 14) galvannealed steel sheet.
      b. Interior Doors at Wet Locations, such as Shower Rooms and Toilet Rooms: Fabricate from at least 0.0747-inch BMT (MSG 14) galvannealed steel sheet.
      c. Interior Doors Located Elsewhere: Fabricate from at least 0.0598-inch BMT (MSG 16) CRS.
   5. Core Construction:
      a. Exterior Insulated Doors: Maximum thermal transmittance (U-factor) value of not more than 0.50 BTU per hour per square foot per deg. F, when tested in conformance with ASTM C 1363.
      b. Fire-Resistance Rated and Other Doors: Manufacturer’s standard core necessary to meet indicated fire-resistance and temperature-rise ratings.
   6. Vertical Edges: Manufacturer's standard edge with mechanical edge seam welded and finished before priming.
   7. Top and Bottom Edges: Close edges with flush or inverted channels or end closures fabricated from same material as face sheets, but not less than at least 0.0747-inch BMT (MSG 14). Provide screw-on caps at exterior doors.
   8. Hardware Reinforcement: Fabricate reinforcing from the same material as door in conformance with the following. Reinforcement must be offset to allow faces of mortised hardware devices to be installed flush with door surfaces.
      a. Hinges: At least 0.1094-inch BMT (MSG 12) continuous stile extruded and tapped to at least 0.1875-inch BMT (MSG 07) reinforcement, unless another thickness and size are

required by the by the hardware manufacturer based on actual in-service conditions applicable to the project.

b. Lock Front, Strike, and Flushbolt Reinforcement: At least 0.1094-inch BMT (MSG 12) by sizes required by the hardware manufacturer, unless another thickness is required by the by the hardware manufacturer based on actual in-service conditions applicable to the project.

c. Lock Reinforcement: At least 0.0625-inch BMT (MSG 16) by size as required by lock manufacturer, unless another thickness is required by the by the hardware manufacturer based on actual in-service conditions applicable to the project.

d. Closer Reinforcement: At least 0.0625-inch BMT (MSG 16) one-piece channel by size as required by the closer manufacturer, unless another thickness is required by the by the hardware manufacturer based on actual in-service conditions applicable to the project.

e. Exit Device Reinforcement: 0.0781-inch BMT (MSG 14) by 18 inches high by 3-3/16 inches wide, unless another thickness and size are required by the by the hardware manufacturer based on actual in-service conditions applicable to the project.

f. Other Hardware Reinforcement: Supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

g. Hardware manufacturers' recommended reinforcement units may be used in lieu of specified reinforcement.

9. Electrical Device Requirements: Make provisions for installation of electrified hardware and door electrical devices, and arrange so that wiring is readily installed, removed, and replaced.

a. Provide cutouts and reinforcement required for installation of devices.

b. Provide metal conduits or raceways to accommodate wiring between devices. (e.g., from electric hinge to other electric door hardware)

2.3 ACCESSORIES

A. Filler: Material conforming to the requirements of SDI publication SDI 100, "*Specifications for Standard Steel Doors and Frames*". Use UL-listed materials in doors scheduled to have a fire-resistance rating.

B. Door Louvers:

1. Products: Provide the following manufactured by USA Fire Door LLC, or equal.

a. Standard Door Louvers: "800 Series", or equal, 0.0478-inch BMT (MSG 18) uncoated steel louver door inserts.

b. Fire-Rated Door Louvers: "1900 Series", or equal, 0.0478-inch BMT (MSG 18) uncoated steel louver door inserts.

2. Requisite Properties:

a. Blades: Inverted Y or Z blades.

b. Minimum Free Area: Between 40 and 50 percent.

c. Finish: Manufacturer's standard powder coat finish; custom colors selected by the Architect.

C. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.4 MATERIALS

A. Uncoated Carbon Steel Sheet:
   1. Door Material: Finished CRS coil, sheet, and strip conforming to ASTM A 1008, CS Type B (commercial steel), exposed, temper rolled, regular matte surface finish (40 to 59 AA), and oiled (sheet must be thoroughly cleaned to remove the oil prior to painting).
   2. Hardware Reinforcements: HRS coil, sheet, and strip conforming to ASTM A 1011, CS Type B (commercial steel), as-rolled surface finish, with cut edges.

B. Zinc-Iron Alloy Coated (Galvannealed) Steel Sheet: ASTM A 653, CS Type B (commercial steel), with equal coating weight on each surface.
   1. Coating Designation: Provide at least a A60 (galvannealed) minimum coating designation.
   2. Surface Finish: Non-spangled matte finish.
   3. Surface Treatment: Provide mill phosphate surface treatment. (provides enhanced lubricating characteristics)

2.5 FINISHES

A. Uncoated Steel HM Frames: Provide shop-applied phosphate (paint-grip) pre-treatment and baked on rust inhibitive primer. Primer must be compatible with either field-applied paint or field-applied coating systems specified in Division 09, as applicable.

B. Zinc Coated and Zinc-Iron Alloy Coated Steel and Stainless Steel HM Frames: Provide shop-applied bonderized pre-treatment (not prime painted).

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed doors and adjacent items.
   3. Install doors in conformance with the quality standards publications using using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Perform drilling and fitting as required or necessary for an accurate fit and complete installation.
   6. Securely attach doors in place to supporting construction.
   7. Installed doors must be warrantable. Do not install, correct, or replace doors in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances:
   1. Fire-Rated Doors: Install doors with clearances in conforming to NFPA 80.
   2. Smoke- Control Doors: Install doors with clearances in conforming to NFPA 105.

3. Other Doors: Install doors within the following clearance variations.
    a. Jambs and Head: 1/8-inch plus or minus 1/16 inch.
    b. Between Edges of Pairs of Doors: 1/8-inch plus or minus 1/16-inch.
    c. Between Bottom of Door and Top of Threshold: Maximum 1/4-inch.
    d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 1/4-inch.

C. Adjusting:
1. Lubricate and adjust doors and hardware to function properly, free from warp, twist, binding, and distortion.
2. Confirm latches and locks engage securely without forcing or binding.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed doors in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

SECTION 08 31 16
ACCESS PANELS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Metal access panel assemblies.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 METAL ACCESS PANEL AND FRAMES

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Activar Construction Products Group, Inc.
   2. Acudor Products, Inc.
   3. Karp Associates, Inc.
   4. Nystrom Building Products.

B. Non-Rated Access Panels at Ceramic Tile Wall Finishes:
   1. Description: Flush stainless steel access panels and frames.
   2. Product: “JL Industries Model TMS” manufactured by Activar Construction Products Group, Inc., or equal.
   3. Material: Type 304, 0.0625-inch BMT (USSG 16) stainless steel frame with at least 0.0625-inch BMT (USSG 16) stainless steel door.
   4. Trim: At least 0.0312-inch BMT (USSG 22) stainless steel flange.
   5. Hinge: Concealed continuous piano hinge.

C. Non-Rated Access Panels Elsewhere:
   1. Description: Flush concealed frame access panels with wallboard bead.
   2. Product: “JL Industries Model TMW” manufactured by Activar Construction Products Group, Inc., or equal.
   3. Material: At least 0.0598-inch BMT (MSG 16) cold-rolled uncoated steel sheet frame and 0.0598-inch BMT (MSG 16) cold-rolled uncoated steel sheet door.
   4. Trim: At least 0.0299-inch BMT (MSG 22) HDG steel sheet gypsum board tape-in bead flange.
   5. Hinge: Concealed continuous piano hinge.
   6. Finish: Manufacturer’s standard shop-applied phosphate pre-treatment and baked on rust inhibitive primer for field-applied finish.

D. Fire-Resistance Rated Access Panels:

1. Description: Fire-rated and insulated concealed frame access panel with wallboard bead.
2. Product: “JL Industries Model FDW” manufactured by Activar Construction Products Group, Inc., or equal.
3. Material: At least 0.0598-inch BMT (MSG 16) cold-rolled uncoated steel sheet frame with At least 0.0359-inch BMT (MSG 20) cold-rolled uncoated steel sheet door.
4. Trim: At least 0.0299-inch BMT (MSG 22) HDG steel sheet gypsum board tape-in bead flange.
5. Insulation: At least 2-inch thick fire-resistive mineral wool insulation sandwiched between access panel faces.
6. Hinge: Concealed continuous piano hinge.
7. Finish: Manufacturer’s standard shop-applied phosphate pre-treatment and baked on rust inhibitive primer for field-applied finish.

E. Requisite Properties:
1. Provide at least 24-inch square or larger panel assemblies where servicemen must access spaces through panels.
2. Elsewhere, provide at least 12-inch square panel assemblies.

F. Accessories:
1. Locking Devices:
    a. Public Areas: Provide one mortise cylinder lock per access door. Key all locks alike, unless otherwise noted.
    b. Other Areas: Provide flush, key-operated cam lock. Key all locks alike, unless otherwise noted.
    c. Panels 24 inches or More in Any Dimension: Provide interior latch to permit access panel opening from inside without a key.
2. Gaskets: Apply manufacturer’s optional gasketing to frames of units that do not come standard with gaskets.
3. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.
4. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed access panels and adjacent items.
3. Install access panels using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.

4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
5. Securely attach access panels in place to supporting construction.
6. Installed access panels must be warrantable. Do not install, correct, or replace access panels in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install access panelsto an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed access panels in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 08 41 13
ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Aluminum-framed storefront assemblies.
   2. Aluminum-framed glass entrance doors.
   3. Site tests and inspections.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 08 71 00 for door hardware.
   2. Section 08 81 00 for glass glazing.

1.02 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install entrance doors and storefronts that conform to the profiles indicated and other Contract Document requirements; meet specified performance criteria; and result in structurally sound, non-corroding, and weathertight assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes, profiles, and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing entrance doors and storefronts installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing entrance doors and storefronts for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing entrance doors and storefronts for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading entrance and storefront installers.
   4. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, door schedule, and shop drawings, samples, delegated design subnittals, and written descriptions of specified qualifications.

D. Preinstallation Meeting:

1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed entrances and storefronts. Resolve each condition.
4. Finalize construction schedule.
5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

E. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate entrance doors and storefronts into the mockup as part of the work of this specification section.

F. Warranty:
1. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years; and for finishes against color fading, chalking, cracking, checking, peeling, and adhesive failure for 20 years.
2. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 2 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Provide products manufactured by one of the following, or equal.
1. Arcadia.
2. EFCO Corp.
3. Kawneer Co., Inc.
4. Wausau Window and Wall Systems.

2.02 ALUMINUM-FRAMED STOREFRONTS

A. Products: Provide one of the following, or equal.
1. “AFG451 Series” manufactured by Arcadia.
2. “Trifab VersaGlaze 451 Framing System” manufactured by Kawneer.
3. “4500 Series Storefront Framing” manufactured by Wausau Window and Wall Systems.

B. Requisite Properties:
1. Faming Size: 2 inches by 4-1/2 inches.
2. Glazing Thickness: One-inch.
3. Glazing Installation: Outside glazed.
4. Exposed Finishes: Specified in Section 05 05 14.
5. Concealed Steel Finishes: Prepare surfaces and apply shop primer specified in Section 05 05 13.
6. Concealed Aluminum Finishes: Prepare surfaces and coat aluminum surfaces in contact with masonry, concrete, or steel with bituminous paint specified Section 05 50 00.

2.03 ALUMINUM-FRAMED ENTRANCES

A. Products: Provide one of the following, or equal.
   1. “MS362 Series” manufactured by Arcadia.
   2. “350 Medium Stile Entrance” manufactured by Kawneer.
   3. “Medium Stile Standard Entrances” manufactured by Wausau Window and Wall Systems.

B. Requisite Properties:
   1. Entrance Door Thickness: 1-3/4 inches.
   2. Vertical Stile Width: 3-1/2 inches.
   3. Top Rail Width: 3-1/2 inches.
   4. Bottom Rail Width: 10 inches.
   5. Glazing Thickness: One-inch.
   6. Glazing Stops: Square, snap-on, extruded-aluminum stops and preformed gaskets. Provide non-removable glazing stops on outside of door.
   7. Exposed Finishes: Match storefront framing.

2.04 MATERIALS

A. Aluminum:
   1. Standard Aluminum Structural Profiles: ASTM B 308, Alloy 6061-T6.
   2. Extruded Aluminum Bars and Shapes: ASTM B 221, Alloy6063-T5 or T6 for primary components; Alloy 6063-T5 or T6, 6005-T5, 6105-T5 or 6061-T6 for structural components.
   3. Aluminum Sheet and Plate: ASTM B 209, Alloy 5005-H32 or Alloy 3003-H14.
   4. Extruded Aluminum Tubes: ASTM B 221 or ASTM B 483.
   5. Structural Aluminum Pipe and Round Tube: ASTM B 429.

B. Glazing: Specified in Section 08 81 00.

2.05 ACCESSORIES

A. Steel Reinforcement: When required by engineering calculations, provide steel bent plate or shapes conforming to ASTM A 36 and shop primed in conformance with Section 05 05 13.

B. Brackets: Provide high-strength aluminum or austenitic stainless steel brackets and reinforcements.

C. Sill Flashing: Fabricate from at least 0.060-inch thick aluminum sheet, with welded end dams and finished to match frames.

D. Concealed Flashing: Stainless steel sheet conforming to ASTM A 240 (annealed) Type 04 (for all other applications), No. 2D (matte) finish, annealed, No. 4 (soft) temper (hardness not more than Rockwell B-65; can be bent flat upon itself in any direction).

E. Movement Joints: Slip-joint linings, slip pads, spacers, and sleeves of material and type supplied, required, recommended, approved, or accepted by the by the manufacturer.

F. Glazing Gaskets: Manufacturer’s standard ethylene propylene diene monomer (EPDM) conforming to ASTM C 864 and having a Shore A hardness value of at least 70, unless another type of gasket is supplied, required, recommended, or accepted by the manufacturer.

G. Silicone Gutter Gaskets: Custom extrusions installed with low modulus single-component sealant specified in Section 07 92 00.

H. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.
   1. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
   2. Reinforce framing members as required to receive fastener threads.
   3. Exposed fasteners are prohibited on faces exposed to view. Provide concealed fasteners and expansion provisions.

I. Anchors:
   1. Anchor Bolts (Anchor Rods): Cast-in-place anchors specified in Section 05 05 23 having minimum 60 ksi tensile strength.
   2. Other Anchors:

      a. Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by the manufacturer.

      b. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 or ASTM A 153 requirements

J. Cleaning Agent and Cloth: Supplied, required, recommended, or accepted by the structural sealant manufacturer.

K. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed entrance doors and storefronts and adjacent items.
   3. Install entrance doors and storefronts using using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Perform drilling and fitting as required or necessary for an accurate fit and complete installation.
   6. Securely attach entrance doors and storefronts in place to supporting construction.

7. Installed entrance doors and storefronts must be warrantable. Do not install, correct, or replace entrance doors and storefronts in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Use concealed fasteners and anchorages. Provide washer head fasteners with bonded sealing washers where required to protect metal surfaces and to make weathertight connections.
2. Form closely-fitted joints with exposed connections accurately located and secured.
3. Provide uniform-width perimeter reveals and opening sealants and joint fillers as indicated.
4. Install concealed gaskets, flashings, and joint fillers as the storefront installation progresses.

C. Entrance Door Installation Tolerances: Install entrance doors within the following clearance variations.
1. Jambs and Head: 1/8-inch plus or minus 1/16 inch.
2. Between Edges of Pairs of Doors: 1/8-inch plus or minus 1/16-inch.
3. Between Bottom of Door and Top of Threshold: Maximum 1/4-inch.
4. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 1/4-inch.

D. Storefront Installation Tolerances: Install storefronts within the following tolerance variations.
1. Maximum Variation from True Position: Not more than 1/8-inch in 12 feet nor more than 1/4-inch over any total length.
2. Maximum Variation from Plane: Not more than 1/8-inch in 12 feet nor more than 1/4-inch over any total length.
3. Maximum Out of Plumb: Not more than 1/8-inch in 10 feet.
4. Maximum Out of Level: Not more than 1/8-inch in 20 feet nor more than 1/4-inch in any 40-foot run.
5. Maximum Offset between Components at Joints:

    a. In-line Surfaces: Not more than 1/16-inch

    b. Corners: : Not more than 1/32-inch
6. Squareness: Not more than 1/8-inch difference in diagonal measurements.

E. Adjusting:
1. Lubricate and adjust entrance doors and hardware to function properly, free from warp, twist, binding, and distortion.
2. Confirm latches and locks engage securely without forcing or binding.

F. Site Tests and Inspections:
1. General: Include site tests and inspections as part of the work of this specification section. The Owner’s testing and inspection agency performs tests and inspections.
2. Required Tests:

    a. Water Leakage Hose Tests: Perform water leakage hose tests in conformance with ASTM AAMA 501.2 (fixed glazing assemblies) and AAMA 502 (operable window units).

    b. Air and Water Leakage Chamber Tests: Perform air and water leakage chamber tests in conformance with ASTM AAMA 502, Test method B.

G. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

3. Repair damaged finishes. Restore finishes so that no evidence remains of corrective work. Return to the factory those items that either cannot be refinished in the field, or that contain components that cannot be refinished in the field. Make required alterations and either refinish the entire item or provide a new item.

H. Protection:

1. Protect installed entrance doors and storefronts in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 08 71 00
DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Door hardware.
2. Wall or floor-mounted electromagnetic hold-open devices.

B. Related Divisions:

1. Division 06 – door hardware installation
2. Division 07 – sealant at exterior thresholds
3. Division 08 – metal doors and frames, interior aluminum frames, wood doors, integrated security systems, specialty doors, storefront and glazed curtainwall systems.
4. Division 10 – operable partitions
5. Division 21 – fire and life safety systems
6. Division 28 – security access systems

C. Specific Omissions: Hardware for the following is specified or indicated elsewhere.

1. Windows.
2. Cabinets, including open wall shelving and locks.
3. Signs, except where scheduled.
4. Toilet accessories, including grab bars.
5. Installation.
6. Rough hardware.
7. Conduit, junction boxes & wiring.
8. Folding partitions, except cylinders where detailed.
9. Sliding aluminum doors, except cylinders where detailed.
10. Access doors and panels, except cylinders where detailed.
11. Corner Guards.
12. Welded steel gates and supports.

1.2 REFERENCES:

A. Use date of standard in effect as of Bid date.

1. American National Standards Institute

   a) ANSI 156.18 – Materials and Finishes.
2. BHMA – Builders Hardware Manufacturers Association
3. 2019 California Building Code

   a) Chapter 11B – Accessibility To Public Buildings, Public Accommodations, Commercial Buildings and Public Housing
4. DHI – Door and Hardware Institute

5. NFPA – National Fire Protection Association
    a) NFPA 80 2019 Edition – Standard for Fire Doors and Other Opening Protectives.
    b) NFPA 105 – Smoke and Draft Control Door Assemblies
    c) NFPA 252 – Fire Tests of Door Assemblies
6. UL – Underwriters Laboratories
    a) UL10C – Positive Pressure Fire Tests of Door Assemblies.
    b) UL 305 – Panic Hardware
7. WHI – Warnock Hersey Incorporated State of California Building Code
8. Local applicable codes
9. SDI – Steel Door Institute
10. WI – Woodwork Institute
11. AWI – Architectural Woodwork Institute
12. NAAMM – National Association of Architectural Metal Manufacturers

B. Abbreviations

1. Manufacturers**:** see table at 2.1.A of this section
2. Finishes**:** see 2.7 of this section.

1.3 SUBMITTALS & SUBSTITUTIONS

A. SUBMITTALS**:** Submit six copies of schedule per D. Only submittals printed one sided will be accepted and reviewed. Organize vertically formatted schedule into "Hardware Sets" with index of doors and headings, indicating complete designations of every item required for each door or opening. Minimum 10pt font size. Include following information**:**

1. Type, style, function, size, quantity and finish of hardware items.
2. Use BHMA Finish codes per ANSI A156.18.
3. Name, part number and manufacturer of each item.
4. Fastenings and other pertinent information.
5. Location of hardware set coordinated with floor plans and door schedule.
6. Explanation of abbreviations, symbols, and codes contained in schedule.
7. Mounting locations for hardware.
8. Door and frame sizes, materials and degrees of swing.
9. List of manufacturers used and their nearest representative with address and phone number.
10. Catalog cuts.
11. Point-to-point wiring diagrams.
12. Manufacturer's technical data and installation instructions for electronic hardware.

B. Bid and submit manufacturer's updated/improved item if scheduled item is discontinued.

C. Deviations**:** Highlight, encircle or otherwise identify deviations from "Schedule of Finish Hardware" on submittal with notations clearly designating those portions as deviating from this section.

D. If discrepancy between drawings and scheduled material in this section, bid the more expensive of the two choices, note the discrepancy in the submittal and request direction from Architect for resolution.

E. Substitutions per Division 1. Include product data and indicate benefit to the Project. Furnish operating samples on request.

F. Furnish as-built/as-installed schedule with closeout documents, including keying schedule, riser and point-to-point wiring diagrams, manufacturers' installation, adjustment and maintenance information, and supplier's final inspection report.

1.4 QUALITY ASSURANCE**:**

A. Qualifications**:**

1. Hardware supplier**:** direct factory contract supplier who employs a certified architectural hardware consultant (AHC), available at reasonable times during course of work for project hardware consultation to Owner, Architect and Contractor.

a) Responsible for detailing, scheduling and ordering of finish hardware. Detailing implies that the submitted schedule of hardware is correct and complete for the intended function and performance of the openings.

B. Hardware**:** Free of defects, blemishes and excessive play. Obtain each kind of hardware (latch and locksets, exit devices, hinges and closers) from one manufacturer.

C. Exit Doors**:** Operable from inside with single motion without the use of a key or special knowledge or effort.

D. Fire-Rated Openings**:** NFPA 80 compliant. Hardware UL10C (positive pressure) compliant for given type/size opening and degree of label. Provide proper latching hardware, non-flaming door closers, approved-bearing hinges, and resilient seals. Coordinate with wood door section for required intumescent seals. Furnish openings complete.

E. Furnish hardware items required to complete the work in accordance with specified performance level and design intent, complying with manufacturers' instructions and code requirements.

1.5 DELIVERY, STORAGE AND HANDLING**:**

A. Delivery**:** coordinate delivery to appropriate locations (shop or field).

1. Permanent keys and cores**:** secured delivery direct to Owner's representative.

B. Acceptance at Site**:** Items individually packaged in manufacturers' original containers, complete with proper fasteners and related pieces. Clearly mark packages to indicate contents, locations in hardware schedule and door numbers.

C. Storage**:** Provide securely locked storage area for hardware, protect from moisture, sunlight, paint, chemicals, dust, excessive heat and cold, etc.

1.6 PROJECT CONDITIONS AND COORDINATION**:**

A. Where exact types of hardware specified are not adaptable to finished shape or size of members requiring hardware, provide suitable types having as nearly as practical the same operation and quality as type specified, subject to Architect's approval.

B. Coordination**:** Coordinate hardware with other work. Furnish hardware items of proper design for use on doors and frames of the thickness, profile, swing, security and similar requirements indicated, as necessary for proper installation and function, regardless of omissions or conflicts in the information on the Contract Documents. Furnish related trades with the following information**:**

1. Location of embedded and attached items to concrete.
2. Location of wall-mounted hardware, including wall stops.
3. Location of finish floor materials and floor-mounted hardware.
4. At masonry construction, coordinate with the anchoring and hollow metal supplier prior to frame installation by placing a strip of insulation, wood, or foam, on the back of the hollow metal frame behind the rabbet section for continuous hinges, as well as at rim panic hardware strike locations, silencers, coordinators, and door closer arm locations. When the frame is grouted in place, the backing will allow drilling and tapping without dulling or breaking the installer's bits.
5. Locations for conduit and raceways as needed for electrical, electronic and electro-pneumatic hardware items. Fire/life-safety system interfacing. Point-to-point wiring diagrams plus riser diagrams to related trades.
6. Coordinate: flush top rails of doors at outswinging exteriors, and throughout where adhesive-mounted seals occur.
7. Manufacturers' templates to door and frame fabricators.

C. Check Shop Drawings for doors and entrances to confirm that adequate provisions will be made for proper hardware installation.

D. Environmental considerations**:** segregate unused recyclable paper and paper product packaging, uninstalled metals, and plastics, and have these sent to a recycling center.

1.7 WARRANTY**:**

A. Part of respective manufacturers' regular terms of sale. Provide manufacturers' written warranties.

B. Include factory order numbers with close-out documents warranty information:

C. Minimum warranties:

1.	Locksets:	Three years
2.	Extra Heavy Duty Cylindrical Lock:	Seven Years
3.	Exit Devices:	Three years mechanical One year electrical
4.	Closers:	Thirty years mechanical Two years electrical
5.	Hinges:	One year
6.	Other Hardware	Two years

1.8 COMMISSIONING:

A. Conduct these tests prior to request for certificate of substantial completion:

1. With installer present, test door hardware operation with climate control system and stairwell pressurization system both at rest and while in full operation.
2. With installer, access control contractor and electrical contractor present, test electrical, electronic and electro-pneumatic hardware systems for satisfactory operation.
3. With installer and electrical contractor present, test hardware interfaced with fire/life-safety system for proper operation and release.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Manufacturers and their abbreviations used in this schedule:

FAL	Falcon
GLY	Glynn-Johnson Hardware
IVE	H. B. Ives
SAL	Salto
ZER	Zero International
ADA	Adams Rite
KNC	K. N. Crowder

2.2 HINGING METHODS:

A. Drawings typically depict doors at 90 degrees, doors will actually swing to maximum allowable. Use wide-throw conventional or continuous hinges as needed up to 8 inches in width to allow door to stand parallel to wall for true 180-degree opening. Advise architect if 8-inch width is insufficient.

B. Doors 3’6” or wider use 5” X 41/2” heavy weight hinges

C. Doors 8’0” use 4 hinges and add 1 hinge for every foot thereafter

D. Conform to manufacturer’s published hinge selection standard for door dimensions, weight and frequency, and to hinge selection as scheduled. Where manufacturer’s standard exceeds the scheduled product, furnish the heavier of the two choices, notify Architect of deviation from scheduled hardware.

E. Conventional Hinges: Steel or stainless steel pins and approved bearings. Hinge open widths minimum, but of sufficient throw to permit maximum door swing.

1. Outswinging exterior doors: stainless steel hinges with non-removable (NRP) pins and security studs.
2. Stainless steel material exteriors and at doors subject to corrosive atmospheric conditions.

F. Pivots: high-strength forged bronze or stainless steel, tilt-on precision bearing and bearing pin.

1. Bottom and intermediate pivots: adjustability of minus 0.063 inch, plus 0.125 inch.

2.3 LOCKSETS, LATCHSETS, DEADBOLTS:

A. Mortise Locksets and Latchsets: as scheduled.

1. Chassis: cold-rolled steel, handing field-changeable without disassembly.
2. Floating mounting tabs automatically adjusts to fit a beveled door edge.
3. Latchbolts: 0.75 inch throw stainless steel anti-friction type.
4. Lever Trim: through-bolted, accessible design, cast lever or solid extruded bar type levers as scheduled. Filled hollow tube design unacceptable.
    a) Spindles: security design independent breakaway. Breakage of outside lever does not allow access to inside lever's hubworks to gain wrongful entry.
    b) Inside lever applied by screwless shank mounting – no exposed trim mount screws.
    c) Levers rotate up or down for ease of use.
5. Furnish solid cylinder collars with wave springs. Wall of collar to cover rim of mortise cylinder.
6. Turnpieces: accessible offset turn-lever design not requiring pinching or twisting motions to operate.
7. Deadbolts: stainless steel 1-inch throw.
8. Strikes: 16 gage curved steel, bronze or brass with 1 inch deep box construction, lips of sufficient length to clear trim and protect clothing.
9. Scheduled Lock Series and Design: Falcon Longitude
10. Certifications:
    a) ANSI A156.13, 1994, Grade 1 Operational,
    b) ANSI/ASTM F476-84 Grade 31 UL Listed.
11. Accessibility: Require not more than 5 lb to retract the latchbolt or deadbolt, or both, per CBC 2019 11B-404.2.7 and 11B-309.4.

B. Extra Heavy Duty Cylindrical Locks and Latches: as scheduled.

1. Chassis: cylindrical design, corrosion-resistant plated cold-rolled steel, through-bolted.
2. Locking Spindle: stainless steel, integrated spring and spindle design.
3. Latch Retractors: forged steel. Balance of inner parts: corrosion-resistant plated steel, or stainless steel.
4. Latchbolt: solid steel.
5. Backset: 2.75 inches typically, more or less as needed to accommodate frame, door or other hardware.

6. Lever Trim**:** accessible design, independent operation, spring-cage supported, minimum 2.00 inches clearance from lever mid-point to door face.
7. Strikes**:** 16 gage curved steel, bronze or brass with 1.00 inch deep box construction, lips of sufficient length to clear trim and protect clothing.
8. Lock Series and Design**:** Falcon T series
9. Certifications**:**
    a) ANSI A156.2, 1994, Series 4000, Grade 1.
    b) UL listed for A label and lesser class single doors up to 4 feet x 8 feet.
10. Accessibility: Require not more than 5 lb to retract the latchbolt or deadbolt, or both, per CBC 2019 11B-404.2.7 and 11B-309.4

2.4 EXIT DEVICES / PANIC HARDWARE

A. General features**:**

1. Push-through push-pad design. No exposed push-pad fasteners, no exposed cavities when operated.
2. Deadlocking latchbolts, 0.75 inch projection.
3. No exposed screws to show through glass doors.
4. Non-handed basic device design with center case interchangeable with all functions, no extra parts required to effect change of function.
5. Releasable in normal operation with 15-pound maximum operating force per UBC Standard 10-4, and with 32-pound maximum pressure under 250-pound load to the door.
6. Lever design to match locksets
7. Accessibility: Require not more than 5 lb to retract the latchbolt, per CBC 2019 11B-404.2.7 and 11B-309.4.
    a) Mechanical method: where touchpad directly retracts the latchbolt with 5 lb or less of force.

2.6 CLOSERS

A. Surface Closers**:** As listed in specification

1. Full rack-and-pinion type cylinder with removable non-ferrous cover. Double heat-treated pinion shaft, single piece forged piston, chrome-silicon steel spring.
1. Non-sized, non-handed and adjustable. Place closers inside building, stairs and rooms.
2. Plates, brackets and special templating when needed for interface with particular header, door and wall conditions and neighboring hardware.
3. Adjust doors to open with not more than 5.0-pounds pressure to open at exterior doors and 5.0-pounds at interior doors. As allowed per 2019 California Building Code Section 11B-404.2.9, local authority may increase the allowable pressure for fire doors to achieve positive latching, but not to exceed 15-pounds.

a) Exception: exterior doors' pressure-to-open may be increased to 8.5-pounds if: at a single location, and one of a bank of eight leafs or fraction of eight, and one leaf of this bank is fitted with a low- or high-energy operator.

4. Separate adjusting valves for closing speed, latching speed and backcheck, fourth valve for delayed action where scheduled.
5. Extra-duty arms (EDA) at exterior doors scheduled with parallel arm units.
6. Pressure Relief Valves (PRV) not permitted.

2.7 OTHER HARDWARE

A. Automatic Flush Bolts**:** Low operating force design.

B. Overhead Stops**:** Non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.

C. Kick Plates**:** Four beveled edges, .050 inches minimum thickness, height and width as scheduled. Sheet-metal screws of bronze or stainless steel to match other hardware.

D. Door Stops**:** Provide stops to protect walls, casework or other hardware.

1. Unless otherwise noted in Hardware Sets, provide floor type with appropriate fasteners. Where floor type cannot be used, provide wall type. If neither can be used, provide overhead type.
2. Locate overhead stops for maximum possible opening. Consult with Owner for furniture locations. Minimum**:** 90deg stop / 95deg deadstop. Note degree of opening in submittal.

E. Automatic door bottoms**:** low operating force units.

1. Include automatic type door bottoms, as opposed to fixed sweeps, at stairs and elevator lobbies to allow fine-tuning of pressurization systems.

F. Thresholds**:** As scheduled and per details. Comply with CBC 2019 11B-404.2.5. Substitute products**:** certify that the products equal or exceed specified material's thickness. Proposed substitutions**:** submit for approval.

2. Saddle thresholds**:** 0.125 inches minimum thickness.
3. Exteriors**:** Seal perimeter to exclude water and vermin. Use sealant complying with requirements in Division 7 "Thermal and Moisture Protection". Minimum 0.25 inch diameter fasteners and lead expansion shield anchors, or Red-Head #SFS-1420 (or approved equivalent) Flat Head Sleeve Anchors. National Guard Products' "COMBO" or Pemko Manufacturing's "FHSL".
4. Fire-rated openings, 90-minutes or less duration**:** use thresholds to interrupt floor covering material under the door where that material has a critical radiant flux value less than 0.22 watts per square centimeter, per NFPA 253. Use threshold unit as scheduled. If none scheduled, include a 0.25in high 5in wide saddle in the bid, and request direction from Architect.
5. Fire-rated openings, 3-hour duration**:** Thresholds, where scheduled, to extend full jamb depth.
6. Acoustic openings**:** Set units in full bed of Division-7-compliant, leave no air space between threshold and substrate.
7. Plastic plugs with wood or sheet metal screws are not an acceptable substitute for specified fastening methods.

8. Fasteners: Generally, exposed screws to be Phillips or Robertson drive. Pinned TORX drive at high security areas. Flat head sleeve anchors (FHSL) may be slotted drive. Sheet metal and wood screws: full-thread. Sleeve nuts: full length to prevent door compression.

G. Through-bolts: Do not use. Coordinate with wood doors; ensure provision of proper blocking to support wood screws for mounting panic hardware and door closers. Coordinate with metal doors and frames; ensure provision of proper reinforcement to support machine screws for mounting panic hardware and door closers.

1. Exception: surface-mounted overhead stops, holders, and friction stays.

H. Silencers: Interior hollow metal frames, 3 for single doors, 4 for pairs of doors. Leave no unfilled/uncovered pre-punched silencer holes. Intent: door bears against silencers, seals make minimal contact with minimal compression – only enough to effect a seal. Provide where seals are not used

I. Wall- & Floor-mounted electromagnetic door holders: LCN's SEM series or approved equivalent. Incorporate into U.L. listed fire & life-safety system, doors release to allow closure and latching when door's zone is in alarm state. Use minimum projection required to allow door to open as widely as allowed by wall conditions and projection of door hardware.

2.8 FINISH:

1. Generally: BHMA 626 Satin Chromium Areas using BHMA 626: furnish push-plates, pulls and protection plates of BHMA 630, Satin Stainless Steel, unless otherwise scheduled.

J. Door closers: factory powder coated to match other hardware, unless otherwise noted.

2.9 KEYING REQUIREMENTS:

A. KEYING REQUIREMENTS:

B. Key System: Keying to be determined at a meeting with the Contractor, Supplier and Owners Representative

C. Keys

2. Factory registered master key system
3. Non-I.C. construction keying: furnish inserted type partial key. At substantial completion, remove inserts in Owner’s presence; demonstrate consequent non-operability of construction key. Give all removed inserts and all construction keys to Owner, provide accounting for all the pieces.
4. Temporary cylinders remain supplier’s property.
5. Furnish 10 construction keys.
6. Furnish 2 construction insert extractor tool 35-057.
7. Furnish 2 construction control keys.

D. Key Cylinders: furnish, 6-pin solid brass construction.

E. Cylinders/Cylinder cores: furnish keyed at factory of lock manufacturer where permanent records are maintained. Locks and cylinders same manufacturer.

F. Permanent keys: furnish secured shipment direct from point of origination to Owner.

8. For estimate**:** 3 keys per change combination, 5 master keys per group, 5 grand-master keys, 3 control keys.
9. For estimate**:** VKC stamping plus “DO NOT DUPLICATE”.

G. Bitting List**:** furnish secured shipment direct from point of origination to Owner upon completion.

PART 3 - EXECUTION

3.1 ACCEPTABLE INSTALLERS**:**

A. Can read and understand manufacturers’ templates, suppliers’ hardware schedule and printed installation instructions. Can readily distinguish drywall screws from manufacturers’ furnished fasteners. Available to meet with manufacturers’ representatives and related trades to discuss installation of hardware.

3.2 PREPARATION**:**

A. Ensure that walls and frames are square and plumb before hardware installation. Make corrections before commencing hardware installation. Installation denotes acceptance of wall/frame condition.

B. Locate hardware per SDI-100 and applicable building, fire, life-safety, accessibility, and security codes.

1. Notify Architect of code conflicts before ordering material.
1. Locate latching hardware between 34 inches to 44 inches above the finished floor, per California Building Code, Section 1010.1.9.2 and 11B-404.2.7.
2. Locate panic hardware between 36 inches to 44 inches above the finished floor.
3. Where new hardware is to be installed near existing doors/hardware scheduled to remain, match locations of existing hardware.

C. Overhead stops**:** before installing, determine proposed locations of furniture items, fixtures, and other items to be protected by the overhead stop's action.

3.3 INSTALLATION

A. Install hardware per manufacturer’s instructions and recommendations. Do not install surface-mounted items until finishes have been completed on substrate. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate for proper installation and operation. Remove and reinstall or replace work deemed defective by Architect.

1. Gaskets**:** install jamb-applied gaskets before closers, overhead stops, rim strikes, etc; fasten hardware over and through these seals. Install sweeps across bottoms of doors before astragals, cope sweeps around bottom pivots, trim astragals to tops of sweeps.
2. When hardware is to be attached to existing metal surface and insufficient reinforcement exists, use RivNuts, NutSerts or similar anchoring device for screws.
3. Use manufacturers' fasteners furnished with hardware items, or submit Request for Substitution with Architect.

4. Replace fasteners damaged by power-driven tools.

B. Locate floor stops no more that 4 inches from walls and not within paths of travel. See paragraph 2.2 regarding hinge widths, door should be well clear of point of wall reveal. Point of door contact no closer to the hinge edge than half the door width. Where situation is questionable or difficult, contact Architect for direction.

C. Core concrete for exterior door stop anchors. Set anchors in approved non-shrink grout.

D. Locate overhead stops for minimum 90 degrees at rest and for maximum allowable degree of swing.

E. Drill pilot holes for fasteners in wood doors and/or frames.

F. Lubricate and adjust existing hardware scheduled to remain. Carefully remove and give to Owner items not scheduled for reuse.

3.4. ADJUSTING

A. Adjust and check for proper operation and function. Replace units, which cannot be adjusted to operate freely and smoothly.

1. Hardware damaged by improper installation or adjustment methods**:** repair or replace to Owner's satisfaction.
2. Adjust doors to fully latch with no more than 1 pound of pressure.

a) Door closer valves: turn valves clockwise until at bottom – do not force. Turn valves back out one and one-half turns and begin adjustment process from that point. Do not force valves beyond three full turns counterclockwise.

3. Adjust delayed-action closers on fire-rated doors to fully close from fully-opened position in no more than 10 seconds.
4. Adjust door closers per 1.9 this section.

B. Fire-rated doors**:**

1. Wood doors**:** adjust to 0.125 inches clearance at heads, jambs, and meeting stiles.
2. Steel doors**:** adjust to 0.063 inches minimum to 0.188 inches maximum clearance at heads, jambs, and meeting stiles.
3. Adjust wood and steel doors to 0.75 inches maximum clearance (undercut) above threshold or finish floor material under door.

C. Final inspection**:** Installer to provide letter to Owner that upon completion installer has visited the Project and has accomplished the following**:**

1. Has re-adjusted hardware.
2. Has evaluated maintenance procedures and recommend changes or additions, and instructed Owner's personnel.
3. Has identified items that have deteriorated or failed.
4. Has submitted written report identifying problems.

3.5 DEMONSTRATION**:**

A. Demonstrate mechanical hardware and electrical, electronic and pneumatic hardware systems, including adjustment and maintenance procedures.

3.6 PROTECTION/CLEANING**:**

A. Cover installed hardware, protect from paint, cleaning agents, weathering, carts/barrows, etc. Remove covering materials and clean hardware just prior to substantial completion.

B. Clean adjacent wall, frame and door surfaces soiled from installation / reinstallation process.

3.7 SCHEDULE OF FINISH HARDWARE

A. See door schedule in drawings for hardware set assignments.

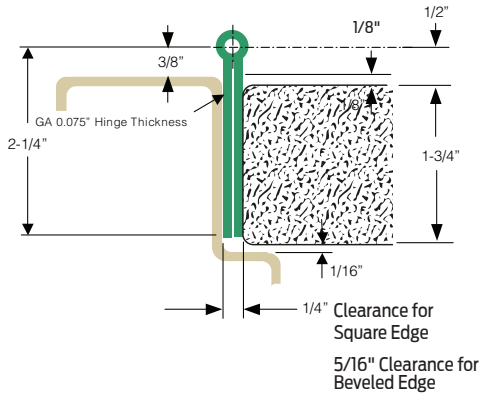
600
700 Full Mortise Pin and Barrel Continuous Hinge

For Doors Weighing up to 600 pounds
- Non Handed
- 1/8" Inset
- 48" Maximum Door Width
- Non Handed
- Bevel or Square Edge Door

Standard lengths 83", 85", 95", 120"
Standard Mounting Hardware
#10 X 1/2" Self Drilling Self Tapping Screws,
#10 X 1" Wood Screws
Optional SEC - Security Fasteners Available

Material
600- 1012 Cold-Rolled Steel
700- 14 Gauge Type 304 Stainless Steel
1/4" Diameter 304 Stainless Pin with
Nylon Split Bearing



Finishes	600	700
BHMA	600	630
US Numbers	USP	US32D

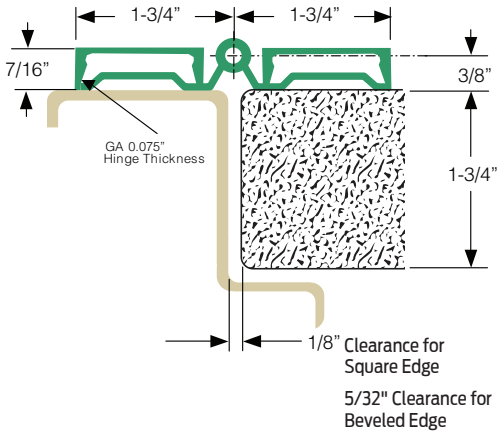
Custom Paint Available, on 600 consult factory.

602
702 Full Surface Pin and Barrel Continuous Hinge

For Doors Weighing up to 600 pounds
- Non Handed
- Flush Mounted, No Inset
- 48" Maximum Door Width
- Bevel or Square Edge Door

Standard lengths 83", 85", 95", 120"
Standard Mounting Hardware
1/4"-20 x 3/4" Self Drilling Self Tapping Screws,
Cover Clips
Optional SEC - Security Fasteners Available

Material
602- 1012 Cold-Rolled Steel
702 - 14 Gauge Type 304 Stainless Steel
1/4" Diameter 304 Stainless Pin with
Nylon Split Bearing
Brushed Aluminum Leaf Covers



Finishes	602	702
BHMA	600	630
US Numbers	USP	US32D

Custom Paint Available, on 602 consult factory

112XY Full Mortise - Narrow Frame and Door Leaf

UL10C certified
Meets ANSI 156.26 for 150 lbs and 300 lbs.

- For 1 3/4" Doors
- Patented center loaded, interlocking bearing design
- Non Handed for custom cut lengths
- Flush Mounted, No inset
- 48" Maximum Door Width
- Beveled or Square Edge Doors
- Frame guidance lip is extended further for retrofit applications to cover existing heavy weight architectural hinge preps
- For doors weighing up to 450 pounds without reinforcing, 600 pounds with reinforcing
- For lead-lined application consult factory for engineering specials

Standard lengths 83", 85", 95", 119"

Standard Mounting Hardware

12-24 x 3/4" Steel Self Drilling / Self Tapping Phillips Head Screw

Finishes

Clear Anodized (US28), Dark Bronze Anodized (313AN)
Custom Anodizing and Painting are available, consult factory

Options:

HT	Hospital Tip
EPT	Electric Power Transfer
TWP CON	Electrical Through Wire Panel with Allegion Connect

Optional Mounting Hardware:

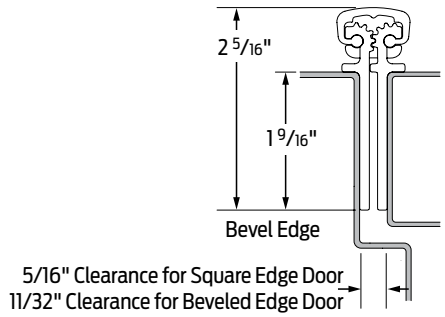
TEK/WD	1/2 Self Drill, Self Tap 1/2 Wood
WD	Wood Door and Frame

Available Accessory Kits:

Security Screws - Hollow Metal
Security Screws - Wood
Thread Forming Screws

For Single Door Applications

For pairs of doors see chart and general information



Meets ANSI/BHMA A156.1
A8133 – Steel
A5133 – Stainless Steel
A2133 – Brass

3PB1 3 Knuckle, Plain Bearing Full Mortise Hinge

- For standard weight doors
- Low frequency usage
- Packed with wood and metal screws

Not for use with a door closer.

Options

- NRP, Non-Removable Pin
- SH, Security Stud
- HT, Hospital Tip
- RC, Round Corners - 1/4" or 5/8" Radius
- SEC, Security Fasteners - Pin-in-Socket

Dimensions

Size (Inches)	Size (mm)	Gauge

Ives Finish	US32	US32D
BHMA	629	630

Meets ANSI A156.3 Type 27.
UL Listed 3 Hour Fire Doors 8'0" x 10'0"

FB51P Top and Bottom Bolts (Pair)

- Constant Latching—inactive door remains latched until the active door is opened, releasing the automatic bottom bolt and then the top bolt can be manually released. Inactive door will relatch automatically when closed.
- Low Actuation Forces.
- Fits standard ANSI A115.4 Door and Frame Preparations.
- Non-handed.
- 3/4" bolt throw with a 7/8" vertical adjustment.
- 3/4" backset
- Standard Rod Length is 12", which is measured from the center of the flush bolt body to the bolt tip. Optional rod lengths available for top bolt only on non-fire rated openings—18", 24", 36" and 48".

DP1 or DP2 optional dust proof strike available, see page C11.

FB51T Top Bolt Only

Meets ANSI A156.3 Type 27.
UL Listed 3 Hour Fire Doors 8'0" x 10'0"

FB52 Top Bolt with Auxiliary Fire Latch

- FB52 Model with Auxiliary Fire Latch eliminates the bottom bolt and is UL Listed for Fire Doors.

FB53 Top Bolt with Auxiliary Fire Latch & Retrofit Plate

- FB53 Model with Auxiliary Fire Latch eliminates the bottom bolt and includes a retrofit plate to cover existing bottom bolt prep. UL Listed for Fire Doors.

Dimensions

SCHLAGE

Grade 1, mortise locks

L Series

Overview

The Schlage® L Series has long been the benchmark for Grade 1 mortise locks. Beyond strength and security – it offers flexibility to meet most needs. Fifty mechanical functions include ten that can be field configured from one universal lock case and ten electrified functions are regularly used as part of electronic access control systems. L Series locks have the ability to suite across electronic, tubular, exit trim, and multi-point locks to integrate seamlessly into any environment. The series features an array of security options including 180-degree visibility status indicators and support for multiple keyway families and cylinder types including Primus® XP high-security cylinders.

Return to door meets ½" requirement for Longitude and Omega levers.

[1] Not available in 612, 613, 629, or 630 finishes.
[2] Not available in 612 or 613 finishes.

Escutcheons

L full face
Specify by adding 'L' after lever design.

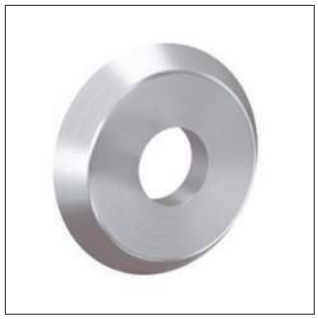
L concealed
Specify by adding 'C' suffix to function and by adding 'L' after lever design.

N full face
Specify by adding 'N' after lever design.

Roses

A rose
Available for use on L Series knob and lever designs. Specify by adding 'A' after lever design
Finishes: available in all L Series finishes.

B rose
Available for use on L Series knob and lever designs. Specify by adding 'B' after lever design.
Finishes: available in all L Series finishes.



C rose
Available for use on L Series knob and lever designs. Specify by adding 'C' after lever design.
Finishes: 605, 606, 609, 619, 622, 625, 626, 629, 630, 643e

AVA rose
Available for use on ACC lever, other levers upon request.
Finishes: 605, 606, 609, 619, 622, 625, 626, 643e

MER rose
Available for use on MER lever, other levers upon request.
Finishes: 605, 606, 609, 619, 622, 625, 626, 643e

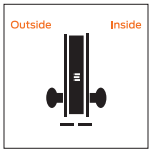
[1] Only available in 630 and 630AM finishes.
[2] Not available with Vandlgard option.
[3] Only available in 630 finish.

Vandlgard® protection available on functions noted with an “LV” option.

Vandlgard allows the outside lever to rotate freely down when locked to limit the ability of vandals to apply excessive force to the chassis helping to prevent damage to internal components.

Non-keyed functions

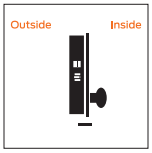


Schlage L9010
ANSI F01

Passage latch

- Latchbolt retracted by lever/knob from either side at all times
- Inside lever always free for immediate egress

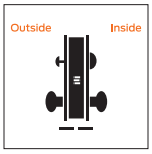
Optional HSLR trim available



Schlage L9025
ANSI F31

Exit lock

- No outside trim
- Inside lever always free for immediate egress

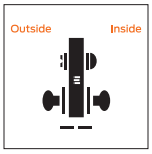


Schlage L9040
LV9040
ANSI F22

Bath/bedroom privacy lock

- Latchbolt retracted by lever/knob from either side unless outside lever is locked by inside thumbturn
- Actuating inside lever or closing door unlocks outside lever
- To unlock from outside remove emergency button, insert emergency thumbturn in access hole and rotate
- Inside knob/lever is always free for immediate egress

Optional 180 degree messaging indicator available



Schlage L9044
LV9044
ANSI -

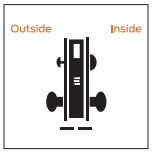
Privacy with coin turn outside

- Latchbolt retracted by lever/knob from either side unless outside lever is locked by inside thumbturn or outside coin turn
- Actuating inside lever, closing door, or rotating outside coin turn unlocks outside lever
- Available in rose trim only

Coin turn for lock with rose trim

Optional 180 degree messaging indicator available

Optional HSLR trim available



Schlage L9440
LV9440
ANSI F19

Privacy with deadbolt

- Latchbolt retracted by lever/knob from either side
- Deadbolt actuated by inside thumbturn
- Throwing deadbolt locks outside knob/lever
- Inside lever retracts both deadbolt and latchbolt and unlocks outside lever
- To unlock from outside remove emergency button, insert emergency thumbturn in access hole and rotate
- Inside lever always free for immediate egress

Optional 180 degree messaging indicator available

Privacy with deadbolt and coin turn outside

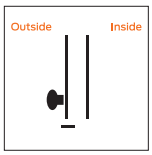
- Latchbolt retracted by knob/lever from either side
- Deadbolt actuated by inside thumbturn or outside coin turn
- Throwing deadbolt locks outside knob/lever
- Inside lever retracts both deadbolt and latchbolt and unlocks outside lever
- Rotating coin turn retracts deadbolt and unlocks outside lever
- Inside lever always free for immediate egress
- Available with rose trim only

Coin turn for lock with rose trim

Optional 180 degree messaging indicator available

Optional HSLR trim available

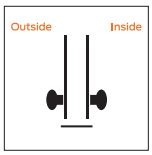
Non-keyed dummy functions



Schlage L0170
ANSI -

Half dummy trim

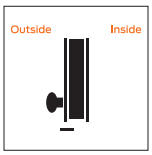
- Fixed lever/knob on one side



Schlage L0172
ANSI -

Full dummy trim

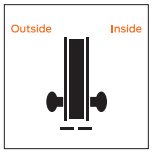
- Fixed lever/knob on both sides



Schlage L9175
ANSI -

Half dummy trim with lock case

- Fixed lever/knob on one side
- Includes lock case and blank armor plate



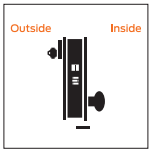
Schlage L9176
ANSI -

Full dummy trim with lock case

- Fixed lever/knob on both sides
- Includes lock case and blank armor plate

In a double-door application where the dummy will be used as the strike order 10-091 armored front strike separately.

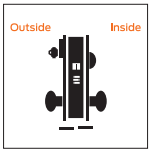
Single cylinder non-deadbolt functions



Schlage L9026
ANSI -

Exit lock with cylinder

- No outside trim
- Outside cylinder retracts latchbolt
- Inside lever always free for immediate egress
- Auxiliary latch deadlocks latchbolt when door is locked



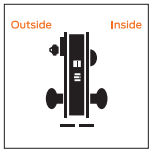
Schlage L9050
LV9050
ANSI F04

Office and inner entry lock

- Latchbolt retracted by knob/lever from either side unless outside is made inoperative by key outside or by turning inside thumbturn
- When outside is locked, latchbolt is retracted by key outside or by knob/lever inside
- Outside knob/lever remains locked until thumbturn is returned to vertical or unlocked by key
- Auxiliary latch deadlocks latchbolt when door is locked
- Inside knob/lever is always free for immediate egress

Optional 180 degree messaging indicator available

Optional HSLR trim available



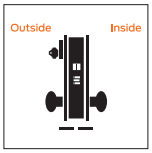
Schlage L9056
LV9056
ANSI -

L9050 with automatic unlocking

- Latchbolt retracted by knob/lever from either side unless outside is made inoperative by key outside or by rotating inside thumbturn
- Outside knob/lever unlocked by key outside, thumbturn or closing door
- Rotating inside knob/lever simultaneously retracts latchbolt and unlocks outside knob/lever
- Auxiliary latch deadlocks latchbolt when door is locked
- Inside knob/lever is always free for immediate egress

Optional 180 degree messaging indicator available

Optional HSLR trim available



Schlage L9070
LV9070

Case material	CRS with zinc dichromate plating
Case size	L9000 Series: 4 7/16" x 6 1/16" x 1"(113 mm x 154 mm x 25 mm) L400 Series: 4 7/16" x 3 5/8" x 1"(113 mm x 92 mm x 25 mm)
Spacing	Knob or lever to cylinder: 3 7/8" (98 mm); Knob or lever to thumbturn hub: 2 11/16" (68 mm)
Door thickness	Standard: 1 3/4" (44 mm) Optional: 1 3/8" (35 mm) to 2 1/2" (64 mm) Over 2 1/2" (64 mm) door ranges vary by function. Specify door thickness if other than 1 3/4" and position in door EE, EI, EO, ED

Trim	
Handing	L9000 Series: Field-reversible without disassembly L400 Series: Non-handed
Lever/knob	Lever designs: forged brass or bronze and cast stainless steel Knob designs: heavy-duty wrought brass, bronze or stainless steel
Rose/ escutcheon	L full face and concealed: Cold-forged brass, bronze and stainless steel N full face: Heavy wrought reinforced brass, bronze and stainless steel Roses: A ,B, C: wrought brass or bronze and stainless steel; AVA and MER: forged brass
Combinations	Available with knob both sides, lever both sides, or knob/lever combinations. Roses cannot be combined with escutcheons.

Latch	
Backset	2 3/4" (70 mm) only
Armor	L9000 Series Standard: 1 1/4" x 8" x 7/32" (32 mm x 203 mm x 6 mm) Optional: 1 1/16" x 8" x 7/32" (27 mm x 203 mm x 6 mm) L400 Series: Standard: 1 1/4" x 5 9/16" x 7/32"(32 mm x 141 mm x 6 mm)
Latch	3/4" (19 mm) throw stainless steel latch with anti-friction tongue
Deadbolt	1" (25 mm) throw stainless steel deadbolt
Strike	L9000 Series Standard: ANSI curved lip strike 1 1/4" x 4 7/8" (32 mm x 124 mm) x 1 3/16" (30 mm) lip to center with dust box Optional: Extended lip strike options (7/8", 1", 1 1/2", 1 3/4", 2") L400 Series Standard: 1 1/8" x 3 1/2" (29 mm x 89 mm) with dust box Optional: 1 1/4" x 4 7/8"(32 mm x 124 mm) with dust box

Specifications

Keying	
Cylinder format	6-pin Conventional mortise cylinder (standard); also available in concealed mortise cylinder, FSIC, SFIC and 7-pin SL cylinder formats plus less cylinder options.
Keyway	Patented Everest 29 S123 (standard); also available in open, restricted, and Primus XP security levels with available master keying and construction keying.
Wired electrified	
Input voltage	12V or 24V DC for L909X
Operating mode	Fail Safe or Fail Secure via switch on chassis
Current draw	0.23 amps maximum; 0.01 amps holding
Request to Exit	Rating: 3A @ 125V AC/2A @ 30V DC. Available on all L909X and L949X electrified functions. Also available option for the following mechanical functions: L9010/50/56/70/71/80 and L9453/56/58/65/66/80/85.
Latch bolt monitor	Available on all L909x and L949x electrified and L9010/25/26/50/56/70/71/80/82 and L9453/56/65/66/80/85 mechanical functions.
Door position sensor	Internal available on L909x electrified and L9010/80/82 mechanical functions; external available on all functions.
Deadbolt monitor	Available on L949x electrified and L9453/56/57/58/80/85/86/96 mechanical functions
Warranty	
	3 year limited mechanical and 1 year limited electromechanical
Certifications	
ANSI/BHMA	L/LV9000: ANSI/BHMA A156.13-2017 Series 1000, Grade 1 operation and security; with FSIC Grade 2; with SFIC Grade 3 L400: ANSI/BHMA A156.36, Grade 1
ICC	Complies with ICC A117.1 Accessible and Usable Buildings and Facilities
UL/cUL	Mechanical: UL 10C and CAN/ULC-S104 3 hour fire listed; all locks listed for A label single doors, 4' x 10' and pairs 8' x 10' Electrified: UL/ULC listed for single-point locking applications; UL listed for 3-hour fire door (except L9076 and L9077)
CA Fire Code	All levers with a return to door of 1/2" (64 mm) or less comply
FL Building Code	Miami-Dade NOA's and Florida Building Commission listings
Federal	BAA compliant, all functions

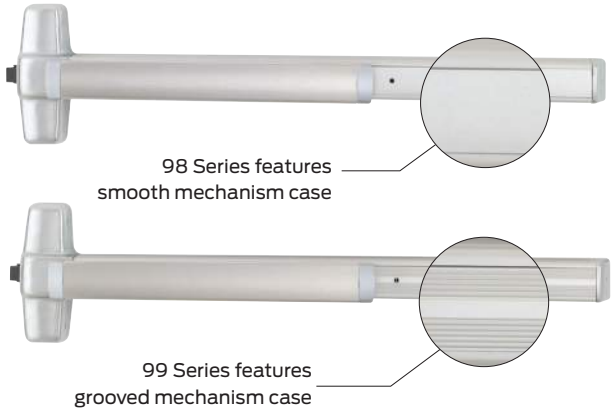
VON DUPRIN®

Exit device

98/99 Series

Overview

The 98/99 Series devices are heavy-duty push pads. The 98 Series has a smooth mechanism case, while the 99 Series has a grooved mechanism case. The 98/99 Series has been certified to the highest industry standards and are used in schools, hospitals and government buildings.



Device types

Rim device

75 Mortise lock device

27 Surface mounted vertical rod device [1]

47 Concealed vertical rod device, 5/16" throw [1]

48 Concealed vertical rod device, 5/8" top, 1 1/2" bottom throw

47WDC Concealed vertical rod wood door device [1]

49 Concealed vertical cable device [2]

50WDC Concealed vertical cable wood door device

57 Three-point latch device

[1] Also available less bottom rod (LBR)
[2] Also available less bottom latch (LBL)

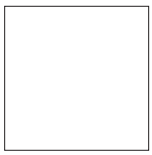
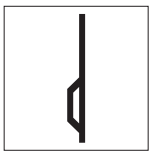
Trim functions



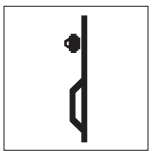
EO No outside trim

- Exit only



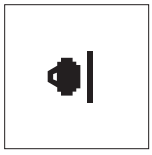
DT Dummy trim

- Pull when dogged (not recommended for fire device)



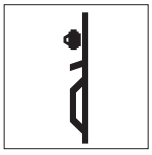
NL Night latch

- Key retracts latchbolt
- Rim and 1 ¼" mortise cylinder



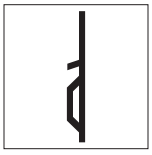
NLOP Night latch

- Key retracts latchbolt, pull required



TP Thumbpiece

- Key locks and unlocks
- Rim and 1 ¼" mortise cylinder



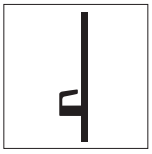
TPBE Thumbpiece, blank escutcheon

- Blank escutcheon always operable (no cylinder, use with DT trim)

L Lever

K Knob

- Key locks and unlocks
- Rim and 1 ¼" mortise cylinder
- Handed, reversible lever
- Electrified lever operation available



LDT Lever, dummy trim

KDT Knob, dummy trim

- Pull when dogged

LNL Lever, night latch

KNL Knob, night latch

- Key retracts latchbolt
- Rim and 1 ¼" mortise cylinder
- Handed, reversible lever

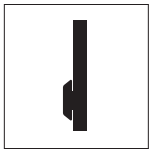
LBE[1] Lever, blank escutcheon

KBE Knob, blank escutcheon

- Always operable (no cylinder)

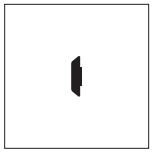
TL Turn lever

- Key locks and unlocks (use with DT trim)
- 1 ¼" mortise cylinder



TLBE Turn lever, blank escutcheon

- Blank escutcheon always operable (no cylinder, use with DT trim)



TLOP Turn lever, optional pull

HL Hospital latch

- Key locks and unlocks
- 1 ¼" mortise cylinder

Electromechanical device options

Switches

LX — **Latchbolt monitoring**

LX-LC — **Latchbolt monitoring, low current**
- Signals use of an opening
- SPDT switch to monitor latch bolt
- 2 A maximum @ 24VDC; below 50 mA @ 24VDC for low current option

RX — **Request to exit**

RXLC — **Request to exit - low current**

RX2 — **Double request to exit - 2 RX switches**

WP-RX — **Waterproof request to exit**

RX-AUX — **RX to RX-2 conversion**
- Signals use of an opening
- SPDT switch to monitor pushpad
- 2 A maximum @ 24VDC; below 50 mA @ 24VDC for low current option

LX-RX — **Request to exit/latchbolt monitoring combination**

LX-RX-LC — **Request to exit/latchbolt monitoring combination, low current**
- 2 A maximum @ 24VDC; below 50 mA @ 24VDC for low current option

SS — **Signal switch**
- Monitors pushpad and latchbolt
- Signals unauthorized use of an opening
- Switch makes latch bolt tamper-resistant
- Up to 2.0 A @ 24VDC

Latch retraction

EL — **Electric latch retraction**

SD-EL — **Electric latch retraction with special center case dogging**
- Enables remote unlatching
- Alternative to manual dogging
- Voltage: 24VDC (continuous duty)
- Current: 16.0 A inrush / 0.3 A holding

QEL — **Quiet electric latch retraction**

HD-QEL — **Quiet electric latch retraction with hex dogging**

SD-QEL — **Quiet electric latch retraction with special center case dogging**
- Bolt retraction via switch
- Converts exit door to push-pull operation
- Voltage: 24VDC
- Current: 1.0 A inrush (0.5 sec.) / 0.14 A holding

Delayed egress

CX — **Chexit delayed exit**
- Meets NFPA 101 requirements
- Self-contained controls, locking, alarm
- Input voltage: 24VDC
- Input current inrush: 1.25 A
- Input current holding: 390 mA
- Alarm relay and secure relay contact ratings: 24 VDC, 1 A

CX-RCM — **Chexit remote module**
- Chexit for smaller doors that can not accommodate a standard Chexit device
- Size: 3.75” x 5.57” x 2.50”
- Input voltage: 24VDC
- Input current inrush: 1.25A
- Input current holding: 390mA
- Alarm relay and secure relay contact ratings: 24 VDC, 1 A

Miscellaneous

ALK — **Alarm exit kit**
- Unauthorized opening triggers 85-decibel horn
- Set in armed or disarmed mode by key
- Assembly includes both a 24VDC input and external inhibit

Electromechanical device options

CON — **Allegion Connect**

- Common connectors to connect various door hardware all the way to the power supply

E996 — **Electric locking and unlocking trim**

- Remains latched while unlocked
- Remote electrical control
- Voltage: 24VDC (Continuous Duty)
- Current: 0.22 amps

E7500 — **Electric mortise lock device**

- Voltage: 12 or 24VDC
- Current: 0.60 amps @ 12VDC, 0.30 amps @ 24VDC

[1] For 98/9949 devices, LX switch monitors trim input or electric dogging of EL/QEL devices. LX switch does not monitor latchbolt condition.

Mechanical device options

Dogging

CD — **Cylinder dogging, panic only**

CD-CX — **Center case cylinder dogging for Chexit devices**

CI — **Cylinder dogging indicator**
- Battery-operated dogging indicator in cylinder format with red light visible from over 75 feet away

DI — **Dogging indicator**
- Battery-operated dogging indicator in hex format with red light visible from over 75 feet away

LD — **Less dogging**

SD — **Special center case dogging**
- Center case cylinder dogging

Classroom security

-2 — **Double cylinder**
- Inside key cylinder locks/unlocks outside trim

-2SI — **Double cylinder with security indicator**
- Inside key cylinder locks/unlocks outside trim with visible indicators that provide status of door

CDSI — **Cylinder dogging with indicator**
- Provides visible lock/unlock indicators showing whether device is dogged or undogged

HDSI — **Hex dogging with indicator**
- Provides visible lock/unlock indicators showing whether device is dogged or undogged

Environmental

PN — **Pneumatic latch retraction**
- For areas where electrical devices banned
- Special linkage for mechanical or pneumatic dogging

QM — **Quiet mechanical option**
- Provides damper-controlled relatching of device

INS — **Insulclad kits**
- Kits with longer fasteners or parts for Insulclad doors

AM — **Anti-microbial finish**

Weatherized

WH — **Weep holes**
- Drainage (weep) holes in mechanism case

WS — **Windstorm**
- Severe weather certified/tested
- FEMA and ICC compliant
- Tornado and hurricane tested

California code

AX — **Accessible device**
- UL certified to meet new 5 lb. maximum operating force requirement
- Exceeds ANSI/BHMA requirements

Latches

PL — **Pullman latch**
- Latches are always extended
- Most commonly used in conjunction with electric strikes and LBR-less bottom rod application

Mechanical device options

Touch bar trim

RSS — **Red silk screen**
- Red silk-screened lettered touchbar trim

PUSH — **PUSH**
- Touchbar trim embossed PUSH

SG — **Safety glow**
- Self-illuminating touchpad
- Glows brightly during low or no light conditions

KN — **Knurled touchbar**
- Tactile warning applied to device

BRAILLE — **Braille**
- Vision impaired touchpad
- Raised letter and Braille

ALLEGION™

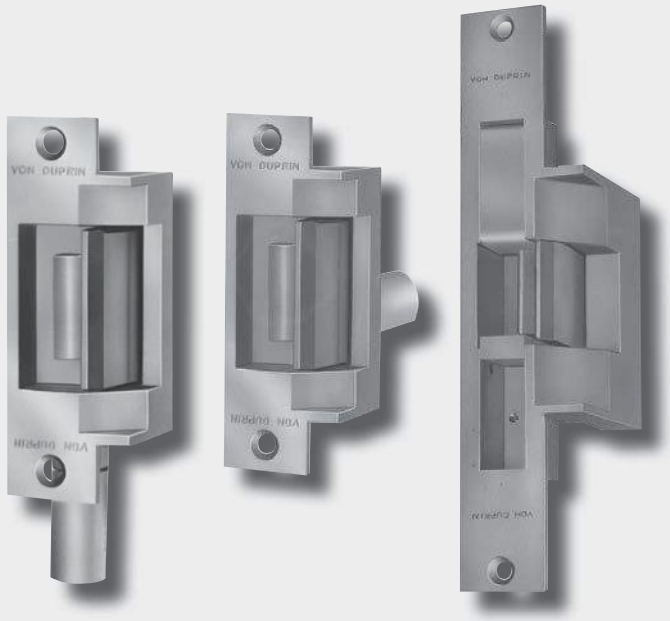
VON DUPRIN®

6200 Series

Strikes for mortise or cylindrical devices



Overview

Von Duprin electric strikes are known for their reliability, durability and security. The 6200 Series strikes are designed to withstand abuse. Their heavy-duty stainless steel construction is fully UL1034 and UL10C listed and meets ANSI/BHMA Grade 1.

6200 Series electric door strikes are designed for use with a variety of mortise or cylindrical locksets. Electrified strikes allow remote release of a locked door by activating a movable lip (keeper) using an entry/exit button or credential reader and can be a cost effective means for managing access. 6200 Series strikes come standard as 24 VDC in fail secure mode. 12 VDC and AC operation can be selected, as can fail safe mode and other options that enable you to configure these strikes to fit your exact needs.

Use 6200 Series electric strikes for retrofit applications or new construction. To assure the proper selection of an electric strike on new applications, lockset compatibility charts are shown on the next page. When using a lockset not listed or when retrofitting a strike to an existing application, please contact Von Duprin Technical Support for application assistance.

Features and benefits

- 17 configurations available for cylindrical and mortise applications
- Heavy-duty stainless steel construction
- 24 VDC standard with 12, 16 and 28 VDC operation optional
- Two-piece plug connectors are furnished for ease of installation and removal during strike servicing
- Options include rectifier kit for VAC to VDC conversion, dual monitor switches, entry buzzer and Allegion Connect wire extension
- Six popular finishes available to suite with existing hardware
- Suitable for interior and exterior doors
- UL 10C 3-hour fire-rated (fail secure only)
- UL 1034 listed for burglary-resistant electric door strikes
- Meets ANSI/BHMA A156.31, Grade 1 for endurance and dynamic strength
- Meets ANSI/BHMA A156.31, Grade 1, 1500 lbs static strength
- Dynamic strength 70 ft-lbs
- Endurance 1,000,000 cycles

6200 Series power requirements

LG1 LG7 Lock Guard

- Units are non-handed and incorporate security frame pin to prevent separation of the door and frame. LG7 does not incorporate the security frame pin
- Unit covers the latch bolt area of the door and lock, thereby providing added protection from burglars, vandals or normal abuse.
- Ideal for use with mortise or cylindrical locks.
- Easy installation.
- Through bolted with carriage bolts and nuts.
- Available in a variety of materials, 13 gauge stainless steel, 12 gauge steel and brass material.

Dimensions

3" Wide x 11-1/2" High

Bolt center to center: 10-1/2"

Finishes

** not available on LP7*

LG10 Lock Guard

- Ideally suited for use with rose or escutcheon 2-3/4" wide or less.
- For use with Type 86 Mortise and Type 161 Cylindrical Locks (ANSI 156.13 Series 1000 and ANSI 156.2 Series 4000).
- No exposed fasteners on face of unit.
- Unique design provides maximum security, virtually eliminating the opening between door and frame at the latch point.
- Available in 13 Gauge Stainless Steel or 12 Gauge Steel.

Dimensions

2-1/2" Wide x 9-1/2" High

Stud center to center: 8-1/2"

Finishes

Ives Number	USP	US32D
BHMA	600	630

LG11 Lock Guard

- Designed for use on aluminum doors with latch-type locks or doors equipped with electric strikes.
- Unit is Handed - Specify left or right hand when ordering.
- No exposed fasteners on face of unit.
- Unique design provides maximum security, virtually eliminating the opening between door and frame at latch point.
- Available in 13 Gauge Stainless Steel or 12 Gauge Steel.

Dimensions

3.5" x 15"
4" x 16"
6" x 16"
8" x 16"
Special sizes are available. Consult factory.

Plates Cut for Cylinder or Thumbturns

Plates are available with cutout for cylinder or thumbturn; standard cutout is 2" from top and centered on plates up to 4" wide. For plates wider than 4" cutout is located 2" from outer edge, specify LH or RH. When pull location interferes with standard cutout location a detail drawing should be furnished with the order.

Standard cutout is 1-1/4" for cylinder and 3/8" for thumbturn.

Specify CFC for cutout for cylinder or CFT for cutout for thumbturn.

COR

Series Bar Coodinators

- The COR Series Coordinators are designed for use on pairs of doors when one door needs to close before the other.
- All COR units function easily. The active door lever, located nearest to the active stop, holds the active door open until the trigger mechanism is released by the closing of the inactive leaf.
- All COR units may not function correctly with swingclear hinges.
- All COR units are equipped with an adjustable override feature which allows the active door to close under extreme pressure.
- All COR units are compatible with Flush Bolts.
- The COR Series is available in five sizes for variable door opening widths.
- The COR Series does not cover the entire length of the stop, so a FL filler bar can be provided to maintain architecturally clean lines.
- COR Series Coordinator Channels and FL fillers are made of aluminum.
- Optional Filler Bars: FL20 - 20", FL32 - 32" and FL44 - 44", available to maintain clean line.
- Optional Mounting Brackets available: MB1, MB2, MB1F, MB2F, MB3F, MB1V, MB2V, and MB3V for other stop applied hardware.

Meets ANSI/BHMA A156.3, Type 21A.
UL Listed for installation on labeled frame.

For Openings Where Doors Are Same Size

Coordinator Number	Length of Channel	For Opening Widths	Common Applications
COR32	32"	34" - 52"	Pair of 2'0" Doors
COR42	42"	52" - 72"	Pair of 2'6" Doors
COR52	52"	62" - 92"	Pair of 3'0" Doors
COR60	60"	70" - 108"	Pair of 3'6" Doors
COR72	72"	84" - 132"	Pair of 4'0" Doors

For Openings Where Doors Are Unequal Size

The coordinator length should equal the active door width plus approximately 1/2 the inactive door width. The coordinator must be 6" longer than the active door width and shorter than the overall frame opening between stops.

Finishes

Ives Finish	US28	US26D	315AN
BHMA	628	713	711

FL

Series Filler Bars

- The FL Filler Bars are available in three sizes for variable frame openings.
- FL Filler Bars are made of aluminum
- FL Filler Bars are field sized to frame opening.

Filler Bar Number	Length	Dimensions
FL20	20"	1-5/8" W x 5/8" D x 20" L
FL32	32"	1-5/8" W x 5/8" D x 32" L
FL44	44"	1-5/8" W x 5/8" D x 44" L

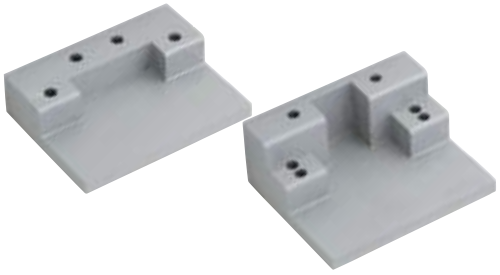
Ives Finish	US28	US26D	315AN
BHMA	628	713	711

MB1and MB2



Mounting Brackets

- Allows stop mounted hardware to be properly installed without damaging the COR coordinator, such as a parallel arm closer or a non-fire-rated surface vertical rod strike.
- Stop mounted hardware will need to be lowered to compensate for the height of the coordinator and mounting bracket.
- MB mounting brackets are made of aluminum

Product	Jamb Depth	Stop Width	Dimensions
MB1	4-3/4" Min.	Over 2-1/2"	4" W x 3" D x 15/16" T
MB2	4-3/4" Min.	Up to 2-1/2"	4" W x 3-1/4" D x 1-5/8" T

MB1V, MB2V and MB3V

MB1V

MB2V

MB3V

Fire Rated Mounting Brackets

- Allows for fire-rated stop mounted hardware to be properly installed without damaging the COR Coordinators, such as fire-rated surface vertical rod exit device strikes.
- Latch will need to be lowered to compensate for the height of the coordinator and mounting bracket.
- MB-V are designed for Von Duprin 8827-F soffit latch.
- Mounting brackets are made of steel.

Product	Jamb Depth	Stop Width	Dimensions
MB1F	5"	1-1/2" - 2-1/4"	4" W x 3" D x 1-5/8" T
MB1V	5"	1-1/2" - 2-1/4"	4" W x 3" D x 1-5/8" T

COR7G and COR9G

Gravity Coordinators

Meets ANSI/BHMA A156.3, Type 21.
UL Listed for Fire Doors.

- When active door is open, coordinator prevents active door from closing until inactive door bypasses. Closing of inactive door causes strike plate on top of door to contact cam and lift arm, allowing active door to close. As inactive door continues closing, roller rides over strike plate on to door bracket, holding arm above active door.
- Non-handed.
- Gravity action arm and door bracket are adjustable on the job for ease of installation. Rubber roller provides quiet and efficient operation, and helps protect the astragal and doors from damage.
- Nylon roller on short arm glides smoothly over door bracket and strike, ensuring silent operation.
- Made of forged brass.
- COR7G for use on pairs of doors with astragal on active door up to 4' or with astragal on inactive door up to 3'4" or with astragal on both doors up to 2'10"
- COR9G for use on pairs of doors with astragal on active over 4' or with astragal on inactive door over 3'4" or with astragal on both doors over 2'10"

Product	Projection
CORG7G	7"
CORG9G	9"

Finishes:
US28, US26D, 315AN

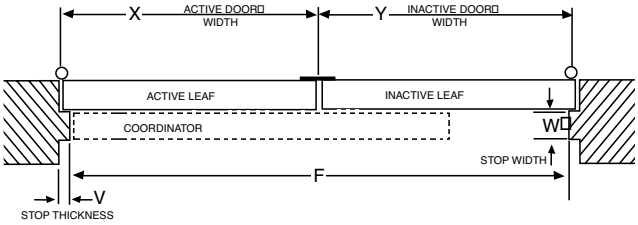
Filler Bar (if desired):
FL20, FL32, FL44

Vertical Rod Exit Device Cutout Type (if applicable):
A, B, C, D, E, F, G
If other Vertical Rod Exit Device not listed on chart, from page C16, include information as shown on page C16.

Active Door Size – Required for ALL Vertical Rod Exit Device Applications

To determine the size COR you need:

1. Start with the active door width (X).
2. Next consider the overall frame opening between stops (F).
3. Preferably, the coordinator would equal the active door width (X) + approximately 1/2 inactive door width (Y). The coordinator must be 6" longer than the active door width (X) and less than the overall frame opening between stop (F).



Examples:

- Pair of 30" Doors, 5/8" Stops
  Active Door Size, X = 30"
  Overall Frame Opening between Stops, F = 58-3/4"
  Recommended Coordinator: COR42

- Pair of 36" Doors, 5/8" Stops
  Active Door Size, X = 36"
  Overall Frame Opening between Stops, F = 70-3/4"
  Recommended Coordinator: COR52

- 36" Active Door, 18" Inactive door, 5/8" Stops
  Active Door Size, X = 36"
  Overall Frame Opening between Stops, F = 52-3/4"
  Recommended Coordinator: COR42

- 48" Active Door, 24" Inactive Door, 5/8" Stops
  Active Door Size, X = 48"
  Overall Frame Opening between Stops, F = 94-3/4"
  Recommended Coordinator: COR60

Special Factory Preparation for Use with Vertical Rod Exit Devices

Coordinators may need to be prepared at the factory for use with some surface or concealed vertical rod exit devices. (See Chart below)

If the exit device is not listed the following information is needed.

1. Exit Device Manufacturer and Model No.
2. Active Door Size, "X"
3. Inactive Door Size, "Y"
4. Exit Device Backset, "U"
5. Stop Width, "W"
6. Stop Thickness if other than 5/8", "V"

100 Series Concealed Overhead Door Holders/Stops

100 Series Heavy-Duty

Glynn-Johnson offers a complete line of overhead door holders and stops, accommodating virtually all openings with solutions for even the most complex door control problems. These concealed holders and stops provide the most attractive and reliable heavy-duty door control available.

Glynn-Johnson 100 series holders and stops provide the most reliable and versatile concealed overhead door control. They are designed for installation on virtually all types of doors mounted on conventional type butt hinges, pivots, continuous hinges, swing clear hinges and numerous other specialty hinges. When used in conjunction with many surface-applied door closers, 100 series holders and stops provide the most effective control for entrance doors and vestibule doors of all types, as well as heavy or often used interior doors. Templates provided allow for variable mounting positions, ranging from 85° - 110° of opening.

Five Models:
- 100H Series Hold-Open Model
- 100HP Series Internal Hold-Open Model
- 100F Series Friction Hold-Open Model
- 100S Series Stop-Only Model
- 100SE Series Special Stop-Only Model

Six Sizes:
- Each model comes in six sizes.
- Simple
- Standardized

Three Options:
- ADJ—Adjustable Jamb Bracket
- CJ—Jamb Bracket for use with LCN5030 Closer
- SOC—Pin-in-Socket Security Screw Package

Unmatched Convenience:
- Non-handed
- Improved Compatibility with Door Closers
- Single/Double-Acting Doors
- Interior/Exterior Applications
- Reduced Door Prep
- Durable
- Improved Corrosion Resistance
- Function Conversion Kits are Available.

Materials and Finishes:
In Heavy Gauge Brass or 300 Series Stainless Steel, these models offer the broadest range of finishes in the industry, complementing any design and offering the highest resistance to corrosion. Available in the following finishes:

Finishes	Description
US3	Polished Brass
US4	Satin Brass
US10	Satin Bronze
US10B	Oil Rubbed Bronze
US32	Polished Stainless Steel
US32D	Satin Stainless Steel
SP4	Powder Coat Brass
SP10	Powder Coat Bronze
SP28	Powder Coat Aluminum
SP313	Powder Coat Dark Bronze
SPBLK	Powder Coat Black

Models

These models provide a wide range of optional features, and are ideal for use on entrance and vestibule doors, large doors, doors opened frequently, or doors subject to abuse. These models are also furnished with an offset-style jamb bracket.

Designed for heavy-duty applications, 100 series models will provide long-lasting protection to doors, frames, hinges, related hardware and surrounding walls or obstructions.

100H Series Hold-Open

(Suffix H) The Hold-Open function should be used where it is desired to hold a door open at a predetermined position for short or long periods of time, permitting an unobstructed traffic flow through the opening.

These models are both selective and adjustable, featuring the most reliable Hold-Open mechanism available. They feature a control knob which protrudes from the face of the door and turns the Hold-Open function on or off. Set in the inactive position, the unit acts as a stop and shock absorber. The tension on the Hold-Open mechanism can be adjusted using an allen wrench to offset air currents or other exterior conditions. The Hold-Open tension adjustment is located in the bottom of the track in the top of the door.

100HP Series Internal Hold-Open

These models provide a Hold-Open unit with the Hold-Open mechanism built into the channel, thus reducing the door prep. The 100HP have a preset Hold-Open force that is not adjustable. The Hold-Open feature is not selectable in these units, so the doors are always held open.

100F Series Friction Hold-Open

(Suffix F) Friction Hold-Open models provide an alternative holding method, ideal for heavy patient room doors, closet doors or similar applications where multiple Hold-Open positions are desired. The friction tension is adjusted using an allen wrench and an open end wrench. The friction tension adjustment is located on the top of the slider in the channel.

100S Series Stop-Only

(Suffix S) When the Hold-Open function is not required, the Stop-Only function provides the same effective door control minus the Hold-Open feature. The Stop-Only model may be used on fire doors.

100SE Series Special Stop-Only

(Suffix SE) When Stop-Only models are used in conjunction with single point Hold-Open electronic door closers, they may be ordered without the shock-absorbing mechanism. Used as an auxiliary stop with these closers, they will prolong the life of the closer. The stop location is adjusted using an allen wrench on the stop block located in the channel.

Note: Caution should be used when using this option in other applications, as the elimination of the shock-absorbing spring can put added stress on door and frame if used improperly.

Application Information

UL Classification

The 100 series Stop-Only models are classified by Underwriters Laboratories (UL) as Miscellaneous Fire Door Accessories. This classification applies to use on either Hollow Metal Fire Doors or Wood Fire Doors. Where Wood Door manufacturer's listing allows for the cutout required for installation, concealed overhead stops may be used on those wood fire doors. These units may be used on doors of any rating. As a reminder, the Miscellaneous Fire Door Accessories (GVUX) section is defined by UL as: "Miscellaneous fire door accessories are intended in the individual Listings. The accessories have been investigated to determine that when installed in accordance with the manufacturer's instructions, the accessories do not adversely affect the fire rating of the fire door and/or fire door frames."

Dead Stop Templating:

If a wall or similar obstruction is in place at 110° or less opening angle (i.e. doors that open back-to-back), Dead Stop Templating should be used. This includes all Hold-Open, Friction and Stop-Only models, except when the "SE" Option is used. The Dead Stop position is reached when the shock-absorbing spring is fully compressed, the initial degree of opening will be 5° to 7° less than the Dead Stop opening.

Example: If the holder is templated to 100° Dead Stop, the door will hold open somewhere between 93° and 95°, but no further than 100°.

Note: Do not use dead-stop templating on the 100SE Series since there is no shock-absorbing spring.

Environmental Considerations:

Environmental factors should always be considered when specifying overhead holders and stops. Doors that are positioned on a building's exterior or subject to corrosive conditions should be equipped with a holder constructed primarily of stainless steel or brass materials. For interior applications, steel is acceptable, though brass substrates generally provide a more attractive architectural-grade finish.

Function Conversion Kits

- FK100F—Converts a 100H or 100S unit into a 100F unit. To order specify FK100F.
- FK100H—Converts a 100F or 100S unit into a 100H unit. To order specify FK100H.
- No kit is needed to convert a 100H or 100F unit into a 100S unit.

Options

Suffix ADJ (Adjustable Jamb Bracket):

An additional option on the 100 series is the adjustable jamb bracket, which allows the degree of Hold-Open or Stop angle to be adjusted after installation. Suffix "ADJ" is available in all functions, but only in sizes 3, 4, 5 & 6. ADJ jamb bracket requires additional frame prep. The ADJ option cannot be added to an existing unit, it must be factory ordered.

Suffix CJ (Closer Jamb Bracket):

Provides a special jamb bracket needed for 100 series units used with LCN5030 closers. These special jamb brackets are handed, so handing will need to be specified when ordering the "CJ" option, CJLH for a left hand door and CJRH for a right hand door. The CJ option cannot be added to an existing unit, it must be factory ordered.

Suffix SOC (Pin-in-Socket Security Screw Package):

A screw package with pin-in-socket screws for mounting the jamb bracket to the frame is provided instead of the standard screw package.

4110 Series

Overview

The 4110 is LCN's best performing heavy duty closer with an adjustable spring and possible hold-open point beyond 140 degrees, meeting ADA requirements. Backed by a 30 year warranty, the cast iron body and all weather fluid offer versatility in high traffic applications.

Cylinder

Available finish options

MTLPC	Brite metallic: Custom powder coat finish, which resembles that of 651 or 652 plated finish.
SRI	For installations where a higher level of protection against weather conditions, or the effects of a potentially corrosive atmosphere is required, LCN offers a special rust inhibiting (SRI) process. Ferrous metal components receive an SRI pretreatment and a standard powder coat finish of your choice, or a custom powder coat finish for a nominal additional cost. Closers treated with the SRI process exceed the 100 hour protection level available with standard LCN powder coated finishes.

Covers

Standard cover

4110-72
Plastic cover
- Non-handed
- Standard

Optional cover

4110-72MC
Metal cover
- Handed
- Required for plated finishes and custom powder coat finishes
- Optional

Arms

4110-3049EDA
Hold-open arm
- Handed
- Optional
- Provides hold-open function, adjustable at shoe

4110-3049FL
Fusible link arm
- Handed
- Releases hold-open function adjustable at shoe when exposed to temperatures above 165º F
- Optional
- NOTE: Check local codes before specifying FL arms. NOT A life safety product!

4110-3077CNS
Cush-N-Stop arm
- Non-handed
- Features solid forged steel main arm and forearm with built-in stop in soffit shoe

4110-3077EDA
Extra duty arm
- Non-handed
- Features forged, solid steel main and forearm for potentially abusive installations

4110-3077EDA/ 62G
Extra duty arm
- Non-handed
- Features forged, solid steel main and forearm for potentially abusive installations
- Optional 4110-62G thick hub shoe for blade stop clearance

4110-3049CNS
HCUSH arm
- Non-handed
- Provides hold-open function with templated stop/ hold-open points.
- Handle controls hold-open function

4110-3077SCNS
Spring CUSH arm
- Non-handed
- For abusive applications features solid forged steel main arm and forearm with spring loaded stop in the soffit shoe
- Optional

4110-3049SCNS
Spring HCUSH arm
- Non-handed
- For abusive applications features solid forged steel main arm and forearm with spring loaded stop in the soffit shoe
- Handle controls hold-open function
- Optional

Installation accessories

4110-18
Plate
- Required for push side mount where top rail is less than 5 1/8″ (130 mm), measured from the stop
- Requires minimum 2″ (51 mm) minimum top rail

4110-30
CUSH shoe support
- Provides anchorage for fifth screw used with CUSH arm, where reveal is less than 3 1/16″ (78 mm)

4110-61
Blade stop spacer
- Lowers parallel arm shoe to clear 1/2″ (13 mm) blade stop

4110-419
PA flush panel adapter
- Provides horizontal mounting surface for CUSH shoe on single rabetted or flush frame

Fasteners

Self-reaming and tapping screws included standard

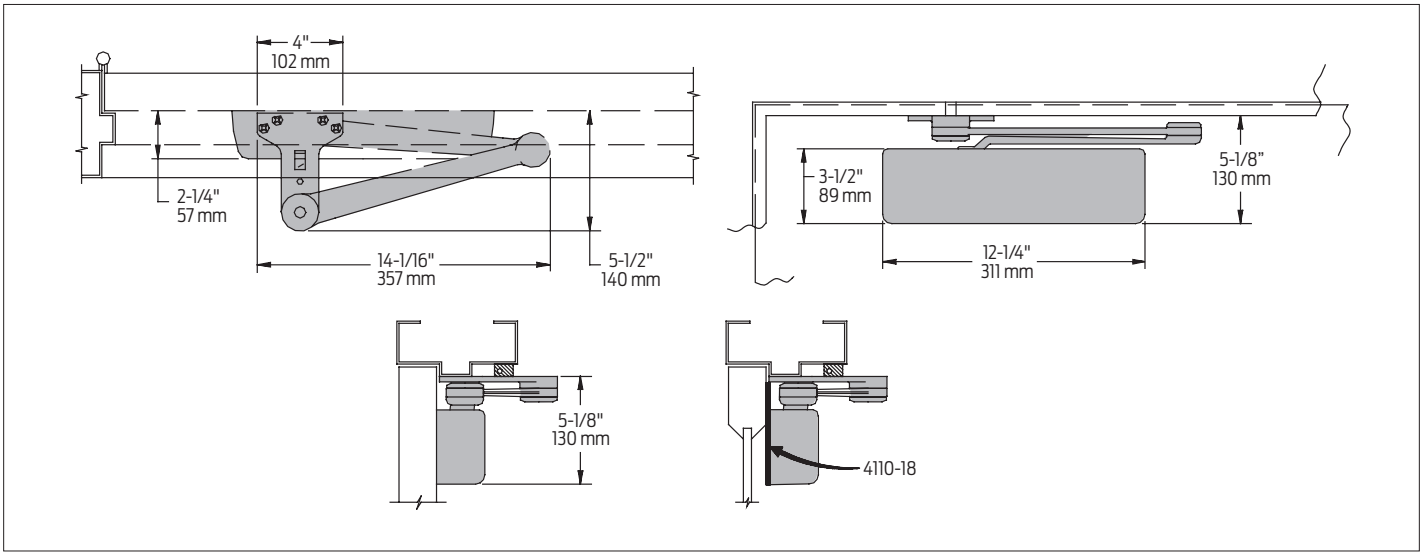
Fastener pack options

TBSRT	TB[1] with self-reaming and tapping screws
WMS	Wood and machine screw
TBWMS	TB[1], wood and machine screw
TORX	TORX machine screw
TBTRX	TB[1] and TORX machine screw

1 Specify door thickness if other than 1 3/4"

Dimensions and mounting

Parallel arm (push side) mounting



Specifications

Accessibility	Available with less than 5.0 lbs. opening force on 36" door
Certifications/ approvals	▪ Grade 1 - ANSI A156.4 ▪ UL 10C ▪ Meets BAA - Buy American Act
Degree of operation	EDA Max opening: 180° Hold open: 180° Cush Max opening: 110° Hold open: 110°
Environmental conditions	▪ Approved for interior use ▪ Approved for exterior use (SRI coated only) ▪ LCN's standard all weather fluid performs to temperature ranges from 120°F (49°C) to -30°F (-35°C) ▪ LCN's powder coat finish surpasses 100 hours of salt spray which is over four times the ANSI standard for corrosion resistance.
Warranty	30 years
Standard features	▪ Cast iron body ▪ Full complement bearing ▪ 1 1/2" diameter piston ▪ 11/16" diameter double heat treated pinion journal

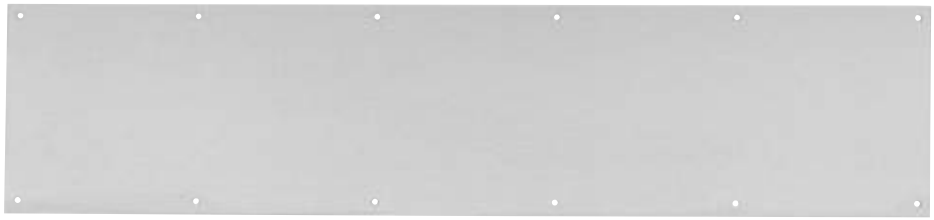
ALLEGION™

8400 Series Protection Plates

- Door protection plates are available in .050" thick brass, stainless steel or aluminum; and 1/8" thick high impact polyethylene in clear or black.
- Bevel edge options; specify B4E for all four edges.
- Mounting screw pack furnished standard, 16 screws per pack. Optional screw packs are available for TEK or TORK screw heads. Refer to the following chart for ordering.
- Specify NMH for no mounting holes. (Not available on 8402)
- Specify NMH-A for no mounting holes with adhesive. (Not available on 8402)
- Specify CS for counter sunk mounting holes.
- Specify ERS prepped with extra row of screws.

Kickplate Gasket Tape Tape is recommended when using a brass plate on a metal door to reduce tarnishing from electrolytic oxidation. One tape pack will cover an the perimeters of a 8" x 34" kickplate. Order 8401 Gasket Tape.



8400 Protection Plate
8402 (UL)* Protection Plate

**UL mark appears in upper right corner. Factory supplied screws must be used.*

Number of screw packs required by plate size (specify TEK Screws or TORK screws).

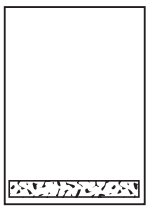
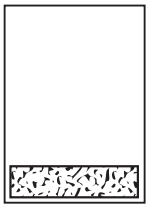
Residential Grade Kickplates available Carded only, finishes PA28, PA3, PA619, PA716, B3, B505, B619, B716



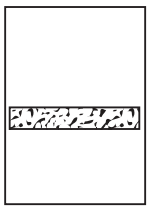
Mop Plates

- Protect the bottom of the pull side of door subject to cleaning and mopping procedures.
- Size Ranges:4" to 6" high, 22" to 48" wide



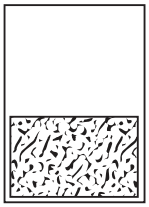
Kick Plates

- Protect the bottom of the push side of doors subject to scuffing from foot traffic.
- Recommended for all doors subject to normal use (especially doors using a closer).
- Size Ranges: 8" to 24" high, 22" to 48" wide



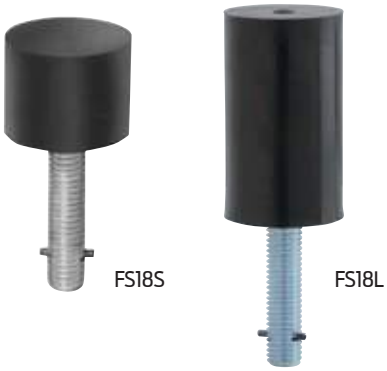
Stretcher Plates

- Protect doors at specific areas where consistent contact is made by stretchers, service carts or other equipment.
- Usually applied to push side of doors.
- Specify "B4E" Option for beveled edges.
- Size Ranges: 6" to 8" high, 22" to 48" wide



Armor Plates

- Protect lower half of doors from abuse by hard carts, trucks and rough usage.
- Usually applied to push side of single doors and both sides of double acting doors.
- Size Ranges: 26" to 48" high, 22" to 48" wide



FS18S
FS18L Floor Stops

- Security Door Stops designed for use in high vandalism areas.
- Molded from black flame resistant, resilient material around a heavy-duty stud.
- Once grouted in concrete, leaves no exposed fasteners to be tampered with or removed.
- Ideal for jail or security cell areas where floor mounted stops are required.
- FS18L also ideal for concrete wall applications.

Dimensions

FS18S Height: 1-1/2”
FS18S Diameter: 2”
FS18S Stud Length: 2-1/2”

FS18L Height: 3-1/2”
FS18L Diameter: 2”
FS18L Stud Length: 2-1/2”

FS434 Floor Stop

- Burnished wrought steel.
- For undercut doors up to 1-1/2”.
- Packed with screws and plastic anchors.
- Replaceable soft, resilient gray rubber.

660 Series

Mini station control

Overview

The 660 Series mini station control is designed for concealed desk application, and it is used to release an electric or electronic locking mechanism from a remote location. The 660 Series mini station control is mounted in a mini aluminum box, 2" x 2" x 1". The 660 is available with a momentary action pushbutton or maintained action toggle switch. Both can be surface mounted. A typical application is under a desk to release an entrance door.

Features and benefits

- Surface mount application
- Choice of maintained or momentary action
- Compact size
- Recommended for concealed desk application

Specifications	
Switch contact rating	6 amp @ 120 VAC

PS902

2 amp power supply

Photo as shown includes optional board(s). Please contact your local sales office or visit the support section on our website for configuration assistance.

Overview

The Schlage comprehensive line of power supplies and option boards was designed to address the changing needs of the access control market.

Installation is simplified by utilizing a flat mounting design and polarized locking connectors for option boards. This design eliminates the need for racks and side connectors. The flat mounting of the option boards also provides for easier access to the terminal blocks for connection of electrified devices (such as electrified strikes, electromagnetic locks, card readers, etc.).

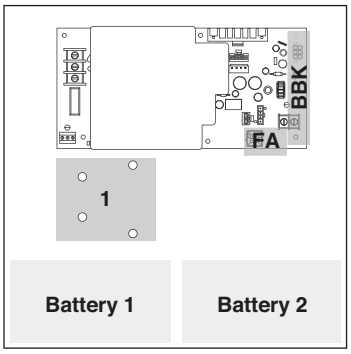
Common to the line of PS900 Series power supplies is a constant output rating at both 12v and 24v settings, universal 120 VAC to 240 VAC input, and polarized option board connectors. New fire alarm interface board mounting allows outputs to be configured as switched (power cut) or unswitched (power continues) when signal is provided.

Features and benefits

- 2A @ 12/24 VDC constant output, field selectable with jumper
- Provides low-voltage, Class 2, filtered and regulated power
- Universal 120-240 VAC, fused primary input
- Single polarized option board connector
- AC input and DC output monitoring circuit with LED indicators
- Externally visible AC input indicator with isolated SPDT contacts
- High-voltage protective cover for AC circuitry (not shown)
- Battery back-up board auto-selects voltage
- Optional Fire Alarm plug-in board available
- UL 294, ULC-S318, RoHS, and FCC Part 15 certified

Configuration options

Available option board, fire alarm and battery backup connection locations:



Exit device support

Von Duprin QEL	Up to 2[1]

Available option boards	900-FA: Plug-in fire alarm (install on main or option board) 900-2RS: 2 Relay option board capable of individual or sequential operation for single and pair door applications 900-4R: 4 Relay option board 900-4RL: 4 Relay option board with integrated logic and individual or sequential operation capability for controlling security interlocks, auto operators, and time delay function 900-8F: Fused, 8 zone option board 900-8P: PTC, 8 zone option board
AC primary fuse size	3.15A, 250v, 5 x 20mm
Battery fuse size	7.5A 32v ATO blade style
DC output protection	Overload protection - current limited foldback circuit
Indicators	LED indicators: - AC input (visible on outside of enclosure) - DC output Isolated SPDT contacts to monitor AC power status
Weight (power supply)	Approx. 9.0 lbs
Weight (each battery)	4.0 lbs
AC input termination	3 position terminal block with protective cover Wire capacity: 10 AWG max.
DC output termination	2 position terminal block Wire capacity: 12 AWG max.
Option board connectors	1
Fire alarm board connector	Yes
Keylock	Optional
Accessories	900-BAT: Backup battery pack

About Allegion

Allegion (NYSE: ALLE) is a global pioneer in safety and security, with leading brands like CISA®, Interflex®, LCN®, Schlage® and Von Duprin®. Focusing on security around the door and adjacent areas, Allegion produces a range of solutions for homes, businesses, schools and other institutions. Allegion is a $2 billion company, with products sold in almost 130 countries. For more, visit **www.allegion.com.**

SECTION 08 81 00
GLASS GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Annealed glass.
   2. Strengthened glass.
   3. Coated glass.
   4. Laminated glass.
   5. Insulating glass units.
   6. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install glazing that conforms to the sizes and thicknesses indicated and other Contract Document requirements; meets specified performance requirements; and results in structurally sound and weathertight assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing glazing installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Fabricator: Must have at least 10 years' experience fabricating custom glazing for at least 100 previous projects similar to this project in similar to this project in size, material, design, and complexity.
   3. Installer: Company or individuals must have at least 5 years' experience installing glazing for at least 30 previous projects similar to this project in size, material, design, and complexity.
   4. Supervisors: Individuals must have at least 7 years' experience installing glazing for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading glazing installers.
   5. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, glazing schedule, samples, and written descriptions of specified qualifications, and delegated design submittals.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate glazing into the mockup as part of the work of this specification section.

E. Warranty:
   1. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 10 years.
   2. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 5 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.1 PRIMARY GLASS MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Guardian Industries Corp.
   2. Pilkington North America, Inc.
   3. PPG Industries.
   4. Saint-Gobain Corp.

2.2 MANUFACTURED GLASS

A. Clear Annealed Vision Glass:
   1. Description: ASTM C 1036, Type I (transparent flat glass), Class 1 (clear), Quality Q3 (select glazing applications).

B. Ultra-Clear (Low Iron) Annealed Vision Glass:
   1. Description: ASTM C 1036, Type I (transparent flat glass), Class 1 (clear), Quality Q3 (select glazing applications).
   2. Products: Provide one of the following, or equal.
      a. “Starphire” manufactured by PPG Industries.
      b. “UltraWhite” manufactured by Guardian Industries Corp.
      c. “OptiWhite” manufactured by Pilkington North America, Inc.
      d. “DIAMANT” manufactured by Saint-Gobain Glass.
   3. Performance Requirements:
      a. Visible Light Transmittance (VLT): At least 90 percent at 6mm thickness.

C. Tinted (Heat Absorbing) Annealed Vision Glass:
   1. Description: ASTM C 1036, Type I (transparent flat glass), Class 2 (tinted), Quality Q3 (select glazing applications).
   2. Color: Match Guardian color, “Crystal Gray”.

2.3 SECONDARY GLASS FABRICATORS

A. Fabricators: Provide products fabricated by one of the following, or equal.
   1. Oldcastle BuildingEnvelope Corp.
   2. PPG Industries.
   3. Viracon, Inc.

2.4 FABRICATED GLASS

A. Heat-Strengthened Glass:
   1. Description: ASTM C 1048, Kind HS (heat strengthened), Condition A (uncoated surfaces), Type I (transparent flat glass), Class 1 (clear), Quality Q3 (select glazing applications).
   2. Minimum Surface Compression Strength (up to 1/4-inch thick): 4,000 to 7,000 pounds per square inch.
   3. Minimum Surface Compression Strength (5/16 to 3/8-inch thick): 5,000 to 8,000 pounds per square inch.
   4. Fabrication:
      a. Except where not practicable due to glass size, fabricate tempered glass by the horizontal (roller hearth) process with roll wave distortion parallel to the bottom glass edge when installed, unless otherwise indicated.
      b. Do not exceed 1/32-inch bow and warp tolerances.

B. Fully-Tempered (Toughened) Glass:
   1. Description: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated surfaces), Type I (transparent flat glass), Class 1 (clear), Quality Q3 (select glazing applications).
   2. Minimum Surface Compression Strength: At least 10,000 pounds per square inch.
   3. Fabrication:
      a. Fabricate tempered glass by the horizontal (roller hearth) process with roll wave distortion parallel to the bottom glass edge when installed, unless otherwise indicated.
      b. Glazing materials must be free from bubbles, smoke vanes, air holes, scratches and other defects, having ground and arrised edges; provide polished edges where exposed.
   4. Source Quality Control:
      a. Individual tempered glass lites installed overhead, and floor-to-ceiling tempered glass lites installed adjacent to walking surfaces must be fully heat soak tested by the manufacturer or fabricator before delivery to the project site.
      b. Other tempered glass lites may have statistical heat soak testing performed to demonstrate nickel sulfide breakage does not exceed 0.1 percent.

C. Vacuum Deposition-Coated (Sputter-Coated) Vision Glass:
   1. Description: ASTM C 1376, Kind CV (coated vision – if glass can be approached within 10 feet or less) or CO (coated overhead – if distance is greater than 10 feet) as applicable; and ASTM C 1048, Kind HS (heat strengthened) or FT (fully tempered) as indicated, Condition C (other coated glass), Type I (transparent flat glass), Class 1 (clear), Quality Q3 (select glazing applications).
   2. Coating: Either spectrally selective or hybrid low-emissivity coating (low-E coating) scheduled at the end of this Section.

D. Laminated Glass:
   1. Description: ASTM C 1172, Kind LA (laminated annealed), Kind LHS (laminated heat strengthened), or Kind LT (laminated fully tempered) as scheduled.
   2. Glass Panes: Indicated on the Drawings, or equal.
   3. PVB Interlayer:
      a. Product: “Saflex” manufactured by Eastman Chemical Co. or “Butacite” manufactured by E.I. du Pont de Nemours & Co., Inc. (DuPont), or equal.
      b. Opacity: Clear, translucent white (either acid etch or simulated sandblast), or opaque white interlayer indicated on the Drawings or selected by the Architect.
   4. Ionoplast Interlayer:

a. Product: “SentryGlas Plus” manufactured by E.I. du Pont de Nemours & Co., Inc. (DuPont), or equal.
b. Color: Clear or translucent interlayer indicated on the Drawings or selected by the Architect.

5. Fabrication: Glass must conform to the requirements of ASTM C 1172, “*Standard Specification for Laminated Architectural Flat Glass”.* Fabricate laminated glass free from foreign substances, and from air or glass pockets.

E. Insulating Glass Units:
1. Glass Panes: Indicated on the Drawings, or equal.
2. Interspace: Hermetically sealed, air-filled interspace.
a. Spacer Material: Black anodized aluminum.
b. Spacer Corner Construction: Provide spacers and splices with no visible seams; and with soldered/welded corners.
c. Desiccant: Either molecular sieve or silica gel, or a blend of both, provided on all four sides.
3. Seals: Black polyisobutylene primary sealant; black silicone secondary sealant.
4. Edge Deletion: To promote full adhesion of primary sealant, low “E” coatings at the glass perimeter must be removed before fabrication, as required, recommended, authorized, sanctioned, or accepted by the manufacturer.
5. Fabrication: IGU assemblies conforming to IGMA publication TB-3000, “*North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use*”.

2.5 ACCESSORIES

A. Spacer Shims: Continuous shims fabricated from load-bearing, non-leaching, high-impact polystyrene.

B. Setting Blocks, Spacers and End Blocks: Provide the following, unless another type, hardness, class, or surface is supplied, required, recommended, authorized, sanctioned, or accepted by the glass installer.
1. Setting Blocks: Elastomeric silicone rubber conforming to ASTM C 1115, CH9.
2. Spacers for Structural Silicone Glazing: Elastomeric silicone rubber conforming to ASTM C 1115, CH6S1.

C. Glazing Gaskets: Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
1. Firm, Dense Gaskets: Elastomeric EPDM rubber conforming to ASTM C 1115, CH7S2 unless another type, hardness, class or surface is supplied, required, recommended, approved, or accepted by the glass installer.
2. Soft, Closed Cell Gaskets: ASTM C 509. Provide EPDM rubber with pre-molded corners.

D. Backer Rod for Butt Joints: Square bi-cellular backer rod; color matching silicone sealant.

E. Cleaners, Primers, Sealers: Supplied, required, recommended, or accepted by the manufacturer or fabricator.

F. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   3. Install glazing using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set glazing true to line; plumb, level, and square without warp or rack; with flush, well-fitted joints; and in alignment with adjacent construction.
   5. Securely attach glazing in place to supporting construction.

B. Installation Tolerances: Install glazing within the following tolerance variations.
   1. Maximum Out of Plumb: Not more than L/960 of span, or 1/8-inch in 10 feet.
   2. Maximum Out of Level: Not more than L/960 of span, or 1/8-inch in 10 feet,
   3. Maximum Out of Plane: Fastening surfaces of adjacent framing members may not vary by more than 1/8-inch.
   4. Maximum Stud Spacing Variance: Not more than 1/8-inch.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged, and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.
   4. Installed glazing must be warrantable. Do not install, correct, or replace glazing in a manner that is un-warrantable by the manufacturer or that results in any other warranty or guarantee becoming void.

D. Protection:
   1. Protect installed glazing in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 08 91 13
FIXED LOUVERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Fixed wall louvers.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing louvers installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing louvers for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing louvers for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading louver installers.

B. Submittals: Submit product data, shop drawings, samples, and written descriptions of specified qualifications.

C. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate louvers into the mockup as part of the work of this specification section.

D. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for finishes against color fading, chalking, cracking, checking, peeling, and adhesive failure for 20 years.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Provide products manufactured by one of the following, or equal.
   1. The Airolite Co., LLC.
   2. Construction Specialties, Inc.
   3. Greenheck Fan Corp.
   4. Ruskin Co.

2.02 STORM-RESISTANT LOUVERS

A. Description: Extruded aluminum mullion louver assembly licensed to bear AMCA International's Certified Rating Seal for performance.

B. Product: "Model RS-4300" manufactured by Construction Specialties, Inc., or equal.

C. Requisite Properties:

1. Sizes: Indicated on the Drawings.
2. Nominal Depth: 4 inches.
3. Blade Type: Chevron blade.
4. Frames and Mullions: At least 0.080-inch thick aluminum.
5. Louver Blades: At least 0.080-inch thick aluminum.
6. Sill Flashing: 4-inch high by full depth by 0.50-inch thick aluminum, with continuously welded and watertight side panels (end dams).
7. Exposed Finishes: Match storefront framing.
8. Concealed Steel Finishes: Prepare surfaces and apply shop primer specified in Section 05 05 13.
9. Concealed Aluminum Finishes: Prepare surfaces and coat aluminum surfaces in contact with masonry, concrete, or steel with bituminous paint specified Section 05 50 00.

D. Performance Requirements (based on 4-foot square louver and 15-minute test duration):

1. Net Opening: At least 7.51 square feet.
2. Percentage Free Area: At least 47 percent.
3. Design Velocity: At least 900 feet per minute.
4. Intake Pressure Drop at 900 feet per minute Free Area Velocity: Not more than 0.226-inch water gage pressure loss.
5. Exhaust Pressure Drop at 900 feet per minute Free Area Velocity: 0.257-inch water gage pressure loss.
6. Wind Driven Rain: Must have at least a Class A (99-percent) effectiveness rating, when tested in compliance with AMCA publication ANSI/AMCA Standard 500-L, "*Laboratory Methods of Testing Louvers for Rating*" based on a one square meter core area (39-inch by 39-inch) louver test unit with a mill finish and no screen, tested at a rainfall rate of 3 inches per hour and a wind velocity of 29.1 miles per hour.

2.03 MATERIALS

A. Aluminum:

1. Standard Aluminum Structural Profiles: ASTM B 308, Alloy 6061-T6.
2. Extruded Aluminum Bars and Shapes: ASTM B 221, Alloy6063-T5 or T6 for primary components; Alloy 6063-T5 or T6, 6005-T5, 6105-T5 or 6061-T6 for structural components.
3. Aluminum Sheet and Plate: ASTM B 209, Alloy 5005-H32 or Alloy 3003-H14.
4. Extruded Aluminum Tubes: ASTM B 221 or ASTM B 483.
5. Structural Aluminum Pipe and Round Tube: ASTM B 429.

2.04 ACCESSORIES

A. Steel Reinforcement: When required by engineering calculations, provide steel bent plate or shapes conforming to ASTM A 36 and shop primed in compliance with Section 05 05 13.

B. Brackets: Provide high-strength aluminum or austenitic stainless steel brackets and reinforcements.

C. Sill Flashing: Fabricate from at least 0.0299-inch BMT (MSG 22) hot-dip galvanized and galvannealed steel sheet, with welded end dams and finished to match frames, mullions, and blades.

D. Bird Screen: 1/2-inch by 1/2-inch mill finish aluminum woven wire mesh fabric made from at least 0.0508-inch diameter (AWG 16) aluminum wire.

E. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.
   1. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
   2. Reinforce framing members as required to receive fastener threads.
   3. Exposed fasteners are prohibited on faces exposed to view. Provide concealed fasteners and expansion provisions.

F. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed louvers and adjacent items.
   3. Install louvers using using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Perform drilling as required or necessary for an accurate fit and complete installation.
   6. Securely attach louvers in place to supporting construction.
   7. Installed louvers must be warrantable. Do not install, correct, or replace louvers in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Use concealed fasteners and anchorages. Provide washer head fasteners with bonded sealing washers where required to protect metal surfaces and to make weathertight connections.
   2. Form closely-fitted joints with exposed connections accurately located and secured.
   3. Provide uniform-width perimeter reveals and opening sealants and joint fillers as indicated.
   4. Install concealed gaskets, flashings, and joint fillers as the louver installation progresses.

C. Installation Tolerances: Install louvers to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

D. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Repair damaged finishes. Restore finishes so that no evidence remains of corrective work. Return to the factory those items that either cannot be refinished in the field, or that contain

components that cannot be refinished in the field. Make required alterations and either refinish the entire item or provide a new item.

E. Protection:
   1. Protect installed louvers in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

RSTLNE, TAGDSC, ELMTB, CLSB2070

DIVISION 09

FINISHES

SECTION 09 05 16
PREPARATION OF CONCRETE SUBSTRATES FOR FINISH FLOORING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Concrete substrate testing equipment.
2. Corrective (remedial) MVECS.
3. Surface preparation.
4. Site tests and inspections.
5. Supplementary components, accessories, and detail work normally furnished or otherwise necessary for complete testing and preparation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
1. Section 03 35 10 for preventative (day-of-pour) MVECS; for definitions of the term “recently-cured”, “hardened”, “newly-aged”, and “existing” concrete; and for wet concrete RH meter accessories.
2. Section 03 54 16 for definition of the term “underlayment”.

1.02 RELATED DOCUMENTS

A. This specification section
1. supplements the requirements of specification sections that identify penetrants, overlays, and coverings required for the project; and
2. is used with other specification sections to produce correct and complete substrates for all actual in-service flooring conditions applicable to the project; and sound substrates for the proper and warrantable installation of all specified or selected penetrants, overlays, and coverings, including underlayment specified in Section 03 54 16.

1.03 PRICE AND PAYMENT PROCEDURES

A. Unit Prices:
1. Administrative Requirements:

a. Unless otherwise indicated, specified MVECS is excluded from the Contract and used only as a topical remediation where necessary to conform to the penetrant, overlay, and covering manufacturers’ MVER, pH, and RH requirements.

b. Supply unit prices in terms of dollars per square foot for complete MVECS surface preparation and installation.

c. Specified MVECS becomes part of the Contract upon acceptance in writing by the Owner via properly-executed Change Order.
2. Measurement Procedures: Contract adjustments are made based on the net installed verifiable quantities of conforming work compared to quantities indicated on the Drawings.
3. Payment Procedures:

a. The Owner provides payment based on actual quantities and measurements that are both placed in the work and verified by the Architect.

b. The Owner is not required to provide additional compensation for extraneous, non-conforming, or rejected work.

B. Alternates: With input from the preventative (day-of-pour) MVECS manufacturer, preventative MVECS specified in Section 03 35 10 may be considered for certain concrete curing applications in lieu of curing compounds; and possibly in lieu of corrective MVECS products specified in this specification.

1.04 REFERENCES

A. Abbreviations and Acronyms:
1. CC: Anhydrous Calcium Chloride.
2. ICRI: International Concrete Repair Institute.
3. MVECS: Moisture Vapor Emission Control System.
4. MVER: Moisture Vapor Emission Rate.
5. pH: Potential of Hydrogen.
6. RH: Relative Humidity.

B. Definitions:
1. Moisture Vapor Emission Rate (MVER): Means the amount of moisture emitted from a substrate, expressed as the weight of condensed gas (liquid) in theoretical pounds emitted over 1,000 square feet of floor area during a 24-hour period. MVER is commonly referred to as “pounds” (i.e., “3 pounds” or “3 lb”). Rates range from 0 to 30 pounds per 1,000 square feet per 24 hours.
2. Substrate: Means a recently-cured, hardened, newly-aged, or existing concrete substrate, including cast-in-place, sitecast, and precast concrete floor and deck assemblies, cast underlayment, toppings, repair materials, and similar items.

    a. Floor: Means a slab-on-grade floor assembly.

    b. Deck: Means a suspended floor or roof slab assembly.
3. Penetrant: Means any direct-applied material, product, component, accessory, or other item that can pass into or through substrate surfaces, or enter and diffuse through substrate surface cracks, pores, and other surface defects. Penetrants include water, hardeners, curing compounds, stains, penetrating repellents and sealers, non-sacrificial graffiti-resistant materials, and dry penetrants.
4. Overlay: Means any direct-applied film-forming or high-build material that covers a substrate surface, including cast decks, underlayment, and toppings; dampproofing, waterproofing, and roofing; liquid flashings and sealants; fluid-applied and flooring treatment; terrazzo flooring; and paints, coatings, and film-forming sealers; and sacrificial graffiti-resistant materials.
5. Covering: Means any direct-applied material, product, component, accessory, or other item that is adhered or bonded to a substrate surface, including tile and adhered veneer assemblies; specialty, masonry, wood, resilient and precast terrazzo flooring; carpeting; and unit paving.
6. Cladding: Means any material, product, component, accessory, or other item supported by a framework, which is attached to a sporting construction, including anchored veneer, wall and soffit panels, and exterior plaster assemblies; suspended ceiling assemblies; and free-standing elevated accessible floor and roof paver assemblies.

7. Overburden: Means all materials, components, accessories, and other items installed or placed over a cured substrate, including overlays, coverings, cladding, and vegetated plaza deck and roof assemblies.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting:
   1. MVECS manufacturer's representative and MVECS installer must attend the preinstallation meeting specified in specification section 03 35 10.
   2. Schedule a separate additional preinstallation meeting between the Contractor, the Architect, penetrant, overlay and covering manufacturers' representatives and installers, the MVECS manufacturer's representative and installer, and the entities and individuals responsible for conducting concrete substrate testing.
   3. Hold the meeting after submittal approval and at least 10 business days before beginning installation.
   4. During the meeting, review

      a. substrate design and installation, including concrete mix design, water-cement ratio, slab thickness at each test location, below grade VDRs and concrete placement and pour dates;

      b. curing, sealing, or bond breaking compounds used on substrates, along with requirements and techniques used for complete removal of compounds prior to testing and floor covering installation;

      c. trenching, including mix design, water-cement ratio, thickness, and pour dates of concrete or slurry backfill;

      d. bonding agents selected for overlay installation or application;

      e. primers and adhesives selected for covering installation;

      f. qualifications of the testing agency and testing agency personnel that are scheduled to complete testing, and that interpret test results;

      g. calibration and verification of test equipment prior to beginning each round of testing;

      h. HVAC system operation and requirements during testing, including temperature and RH limits;

      i. preparation of testing sites, including procedures to assure slab surfaces are free from any material or substance that may hinder the free release of moisture from the slab;

      j. testing procedures and sequence for each test, including sequence, frequency, and location of test sites;

      k. requirements for testing and inspection reports;

      l. the construction schedule;

      m. temporary procedures required to protect concrete surfaces from re-wetting after initial testing; and

      n. redistribution of moisture within the substrate after floor coverings are applied;

5. Identify and discuss adverse or unfavorable conditions detrimental to testing and floor preparation.
6. Finalize construction schedule.
7. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

B. Quality Standards:
1. Quality Guideline: Selected concrete surface profiling, preparation, cleaning, and repair must conform to the requirements of International Concrete Repair Institute (ICRI) Guideline No. 310.2R, "*Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair*".
2. Installation Standard: Concrete surface preparation must conform to the requirements of Journal of Protective Coatings and Linings (JPCL) publication, "*Surface Preparation of Concrete Substrates*".

C. Qualifications:
1. Substrate Testing: Individuals performing substrate testing must be certified as ICRI Concrete Slab Moisture Testing Technicians, Grade 1 and current in their certification.
2. Substrate Repair: Individuals performing substrate repair must be certified as ICRI Concrete Surface Repair Technicians, Grade 1 and current in their certification.

D. Sequencing: Begin substrate testing only after
1. the building is enclosed with a permanent enclosure, including permanently-installed doors, windows, storefronts, curtain walls and similar opening protectives;
2. "wet work" such as concrete work, plastering, tile installation, and gypsum board finishing are complete and cured and dried to a condition of equilibrium;
3. testing areas are properly prepared for testing; and
4. the HVAC system is activated, operating, and maintaining temperatures and RH at anticipated occupancy levels for at least 48 hours prior to and during testing.

    a. If HVAC activation and operation prior to testing cannot be provided within the proposed construction schedule, then close a number of rooms or spaces where conditions can either be brought to anticipated normal conditions or into conformance with the minimum environmental parameters of the specified test standards using commercial equipment and building climate control services.

    b. Provide a recording hygrometer to monitor and record ambient temperature and RH levels for comparison to design occupancy conditions.

E. Scheduling:
1. Allow sufficient time in the construction schedule to permit concrete to cure and dry, without being re-wetted, for at least 90 days before beginning testing. Substrates re-wetted after initial curing must be permitted to cure and dry for at least 180 days before beginning testing.

    a. If minimum concrete curing and drying time cannot be provided in the construction schedule, assume the specified MVECS must be incorporated into the project as a topical remediation for concrete substrates, and reflect this assumption in the project cost until otherwise directed by the Owner**.**

    b. Forced drying substrates is prohibited.
2. Allow sufficient time in the construction schedule to permit RH test sites to equalize for at least 72 hours prior to reading equilibrium RH levels.
3. Testing must be complete and reports submitted at least one week, but not more than 3 weeks, before beginning penetrant, overlay, or covering installation or application.

1.06 SUBMITTALS

A. Action Submittals: Before beginning the work of this specification section, including bulk purchase and delivery of products, submit to the Architect the following for responsive action (formal review and approval).
   1. Product Data:

      a. Submit a comprehensive and complete list of proposed and other items specified, required, or otherwise necessary to complete the work of this specification section, including all accessories and similar secondary items normally furnished, required, or otherwise necessary for complete repair, surface preparation, testing and remediation.

      b. For each item listed, submit manufacturer's product data, specifications, typical installation details for all actual in-service conditions applicable to this project, and any other information necessary to demonstrate conformance with the Contract Documents, excluding Material Safety Data Sheets (MSDSs), which are returned to the Contractor without review.

B. Informational Submittals: Submit to the Architect the following for information (for informal review: responsive action by the Architect, including formal review and approval, is not expected or required, except to record non-conformance with specified requirements).
   1. Installation Instructions: Before beginning the work of this specification section, submit the following.

      a. Submit manufacturer-prepared published instructions for the proper installation of each furnished manufactured item and accessory, including packaging, delivery, storage, handling, surface preparation, installation, adjusting, cleaning, and protection instructions and requirements.

      b. If manufacturer-prepared published installation instructions are either unavailable or do not specifically apply to actual project conditions, then consult with the manufacturer's representative and obtain manufacturer-prepared, project-specific supplemental instructions printed on the manufacturer's company letterhead. Promptly distribute copies to the Architect for examination before beginning the work of this specification section; the Architect may have comments that lead to contract modifications, or to minor changes in the work.
   2. Test Reports: Submit facility floor plan diagrams showing area calculations and locations of each test along with measured test results for each test location.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. American Moisture Test, Inc.
   2. Vaisala
   3. Wagner Electronics.

2.02 CONCRETE SUBSTRATE TESTING EQUIPMENT

A. Description: Commercially-produced and -packaged test kits and equipment delivered to testing sites in factory-sealed wrappings.

B. MVER Testing Kits (CC Moisture Test Kits):
   1. Description: ASTM F 1869-compliant anhydrous calcium chloride moisture vapor testing kits consisting of a sealed dish of anhydrous calcium chloride, a metering dome with gasket, and instructions.
   2. Product: “AMT Calcium Chloride Moisture Test Kit” manufactured by American Moisture Test, Inc., or equal.
   3. Components:
      a. Non-pre-weighed, non-recycled, 94-percent pure anhydrous calcium chloride sealed in air-tight dishes.
      b. Virgin resin non-recycled plastic dome having a maximum U.S. perm rating of 0.10-perm or less.
      c. Butyl adhesive sealant system.
      d. Dish container size of 69mm plus or minus one millimeter; calcium chloride weight of 16 grams plus or minus one gram.

C. pH Testing Kits:
   1. Description: ASTM F 710-compliant digital alkalinity-pH meter.
   2. Product: “AMT Concrete Digital Alkalinity-pH Meter” manufactured by American Moisture Test, Inc., or equal.
   3. Components:
      a. Meter must return wide range (1-14) pH readings.
      b. Provide clean distilled or deionized water.

D. RH Testing Equipment:
   1. Description: ASTM F 2170-compliant temperature and RH meter, cable, RH probes, and concrete sleeves.
   2. Product: “AMT RH System” manufactured by American Moisture Test, Inc., or equal.

2.03 CORRECTIVE (REMEDIAL) MVECS

A. Description: Corrective MVER remediation system consisting of concrete mechanical surface profiling, sealer, and cementitious covering.

B. Application: MVER remediation system are applied when test results indicate slab MVER, pH, or RH exceed selected coating or covering manufacturer’s required, recommended, or accepted limits.

C. Concrete Surface Profiling: ICRI concrete surface profile CSP 2 to CSP 3 (grind to light blast between 4 and 10 mils), unless otherwise explicitly required, recommended, accepted in writing by the sealer manufacturer.

D. Sealer:
   1. Description: Moisture seal applied to substrates as a topical remediation.
   2. Products: “MES 100” manufactured by Floor Seal Technology, Inc., or equal.
   3. Requisite Properties:
      a. Composition: Products may not contain latex, organic additives or chemistries that have a potential to either re-emulsify or support micro-organism growth.

b. Growth Resistance: Product must not support the growth of mold, mildew or biological growth.

c. Safety: Non-corrosive, non-toxic, and non-hazardous to installers.

d. Water Pollution: Product must be a non-marine pollutant, and safe for natural water sources.

e. Maximum VOC Material Content: Less than 100 grams per liter.

4. Performance Requirements:

a. Water Vapor Transmission: Products must bring emission rates of up to 20 pounds to within a range conforming to the flooring manufactures' requirements, when measured in conformance with ASTM F 1869.

b. Alkali Resistance: Tolerant to 14pH alkali exposure, when tested in conformance with ASTM D 1308 and ASTM F 710.

c. Minimum Adhesion Strength: Between 370 and 500 psi, when tested in conformance with ASTM D 4541.

d. Adhesive Compatibility: Complete compatibility with all covering primers, adhesive, and materials.

e. Minimum RH Tolerance: Tolerant to at least 95 percent RH exposure, when determined in conformance with ASTM F 2170.

E. Covering:

1. Description: Cementitious topping applied directly over sealer to provide smooth substrate for finish flooring.
2. Products: Hydraulic cement underlayment specified in Section 03 35 16.
3. Minimum Thickness: Install underlayment to thickness required by either the sealer manufacturer or the finish flooring manufacturer (whichever is thicker), but not less than 1/8-inch.

2.04 ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Specified in Section 03 54 16 unless other products are supplied, required, recommended, or accepted by the MVECS manufacturer for the applications indicated.

B. Other Accessories: Provide accessories and other similar secondary items supplied, required, recommended, or accepted by the MVECS manufacturer.

2.05 SURFACE PREPARATION

A. Penetrants:

1. Remove all dirt, dust, debris, and other foreign matter from concrete surfaces

B. Marker Removal:

1. Remove all slab markings by sanding or bead blasting surface clean.
2. Completely remove all marker markings (i.e. Sharpie markers), marker paint, spray paint, and other markings.

C. Floor Coatings and Fluid-Applied Flooring:

1. Provide one or more of the following ICRI concrete surface profiles, as applicable, unless otherwise explicitly required, recommended, or accepted in writing by the flooring manufacturer.

    a. Sealers: CSP 1 to CSP 2. (grind to between 0 and 3 mils)

    b. Thin-Film Coatings: CSP 2 to CSP 3. (grind to light blast between 4 and 10 mils)

    c. High-Build Coatings and Resurfacing Applications: CSP 3 to CSP 5. (light to medium shotblast between 10 and 40 mils)

    d. Self-Leveling Overlays: CSP 4 to CSP 6. (medium to heavy shotblast between 50 mils and 1/8-inch)

    e. Polymer Overlays: CSP 5 to CSP 9. (medium shotblast to coarse planing between 1/8- and 1/4- inch)

    f. Concrete Overlays, Toppings, and Repairs: CSP 5 to CSP 10. (medium shotblast to coarse planing greater than 1/4- inch)

2. To reduce the risk of introducing microcracking into the substrate, all concrete surface profiling must be achieved through abrasive blasting, grinding, or shot blasting; or through the use of surface retarders specified in Section 03 35 10.

    a. Handheld concrete breakers, rotomilling, needle scaling, scabbling, and scarifying are prohibited, unless explicitly required or recommended in writing by the covering manufacturer (scarifying grooves/lines may become visible through a newly laid coverings).

    b. Ultra-high- and high-pressure water jetting, and low-pressure water jetting surface preparation methods are also prohibited.

    c. Chemical cleaning and acid etching are also prohibited. (residual chemicals not removed may adversely affect the flooring performance and adhesion – ASTM D 4262 covers procedures for determining the acidity or alkalinity of concrete surfaces prepared by chemical cleaning or etching prior to coating)

3. Repair damaged sub-floor. Produce a uniform and smooth substrate. Fill cracks, holes, depressions, and similar substrate defects with trowelable leveling and patching compound; remove bumps and ridges.
4. Sweep and vacuum-clean substrates just prior to beginning floor covering installation.
5. Do not install flooring until it is acclimated to the same temperatures as the spaces into which it is installed. Move floor coverings and installation materials into spaces at least 48 before installation.

D. Floor Coverings: Prepare substrates in conformance with the requirements of ASTM F 710 and as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.

1. Verify substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives or that contain soap, wax, oil, or silicone; or that may negatively affect the quality of installation, durability, appearance, or performance of furnished flooring. Comply with the flooring manufacturers' instructions using manufacturer-recommended techniques and equipment. Do not use solvents.
3. Remove subfloor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with leveling and patching compound. Apply, trowel, and float patching

compound to achieve smooth, flat, hard surface. Prohibit traffic until patching compound is cured.

4. Repair damaged sub-floor. Produce a uniform and smooth substrate. Fill cracks, holes, depressions, and similar substrate defects with trowelable leveling and patching compound; remove bumps and ridges.
5. Sweep and vacuum-clean substrates just prior to beginning floor covering installation.
6. Do not install floor coverings until both they and the installation materials are acclimated to the same temperatures as the spaces into which they are installed. Move floor coverings and installation materials into spaces at least 48 before installation.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verification of Conditions: Before beginning testing, examine project conditions and field-verify measurements affecting the work of this specification section.
   1. Examine substrates scheduled for testing, and other conditions under which such items are tested, including HVAC operation and building enclosure.
   2. Verify that work performed as part of the work of other specification sections conforms to the testing equipment or testing kit manufacturer's requirements; and satisfies all other conditions relating to the quality of testing.

3.02 FIELD QUALITY CONTROL

A. Site Tests and Inspections:
   1. General: Include site tests and inspections as part of the work of this specification section. The Owner's testing and inspection agency performs tests and inspections.
      a. Schedule and arrange all tests and inspections.
      b. Coordinate all work and the final construction schedule with all tests and inspections.
      c. Coordinate tests and inspections with the work of other specification sections, and other specified, required, or necessary tests and inspections.
      d. Furnish all work, equipment, tools, facilities, personnel, and controls necessary for each test and inspection.
      e. Arrange tests and inspections by notifying the Owner, the testing and inspection agency, the installer, the manufacturer's representative, and the Architect at least 5 business days before work is ready for testing or inspection.
      f. Witness all site tests and inspections.
      g. Receive test and inspection reports and distribute to the installer and the manufacturer's representative.
   2. Required Tests: Conduct the following tests on all concrete substrates prior to the installation of any flooring material or component regardless of substrate grade level or age.
      a. MVER Testing (Anhydrous Calcium Chloride Test): Conduct CC tests in conformance with ASTM F 1869.
         1) Test area environmental conditions must match that of the finished floor covering.

2) Doors, windows, and roofing must be installed and the building temperature controlled to a finished building atmosphere.

3) Do not perform tests when the interior building temperature is below 65 deg. F for 72 hours prior to and throughout the duration of testing.

4) The minim required number of test kits is determined by the square footage of areas scheduled to receive finish flooring. Provide at least 3 test kits for the first 1,000 square feet, and at least one additional test kit for each additional 1,000 square feet or fraction thereof, with consideration given to separation of test areas.

5) Time of exposure must be between 60 hours 72 hours.

6) Clean substrate in area to be tested by removing dust solvent, paint, wax, oil, grease, residual adhesive, adhesive removers, curing, sealing, hardening, or parting compounds, alkaline salts, excessive carbonation, or laitance, mold mildew and other foreign materials.

7) Weigh the tape sealed dish on a gram scale with 1/10th gram gradation. Record start weight, date and time on dish's label and instruction document.

8) Unseal dish and expose test according to preprinted test kit instructions.

9) After exposure time has elapsed, retrieve test dish re-seal and re-weigh according to the manufacturer's instructions.

10) Moisture emission rates exceeding 3 pounds may affect coating or covering. Verify permissible RH levels with individual flooring manufacturers.

b. Alkalinity (pH) Testing: Conduct pH test in conformance with ASTM F 710.

1) Perform tests after abrasive removal of concrete surfaces.

2) Place several drops of water on a clean portion of the substrate surface; form a puddle approximately one-inch in diameter. Allow the puddle to set for at least 60 seconds, and then insert the digital alkalinity-pH meter probe into the puddle. Allow the meter to calculate results for 15 seconds and record the meter readings.

3) Concrete substrates must test between pH 8.0 and 10.0 before flooring materials are installed; slabs may not exceed pH 10.0.

4) Readings exceeding pH 10.0 may affect coating or covering. Verify permissible pH levels with individual flooring manufacturers.

c. RH Probe Test: Conduct *in situ* RH probe testing in conformance with ASTM F 2170

1) Concrete floor slabs must be at the in-service temperature and the occupied air space above the slab must be at the in-service temperature and RH far at least 48 hours before taking RH measurements in the substrate.

2) Perform at least 3 tests for the first 1,000 square feet and at least one test for every additional 1,000 square feet or fraction thereof.

3) At below-grade substrates, choose testing locations within 3 feet of each exterior wall.

4) Drill probe holes 40 percent down into the slab for slabs drying from the top only; 20 percent into the slab for slabs drying from top and bottom.

5) Use a vacuum cleaner to remove dust from drilled holes, and allow at least 72 hours for holes to achieve moisture equilibrium within each hole before taking RH measurements.

6) After the 72-hour equilibrium period, insert probes and allow a 30-minute period for each probe to reach temperature equilibrium before measuring RH.

7) Use the RH probe to measure the ambient air temperature and RH above the slab in the vicinity of the hole.

8) RH readings exceeding 75 percent may affect coating or covering. Verify permissible RH levels with individual flooring manufacturers.

3.03 CORRECTION AND REPAIR

A. Non-conforming, damaged, and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
   1. written descriptions of non-conforming, damaged, and defective work;
   2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
   3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

RSTLNE, TAGTIS, ELMTC, CLSC2030, CLSC2040

SECTION 09 22 16
LIGHTGAGE METAL FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Metal furring for supporting interior finish materials.
   2. Metal framing for supporting interior partition and ceiling assemblies.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 05 40 00 for cold-formed metal framing, including manufactured (pre-engineered) headers and metal wall backings.

1.02 SECTION REQUIREMENTS

A. Delegated Design Requirements:
   1. Engineer, fabricate, assemble, and install framing that conforms to the profiles indicated and other Contract Document requirements; meets specified performance criteria; and results in structurally sound, and non-corroding assemblies that accommodate, resist, distribute, or transfer in-service loads without incipient or catastrophic failure.
   2. Maintain visual design concept indicated, including sizes, profiles, and alignments. Deviation from visual design concept is non-conforming work and prohibited without prior written acceptance by the Architect.

B. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing framing for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing framing for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading framing installers.
   3. Engineer: Must be a licensed professional structural engineer registered to practice in California having at least 10 years' experience performing the kind of engineering services indicated for at least 20 previous projects similar to this project in size, material, design, and complexity.

C. Submittals: Submit product data, shop drawings, written descriptions of specified qualifications, and delegated design submittals.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. California Expanded Metal Products Co. (CEMCO)
   2. Clarkwestern Dietrich Building Systems LLC.

3. Olmar Supply Inc.
4. SCAFCO Corp.

2.02 MATERIALS

A. Cold-Formed Metal Framing: ASTM A 1003, ST50 (Structural Grade 50), with at least a G60 coating weight designation (mass designation) on both surfaces with equal coating weight on each surface.

B. Lightgage Metal Framing: ASTM A 645 manufactured from HDG metallic-coated steel sheet conforming to ASTM A 1003, NS33 (Non-Structural Grade 33), with at least a G40 coating weight designation (mass designation) on both surfaces with equal coating weight on each surface.

2.03 COLD-FORMED METAL FURRING

A. Hat Furring Channels:
   1. Products: “FC Series Furring Channel” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
   2. Requisite Properties:
      a. Depth: 7/8- or 1-1/2-inch deep channels, as indicated.
      b. Minimum Thickness: At least 43 mils BMT (MSG 18).
      c. Web: 1-1/4 inches wide.
      d. Screw Flanges: 3/4-inch wide.

B. Z-shaped Furring Channels:
   1. Products: “Z-Furring (ZF-Series)” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
   2. Requisite Properties:
      a. Depth: One to 3 inches deep, as indicated.
      b. Minimum Thickness: At least 43 mils BMT (MSG 18).
      c. Screw Flanges: 1-1/4 inches wide.

2.04 LIGHTGAGE METAL FURRING

A. Hat Furring Channels:
   1. Products: “Hat” or “F” furring channel manufactured by CEMCO, or equal.
   2. Requisite Properties:
      a. Depth: 7/8- or 1-1/2-inch deep, as indicated.
      b. Minimum Thickness: At least 30 mils BMT (MSG 20).
      c. Web: 1-1/4 inches wide or 2-1/2 inches.
      d. Screw Flanges: 1/2-inch wide.

B. Z-shaped Furring Channels:

1. Products: “CEMCO Z - Furring Channel” manufactured by CEMCO, or equal.
2. Requisite Properties:

    a. Depth: 7/8-inch.

    b. Minimum Thickness: At least 30 mils BMT (MSG 20).

    c. Screw Flanges: 1-1/4 inches wide.

C. Standard Resilient Channels:
1. Products: “RC1-X” manufactured by CEMCO, or equal.
2. Requisite Properties:

    a. Depth: 1/2-inch deep.

    b. Minimum Thickness: At least 30 mils BMT (MSG 20).

    c. Screw Flanges: 1-1/4 inches wide.

D. Resilient Channels for Acoustical Applications:
1. Product: “RC Deluxe Resilient Channel (RCSD)” manufactured by Clarkwestern Dietrich Building Systems LLC, or equal.
2. Requisite Properties:

    a. Depth: 1/2-inch deep.

    b. Minimum Thickness: At least 27 mils BMT (MSG 22).

    c. Screw Flanges: 1-1/2 inches wide.

E. Resilient Sound Isolation Clips:
1. Description: Molded rubber and steel resilient sound isolation wall and ceiling clips.
2. Products: Provide one of the following, or equal.

    a. “IsoMax” manufactured by Kinetics Noise Control, Inc.

    b. “RSIC-1” manufactured by PAC International, Inc.

    c. “GenieClip Resilient Sound Isolation Clip” manufactured by Pliteq, Inc.

2.05 LIGHTGAGE STUD FRAMING

A. Studs:
1. Description: Pre-punched C-shaped framing members with manufacturer’s standard knockout sizing and spacing.
2. Product: “Viper-X Stud” manufactured by CEMCO, or equal.
3. Requisite Properties:

    a. Depth: Indicated on the Drawings.

    b. Minimum Thickness: At least 30 mils BMT (MSG 20).

    c. Flanges: 1-7/16-inch wide stiffened flanges with at least 3/8-inch returns (lip).

B. Tracks (Top and Bottom Runners):
   1. Description: Un-punched U-shaped runners manufactured from the same material to corresponding stud sizes and gages.
   2. Product: “Viper-X Track” manufactured by CEMCO, or equal.
   3. Requisite Properties:
      a. Depth: Indicated on the Drawings.
      b. Minimum Thickness: At least 30 mils BMT (MSG 20).
      c. Flanges: At least 1-1/2-inch wide unstiffened flanges.

C. Deflection Tracks:
   1. Description: Slotted roll- or brake-formed track installed in head-of-wall deflection conditions to accommodate vertical movement caused by normal head-of-wall and floor extension or compression.
   2. Products: “CEMCO Slotted Track (CST)” or “SLP-TRK” manufactured by CEMCO, or equal.

D. Cold Rolled Channel (CRC) Bridging:
   1. Description: Un-punched U-shape stiffeners installed in both load-bearing and non-load bearing walls to help resist stud twisting.
   2. Requisite Properties:
      a. Size: 1-1/2-inch wide by 1/2-inch deep.
      b. Minimum Thickness: At least 54 mils BMT (MSG 16).
      c. Flanges: 1-1/2 inches wide unstiffened flanges.
   3. Manufactured Bridging Clips: “SUBH Wall Stud Bridging Connectors” manufactured by CEMCO, or equal.

E. Flat Strap Bridging (Strapping):
   1. Application: Flat sheet installed to provide resistance to stud rotation and minor axis buckling under loads for studs deeper than 6 inches.
   2. Requisite Properties:
      a. Width: Between 2 and 20 inches, as indicated or necessary.
      b. Minimum Thickness: At least 54 mils BMT (MSG 16).

2.06 SPECIALTY FRAMING

A. Corner Angles:
   1. Description: Utility angles installed as a connection strut or angle, as corner reinforcement, or other various framing applications.
   2. Requisite Properties:
      a. Minimum Thickness: At least 30 mils BMT (MSG 20).
      b. Legs: 2- or 3-inch wide legs, as indicated, unless a wider or uneven leg size is explicitly indicated; or is otherwise supplied, required, recommended, authorized, or accepted by the manufacturer.

2.07 ACCESSORIES

A. Partition Closures:
   1. Description: Silicone conforming to ASTM D 2000, 4GE 709 M.
   2. Application: Narrow resilient termination of a partition and sound deterrent; allows exterior glass deflection during positive and negative wind loading
   3. Product: “WFR2” manufactured by EMSEAL or “Partition Closures” manufactured by Michael Rizza Co. Inc., or equal.

B. Mullion Closures:
   1. Description: Factory-assembled, spring loaded, pre-finished aluminum adjustable partition closure.
   2. Application: Used for vertical junctures or partitions and window walls
   3. Product: “Mullion Mate” manufactured by Gordon, Inc., or equal.

C. Low Partition Wall Floor Anchors: “Floor Anchor” stud reinforcement manufactured by Pinquist Tool & Die Company, Inc., or equal.

D. Steel Beam and Column Wallboard Clips: “The Claw” beam clips manufactured by Claw International, or equal.

E. Shims: Load bearing, non-leaching, high-density multimonomer plastic.

F. Screw Fasteners: Provide #8-32 UNC 2B (0.164-inch shank diameter, 32 threads per inch) by at least one-inch long, pan head, coarse thread, self-piercing or self-drilling as applicable, chromate finish zinc-plated steel screw fasteners, unless another fastener type is explicitly indicated; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

G. Power-Actuated Fasteners:
   A. Description: ICC-ES-approved anchors conforming to California Building Code Category 1, Seismic Zones A-F.
   B. Manufacturer: Provide products manufactured by Hilti, Inc., or equal.

H. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

I. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.

3. Install framing using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set framing true to line; plumb, level, and square without warp or rack; with flush, well-fitted joints; and in alignment with adjacent construction.
5. Securely attach framing in place to supporting construction.

B. Installation Tolerances: Install framing within the following tolerance variations.
1. Maximum Out of Plumb: Not more than L/960 of span, or 1/8-inch in 10 feet.
2. Maximum Out of Level: Not more than L/960 of span, or 1/8-inch in 10 feet,
3. Maximum Out of Plane: Fastening surfaces of adjacent framing members may not vary by more than 1/8-inch.
4. Maximum Stud Spacing Variance: Not more than 1/8-inch. Cumulative error may not exceed minimum fastening requirements of sheathing or other finishing materials.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged, and defective work.
3. Installed framing must be warrantable. Do not install, correct, or replace framing in a manner that is un-warrantable by the manufacturer or that results in any warranty or guarantee becoming void.

D. Protection:
1. Protect installed framing in place from deterioration and damage until covering framing.
2. Remove protection when it's no longer needed and before covering framing.

SECTION 09 22 38
CEMENT PLASTER BASE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Supporting framework.
   2. Cementitious scratch and brown coats.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 07 25 13 for sheet weather-resistive barriers.

1.02 REFERENCES

A. Abbreviations and Acronyms:
   1. AR: Alkali Resistant.

B. Definitions:
   1. Manufacturer: Means the plaster manufacturer, unless otherwise indicated.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed plaster. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

1.04 SUBMITTALS

A. Action Submittals: Submit the following for responsive action (formal review and approval).
   1. Product Data:

      a. Submit manufacturer’s product data, specifications, typical installation details, and all other information necessary to show conformance to the Contract Documents, excluding material safety data sheets (MSDSs), which are returned to the Contractor without review or responsive action.

b. Submit sample warranties with warranty periods, terms, conditions, exclusions, and remedies explicitly defined for each warranty, including clear warranty period start dates. (e.g., date of manufacture, purchase, installation, Beneficial Occupancy, Substantial Completion, Final Completion, etc.)

2. Shop Drawings: Include project-specific dimensioned details drawn to scale showing conditions not detailed on the product data; or that are detailed, but not in a manner specific to the project.
3. Samples: Submit at least 18-inch square representative color stepped samples of each plaster type, color, finish with typical trim and joints intersecting at the center of each sample. Stepped samples must include each coat or layer, including prime coat, separately identified by manufacturer's name, and product name or stock number.

B. Informational Submittals: Submit the following for information (informal review: responsive action not expected or required, except to record non-conformance with submittal requirements).
1. Manufacturer's Instructions: Submit manufacturer-prepared published instructions for proper installation of furnished plaster.

a. If manufacturer's instructions are unavailable or do not apply to specific project conditions, then consult the manufacturer's representative and obtain project-specific supplemental instructions printed on manufacturer's letterhead.

b. Promptly distribute supplemental instructions to the Architect, who may have comments that lead to contract modifications or minor changes in the work.

2. Qualification Statements: Submit written descriptions confirming experience specified in QUALITY ASSURANCE article below.

C. Closeout Submittals: Submit the following to the Architect as a condition of project closeout.
1. Warranty Documentation: Submit final warranties signed by the manufacturer's representative with complete terms indicated for all warranties covering items furnished or installed under this specification section.

1.05 QUALITY ASSURANCE

A. Source Limitations:
1. Plaster must be obtained through one source from the same manufacturer (to ensure compatibility, regulatory conformance, and a warrantable installation).

a. Certain items may be obtained from more than one manufacturer, but only when used for separate installations.

b. Items provided for each different installation must be obtained from the same source and manufacturer.

2. Provide secondary materials, components, accessories and other items from sources required, recommended, or accepted by the primary manufacturer for actual in-service conditions applicable to the project.

B. Qualifications:
1. Installer: Company or individuals must have at least 5 years' experience installing plaster for at least 30 previous projects similar to this project in size, material, design, and complexity.
2. Supervisors: Individuals must have at least 7 years' experience installing plaster for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading plaster installers.

C. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate plaster into the mockup as part of the work of this specification section.

1.06 HANDLING

A. Receiving: Inspect all deliveries for deteriorated, damaged, and defective items.
   1. Reject items that are not packaged in a manner that prevents damage; or that exhibit deterioration or damage or have damaged or open packaging or containers.
   2. Unload and store only inspected and accepted items.

B. Storage: Store unloaded items as shipped and in conformance with manufacturer's instructions and other requirements and recommendations for storage. Furnish adequate dunnage during storage.
   1. Prevent stored items from contacting the floor or ground and from deterioration and damage.
   2. If items are not stored in an enclosed location, then cover the tops and sides with securely-tied, waterproof, and breathable covers. Unvented polyethylene tarpaulins do not qualify as breathable covers and are prohibited. (due to potential accumulation of moisture beneath tarpaulin during certain environmental conditions)
   3. Incline covered items to ensure maximum drainage of accumulated moisture.
   4. Do not leave items uncovered where they might be exposed to weather or become wet from rain, mist, relative humidity, condensation, frost, and other sources of moisture; or exposed to other sources of deterioration and damage, including heat and sudden changes in temperature, and UV exposure beyond manufacturer-recommended limits.

C. Handling: Handle items in conformance with manufacturer's instructions and other requirements and recommendations, and in a manner that that prevents damage.
   1. Avoid damage to packaging and containers, and contamination of contents.
   2. Rotate inventory; do not use items the shelf life of which is expired.

D. Damaged Item Replacement: Promptly remove and replace deteriorated, damaged, or defective plastering materials with undamaged new plastering materials that do not exhibit deterioration, damage, or defects.

E. Packaging Waste Management: Do not burn or bury construction waste at the project site. Remove and legally dispose of all construction waste away from the project site.

1.07 PROJECT CONDITIONS

A. Ambient Conditions: Install plaster only when ambient temperature, RH, and other environmental conditions fall within ranges required, recommended, or accepted by the manufacturer.

B. Other Conditions:
   1. Substrate Tolerance: Surfaces receiving plaster finishes must be flat with 1/4-inch within any 10-foot radius.
   2. Deflection: Maximum of substrate deflection under positive or negative design loads must not exceed L/360 of span.

1.08 WARRANTY

A. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

B. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 2 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.01 SUPPORTING FRAMEWORK

A. Heavy-Duty Welded Wire Lath:
   1. Description: Self-furring galvanized steel welded wire fabric lath fabricated in conformance with the requirements of ASTM C 847, ASTM C 933, ASTM C1032, ASTM C1063 and Appendix.
   2. Application: Fabricated for use as an alternative to 2.5 or 3.4 pound per square yard diamond mesh metal lath specified in ASTM C 847 and as an alternative to 1.4 pound per square yard woven wire lath specified in ASTM C 1032.
   3. Product: “Mega Lath” manufactured by Structa Wire Corp. (ICC-ES Report No. ESR-2017), or equal.
   4. Requisite Properties:
      a. Minimum Size: 30 inches wide by 108-foot long rolls. (30 square yards)
      b. Wire and Mesh Sizes: 17-gage galvanized steel wire welded to form 0.7-inch by 1.5-inch openings.
      c. Nominal Weight: 1.95 pounds per square yard.
      d. Style: Self-furring.
      e. Minimum Groove Depth: At least 1/4-inch.

B. Plastic Lath:
   1. Description: Rustproof, self-furring, damage-resistant plastic lath sheets conforming to ASTM C 1764, ASTM C 1780, ASTM C 1787, and ASTM C 1788.
   2. Application: Used as a non-rusting alternative to metal lath for interior and exterior vertical applications.
   3. Restrictions: Installation over open framing; and in horizontal applications or soffits is prohibited.
   4. Products: “Ultra-Lath Plus Product No. PDM2796-25” manufactured by Plastic Components, Inc., or equal.
   5. Requisite Properties:
      a. Minimum Size: At least 27 inches wide by 96 inches long.
      b. Style: Self-furring.
      c. Minimum Groove Depth: At least 1/4-inch.

C. Galvanized Steel Trim:
   1. Description: Zinc coated (HDG) steel trim conforming to ASTM C 847, ASTM C 933, ASTM C1032, ASTM C1063 and Appendix.
   2. Manufacturers: Provide products manufactured by one of the following, or equal.
      a. California Expanded Metal Products Co. (CEMCO)
      b. Clarkwestern Dietrich Building Systems LLC.
      c. Frye Reglet.
      d. Stockton Products.

3. Products: “Water Management Products” manufactured by California Expanded Metals Co. (CEMCO), or equal.

    a. Foundation Weep Screeds: “#7 Foundation Sill Screed (FHA Screed)”, or equal, with at least a 3-1/2-inch flange and weep holes.

    b. Extended Weep Screed: “#7 Extended Foundation Screed”, or equal, one-piece flashing weep screed for applications at decks were flashing is needed to protect waterproof membrane.

    c. Base Flashing: “#17 Base Flashing”, or equal, one-piece flashing weep screed for applications at decks were flashing is needed to protect waterproof membrane.

    d. Drip Head: “#6 Drip Head”, or equal, for application above vents, doors, windows, joints, and as indicated on the Drawing; water can weep out of the slope leg and solid return leg used for sealant application.

    e. Drip Edge: “#12 Soffit Drip Edge”, or equal, used at soffits and recessed windows; provides drainage and drip edge.

    f. Flashing Screed: “#3 Flashing Screed”, or equal, one-piece Z-flashing and weep screed combination for application at window head.

    g. Casing Beads: “J-Series Casing Bead”, or equal, non-perforated casing bead; used as a stop to terminate plaster edge in a clear straight line at head of plaster or jamb conditions of doors, windows.

    h. Expansion Joints: “M-SLIDE EXPANSION JOINT”, or equal; 2-piece plaster accessories are prohibited.

    i. Horizontal Control Joint: “#15 SOLID LEG Control Joint”, or equal, one-piece horizontal control joint.

    j. Vertical Control Joints: “#XJ15 Expanded Wing Control Joint (Double J)”, or equal, used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

    k. Transition Control Joint: “#9 Transition Control Joint”, or equal, one-piece drainage accessory for application at substrate transitions between masonry and framed walls.

    l. Control Joints: “#15 Double V Control Joint”, or equal, used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

    m. Clean-Finish Control Joints: “#XJ15 Expanded Wing Control Joint (Double J)”, or equal, used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

    n. Cornerbeads: “#2A-Expanded Corner Bead”, or equal, used for reinforcing exterior corners, or equal.

    o. Cornerite: Pre-shaped diamond mesh metal lath formed with minimum 3-inch legs to minimum 105 degrees for a snug fit; used as a reinforcement on inner corners.

    p. Strip Lath: Welded wire metal lath formed in at least 4-inch wide strips with smooth outer edges. Used where small strips of lath are required so cutting is limited; and around window and door frames as butterfly reinforcement.

4. Requisite Properties:

a. Size: Trim and accessories depths must match the thicknesses and number of plaster coats required.

b. Material: Zinc Coated (HDG) Steel Sheet conforming to ASTM A 653, CS Type B (commercial steel), with at least a G90 (galvanized) minimum coating designation and equal coating weight on each surface.

c. Surface Finish: Provide regular spangle surface finish.

d. Surface Treatment: Provide oiled surface treatment. (needed for enhanced formability)

D. Plastic Trim:

1. Description: PVC plaster trim and accessories conforming to ASTM D 1784 cell classification 13244C, ASTM C 1063, and ASTM D 4216.
2. Application: Used as a non-rusting alternative to metal trim for interior and exterior vertical applications.
3. Products: Provide the following manufactured by Plastic Components, Inc., or equal.

a. Foundation Weep Screeds: “Sill Screed (FHA Screed)”, or equal, with at least a 3-1/2-inch flange and weep holes.

b. Drip Head: “Drip Edge for use above Exterior Doors”, or equal, for application above vents, doors, windows, joints, and as indicated on the Drawing.

c. Flashing Screed: “Z Flashing for Floor Line Applications”, or equal, one-piece Z-flashing.

d. Casing Beads: “Medium Flange Casing Bead”, or equal, un-weeped casing bead; used as a stop to terminate plaster edge in a clear straight line at head of plaster or jamb conditions of doors, windows.

e. Expansion Joints: “M Control Joint”, or equal; 2-piece plaster accessories are prohibited.

f. Control Joints: “V Control Joint” and factory-assembled intersections, or equal, used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

g. Plaster Reveals: “ULTRA-TRAC Aesthetic Stucco Reveals” and factory-assembled intersections, or equal, used to form patterns and reveals in walls; provide profiles indicated on the Drawings.

h. Corner Control Joints: “Inside Corner Joint”, or equal, one-piece control joint used at inside angles of walls and ceilings.

i. Cornerbeads: “#2”, or equal, used for reinforcing exterior corners.

j. Strip Lath: “Ultra-Lath Plus Product No. PDM4-25” formed in at least 4-inch wide strips. Used where small strips of lath are required so cutting is limited; and around window and door frames as butterfly reinforcement.

2.02 CEMENTITIOUS SCRATCH AND BROWN COATS

A. Description: Pre-blended mixture conforming to ASTM C926, including cement, reinforcement fibers, hydrated lime, and proprietary ingredients for scratch and brown coats.

B. Manufacturers: Provide products manufactured by one of the following, or equal.

1. Dryvit Systems, Inc.
2. Omega Stucco.

3. Parex USA, Inc.
4. Sto Corp.

C. Product: “Parex Fiber-47 Armourwall 300 Scratch and Brown Sanded or Concentrate” manufactured by Parex USA, Inc., or equal.

D. Components:
1. Cement: Portland cement conforming to ASTM C 150 Type I.
2. Fine Aggregate: Dense graded (well-graded) air dry natural sands conforming to ASTM C 897 requirements for gradation, deleterious substances and organic impurities.
3. Hydrated Lime: ASTM C 206, Type S. (special finishing hydrated lime)
4. Fiber Reinforcement: Nylon or polypropylene monofilament fibers conforming to ASTM C 1116 Type III. (synthetic fiber-reinforced concrete or shotcrete) AR chopped glass fiber strands are prohibited.

E. Accessories:
1. Admix and Bonding Agent: “Adacryl” 100-percent acrylic emulsion additive for Portland cement-based products manufactured by Parex USA, Inc., or equal
2. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect plaster quality, durability, appearance, or performance.

2.03 ACCESSORIES

A. Tie Wire: At least 0.048-inch diameter (ASW 18) soft temper zinc-coated wire conforming to ASTM A 641 Class 3 or A coating.

B. Fasteners for Concrete and CMU: At least 3/4-inch long hardened drive pin power-actuated fasteners (PAF) with 1/2-inch diameter galvanized disc or washer; or 9-gauge, minimum 3/8-inch diameter head, minimum 3/4-inch long concrete nails.

C. Fasteners for Metal Framing: 0.164-inch shank diameter (#8-32 UNC) by at least 1-1/4-inch-long Philips drive socket, bugle or wafer head, self-drilling stainless steel, bi-metal, duplex anti-corrosive steel, 3-coat anti-corrosive steel, or ceramic-coated anti-corrosive steel screw fasteners specified in Section 05 05 23, unless another fastener type is explicitly indicated; or is otherwise supplied, required, recommended, or accepted by the manufacturer.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.04 MIXING

A. Factory-Mixed Products:
1. Open plaster packaging and containers only as required for use and mix only in designated areas.
2. Thoroughly agitate and stir plaster to a uniform and smooth consistency suitable for proper installation.
3. Do not reduce, alter, or introduce foreign materials into plaster, except in conformance with manufacturer’s instructions and other requirements and recommendations.

B. Site Mixing: Batch mix plaster in conformance with manufacturer's instructions and other requirements and recommendations, using manufacturer-recommended techniques and manufacturer-recommended mechanical mixing equipment, which must be clean and free of material from previously mixed batches before charging each subsequent batch.
   1. Measure mix materials using only graduated mixing containers and calibrated mixing equipment. Shovels do not qualify as graduated mixing containers or calibrated equipment, and are prohibited from measuring or dispensing mix materials.
   2. Thoroughly agitate and stir mix materials to a uniform and smooth consistency suitable for proper installation.
   3. Do not reduce, alter, or introduce foreign materials into mix materials, except in conformance with manufacturer's instructions and other requirements and recommendations.
   4. Do not use caked or lumpy materials; or materials that are irregular, too thick or too thin, or that are partially set.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Oversight: Ensure an adequate number of supervisors are present and proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Verification:
   1. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   2. Verify items penetrating plaster are installed.

C. Evaluation and Assessment:
   1. Identify project conditions that do not conform to the manufacturer's instructions and other requirements and recommendations.
   2. Perform or arrange and pay costs without reimbursement from Owner for all remedial work necessary to correct or improve deficient conditions, without limitation, before the installer begins work.

3.02 PREPARATION

A. Protection:
   1. Work Area Protection: Protect work areas from dust and other airborne contaminants during surface preparation and plaster finish installation.
   2. Adjacent Material Protection: Protect adjacent surfaces against soiling and damage. Utilize drop cloths, shields, masking, barricades, and other items necessary to protect adjacent surfaces.
   3. Opening Protection: Close and protect drains and other openings and penetrations to prevent intrusion or migration of liquids.

B. Substrate Preparation: Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any specified or other warranty or guarantee becoming void.

3.03 INSTALLATION

A. General Requirements:
   1. Install plaster using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   2. Securely attach plaster trim and lath in place to supporting construction. Continuous expansion and control joints must be installed at locations in conformance with ASTM C1063 and ASTM C926.
   3. Completed work must match approved samples and mockups, as accepted by the Architect.
   4. Installed plaster must be warrantable. Do not install, correct, or replace plaster in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Provide sufficient manpower and equipment to ensure a continuous operation free of cold joints, scaffold lines, texture variations, and other objectionable conditions.
      a. Plaster surfaces full height and width between control joints in one operation once the application of any coat has begun.
      b. Stop plaster at control joints, edges, or corners only.
      c. Apply plaster flush with metal trim members and make corners square and true.
   2. Finish plaster in a true, plumb or level plane flush with grounds.
   3. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal. Apply sealant in grove to metal frame.
   4. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
   5. Protection Measures during Application and Cure:
      a. Protect plaster products in conformance with manufacturer’s instructions.
      b. Protection measures must shield the completed scratch, brown and finish coat applications from direct sunlight and wind exposure (i.e., provide dark colored coverings or barriers).
      c. The combination of curing and protection measures that are employed must prevent drying, uneven or excessive evaporation and strong natural or artificial blasts of dry air during the curing period.

C. Plaster Accessory Installation:
   1. Install with surfaces and edges plumb, level and in alignment with a tolerance of not more than 1/8-inch in 5 feet. Shim as required and align joints with concealed splice or tie plates.
      a. Use single length pieces wherever length of run does not exceed longest standard stock length available.
      b. Miter or cope at corners with hairline joints, and seal with sealant specified in Section 07 92 00. Seal butt splices in the same manner.
      c. Attach securely to supports with same fasteners and spacing as required for metal lath. Wire-tie at no less than 6-inches-on-center to metal lath.
   2. Install foundation weep screed.
   3. Install corner reinforcement.

4. At plaster terminations, provide casing bead at the following locations:

    a. Where plaster termination abuts other finishes, isolate casing bead from contact with adjacent finishes with 1/4-inch thick tape sealant specified in Section 07 92 00.

    b. Where plaster termination is not covered by another finish or applied trim, provide cased opening by installing casing bead around perimeter of opening as indicated.

D. Control Joint Installation:

1. Install control joints in specific locations indicated on the Drawings, approved by Architect, and as follows.

    a. As required to delineate plasterwork into areas (panels) of the following maximum sizes:

        1) Vertical Surfaces: 144 sq. ft.

        2) Horizontal and Other Non-Vertical Surfaces: 100 sq. ft.

    b. At distances between control joints of not greater than 18 feet on center

    c. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.

    d. Where control joints occur in surface of construction directly behind plaster.

    e. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.

2. Wire tie to metal lath at maximum 6 inches on center. Do not attach horizontal control joints to vertical control joints at intersections across the joint.
3. Install vertical control joint first, continuous from top to bottom of wall.
4. Install horizontal control joints last and split where it meets the vertical control joint.
5. Install joints plumb, level, evenly spaced, at locations and spacing indicated, and in one piece.

E. Metal Lath Installation:

1. Comply with the lath manufacturer’s printed installation instructions, and with ASTM C 1063 and Appendix, and the CBC.
2. Unless otherwise indicated, install all horizontal trims, joints, and accessories prior to installing lath.
3. Apply metal lath in conformance with the manufacturer’s published installation standards.
4. Apply lath taut with long dimension at right angle to supports.
5. Stagger vertical joints. Lap end joints at least one inch, and lap horizontal joints at least 1/2-inch.
6. Where end laps occur between framing members, wire-tie ends at not more than 9 inches on center.
7. Cut lath at expansion and control joint locations. Lath must be secured to expansion and control joints at each side of joints and lapped or spliced at interior and exterior corners.
8. Hold lath 1/4-inch clear of items projecting through the plaster.
9. Attach lath through WRB and sheathing into supporting construction at 6 inches on center.

F. Scratch Coat Installation:

1. Apply with sufficient material to cover well and sufficient pressure to form good, full keys. Mix and apply scratch coat and admix and bonding agent products in conformance with manufacturer's published instructions.
2. Minimum thickness of scratch coat shall be 3/8-inch when measured from backing to crest of scored plaster.
3. Scratch before plaster hardens to provide sufficient mechanical key for brown coat. Moist cure continuously for a minimum of 48 hours in conformance with ASTM C 926 and building codes, including weekends and holidays.
4. Score horizontally.

G. Brown Coat Installation:
1. Surface of the scratch coat must be dampened with fog spray prior to application of the brown coat. Do not over-saturate.
2. Apply brown coat approximately 3/8-inch thick at a uniform thickness that matches the grounds of the accessories. Bring to a true, even surface by rodding and floating and leave slightly rough, uniform texture to receive the finish coat.
3. Begin floating only after hydration of the cement has commenced, and sufficient moisture has evaporated so that surface sheen will disappear, but before plaster has become too rigid to be moved under the float.
4. Moist cure continuously for at least 48 hours in conformance with ASTM C 926 and building codes, including weekends and holidays.

    a. Specified moist curing period is a minimum requirement.

    b. Determine the most effective procedure for curing and time lapse between applications of coats based upon climatic and job conditions.

    c. Fog as frequently as required to prevent loss of moisture from the plaster. Avoid erosion damage to the plaster surface.

H. Finish Coat:
1. Apply finish coat not less than 7 days after brown coat has been applied. Dampen brown coat thoroughly and apply finish coat to a uniform minimum thickness of 1/8-inch to match approved mockup. Correct irregularities prior to application.

3.04 CORRECTION AND REPAIR

A. Non-conforming, damaged, and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
1. written descriptions of non-conforming, damaged, and defective work;
2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

3.05 CLEANING

A. Cleaning Work: Clean spills, stains, soiling, overspray, and fallout from adjacent surfaces.
   1. Use cleaning materials, equipment, and accessories supplied, and means, methods, techniques, and procedures required, recommended, or accepted by the manufacturer.
   2. Do not use cleaning materials or procedures known to change, or that might change, the appearance of exposed finishes or adjacent surfaces; or cause deterioration or damage to exposed finishes or adjacent surfaces.
   3. Protect adjacent surfaces not being cleaned from staining, deterioration, damage, or other detrimental effects caused by cleaning.
   4. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be cleaned to the Architect's acceptance.

B. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

3.06 PROTECTION

A. Protect installed plaster in place from soiling, deterioration, and damage until Substantial Completion.

B. Do not store anything adjacent to or against installed plaster unless it is protected from damage, as accepted in writing by the manufacturer's representative. Do not use installed plaster as work surfaces.

C. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 24 43
POLYMER-MODIFIED PORTLAND CEMENT PLASTERING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Acrylic plaster finish.
   2. Cementitious scratch and brown coats.
   3. Supporting framework.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 07 25 13 for sheet weather-resistive barriers.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing plaster for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing plaster for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading plaster installers.

B. Submittals: Submit product data, shop drawings, samples, and written descriptions of specified qualifications.

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed plaster. Resolve each condition.
   4. Finalize construction schedule.
   5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate plaster into the mockup as part of the work of this specification section.

E. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

PART 2 - PRODUCTS

2.01 SUPPORTING FRAMEWORK

A. Heavy-Duty Welded Wire Lath: Conform to ASTM C 847, ASTM C 933, ASTM C1032, ASTM C1063 and Appendix.
   1. Description: Self-furring welded wire fabric lath fabricated for use as an alternative to 3.4 pound per square yard diamond mesh metal lath specified in ASTM C 847.
   2. Application: Fabricated for use as an alternative to 3.4 pound per square yard diamond mesh metal lath specified in ASTM C 847 and as an alternative to 1.4 pound per square yard woven wire lath specified in ASTM C 1032.
   3. Products: “Mega Lath” manufactured by Structa Wire Corp. (ICC-ES Report No. ESR-2017), or equal.
   4. Requisite Properties:
      a. Type: Double wire for screw penetration.
      b. Size: Minimum 28 inches wide by minimum 98 inches wide.
      c. Thickness: 17-gage.
      d. Style: Self-furring over continuous sheathing.
      e. Groove Depth: 1/4-inch.

B. Galvanized Steel Trim:
   1. Description: Zinc coated (HDG) steel trim conforming to ASTM C 847, ASTM C 933 (Standard Specification for Welded Wire Lath), ASTM C1032 (Standard Specification for Woven Wire Plaster Base), ASTM C1063 (Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster) and Appendix.
   2. Manufacturers: Provide products manufactured by one of the following, or equal.
      a. California Expanded Metal Products Co. (CEMCO)
      b. Clarkwestern Dietrich Building Systems LLC.
      c. Frye Reglet.
      d. Stockton Products.
   3. Products: “Water Management Products” manufactured by California Expanded Metals Co. (CEMCO), or equal.
      a. Foundation Weep Screeds: where indicated, provide “#7 Foundation Sill Screed” with at least a 3-1/2-inch flange and no weep holes.
      b. Extended Weep Screed: “#7 Extended Foundation Screed” one-piece flashing weep screed for applications at decks were flashing is needed to protect waterproof membrane.
      c. Base Flashing: “#17 Base Flashing” one-piece flashing weep screed for applications at decks were flashing is needed to protect waterproof membrane, or equal.
      d. Drip Head: “#6 Drip Head” for application above vents, doors, windows, joints, and as indicated on the Drawing, or equal; water can weep out of the slope leg and solid return leg used for sealant application.

e. Drip Edge: “#12 Soffit Drip Edge” used at soffits and recessed windows; provides drainage and drip edge, or equal.

f. Flashing Screed: “#3 Flashing Screed” one-piece Z-flashing and weep screed combination for application at window head, or equal.

g. Casing Beads: “J-Series Casing Bead” non-perforated casing bead, or equal; used as a stop to terminate plaster edge in a clear straight line at head of plaster or jamb conditions of doors, windows.

h. Expansion Joints: “M-SLIDE EXPANSION JOINT”. 2-piece plaster accessories are prohibited.

i. Horizontal Control Joint: “#15 SOLID LEG Control Joint” one-piece horizontal control joint, or equal.

j. Vertical Control Joints: “#XJ15 Expanded Wing Control Joint (Double J)” used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

k. Transition Control Joint: Unless otherwise indicated on the Drawings, provide “#9 Transition Control Joint” one-piece drainage accessory for application at substrate transitions between masonry and framed walls, or equal.

l. Control Joints: “#15 Double V Control Joint” used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

m. Clean-Finish Control Joints: “#XJ15 Expanded Wing Control Joint (Double J)” used to relieve stresses in large plastered areas of walls, ceilings and plaster areas.

n. Cornerbeads: “#2A-Expanded Corner Bead” used for reinforcing exterior corners, or equal.

o. Cornerite: Pre-shaped diamond mesh metal lath formed with minimum 3-inch legs to minimum 105 degrees for a snug fit; used as a reinforcement on inner corners.

p. Strip Lath: Provide welded wire metal lath formed in minimum 4-inch wide strips with smooth outer edges. Used where small strips of lath are required so cutting is limited and around window and door frames as a butterfly reinforcement.

4. Requisite Properties:

   a. Size: Trim and accessories depths must match the thicknesses and number of plaster coats required.

5. Material: Zinc Coated (HDG) Steel Sheet conforming to ASTM A 653, CS Type B (commercial steel), with equal coating weight on each surface.

   a. Coating Designation: Provide at least a G90 (galvanized) minimum coating designation.

   b. Surface Finish: Provide regular spangle surface finish.

   c. Surface Treatment: Provide oiled surface treatment (needed for enhanced formability).

2.02 CEMENTITIOUS SCRATCH AND BROWN COATS

A. Description: Pre-blended mixture conforming to ASTM C926, including cement, reinforcement fibers, hydrated lime, and proprietary ingredients for scratch and brown coats.

B. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Omega Stucco.
   2. Parex USA, Inc.

C. Product: “Parex Fiber-47 Armourwall 300 Scratch and Brown Sanded or Concentrate” manufactured by Parex USA, Inc., or equal.

D. Components:
   1. Cement: Portland cement conforming to ASTM C 150 Type I.
   2. Fine Aggregate: Dense graded (well-graded) air dry natural sands conforming to ASTM C 897 requirements for gradation, deleterious substances and organic impurities.
   3. Hydrated Lime: ASTM C 206, Type S (special finishing hydrated lime).
   4. Fiber Reinforcement: Nylon or polypropylene monofilament fibers conforming to ASTM C 1116 Type III (synthetic fiber-reinforced concrete or shotcrete). AR chopped glass fiber strands are prohibited.

E. Accessories:
   1. Admix and Bonding Agent: “Adacryl” 100-percent acrylic emulsion additive for Portland cement-based products manufactured by Parex USA, Inc., or equal
   2. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect plaster quality, durability, appearance, or performance.

2.03 ACRYLIC PLASTER FINISH

A. Manufacturers: Provide plaster products manufactured by one of the following, or equal.
   1. Dryvit Systems, Inc.
   2. Parex USA, Inc.
   3. Sto Corp.

B. Reinforced Acrylic Leveling Coat:
   1. Description: 100-percent, acrylic polymer based, reinforced leveling coat used for enhanced crack resistance and embedding reinforcing mesh.
   2. Product: “Parex 121 Base Coat & Adhesive” manufactured by Parex USA, Inc., or equal.

C. Reinforcing Mesh:
   1. Description: Symmetrical, interlaced open-weave alkali-resistant glass fiber fabric made with minimum 20 percent by weight alkaline resistant coating for compatibility with finish materials.
   2. Products: Provide the following manufactured by Parex USA, Inc., or equal.

      a. Standard Mesh: “355 Standard Mesh” 4.5 ounce per square yard fiberglass mesh, or equal.

      b. Detail Mesh: “356 Short Detail Mesh” 4.5 ounce per square yard fiberglass mesh, or equal.

      c. Corner Mesh: “357 Corner Mesh” 7.2 ounce per square yard fiberglass mesh, or equal.

      d. Intermediate Impact Mesh: “358.10 Intermediate Impact Mesh” 12 ounce per square yard fiberglass mesh, or equal.

e. High Impact Mesh: “358.14 High Impact Mesh” 15 ounce per square yard fiberglass mesh, or equal.

f. Ultra High Impact Mesh: “358.20 Ultra High Impact Mesh” 20 ounce per square yard fiberglass mesh, or equal.

g. Reinforced Preformed Mesh: “360 Fast Window Mesh" fiberglass mesh, or equal.

D. Acrylic Primer:
1. Description: Acrylic-based primer designed to reduce the chance of efflorescence and enhance the appearance and uniformity of the finish.
2. Product: “Parex 310 Primer” manufactured by Parex USA, Inc., or equal; tint to match finish coat colors.

E. Acrylic Finish Coat:
1. Description: Factory blended, 100-percent acrylic polymer-based, integral-color plaster finish coat.
2. Products: “DPR Optimum Finish” textured plaster finish manufactured by Parex USA, Inc., or equal.
3. Requisite Properties:

a. Color: Indicated on the Drawings or selected by the Architect.

b. Finish: 533 Sand Smooth.

2.04 ACCESSORIES

A. Bonding Agent:
1. Description: 100-percent acrylic emulsion additive for Portland cement-based products.
2. Product: “Adacryl” manufactured by Parex USA, Inc., or equal.

B. Tie Wire: At least 0.048-inch diameter (ASW 18) soft temper zinc-coated wire conforming to ASTM A 641 Class 3 or A coating.

C. Fasteners for Concrete and CMU: At least 3/4-inch long hardened drive pin power-actuated fasteners (PAF) with 1/2-inch diameter galvanized disc or washer; or 9-gauge, minimum 3/8-inch diameter head, minimum 3/4-inch long concrete nails.

D. Fasteners for Metal Framing: 0.164-inch shank diameter (#8-32 UNC) by at least 1-1/4-inch-long Philips drive socket, bugle or wafer head, self-drilling stainless steel, bi-metal, duplex anti-corrosive steel, 3-coat anti-corrosive steel, or ceramic-coated anti-corrosive steel screw fasteners specified in Section 05 05 23, unless another fastener type is explicitly indicated; or is otherwise supplied, required, recommended, or accepted by the manufacturer.

E. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed plaster and adjacent items.
3. Securely attach plaster trim and lath in place to supporting construction in conformance with ASTM C1063 and ASTM C926.
4. Install plaster in conformance with ASTM C 926 and ASTM C 1063 using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
5. Completed work must match approved samples and mockups, as accepted by the Architect.
6. Installed plaster must be warrantable. Do not install, correct, or replace plaster in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Provide sufficient manpower and equipment to ensure a continuous operation free of cold joints, scaffold lines, texture variations, and other objectionable conditions.
    a. Once application of any coat has begun, plaster surfaces full height and width between control joints in one operation.
    b. Stop plaster at control joints, edges, or corners.
    c. Apply plaster flush with metal trim members and make corners square and true.
2. Finish plaster in a true, plumb or level plane flush with grounds.
3. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated.
    a. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
    b. Apply sealant in groove to metal frame.
4. Shield completed scratch, brown and finish coat applications from direct sunlight and wind exposure (i.e., provide dark colored coverings or barriers).
5. Curing and protection measures must prevent drying, uneven or excessive evaporation, and strong natural or artificial blasts of dry air during the curing period.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Repair damaged finishes. Restore finishes so that no evidence remains of corrective work.

D. Protection:
1. Protect installed plaster in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 25 14
ACRYLIC PLASTER FINISH

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Acrylic plaster finish.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 09 22 38 for lath, trim, and cementitious scratch and brown coats.

1.02 REFERENCES

A. Definitions:
   1. Manufacturer: Means the acrylic plaster finish manufacturer, unless otherwise indicated.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Proposed substitution requests and submittals that change the quality (grade) or generic chemistry of specified finishes are prohibited and returned to the Contractor without review or responsive action, except to record non-conformance with this requirement.
   2. Specified coverage rates and thicknesses are minimum. If manufacturer's recommended coverage rates differ from specified rates, then

      a. consult the manufacturer's representative and obtain manufacturer-recommended coverage rates printed on manufacturer's letterhead;

      b. assume the manufacturer-recommended coverage rates govern; and

      c. promptly submit an RFI to the Architect for resolution; include manufacturer-recommended coverage rates with the RFI.

B. Sequencing:
   1. Schedule acrylic plaster finish deliveries to the project site only after the building is enclosed with a permanent enclosure; "wet work" within storage areas (including concrete, cast underlayment, mortaring, grouting, plastering, and gypsum board finishing) is complete and cured or dried to a condition of equilibrium; and storage areas are broom- and vacuum-clean.
   2. Install acrylic plaster finishes only after penetrating items are installed and after overhead finishing operations are complete,

C. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.

2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed plaster finishes. Resolve each condition.
4. Finalize construction schedule.
5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

1.04 SUBMITTALS

A. Action Submittals: Submit the following for responsive action (formal review and approval).
   1. Product Data:

      a. Submit manufacturer's product data, specifications, typical installation details, and all other information necessary to show conformance to the Contract Documents, excluding material safety data sheets (MSDSs), which are returned to the Contractor without review or responsive action.

      b. Submit sample warranties with warranty periods, terms, conditions, exclusions, and remedies explicitly defined for each warranty, including clear warranty period start dates. (e.g., date of manufacture, purchase, installation, Beneficial Occupancy, Substantial Completion, Final Completion, etc.)
   2. Shop Drawings: Include project-specific dimensioned details drawn to scale showing conditions not detailed on the product data; or that are detailed, but not in a manner specific to the project.
   3. Samples: Submit at least 8-inch square representative color samples of each acrylic plaster finish type, color, finish with typical trim and joints intersecting at the center of each sample. Stepped samples must include each coat or layer, including leveling coat, reinforcing mesh, primer, and finish coat separately identified by manufacturer's name and product name or stock number.

B. Informational Submittals: Submit the following for information (informal review: responsive action not expected or required, except to record non-conformance with submittal requirements).
   1. Manufacturer's Instructions: Submit manufacturer-prepared published instructions for proper installation of furnished plaster finishes.

      a. If manufacturer's instructions are unavailable or do not apply to specific project conditions, then consult the manufacturer's representative and obtain project-specific supplemental instructions printed on manufacturer's letterhead.

      b. Promptly distribute supplemental instructions to the Architect, who may have comments that lead to contract modifications or minor changes in the work.
   2. Qualification Statements: Submit written descriptions confirming experience specified in QUALITY ASSURANCE article below.

C. Closeout Submittals: Submit the following to the Architect as a condition of project closeout.
   1. Warranty Documentation: Submit final warranties signed by the manufacturer's representative with complete terms indicated for all warranties covering items furnished or installed under this specification section.

1.05 QUALITY ASSURANCE

A. Source Limitations:
   1. Acrylic plaster finishes must be obtained through one source from the same manufacturer (to ensure compatibility, regulatory conformance, and a warrantable installation).
      a. Certain items may be obtained from more than one manufacturer, but only when used for separate installations.
      b. Items provided for each different installation must be obtained from the same source and manufacturer.
   2. Provide secondary materials, components, accessories and other items from sources required, recommended, or accepted by the primary manufacturer for actual in-service conditions applicable to the project.

B. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing acrylic plaster finishes for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing acrylic plaster finishes for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading acrylic plaster finish installers.

C. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate acrylic plaster finishes into the mockup as part of the work of this specification section.

1.06 HANDLING

A. Receiving: Inspect all deliveries for deteriorated, damaged, and defective items.
   1. Reject items that are not packaged in a manner that prevents damage; or that exhibit deterioration or damage or have damaged or open packaging or containers.
   2. Unload and store only inspected and accepted items.

B. Storage: Store unloaded items as shipped and in conformance with manufacturer's instructions and other requirements and recommendations for storage. Furnish adequate dunnage during storage.
   1. Prevent stored items from contacting the floor or ground and from deterioration and damage.
   2. If items are not stored in an enclosed location, then cover the tops and sides with securely-tied, waterproof, and breathable covers. Unvented polyethylene tarpaulins do not qualify as breathable covers and are prohibited. (due to potential accumulation of moisture beneath tarpaulin during certain environmental conditions)
   3. Incline covered items to ensure maximum drainage of accumulated moisture.
   4. Do not leave items uncovered where they might be exposed to weather or become wet from rain, mist, relative humidity, condensation, frost, and other sources of moisture; or exposed to other sources of deterioration and damage, including heat and sudden changes in temperature, and UV exposure beyond manufacturer-recommended limits.

C. Handling: Handle items in conformance with manufacturer's instructions and other requirements and recommendations, and in a manner that that prevents damage.
   1. Avoid damage to packaging and containers, and contamination of contents.
   2. Rotate inventory; do not use items the shelf life of which is expired.

D. Damaged Item Replacement: Promptly remove and replace deteriorated, damaged, or defective acrylic plaster finishing materials with undamaged new acrylic plaster finishing materials that do not exhibit deterioration, damage, or defects.

E. Packaging Waste Management: Do not burn or bury construction waste at the project site. Remove and legally dispose of all construction waste away from the project site.

1.07 PROJECT CONDITIONS

A. Ambient Conditions: Install acrylic plaster finishes only when ambient temperature, RH, and other environmental conditions fall within ranges required, recommended, or accepted by the manufacturer.

B. Other Conditions:
   1. Substrate Tolerance: Surfaces receiving acrylic plaster finishes must be flat with 1/4-inch within any 10-foot radius.
   2. Deflection: Maximum of substrate deflection under positive or negative design loads must not exceed L/360 of span.

1.08 WARRANTY

A. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

B. Installer Guarantee: Furnish to the Owner a written guarantee for the work of this specification section against all defects in materials and workmanship for 2 years from date of acceptance. Guarantees must be properly prepared and signed on the guarantee form in Division 01.

PART 2 - PRODUCTS

2.01 ACRYLIC PLASTER FINISH

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Dryvit Systems, Inc.
   2. Parex USA, Inc.
   3. Sto Corp.

B. Reinforced Acrylic Leveling Coat:
   1. Description: 100-percent, acrylic polymer based, reinforced leveling coat used for enhanced crack resistance and embedding reinforcing mesh.
   2. Product: “Parex 121 Base Coat & Adhesive” manufactured by Parex USA, Inc., or equal.

C. Reinforcing Mesh:
   1. Description: Symmetrical, interlaced open-weave alkali-resistant glass fiber fabric made with minimum 20 percent by weight alkaline resistant coating for compatibility with finish materials.
   2. Products: Provide the following manufactured by Parex USA, Inc., or equal.

      a. Standard Mesh: “355 Standard Mesh”, or equal, 4.5 ounce per square yard fiberglass mesh.

b. Detail Mesh: “356 Short Detail Mesh”, or equal, 4.5 ounce per square yard fiberglass mesh.

c. Corner Mesh: “357 Corner Mesh”, or equal, 7.2 ounce per square yard fiberglass mesh.

d. Intermediate Impact Mesh: “358.10 Intermediate Impact Mesh”, or equal, 12 ounce per square yard fiberglass mesh.

e. High Impact Mesh: “358.14 High Impact Mesh”, or equal, 15 ounce per square yard fiberglass mesh.

f. Ultra-High Impact Mesh: “358.20 Ultra High Impact Mesh”, or equal, 20 ounce per square yard fiberglass mesh.

g. Reinforced Preformed Mesh: “360 Fast Window Mesh” fiberglass mesh, or equal.

D. Acrylic Primer:
1. Description: Acrylic-based primer designed to reduce the chance of efflorescence and enhance finish appearance and uniformity.
2. Product: “Parex 310 Primer” manufactured by Parex USA, Inc., or equal; tint to match finish coat colors.

E. Acrylic Finish Coat:
1. Description: Factory blended, 100-percent acrylic polymer-based, integral-color plaster finish coat.
2. Product: “DPR Optimum Finish” manufactured by Parex USA, Inc., or equal.
3. Requisite Properties:

a. Color: Indicated on the Drawings or selected by the Architect.

b. Finish: 533 Sand Smooth.

2.02 ACCESSORIES

A. Bonding Agent:
1. Description: 100-percent acrylic emulsion additive for Portland cement-based products.
2. Product: “Adacryl” manufactured by Parex USA, Inc., or equal.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.03 MIXING

A. Factory-Mixed Products:
1. Open acrylic plaster finish packaging and containers only as required for use and mix only in designated areas.
2. Thoroughly agitate and stir acrylic plaster finish materials to a uniform and smooth consistency suitable for proper installation.
3. Do not reduce, alter, or introduce foreign materials into acrylic plaster finish materials, except in conformance with manufacturer’s instructions and other requirements and recommendations.

B. Site Mixing: Batch mix acrylic plaster finish materials in conformance with manufacturer's instructions and other requirements and recommendations, using manufacturer-recommended techniques and manufacturer-recommended mechanical mixing equipment, which must be clean and free of material from previously mixed batches before charging each subsequent batch.
   1. Measure mix materials using only graduated mixing containers and calibrated mixing equipment. Shovels do not qualify as graduated mixing containers or calibrated equipment, and are prohibited from measuring or dispensing mix materials.
   2. Thoroughly agitate and stir mix materials to a uniform and smooth consistency suitable for proper installation.
   3. Do not reduce, alter, or introduce foreign materials into mix materials, except in conformance with manufacturer's instructions and other requirements and recommendations.
   4. Do not use caked or lumpy materials; or materials that are irregular, too thick or too thin, or that are partially set.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Oversight: Ensure an adequate number of supervisors are present and proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Verification:
   1. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   2. Verify substrates are free of deleterious and other substances that might interfere with acrylic plaster finish adhesion, appearance, or performance.
   3. Verify items penetrating acrylic plaster finishes are installed.

C. Evaluation and Assessment:
   1. Identify project conditions that do not conform to the manufacturer's instructions and other requirements and recommendations.
   2. Perform or arrange and pay costs without reimbursement from Owner for all remedial work necessary to correct or improve deficient conditions, without limitation, before the installer begins work.

3.02 PREPARATION

A. Protection:
   1. Work Area Protection: Protect work areas from dust and other airborne contaminants during surface preparation and acrylic plaster finish installation.
   2. Adjacent Material Protection: Protect adjacent surfaces against soiling and damage. Utilize drop cloths, shields, masking, barricades, and other items necessary to protect adjacent surfaces.
   3. Opening Protection: Close and protect drains and other openings and penetrations to prevent intrusion or migration of liquids.

B. Substrate Preparation: Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any specified or other warranty or guarantee becoming void.

3.03 INSTALLATION

A. General Requirements:

1. Install acrylic plaster finishes using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
2. Only install acrylic plaster finish under conditions that ensure finishes are free from blemishes and defects.
3. Provide smooth surfaces of uniform finish, color, appearance, and coverage. Acrylic plaster finish surfaces with soft spots, holidays, streaks, or other imperfections are prohibited and are rejected as non-conforming work.
4. Do not exceed the application rates recommended by the manufacturer.
5. Completed work must match approved samples and mockups, as accepted by the Architect.
6. Installed acrylic plaster finishes must be warrantable. Do not install, correct, or replace acrylic plaster finishes in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:

1. Apply finish coat not less than 7 days after brown coat is applied. Dampen brown coat thoroughly and apply finish coat to a uniform minimum thickness of 1/8-inch to match approved mockup. Correct irregularities prior to application.
2. Provide sufficient manpower and equipment to ensure a continuous operation free of cold joints, scaffold lines, texture variations, and other objectionable conditions.

    a. Plaster surfaces full height and width between control joints in one operation once the application of any coat has begun.

    b. Stop acrylic plaster finishes at control joints, edges, or corners only.

    c. Apply acrylic plaster finishes flush with metal trim members and make corners square and true.
3. Finish plaster in a true, plumb or level plane flush with grounds.
4. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate acrylic plaster finish at metal frame, cut base coat free from metal frame before acrylic plaster finish sets and groove finish coat at junctures with metal. Apply sealant in groove to metal frame.
5. Protection Measures during Application and Cure:

    a. Protect acrylic plaster finishes in conformance with manufacturer’s instructions.

    b. Protection measures must shield the completed finish coat from direct sunlight and wind exposure (i.e., provide dark colored coverings or barriers).

    c. The combination of curing and protection measures that are employed must prevent drying, uneven or excessive evaporation, and strong natural or artificial blasts of dry air during the curing period.

3.04 CORRECTION AND REPAIR

A. Non-conforming, damaged, and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
   1. written descriptions of non-conforming, damaged, and defective work;
   2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
   3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

3.05 CLEANING

A. Cleaning Work: Clean spills, stains, soiling, overspray, and fallout from adjacent surfaces.
   1. Use cleaning materials, equipment, and accessories supplied, and means, methods, techniques, and procedures required, recommended, or accepted by the manufacturer.
   2. Do not use cleaning materials or procedures known to change, or that might change, the appearance of exposed finishes or adjacent surfaces; or cause deterioration or damage to exposed finishes or adjacent surfaces.
   3. Protect adjacent surfaces not being cleaned from staining, deterioration, damage, or other detrimental effects caused by cleaning.
   4. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be cleaned to the Architect's acceptance.

B. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

3.06 PROTECTION

A. Protect installed acrylic plaster finishes in place from soiling, deterioration, and damage until Substantial Completion.

B. Do not store anything adjacent to or against installed acrylic plaster finishes unless they are protected from damage, as accepted in writing by the manufacturer's representative. Do not use installed acrylic plaster finishes as work surfaces.

C. Remove protection when it's no longer needed and before Substantial Completion.

RSTLNE, TAGDSC, ELMTB, CLSB2010, CLSB3080, CLSB3090

SECTION 09 25 16
INTERIOR PLASTER FINISH

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Plaster finish for interior surfaces exposed to high moisture.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 09 22 38 for plastic lath, plastic trim, and cementitious scratch and brown coats.

1.2 REFERENCES

A. Definitions:
   1. Manufacturer: Means the plaster finish manufacturer, unless otherwise indicated.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Proposed substitution requests and submittals that change the quality (grade) or generic chemistry of specified finishes are prohibited and returned to the Contractor without review or responsive action, except to record non-conformance with this requirement.
   2. Specified coverage rates and thicknesses are minimum. If manufacturer's recommended coverage rates differ from specified rates, then
      a. consult the manufacturer's representative and obtain manufacturer-recommended coverage rates printed on manufacturer's letterhead;
      b. assume the manufacturer-recommended coverage rates govern; and
      c. promptly submit an RFI to the Architect for resolution; include manufacturer-recommended coverage rates with the RFI.

B. Sequencing:
   1. Schedule plaster finish deliveries to the project site only after the building is enclosed with a permanent enclosure; "wet work" within storage areas (including concrete, cast underlayment, mortaring, grouting, plastering, and gypsum board finishing) is complete and cured or dried to a condition of equilibrium; and storage areas are broom- and vacuum-clean.
   2. Before beginning installation, final light fixtures must be completely installed, energized, and fully illuminated to at least the same type and level of illumination, and color temperature, maintained in the room or space after the building is occupied.
   3. Install plaster finishes only after penetrating items are installed and after overhead finishing operations are complete,

1.4 SUBMITTALS

A. Action Submittals: Submit the following for responsive action (formal review and approval).

1. Product Data: Submit manufacturer's product data, specifications, and all other information necessary to show conformance to the Contract Documents, excluding material safety data sheets (MSDSs), which are returned to the Contractor without review or responsive action.
2. Shop Drawings: Include project-specific dimensioned details drawn to scale showing conditions not detailed on the product data; or that are detailed, but not in a manner specific to the project.
3. Samples: Submit at least 8-inch square representative color samples of each plaster finish type, color, finish with typical trim and joints intersecting at the center of each sample. Stepped samples must include each coat or layer, including leveling coat, reinforcing mesh, primer, and finish coat separately identified by manufacturer's name and product name or stock number.

B. Informational Submittals: Submit the following for information (informal review: responsive action not expected or required, except to record non-conformance with submittal requirements).
1. Manufacturer's Instructions: Submit manufacturer-prepared published instructions for proper installation of furnished plaster finish.
a. If manufacturer's instructions are unavailable or do not apply to specific project conditions, then consult the manufacturer's representative and obtain project-specific supplemental instructions printed on manufacturer's letterhead.
b. Promptly distribute supplemental instructions to the Architect, who may have comments that lead to contract modifications or minor changes in the work.
2. Qualification Statements: Submit written descriptions confirming experience specified in QUALITY ASSURANCE article below.

1.5 QUALITY ASSURANCE

A. Source Limitations:
1. Plaster finishes must be obtained through one source from the same manufacturer (to ensure compatibility, regulatory conformance, and a warrantable installation).
a. Certain items may be obtained from more than one manufacturer, but only when used for separate installations.
b. Items provided for each different installation must be obtained from the same source and manufacturer.
2. Provide secondary materials, components, accessories and other items from sources required, recommended, or accepted by the primary manufacturer for actual in-service conditions applicable to the project.

B. Qualifications:
1. Installer: Company or individuals must have at least 5 years' experience installing plaster finishes for at least 30 previous projects similar to this project in size, material, design, and complexity.
2. Supervisors: Individuals must have at least 7 years' experience installing plaster finishes for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading plaster finish installers.

C. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
1. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
2. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of stone wall facings is made from field samples.
3. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
4. Approved field samples may remain part of the work after being identified for future reference.

1.6 HANDLING

A. Receiving: Inspect all deliveries for deteriorated, damaged, and defective items.
   1. Reject items that are not packaged in a manner that prevents damage; or that exhibit deterioration or damage or have damaged or open packaging or containers.
   2. Reject items that are not transported, delivered, or protected in conformance with manufacturer-recommended transport, delivery, and receiving requirements.
   3. Unload and store only inspected and accepted items.

B. Storage: Store unloaded items indoors as shipped, upright in their original packaging or containers, within dry, well-ventilated, broom-cleaned and enclosed storage areas.
   1. Furnish adequate dunnage and bracing during storage.
   2. Prevent stored items from contacting the floor and from deterioration and damage.
   3. Do not leave items uncovered where they might be exposed to weather or become wet; or exposed to heat or sudden changes in temperature or relative humidity; or other sources of deterioration and damage, including dust and other airborne contaminants.

C. Handling: Handle items in conformance with manufacturer's instructions and other requirements and recommendations, and in a manner that that prevents damage.
   1. Avoid damage to packaging and containers, and contamination of contents.
   2. Rotate inventory; do not use items the shelf life of which is expired.

D. Damaged Item Replacement: Promptly remove and replace deteriorated, damaged, or defective plaster finishing materials with undamaged new plaster finishing materials that do not exhibit deterioration, damage, or defects.

E. Packaging Waste Management: Do not burn or bury construction waste at the project site. Remove and legally dispose of all construction waste away from the project site.

1.7 PROJECT CONDITIONS

A. Ambient Conditions: Install plaster finishes only when ambient temperature, RH, and other environmental conditions fall within ranges required, recommended, or accepted by the manufacturer.

B. Other Conditions:
   1. Substrate Tolerance: Surfaces receiving acrylic plaster finishes must be flat with 1/4-inch within any 10-foot radius.
   2. Deflection: Maximum of substrate deflection under positive or negative design loads must not exceed L/360 of span.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Merlex Stucco, Inc.
   2. Sika Corp.

2.2 INTERIOR PLASTER FINISH

A. Description: Spray- or trowel-applied polymer-modified Portland cement based plaster finish for interior surfaces exposed to high moisture.

B. Products: “Super Shower Finish” manufactured by Merlex Stucco, Inc., or equal.

C. Requisite Properties:
   1. Plaster Thickness: 1⁄8-inch nominal dry thickness.
   2. Surface Finish: Smooth finish for field-applied painting.

2.3 ACCESSORIES

A. Sealant: “Mer Seal II” manufactured by Merlex Stucco, Inc., or equal.

B. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect plaster quality, durability, appearance, or performance.

C. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.4 MIXING

A. Factory-Mixed Products:
   1. Open plaster finish containers only as required for use and mix only in designated areas.
   2. Thoroughly agitate and stir plaster finish materials to a uniform and smooth consistency suitable for proper installation.
   3. Do not reduce, alter, or introduce foreign materials into plaster finish materials, except in conformance with manufacturer’s instructions and other requirements and recommendations.

B. Site Mixing: Batch mix acrylic plaster finish materials in conformance with manufacturer’s instructions and other requirements and recommendations, using manufacturer-recommended techniques and manufacturer-recommended mechanical mixing equipment, which must be clean and free of material from previously mixed batches before charging each subsequent batch.
   1. Measure mix materials using only graduated mixing containers and calibrated mixing equipment. Shovels do not qualify as graduated mixing containers or calibrated equipment, and are prohibited from measuring or dispensing mix materials.
   2. Thoroughly agitate and stir mix materials to a uniform and smooth consistency suitable for proper installation.
   3. Do not reduce, alter, or introduce foreign materials into mix materials, except in conformance with manufacturer’s instructions and other requirements and recommendations.
   4. Do not use caked or lumpy materials; or materials that are irregular, too thick or too thin, or that are partially set.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Oversight: Ensure an adequate number of supervisors are present and proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Verification:
   1. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
   2. Verify substrates are free of deleterious and other substances that might interfere with plaster finish adhesion, appearance, or performance.
   3. Verify items penetrating acrylic plaster finishes are installed.

C. Evaluation and Assessment:
   1. Identify project conditions that do not conform to the manufacturer's instructions and other requirements and recommendations.
   2. Perform or arrange and pay costs without reimbursement from Owner for all remedial work necessary to correct or improve deficient conditions, without limitation, before the installer begins work.

3.2 PREPARATION

A. Protection:
   1. Work Area Protection: Protect work areas from dust and other airborne contaminants during surface preparation and plaster finish installation.
   2. Adjacent Material Protection: Protect adjacent surfaces against soiling and damage. Utilize drop cloths, shields, masking, barricades, and other items necessary to protect adjacent surfaces.
   3. Opening Protection: Close and protect drains and other openings and penetrations to prevent plaster finish intrusion or migration of liquids.

B. Substrate Preparation: Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.

3.3 INSTALLATION

A. General Requirements:
   1. Install plaster finish using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   2. Only install plaster finish under conditions that ensure finishes are free from blemishes and defects.
   3. Provide smooth surfaces of uniform finish, color, appearance, and coverage. Plaster finish surfaces with soft spots, holidays, streaks, or other imperfections are prohibited and are rejected as non-conforming work.
   4. Do not exceed the application rates recommended by the manufacturer.
   5. Completed work must match approved samples and mockups, as accepted by the Architect.
   6. Installed plaster finishes must be warrantable. Do not install, correct, or replace plaster finishes in a manner that results in any warranty or guarantee becoming void.

3.4 CORRECTION AND REPAIR

A. Non-conforming, damaged, and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
   1. written descriptions of non-conforming, damaged, and defective work;
   2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
   3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

3.5 CLEANING

A. Cleaning Work: Clean spills, stains, soiling, overspray, and fallout from adjacent surfaces.
   1. Use cleaning materials, equipment, and accessories supplied, and means, methods, techniques, and procedures required, recommended, or accepted by the manufacturer.
   2. Do not use cleaning materials or procedures known to change, or that might change, the appearance of exposed finishes or adjacent surfaces; or cause deterioration or damage to exposed finishes or adjacent surfaces.
   3. Protect adjacent surfaces not being cleaned from staining, deterioration, damage, or other detrimental effects caused by cleaning.
   4. Arrange and pay costs without reimbursement from Owner for removing and replacing work that cannot be cleaned to the Architect's acceptance.

B. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

3.6 PROTECTION

A. Protect installed plaster finishes in place from soiling, deterioration, and damage until Substantial Completion.

B. Do not store anything adjacent to or against installed plaster finishes unless they are protected from damage, as accepted in writing by the manufacturer's representative. Do not use installed plaster finishes as work surfaces.

C. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 28 14
CEMENTITIOUS TILE BACKING BOARD

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Glass mesh cement backerboard.
   2. Installation materials.
   3. Joint treatment materials.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 GLASS MESH CEMENT BACKERBOARD

A. Description: Portland cement-based backerboards conforming to ASTM C 1325 and ANSI A118.9.

B. Products: Provide one of the following, or equal.
   1. “WonderBoard Lite BackerBoard” manufactured by Custom Building Products.
   2. “PermaBase Cement Board” manufactured by National Gypsum Co.
   3. “DUROCK Cement Board Next Gen” manufactured by USG Corp.

C. Requisite Properties:
   1. Minimum Size: Provide at least 4-foot by 8-foot sheets.
   2. Minimum Thickness: 5/8-inch.
   3. Edges: Eased.

2.02 INSTALLATION MATERIALS

A. Moisture Barrier:
   1. Application: Applied directly over stud framing behind backing boards as a base layer moisture barrier.
   2. Products: Provide “Tyvek CommercialWrap” (ICC-ES Report No. ESR-2375) manufactured by E.I. DuPont de Nemours & Company., or equal.
   3. Requisite Properties:

      a. Minimum Basis Weight: At least 2.7 ounces per square yard, when measured in conformance with TAPPI Test Method T 410.

b. Maximum UV Exposure Limit: Cover within 365 calendar days.

2.03 INSTALLATION MATERIALS

A. Fasteners: Provide 0.164-inch shank diameter (#8-32 UNC) by at least 1-1/4-inch-long Philips drive socket, bugle or wafer head, self-drilling stainless steel, bi-metal, duplex anti-corrosive steel, 3-coat anti-corrosive steel, or ceramic-coated anti-corrosive steel screw fasteners, with Hi-Lo threads, unless another fastener type is explicitly indicated; or is otherwise supplied, required, recommended, or accepted by the manufacturer.

2.04 JOINT TREATMENT MATERIALS

A. Glass Mesh Tape:
   1. Description: 2-inch wide, alkali-resistant, polymer-coated, 10x10 glass-fiber mesh tape.
   2. Application: Used in combination with joint sealant as a panel joint and penetration treatment for long-term joint protection.
   3. Product: As supplied, required, recommended, or accepted by the manufacturer.

B. Glass Mesh Tape:
   1. Description: 2-inch wide, alkali-resistant, polymer-coated, 10x10 glass-fiber mesh tape.
   2. Application: Used in combination with joint sealant as a panel joint and penetration treatment for long-term joint protection.
   3. Product: Supplied, required, recommended, or accepted by the manufacturer.

C. Polymer-Modified Cementitious Mortar:
   1. Description: Premium-grade (best quality grade), single-component, ultra-high-performance, polymer-modified Portland cement mortar conforming to A118.15 shear bond strength requirements.
   2. Application: Used for embedding joint tape and finishing backing board in wet locations (e.g., toilet rooms, shower rooms, saunas, steam rooms, kitchens, swimming pool enclosures, etc.). Do not use drying-type joint compound, setting-type joint compound, or paper tape in wet locations.
   3. Products: Provide one of the following, or equal.
      a. “MegaFlex Crack Prevention Mortar” manufactured by Custom Building Products.
      b. “254 Platinum” manufactured by LATICRETE International, Inc.
      c. “Ultraflex 3” manufactured by Mapei Corp.

D. Setting-Type Joint Compound:
   1. Description: Lightweight, sandable, chemically setting powder compound conforming to ASTM C 475 and used for embedding joint tape and finishing backing board. All-purpose and drying type joint compounds are prohibited.
   2. Product: Provide “SHEETROCK DURABOND” and “SHEETROCK Easy Sand” manufactured by USG Corp., or equal.

2.05 ACCESSORIES

A. Sealant: Provide fluid-applied low modulus joint sealant specified in Section 07 92 00, unless another type of sealant or liquid flashing is explicitly indicated; or supplied, required,

recommended, or accepted by the manufacturer to seal sheathing joints and fastener penetrations.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed backing boards and adjacent items.
   3. Install backing boards using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
   5. Securely attach backing boards in place to supporting construction.
   6. Installed backing boards must be warrantable. Do not install, correct, or replace backing boards in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install backing boards to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

END OF SECTION

SECTION 09 29 00
GYPSUM BOARD

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Gypsum board.
   2. Metal trim.
   3. Installation materials.
   4. Joint treatment materials.
   5. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 07 54 19 for GMF roof cover boards.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Provide products manufactured by one of the following, or equal.
   1. CertainTeed Corp.
   2. GP Building Products.
   3. National Gypsum Co.
   4. USG Corp.

2.02 FIRE-RESISTANCE RATED GYPSUM BOARD

A. Fire-Resistance-Rated Gypsum Wall and Ceiling Board:
   1. Description: Gypsum board conforming to ASTM C 1396.
   2. Applications: Installed in fire-resistance-rated and non-rated interior partition assemblies constructed in dry locations.
   3. Products: Provide one of the following, or equal.

      a. “ProRoc Type X” and “ProRoc Type C” manufactured by CertainTeed Corp.

      b. “ToughRock Fireguard” and “ToughRock Fireguard C” manufactured by GP Building Products.

      c. “Gold Bond Fire-Shield” and “Gold Bond Fire-Shield C” manufactured by National Gypsum Co.

d. “SHEETROCK “Firecode Core”” and “SHEETROCK “Firecode C Core””

4. Requisite Properties:

a. Minimum Size: At least 4-foot by 8-foot sheets.

b. Minimum Thickness: At least 5/8-inch.

c. Core: Provide Type X panels in walls and Type C panels in ceilings, unless otherwise indicated on the Drawings.

d. Minimum Mass: At least 2.2 pounds per square foot.

e. Edges: Tapered long edges and square ends.

f. Facers: Paper face, back, and long edges.

B. Mold- and Moisture-Resistant Fire-Resistance-Rated Gypsum Wall and Ceiling Board:

1. Description: Mold- and moisture-resistant and fire-resistance-rated gypsum board conforming to ASTM C 1396.
2. Applications: Installed as the inside face of exterior wall assemblies; and in fire-resistance-rated and non-rated interior partition assemblies constructed in wet locations.
3. Products: Provide one of the following, or equal.

a. “ProRoc Moisture and Mold Resistant Gypsum board with M2Tech” manufactured by CertainTeed Corp.

b. “ToughRock Mold-Guard” manufactured by GP Building Products.

c. “Gold Bond XP Gypsum Board” manufactured by National Gypsum Co.

d. “SHEETROCK Mold Tough” manufactured by USG Corp.

4. Requisite Properties:

a. Minimum Size: At least 4-foot by 8-foot sheets.

b. Minimum Thickness: At least 5/8-inch.

c. Core: Provide Type X panels in walls and Type C panels in ceilings, unless otherwise indicated on the Drawings.

d. Minimum Mass: At least 2.2 pounds per square foot.

e. Edges: Tapered long edges and square ends.

f. Facers: Heavy-duty mold- and moisture-resistant paper face, back, and long edges.

5. Performance Requirements:

a. Mold Resistance: Must earn a score of at least 10, when tested in conformance with ASTM D 3273.

2.03 METAL TRIM

A. Steel Trim:

1. Description: Paper-faced galvanized steel sheet trim pieces conforming to ASTM C 1047.
2. Manufacturers: Provide products manufactured by one of the following, or equal.

a. CEMCO.

b. Clinch-On Cornerbead Co.

c. Stockton Products.

d. Western Metal Lath.

e. USG Corp.

3. Products: “BEADEX” paper-faced metal bead and trim manufactured by USG Corp., or equal.

a. Corner Beads: Provide to protect exterior corners. Provide corner beads with notched or flexible flanges at curved edges.

1) 90-degree Outside Corner Bead: “Micro Bead Style”, or equal.

2) 90-degree Inside Corner Bead: “B2 Style”, or equal.

b. Casing Beads: Provide long-flanged L- or LC-beads at exposed panel edges indicated as receiving joint compound; provide short-flanged U-beads at exposed panel edges that do not receive joint compound.

1) J Trims (J-shaped with exposed long flange): “B9J Style”, or equal.

2) L Trims (L-shaped with exposed long flange): “B4 Style”, or equal.

B. Metal Control Joints:

1. Description: One-piece solid zinc control joint supplied with factory-applied removable tape to ensure a clean joint.
2. Products: Provide one of the following, or equal.

a. “NO93 Control Joint” manufactured by Alabama Metal Industries Corp. Building Products (AMICO).

b. “Niles-093 Zinc Control Joint” manufactured by Niles Building Products Co.

c. “SHEETROCK Zinc Control Joint No. 093” manufactured by USG Corp.

3. Requisite Properties:

a. Minimum Length: At least 10 feet long; provide longest possible lengths to avoid joints.

2.04 INSTALLATION MATERIALS

A. Fasteners: Provide #6-32 UNC 2B (0.138-inch shank diameter, 32 threads per inch) by at least 1-1/4-inch long, Philips bugle head, coarse thread, self- piercing or self-drilling (as applicable) phosphate coated steel screw fasteners, unless another fastener type is explicitly indicated; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Laminating Adhesive:

1. Description: Lightweight, sandable, chemically setting powder compound conforming to ASTM C 475.
2. Application: Used for bonding gypsum board to wood or metal studs, laminating gypsum board to gypsum board, and for bonding gypsum board to concrete or CMU walls.
3. Product: “SHEETROCK Easy Sand Joint Compound” manufactured by USG Corp., or equal.

2.05 JOINT TREATMENT MATERIALS

A. Joint Tape:
   1. Description: Nominal 2-inch wide gypsum panel joint and corner reinforcement conforming to ASTM C 475.
   2. Products:

      a. Fiberglass Joint Tape: “SHEETROCK Fiberglass Drywall Tape” manufactured by USG Corp., or equal.

      b. Paper Joint Tape: “BEADEX Drywall Joint Tape” manufactured by USG Corp., or equal.

      c. Fiberglass Mesh Tape: Prohibited.

B. Setting-Type Joint Compound:
   1. Description: Lightweight, sandable, chemically setting powder compound conforming to ASTM C 475, and used for embedding joint tape and finishing interior gypsum panels.
   2. Applications:

      a. Pre-Filling Gypsum Panel Joints throughout the Project: Use setting-type compound for open joints, beveled panel edges, and at damaged surface areas at all locations.

      b. All Other Coats: Use setting-type compound for embedding and first coat, fill coat, finish coat, and skim coat at wet locations; and at locations where panels are subject to moisture and high humidity.
   3. Product: “SHEETROCK DURABOND” manufactured by USG Corp., or equal.

C. Drying-Type Joint Compound:
   1. Description: Vinyl-type compound conforming to ASTM C 475, and used for embedding joint tape, finishing interior gypsum panels, and hand-applying simple texturing.
   2. Application: Use for embedding and first coat, fill coat, finish coat, and skim coat at dry locations, and at locations where joint is subject to moisture and high humidity.
   3. Product: “SHEETROCK All Purpose Joint Compound – SELECT” and “SHEETROCK Brand Plus 3 Lightweight All-Purpose Joint Compound” manufactured by USG Corp., or equal.

2.06 ACCESSORIES

A. Applied Level 5 Wallboard Finish Products: Prohibited.

B. Repair Clips: “SHEETROCK Drywall Repair Clips” manufactured by USG Corp., or equal.

C. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.07 MARKING AND IDENTIFICATION

A. Description: Fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions, and other walls required by the California Building Code to have protected openings or penetrations must be effectively and permanently identified with stenciling located in accessible concealed floors, floor-ceiling assemblies, plenums, and attic spaces

B. Paint Products: Specified in Section 09 91 00.

C. Fire Walls, Fire Barriers, and Fire Partitions: Paint 6-inch high stripes not more than 15 feet from the end of each fire wall, fire barrier, or fire partition; and at intervals of not more than 30 feet, when measured horizontally along the wall, barrier, or partition. Paint stenciled letters over the 6-inch high stripes, leaving at least a one-inch border around the stenciled letter copy.
   1. Stripe Color: Match Federal Standard 595B color FS 31350 (red).
   2. Stenciled Letter Color: Match Federal Standard 595B color FS 37925 (insignia white).
   3. Stenciled Letter Font: 288-Point Linotype Neue Helvetica Regular Bold.
   4. Stenciled Letter Copy:
      a. Fire Walls: “FIRE WALL – PROTECT ALL OPENINGS”.
      b. Fire Barriers: “FIRE BARRIER – PROTECT ALL OPENINGS”.
      c. Fire Partitions: “FIRE PARTITIONS – PROTECT ALL OPENINGS”.

D. Smoke Barriers and Smoke Partitions: Paint 6-inch high stripes not more than 15 feet from the end of each smoke barrier or smoke partition; and at intervals of not more than 30 feet, when measured horizontally along the wall, barrier, or partition. Paint stenciled letters over the 6-inch high stripes, leaving at least a one-inch border around the stenciled letter copy.
   1. Stripe Color: Match Federal Standard 595B color FS 36492 (gray).
   2. Stenciled Letter Color: Match Federal Standard 595B color FS 37038 (black).
   3. Stenciled Letter Font: 288-Point Linotype Neue Helvetica Regular Bold.
   4. Stenciled Letter Copy:
      a. Smoke Barriers: “SMOKE BARRIER – PROTECT ALL OPENINGS”.
      b. Smoke Partitions: “SMOKE PARTITIONS – PROTECT ALL OPENINGS”.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed gypsum board and adjacent items.
   3. Install gypsum board using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Securely attach gypsum board in place to supporting construction.
   6. Installed gypsum board must be warrantable. Do not install, correct, or replace gypsum board in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Single-Layer Application:
      a. On ceilings, apply gypsum panels before wall or partition board application to greatest extent possible, and at right angles to framing, unless otherwise indicated.

b. On partitions and walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire-resistance-rated assemblies; minimize end joints.

c. At stairwells and other high walls, install panels horizontally, unless otherwise indicated or required by fire-resistance-rated assemblies.

d. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.

e. Stagger abutting end joints not less than one framing member in alternate courses of panels.

f. Securely attach gypsum panels to supports with steel drill screws.

2. Multilayer Application:

a. On partitions and wall assemblies, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.

b. On Z-furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.

c. Securely attach base layers and face layers separately to supports with screws. Do not glue multiple layers of gypsum board together.

3. Trim:

a. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim in conformance with manufacturer's instructions.

b. Control Joints: Install control joints in conformance with ASTM C 840 and in specific locations indicated or accepted by the Architect.

C. Trim: Install cornerbead at outside corners; install LC-Bead or U-Bead at exposed panel edges.

4. Finishing Gypsum Board:

a. Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and other items and conditions as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

b. Prefill open joints, beveled edges, and damaged surface areas.

c. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

C. Installation Tolerances: Install gypsum board to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

D. Correction and Repair:

1. Correct deficiencies that do not conform to the Contract Documents.

2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed gypsum board in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

3.02 GYPSUM BOARD FINISH SCHEDULE

A. General: Finish gypsum board surfaces with exposed joints, corners and edges reinforced or trimmed in conformance with ASTM C 840, Gypsum Association publication GA-214, "*Recommended Levels of Gypsum Board Finish*", and the following.

B. Levels of Gypsum Board Finish:
1. Level 0: Use for first layer of multiple layer construction and gypsum board ledge guards in elevator shafts.
2. Level 1: Use in plenum areas above ceilings, interior faces of shafts, in attics, and in areas where the assembly will generally be concealed.
3. Level 2: Use where moisture-resistant gypsum backing board is used as a substrate for tile; and in storage and similar areas where surface appearance is not of primary concern.
4. Level 3: Use in areas where heavy grade wall coverings are to be applied as the final decoration.
5. Level 4: Use in areas where light texture or backed lightweight wall covering is applied; and all areas indicated as receiving a paint finish, except where Level 5 finish is indicated.
6. Level 5 (spray and roller-applied products are prohibited): Use where indicated on the Drawings.

RSTLNE. TAGDSC, ELMTC, CLSC1010

SECTION 09 30 00
TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Tile surfacing units.
   2. Thresholds.
   3. Installation materials.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 03 35 10 for concrete flatwork finishing and curing; and for preventative MVER products.
   2. Section 09 05 16 for preparation of concrete slabs for finish flooring; and for remedial MVER products.

1.2 SECTION REQUIREMENTS

A. Regulatory Requirements:
   1. Allowable Static Coefficient of Friction Value for Polish-Coated Flooring Surfaces (SCOF): At least 0.6 for level surfaces and at least 0.8 for sloped surfaces, when measured in conformance with ASTM D 2047.
   2. Allowable Dynamic Coefficient of Friction Value for Hard Surface Flooring (DCOF): Between 0.35 and 0.45, with at least 0.42 minimum “passing” value, when measured in conformance with ANSI 326.3 under wet conditions.

B. Qualifications:
   1. Installer: Company or individuals must have at least 5 years’ experience installing tile for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years’ experience installing tile for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years’ supervisory experience directing and leading tile installers.

C. Submittals: Submit product data, shop drawings, samples, and written descriptions of specified qualifications.

D. Preinstallation Meeting:
   1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation
   3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed tile. Resolve each condition.

4. Finalize construction schedule.
5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

E. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
1. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
2. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of tile is made from field samples.
3. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
4. Approved field samples may remain part of the work after being identified for future reference.

F. Maintenance Material Submittals: Before Final Completion, deliver to the Owner tile cleaning materials, equipment, accessories, and instructions; and extra stock materials to replace those worn or damaged as a result of normal occupancy.
1. Furnish at least 2 percent of the total installed for each tile type, color, composition, grade, finish, and variety.
2. Furnish at least 2 percent of the total amount installed for each grout type, color, and composition. but not less than one unopened container.

PART 2 - PRODUCTS

2.1 TILE SURFACING UNITS

A. Products: Indicated in the Finish Legend on the Drawings, Sheet A8.50, or equal.

2.2 THRESHOLDS

A. Aluminum Thresholds: Indicated on the Drawings or selected by the Architect, or equal.

2.3 INSTALLATION MATERIALS

A. Concrete Repair:
1. Description: Trowel-grade cementitious products used for non-structural repair indoor and outdoor concrete flatwork.
2. Product: “ARDEX CP” manufactured by ARDEX Engineered Cements, or equal, unless another type is explicitly indicated or otherwise supplied, required, recommended, or accepted by the manufacturer

B. Trowelable Leveling and Patching Compounds: Specified in Section 03 54 16, unless other products are supplied, required, recommended, or accepted by the manufacturer for the applications indicated.

C. Moisture Vapor Transmission Reduction Coating: Specified in Section 03 35 10 (preventative) or Section 09 05 16 (remedial), unless another coating is supplied, required, recommended, accepted by the by manufacturer for actual in-service conditions applicable to the project.

D. Fluid-Applied Waterproofing / Crack Isolation Membrane:
1. Products: Provide one of the following, or equal.

a. “RedGard” elastomeric membrane manufactured by Custom Building Products.
b. “Laticrete HydroBan” manufactured by LATICRETE International, Inc.
c. “Mapelastic AquaDefense” manufactured by Mapei Corp.

2. Accessories:
   a. Primer: One-part waterproofing / crack isolation membrane diluted with 4 parts water and applied at a rate of 300 square feet per gallon of reduced material; or other substrate sealer or primer supplied, required, recommended, approved or accepted manufactured by the waterproofing/crack isolation membrane manufacturer.
   b. Fiberglass Mesh: Provide manufacturer’s standard alkali-resistant reinforcing mesh for changes of plane and for gaps 1/8-inch wide or greater.
   c. Other Accessories: Provide other accessories and secondary items supplied, required, recommended, approved, or accepted manufactured by the waterproofing/crack isolation membrane manufacturer.

E. Thin Bed Mortar (Thinset) Installations (horizontal applications between 3/32- and 3/16-inch thick after beat-in):
   1. Description: Premium-grade (best quality grade), single-component, ultra-high-performance, polymer-modified Portland cement mortar conforming to A118.15 shear bond strength requirements.
   2. Application: Used for the installation of interior and exterior floor and wall vitreous, semi-vitreous or non-vitreous tile (ceramic, mosaic, quarry, and cement body tile); impervious porcelain tile; and natural stone veneer and stone tile.
   3. Products: Provide one of the following, or equal.
      a. “MegaFlex Crack Prevention Mortar” manufactured by Custom Building Products.
      b. “254 Platinum” manufactured by LATICRETE International, Inc.
      c. “Ultraflex 3” manufactured by Mapei Corp.

F. Medium Bed Mortar Installations (horizontal applications between 3/8- and 3/4-inch thick after beat-in):
   1. Description: Regular-setting, polymer-modified mortar conforming to A118.15 shear bond strength requirements.
   2. Application: Used for the installation of the installation of
      a. large-format dimensional tile (greater than 12 by 12 inches);
      b. inconsistent thickness natural stone; and
      c. tiles and pavers having slight substrate irregularity.
   3. Products: Provide one of the following, or equal.
      a. “Marble, Granite & Travertine Premium Medium Bed Mortar” manufactured by Custom Building Products.
      b. “LATICRETE 4-XLT” manufactured by LATICRETE International, Inc.
      c. “Ultraflex LFT” manufactured by Mapei Corp.

G. Polymer-Modified Cementitious Sanded Grout:
   1. Description: Premium-grade, pre-mixed, Portland cement sanded grout conforming to ANSI A118.7, and having a specifically-tailored, integrally-mixed antimicrobial agent.
   2. Application: Used for typical joints between 1/8- and 1/2-inch wide.
   3. Products: Provide one of the following, or equal.
      a. “Prism Ultimate Performance Grout” manufactured by Custom Building Products.
      b. “LATICRETE PermaColor” manufactured by LATICRETE International, Inc.
      c. “Ultracolor Plus FA” manufactured by Mapei Corp.
   4. Colors: Indicated on the Drawings or selected by the Architect.

H. Polymer-Modified Cementitious Non-Sanded Grout:
   1. Description: Premium-grade, pre-mixed, Portland cement non-sanded grout conforming to ANSI A118.6, and having a specifically-tailored, integrally-mixed antimicrobial agent.
   2. Application: Used for the installation of narrow grout joints between 1/16- and 1/8-inch wide, and especially with
      a. highly glazed or polished tile, marble, and natural stone that might scratch with sanded grouts; and
      b. glass mosaic tile grout installations.
   3. Products: Provide one of the following, or equal.
      a. “Polyblend Non-Sanded Grout” manufactured by Custom Building Products.
      b. “LATICRETE 1600” manufactured by LATICRETE International, Inc.
      c. “Keracolor U” manufactured by Mapei Corp.
   4. Colors: Indicated on the Drawings or selected by the Architect.
   5. Masonry Joints: Indicated on the Drawings or selected by the Architect.

I. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect tile quality, durability, appearance**,** or performance.

2.4 ACCESSORIES

A. Trim Units: Coordinate with sizes and coursing of adjoining tile. Provide shapes indicated on the Drawings.

B. Grout Release:
   1. Description: Temporary, water soluble, pre-grout coating.
   2. Application: Used to provide protection against grout & mortar staining.
   3. Products: Provide one of the following, or equal.
      a. “Aqua Mix Grout Release” manufactured by Custom Building Products.
      b. “STONETECH Grout Release” manufactured by LATICRETE International, Inc.
      c. “UltraCare Grout Release” manufactured by Mapei Corp.

C. Cleaner: Supplied, required, recommended, or accepted by the manufacturer for use on the installed tile and actual in-service conditions applicable to the project. Cleaners must remove stains, dirt, and residue without damaging or altering tile and grout surfaces.

D. Grout Sealer: Manufacturer's standard product for sealing grout joints, which does not change either the color or appearance of installed grouts.

E. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
3. Verify substrates are dry and free of curing compounds, sealers, hardeners, and deleterious and other substances that might interfere with tile adhesion,
4. Protect work areas, surfaces, in-place construction, and installed and adjacent items against soiling and damage.
5. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
6. Install tile using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
7. Set tile true to line; plumb, level, and square with flush, well-fitted joints; and in alignment with adjacent construction.
8. Securely attach tile in place to supporting construction.
9. Completed work must match approved samples and mockups, as accepted by the Architect.
10. Installed tile must be warrantable. Do not install, correct, or replace tile in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Install waterproofing/crack prevention membrane in conformancewith ANSI A108.13 and the waterproofing/crack prevention manufacturer's written instructions to produce membrane of uniform thickness bonded securely to substrate.
2. Do not install tile over waterproofing/crack prevention membrane until membrane has cured and been tested to determine that it is watertight.
3. Install tile in conformance with the ANSI and TCNA quality standard publication requirements for wall installations.
4. Accurately form intersections and returns. Perform cutting and drilling without marring visible surfaces. Carefully grind cut edges abutting trim, finishes, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap stonetile.
5. Jointing Pattern: Lay tile in patterns as indicated on the Drawings.
6. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, during installation.
7. Install thresholds at locations indicated; set in same type of setting bed as abutting field tile, unless otherwise indicated.
8. Grout tile in conformance with the requirements of ANSI A108.10.
9. Apply grout sealer to cementitious grout joints in conformance with the grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer that has gotten on tile faces by wiping with soft cloth.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed equipment in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 51 13
ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Acoustical ceiling panels.
   2. Suspension system.
   3. Installation materials.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Regulatory Requirements:
   1. Surface-Burning Characteristics: Provide acoustical ceilings having a maximum FSI Value of 25 or less and a maximum SDI Value of less than 450 (Class A), when tested in conformance with ASTM E 84.

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing acoustical ceilings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing acoustical ceilings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading acoustical ceiling installers.

B. Submittals: Submit product data, shop drawings, samples, coordination drawings, and written descriptions of specified qualifications.

C. Maintenance Material Submittals:
   1. Deliver to the Owner acoustical ceiling cleaning materials, equipment, accessories, and instructions; and extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish at least 2 percent of the total installed for each acoustical ceiling type, color, composition, grade, finish, and variety, but not less than one unopened box or container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Armstrong World Industries.
   2. CertainTeed Corp.
   3. USG Interiors, Inc.

2.2 ACOUSTICAL CEILING PANELS

A. Description: Mineral fiber ceiling panels conforming to ASTM E 1264 Type XII (glass fiber base with membrane-faced overlay), Form 2 (cloth), Pattern E (lightly textured).

B. Product: “Radar Climaplus Performance” manufactured by USG Interiors, Inc., or equal.

C. Requisite Properties:
   1. Style: 2227.
   2. Size: 24 inches by 24 inches.
   3. Color: White.
   4. Surface Finish: Factory-applied latex paint.
   5. Edge Detail: Shawdowline Tapered.

D. Performance Requirements:
   1. Minimum Noise Reduction Coefficient (NRC): At least NRC 0.80, when tested in conformance with ASTM E 492 and ASTM E 989.
   2. Minimum Ceiling Attenuation Class (CAC): At least CAC 35, when tested in conformance with ASTM E 492 and ASTM E 1414.
   3. Minimum Light Reflectance (LR): Provide LR value of at least 0.87, when tested in conformance with ASTM E 1477.

2.3 SUSPENSION SYSTEMS

A. Description: Non-rated direct hung ceiling suspension system conforming to ASTM C 635 requirements for Heavy Duty structural classification.

B. Product: “USG Donn Brand DX/DXL” manufactured by USG Interiors, Inc., or equal.

C. Requisite Properties:
   1. Size: 15/16-inch bottom flange face dimension.
   2. Profile Type: Exposed tee.
   3. Material: Hot dip galvanized steel sheet.
   4. Finish: Manufacturer’s standard shop-applied pre-treatment and baked enamel finish.
   5. Color: White.

2.4 INSTALLATION MATERIALS

A. Attachment Devices: Sized for 5 times the design load indicated in ASTM C 635, Table 1, Direct Hung, unless otherwise indicated. Comply with seismic design requirements.

B. Wire: Soft temper, zinc-coated, pre-stretched, galvanized carbon steel wire conforming to ASTM A 641 Class 3 or A coating and having a minimum yield-stress load of 3 times the design load.
   1. Hanger Wire: Minimum 0.106-inch diameter. (12-gage ASW)
   2. Diagonal Bracing Wire: Minimum 0.106-inch diameter. (12-gage ASW)
   3. Provide heavier gage hanger wire for ceiling systems heavier than 4 psf.

C. Compression Struts:
   1. Cold or hot rolled angles, loadbearing or non-loadbearing studs, EMT or rigid conduit, or black iron.

2. Cold-rolled steel section with maximum L/R ratio of 200.

D. Engineered Compression Struts:
   1. Description: Pre-engineered telescoping seismic compression posts manufactured from heavy-wall galvanized tubing.
   2. Application: Manufactured compression struts may be provided in lieu of compression struts indicated above when installed in compliance with its manufacturer's instructions.
   3. Products: "ARMSTRONG 5594 Ceiling Tile Compression Strut" manufactured by Armstrong World Industries or "Donn Brand Compression Post VSA" manufactured by USG Interiors, Inc. (ICC ES Report No. ESR-1222), or equal.

E. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.5 ACCESSORIES

A. Seismic Clips:
   1. Description: 2-inch beam end retaining clip that joins main beam or cross tee to wall molding and web of grid with no visible pop rivets.
   2. Products: "BERC 2" clips manufactured by Armstrong World Industries or "ACM7" clips by USG Interiors, Inc., or equal.

B. Seismic Separation Joints: Provide ceiling system manufacturer's standard at seismic separation joints at ceiling locations where the contiguous area of non-broken ceiling is 2,500 square feet or greater.

C. Wall Molding: Provide the following, with prefinished exposed flanges matching suspension system.
   1. Perimeter Molding: 1-1/4-inch by 15/16-inch perimeter wall angle moldings.
   2. Shadow Molding: "No. 7877" 15/16-inch flange by 15/16-inch-inch high by 1/4-inch shadow molding manufactured by Armstrong World Industries, or equal.
   3. Shadow Molding: "No. 7823" 7/8-inch flange by 2-inch high by 3/4-inch reveal hemmed-edge shadow molding manufactured by Armstrong World Industries, or equal.

D. Perimeter Trim:
   1. "Axiom Building Perimeter System" manufactured by Armstrong World Industries, or equal, for light pockets in corridor and roller window pockets – both with slots for linear return diffusers.
   2. "Axiom Building Perimeter System" manufactured by Armstrong World Industries, or equal, for ACT ceiling tiles flush with adjacent gypsum board soffits.

E. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed acoustical ceiling and adjacent items.
3. Install acoustical ceilings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set acoustical ceilings true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
5. Securely attach acoustical ceilings in place to supporting construction.
6. Installed acoustical ceilings must be warrantable. Do not install, correct, or replace acoustical ceilings in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Suspend acoustical ceiling hangers from building's structural members.
2. Secure bracing wires to suspension members and to supports with at least four tight turns. Suspend bracing from building's structural members as for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Attach bracing wires to concrete with cast-in-place or post installed anchors.
3. Install edge moldings and trim at acoustical ceiling perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
4. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
5. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

C. Installation Tolerances: Ceilings must conform to the following tolerances, which are non-cumulative.
1. Maximum Out of Plane: Surfaces may not vary by more than 1/8-inch in 10 feet.
2. Carrying Channel Maximum Out of Level: Not more than 1/8-inch in 12 feet,
3. Main Runner Maximum Out of Level: Not more than 1/4-inch in 10 feet,
4. Main Runner Maximum Deflection: Not more than L/360 of span,
5. Maximum Misalignment of Main Runners: 0.015-inch.
6. Maximum Misalignment of Intersection Members: 0.020-inch.
7. Main Runner Bow, Camber, and Twist: Not more than 1/32-inch in 2 feet bow or camber; not more than one degree twist.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed acoustical ceilings in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

SECTION 09 67 13
MECHANICAL ROOM COATING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Mechanical equipment room floor coatings.
   2. Surface preparation.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 03 35 10 for concrete flatwork finishing and curing.
   2. Section 09 05 16 for preparation of concrete slabs for finish flooring.

1.02 SECTION REQUIREMENTS

A. Regulatory Requirements:
   1. Radiant Flux Classification: Provide flooring having an average critical radiant flux value of at least 0.45 (Class I), when tested in conformance with ASTM E 648.
   2. Allowable Static Coefficient of Friction Value (SCOF): At least 0.6 for level surfaces and at least 0.8 for sloped surfaces, when measured in conformance with ASTM D 2047.
   3. Allowable Dynamic Coefficient of Friction Value (DCOF): Between 0.35 and 0.45, when measured in conformance with ANSI B101.3 under wet conditions.

B. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing flooring material installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Installer: Company or individuals must have at least 5 years' experience installing flooring for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Supervisors: Individuals must have at least 7 years' experience installing flooring for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading flooring installers.

C. Submittals: Submit product data, shop drawings, samples, and written descriptions of specified qualifications.

D. Preinstallation Meeting:
   1. Hold meeting after submittal approval and at least 10 business days before beginning installation.
   2. During the meeting, review

      a. Contract Documents, submittals, manufacturer's instructions, project conditions, and installation methods;

      b. special details and conditions that might affect installation;

c. substrates and surface preparation;

d. installation sequence;

e. procedures for protecting stored materials and installed flooring; and

f. specified requirements for testing, inspection, reports, and closeout submittals.

3. Identify conditions detrimental to installation.
4. Finalize construction schedule.
5. Record significant discussions and distribute meeting minutes.
6. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

E. Field Samples: Include *in-situ* mockups as part of the work of this specification section.

1. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
2. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of flooring is made from field samples.
3. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
4. Approved field samples may remain part of the work after being identified for future reference.

F. Maintenance Material Submittals:

1. Deliver to the Owner flooring cleaning materials, equipment, accessories, and instructions; and extra stock materials to replace those worn or damaged as a result of normal occupancy.
2. Furnish at least 2 percent of the total installed for each flooring type, color, composition, grade, finish, and variety, but not less than one unopened container.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.

1. Carlisle Coatings and Waterproofing.
2. Pacific Polymers International, Inc.
3. Urethane Polymers International, Inc.

2.02 MECHANICAL ROOM COATING

A. Description: 3-coat, high-solids content, urethane-based, cold fluid-applied, seamless and waterproof elastomeric foot traffic-bearing deck surfacing system conforming to ASTM C 957 requirements for minimum physical properties, and consisting of the following.

1. Base Coat: Aromatic polyurethane.
2. Top Coat (Color Coat): Aromatic polyurethane.

B. Products: Provide “ELASTO-DECK 5000 MR” deck coating system manufactured by Pacific Polymers International, Inc., or equal.

1. Average Membrane Thickness: At least 48 mils (dry).
2. Average Total System Thickness: At least 60 mils (dry).

3. Base and Intermediate Coat Exposure Limit: Not more than 72 hours.

C. Base Coat:
1. Description: Single-component, high adhesion strength aromatic urethane coating.
2. Product: “ELASTO-DECK 5001NG”.
3. Color: Tan.
4. Performance Requirements:

a. Ultimate Elongation: At least 700 percent, when tested in conformance with ASTM D 412.

b. Minimum Tensile Strength: At least 400 pounds per square inch, when tested in conformance with ASTM D 412.

c. Maximum Shore A Hardness: Not more than 55, when tested in conformance with ASTM D 2240.

D. Aggregate: Uniformly graded, No. 20 mesh, silica (quartz) sand aggregate having a minimum Moh's Hardness value of at least 6.5.

E. Top Coat:
1. Description: Single-component high tensile strength abrasion- and weather-resistant aromatic urethane coating.
2. Product: “ELASTO-GLAZE 6001 AL-HT”.
3. Color: Indicated on the Drawings or selected by the Architect.
4. Performance Requirements:

a. Ultimate Elongation: At least 200 percent, when tested in conformance with ASTM D 412.

b. Minimum Tensile Strength: At least 280, when tested in conformance with ASTM D 624.

c. Minimum Tear Strength: At least 2,700 pounds per square inch, when tested in conformance with ASTM D 412.

d. Maximum Shore A Hardness: Not more than 95, when tested in conformance with ASTM D 2240.

e. Maximum Abrasion Resistance: Not more than 0.029-mil DFT, when tested in conformance with ASTM D 4060 on a 4-inch by 4-inch sample with a CS-17 wheel, 1000 revolutions with 1000 grams weight.

f. Maximum Water Absorption: Not more than 1.5 percent, when tested in conformance with ASTM D 570.

2.03 SURFACE PREPARATION

A. Substrate Testing and Surface Preparation: Perform testing and corrective work, and prepare substrates in conformance with the requirements of Section 09 05 16.

B. Concrete Surface Profiling: Provide ICRI concrete surface profile CSP 3 to CSP 5 (between 10 and 40 mils), unless otherwise explicitly required, recommended, or accepted in writing by the covering manufacturer. Conform to the requirements of Section 09 05 16.

2.04 INSTALLATION MATERIALS

A. Concrete Repair:
   1. Description: Trowel-grade cementitious products used to fill and repair portions of indoor and outdoor concrete flatwork.
   2. Product: Provide “ARDEX CP” manufactured by ARDEX Engineered Cements, or equal, unless another type is explicitly indicated or otherwise supplied, required, recommended, or accepted by the manufacturer

B. Trowelable Leveling and Patching Compounds: Specified in Section 03 54 16, or as otherwise supplied, required, recommended, or accepted by the manufacturer for the applications indicated.

C. Moisture Vapor Transmission Reduction Coating: Specified in Section 03 35 10 (preventative) or Section 09 05 16 (remedial), unless another coating is supplied, required, recommended, accepted by the by manufacturer for actual in-service conditions applicable to the project.

D. Primer: “DECK-THANE”, or equal primer, or equal.

E. Flashing Tape: 4-inch wide by 30-mil thick “Webseal MicroSealant Tape” manufactured by EternaBond, Inc., or equal, unless another product is supplied, required, recommended, or accepted by the manufacturer.

F. Detail Membrane: Same material as base coat specified above.

2.05 ACCESSORIES

A. Sealant: “ELASTO-THANE 230”, or equal, single-component urethane sealant.

B. Cleaner: Chemically neutral, biodegradable, phosphate free cleaner with a pH between 7 and 10 designed to remove soil and residue without damaging flooring, and supplied, required, recommended, or accepted by the manufacturer for use on the installed flooring and actual in-service conditions applicable to the project.

C. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Examine project conditions and field-verify ambient and existing conditions affecting flooring installation.
   3. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   4. Protect work areas, surfaces, in-place construction, and installed and adjacent items against soiling and damage.

5. Prepare surfaces as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any specified or other warranty or guarantee becoming void.
6. Install flooring using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
7. Completed work must match approved samples and mockups accepted by the Architect.

B. Site Tests and Inspections:
1. Manufacturer Services: Installed work is subject to examination by the manufacturer's representative to determine conformance to manufacturer's instructions and other requirements and recommendations.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged, and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.
4. Installed flooring must be warrantable. Do not install, correct, or replace flooring in a manner that is un-warrantable by the manufacturer or that results in any other specified or other warranty or guarantee becoming void.

D. Protection:
1. Protect installed flooring in place from soiling, deterioration, and damage until Substantial Completion.
2. Do not store anything on or adjacent to or against installed flooring unless it is or they are protected from damage, as accepted in writing by the manufacturer's representative. Do not use installed flooring surfaces as work surfaces.
3. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 81 33
ACOUSTICAL INSULATION, SEALANTS, AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Concealed acoustical insulation.
2. Acoustical sealants.
3. Acoustical spray.
4. Firestop and acoustical putty pads.
5. Installation materials.
6. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data.

PART 2 - PRODUCTS

2.01 CONCEALED ACOUSTICAL INSULATION

A. Acoustical Board Insulation:
1. Description: Unfaced inorganic glass-fiber semi-rigid board acoustical insulation conforming to ASTM C 612 requirements for Type IA or IB insulation.
2. Products: Provide one of the following, or equal.

a. “CertaPro Commercial Board” manufactured by CertainTeed Corp.

b. “Insul-SHIELD” manufactured by Johns Manville.

c. “Fiberglass 700 Series, Type 703” manufactured by Owens Corning.

B. Acoustical Blanket Insulation:
1. Description: Unfaced inorganic glass-fiber blanket acoustical insulation conforming to ASTM C 665 Type I acoustical insulation requirements (blankets without membrane coverings).
2. Manufacturers: Provide one of the following, or equal.

a. “CertaPro AcoustaTherm” manufactured by CertainTeed Corp.

b. “Sound Control Batts” manufactured by Johns Manville.

c. “Sound Attenuation Batts/MW” manufactured by Owens Corning Fiberglass Corp.

C. Sound Attenuating Fire Blanket Insulation:

1. Description: Asbestos-free mineral fiber blanket acoustical insulation conforming to ASTM C 665 requirements for Type I acoustical insulation requirements (blankets without membrane coverings), manufactured from slag and naturally occurring rock.
2. Products: Provide one of the following, or equal.

    a. “FIBREX Sound Attenuation Fire Batt Acoustical insulation (SAFB)” manufactured by Fibrex Insulations Inc.

    b. “Thermafiber Sound Attenuating Fire Blankets (SAFB)” manufactured by Owens Corning.

    c. “ROCKWOOL AFB” manufactured by Roxul Inc.

2.02 ACOUSTICAL SEALANTS

A. Latex Sealants:
1. Description: Non-sag, paintable, non-staining siliconized acrylic-latex sealant conforming to ASTM C 834 requirements for Type OP (opaque sealant), Grade NF (does not meet the requirements for low temperature flexibility of Grade 0°C classification).
2. Application: Used where indicated at exposed and concealed joints and annular spaces around through-penetrations.
3. Products: Provide one of the following, or equal.

    a. “CP 506 Smoke and Acoustic Sealant” manufactured by Hilti, Inc.

    b. “QuietZone Acoustic Sealant” manufactured by Owens Corning.

    c. “AC-20 FTR” manufactured by Pecora Corp.

    d. “Tremflex 834” manufactured by Tremco, Inc.

    e. “Sheetrock Acoustical Sealant” manufactured by USG Corp.
4. Requisite Properties:

    a. Color: White.

B. Non-Drying, Non-Hardening, Non-Skinning Sealants:
1. Description: Single-component butyl rubber sound dampening elastomeric sealant.
2. Application: Installed at concealed joints where indicated.
3. Products: Provide one of the following, or equal.

    a. “BA-98” manufactured by Pecora Corp.

    b. “QuietSeal Acoustical Sealant QS-350” manufactured by Serious Materials, Inc.

    c. “Acoustical Sealant” manufactured by Tremco, Inc.

C. Fire Rated Acoustical Sealant: Provide one of the following, or equal.
1. “Fire Barrier 2001 Silicone RTV Foam” manufactured by 3M.
2. “CP 601S Elastomeric Firestop Sealant” manufactured by HILTI.
3. “Firetemp CI Caulk” manufactured by Johns Manville.
4. “Spec Seal ES100” manufactured by Specified Technologies, Inc.

D. Expanding Foam Sealant:

1. Description: Gun-applied, expanding spray foam sealant.
2. Application: Used to seal and insulate around common areas of energy loss, including foundation/sill plates, outdoor fixtures, pipe penetrations, etc.
3. Products: Provide one of the following, or equal.

    a. “GREAT STUFF PRO Gaps & Cracks” manufactured by The Dow Chemical Co.

    b. “Expanding Foam Polyfilla” manufactured by Polyfilla.

E. Preformed Tape Sealants:
1. Description: Compressible, self-extinguishing, UL-listed closed cell polyvinyl chloride foam tape with pressure sensitive adhesive.
2. Application: Installed at concealed joints where indicated.
3. Product: “Norseal V740FR” manufactured by Norton Performance Plastics Corp., or equal.
4. Requisite Properties:

    a. Size: One-inch minimum roll width.

    b. Thickness: At least 3/8-inch.

    c. Density: At least 6 pounds per cubic foot.

    d. Facing: Furnish tape in rolls with protective release liner on non-adhesive face.

2.03 ACOUSTICAL SPRAY

A. Description: Sprayable acrylic latex material.

B. Application: Used where indicated at exposed and concealed static or minimally dynamic joints or gaps in wall construction.

C. Products: Provide one of the following, or equal.
1. “CP 572 Smoke and Acoustic Spray” manufactured by Hilti, Inc.
2. “Spec Seal Smoke & Sound” manufactured by Specified Technologies, Inc.

D. Requisite Properties:
1. Spray must be mold and mildew resistant in conformance with ASTM G21.
2. Spray must have a minimum movement capability of at least 12.5 percent.

2.04 FIRESTOP AND ACOUSTICAL PUTTY PADS

A. Description: Sound deadening pads.

B. Application: Used to seal the external surfaces (back side) of metallic and nonmetallic switch and receptacle boxes to reduce airborne sound transmission in interior partitions.

C. Fire-Resistance Rated Construction (Firestop Putty Pads): Provide one of the following, or equal.
1. “CP 617 Firestop Putty Pads” manufactured by Hilti, Inc.
2. “Putty Pads” manufactured by International Protective Coatings
3. “Type FSP Firestop Putty” pads by Nelson Electric.
4. “Putty Pads” manufactured by Specified Technologies, Inc.

D. Elsewhere (Acoustical Putty Pads): Provide one of the following, or equal.
   1. “Lowry Box Pads” manufactured by Henry A. Lowry Co.
   2. “Sound Pad #68” manufactured by LH Dottie Co.

2.05 INSTALLATION MATERIALS

A. Acoustical insulation Hangers:
   1. Application: Used to attach acoustical insulation to clean, dry, smooth, non-porous solid surfaces.
   2. Manufacturer: Provide products manufactured by AGM Industries, Inc., or equal.
   3. Products: Provide the following, or equal.
      a. Anchors: “TACTOO Insul-Hangers” adhesively attached spindle-type anchors.
      b. Adhesive: “BOSS 348 Multi-Purpose Construction Adhesive” manufactured by Accumetric, LLC or other VOC-compliant acoustical insulation hanger adhesive.
      c. Acoustical insulation Standoff: One-inch “Clutch Clip”.
      d. Acoustical insulation Retaining Washers: “Style RC 200” round or “SC 250” square washers.
   4. Requisite Properties:
      a. Base Plate and Acoustical insulation Standoff and Retaining Washers: At least 2-inch square by at least 0.149-inch (MSG 28) base metal thickness galvanized perforated steel sheet.
      b. Retaining Washers: At least 1-1/2-inch square or diameter by at least 0.149-inch (MSG 28) base metal thickness galvanized perforated steel sheet.
      c. Spindle: At least 0.106-inch diameter (SWG 12), zinc-coated wire, depth to suit depth of acoustical insulation indicated.
      d. Adhesive: Adhesive used with impaling pins must either be manufactured or accepted by the acoustical insulation hanger manufacturer. “Peel and press” hangers with self-adhering adhesive backings are prohibited.

B. Mechanical Fasteners: Tape, staples, and other devices for fastening acoustical insulation supplied, required, recommended, or accepted by the acoustical insulation manufacturer.

C. Hanger Wire: At least 0.106-inch diameter (SWG 12) soft temper zinc-coated wire conforming to ASTM A 641, Class 3 or A coating.

D. Adhesive: Supplied, require, recommended, or accepted by the acoustical insulation manufacturer to bond acoustical insulation securely to substrates indicated without damaging acoustical insulation or substrates.

2.06 ACCESSORIES

A. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed acoustical insulation and adjacent items.
3. Install acoustical insulation in conformance with ASTM C 919 using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Extend acoustical insulation to envelop entire area insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
5. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of acoustical insulation to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.
6. Installed acoustical insulation must be warrantable. Do not install, correct, or replace acoustical insulation in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Wall Insulation:
    a. Install acoustical insulation in cavities formed by framing members.
    b. Use acoustical insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.
    c. Place acoustical insulation to produce a friction fit between edges of acoustical insulation and adjoining framing members.
    d. Stuff loose-fill acoustical insulation into miscellaneous voids and cavity spaces where shown. Compact to approximately 40 percent of normal maximum volume.
2. Ceiling Insulation:
    a. Install blanket acoustical insulation above ceilings where indicated.
    b. Maintain 3-inch clearance of acoustical insulation around recessed lighting fixtures.
3. Acoustical Sealant Installation:
    a. At sound-rated assemblies and elsewhere indicated, seal construction with a continuous bead of acoustical sealant at perimeter, behind control joints, and at openings and penetrations.
    b. Install acoustical sealant to both faces of partitions at perimeters and through penetrations.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.

D. Protection:
   1. Protect installed acoustical insulation in place from deterioration and damage until covered.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 91 00
PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Field-applied finish paint.
   2. Surface preparation.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 05 05 13 for shop-applied steel primers and surface preparation; and for SSPC Environmental Zone definitions.
   2. Section 09 96 56 for epoxy coatings.
   3. Section 09 97 13 for high performance steel coatings applied to steel surfaces installed in SSPC Environmental Zones 1B, 2A, and 2B.

1.2 SECTION REQUIREMENTS

A. Submittals: Submit product data, samples, and written descriptions of specified qualifications.

B. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
   1. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.
   2. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of tile is made from field samples.
   3. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
   4. Approved field samples may remain part of the work after being identified for future reference.

C. Maintenance Material Submittals:
   1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish at least one unopened gallon or container for each paint type, color, composition, grade, finish, and variety.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Dunn Edwards.
   2. Vista Paint.

3. Benjamin Moore.

2.2 PAINT

A. Description: 100-percent premium grade (best grade) low- and no-VOC paints, unless otherwise indicated.

B. Products: Indicated in the Finish Legend on the Drawings, Sheet A8.50, or equal.

2.3 ACCESSORIES

A. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
   3. Protect work areas from dust and other airborne contaminants during surface preparation and paint installation. Protect adjacent surfaces against soiling and damage. Close and protect drains and other openings and penetrations to prevent paint intrusion or migration of liquids.
   4. Prepare substrates as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
   5. Install paint using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   6. Only install paint under conditions that ensure finishes are free from blemishes and defects.
   7. Provide smooth surfaces of uniform finish, color, appearance, and coverage. Paint surfaces with cloudiness, spotting, holidays, runs, or other imperfections are prohibited and are rejected as non-conforming work.
   8. Do not exceed the application rates recommended by the manufacturer.
   9. Completed work must match approved samples and mockups, as accepted by the Architect.
   10. Installed paint must be warrantable. Do not install, correct, or replace paint in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work. Replace soiled paint that cannot be cleaned to the same condition as new.

C. Protection:
   1. Protect installed equipment in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 09 96 23
GRAFFITI-RESISTANT COATINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Penetrating graffiti-resistant coatings,
   2. Painted surface graffiti-resistant coatings,
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Performance Requirements:
   1. When compared visually to an untreated sample under the same lighting conditions, graffiti-resistant coatings may not alter the color or sheen of the coated substrate and must be invisible after application and over the life of the substrate. Confirm visual appearance by mockups and adjust products and applications as required.
   2. Coatings must remove 100 percent of all types of paint and graffiti materials from treated surfaces without damaging the coating or the substrate; no evidence of graffiti may remain upon graffiti removal.
   3. Coatings must not show any signs of deterioration or change of appearance during the warranty period after graffiti removal; ghosting, staining, or shadowing is prohibited.
   4. Coatings must withstand at least 120 cleaning cycles over the same area without measurable coating deterioration.
   5. Coatings must not increase substrate dirt pick-up.
   6. Coatings must not require re-application during the warranty period regardless of the number of graffiti taggings.

B. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing graffiti-resistant coatings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing graffiti-resistant coatings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading graffiti-resistant coating installers.

C. Submittals: Submit product data, samples, and written descriptions of specified qualifications.

D. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate graffiti-resistant coatings into the mockup as part of the work of this specification section.

E. Field Samples: Include *in-situ* mockups as part of the work of this specification section.
   1. The Architect reviews field samples for conformance to the Contract Documents and approves or rejects them as the standard by which subsequent work is evaluated.

2. Revise field samples and repeat reviews, including arranging all revisions and paying all revision costs, until accepted in writing by the Architect. Final acceptance of firestopping is made from field samples.
3. After acceptance, promptly identify and protect field samples for reference until Substantial Completion.
4. Approved field samples may remain part of the work after being identified for future reference.

F. Maintenance Material Submittals:
1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
2. Furnish one unopened gallon or container for each graffiti-resistant coating type, color, composition, grade, finish, and variety.

G. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

PART 2 - PRODUCTS

2.01 PENETRATING GRAFFITI-RESISTANT COATINGS

A. Description: Non-sacrificial water-based silicone emulsion graffiti protectant.

B. Light-Duty Coatings:
1. Products: “Sure Klean Weather Seal Blok-Guard & Graffiti Control II” manufactured by PROSOCO, Inc., or equal.

a. Coating: “Sure Klean Weather Seal Blok-Guard & Graffiti Control II”, or equal.

b. Cleaner: “Defacer Eraser Graffiti Wipe”, or equal.

C. Medium-Duty Coatings:
1. Description: Non-sacrificial water-based silicone emulsion graffiti protectant.
2. Product: Provide the following manufactured by the Tnemec Co., or equal.

a. Coating: “Series V626 Dur A Pell GS”, or equal.

b. Cleaner: “Series 680 Mark A Way”, or equal.

2.02 HEAVY-DUTY AND PAINTED SURFACE GRAFFITI-RESISTANT COATINGS

A. Description: Non-yellowing aliphatic polyurethane permanent graffiti control system.

B. Product: “PERMASHIELD PREMIUM SYSTEM” manufactured by Monopole, Inc., or equal.
1. Base Coat: “PERMASHIELD BASE” applied to a DFT of 2 to 3 mils per coat; apply 2 coats.
2. Top Coat: “PERMASHIELD PREMIUM” applied to a DFT of 2 to 3 mils per coat; apply 2 coats. Do not apply thicker (may micro-blister).
3. Cleaner: “CITRUS CLEAN SUPER” is the only cleaner manufacturer-recommended product for graffiti removal with “PERMASHIELD PREMIUM SYSTEM”.

C. Requisite Properties:
1. Color: Clear.

2. Specular Gloss (Sheen): Flat.

2.03 ACCESSORIES

A. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect tile quality, durability, or performance.

B. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
3. Install graffiti-resistant coatings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Only install graffiti-resistant coatings under conditions that ensure finishes are free from blemishes and defects.
5. Do not exceed the application rates recommended by the manufacturer.
6. Installed graffiti-resistant coatings must be warrantable. Do not install, correct, or replace graffiti-resistant coatings in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled graffiti-resistant coatings that cannot be cleaned to the same condition as new.

SECTION 09 96 56
EPOXY COATINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Epoxy coatings.
   2. Surface preparation.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing epoxy coatings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing epoxy coatings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading epoxy coating installers.

B. Submittals: Submit product data, samples, and written descriptions of specified qualifications.

C. Maintenance Material Submittals:
   1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish one unopened gallon or container for each epoxy coating type, color, composition, grade, finish, and variety.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.

   1. Crossfield Products Corp.
   2. Dur-A-Flex, Inc.
   3. Stonhard.
   4. Tnemec Co.

2.02 EPOXY COATINGS

A. Description: Epoxy coatings applied to interior horizontal and vertical surfaces.

B. Base Coat: Provide the following manufactured by the Tnemec Co., or equal.

1. Concrete Primer: “Series 201 Epoxoprime”, or equal, moisture tolerant epoxy applied to a DFT between 6 and 8 mils.
2. CMU Block Filler: “Series 130 Envirofill”, or equal, waterborne cementitious acrylic applied to a DFT between 2 to 3 mils.
3. Drywall Primer: “Series 287 Enviro-Pox”, or equal, waterborne epoxy-amine adduct applied to a DFT between 2 to 3 mils.

C. Intermediate Coat: “Series 287 Enviro-Pox” manufactured by the Tnemec Co., or equal, waterborne epoxy-amine adduct applied to a DFT between 2 to 3 mils.

D. Top Coat: “Series 297 EnviroGlaze” manufactured by the Tnemec Co., or equal, 2-component, water-based urethane coating applied to a DFT between 2 to 3 mils.

E. Requisite Properties:
1. Concrete and CMU Total Systems Total Thickness: 10- and 15 mils DFT.
2. Drywall System Total Thickness: Between 6- and 9 mils DFT.
3. Color: Indicated on the Drawings or selected by the Architect.

2.03 SURFACE PREPARATION

A. Substrate Testing and Surface Preparation: Perform testing and corrective work, and prepare substrates in conformance with the requirements of Section 09 05 16.

B. Concrete Surface Profiling: Provide ICRI concrete surface profile CSP 3 to CSP 5 (between 10 and 40 mils), unless otherwise explicitly required, recommended, or accepted in writing by the covering manufacturer. Conform to the requirements of Section 09 05 16.

2.04 ACCESSORIES

A. Concrete Repair:
1. Description: Trowel-grade cementitious products used to fill and repair portions of indoor and outdoor concrete flatwork.
2. Product: Provide “ARDEX CP” manufactured by ARDEX Engineered Cements, or equal, unless another type is explicitly indicated or otherwise supplied, required, recommended, or accepted by the manufacturer

B. Trowelable Leveling and Patching Compounds: As specified in Section 03 54 16, or as otherwise supplied, required, recommended, or accepted by the manufacturer for the applications indicated.

C. Moisture Vapor Transmission-Resistant Grout: Polymer modified cementitious osmotic-pressure-resistant grout supplied, required, recommended, accepted by the by manufacturer.

D. Slip-Resistive Additive: Provide glass beads supplied, required, recommended, or accepted by the manufacturer for the actual in-service conditions applicable to the project.

E. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
   3. Install epoxy coatings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Only install epoxy coatings under conditions that ensure finishes are free from blemishes and defects.
   5. Do not exceed the application rates recommended by the manufacturer.
   6. Installed epoxy coatings must be warrantable. Do not install, correct, or replace epoxy coatings in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled epoxy coatings that cannot be cleaned to the same condition as new.

C. Protection: Protect sealed concrete in place from soiling, deterioration, and damage until Substantial Completion.

SECTION 09 97 13
HIGH-PERFORMANCE STEEL COATINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Field-applied high-performance steel coatings.
   2. Surface preparation.
   3. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing high-performance coatings for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing high-performance coatings for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading high-performance coating installers.

B. Submittals: Submit product data, samples, and written descriptions of specified qualifications.

C. Mockups: If an *ex-situ* exterior wall integrated mockup is required for this project, then integrate high-performance coatings into the mockup as part of the work of this specification section.

D. Maintenance Material Submittals:
   1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish one unopened gallon or container for each high-performance coating type, color, composition, grade, finish, and variety.

E. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Carboline Co.
   2. PPG Industries, Inc.
   3. Tnemec Co.

2.02 HIGH PERFORMANCE COATING

A. Spot Primer for Shop-Primed Surfaces: Provide spot primer identical to the Section 05 05 13 shop primer originally used to prime metal surfaces.

B. Spot Primer for Unprimed and Zinc-Rich-Primed Surfaces:
   1. Description: Zinc-rich organic primer conforming to SSPC-Paint 20 Type II (Organic) zinc-rich primers and AISC requirements for Class B surface slip coefficient rating (minimum mean slip coefficient of at least 0.50).
   2. Product: “94-H20 Hydro-Zinc” manufactured by the Tnemec Co., or equal.
   3. Requisite Properties:
      a. Minimum Thickness: Apply to a DFT of between 2.5 and 3.5 mils, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.
      b. Colors: Reddish-gray or other standard color furnished by the primer manufacturer.
   4. Performance Requirements:
      a. Zinc Dust Pigment: ASTM D 520 Type III composition classification (maximum 0.002 percent lead).
      b. Dry Film Adhesion: At least 800 psi pull, when tested in conformance with ASTM D 4541.
      c. Humidity Resistance: No blistering, cracking, rusting, or film delamination after at least 1,000 hours exposure, when tested in conformance with ASTM D 4585.
      d. Salt Spray Resistance: No blistering, cracking, rusting, or film delamination; nor more than 1/32-inch rust creep at scribe after at least 10,000 hours exposure, when tested in conformance with ASTM B 117.

C. Epoxy Intermediate Coat:
   1. Product: “Hi-Build Epoxoline II Series L69” manufactured by the Tnemec Co., or equal.
   2. Requisite Properties:
      a. Material: 2-component polyamidoamine epoxy.
      b. Minimum Thickness: Apply to a DFT of between 6.0 and 10.0 mils per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.
      c. Color: Match Tnemec color 10BL, “Cornflower”.
      d. Specular Gloss (Sheen): Satin.
   3. Performance Requirements:
      a. Dry Film Adhesion: Minimum rating of 5, when tested in conformance with ASTM D 3359.
      b. Humidity Resistance: No blistering, cracking, rusting or delaminating of film after minimum 1,000 hours exposure, when tested in conformance with ASTM D 4585.
      c. Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film; and not more than 3/16-inch rust creep at scribe after 10,000 hours exposure, when tested in conformance with ASTM B 117.

D. Hybrid Polyurethane Top Coat:

1. Product: Design is based “UVX Series 750” manufactured by the Tnemec Co., or equal.
2. Requisite Properties:
    a. Material: Two-component polyfunctional hybrid polyurethane.
    b. Minimum Thickness: Apply to a DFT of between 2.5 and 5.0 mils per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.
    c. Color: Indicated on the Drawings or selected by the Architect.
    d. Specular Gloss (Sheen): Semi-gloss.
3. Performance Requirements:
    a. Dry Film Adhesion: Minimum rating of 5, when tested in conformance with ASTM D 3359.
    b. Humidity Resistance: No blistering, cracking, rusting or delaminating of film after minimum 1,000 hours exposure, when tested in conformance with ASTM D 4585.
    c. Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film; and not more than 3/16-inch rust creep at scribe after 10,000 hours exposure, when tested in conformance with ASTM B 117.

2.03 SURFACE PREPARATION

A. Unprimed Iron and Steel Surfaces:
    1. Normally-Dry Interior Exposed-In-Service Conditions: Prepare surfaces in conformance with the primer manufacturer’s application instructions and SSPC-SP-3, “*Power Tool Cleaning*”.
    2. Elsewhere: Prepare surfaces in conformance with primer manufacturer’s application instructions and SSPC-SP-11, “*Power Tool Cleaning to Bare Metal*”.

B. Shop-Primed Iron and Steel Surfaces:
    1. Clean damaged primer areas and prepare damaged primer and adjacent surfaces in conformance with the steel coating manufacturer’s application instructions and SSPC-SP-11 , “*Power Tool Cleaning to Bare Metal*”.
    2. Sand smooth and re-clean.
    3. Spot-prime bare metal surfaces with specified spot-primer applied to a minimum total spot primer DFT of between 2.5 and 3.5 mils.
    4. Overlap undamaged primer areas with spot primer a minimum of at least 2 inches.

C. Unknown or Incompatible Primer: Apply full prime coat of specified spot primer on all surfaces as a tie-coat for subsequent intermediate and top coats.

2.04 ACCESSORIES

A. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer's instructions and other requirements and recommendations.
   3. Install high-performance coatings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Only install high-performance coatings under conditions that ensure finishes are free from blemishes and defects.
   5. Do not exceed the application rates recommended by the manufacturer.
   6. Installed high-performance coatings must be warrantable. Do not install, correct, or replace high-performance coatings in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled high-performance coatings that cannot be cleaned to the same condition as new.

C. Protection: Protect sealed concrete in place from soiling, deterioration, and damage until Substantial Completion.

SECTION 09 97 23
PENETRATING CONCRETE FLOOR SEALER

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Penetrating concrete floor sealer.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing concrete sealers for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing concrete sealers for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading concrete sealer installers.

B. Submittals: Submit product data and written descriptions of specified qualifications.

C. Maintenance Material Submittals:
   1. Before Final Completion, deliver to the Owner extra stock materials to replace those worn or damaged as a result of normal occupancy.
   2. Furnish one unopened gallon or container for each concrete sealer type, color, composition, grade, finish, and variety.

PART 2 - PRODUCTS

2.01 PENETRATING CONCRETE FLOOR SEALER

A. Description: Clear-drying, water-based silane or siloxane water repellent sealer for interior exposed concrete slabs.

B. Penetrating Water Repellent Sealer: "Sure Klean Weather Seal Siloxane WB Concentrate" manufactured by PROSOCO, Inc., or equal.
   1. Porous Surfaces (e.g., Concrete Brick, Concrete Pavers, and Concrete Tile): Dilute to 1 part concentrate to not more than 7 parts water.
   2. Semi-Porous Surfaces (e.g., Cast-in-Place Concrete, Precast Concrete, Clay Brick, Terra Cotta, and Unpolished Sandstone): Dilute to 1 part concentrate to not more than 9 parts water.
   3. Dense Surfaces: Dilute to 1 part concentrate to not more than 14 parts water.

C. Requisite Properties: When compared visually to an untreated sample under the same lighting conditions, concrete sealers may not alter the color or sheen of the coated substrate, and must

be invisible after application and over the life of the substrate. Confirm visual appearance by mockups and adjust products and applications as required.

2.02 ACCESSORIES

A. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect tile quality, durability, or performance.

B. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place construction, project conditions, and the work of other specification sections conform to the manufacturer’s instructions and other requirements and recommendations.
   3. Install concrete sealers using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Only install concrete sealers under conditions that ensure finishes are free from blemishes and defects.
   5. Do not exceed the application rates recommended by the manufacturer.
   6. Installed concrete sealers must be warrantable. Do not install, correct, or replace concrete sealers in a manner that results in any warranty or guarantee becoming void.

B. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled concrete sealers that cannot be cleaned to the same condition as new.

C. Protection:Protect sealed concrete in place from soiling, deterioration, and damage until Substantial Completion.

RSTLNE, TAGTIS, ELMTC, CLSC2030, CLSC2090

DIVISION 10

SPECIALTIES

SECTION 10 14 13
REGULATORY SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Restroom doors signs.
   2. Egress stairway door signs.
   3. Accessible entrance and route signs.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings and samples.

PART 2 - PRODUCTS

2.1 PHOTOPOLYMER PANEL SIGNS

A. Description: Single-piece photopolymer panel permanent identification signs consisting of moisture resistant non-glare photopolymer bonded to sign base material.

B. Manufacturer: Provide photopolymer products manufactured by Nova Polymers, Inc., or equal.

C. Fabricators: Provide signs fabricated by one of the following, or equal.
   1. Neiman & Co.
   2. Signtech Inc.

D. Materials:
   1. Photopolymer Layer: 0.040-inch acrylic photopolymer.
   2. Base Material:
      a. Interior Locations: 0.120-inch phenolic base.
      b. Exterior Locations: Exterior grade photopolymer applied to a 0.120-inch phenolic base.

E. Requisite Properties:
   1. Overall Panel Thickness: Between 1/8- and 1/4-inch.
   2. Colors: Indicated in the Architectural Signage Schedule on the Drawings.
   3. Finish: Furnish non-glare finish.
   4. Edge Condition: Square cut.
   5. Corner Condition: Square.
   6. Mounting: Indicated on the Drawings.
   7. Copy: Indicated in the Architectural Signage Schedule on the Drawings.
      a. Letter spacing must conform to standards shown and kerned optically to the acceptance of the Architect.
      b. Lines of copy must be straight and parallel to the sign format, unless otherwise indicated.

c. Edges of letters, numbers, and symbols must be smooth and continuous, with straight and curved portions reproducing the original forms exactly, with corners sharp and true.
d. All forms must be free from ticks, line waiver, discontinuous curves, and other imperfections.

8. Font: Indicated in the Architectural Signage Schedule on the Drawings.

2.2 INSTALLATION MATERIALS

A. Fasteners: Non-removable mechanical fasteners and anchors suitable for secure attachment to substrate and placed through predrilled holes as recommended in writing by the sign manufacturer.
1. Exposed Fasteners: Exposed fasteners are permitted only where specifically stated in the drawings and must be stainless steel painted or finished to match adjacent surfaces, unless otherwise indicated.
2. Concealed Fasteners: Fabricate from metals that are not corrosive to the sign material and mounting surface.

B. Tape: “VHB Tape” manufactured by 3M, or equal.

C. Adhesive: “732 Multi-Purpose Sealant Clear” manufactured by Dow Corning Corp., or equal.

2.3 ACCESSORIES

A. Plastic Cement: “WELD-ON 4” manufactured by IPC Corp., or equal.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed signs and adjacent items.
3. Install signs using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
5. Securely attach signs in place to supporting construction.
6. Installed signs must be warrantable. Do not install, correct, or replace signs in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install signs to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.

2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed signs in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

©AWCWEST 18E22 All rights reserved.

SECTION 10 21 13
TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Solid phenolic core toilet compartments.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, and samples.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Bobrick Washroom Equipment, Inc.
   2. Bradley Corp.
   3. General Partitions Manufacturing Corp.
   4. Scranton Products.

2.2 SOLID PHENOLIC CORE TOILET COMPARTMENTS

A. Description: Gap-free solid phenolic core partitions and screens.

B. Products: “1082G Series DuraLine” compartments and “1085 Series DuraLine” urinal screens manufactured by Bobrick Washroom Equipment, Inc., or equal.

C. Requisite Properties:
   1. Partition Style: Overhead-braced.
   2. Urinal Screen Style: Wall-mounted.
   3. Panels and Screens Thickness: 1/2-inch thick.
   4. Pilasters and Doors Thickness: 3/4-inch.
   5. Headrail: Extruded anodized aluminum with satin finish.
   6. Color: Indicated on the Drawings.
   7. Finish: Machined smooth, 15-degree beveled edges.

2.3 HARDWARE

A. General:

1. Provide stainless steel 18-8, Type 304 No. 4 finish hardware. Chrome-plated brass, chrome-plated zinc alloy and aluminum hardware are prohibited.
2. Provide manufacturer’s standard vandal-resistant option for all hardware.

B. Hinges: Provide stainless steel wraparound gravity hinges, through-bolted to pilasters, and that allow for fully-adjustable door closing position.

C. Latches: Provide stainless steel surface-mounted slide latch and keeper.

D. Door Pull: Provide stainless steel pulls at out-swinging doors mounted in compliance with the accessibility requirements of the authorities having jurisdiction. Provide pulls at both sides of compartment doors indicated to be accessible.

E. Coat Hook/Bumper: Provide manufacturer's standard combination hook and rubber-tipped bumper, mounted on the water closet side of each compartment door, and sized to prevent door from hitting compartment-mounted accessories.

2.4 ACCESSORIES

A. Heat-Sink Strips: Provide aluminum heat-sink strips fastened to exposed bottom edges of doors and panels with vandal-proof fasteners.

B. Brackets: Provide stainless steel continuous brackets.

C. Pilaster Shoes: Provide 3-inch high stainless steel shoes secured by concealed fasteners.

D. Mounting Brackets: Stainless steel, mounted inside compartment. Mounting brackets exposed on the exterior of the compartment are prohibited. Wall mounted urinal screen brackets must be at least 0.1250-inch thick (USSG 11) double thickness.

E. Fasteners: Provide tamper-resistant stainless steel fasteners for component connections, for attaching exposed hardware and for fastening compartments to walls.

F. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

G. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed toilet compartments and adjacent items.

3. Install toilet compartments using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
5. Securely attach toilet compartments in place to supporting construction.
6. Installed toilet compartments must be warrantable. Do not install, correct, or replace toilet compartments in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
1. Set pilasters with anchorages having at least 2-inch penetration into structural floor, unless otherwise recommended by partition manufacturer.
   a. Level, plumb, and tighten installation with devices furnished.
   b. Hang doors and adjust so that tops of doors are level with tops of pilasters when doors are in closed position.
2. Install hardware as recommended by manufacturer. Conceal evidence of drilling in finished work.

C. Installation Tolerances: Install toilet compartments to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
1. Protect installed toilet compartments in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it’s no longer needed and before Substantial Completion.

END OF SECTION

SECTION 10 21 33
CUBICLE CURTAINS AND TRACK

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Cubicle curtains.
   2. Curtain tracks.
   3. Curtain carriers.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Regulatory Requirements:
   1. Curtain Fabric: Fabric must be identified, with appropriate markings of the applicable testing and inspecting agency, as having required flame-resistant properties.

B. Submittals: Submit product data, shop drawings, and samples.

C. Maintenance Material Submittals: Deliver extra stock materials to the Architect before Final Completion.
   1. Curtain Carriers and Track End Caps: Furnish full-size units equal to 3 percent of the amount installed for each size and type indicated.
   2. Curtains: Full-size units from the same manufacturer dye lot, or from consecutive lots, matching those installed, equal to 10 percent of amount installed for each size indicated, but no fewer than 2 units.
   3. Properly package and identify extra stock materials for use for future maintenance, repair, or replacement.

PART 2 - PRODUCTS

2.01 CUBICLE CURTAINS

A. Description: Contract textiles manufactured for privacy applications and fabricated into curtains consisting of a textile privacy panel with a mesh top.

B. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Carnegie Fabrics, LLC.
   2. KnollTextiles.
   3. Luna Textiles.
   4. Maharam.

C. Product: Indicated on the Drawings or selected by the Architect, or equal.

D. Requisite Properties:
   1. Collection: Indicated on the Drawings or selected by the Architect, or equal.

2. Color: Indicated on the Drawings or selected by the Architect.
3. Pattern: Indicated on the Drawings or selected by the Architect.
4. Overall Curtain Width: Equal to track length from which the curtain is hung, plus 10 percent or at least 12 inches for added fullness, whichever is greater.
5. Overall Curtain Length: Equal to the floor-to-ceiling height, less 32 inches (minus 12 inches from finished floor at the bottom, and minus 20 inches from finished ceiling at the top).
6. Privacy Panel:

    a. Material: Fabric woven from 100-percent flame-retardant and stain-resistant polyester yarn.

    b. Minimum Fabric Weight: At least 20 ounces per square yard.

    c. Minimum Overall Fabric Width: At least 54 inches wide.

    d. Top Hem: Between one and 1-1/2 inches wide, triple thickness, reinforced with an integral web, and double lock stitched.

    e. Bottom Hem: Between one and 1-1/2 inches wide, double thickness, and double lock stitched.

    f. Side Hems: Between 1/2- and 1-1/4 inches wide, with double turned edges, and single lock stitched.

    g. Vertical Seams: At least 1/2-inch wide, double turned edges, and double stitched.
7. Mesh Top:

    a. Material: Provide No. 50, 20-inch wide, 1/2-inch hole flame-resistant nylon mesh.

    b. Top Hem: At least one inch and not more than 1-1/2 inches wide, triple thickness, reinforced with integral web, and double lock stitched. Double lock stitch bottom of mesh directly to 1/2-inch triple thickness, top hem of curtain fabric.

    c. Grommets (Client wants snaps – Architect to send cut sheets): Provide 2-piece, rolled-edge, rustproof, nickel-plated brass or aluminum grommets at the top hem, and spaced not more than 6 inches on center.

E. Performance Requirements: Curtain fabrics must be
1. launderable to a temperature of at least 160 deg. F;
2. flame-resistant and identical to those fabrics having passed the requirements of NFPA publication NFPA 701, “Standard Methods of Fire Tests for Flame Propagation of Textiles and Films”, when tested by a qualified testing and inspection agency acceptable to the AHJ; and
3. identified with the appropriate markings of the applicable qualified testing and inspection agency.

F. Accessories:
1. Tiebacks: Provide flame-resistant, woven polyester straps with self-adhering aluminum wall attachment plates.
2. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.02 CURTAIN TRACKS

A. Description: Surface-mounted extruded-aluminum cubicle curtain track systems.

B. Products: “Narrowline Aluminum Track” manufactured by Construction Specialties, Inc., or equal.

C. Requisite Properties:
   1. Curved Track: Provide curved track factory-fabricated in one continuous “L” shape with at least 12-inch radius bends.
   2. Finish: Manufacturer’s standard clear anodized finish.

D. Components: Provide splices, end caps, connectors, removable end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories as supplied, required, recommended, approved, or accepted by the curtain track manufacturer.

E. Accessories:
   1. Fasteners: Provide exposed and concealed stainless steel fasteners.
   2. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.03 CURTAIN CARRIERS

A. Description:
   1. Curtain Carriers: 2-wheel carriers, with rollers and axles manufactured from virgin nylon, and nickel-plated brass or steel bead chains and hard aluminum hooks; provide at least 2.2 rollers per linear foot of track.

B. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Capital Cubicle.
   2. Construction Specialties, Inc.
   3. Cubicle Curtain Factory, Inc.

2.04 INSTALLATION

A. General:
   1. Use materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   2. Set items plumb, level, and square, without panel warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
   3. Provide surface-mounted track fabricated from one continuous length for tracks up to 20 feet in length.

B. Special Techniques:
   1. Surface Track Mounting: Fasten surface-mounted tracks at intervals of not less than 24 inches.
      a. Fasten support at each splice and tangent point of each corner.
      b. Center fasteners in track to ensure unencumbered carrier operation.
      c. Mechanically fasten to suspended ceiling grid with screws.
   2. Suspended Track Mounting: Install track with suspended supports at intervals of not more than 48 inches. Fasten support at each splice and tangent point of each corner. Secure ends of track to wall with flanged fittings or brackets.
   3. Track Accessories: Install splices, end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.

4. Curtain Carriers: Provide curtain carriers adequate for 6-inch spacing along full length of curtain plus an additional carrier.
5. Curtains: Hang curtains on each curtain track.
6. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed curtains and tracks and adjacent items.
3. Install curtains and tracks using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
5. Securely attach curtains and tracks in place to supporting construction.
6. Installed curtains and tracks must be warrantable. Do not install, correct, or replace curtains and tracks in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install curtains and tracksto an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed curtains and tracks in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 10 28 13
COMMERCIAL TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Commercial toilet accessories.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Bobrick Washroom Equipment, Inc.
   2. Bradley Corp.

2.2 COMMERCIAL TOILET ACCESSORIES

A. Products: Indicated in the Accessory Schedule on the Drawings, Sheet GO.40, or equal.

B. Materials:
   1. Stainless-Steel Sheet: ASTM A 666 (annealed and tempered) Type 304 tension leveled to a flatness of 5 I-units or less.
   2. Mirrored Glass: ASTM C 1503, Q-1 Mirror Select Quality.

2.3 ACCESSORIES

A. Pipe Guards:
   1. Description: Insulating antimicrobial, molded plastic, white pipe covering for supply and drain piping assemblies that prevent direct contact with and burns from piping; allow service access without removing coverings.
   2. Manufacturers: Provide products manufactured by one of the following, or equal.
      a. Plumberex Specialty Products, Inc.
      b. IPS Corp.

B. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

C. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed toilet accessories and adjacent items.
   3. Install toilet accessories using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
   5. Securely attach toilet accessories in place to supporting construction.
   6. Installed toilet accessories must be warrantable. Do not install, correct, or replace toilet accessories in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install toilet accessories to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
   1. Protect installed toilet accessories in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 10 28 14
COMMERCIAL SHOWER ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shower curtains.
   2. Shower curtain rods.
   3. Shower curtain hooks.
   4. Shower seats.
   5. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Bobrick Washroom Equipment, Inc.
   2. Bradley Corp.

2.02 SHOWER CURTAINS

A. Product: “Model B-204” manufactured by Bobrick Washroom Equipment, Inc., or equal.

B. Requisite Properties:
   1. Overall Curtain Width: Equal to the curtain rod length plus either 10 percent or at least 12 inches, whichever is greater, for added fullness.
   2. Overall Curtain Length: 72 inches.
   3. Material: Matte white vinyl with antibacterial and flame-retardant agents.
   4. Minimum Fabric Thickness: At least 0.008-inch thick.
   5. Hems: Bottom and sides must be hemmed.
   6. Grommets: Nickel-plated brass grommets spaced every 6 inches on center along the top of curtain.

2.03 SHOWER CURTAIN RODS

A. Product: “Model B-6047” manufactured by Bobrick Washroom Equipment, Inc., or equal.

B. Requisite Properties:
   1. Curtain Rod: 18-8 S, Type 304, stainless steel with satin finish.

2. Flanges: Same material and finish as curtain rod; drawn, one-piece seamless construction (heavy- and extra-heavy-duty rods).
3. Curtain Rod and Flange Thickness: At least 0.050-inch BMT (USSG 18).
4. Curtain Rod Outside Diameter: 1-1/4 inches.
5. Mounting: Concealed aluminum brackets.
6. Backing: Specified in Section 05 40 00.

2.04 SHOWER CURTAIN HOOKS

A. Product: “Part No. 204-1” shower curtain hooks manufactured by Bobrick Washroom Equipment, Inc., or equal.

B. Material: 0.09-inch diameter stainless steel Type 304.

2.05 STANDARD SHOWER SEATS

A. Reversible Folding Shower Seat:
1. Product: “Model B-5181” manufactured by Bobrick Washroom Equipment, Inc., or equal.
2. Requisite Properties:

a. Seat: One-piece, 1/2-inch thick solid phenolic core seat with matte-finish melamine surfaces and black phenolic resin core.

b. Support: Stainless steel with self-locking mechanism.

2.06 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed shower accessories and adjacent items.
3. Install shower accessories using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction

5. Securely attach shower accessories in place to supporting construction.
6. Installed shower accessories must be warrantable. Do not install, correct, or replace shower accessories in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install shower accessories to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed shower accessories in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 10 41 16
EMERGENCY KEY VAULTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Commercial key vaults.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Knox Co.
   2. UTC Fire & Security Co.

2.02 COMMERCIAL KEY VAULT

A. Description: Vault-like hinged door key boxes for allowing fire department access to properties when responding to emergencies

B. Products: “3200 Series KNOX-BOX" manufactured by Knox Co., or equal.

C. Requisite Properties:
   1. Model: Lift-off door model with alarm tamper switches.
   2. Capacity: Up to 10 keys.
   3. Mounting: Surface and Recessed mounted, as indicated.
   4. Size: 7 inches high by 7 inches wide.
   5. Surface Mount Body: 5inches high by 4 inches wide by 3-3/4 inches deep.
   6. Recessed Mount Flange: 7 inches high by 7 inches wide.
   7. Rough in Dimensions: 6-1/2 inches high by 6-1/2 inches wide by 5 inches deep.
   8. Construction: 1/4-inch steel plate housing; 1/2-inch steel plate door with interior gasket seal and stainless steel door hinge.
   9. Lock: UL listed double-action rotating tumblers and hardened steel pins accessed by a biased cut key.
   10. Color: Black.
   11. Mounting Height: Indicated on the Drawings.

2.03 ACCESSORIES

A. Recessed Mounting Kit: Provide manufacturer's standard shell housing and mounting hardware for casting into concrete or setting into masonry construction.

B. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed key vaults and adjacent items.
   3. Install key vaults using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
   5. Securely attach key vaults in place to supporting construction.
   6. Installed key vaults must be warrantable. Do not install, correct, or replace key vaults in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install key vaultsto an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
   1. Protect installed key vaults in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it’s no longer needed and before Substantial Completion.

SECTION 10 51 29
SOLID PHENOLIC CORE LOCKERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. SPC lockers.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 PHENOLIC LOCKERS

A. Description: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges.

B. Manufacturers: Provide products manufactured by Hollman, or equal.

C. Products: Indicated on the Drawings or selected by the Architect, or equal.

D. Requisite Properties:
   1. Dimensions: Indicated on the Drawings or selected by the Architect.
   2. Color: Indicated on the Drawings or selected by the Architect.
   3. Handle: Easy-grip recessed handle.
   4. Locking: Padlock friction hasp.
   5. Accessible Lockers: ADA locker modifications include added shelf 9 inches off the floor, ADA-compliant hinge that allows the door to open 180 degrees, ADA locker tag, and ADA-compliant latch and locking hardware that do not require twisting, pinching, or grasping to operate.

2.02 ACCESSORIES

A. Stainless-Steel Hooks: Provide one double-prong back hook and two single prong wall hooks at each compartment.

B. Number Plates: Manufacturer’s standard engraved plates; verify numbering with Architect.

C. Locking: Provide lockers with padlock hasps, key locks, or built-in combination locks, as indicated on the Drawings.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed lockers and adjacent items.
   3. Install lockers using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction
   5. Securely attach lockers in place to supporting construction.
   6. Installed lockers must be warrantable. Do not install, correct, or replace lockers in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install lockers to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
   1. Protect installed lockers in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

BAG CHECK RACKS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Bag check racks.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 BAG CHECK RACKS

A. Products: Provide “Model 71-076” manufactured by Lincoln Aquatics, or equal.

B. Requisite Properties:
   1. Finish: Stainless steel.
   2. Tier: 2 tiered.

2.02 ACCESSORIES

A. Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed racks and adjacent items.
   3. Install racks using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction

5. Securely attach racks in place to supporting construction.
6. Installed racks must be warrantable. Do not install, correct, or replace racks in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install racks to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged and defective work.
3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
1. Protect installed racks in place from soiling, deterioration, and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

DIVISION 12

FURNISHINGS

SECTION 12 36 17
STAINLESS STEEL COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Stainless steel countertops.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.2 SECTION REQUIREMENTS

A. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing countertop material installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Fabricator: Company or individuals must have at least 10 years' experience fabricating countertops installed on at least 100 previous projects similar to this project in size, material, design, and complexity
   3. Installer: Company or individuals must have at least 5 years' experience installing countertops for at least 30 previous projects similar to this project in size, material, design, and complexity.
   4. Supervisors: Individuals must have at least 7 years' experience installing countertops for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading countertop installers.

B. Submittals: Submit product data, shop drawings, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.1 STAINLESS STEEL COUNTERTOPS

A. Description: Countertops fabricated from non-magnetic austenitic stainless steel sheet.
   1. Provide sheet metal selected for its surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit.
   2. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet, stains, discoloration or other imperfections.

B. Materials: Stainless steel sheet conforming to ASTM A 666 (annealed and tempered), Type 316L (for welded applications) or Type 316 (for all other applications), annealed, No. 2 (half hard) temper (hardness between Rockwell B-65 and B-70; can be bent 90 degrees across the direction of rolling around a radius equal to its thickness), passivated in conformance with ASTM A 967.

C. Requisite Properties:
   1. Thickness: 0.0781-inch thick. (USSG 14)
   2. Edge Profile: Indicated on the Drawings.

3. Finish: No. 4 directional finish.

2.2 ACCESSORIES

A. Adhesive: Structural-grade silicone or epoxy adhesives of type recommended or accepted by manufacturer for conditions of use. Tint adhesive visible in finished work to match countertop materials.

B. Sealant:
   1. Description: White or clear, medium or high modulus, mildew-resistant silicone sealant conforming to ASTM C 920 requirements for Type S, Grade NS, Class 25, Use NT, A or O sealant, as applicable.
   2. Products: “786” manufactured by Dow Corning Corp., or “Sanitary SCS 1700” manufactured by Momentive Performance Materials, Inc., or equal.

C. Solvent: Supplied, required, recommended, or accepted by the manufacturer to clean countertop surfaces to ensure adhesion of adhesives and sealants.

D. Cleaning Agents: Provide non-abrasive cleansers supplied, required, recommended, or accepted by the manufacturer.

E. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed countertop and adjacent items.
   3. Install countertops using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set countertops true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Securely attach countertops in place to supporting construction.
   6. Installed countertops must be warrantable. Do not install, correct, or replace countertops in a manner that results in any warranty or guarantee becoming void.

B. Special Techniques:
   1. Shim as required using concealed shims.
   2. Scribe and fit accurately against adjacent surfaces for a close fit.
   3. Attach countertops securely to supports with concealed screws as required for a rigid and secure installation.
   4. Seal interface of countertops with contiguous surfaces with sealant.

C. Installation Tolerances: Install countertops to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

D. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

E. Protection:
   1. Protect installed equipment in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

DIVISION 13

SPECIAL CONSTRUCTION

SECTION 13 1100
SWIMMING POOL GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 WORK INCLUDED

A. The scope of the work included under this Section of the Specifications shall include swimming pool(s) as illustrated on the Drawings and specified herein. The General and Supplementary Conditions of the Specifications shall form a part and be included under this Section of the Specifications. The Swimming Pool Subcontractor shall provide all supervision, labor, material, equipment, machinery, plant and any and all other items necessary to complete the work. ALL OF THE WORK IN SECTIONS 13 1100 – 13 1108 IS TO BE THE RESPONSIBILITY OF ONE EXPERIENCED SWIMMING POOL SUBCONTRACTOR PRIMARILY ENGAGED IN THE CONSTRUCTION OF COMMERCIAL PUBLIC-USE SWIMMING POOLS. A SWIMMING POOL SUBCONTRACTOR SHALL BE CONSIDERED PRIMARILY ENGAGED AS REQUIRED HEREIN IF THE SUBCONTRACTOR DERIVED 50% OF ITS ANNUAL REVENUE FROM PUBLIC-USE SWIMMING POOL CONSTRUCTION FOR EACH OF THE LAST FIVE YEARS. THE SUBCONTRACTOR MUST HAVE ALSO, IN THE LAST FIVE YEARS CONSTRUCTED AT LEAST FIVE (5) COMMERCIALLY DESIGNED MUNICIPAL AND PUBLIC-USE SWIMMING POOLS, EACH OF WHICH SHALL HAVE INCORPORATED A MINIMUM SIZE OF 6,000 SQUARE FEET OF WATER SURFACE AREA WITH A CONCRETE AND CERAMIC TILE PERIMETER OVERFLOW GUTTER AND SELF-MODULATING BALANCE TANK. The Swimming Pool Subcontractor shall furnish and install the swimming pool structures, finishes, cantilever forming, swimming pool mechanical and electrical systems, and all accessories necessary for a complete, functional swimming pool system, as herein described. Work shall include start-up, instruction of Owner’s personnel, as-built drawings and warranties as required.

1.2 CODES, RULES, PERMITS, FEES

A. The swimming pools shall be constructed in strict accordance with the applicable provisions set forth by authorities having jurisdiction over swimming pool construction and operation in the State of California.

B. The Swimming Pool Subcontractor shall give all necessary notices, obtain all permits, and pay all government sales taxes, fees, and other costs in connection with their work; file all necessary plans, prepare all documents and obtain all necessary approvals of governmental departments having jurisdiction; obtain all required certificates of inspection for their work and deliver same to the Designated Representative before request for acceptance and final payment for the work.

C. The Swimming Pool Subcontractor shall include in the work any labor, materials, services, apparatus, or drawings in order to comply with all applicable laws, ordinances, rules and regulations, whether or not shown on Drawings and/or specified.

D. The Contractor shall submit all required documents and materials to all Governmental Departments having jurisdiction for any deferred approval items or substituted materials or products to obtain final approval to installation.

1.3 DESCRIPTION OF WORK

A. Furnish and perform supervision, coordination, all layout, formwork, excavation, hand trim, disposing off-site of all unused material or debris to complete the swimming pool excavation to the dimensions shown on the plans.

B. Furnish and install complete swimming pool structures, including reinforcing steel and cast-in-place or pneumatically placed concrete walls and floors.

C. Furnish and install swimming pool finishes, including ceramic tile and marble plaster or other waterproof finishes.

D. Furnish and install complete swimming pool mechanical system(s), including, but not limited to, circulation systems, filtration systems, pool water heating systems, water chemistry control systems, domestic water fill line systems, booster pump and special effects systems, and all pumps, piping, valves, and connections between system(s) and swimming pool(s).

E. Furnish and install complete swimming pool electrical system(s) from P.O.C. in Mechanical Room, including, but not limited to, underwater lighting systems, water level control systems, timing systems, scoreboards, special effects systems, control circuitry, motor starters, time clocks, bonding, and all conduits, conductors, contactors, and switches between the system(s) and swimming pool(s).

F. Furnish and install all swimming pool cantilever forming, deck equipment and required anchors and inserts for the specified equipment as required by code, shown on the Drawings and specified herein.

G. After the initial filling of the swimming pool system(s), should any repairs, continuing work, or other Subcontractor responsibility require drainage or partial drainage of the swimming pool systems, the Swimming Pool Subcontractor shall be responsible for any subsequent refilling and shall complete the project with the swimming pool system(s) full of water, water in chemical balance, complete in every way, and in full operation.

1.4 ASSIGNED RESPONSIBILITIES AND RELATED WORK

A. It is the intent of this section of the Specifications to clarify Work responsibilities of the trades directly and indirectly involved in construction of the pool systems. All labor, equipment, materials and supplies furnished by the Swimming Pool Subcontractor and other Subcontractors per the contractual agreement with the General Contractor and Owner and shall be as directed by the Owner through their Designated Representative.

B. THE SWIMMING POOL SUBCONTRACTOR SHALL NOT SUBCONTRACT ANY PORTION OF THE SWIMMING POOL CONSTRUCTION OR SWIMMING POOL EQUIPMENT INSTALLATION TO ANYONE OTHER THAN A SUBCONTRACTOR THAT SATISFIES THE REQUIREMENTS OF SECTION 13 1100.

C. References to “swimming pool systems” shall include the swimming pools, equipment, and accessories.

D. The Owner will provide one complete water filling of the swimming pool(s), but will not assume any responsibility for the swimming pool system(s) until they have been proved fully operational, complete in every way and accepted by the Designated Representative.

1.5 RESPONSIBILITIES OF THE CONTRACTOR

A. The Contractor shall grade the swimming pool site(s), establish benchmarks, cut and fill as necessary to provide as level an area as possible at swimming pool deck elevation before swimming pool layout.

B. The Contractor shall be responsible for horizontal dimensions and grade elevations accurately from established lines and benchmarks (as indicated on the Drawings) and be responsible for those grades.

C. The Contractor shall provide adequate temporary light, electric power, heat and ventilation per Federal and State OSHA requirements to construct the swimming pool system(s).

D. The Contractor shall not permit any heavy equipment activity over any area or within five (5) feet of any area under which swimming pool piping is buried. There shall be no exceptions to this requirement.

E. The Contractor shall keep the swimming pool excavation(s) and swimming pool structure(s) free of construction residue and waste materials of their workmen or Subcontractors, removing said material from the swimming pools as required.

F. The Contractor shall protect the swimming pool(s) from damage caused by their construction equipment and /or workmen and Subcontractors.

G. The Contractor shall provide a representative at time of swimming pool start-up to coordinate all trades related to swimming pool system(s).

1.6 RESPONSIBILITIES OF THE MECHANICAL SUBCONTRACTOR

A. The Mechanical Subcontractor shall be licensed in the State of California and provide written notifications to Swimming Pool Subcontractor and contractor when necessary to excavate and backfill within the swimming pool construction site.

B. The Mechanical Subcontractor shall not utilize any swimming pool piping trench for installation of any sanitary sewer, storm sewer, domestic water, hot water, chilled water or natural gas line.

C. The Mechanical Subcontractor shall furnish and install all sanitary sewer piping, including vent stacks (if necessary), for backwash pits, floor drains and floor sinks as required by code, shown on Drawings, and herein specified.

D. The Mechanical Subcontractor shall furnish and install all storm sewer piping and site drainage systems as required by code, shown on the Drawings, and herein specified.

E. The Mechanical Subcontractor shall provide a minimum 75 psi water supply for swimming pool construction work within fifty (50) feet of the swimming pool construction site(s).

F. The Mechanical Subcontractor shall furnish and install reduced pressure backflow protected domestic water lines to P.O.C. within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

G. The Mechanical Subcontractor shall furnish and install natural gas piping, pressure regulation and valving to P.O.C. within swimming pool Mechanical Room as required by code, shown on the drawings, and herein specified.

H. The Mechanical Subcontractor shall furnish and install all ductwork, louvers, and all HVAC equipment within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

I. The Mechanical Subcontractor shall provide a representative at time of swimming pool start-up to coordinate work related to swimming pool system(s).

1.7 RESPONSIBILITIES OF THE ELECTRICAL SUBCONTRACTOR

A. The Electrical Subcontractor shall be licensed in the State of California and shall furnish and install electrical service to swimming pool Mechanical Room sized to accommodate all necessary swimming pool equipment as shown on the Drawings and herein specified.

B. The Electrical Subcontractor shall furnish any temporary power needed by the Swimming Pool Subcontractor within fifty (50) feet of the swimming pool construction site(s).

C. The Electrical Subcontractor shall furnish and install all conduits, conductors, starters/disconnects, panels, circuits, switches and equipment as required for lighting, ventilation and HVAC equipment within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

D. The Electrical Subcontractor shall furnish and install all conduits, conductors, panels, circuits, switches and equipment for area lighting as required by code, shown on the Drawings, and herein specified.

E. All equipment, material and installation shall be as required under Division 16 of the Specifications and shall conform to NEC Article 680 (latest revision), State and Local Codes, and as may be required by all authorities having jurisdiction over swimming pool construction within the State of California.

F. The Electrical Subcontractor shall provide a representative at time of swimming pool start-up to coordinate work related to swimming pool system(s).

1.8 INTENT

A. It is the intention of these specifications and Drawings to call for finished work, tested and ready for operation. Wherever the work “provide” is used, it shall mean “furnish and install complete and ready for use.”

B. Minor details not usually shown or specified, but necessary for proper installation and operation, shall be included in the work, the same as if herein specified or shown.

1.9 SCHEDULE OF VALUES

A. Provide a Schedule of Values for all work specified in each of the technical specifications listed in the table below, regardless of whether the work is performed by the swimming pool contractor or others. Values listed shall be fully burdened, with contractor general conditions, overhead, profit and bonds included. Payments for swimming pool work completed shall not be approved until Schedule of Values has been submitted to and approved by Architect.

SWIMMING POOL SCHEDULE OF VALUES			
No.	Section #	Description	Value
1.	13 1101	Swimming Pool Excavation	
2.	13 1102	Swimming Pool Concrete	
3.	13 1103	Swimming Pool Shotcrete	
4.	13 1104	Swimming Pool Ceramic Tile	
5.	13 1105	Swimming Pool Plaster	
6.	13 1106	Swimming Pool Equipment	
7.	13 1107	Swimming Pool Mechanical	

8.	13 1108	Swimming Pool Electrical	
Total			

1.10 SUBMITTAL PROCEDURES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will not be provided by Architect for Subcontractor's use in preparing submittals.

B. Coordination: Coordinate preparation and processing submittals with performance construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Submittals Schedule: Comply with requirements in Division 1 Section "Construction Progress Documentation" for list of submittals and time requirements for schedules performance of related construction activities.

D. Processing Time: Allow enough time for submittal review, including time for re-submittals as follows. Time for review shall commence on Architect's receipt of submittal.

1. Initial Review: Allow fifteen (15) days for initial review of each submittal. Allow additional time if processing must be delayed to permit coordination with subsequent submittals. Architect will advise Contract when a submittal being processed must be delayed for coordination.

2. Concurrent Review: Where concurrent review of submittals by Architect's consultants, Owner, or other parties is required, allow twenty-one (21) days for initial review of each submittal.

3. Direct Transmittal to Consultant: Where the Contract Documents indicate that submittals may be transmitted directly to Architect's consultants, provide duplicate copy of transmittal to Architect. Submittal will be returned to Architect before being returned to Subcontractor.

4. If intermediate submittal is necessary, process it in same manner as initial submittal.

5. Allow fifteen (15) days for processing each submittal.

6. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing.

E. Identification: Place a title block on each submittal for identification.

1. Indicate name of firm or entity that prepared each submittal on title block.

2. Provide a space on title block to record Subcontractor's review and approval markings and action take by Architect.

3. Include the following information on title block for processing and recording action taken: (See Attached Sample)

    a. Project name.

    b. Date.

    c. Name and address of Subcontractor.

    d. Name of Subcontractor.

    e. Name of Supplier.

    f. Name of Manufacturer.

    g. Unique identifier, including revision number.

    h. Number and title of appropriate Specification Section.

    i. Drawing number and detail references, as appropriate.

    j. Other necessary identification.

SUBMITTAL FOR:	SUBMITTAL TO:	SUBCONTRACTOR:

Item Number: _____
Section Number: _____
Section Description: _____
Subcontractor: _____
Supplier: _____
Manufacturer: _____
Product Code: _____
Quantity: _____

Subcontractor Certification:

It is hereby certified that the equipment or material designated in this submittal is proposed to be incorporated in the above-named project and is in compliance with the contract drawings and / or specifications and is submitted for approval.

Certified by: _____

Date: _____

Job Superintendent: _____

Revisions: _____

Contractor's Submittal Stamp:

Architect's Review Stamp and Comments

F. Deviations: Highlight, encircle, or otherwise identify deviations from the Contract documents on submittal.

G. On all catalogue or cut sheets identify which model or type is being submitted.

H. Transmittal: Package each submittal individually and appropriately for transmittal and handling. Product data and shop drawings shall be packaged within a three-ring binder and colored samples shall be packaged on a heavy cardboard. Transmit each submittal using a transmittal form.

1. On an attached separate sheet, prepared on Subcontractor's letterhead, record relevant information, request for data, revisions other than those requested by Architect on previous submittals and deviations from requirements of the Contract documents, including minor variations and limitations. Include the same label information as the related submittal.

2. Include Subcontractor's certification stating that information submitted complies with requires of the Contract Documents.

3. Transmittal Form: Provide locations on form for the following information:

a. Project name.

b. Date.

c. Destination (To:).

d. Source (From:).

e. Names of Subcontractor, manufacturer, and supplier.

f. Category and type of submittal.

g. Submittal purpose and description.

h. Remarks.

I. Distribution: Furnish copies of final submittals to manufacturers, Subcontractors, suppliers, fabricators, installers, authorities having jurisdiction and others as necessary for performance of construction activities. Show distribution on transmittal forms.

J. Use for Construction: Use only final submittals with mark indicating action taken by Architect in connection with construction.

1.11 SUBSTITUTIONS

A. To obtain approval to use unspecified products, bidders shall submit requests for substitution at least ten (10) days prior to bid date. Requests shall only be considered if they clearly describe the product for which approval is asked, including all data necessary to demonstrate acceptability. All unspecified products and equipment will be considered on an “or equal” basis at the discretion of the Designated Representative. Requests for substitution received after the specified deadline will not be considered. Where a conflict exists between the requirements of

the General Conditions / Special Conditions / Division 1 concerning substitutions and the requirements of this Article, this Article (Section 13 1100, Article 1.10) shall govern.

B. Where the Swimming Pool Subcontractor proposes to use an item of equipment other than that specified or detailed on the Drawings which requires any redesign of the structure, partitions, foundations, piping, wiring, or any other part of the architectural, mechanical, or electrical layout, all such redesign and all new drawings (stamped by California Licensed Engineer) and detailing required shall be prepared by the Swimming Pool Subcontractor, at their own expense, submitted for review and approval by the Designated Representative prior to bid.

C. Where such approved deviation requires a different quantity and arrangement of piping, supports and anchors, wiring, conduit, and equipment from that specified or indicated on the Drawings, the Swimming Pool Subcontractor shall furnish and install any such piping, structural supports, controllers, motors, starters, electrical wiring and conduit, and any other additional equipment required by the system, at no additional cost to the Owner.

1.12 SURVEYS AND MEASUREMENTS

A. The Swimming Pool Subcontractor shall base all measurements, both horizontal and vertical, from benchmarks established by the Contractor. All work shall agree with these established lines and levels. The mechanical Drawings do not give exact details as to elevations of piping, exact locations, etc. and do not show all offsets, control lines, pilot lines and other installation details. Verify all measurements at site and check the correctness of same as related to the work.

1.13 DRAWINGS

A. Drawings are diagrammatic and indicate the general arrangement of the systems and work included in the Subcontractor. Drawings are not to be scaled. The architectural drawings and details shall be examined for exact dimensions. Where they are not definitely shown, this information shall be obtained from the Designated Representative.

1.14 SWIMMING POOL SUBSUBCONTRACTOR

A. The swimming pool construction work as herein described and specified in Division 13 of the Project Manual shall be the complete responsibility of a qualified and specifically licensed (C-53 license classification within the State of California) Swimming Pool Subcontractor with extensive experience in commercial public use swimming pool installations.

B. The Contractor shall require the Swimming Pool Subcontractor to furnish to the Contractor performance and payment bonds in the amount of 100% of the Swimming Pool Subcontractor's bid written by a surety Company properly registered in the State of California and listed by the U.S. Treasury. The expense of the bond(s) is to be borne by the Subcontractor. The Contractor shall clearly specify the amount and requirements of the bond(s) in the Contractor's written or published request for subbids. The Contractor's written or published request for subbids shall also specify that the bond(s) expense is to be borne by the Subcontractor.

C. Subcontractor certifies that it meets the qualifications and experience requirements established in Swimming Pool General Requirements, Section 13 1100, as follows:

1. Subcontractor has derived 50% of its annual revenue from public-use swimming pool construction for each of the last five (5) years.

2. Subcontractor has, in the last five (5) years, constructed at least five (5) commercially designed municipal and public-use swimming pools, each of which have incorporated a minimum size of 6,000 square feet of water surface area with a concrete and ceramic tile perimeter overflow gutter and self-modulating balance tank.

3. The following list of projects meet the requirements of section (b) above and the contact as reference by the Contractor, the Awarding Authority of their agent or designee.

a. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

b. Owner: _____

1.15 OPERATING INSTRUCTIONS

A. The Swimming Pool Subcontractor shall determine from actual samples of pool water supplied by the Owner, the proper water management program necessary for maximum operating efficiency and comfort. The Swimming Pool Subcontractor shall provide the services of experienced personnel familiar with this type of pool system operation, in conformance with Section 13 1105 of the Specifications.

1.16 MAINTENANCE MANUALS

A. The Swimming Pool Subcontractor shall provide six (6) bound sets for delivery to the Designated Representative of instructions for operating and maintaining all systems and equipment included in this Contract. Manufacturer's advertising literature or catalog pictures will not be acceptable for operating and maintenance instructions.

B. Bound in ring binders shall be all parts lists, periodic maintenance instructions and troubleshooting guidelines for all pool equipment, including but not limited to filters, pumps, controllers, water chemistry control equipment, etc.

1.17 SECURE FROM THE OWNER

A. A complete Owner-furnished filling of the swimming pools.

B. The Owner's assistance, as specified herein, from the time of start-up until final written acceptance of the swimming pool system(s).

C. Chemicals as required for swimming pool operation after Swimming Pool Subcontractor completes initial water chemistry balance and water treatment during the maintenance period described in Section 13 1105 of the Specifications.

1.18 WARRANTY

A. The Swimming Pool Subcontractor shall warrant all swimming pool structures, finishes and systems against defects in material and workmanship for a period of one year after the date of acceptance by the Owner. Any repair or replacement required due to defective material or workmanship will be promptly corrected by the Swimming Pool Subcontractor.

PART 2 - PRODUCTS
NOT USED

PART 3 - EXECUTION
NOT USED

END OF SECTION

SECTION 13 1101
SWIMMING POOL EXCAVATION

PART 1 - GENERAL

1.1 DESCRIPTION

A. Finish and fine grading to bring the surface of the ground to the required grades and elevations as indicated on the Drawings.

B. Subgrade improvements and placing of compacted fills.

C. Excavation and backfill for all swimming pool, pool deck and surge chamber structural, including footings, foundations, slabs and walls.

1.2 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies: Conform with requirements of the General Conditions, and more specifically the following:

1. Comply with the 2019 California Building Code.

2. Comply with applicable construction safety orders, latest edition, Federal and State OSHA.

3. Comply with applicable trench safety provisions, latest edition, Federal and State OSHA.

B. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

C. Project/Site Conditions:

1. Be familiar with site and subsurface conditions.

2. Excavation is unclassified and includes excavation to sub-grade elevations indicated or necessary, regardless of character of materials and obstructions encountered.

3. Provisions for mitigation of wet soils due to seepage or rain shall be made during excavation and throughout construction. If wet soils are encountered within the

swimming pool excavations, de-watering shall be provided and the Geotechnical Engineer shall make recommendations for moist soil mitigation.

4. Where slope instability is encountered, all excavations within those areas shall be 1:1 or flatter. Forming of vertical walls may be necessary, and all soil conditions shall be field verified by the Geotechnical Engineer.

5. Contractor shall review the Geotechnical Investigation Report as furnished by the Owner's Representative to determine the suitability of the soils.

D. Adverse Weather Conditions:

1. During the periods when site soil moisture content is substantially in excess of moisture content required for optimum compaction, do not perform fill compaction.

2. When unfavorable weather conditions necessitate interrupting filling and grading operations, prepare areas by compaction of surface and grading to avoid collection of water. Provide adequate temporary drainage to prevent erosion.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with requirements of Section 01 3300.

B. Required submittals include:

1. Offsite fill material, if applicable.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section

1.4 EXCAVATING & TRENCHING, GENERAL REQUIREMENTS

A. Refer to Section 015500, Temporary Facilities and Controls.

B. All trenches, holes, etc. are to be completely protected using solid barricades, steel plates, and plywood both during construction and during off hours, including night time.

C. Flashing warning light barricades are required on sidewalks, roads, and any other critical areas that require night time protection.

D. Roads, paths and sidewalks shall not be blocked at any time or in any way. Trenching across roads, paths or sidewalks involves special instructions and review of the construction procedure by the Owner's Representative at least three (3) days prior to the Work actually being started.

E. Construction equipment, including all trucks, cars, etc. shall not be parked or driven on roads, paths or sidewalks. Items not allowed on roads, paths or sidewalks include hoses, power cords, ropes, construction materials, dirt and debris, etc.

F. All roads, paths and sidewalks must remain clear and the Contractor shall maintain temporary safe and effective pedestrian access at all times.

G. Drawings show existing major underground utilities using the best information available. The Contractor shall also fully check public works reference drawings prior to excavation. Call local Dig Alert to locate utilities to ensure safety.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Fill Material, General: All material shall be subject to the review of the Geotechnical Engineer to determine acceptability.

B. The existing native clay shall not be reused as compacted fill. It shall be removed from the job site or placed in landscaped areas. The remaining onsite fill and native soil is suitable for reuse provided its free of organic material, debris, and does not contain fragments greater than 3 inches in maximum dimension. Drying of wet site soils or mixing of these soils with dryer soils may be required prior to being used as compacted fill.

C. Import fill may also be used instead of the native soil. Import fill material shall be predominantly granular (minimum 80% passing number 4 sieve and between 10% and 35% passing the number 200 sieve), and non-expansive (EI less than 25). Also, the import fill material shall be free of organic or inorganic debris, contamination and materials with any dimension larger than 3 inches. Import materials shall be reviewed for approval by the Soils Engineer prior to importing to the job site and the Soils Engineer shall be notified a minimum of three working days prior to scheduled importing of soil to the project site.

D. Fill material shall be placed in loose lifts no exceeding 8 inches in thickness, moisture conditioned to within 3 percent above optimum, and mechanical compacted.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify drawing dimensions and elevations with actual field conditions. Inspect related Work and adjacent surfaces and report discrepancies and conditions which prevent proper execution of the Work to the Owner’s Representative.

3.2 SUBGRADE IMPROVEMENTS

A. Site preparation will initially involve the demolition of the existing swimming pool and concrete deck surrounding the pool. Following demolition, the construction area shall be cleared of any vegetation and stripped of miscellaneous debris and other deleterious material. Tree removal, if proposed outside the existing pool deck area, shall include the rootballs and/or root systems. Organic matter and other material that may interfere with construction shall be removed. Vegetation and organic matter shall not be incorporated into the fill material. Organic rich soil, if present, may be stockpiled for future landscaping. Voids resulting from the demolition shall be backfilled with properly compacted fill.

B. Excavation bottoms shall be scarified at least 6 inches, moisture conditioned to within 3 points above the optimum moisture content, and compacted to a minimum 90 percent relative compaction (RC), as determined by ASTM D1557. All excavation bottoms shall be observed,

tested, and approved by a representative of the Soils Engineer and the LADBS Grading Inspector prior to placement of fill.

C. All existing fill shall be removed beneath the pool. The soils beneath the proposed pool shall be excavated to the design subgrade elevation or to expose native soil, whichever is greater. An additional removal of 12 inches shall be performed such that the pool bottom is underlain by at least 12 inches on non-expansive compaction fill. Lateral over-excavation beyond the limits of the pool is not required. If soft and yielding conditions are encountered under the pool, the bottom shall be excavated an additional 12 inches. This 12-inch thick removal is separate and in addition to the over excavation discussed above. The “new” bottom shall be lined with Mirafi 600X or approved equal stabilization geotextile. A 12-inch-thick layer of ¾ inch to 1-inch crushed rock shall be placed on top of stabilization geotextile. The top of the crushed rock layer shall be covered with Mirafi 140N or approved equal filter cloth.

D. Existing fill may be left in place beneath non-structural footings and the new pool deck. The earthwork beneath non-structural footings, including the subgrade preparation shall result in at least 24 inches of compacted fill below the bottom of footing. The excavation shall extend laterally beyond the footing a distance of 2 feet or to the property boundary, whichever is less. The new pool deck shall be underlain by at least 18 inches of compacted fill, which includes the subgrade preparation.

3.3 EXCAVATION

A. Checking Layout: Contractor shall, before commencing the excavation work, check all lines, stakes and levels for dimensions, angles, elevations and grades with the survey.

B. Except where extra excavation is directed by the Owner’s Representative or Geotechnical Engineer, excavations made to a greater depth or size than indicated or required shall be filled with concrete or shotcrete as specified in Sections 13 1102 / 13 1103.

C. Dimensions: Excavate to proper dimensions as shown, cut square and smooth with firm level bottoms. Prepared excavations shall be approved by Geotechnical Engineer. Excavations shall be free of loose or disturbed materials.

D. Excess Water Control: Keep all excavations free from standing water by pumping, draining or providing proper protection against water intrusion. If soil becomes soft, soggy or saturated, perform additional excavation to firm soil not affected by water.

E. Form Removal: Make all excavations of sufficient size to permit installation and removal of forms and all other required work.

F. Alternate Forming: Sides of structures may be formed by neat excavations where banks will stand without caving. If banks cave, provide forming as required and widen excavation to permit forming, bracing and inspection. Provide forming in conformance with Section 13 1102 and all recognized safety standards.

3.4 BACKFILLING

A. Method: After concrete has been placed, forms removed and concrete work approved, backfill the excavations with earth to indicated or required grades. Carry on backfilling simultaneously on each side of walls or grade beams. Remove all rubbish and wood from the excavations before placing backfill.

B. Concrete Protection: Prior to placing any backfill, adequately cure all concrete and provide any bracing required to ensure the stability of the structure. Protect waterproofing and dampproofing against damage in a manner acceptable to the Owner's Representative. Remove bracing as backfill operations progress.

C. Material: Use the material from the excavations for backfilling, subject to approval by Soils Testing Agency. The earth shall be free from debris, large clods or stones.

D. Lifts: Place backfill in six (6) inch loose layers, bring to optimum moisture content and compact to ninety percent (90%) of maximum density, sloping down and away from the structures being backfilled.

E. Moisture: Rigidly control the amount of water used to ensure optimum moisture conditions for the type of fill material used. Excessive amounts of water causing saturation of earth will not be permitted. Compaction by flooding or jetting is prohibited.

3.5 GRADING

A. Slopes: Grade to finish grades indicated on Drawings, with uniform slopes between all points.

B. Subgrades: Blade to required grade and roll or tamp subgrades for exterior slabs, decks and paving.

3.6 CLEAN-UP

A. Disposal: Haul away rubbish, debris, and rocks from site promptly and dispose of legally. Burning rubbish on site is prohibited.

B. Dust and Noise Abatement: During entire period of construction keep area and material being loaded sprinkled to reduce dust in air and annoyance to premises and surrounding property.

END OF SECTION

SECTION 13 1102
SWIMMING POOL CONCRETE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Forming for cast-in-place concrete and shotcrete associated with swimming pools.

B. Reinforcement for cast-in-place concrete and shotcrete associated with swimming pools.

C. Cast-in-place concrete for swimming pool structures. Do not use waterproofing admixture of any kind.

D. Provide labor, materials and equipment as required to install sealant for all pool deck expansion joints, or any other caulking, as indicated on the aquatic Drawings and herein specified.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years' experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years' experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards:

1. In addition to complying with the California Building Code (latest edition), comply with all pertinent recommendations contained in, "Guide to Formwork for Concrete" Publication ACI 347R-14 of the American Concrete Institute.

2. In addition to complying with California Building Code (latest edition), comply with all pertinent recommendations contained in "Guide to Presenting Reinforcing Steel Design Details," Publication ACI 315R-18 of the American Concrete Institute.

3. In addition to complying with all local codes and regulations, comply with all pertinent recommendations contained in American Society for Testing and materials (ASTM); ASTM C 920 "Standard Specification for Elastometric Joint Sealants."

C. Tolerances: Construct all swimming pool concrete straight, true, plumb and square within a tolerance horizontally of one in 200 and vertically of one in 2000.

1.3 SUBMITTAL AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300. Requests for substitution shall conform to requirements of Article 1.10.A of Section 13 1100.

B. Samples and Certificates, Concrete Reinforcement:

1. Provide all data and access required for testing as described in Section 01 4400 of the Specifications.

2. All material shall bear mill tags with heat number identification. Mill analysis and report shall be made available upon request.

3. Material not so labeled and identifiable may be required by the Owner to be tested by the testing laboratory selected by the Owner and at no additional cost to the Owner, in which case random samples will be taken for one series of tests from each 2-1/2 tons or fraction thereof of each size and kind of reinforcing steel.

4. Design mix from batch plant demonstrating previous use history and associated strengths at 28 days.

5. The Contractor shall submit a mix design stamped and signed by a licensed engineer for approval by the Owner's Representative prior to any placement of concrete.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

D. Submit reinforcing shop drawings for pool walls, gutters, floors, dike walls and balance tank, etc. as shown on the construction drawing.

1.4 PRODUCT HANDLING

A. Delivery: Deliver materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project Site.

C. Protection: Use all means necessary to protect the swimming pool concrete before, during, and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner.

PART 2 - PRODUCTS

2.1 CONCRETE FORMWORK

A. Form Materials:

1. Form Lumber: All form lumber in contact with exposed concrete shall be new except as allowed for reuse of forms in Part 3 of this Section, and all form lumber shall be one of the following, a combination thereof, or an equal approved in advance by the Owner's Representative.

a. "Plyform," Class I or II, bearing the label of the Douglas Fir Plywood Association; "Inner-Seal" Form as manufactured by Louisiana-Pacific, or approved equal.

b. Douglas Fir-Larch, number two grade, seasoned, surfaced four sides.

2. Form Release Agent: Colorless, non-staining, free from oils; chemically reactive agent that shall not impair bonding of paint or other coatings intended for use.

B. Ties and Spreaders:

1. Type: All form ties shall be a type which do not leave an open hole through the concrete and which permits neat and solid patching at every hole.

2. Design: When forms are removed, all metal reinforcement shall be not less than two (2) inches from the finished concrete surface.

3. Wire Ties and Wood Spreaders: Do not use wire ties or wood spreaders.

C. Alternate Forming Systems: Alternate forming systems may be used subject to the advance approval of the Owner's Representative.

2.2 CONCRETE REINFORCEMENT

A. Bars: Bars for reinforcement shall conform to "Specifications for Deformed Carbon-Steel Bars for Concrete Reinforcement," ASTM A-615, Grade 60.

B. Wire Fabric: Wire fabric shall conform to "Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete", ASTM A1064.

C. Tie Wire: Tie wire for reinforcement shall conform to "Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete", ASTM A1064. black annealed 16-gauge tie wire.

2.3 CAST-IN-PLACE CONCRETE

A. Concrete:

1. All concrete, unless otherwise specifically permitted by the Owner's Representative, shall be transit-mixed in accordance with ASTM C94. Concrete for water retaining structures that do not receive a waterproofing finish such as ceramic tile or swimming pool plaster shall receive a topical waterproofing finish.

2. The control of concrete production shall be under the supervision of a recognized testing agency, selected by the Owner in accordance with Section 01 25 00 of the Specifications.

3. Quality: All concrete shall have the following minimum compressive strengths at twenty-eight (28) days and shall be proportioned within the following limits:

a. 4,000 psi minimum compressive strength for cast-in-place swimming pool structures.

b. 1" maximum size aggregate.

c. 6.0 minimum sacks of cement per cubic yard. *

d. Maximum water to cement ratio of 0.40-0.45.

e. 4” maximum slump.

* For estimate only: to be determined by mix design.

4. Cement: All cement shall be Portland Cement conforming to ASTM C-150, Type II or V and shall be the product of one manufacturer.

5. Aggregates:

a. Shall conform to “Standard Specifications for Concrete Aggregates,” ASTM C33, except as modified herein.

b. Coarse Aggregate: Clean sound washed gravel or crushed rock. Crushing may constitute not more than 30% of the total coarse aggregate volume. Not more than 5% flat, thin, elongated or laminated material nor more than 1% deleterious material shall be present. 1" aggregate graded from 1/4” to 1”, fineness modulus 6.90 to 7.40. 1-1/2” graded from ½” to 1-1/2”, fineness modulus 7.80 to 8.20.

c. Fine Aggregate: Washed natural sand of hard, strong particles and shall contain not more than 1% of deleterious material, fineness modulus 2.65 to 3.05.

d. Aggregate must be certified, non-expansive from a “known” good source.

6. Water: ASTM C1602 Clean, fresh, free from acid, alkali, organic matter or other impurities liable to be detrimental to the concrete (potable).

7. Admixtures: Admixtures shall be used upon approval of the Owner's Representative.

a. Air-entraining admixture: Conform to ASTM C260.

b. Water-reducing admixture: Conform to ASTM C494.

B. Construction Joints: Use keyform for slab pour joints. Either preformed galvanized or PVC construction joint forms of a standard manufacturer may be used. Install per manufacturer's recommendations and tool edges of slabs.

C. Waterstops: PVC bulb-type for use between concrete pours / lifts, conforming with ASTM D 570, D 624, and D 638. Provide in configuration(s) as recommended by manufacturer for specific application. Greenstreak, W.R. Meadows, or approved equal.

D. Curing Materials:

1. Liquid Membrane (covered slab): Chlorinated rubber membrane forming, curing-sealing compound conforming to ASTM C309.

2. Liquid Membrane (exposed slab): Clear methyl and butyl methacrylate non-staining, membrane forming, curing-sealing compound conforming to ASTM C309.

E. Cement Grout and Drypack:

1. Cement Grout: Mix 1 part by volume of Portland Cement, 1/2 part by volume of water and fine aggregate enough to make mixture flow under its' own weight.

2. Drypack: Mix 1 part by volume of Portland Cement, 1/2 part by volume of water and fine aggregate enough to make a stiff mix that will mold into a ball. Mix no more than can be used in 30 minutes.

2.4 JOINT SEALANT MATERIALS

A. Caulking: Multipart, non-sag gun grade polyurethane based sealant meeting the requirements of ASTM C920-02, Type S or M, Mamemco International, Pecora, Sika Corp., Sonneborn Building Products, Tremco or approved equal. Self-leveling caulking materials are not allowed.

B. Primer: Non-staining type, recommended by sealant manufacturer to suit application.

C. Joint Cleaner: Non-corrosive and non-staining type, recommended by sealant manufacturer; compatible with joint forming materials.

D. Sealant Backer Rod: Provide compressible polyethylene or polyurethane backer rod as recommended by the sealant manufacturer.

E. Bond Breaker Tape: Provide polyethylene tape or other plastic tape as recommended by sealant manufacturer, to be applied to sealant-contact surfaces where bond to substrate or joint filler must be avoided for proper performance of sealant.

F. Sand: Cover the surface of the caulking with #30 silica sand.

2.5 OTHER MATERIALS

A. All other materials, not specifically described but required for proper completion of the work of this Section, shall be as selected by the Contractor subject to the advance review by the Owner’s Representative.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to all Work of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.

2. Verify that all Work may be constructed in accordance with all applicable codes and regulations, the referenced standards, the original design, and in accordance with site specific Geotechnical Report.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner’s Representative.

2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive work.

3.2 CONCRETE FORMWORK

A. Construction of Forms:

1. General: Construct all required forms to be substantial, sufficiently tight to prevent leakage of concrete paste, and able to withstand excessive deflection when filled with wet concrete.

2. Layout:

   a. Form for all required cast-in-place concrete to the shapes, sizes, lines and dimensions indicated on the Drawings.

   b. Exercise particular care in the layout of forms to avoid necessity for cutting concrete after placement.

   c. Make proper provisions for all openings, offsets, recesses, anchorages, blocking and other features of the Work as shown or required.

   d. Perform all forming required for Work of other trades and do all cutting and repairing of forms required to permit such installation.

   e. Carefully examine the Drawings and Specifications and consult with other trades as required relative to providing for pipe and conduit penetrations, reglets, chases and other items in the forms.

3. Imbedded Items: Set all required steel frames, angles, bolts, inserts and other such items required to be anchored in the concrete prior to concrete being placed.

4. Bracings:

   a. Properly brace and tie the forms together so as to maintain position and shape and to ensure safety to workmen.

   b. Construct all bracing, supporting members and centering of ample size and strength to safely carry, without excessive deflection, all dead and live loads to which they may be subjected.

   c. Properly space the forms apart and securely tie them together, using metal spreader ties that give positive tying and accurate spreading.

5. Wetting: Keep forms sufficiently wetted to prevent joints from opening up before concrete is placed.

B. Plywood Forms:

1. Design: Nail the plywood panels directly to studs and apply in a manner to minimize the number of joints.

2. Joints: Make all panel joints tight butt joints with all edges true and square.

C. Footing Forms:

1. Wood Forms: All footing forms shall be wood unless otherwise specifically approved by the Owner's Representative, or as specified in paragraph 3.2(C)(2).

2. Earth Forms:

a. Side walls for footings may be of earth provided the soil will stand without caving and the sides of the bank are made with a neat cut to the minimum dimensions indicated on the Drawings.

b. For excavation and backfill of earth forms, conform with applicable provisions of Section 13 1101.

D. Reuse of Forms:

1. Reuse of forms shall be subject to advance approval of the Owner's Representative.

2. Except as specifically approved in advance by the Owner's Representative, reuse of forms shall in no way delay or change the schedule for placement of concrete from the schedule obtainable if all forms were new.

3. Except as specifically approved in advance by the Owner's Representative, reuse of forms shall in no way impart less structural stability to the forms nor less acceptable appearance to finished concrete.

E. Removal of Forms:

1. General:

a. In general, side forms of footings may be removed seven (7) days after placement of concrete, but time may be extended if deemed necessary by the Owner's Representative.

b. Forms for footings, foundations, grade beams, slabs, walls, and other formed concrete may be removed fourteen (14) days after placement of concrete.

2. Removal:

a. Use all means necessary to protect workers, passersby, the installed Work of other trades and the complete safety of the structure.

b. Cut nails and tie wires or form ties off flush, and leave all surfaces smooth and clean.

c. Remove metal spreader ties on exposed concrete by removing or snapping off inside the wall surface and pointing up and rubbing the resulting pockets to match the surrounding areas.

d. Flush all holes resulting from the use of spreader ties and sleeve nuts using water, and then solidly pack throughout the wall thickness with cement grout applied under pressure by means of a grouting gun; grout shall be one-part Portland Cement to 2-1/2 parts sand; apply grout immediately after removing forms.

3.3 CONCRETE REINFORCEMENT

A. Bending:

1. General:

a. Fabricate all reinforcement in strict accordance with the Drawings.

b. Do not use bars with kinks or bends not shown on the Drawings.

c. Do not bend or straighten steel in a manner that will injure the material. (When opposite end is already encased in concrete.)

2. Design:

a. Bend all bars cold.

b. Make bends for stirrups and ties around a pin having a diameter of not less than two (2) times the minimum thickness of the bar.

c. Make bends for other bars, including hooks, around a pin having a diameter of not less than six (6) times the minimum thickness of the bar.

B. Placing:

1. General: Before the start of concrete placement, accurately place all concrete reinforcement, positively securing and supporting by concrete blocks, metal chairs or spacers, or by metal hangers.

2. Clearance:

a. Preserve clear space between bars of not less than one and one-half (1-1/2) times the nominal diameter of the round bars.

b. In no case let the clear space be less than one and one-half (1-1/2) inches nor less than one and one-third (1-1/3) times the maximum size of the aggregate.

c. Provide the following minimum concrete covering of reinforcement:

1) Concrete deposited against earth: three (3) inches minimum.

2) Concrete below grade deposited against forms: two (2) inches minimum.

3) Concrete elsewhere: As indicated on Drawings or otherwise approved by the Owner’s Representative.

3. Splicing:

a. Horizontal Bars:

1) Place bars in horizontal members with minimum lap at splices sufficient to develop the strength of the bars.

2) Bars may be wired together at laps except at points of support of the member, at which points preserve clear space described above.

3) Whenever possible, stagger the splices of adjacent bars.

4) Splice forty (40) bar diameters minimum.

5) Provide non-contact lap slices for shotcrete.

b. Wire Fabric: Make all splices in wire fabric at least one and one-half (1-1/2) meshes wide.

c. Other Splices: Make only those other splices that are indicated on the Drawings or specifically approved by the Owner's Representative.

4. Dowels: Place all required steel dowels and securely anchor them into position before concrete is placed.

5. Obstructions: In the event conduits, piping, inserts, sleeves and other items interfere with placing reinforcement as indicated on the Drawings or otherwise required, immediately consult with the Owner's Representative and obtain approval of a new procedure prior to placing concrete.

C. Cleaning Reinforcement: Steel reinforcement, at the time concrete is placed around it, shall be free from rust scale, loose mill scale, oil, paint and all other coatings which will destroy or reduce the bond between steel and concrete. Bend down all tie wire away from the top of the pool concrete. Maintain a 2" clear from top of concrete to the tie wire.

3.4 SHOTCRETE REINFORCEMENT

A. The maximum size of reinforcement shall be No. 5 bars unless it can be demonstrated by preconstruction tests that adequate encasement of larger bars can be achieved. When No. 5 or smaller bars are used, there shall be a minimum clearance between parallel reinforcement bars of 2-1/2 inches (64 mm). When bars larger than No. 5 are permitted, there shall be a minimum clearance between parallel bars equal to six diameters of the bars uses. When two curtains of steel are provided, the curtain nearest the nozzle shall have a minimum spacing equal to 12 bar diameters and the remaining curtain shall have a minimum spacing of six bar diameters.

B. Lap splices in reinforcing bars shall be by the non-contact lap splice method with at least 2 inches clearance between bars. The enforcement agency may permit the use of contact lap splices when necessary for the support of the reinforcing provided it can be demonstrated by means of preconstruction testing, that adequate encasement of the bars at the splice can be achieved, and provided that the splices are placed so that a line through the center of the two spliced bars is perpendicular to the surface of the shotcrete work.

3.5 CAST-IN-PLACE CONCRETE

A. Conveying and Placing Concrete:

1. Before placing concrete, mixing and conveying equipment shall be well cleaned, and the forms and space to be occupied by concrete shall be thoroughly cleaned and wetted. Ground water shall be removed until the completion of the work.

2. No concrete shall be placed in any unit of work until all formwork has been completely constructed, all reinforcement has been secured in place, all items to be built into concrete are in place, and form ties at construction joints tightened.

3. Concrete shall be conveyed from mixer to place of final deposit in such a way to prevent the separation or loss of ingredients. It shall be placed as nearly as practicable in its' final position to avoid rehandling or flowing. Concrete shall not be dropped freely where reinforcing bars will cause segregation, nor shall it be dropped freely more than six (6) feet. Use tremies, spouts and dump boxes in deep sections. Vibrators are not acceptable for facilitating concrete transport.

4. Concrete shall be tamped and spaded to insure proper compaction into all parts of forms and around reinforcement. A mechanical vibrator shall be used to thoroughly compact the concrete. Vibration must be by direct action in the concrete and not against forms or reinforcement.

5. Mixing and transport time as indicated in ASTM C94 is required. If air temperatures are between 85° and 90° F the delivery time is to be reduced to 75 minutes. When air temperatures are in excess of 90° F the delivery time should be reduced to 60 minutes.

6. Truck mixes without batch certificates will be rejected.

B. Construction Joints / Expansion Joints: Construction joints and expansion joints shall be provided at locations and in the manner shown on the Drawings. With exception of existing concrete / new shotcrete joints, use PVC bulb-type waterstops appropriate for design condition between all concrete pours / lifts to avoid cold joints. Waterstops shall be placed in such a way to protect reinforcing steel from rust and oxidation. All expansion joints must be the full depth of the concrete section in which they are located.

C. Slab Finishes: Concrete slabs shall be compacted and screeded uniformly to grades shown. Push large aggregates below the surface with a screen tamper, screed and bull float. As soon as the surface becomes workable, it shall be wood floated, then finished as indicated on the Drawings to a uniform smooth, true surface in a neat and workmanlike manner. Carefully coordinate slab finish requirements with other trades (ceramic tile, pool plaster) to ensure concrete finish is appropriate substrate for final finish material.

1. Pool Floor Slab: Heavy Wire Broom Finish.

D. Protection and Curing:

1. Concrete shall be protected from injurious action of the elements and defacement of any nature during construction.

2. All forms must be kept wet to prevent drying out of the concrete.

3. All concrete surfaces including footings must be kept wet for at least seven (7) days after concrete is placed.

4. Apply the appropriate curing materials, as specified in 2.3 of this Section, immediately after finishing slabs. Application shall be as specified by the manufacturer.

E. Form Removal:

1. Take care in removing forms so that surfaces are not marred or gouged and that corners are true, sharp and unbroken.

2. No steel spreaders, ties or other metal shall project from or be visible on any concrete surfaces.

F. Defective Work:

1. Should the strength of any concrete for any portion of the work indicated by tests of molded cylinders and core tests fall below minimum 28 days strength specified or indicated, concrete will be deemed defective work and shall be replaced.

2. Concrete work that is not formed as indicated, is not true to intended alignment, not plumb or level where so intended, not true to intended grades or elevations, not true to specified or selected finish, contains sawdust shavings, wood, or embedded debris, which exhibits cracks or contains fine or coarse sulfide particles, or expansive aggregates detrimental to performance or appearance of the concrete shall be deemed defective.

3. Promptly perform work required to replace and properly clean (by sandblasting if necessary) any defective concrete panels (control joint or expansion joint to control joint or expansion joint), at Contractor's expense, including all expense of additional inspection, tests, or supervision made necessary as a result of defective concrete.

3.6 EXPANSION JOINTS

A. Temperatures: Do not install sealants when air temperature is less than 40°F.

B. Tooling: Tool exposed joints to a slightly concave surface using slicking materials recommended by the manufacturer. The tooling procedure shall press sealant against the sides of the joint. No materials shall be left “feathered” out or smeared on the abutting materials. Completed joints shall have a uniform professional appearance.

C. Joint Construction: Sealant joint width, thickness and cross-sectional profile to be constructed in strict accordance with the sealant manufacturer’s recommendations.

D. Sand: At the appropriate time cover the sealant with sand to provide a sanded finish.

3.7 CLEAN-UP

A. Upon completion of the Work of this Section, immediately remove all swimming pool concrete materials, debris and rubbish occasioned by this Work to the approval of the Owner’s Representative.

END OF SECTION

SECTION 13 1103
SWIMMING POOL SHOTCRETE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Provide labor, materials and equipment as required to install wet mix shotcrete for swimming pool structures as indicated on the Drawings and herein specified.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards: Except as otherwise indicated, provide shotcrete per American Concrete Institute Standard ACI 506. In addition, conform to recommendations contained in “Shotcrete,” Brochure G-84 as published by the Gunite Contractors Association, Sylmar, California and the 2019 California Building Code. Comply with CBC 2019 Section 1908A.

C. Mix Design: The Contractor shall submit a mix design stamped and signed by a licensed engineer for approval by the Owner’s Representative prior to any placement of shotcrete. Mix design shall indicate source of aggregate and brands of cement and admixtures used. All mix designs shall take character of locally available aggregate into consideration and make adjustments as necessary to conform with specified design criteria.

D. Testing and Inspection: A test panel shall be shot, cured, cored or sawn, examined and tested (representing the most congested and difficult project scenario) prior to commencement of the project in accordance with ASTM C1140. All project conditions and personnel shall be represented in the test panel. Additionally, one test panel shall be provided for each 50 yards (or portion thereof) of shotcrete placed for each day or each nozzleman, whichever is greater. The size of the strength test panel shall be per the direction of the Special Shotcrete Inspector. At least three (3) cores shall be taken from each test panel. (At least three (3) cores shall be taken from the completed work for each day of shotcrete operation.) Testing shall be performed by the Owner’s designated Testing Lab and comply with Section 1908A.10, California Building Code. Continuous inspection of the shotcrete operation by a deputy inspector provided by the Owner shall be required. Inspection of shotcrete work shall comply with Section 1908A of California Building Code, and coring, sampling, soaking and testing per 1908A.5 and 1908A.10 of California Building Code. Contractor shall provide test panels for all required tests. The Contractor shall provide the Owner and Testing Lab 48 hours’ notice before the start of shotcrete operations

E. Tolerances: Construct all swimming pool shotcrete straight, true, plumb and square within a tolerance horizontally of one in 200 and a tolerance vertically of one in 2000.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300 and ACI 506.2.

B. Materials List: Within thirty (30) days after issuance of Notice to Proceed, and before shotcrete materials are delivered to the project site, submit to the Owner's Representative a complete list of materials proposed to be used in this portion of the Work, showing manufacturer's name and catalog number of all items such as admixtures and curing membranes, and the name and address of the supplier of cement and aggregate to be used.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Protection: Use all means necessary to protect shotcrete materials before, during and after installation and to protect the installed Work specified in other Sections.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative and at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cement: Cement shall be Type II Portland Cement conforming to ASTM C150. Cement type shall be the same for all shotcrete work.

B. Aggregate: ASTM C33, washed hard dense durable clean sharp sand from approved pit, free of organic matter and opaline, feldspar, or siliceous magnesium substances and containing not more than 3% by weight of deleterious substances. Maximum size aggregate for shotcrete is ¾" per CBC 1908A.3. When tested for organic impurities by ASTM C40 method, fine aggregate color not darker than reference standard color. When tested for soundness by ASTM C88 method, grading No. 2 of ASTM C1436, loss after 5 cycles not over 10% of fine aggregate.

C. Water: Potable, clean, fresh, free from acid, alkali, organic matter or other impurities liable to be detrimental to the shotcrete.

D. Admixtures: Admixtures shall conform to ASTM C1141 and only be used upon approval of the Owner's Representative.

PART 3 - EXECUTION

3.1 EXECUTION

A. Inspection:

1. Prior to all Work of this Section carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.

2. Verify that items to be imbedded in shotcrete are in place and that shotcrete may be placed to the lines and elevations shown on the Drawings, with all required clearance from reinforcement.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.

2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive the Work.

3.2 PREPARATION

A. General:

1. Thoroughly clean all areas where shotcrete is to be placed to insure proper bonding of shotcrete.

2. Where shotcrete is to be placed against smooth surfaces (i.e., cast-in-place concrete), sandblast surfaces to receive shotcrete to provide clean aggregate surface, thereby insuring proper bond between materials.

B. Ground Wires: Adequate ground wires, to be used as screeds, shall be installed to establish the thickness and surface planes of the shotcrete work. Ground wires shall be placed so that they are tight and true to line and grade and in such a manner that they can be easily tightened.

3.3 PROPORTIONING AND MIXING

A. Accurately control proportion of water to Portland cement to produce thorough and uniform hydration of the shotcrete that, when shot, forms a homogeneous mass containing neither sags nor dry sand formation. Proportion by mass per ASTM C94 or by volume per ASTM C685.

B. Shotcrete shall have a minimum compressive strength of 4,000 PSI at 28 days. Shotcrete material shall have a water/cement ratio of 0.40-0.45 per ACI 506R, Chapter 6, Proportioning and Preconstruction Testing; Section 6.3.3, Wet Mix Process.

C. Discontinue shotcrete work if the time between the addition of mixing water to cement and aggregate, or cement to aggregates, and placement of shotcrete exceeds ninety (90) minutes when the ambient temperature is below 85 degrees Fahrenheit, or exceeds sixty (60) minutes when the ambient temperature is above 85 degrees Fahrenheit. Batch, mix and deliver wet-mixture shotcrete per ASTM C94 or C685.

D. Hot Weather Shotcreting – Unless otherwise specified, do not place shotcrete when shotcrete temperature is above 95°F, unless prequalification testing shows that the required quality of materials can be achieved at high temperatures. The temperature of reinforcement and receiving surfaces shall be below 90°F prior to shotcrete placement.

E. Cold Weather Shotcreting – Unless otherwise specified, shooting may proceed when ambient temperature is 40°F and rising. Stop shooting when ambient temperature is 40°F and falling, unless measures are taken to protect the shotcrete. Shotcrete material temperature, when shot, shall not be less than 50°F. Do not place against frozen surfaces

3.4 SHOTCRETE PLACING, FINISHING, AND CURING

A. Operations: Utilize a standard type of air compressor, capable of providing a minimum of 250 cubic feet of air per minute per nozzle.

B. Placing: Except when shooting reinforcing, hold the nozzle perpendicular to and 2-1/2 to 3 feet from surface. At reinforcing bars, hold the nozzle so as to direct shotcrete behind the bars, and shoot each side of each bars separately. A nozzleman's helper equipped with an air jet shall precede the nozzle and blow out rebound or sand lodged behind bars, on forms, or placed shotcrete. Placing shotcrete horizontal members from the top is not allowed unless approved methods are employed to eliminate all rebound. Material shall emerge from the nozzle in a uniform flow. If flow becomes intermittent for any reason, direct the nozzle away from the surface until the flow is again steady and constant. Do not reuse rebound or loose sand for any purpose.

C. Puddled Shotcrete: Use of "puddled shotcrete" in which the air pressure is reduced and the water content is increased to facilitate placing in difficult locations is not allowed. Do not place shotcrete where nozzle stream cannot impinge directly on the involved surface. Where difficult shooting conditions occur, obtain proper results by maintaining correct air pressure and water ratio and reduce supply of material.

D. Construction Joints: Form joints with sloping beveled edges. Clean and dampen the hardened joint surfaces before placing additional shotcrete. Square edged construction joints are not allowed. The film of laitance which forms on the surface of the shotcrete shall be removed within approximately two hours after application by brushing with a stiff broom. If this film is not removed within two hours, it shall be removed by thorough wire brushing or sand blasting. Construction joints over eight hours old shall be thoroughly cleaned with air and water prior to receiving shotcrete.

E. Finishing: Rod exposed surfaces to true planes and lines on reaching the thickness and plane established by forms and ground wires. Tamp and wood float surfaces level and provide a rough raked finish. Carefully coordinate finish requirements with other trades (ceramic tile, pool plaster) to insure shotcrete finish is appropriate substrate for final finish material.

F. Curing: Keep shotcrete continuously damp for not less than seven (7) days after placing. Use sealed curing sheeting or other approved curing method where water curing is not feasible. Do not use curing compound of any kind.

3.5 DEFECTIVE WORK

A. Cut out, remove and replace, or repair to the satisfaction of the Owner's Representative, shotcrete not meeting minimum strength, not true, plumb or level, not to required elevations, containing cracks detrimental to performance or appearance, containing shavings, debris or with honeycombs or voids.

B. Promptly perform Work required to repair, patch, replace, render properly cleaned surfaces (by sandblasting if necessary) or otherwise make good any defective shotcrete at Contractor's expense, including all expense of additional inspection, tests, or supervision made necessary as a result of defective shotcrete.

3.6 CLEAN-UP

A. Upon completion of the Work of this Section, immediately remove all swimming pool shotcrete materials, debris and rubbish occasioned by this work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 1104
SWIMMING POOL CERAMIC TILE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Swimming pool ceramic tile detailed on the Drawings, including, but not limited to, the following:

1. Waterline Face Tile. (Deep Gutter Pool)

2. Gutter Cap Tile. (Deep Gutter Pool)

3. Lane Line / Target Tile / 4'-6" Depth Tile

4. Depth Marker Tile. (At Cantilever Deck)

5. Depth / Caution Marker Tile. (At Deep Gutter Pool Deck)

6. Trim Tile (at Steps.)

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards: In addition to complying with all pertinent codes and regulations:

1. Manufacture of all tile shall be in accordance with ANSI A-137.1.

2. Install ceramic tile in accordance with the recommendations contained in the 2021 "Handbook for Ceramic Tile Installation" of the Tile Council of America, Inc.

C. Tolerances: Install all swimming pool ceramic tile straight, true, plumb and square within a tolerance horizontally of one in 200 and a tolerance vertically of one in 500. Waterline and gutter bullnose tile shall be level to 1/8" (+/- 1/16") around entire perimeter of swimming pools.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300.

B. Samples: Submit samples of each color and pattern in the specified groups. Character samples can be representative for review prior to screening of actual tile.

C. Master Grade Certificate: Prior to opening ceramic tile containers, submit a Master Grade Certificate, signed by the manufacturer of the tile used and issued when the shipment is made, stating the grade, kind of tile, identification marks for the tile containers, and the name and location of the Project.

D. Specifications: Submit manufacturer's recommended installation specifications for the Work.

E. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer’s original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool ceramic tile before, during and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner’s Representative.

PART 2 - PRODUCTS

2.1 TILE

A. A. Waterline Face Tile: (Deep Gutter Pool)

1. Material: All waterline face tile shall be glazed ceramic tile (Group III standard) as manufactured by Dal-Tile or approved equal.

2. Size: 6 x 6 inches.

3. Color: Dal-Tile #O-129, 'Sky Blue'. Contact Kylee Midura kylee.midura@daltile.com (858) 344-0019.

B. Gutter Cap Tile: (Deep Gutter Pool)

1. Material: All gutter cap tile shall be glazed ceramic tile (Group III standard) as manufactured by Dal-Tile or approved equal.

2. Size: 2-1/2 x 6 inches (#A-7250).

3. Color: Dal-Tile #D-129, 'Sky Blue'.

C. Lane Line / Target / 4’ - 6” Depth Tile:

1. Material: Group 3 quality, frost proof unglazed ceramic mosaic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.

2. Size: 1 x 1 inches.

3. Color: Dal-Tile #D-311, 'Black/ in 25-yard direction and D-621 ‘Nautical Blue’ at 4’-6” depth tile.

D. Depth Marker Tile (At Cantilever Deck Face):

1. Material: All depth marker tile shall be glazed ceramic tile as manufactured and/or distributed by Dal-Tile, Precision Tile Co., or approved equal.

2. Size: 4-1/4 x 4-1/4 inches.

3. Color: Dal-Tile #X-114, 'Desert Gray' with Black silk screen numbers.

E. Depth / Caution Marker Tile (at deep gutter pool deck):

1. Material: Group 3 quality, frost proof unglazed ceramic mosaic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.

2. Size: 1 x 1 inches.

3. Color: Dal-Tile #D-311, 'Black' letters and numbers on #D-014, ' Light Gray' field.

F. Trim Tile (on underwater steps):

1. Material: Group 3 quality, frost proof unglazed ceramic mosaic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.

2. Size: 1 x 1 inches with S-812 quarter round. Color: Dale-Tile #D-311. ‘Black’.

3. Size 2 x 6 inches with integral quarter round. Color: Black, non-slip. Inlays #CPC00022.

2.2 MORTAR

A. Laticrete 3701 fortified mortar #LCR-37-1017.

B. Site mortar mix shall comply with ASTM C270 standards.

1. Sand for Mortar: Comply with requirements of fine aggregate for concrete.

2. Cement: Type 1 portland cement, conforming to ASTM C150.

3. Hydrated Lime: Conforming to ASTM C206 or 207, Type S.

4. Water: From a potable source.

C. Water: From a potable source.

D. Mortar shall meet ASTM C627

2.3 THIN SET MORTAR

A. Laticrete 254 Platinum, Laticrete, Custom or equal.

B. Water: From a potable source.

C. Mortar shall meet ASTM C627 standard.

2.4 GROUT

A. All tile grout shall be waterproof grout complying with the recommendations of TCA and ANSI A118.6 (4) standards. Grout color shall be grey for dark backgrounds, white for light backgrounds (verify colors with Architect).

2.5 OTHER MATERIALS

A. All other materials, not specifically described but required for a complete and proper installation of ceramic tile as indicated on the Drawings, shall be new, first quality of their respective kinds, and subject to the approval of the Owner's Representative.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to all Work of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.

2. Verify that ceramic tile can be installed in accordance with the original design and all referenced standards.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.

2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive its Work.

3.2 INSTALLATION

A. Method:

1. Install all ceramic tile in strict accordance with installation method P601-90 of the 2021 Handbook for Ceramic Tile Installation of the Tile Council of America, Inc.

2. Be certain to install all ceramic tile perfectly level, flush, plumb, and to the finish grades and elevations indicated on the Drawings.

B. Interface:

1. Carefully establish and follow the required horizontal and vertical elevations to insure proper and adequate space for the work and materials of other trades.

2. Coordinate and cooperate as required with other trades to insure proper and adequate interface of ceramic tile Work with the Work of other trades.

3.3 GROUTING

A. Follow grout manufacturer's recommendations as to grouting procedures and precautions.

B. Remove all grout haze, observing grout manufacturer's recommendations as to use of acid and chemical cleaners.

3.4 EXTRA STOCK

A. Provide one (1) unopened box of extra tile for 2.1A, 2.1B, and 2.1C for Owners use at a future time.

3.5 CLEAN-UP

A. Upon completion of the swimming pool ceramic tile installation, thoroughly clean and polish the exposed surfaces of tile work. Completely clean work area of debris and rubbish occasioned by this Work and dispose of to the approval of the Owner’s Representative.

END OF SECTION

SECTION 13 1106
SWIMMING POOL EQUIPMENT

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Swimming pool equipment items required for this Work as indicated on the Drawings and specified herein.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years' experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years' experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. All equipment supplied or work performed shall comply with regulations governing public swimming pools and spas as contained within Chapter 31 of the 2019 California Building Code.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300.

B. Required submittals include:

1. Swimming Pool Safety Equipment and Maintenance Equipment as specified in Article 2.1 and 2.2 of this Section.
2. Swimming Pool Fittings, Deck and Mechanical Equipment as specified in Article 2.3-2.21 of this Section.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

D. The equipment shown on the plans represent the first listed items in the technical specifications. The Contractor shall be responsible for all required field coordination and installation of any approved equal product to provide a fully working and warranted system. The Contractor shall submit detailed shop drawings for any products used other than the first listed specified items. Contractor provided shop drawings shall include details and quality equal to the original plans and construction documents. The Contractor shall provide any and all required engineering including but not limited to structural and anchorage requirements for any proposed equipment other than the first listed specified equipment. The Contractor is responsible to provide a factory certified representative(s) to start-up and provide on-site training for all swimming pool mechanical equipment provided.

1.4 PRODUCT HANDLING

A. Protection: Use all means necessary to protect swimming pool equipment items before, during and after installation and to protect the installed work specified in other Sections.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative.

PART 2 - PRODUCTS

2.1 SAFETY EQUIPMENT

A. First Aid Kit for 50 Persons with two (2) wool blankets: Marine Rescue or approved equal. Quantity as required by the Department of Health, one (1) minimum.

B. Rescue Tubes (minimum 49" long) and Life Ring Buoy (minimum 24" in diameter) U.S. Coast Guard Approved: Marine Rescue or approved equal. Quantity as required by the Department of Health, one (1) minimum.

C. Throw Rope (3/16" diameter) complete with lemon foot, for use with Life Ring Buoy: Kiefer, United Industries, or approved equal. Quantity as required by the Department of Health, two (2) minimum.

D. Rescue Hooks, 16' long x 1-1/2" aluminum pole and stainless-steel mounting hardware: Kiefer, Pentair, or approved equal. Quantity as required by the Department of Health, two (2) minimum.

E. Pool Safety Signs: As required by the Department of Health. Submittal required. Placement at the pool site shall be in conformance with Health Department Inspector. One (1) set minimum.

F. Eyewash / Shower: Haws model #8309WC CRP combination eyewash / shower, with corrosion resistant protection. Two (2) required. See MEP sheets for water supply piping.

2.2 MAINTENANCE EQUIPMENT

A. Commercial Pool Vacuum: Provide pool vacuum cart with lid-mounted handle, separate lid-mounted bracket for electrical cord, and two rubber-tired ball bearing wheels with grease fittings. Cart and filter shall be fabricated from schedule 304 stainless steel with welds treated and passified. Provide an all-bronze pump with a 1 1/2 hp, 115/230 volt, maximum 20 amp draw @ 120 volts, single phase motor and a 6" bronze trap. Pump shall be UL and NSF listed, have 2" suction and 1 1/2" discharge fittings, and have a brass priming valve with hose bib. Entire pump assembly shall be anchored to vacuum cart with two stainless steel bolts. Provide a 100 foot 10 AWG 3/C SJ electrical cord with ground fault interrupter (GFI) plus. Cord shall be wired to a double pole, 30-amp switch which shall be mounted on pump motor. One (1) required.

B. Heavy Duty Vacuum Hose: 2" x 50', with hose connector. Pentair, Smooth Bore or approved equal. Two (2) required.

C. Utility Pole: 24' fiberglass with connectors. Pentair, Skimlite or approved equal. Two (2) required.

D. Commercial Vacuum Head: 24" wide "flexible" vacuum head. Pentair Model #R201186, or approved equal. One (1) required.

E. Pool Wall Brush: 36" wide professional quality. Pentair or approved equal. One (1) required.

F. Leaf Skimmer: 30" x 8" x 12", professional quality. Pentair, Spectrum or approved equal. One (1) required.

G. Water Quality Test Kit, Professional Grade, Taylor Technologies Model #1741C, LaMotte Model #PRO250-NJ, or approved equal. One (1) required.

H. Chain Hoist Trolley: 'OZ' Wheeled hoist trolley for circulation pump maintaince. Minimum 1 ton lifting capacity with lifting eye. Contractor to coordinate trolley track size with Structural lifting beam over circulation pump pit. One (1) required.

I. Manual Chain Hoist: 'OZ' Manual powered Chain hoist with 1 ton lifting capacity with 10' lift capacity. Provide extra-long lifting chain and hoist control chain, one (1) required.

2.3 FITTINGS

A. Main Drain Frame & Grate (18" x 36"): Lawson Aquatics #MLD-FG-1836, Super Sump with VGB Compliant Grates, or approved equal, two (2) required. Provide two (2) Hayward #SP-1056 1-1/2" collector tubes and two (2) #SP-1055 Hayward 1-1/2" hydrostatic relief valve, one per main drain sump. Contractor shall provide to the Owner a Certificate of Compliance, signed by a licensed design professional, for main drain sump(s) and frame(s) and grate(s), as required by the Virginia Graeme Baker Act.

B. Gutter Outlet Frame and Grate (12"x12"): Lawson Aquatics #MLD-FGD-1212. Eighteen (18) required.

C. Floor Return Inlet 1-1/2" Adjustable: StaRite #08417-0000, United Industries, or approved equal. Fifty-four (54) required.

D. Swimming Pool Underwater Lights: J & J Electronics 'PureWhite LED' #LPL-F5W-120-100 (100' cord) with polished stainless-steel face rings, 87-watt lamps and LWC, provide stainless steel light niches, #78210600 with 1" rear hubs, 'Pentair' or approved equal. Thirty (30) required.

E. Junction Box for Underwater Lights, complete with strain reliefs: Hydrel #1719, Appleton, or approved equal. Sixteen (16) required.

2.4 DECK EQUIPMENT

A. Starting Platform Anchors: Spectrum Aquatics Xcellerator anchors, 6" deep, no known equal. Eight (8) required, for concrete deck. Complete with cover for dual wedge and cover removal tool, two (2) required.

B. Adjustable Starting Platforms: 'Spectrum Aquatics' Xcellerator DP #138900 or approved equal. Color of top shall be blue. Eight (8) required.

C. Stanchion Sockets: 1.90" I.D. Bronze. KDI-Paragon 38201TC, no known equal. Twelve (12) required.

D. Stanchion Posts: 1.90" O.D. x .145 wall. KDI-Paragon, Eight (8) #38106, and Eight (8) #38301, no known equal.

E. Lane Line Anchors: Heavy eye bolt with insert. KDI-Paragon #73017/18 or equal. Twenty-two (22) required.

F. Racing Lanes: Anti Wave' maximum 6", no known equal, verify colors with Owner prior to ordering. Nine (9) required. Provide vinyl covered stainless steel lane line extensions, Knorr System model #EP-009-0020 or approved equal, two (2) per lane line. Provide two (2) additional lanes to be utilized for stationary water polo course.

G. Racing Lane Reel with Cover: KDI-Paragon #75111SS with cover #75133, no known equal. Two (2) required.

H. Lifeguard Chair: 1.90" O.D. x .065 wall. Spectrum Aquatics Economy Guard Chair. SS tread. Custom with 3" x 8" cedar slats. Two (2) required. Specify product from 'Pentair' as modified lifeguard chair for City of Los Angeles drawing number 007 revision F. Dated 4/18/2017.

I. Figure 4 Grab Rails/Cross Braced Ladder: KDI-Paragon #30102, 1.90" O.D. x .109" wall, no known equal. Six (6) sets required. KDI-Paragon #42123 with custom 5" wide stair treads, one (1) required.

J. Recessed Steps, Set of 3: KDI-Paragon #3212, no known equal. Six (6) sets of three required.

K. Handrail: KDI Paragon #34203, 3 bend, 1.90" O.D. x 0.65" wall. Six (6) required.

L. Anchor Sockets for Grab Rails & Handrails: KDI-Paragon 28102, no known equal. Thirty-eight (38) required.

M. Stainless Steel Escutcheon Plates for Grab Rails, Handrails and Ladders: Spectrum Model #35214, no known equal. Thirty-eight (38) required.

N. Stationary Water Polo Goals: KDI-Paragon 36104, 36201, no known equal. Furnish complete with anchors and nets. One (1) pair required.

O. Disabled Lift: Hydraulic self-operable with 350 lb. lifting capacity and 12" water draft; with headrest, dual flip-up armrests, pull-out leg rest, submergible push-button remote control, lockable cover; transport cart, extra battery, wall mount charger and 5 year manufacturer warranty (contractor to confirm unit meets appropriate local government agency ADA requirements); furnish with deck anchors and deck hydrant. Spectrum Gallatin #27336 or approved equal. One (1) required.

P. Backstroke Pennants: 'Champion' 3/16" diameter vinyl coated cable #50-175; 'Champion' hardware package #53-030, and 'Champion' 12" x 18" vinyl coated polyester pennants #53-020 Lincoln Equipment, Knorr Systems or equal.

Q. 1 Meter Diving Stand: Arcadia Air Products 'Durafirm' #70-231-400, Knorr Pool Systems or equal. Furnish complete with anchors with stainless steel bolts, and mounting hardware. One (1) required.

R. 16 Foot Diving Board: Duraflex International Corporation, 'Maxiflex B' #66-231-330, Knorr Pool Systems or equal. Furnish complete with jury rig poles. One (1) required.

S. Pool Cover System:

1. A pool cover system as described below shall be provided and shall include all the specified features, without exception. Submittal data must include complete documentation relating to all the specified features and include manufacturer's sales literature, specification sheets, and installation/operation/maintenance manuals. Upon written request by the specifying agent, the following samples must be provided: samples of tubing used for storage reel winding tubes and end frames; a sample winding tube bearing; a sample castor wheel assembly; and a cover sample measuring at least 8" x 11", including weighted side edge, reinforced end edge, and grommet.
2. Cover Material:

    a. Material shall be woven, 10 by 10 count per inch, high-density polyethylene, ultraviolet stabilized film fabric, laminated to both sides of 1/8" thick, closed cell, medium density, white, polyethylene foam. The woven polyethylene film fabric shall be coated on both sides with an ultraviolet stabilized, chemically resistant polyethylene coating. The combination of film, foam and woven components shall be non-toxic, non-absorbent, non-permeable and buoyant. Color shall be blue on upper surface and black on under surface. In addition to the above, cover must meet the following requirements:

Thickness	1/8-inch minus or plus 10%
Foam Density	2 lbs. per cubic foot
Weight	5 oz. per square foot
*Tensile Strength	318 lbs. (ASTM 1682264)
*Tear Strength	60 lbs. (ASTM D2261-71)
*Bursting Strength: (Mullen Tester)	425 psi (ASTM 751-73)
Service Temperature	-40°F to +160°F
K Factor	.25 BTU/sq. ft.-Hr – degrees F/inch (ASTM D2326)
Reinforced Edge Tear Strength	1225 lbs. pull strength, corner to corner
Open Seam Tear Strength	70 lbs.

3. Cover Design Criteria:

    a. Cover panels shall totally cover the surface of the pool without gaps or overlaps with reinforced cutouts to accommodate rounded corners, step areas, rails, etc. Cover panels shall be of the following quantities and sizes:

Qty.	Size
9	13 feet, 4 inch x 75 feet, 1 inch

    b. Along end and side edges of each panel, a weighted material shall be sewn in and shall be continuous, non-corrosive and conform to the flat shape of the cover. End edges shall be reinforced with a double layer of polyethylene-coated film fabric and designed in such a manner as to prevent panels from dividing when the covers are being pulled across the water. On all corners, weighted edge shall wrap corners and be itself encapsulated by the two layers of end reinforcement. The entire corner construction shall be reinforced with an 1/8" thick load dispersion plate and non-corrosive grommet.

    c. Both ends of each cover panel shall be equipped with no less than three (3) non-corrosive grommets and quick-release loops for easy connection to the storage reel or to the next cover panel. All sewing shall be ultra-violet stabilized and

chemically resistant 100% polyester thread. Main body seams shall be welded, glued or heat sealed. Complete mechanical attachment with lock-stitched thread shall be required. Warning labels consistent with the recommendations of the Federal Consumer Protection Agency shall be permanently affixed to each end of each cover panel and to the sides of perimeter panels.

4. Storage Reels:

   a. The following quantity, type, and size of storage reels shall be provided:

Qty.	Winding Tubes Per Reel	Length of Winding Tubes
3	3	16 Foot

   b. Storage reel frame, winding tubes, castors, brake shafts, cranks and fasteners shall be made of type 304 stainless steel. Each reel shall have six wheels, each of which shall be 6 inches in diameter, be rated at 1150 pounds load capacity and be made of solid polyurethane. Wheels shall be lubricateable through grease fittings on stainless steel axle shafts and have stainless steel swivel yoke assemblies. The reel shall have two frame mounted, screw-type brakes with pads that lock directly to the pool deck and have a total of 18 square inches of total braking surface. Castor brakes or other types of foot-operated or lever-operated brakes will not be considered equal. Each winding tube shall be 4 1/2 inches in diameter; have a wall thickness of .120 inches; and shall consist of continuous length of tubing without joints or welds. Reels with tubes fabricated from two or more pieces of tubing joined together will not be acceptable. End frames shall be fabricated from 1 1/2-inch square Schedule 304 stainless steel box beam tubing with .120" wall thickness. To facilitate field repair, 3/8" stainless steel bolts, nuts and washers shall be used to connect major reel frame parts, wheels, brakes, bearings and winding tubes. Reels that use welding to connect these components will not be considered equal. Winding tube bearings shall be heavy duty, self-aligning, pillow block ball bearings with set screws to secure tube shafts and prevent their lateral movement. All bearings shall be lubricateable through grease fittings. Plastic surface bearings will not be acceptable.

   c. Each storage reel shall be provided with a protective cover constructed of vinyl-laminated polyester cloth, 1000 denier, totaling 13 ounces per square yard.

5. Measuring and Training:

   a. A representative of the manufacturer shall visit pool site to confirm measurements prior to fabrication of cover, and once cover is delivered, train operating personnel and supervise initial installation of cover.

6. Warranty:

   a. Cover panels shall be provided with manufacturer's three- year full replacement warranty covering defects in material and workmanship. Storage reel shall be provided with manufacturer's 10-year warranty covering defects in material and workmanship.

2.5 WET PLAY

A. Wet Play Safety Signs: As required by the Department of Health. Submittal required.

B. Wet Play Elements:

	PRODUCT CODE	QTY	TOTAL FLOW
1.	Waterbug N°2 'Vortex' VOR-7581	1	13 GPM
2.	Aqua Dome N°1 'Vortex' VOR-555	1	14 GPM
3.	Side Winder 'Vortex' VOR-7518	1	15 GPM
4.	Jet Stream 'Vortex' VOR-7512	4	12 GPM
5.	Fumbling Five 'Vortex' VOR-7384	1	12 GPM
6.	Water Tunne N°2 'Vortex' VOR-309	1	12 GPM
7.	Split Stream 'Vortex' VOR-7516	7	55 GPM
8.	Bollard Activator N°3 'Vortex' VOR-600	1	Total Flow 133 GPM
9.	Maintenance Minimizer 'Water Odyssey' WMM600	2	Total Flow 133 GPM

2.6 WET PLAY BOOSTER PUMP

A. 'Pentair' XFK-8, 2HP 208-230V/460V, 3PH, rated at 135 GPM at 50ft. TDH, with integral strainer, interconnect with water feature circulation pump. (Field verify motor voltage prior to ordering.) (58 lbs.) Provide motor stater/disconnect.

2.7 WET PLAY CIRCULATION PUMP

A. 'Pentair' WFK-12, Whisperflo pump rated at 143 GPM at 60 ft. TDH, 3,450 RPM 3HP, 208V 3PH, self-priming pump with integral strainer. One (1) total. Complete with time clock system. Interconnect circulation pump with booster pumps to only allow booster pump operation when circulation system is on. (58lbs.)

2.8 WET PLAY FILTER

A. 'Pentair' TR140-C-3 Hi-rate permanent media filters with 9.80 sq. ft. of filter area rated at 147 GPM at 15 GPM/Sq. ft. Complete with 3" pre-manufactured multi-port valve, 3" backwash, seismic anchorage. Provide all utilities, piping, valving, etc. One (1) total. (1,300 lbs.)

2.9 WET PLAY HEATER

A. 'Lochinvar' #ERN302, 300,000 BTU input, 3/4" natural gas connection, 2" water influent/effluent connections Copper Fin II and 5" direct air intake low and 6" sidewall exhaust above, in accordance with manufacturer's recommendations. One (1) total (210 lbs.) Heater shall have electronic ignition and external shut-off switch without adjusting thermostat setting.

2.10 WET PLAY WATER CHEMISTRY CONTROLLER

2.11 WET PLAY WATER CHEMISTRY CONTROLLER: PROVIDE ONE (1) CHEMTROL PC5000 WITH FLOW CELL,ORP SENSOR. PPM SENSOR, PROVIDE ETHERNET CONNCETION AND COMMNUCATION SOFTWAREWITH AUTODIAL ALARM, 4-20MV OUT[UT WITH CORRESPONDING INPUT SENSORS AND OUTPUT CONNCETION INCLUDING TANK SENSORS,TRANSDUCERS,RELAYS,VFD CONTROL.. ONE (1) TOTAL.

2.12 WET PLAY BOOSTER PUMP ULTRA VIOLET SYSTEM:

2.13 WET PLAY ULTRA VIOLET SYSTEM: 'AQUIONICS I-100+ 176 GPM VALIDATED FOR OUTDOOR/CAPACITY,INCREASE TO 4" FLANGED CONNECTION IN-LINE UV. 1.3 KW AT 208V 1 PH WITH 15' CABLE. 3 #10 WIRING WITH 20A EXTERNAL BREAKER. PROVIDE FLOOR MOUNTING. PROVIDE INSTALLATION AND PIPING PER MANUFACTURERS RECOMMENDATIONS INCLUDING PIPING BYPASS, STRAINER AND VALVING.

2.14 WET PLAY AUTOMATION

A. 'Vortex' command center including system controller, pit wall mounted water distribution manifolds, with ten (10) outlets, solenoid valves, one (1) dynamic bypass valve, isolation valves, bollard operated activation, complete. Contractor shall provide complete shop drawings for approval. Proivde water drain points adjacent to equipment area for all manifold lines.

2.15 WET PLAY FLOWMETER

A. 'Signet' #P51530-X0 flow sensor with 'Signet' #5090 flow monitor (mounted by door in mechanical room), 3" line size, NSF 50 listed.

2.16 SWIMMING POOL STRAINER

A. 'MerMade' F.O. series FRP reducing basket strainer: One (1) 10" x 8" standard, with acrylic lid and two (2) stainless steel strainers each (150 lbs.)

2.17 SWIMMING POOL CIRCULATION PUMP

A. 'SWIMMING POOL CIRCULATION PUMP: 'PACO' #6015-7, 6"x8"x15" TYPE 'LC' END SUCTION CENTRIFUGAL PUMP; 1150 RPM 460V, 3PH; 30HP; RATED AT 1,275 GPM @ 60 FT. TDH; 85% EFFICIENT; PREMIMUM EFFICIENCY TEFC MOTOR; EPOXY COAT ALL WET SURFACES. 'PACO', 'AURORA' OR EQUAL. (760 lbs.) PROVIDE 'PENTAIR ACCUDRIVE PUMP CONTROL SYSTEM VARIABLE SPEED DRIVE MODEL AD300-4603-N12FB WITH FULL BY PASS MODE AND 4-20Ma FLOWMETER KIT 97016-420KIT AND EXTENDED WARRANTY AD-EWW272 . COORDINATE MOUNTING LOCATION TO MAINTAIN DESIRED CLEARANCES, 460V 3PH. (122 lbs.)

B.

2.18 SWIMMING POOL FILTRATION SYSTEM (EKO^3, STARK OR EQUAL)

A. 'Stark' SS3-96-08 automatic filter control (AFC) fully automatic hi-rate permanent media filters with 81 sq. ft. of filter area rated at 1296 GPM at 16 GPM/sq. ft. Complete with 8" face piping, 6" backwash, seismic anchorage. Provide all utilities, piping, valving, etc. (9800 lbs. each tank) 'Stark', 'EPD', or equal. Provide 'Signet' #P51530-X1 flow sensor with 'Signet' #5090 flow monitor (mounted by door in mechanical room) and water chemistry controller digital readout.

2.19 POOL HEATER(S)

A. ‘Lochinvar’ Aquas high efficiency titanium pool package system Type XPN1502 1,449,877 BTU/hr output, 1½” gas connection, 6” water influent/effluent connections with isolations valves and 6” ø flue to atmosphere. Provide ¾” cold water connection. Two (2) total (1,192 lbs. each.) Provide thermometers on titanium heat exchanger influent/effluent lines.

2.20 CHLORINE FEED SYSTEM

A. CHLORINE STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 500 GALLON #TC5971DC-CA; DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED; OPERATING WEIGHT = (4,165lbs). COMPLIES WITH FED. REG #40CFR-264-193. SWIMMING POOL FEED PUMP SHALL BE “THE SOLUTION” 22152 011728GPD, WET PLAY FEED PUMP SHALL BE 'STENNER' 85M-5, 50 GPD @25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION.

2.21 ACID STORAGE/FEED SYSTEM

A. ACID STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 350 GALLON #TC 5256DC-CA; DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED; OPERATING WEIGHT =(3,250lbs). WET PLAY FEED PUMP= 'STENNER' 45M-5, 50 GPD @ 25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION. SWIMMING POOL ACID FEED ‘THE SOLUTION X2 #22152-02 WITH BOOSTER PUMP COMPLIES WITH FED. REG #40CFR-264-163. PROVIDE 60 GALLON ‘CHEMTAINER’ #TC 2342DC-CA; ACID VAPOR RECOVERY TANK (500 LBS.), ONE (1) TOTAL.

.

2.22 SWIMMING POOL WATER CHEMISTRY CONTROLLER

A. SWIMMING POOL WATER CHEMISTRY CONTROLLER: PROVIDE ETHERNET CONNECTION TO CHEMTROL PC7000 WITH FLOW CELL, ORP SENSOR, PPM SENSOR, FILTER CONTROL PANEL WITH GUAGES AND BACKWASH CONTROL SOLENOID VALCES AND MANUAL BACKWASH VALVE, COMMUNICATION SOFTWARE WITH AUOT DIAL ALARM 4-20 OUTPUT, CORRESPONDING INPUT SENSORES , OUTPUT CONNCETIONS, TANK SENSORS, TRANSDUCERS REALYS VFD CONTROL (1) ONE 'IMPACT', 'WALLACE & TIERNAN' OR APPROVED EQUAL.

1. The integrated equipment room control system shall provide continuous monitoring and control of sanitizers, oxidizers, pH, temperature, system flow rate monitoring, total dissolved solids (TDS), turbidity, chemical inventory levels, surge tank and backwash holding tank water levels, system pressures, and water chemistry balance calculations. The control system shall also provide automatic control of the filtration system including backwash operation. Installation of the system shall be per the manufacturer’s specification and no exceptions shall be allowed. A factory trained/authorized representative shall provide system commissioning and training to the owner.

B. Certifications

1. The controller shall carry the following product certifications:

a. UL 61010-1

b. (CSA) C22.2 Number 61010-1

c. European Union Low Voltage Directive 73/23/EEC EN 61010-1

C. Sensors

The controller shall include pH, ORP, ppm and temperature sensors meeting the following requirements:

1. pH sensor

a. The controller shall continuously monitor, display and data log pH with 0.1 or 0.01 resolution (programmable) and provide a measurement of pH by utilizing a sensor with the following characteristics:

1) 0 – 14 sensing range;

2) ABS body with ½" NPT process connection;

3) Minimum of 32 milliliters of inorganic electrolyte gel; organic electrolytes, susceptible to breakdown in the presence of strong oxidants, shall not be considered equal;

4) A porous Teflon liquid junction to provide a stable, low impedance reference contact, and to prevent fouling and clogging of the liquid junction;

5) A silver/silver chloride (Ag/AgCl) reference element;

6) A general purpose glass membrane pH sensing element;

7) Operating temperature range of 0 - 80 degrees C;

8) Operating pressure range of 0 - 100 psiG.

2. ORP / HRR sensor

a. The controller shall continuously monitor, display and data log ORP with 1mV resolution and provide a measurement of ORP by utilizing a sensor with the following characteristics:

1) -1000 to +1000mV sensing range;

2) ABS body with ½" NPT process connection;

3) Minimum of 32 milliliters of inorganic electrolyte gel; organic electrolytes, susceptible to breakdown in the presence of strong oxidants, shall not be considered equal;

4) A porous Teflon liquid junction to provide a stable, low impedance reference contact, and to prevent fouling and clogging of the liquid junction;

5) A silver/silver chloride (Ag/AgCl) reference element;

6) A solid platinum or solid gold ORP sensing element with a minimum of 1 cm^2 surface area; platinum-plated and gold-plated sensing elements, which are susceptible to abrasives, shall not be considered equal;

7) Operating temperature range of 0 - 80 degrees C;

8) Operating pressure range of 0 - 100 psig.

3. Amperometric (ppm) Sensor

a. The optional Free Chlorine sensor shall be an amperometric probe system with a measuring range of 0.05 to 20 mg/l with a fully selectable scale and a temperature range of 36°-113° Fahrenheit. The amperometric probe shall come with a PVC body, replaceable PTFE membrane and electrolyte, gold cathode and silver/ silver chloride anode.

4. Temperature Sensor

a. The controller shall continuously monitor, display and data log temperature with 1°F resolution and provide a measurement of water temperature by utilizing a sensor with the following characteristics:

1) 32 – 212°F (0 – 100°C) sensing range;

2) 2 wire, 100Ω resistive temperature detector (RTD) with an 0.00385 Alpha.

5. Flow Sensor

a. The controller shall continuously monitor, display and data log flow rate with 0.1 gpm resolution and shall provide a measurement of pool circulation flow rate and volume by utilizing a flow sensor with the following characteristics:

1) 0-8800 gpm (0-33265 liter/min) measuring range,

2) Paddle wheel flow sensor with a frequency output,

3) Dual O-ring seal,

4) 25-foot cable,

5) Iron pipe saddle,

6) Flow volume: 999 trillion gallons, 1-gallon resolution; 999 trillion liters, 1 liter resolution.

6. 4-20mA Sensor

a. The controller shall be capable of reading a total of eight (8) 4-20mA output sensors, including the following:

1) Pressure Transducers (Quantity 2)

The controller shall continuously monitor, display and data log pressure(s) with 1 psiG resolution and provide measurement of filter influent and/or filter

effluent pressure by utilizing pressure transducer(s) with the following characteristics:

a) 0 to 100 psiG measuring range,

b) < ± 2% span max @ 25° C which includes linearity, hysteresis and repeatability,

c) 0.25% static error band and 1.5% typical thermal error band,

d) Temperature compensated and fully calibrated,

e) Stainless steel wetted components with plumbing connections of 1/4".

2) Vacuum Transducer (Quantity 1)

The controller shall continuously monitor, display and data log vacuum(s) with 1 psiG resolution and provide measurement of strainer vacuum by utilizing a vacuum transducer with the following characteristics:

a) -15 to +85 psiG measuring range,

b) < ± 2% span max @ 25° C which includes linearity, hysteresis and repeatability,

c) 0.25% static error band and 1.5% typical thermal error band,

d) Temperature compensated and fully calibrated,

e) Stainless steel wetted components with plumbing connections of 1/4".

3) Liquid Level Sensors - Three (3) total

The controller shall provide measurement of liquid levels for surge tanks, backwash holding tanks and/or liquid chemical inventory by utilizing liquid level sensor(s) with the following characteristics:

a) Field configurable sensing range from 3 ft. to 16 ft.,

b) Field calibration for various tank levels, shapes and sizes,

c) Non-contacting sensing elements enclosed in PVC.

4) 4) Conductivity/TDS Sensor

The controller shall continuously monitor, display and data log conductivity/TDS with 1 micromho/ppm resolution and provide a measurement of conductivity/TDS by utilizing a sensor with the following characteristics:

a) 0-20,000 micromhos (0-10,000 ppm TDS) measuring range

b) A 316 stainless steel electrode,

c) PTFE insulator as well as a dual EPR O-ring seals,

d) AC operation, which resists electrode plating.

D. User Interface

1. Standard Display

The standard display shall be a backlit transflective LCD with 14-line x 40 alpha/numeric graphical characters that will continuously display information related to the following:

a. All installed sensor readings,

b. Set points, with current control status,

c. All active alarms, including time activated,

d. Smart menus w/ integrated on-screen help.

2. Contrast adjustment of the backlit LCD shall be provided through clearly marked keys on the front-panel without the need for access to internal controller circuitry. After initial adjustment, controller shall monitor internal temperature and automatically adjust contrast to prevent LCD blackout in extreme ambient temperature conditions. Controllers that do not include front-panel contrast adjustment and automatic temperature compensation shall not be considered equal.
3. The standard user interface shall include single-touch access to Set Points, Relay Modes, Calibrations, Backwash status and settings, Menu access, and Reset Fail/Safes. An alphanumeric keypad shall be provided for ease of system configuration.

E. Control Functions

1. Water Chemistry

a. pH Control: The controller shall continuously control pH. Chemical feed shall be configurable for feed-up, feed-down, or dual feed and either on/off or time-based proportional feed.

b. Sanitizer Control: The controller shall continuously control sanitizer based upon the ORP reading, the amperometric sensor, or both with a bracketed control program. Chemical feed shall be configurable for either on/off or time-based proportional feed.

c. Bracketed Sanitizer Control: With the amperometric ppm sensor, the controller shall be configurable for bracketed sanitizer control; The bracketed control algorithm shall allow either the ORP or ppm setpoint to be chosen as the primary control point, while using other parameter to create a secondary boundary (min and max settings) that must be maintained in addition to the primary control point.

d. Sanitizer Booster Feed: The controller shall have a sanitizer booster program with selectable ORP and/or ppm set points with separate ending set points, allowing the option of the booster sanitizer to control to a lower set point while the primary system can recovers.

e. Ozone/UV Control: The controller shall provide feed-up control of an ozone or UV system based upon ORP and/or ppm set points. A Fireman Cycle feature shall turn off the Ozone/UV relay 0 to 60 minutes (settable) prior to backwash initiation or recirculation pump shutdown. The Ozone/UV control algorithm shall include an Energy Conservation mode, with on/off set time and secondary set point.

f. Superchlorination: The controller shall have a programmable superchlorination function, based ORP or ppm superchlor setpoint, which is triggered manually.

g. Dechlorination: The controller shall have a programmable dechlorination function, based upon ORP or ppm dechlor setpoint, which is triggered either manually or by the completion of the superchlorination function.

h. LSI & RSI: The controller shall compute the Langelier Saturation Index and the Ryznar Saturation Index based upon current inputs and the Ca Hardness and Alkalinity entered by the operator.

i. Flow Monitoring: The controller shall continuously monitor, display, and data log system flow, maintaining a total flow volume. A low flow alarm shall be operator settable, which can be programmed to disable chemical feeds.

j. Heater Control: The controller shall perform on/off control of a heater based upon an operator settable temperature set point. A Fireman Cycle feature shall turn off the heater 0 to 60 minutes (settable) prior to recirculation pump shutdown. Heater control algorithm shall include an Energy Conservation mode, with on/off set time and secondary temperature set point.

k. Chemical Inventory Monitoring: The controller shall continuously monitor, display, and data log liquid pH adjuster and sanitizer inventory levels. The controller shall include low chemical level alarm points for each chemical being monitored.

l. Backwash tank Monitoring: The controller shall continuously monitor, display, and data log backwash holding tank levels.

m. Surge tank Monitoring: The controller shall continuously monitor, display, and data log surge tank levels.

n. Autofill: The controller shall automatically control a water makeup relay to add makeup water to maintain pool level set point, based upon surge tanks (or equivalent) level, with an overfill delay feature. The controller shall provide a programmable alternate set point (4 event 28-day timer). Use in conjunction with 3” valve specified in Section 13157 2.03G

o. Sensor Wash: The controller shall include a programmable sensor wash with start and end time, feed duration, and number of cycle to allow multiple feed cycles per day.

F. Energy Conservation

1. Alternate Setpoints: The controller shall have alternate Sanitizer, Heater, and Autofill setpoints, based upon a 4 event 28-day timer.
2. Energy Conservation Mode: The controller shall have the capability to disable all mechanical and chemical functions during programmed conservation cycle. The Energy

Conservation Mode shall include the ability to periodically monitor and satisfy all operation requirements based upon a programmed time schedule.

G. Automatic Backwash

1. Backwash Initiation: The controller shall be user configurable to initiate backwash upon any of the following conditions:

   a. Time, based upon a 24-hour, 7-day programmable calendar,

   b. Pressure Differential, taken from either a pressure differential switch or an operator settable low pressure differential setpoint based upon the differential between two installed pressure transducers,

   c. Low System Flow, an operator settable low flow set point based upon the installed system flow meter,

   d. Totalized filter water volume, an operator settable totalized filter water volume set point based upon the total system flow maintained by the controller from the installed system flow meter,

   e. High filter effluent turbidity, an operator settable turbidity set point based upon the installed turbidity sensor,

   f. Manual, which only initiates backwash when manually activated by operator.

2. Normal Operation: The controller shall be capable of controlling the backwash operation of up to 16 filters, with the following backwash features included as part of normal programming.

   a. Inhibit Period, Operator settable daily time period during which backwash is prevented from being triggered.

   b. Backwash Frequency Fail Safe: Prevents an automatically triggered backwash from starting within this time period from the end of the previous backwash. Does not prevent a Manual initiation of backwash.

   c. Fireman Cycles: The controller shall provide operator settable independent Fireman Cycle settings for the Heater and Ozone/UV controls. The controller shall automatically delay the start of the backwash operation until the Heater and Ozone/UV controls have been deactivated and the corresponding Fireman Cycles have expired.

   d. Primary/Priority Valve Management: Primary/Priority valve control closes a Primary/Priority valve during backwash of a filter to increase the flow through the filter being backwashed.

   e. Alternate Lead Filter, in multiple filter systems, the controller shall automatically alternate the lead filter in each successive backwash cycle, in order to assure an effective full backwash of all filters in the system.

   f. Backwash duration: Operator settable length of time to backwash each filter.

g. Dwell Time: Operator settable length of time to delay after each filter is backwashed.

3. Backwash Holding Tank Management: The controller shall be capable of monitoring the backwash holding tank to prevent overflow, by adjusting the backwash cycle as follows:

a. Suspend backwash when the holding tank is full, allowing time for the holding tank to drain.

b. Automatically resume backwash when the holding tank is empty.

c. An operator settable timeout which monitors the amount of time the backwash holding tank takes to drain. If this timeout is exceeded, a limit timer alarm is activated and the backwash cycle cancelled.

4. Advanced Backwash Optimization: The controller shall be capable of the following advanced features as part of the normal backwash programming:

a. Backwash accessory: Turns on an additional relay before, during, and/or after backwash operations based upon operator settable parameters; useful for sites where application of a dechlorination agent to backwash water (holding tank) is required.

b. Water Saving (Turbidity): The controller shall be capable of monitoring backwash effluent turbidity and ending a filter backwash early upon reaching a desired turbidity set point.

c. Filter Isolation: During backwash suspension due to full backwash holding tank, allows suspended filter to be isolated from the system rather than being returned to filter mode. This prevents the filter bed from recompacting, making the resumed backwash rapidly effective. Requires properly equipped filters.

H. Main Recirculation Pump

1. On/Off Control with Relay:

Controller shall provide the capability to interface to and control a recirculation pump with a programmable relay. The controller shall include the following capabilities, available as appropriate based upon installed sensors and implemented features:

a. Fireman Switch: The following events shall satisfy Fireman Switch timing requirements prior to turning off recirculation pump:

1) Backwash Operations

2) Energy Conservation mode (24 hr., 7-day function)

3) Manual off

b. Immediate: The following events immediately turn off recirculation pump, regardless of Fireman Switch timing requirements:

1) Surge Tank Level Low Alarm: Turn off pump immediately (surge tank is almost empty)

2) Strainer Vacuum High Alarm: Turn off pump immediately (possible entrapment)

3) Emergency shutdown, triggered by front-panel Emergency Off: Turn off pump immediately (per Operator)

I. Total Dynamic Head (TDH)

1. Controller shall provide the capability to continuously monitor the Total Dynamic Head (TDH) of the main recirculation pump, directly calculated by the controller from recirculation pump influent vacuum and filter influent pressure transducers. TDH shall be displayed on the user interface and recorded in data logs, with user-programmable High and Low TDH Alarm settings.

J. Control Outputs

1. Relay Outputs - Solid-State Relays:

a. The controller shall come with a total of 4 integral line or dry contact 5A solid-state relay outputs capable of switching 3A under all normal operating conditions, accounting for the effects of the temperature gradient inside the NEMA 4X enclosure. Systems that utilize relays that are not de-rated must submit an engineering evaluation justifying the use of relays at their full, optimal-condition capacity.

2. Mechanical Relays - The controller shall come with a total of 3 mechanical relays:

a. 1 integral 8A dry contact mechanical relay, and

b. 4 integral 3A dry contact or line powered mechanical relays.

c. Since mechanical relays have the inherent risk of failing in the closed (active) position, as a safety measure the controller shall preclude the ability to assign any of the integral mechanical relays to chemical feed functions. Systems that do not preclude mechanical relays from being configured for chemical feeds shall not be considered equal.

3. Expansion Relay Outputs

a. The controller shall be capable of expanding the number of relay outputs available by adding up to 3 expansion modules in any combination.

K. Solid-State Relay Expansion Modules

1. Each Solid-State Relay Expansion Module provides 5 integral 5A solid state dry contact or line powered relays capable of switching 3A under all normal operating conditions. Systems that utilize relays that are not de-rated must submit an engineering evaluation justifying the use of relays at their full, optimal-condition capacity.

L. Mechanical Relay Expansion Modules

1. Each Mechanical Relay Expansion Module provides 5 integral mechanical relays:

a. 1 integral 8A dry contact mechanical relay, and

b. 4 integral 3A dry contact or line powered mechanical relays.

c. Since mechanical relays have the inherent risk of failing in the closed (active) position, as a safety measure the controller shall preclude the ability to assign any of the integral mechanical relays to chemical feed functions. Systems that do not preclude mechanical relays from being configured for chemical feeds shall not be considered equal.

M. Safety Features

1. Manual-On limit

a. The controller shall have built-in limits to the amount of time any relay control output may be forced on (i.e. in “Manual On” mode). This is an important safety feature to prevent control outputs from inadvertently being left forced on after service or diagnostics.

2. High/Low Alarm Settings & Control Lockouts

a. The controller shall have programmable high and low alarm settings for pH, ORP, PPM, temperature, low flow & no flow and chemical overfeed, turbidity, pressure & vacuum, surge tank levels, chemical inventory.

b. The controller shall have a programmable lockout of sanitizer feed upon pH high or low alarm.

3. No Flow Alarm & Flow Restored Delay

a. The controller shall activate a No Flow alarm when the dedicated sample stream flow switch indicates there is insufficient flow through the sample stream. This No Flow alarm shall lockout all chemical feed control operations.

b. The controller shall include a Flow Restored Delay, which shall extend the No Flow lockout user-programmable amount of time after the No Flow alarm ends (i.e. flow is restored). This feature is necessary to assure that the system has valid, stable sensor readings of circulating water prior to making chemical feed control decisions.

c. Feed Limit Alarms

d. The controller shall trigger a Failsafe alarm if a chemical feed relay remains on longer than the programmable Feed Limit Timer. Chemical feeds shall automatically be disabled if the corresponding reading goes into a Failsafe alarm condition.

4. Emergency Off

a. The controller shall have a dedicated Emergency Off button on the front panel of the system, which immediately halts all chemical feeds and control outputs when pressed. This feature shall be password protectable, which shall require entry of one of the Security passwords.

5. Safety Shield

a. The controller shall include a safety shield or other mechanism for allowing fuse replacement without access to high voltage circuitry or wiring.

N. Security

1. The controller shall have three security password levels: six for operators, two for managers and one for the distributor providing for a history of access identified by the user.

O. Data Logging

1. The controller shall have 512K battery backed-up RAM for input level recording and events. All input level shall be recorded for 10 to 56 days depending on sample rate (2to 10 minutes).
2. The controller shall record and maintain the latest 1100 events over a maximum of 14 days recording all alarms, parameter changes, user logins, and operational cycles related to all control features

P. Local Alarms / Indicators

1. The controller shall signal all alarm conditions with the following indicators:

a. A bright red flashing LED on the front of the controller,

b. Activation of a master alarm signal provided as a dry contact relay enabling the use of 0-240 VAC alarms, and each active alarm listed on the LCD display along with time activated.

Q. Remote Communication, Access and Alarm Notification

1. Ethernet

a. The controller shall come with a standard, integral 100BaseT Ethernet connection. The controller shall be capable of providing Remote Access via PC with Ethernet connection and Alarm Notification via email or text message via an Ethernet connection to the Internet.

R. Enclosure

1. The controller shall be housed in a NEMA 4X polycarbonate enclosure.

S. Flow Cell

1. PVC flow cell

a. The flowcell shall have a PVC body with two ½" NPT ports for pH and ORP sensors, two ¼"NPT ports for temperature sensor and sensor wash acid injection, and a clear acrylic front viewing window. The flowcell design shall provide precise sample flow rate and water velocity regulation past the probes. The flowcell shall come provided with PVC ½" isolation ball valves, PVC ¼" wet test valve and standard reed or optional rotary flow switch.

b. Each flowcell shall be equipped with a pressure-sensing device. The pressure sensor shall consist of a compound pressure/vacuum gauge manufactured in

stainless steel, 2 ½" diameter, liquid filled with an operating pressure range of 0 to 60 psig and vacuum of 0 to –30 in./ Hg.

T. Packaged System Enclosure

1. The equipment room controller and flowcell with sensors shall be mounted onto a 3/8" thick PVC backplate. The flowcell shall be completely assembled and reading for integration into the plumbing.

U. AC Surge Suppression

1. An integrated solid-state devise shall be furnished to protect each mechanical room control system from excessive line voltage at controller.
2. Device shall be housed in a tamper proof enclosure provided with mounting tabs and have ½" NPT hardwire connection, with LED indicator light, UL listed.

V. Commissioning / Start-Up, Warranty and Manuals

1. Controller and sensing probes (ORP, pH, ppm) shall be covered by a standard manufacturer's 5-year warranty. Manufacturer's representative shall provide a complete set of new probes on the fifth year of operation.
2. The control system shall be provided with on-site start-up, on-site operator training, and 2 years on-site warranty service performed by a factory trained and certified representative of the controller manufacturer.
3. Manufacturer's representative shall supply an Operator's Manual describing system features and operating instructions.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to installing the items of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.
2. Verify that the swimming pool equipment items may be installed in strict accordance with original design, pertinent codes and regulations, and the manufacturers' recommendations.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative's Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies are fully resolved.
3. Failure to notify the Owner's Representative's Representative and give written notice of discrepancies shall constitute acceptance by the Installer of existing conditions as fit and proper to receive its Work.

3.2 INSTALLATION

A. Supply and install items of swimming pool equipment in strict accordance with applicable codes and regulations, the original design, and the manufacturer's published recommendations, anchoring firmly and securely for long life under hard use.

B. Coordinate with other trades to insure all imbedded items are set plumb and flush. Railing ends must have anchor sockets and escutcheon plates. Be certain that deck equipment and railings are properly bonded prior to imbedding.

C. All equipment shall be braced and/or anchored to resist a horizontal force acting in any direction using the criteria shown on the Drawings.

3.3 INSTRUCTION

A. The Contractor shall provide a factory certified representative(s) to start-up and certify proper installation, operation and full warranty status of all swimming pool mechanical equipment. The Contractor shall provide not less than two 8-hour days of on-site training for facility staff in the operation and maintenance of the swimming pool mechanical equipment and systems. The two 8-hour days shall be separated by a minimum of seven calendar days and be completed within the 14-day start-up period.

3.4 EQUIPMENT ACTIVATION

A. All water chemistry and filtration mechanical equipment shall be operational upon filling of pool after plaster. Chemicals and other related support items as supplied by Contractor, shall be in supply at start-up.

B. For the first fourteen (14) calendar days after completion of the pool plaster, brush all plastered surfaces at least twice a day and coordinate with General Contractor to ensure that the plaster is carefully maintained after the initial fourteen-day period. In addition, coordinate with the Contractor to ensure that pool filtration equipment is continuously running during the initial fourteen-day period.

C. Start-up and provide qualified personnel to operate pool equipment for a period not less than fourteen (14) days after the pool is placed in operation, or until the Owner takes occupancy of the facility or letter of substantial completion. During this time, Contractor shall instruct and supervise the Owner's personnel in the various operating and maintenance techniques involved. Contractor shall be responsible for supply of chemicals during this not less than fourteen (14) day period and at time of turnover to Owner, chemical storage tanks shall be full. (Owner's personnel shall be fully trained and capable of assuming swimming pool maintenance tasks, training may begin before Owner takes occupancy).

3.5 CLEAN-UP

A. Upon completion of swimming pool equipment, remove all debris, materials and equipment occasioned by this Work to the approval of the Owner’s Representative’s Representative.

END OF SECTION

SECTION 13 1107
SWIMMING POOL MECHANICAL

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Swimming pool mechanical piping as indicated on the Drawings for circulation and filtration systems, pool water heating systems, chemical control systems, booster pump systems and appurtenances.

B. Domestic water system from points of connection within swimming pool mechanical equipment room to make-up water system.

C. Filter backwash piping to point of connection with backwash retention pit as required.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards:

1. All equipment supplied or work performed shall comply with Chapter 31B of the 2019 California Building Code.

2. Work shall be performed in accordance with the applicable editions of all National, State and local codes, laws, regulations and ordinances, including the following:

a. American National Standards Institute (ANSI).

b. American Society for Testing Materials (ASTM).

c. American Waterworks Association (AWWA).

d. American Welding Society (AWS).

3. Do not construe anything in the Drawings or Specifications to permit Work not conforming to these requirements.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300.

B. Required submittals include:

1. Pipe and Fittings as specified in Article 2.2 of this Section.

2. Valves as specified in Article 2.3 of this Section.

3. Pressure / Vacuum Gauges as specified in Article 2.4 of this Section.

4. Pipe Hangers and Supports as specified in Article 2.5 of this Section.

5. Sleeves and Waterstops as specified in Article 2.6 of this Section.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool mechanical items before, during and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative and at no additional cost to the Owner.

1.5 JOB CONDITIONS

A. Cooperate with entities performing Work specified in other Sections to so that no conflict of new construction or occupied space may occur. Should any installation Work be done without such craft coordination, that Work so installed shall be removed and re-installed.

PART 2 - PRODUCTS

2.1 PRODUCT QUALITY

A. Materials and equipment shall be new, of the best quality for the purpose intended, and shall be clearly marked with the manufacturer's name and nameplate data or stamp and rating. As far as practicable, materials and equipment shall be of one manufacturer.

2.2 PIPE AND FITTINGS

A. PVC Schedule 40: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be white. Dura, Lasco, or approved equal.

B. PVC Schedule 80: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be gray. Dura, Lasco, or approved equal.

C. CPVC Schedule 80 Influent/Effluent Heating Piping: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be gray. Dura, Lasco, or approved equal.

D. PVC DR25: Conforming to ATSM D-1784, use with epoxy coated bell and spigot-type fittings or epoxy coated mechanical joint by flange adapters with epoxy coated cast iron fittings as specified in Article 2.02 (F), below. Johns-Manville "Big Blue", Diamond Plastics, or approved equal.

E. Copper Tubing: ASTM Specification B-88, hard drawn, with ANSI Standard B16.22 wrot copper fittings.

F. Steel: ASTM Specification A-120, Schedule 40 black or galvanized pipe with ASTM A-47 150 lb. banded malleable iron threaded fittings.

G. Cast Iron: ASTM Specification B16.1, cast iron flanged fittings, provide epoxy coating as required for use with chlorinated water.

2.3 VALVES

A. Ball Valves:

1. For pool system: True-Union design, PTFE seat material with FPM or FKM Double O-ring stem seals, locking handle, NSF certified. PVC schedule 80 body for below grade installation. PVC Schedule 80 body for above grade installation. Furnish ball valves on all pipe diameters 2½" or less with a rating of at least 200psi at 73°F. Asahi, Ipex, or Nibco.

2. For copper pipe system: 3-piece full-port Bronze body valve with Teflon seat, 'Apollo', 'Nibco' or approved equal.

B. Butterfly Valves:

1. Epoxy coated cast or ductile iron body, 316 stainless steel disc and stem, viton seat material, furnish hand wheel/gear operators on all valves 8" and larger. DeZurick, Keystone, or Ipex.

2. PVC body, PVC disc and EPDM construction suitable for chlorinated water applications. Stem shall be of 316 stainless steel and non-wetted. Valves shall be self-gasketed design with a convex sealing arrangement. Valves 1-1/2" – 10" shall be rated to 150 psi and 12" valves shall be rated to 100 psi at 70°F. Asahi Pool-Pro, no known equal.

C. Check Valves: Wafer-type, epoxy coated cast or ductile iron body, 316 stainless steel plates and shaft, viton seat material. Centerline, Metraflex, or approved equal.

D. Surge Chamber Float Valve: EPD #2-0020-230 Float Control Valve, 10"-line size, as manufactured by Environmental Products Division of Doughboy Recreational, Rancho Cucamonga, CA, no known equal.

E. Surge Chamber Isolation Valve: Butterfly valve, tapped lug style, bronze body, stainless steel stem, bronze disc, phenolic back-up ring, EPT seat material. Provide stainless steel shaft

extension, shaft housing and tool operator located 2'-0" above floor level with deck access grate as required. DeZurick, Keystone, Asahi, Spears, Ipex or approved equal.

F. RP Backflow Preventer: Febco #835-B for 2" and smaller; #825 for 2-1/2" and larger. Febco, Watts, or approved equal.

G. Swimming Pool Make-up Water Control: 3" 'Cla-Val' fill system to include 3" 'Cla-Val' solenoid control valve #136-01BY, 3" ductile iron, epoxy coated body with cast iron disc retainer and diaphragm washer, bronze trim, flanged globe pattern, 120V at 60 Hz. Solenoid wiring shall be wired to water chemistry controller. Provide 6" air gap at fill point.

H. Wet Play Fill System: 1" 'Cla-Val' fill system to include 1" 'Cla-Val' solenoid control valve #136-01BY, 1" duct iron, epoxy coated body with cast iron disc retainer and diaphragm washer, bronze trim, flanged globe pattern, 120V at 60 hz. Solenoid wiring shall be wired to water chemistry controller. Provide 2" air gap at fill point.

2.4 PRESSURE / VACUUM GAUGES

A. Furnish and install pressure and vacuum gauges on the discharge and suction sides of all pumps. 2" or 2 ½" dial, bottom connection, chrome ring, shut-off cock and snubber. Ranges shall be selected to indicate between mid-point and two-thirds of maximum range under design conditions. Marsh, Trerice, or approved equal.

2.5 PIPE HANGERS AND SUPPORTS

A. General:

1. The requirements of this Section relates to various requirements of the Agreement, General and Supplementary Conditions, Specifications, Drawings, and modifying documents which are part of the Construction Contract. Responsibility for coordination of all such applicable requirements will be that of the Contractor.

B. Description:

1. This section provides guidelines and limitations for the support of all mechanical, electrical, plumbing or architectural items from the building structure, and for the seismic bracing of such items.

2. Design and install all support and bracing systems as required for the swimming pool systems. Provide for attachment to portions of the building structure capable of bearing the loads imposed. Design these systems to not overstress the building structure.

C. Quality Assurance:

1. Design and install all support systems to comply with the requirements of the 2019 California Building Code, Chapter 16A.

2. Seismic bracing is to be designed by a professional engineer licensed in the State of California.

3. For the seismic bracing of mechanical, electrical and plumbing system, refer to "Guidelines for Seismic Restraints of Mechanical Systems and Plumbing Piping Systems"

by Sheet Metal and Air Conditioning Contractors National Association, Inc., (SMACNA) for guidelines.

D. Submittals:

1. Submit shop drawings for all substructures and attachment methods.

2. Submit proposed alternative methods of attachment for review and approval by the Architects, prior to deviating from the requirements given below.

3. For all pipe hangers and support systems, submit structural calculations and details which include all resultant forces applied to the building structure and are prepared and signed by the Contractor’s licensed California professional engineer. Calculations will be reviewed for compliance with design criteria, not for arithmetic.

E. Materials:

1. Use Kin-Line, Grinnel, or approved equal.

2. Support all pipelines individually with hangers, each branch having at least one hanger. Lateral brace as noted and required.

3. Support piping near floor with steel stanchions welded to end plates secured to pipe and floor.

4. Support vertical piping at each floor level. Install coupling in piping at each support. Coupling shall rest on and transmit load to support. Isolate copper from steel supports with vinyl electrician's tape around pipe and coupling.

5. Use Stoneman "Trisolator," Unistrut, or approved equal, isolators at each hanger and other support points on bare copper tubing system.

6. For PVC pipe, space hangers four (4) feet apart for pipe sizes 1" and under, five (5) feet apart for pipe sizes 1-1/4" to 2", and six (6) feet apart for pipe sizes over 2". Space hangers for horizontal pipes at a maximum of six (6) feet for copper 2" and smaller and for steel 1-1/4" and smaller; ten (10) feet for copper 2-1/2" and larger and for steel 1-1/2" and larger.

7. Size hanger rods, screws, bolts, nuts, etc., according to manufacturer's sizing charts.

8. Trapeze hangers may be used for parallel lines.

9. Use galvanized or cadmium plated hangers, attachments, rods, nuts, bolts, and other accessories in pool mechanical room, high humidity areas, or where exposed to weather. Hot dip galvanize all items which are not factory furnished. Plating for hinged movements must be done at the factory.

10. Lateral Bracing: To prevent swaying of the piping systems, provide angle iron bracing and anchor into wall or overhead framing. Piping shall be braced or anchored in such a way as to resist a horizontal force of 50% of its operating weight in any direction.

11. Do not use wire or other makeshift devices for hangers.

12. Furnish all substructures and fasteners required to comply with the limitations given below. Use material as specified in the various sections and as appropriate to their use.

F. Guidelines & Limitations:

1. Each Contractor will coordinate the load requirements from all subcontractors so that no combination of loads overstresses the building structure or exceed the limitations given below.

2. Concrete Structure:

a. Support all loads hung from concrete structure with cast-in-place inserts, unless drilled-in anchors are specifically approved in writing prior to placing the concrete.

b. Concrete anchors must not penetrate into reinforcing bars. Where the anchors boring indicates the presence of reinforcing bar, patch hole with an epoxy type grout and relocate anchor 12 diameters away.

c. Individual expansion anchors cannot support any loads greater than 300 pounds or manufacturer's specified load capacity without approval.

3. Steel Structure:

a. Hang no more than 20 pounds per metal deck rib in any span.

b. At beams, hang all beam loads greater than 40 pounds concentric to beam, not off the flanges.

c. Attached no loads to the beams or girders greater than the following without specific approval from the architect;

1) Roof beams and girders: 300-pound point load or 600-pound total load for a single span.

G. Seismic Bracing:

1. Design and install seismic bracing to not ground out vibration and sound isolation systems.

2. All items of mechanical and electrical equipment 60" or more in height are to be seismically braced whether such bracing is shown or not.

2.6 SLEEVES AND WATERSTOPS

A. Provide sleeves where work of this Section passes through fire rated partitions, floors and ceilings, concrete slabs or exterior of structure. Caulk clearance space using sealant appropriate for application in conformance with manufacturer's recommendations and Title 24 of California Code of Regulations. 3m, Dow Corning, or approved equal. In lieu of sleeves and caulking, "Link Seal" products may be used.

B. Provide prefabricated waterstops as indicated on the Drawings at all pipe penetrations through structures containing stored water (i.e., swimming pools, balance/surge tanks, etc.) to insure leak-proof seals.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to Work of this Section, carefully inspect the installed Work of other trades and verify that such work is complete to the point where this installation may properly commence.

2. Verify that items of this Section may be installed in accordance with the original design and referenced standards.

B. B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.

2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive his work.

3.2 ABBREVIATIONS AND SYMBOLS

A. Abbreviations and symbols on the Drawings are those most commonly used. Obtain clarification from the Owner's Representative on any questionable items before bid.

3.3 GENERAL PIPING REQUIREMENTS

A. Size any section of pipe for which size is not indicated or any intermediate section erroneously shown undersized the same size as the largest pipe connecting to it. Sizes listed are nominal.

B. Cut pipe accurately to job measurements and install without springing or forcing, true to line and grade, generally square with building and/or structures and adequately supported to prevent undue stress on pipe, fittings and accessories.

C. Make changes of direction with manufactured fittings. Street ells, bushings, reducing flanges, close nipples or bending of pipe is not allowed.

D. Use great care to install piping in accordance with best practice. Plastic pipe shall be "snaked" in trenches to allow for thermal expansion.

E. All above grade, below grade and buried or imbedded PVC shall be installed using solvent weld fittings. Also, each and every fitting and pipe end shall be prepared with solvent primer. Fittings shall be joined individually and with enough time between assembly of adjacent joints to allow them to seal solidly. After joining, an even ring of primer must be visible around the entire fitting. If any fittings are installed without visible primer, the fitting shall be removed and discarded and piping recut, rechamfered and joint made up again using a new fitting. All procedures, methods and techniques used to make up solvent weld joints shall be in strict accordance with manufacturer's recommendations.

F. Arrange pipe and hangers to allow for expansion, contraction and structural settlement. No pipe shall contact structure except penetrations as shown on the Drawings.

G. Provide dielectric connections between copper and dissimilar metals. In copper systems, threaded piping. Including connections to equipment shall be brass pipe and fittings. Install dielectric connections in vertical sections of piping only.

H. Run pipe full size through shut-off valves, balancing valves, etc. Change pipe size within three (3) pipe diameters of final connection to control valves, fixtures and other equipment.

I. Provide unions or flanges at connections to equipment, on service side of valves and elsewhere as required to facilitate ease of maintenance.

J. Locate equipment shut-off valves as close to equipment as possible maintaining easy valve access.

K. Make all connections between domestic water systems and equipment or face piping with approved backflow prevention devices as required.

L. All PVC pipe exposed to direct sunlight shall be painted with two coats of Exterior Acrylic Semi-Gloss Paint, Sherwin Williams or equal. Color to be selected by the Architect. Prior to painting the PVC pipes, the exterior of all PVC pipes shall be wiped with Methyl Ethyl Ketone, or an approved equal, to remove the glaze from the pipes.

M. The Main Drain pipe must run either level or uphill from the main drain sump, through the surge pit (if applicable) and then to the circulation pump.

3.4 TRENCH EXCAVATION AND BACKFILL

A. Excavation:

1. Excavate and backfill trenches as required for the Work of this Section. Conform to requirements of Section 131101.

2. The Contractor shall perform all excavation of every description and of whatever materials encountered, to the depths indicated on the Drawings or as necessary. The Contractor shall dispose of the excavated materials not required or suitable for backfill as directed, and shall perform such grading as may be necessary to prevent surface water from flowing into the trenches. The Contractor shall provide adequate equipment for the removal of storm or subsurface waters, which may accumulate in the excavated areas.

B. Trenching:

1. Excavate trenches to lines and grades as indicated on the Drawings and with banks as nearly vertical as practicable.

2. Bottoms of trenches shall be accurately graded to provide uniform bearing on undisturbed soil for the entire length of each section of pipe.

3. The width of the trench at and below the top of the pipe shall be such that the clear space between the barrel of the pipe and the trench wall shall not exceed 8” on either side of the pipe. The width of trench above the top of pipe may be wider if necessary.

4. Over-depth excavations shall be filled with tamped sand to required grades.

5. Excavations of five (5) feet or more in depth shall be shored or supported in conformance with rules, and regulations of State and Federal Governments. Shoring shall be constructed, maintained and removed in a manner to prevent caving of the excavation walls or other load on the pipe.

C. Backfilling:

1. Material for backfilling of pipes shall be approved granular material less than two (2) inches in diameter obtained from the excavation. No material of a perishable, spongy or otherwise unsuitable nature shall be used as backfill.

2. Backfilling of pipe trenches shall commence immediately after installation and testing to preclude damage to the installed pipe. Backfill around pipe shall be carefully placed so as not to displace or damage the pipe, and shall be carried up symmetrically on each side of the pipe to one foot above the top of the pipe. The material shall be carefully compacted or consolidated before additional backfill is placed.

3. Backfill above an elevation of one foot above the top of pipe in conformance with requirements of Section 131101. Material for balance of backfill shall be approved granular material less than six (6) inches in diameter taken from the excavation.

4. Unless otherwise indicated on the Drawings, all pipe shall have a minimum of eighteen (18) inches of cover.

3.5 GENERAL EQUIPMENT REQUIREMENTS

A. Position equipment to result in good appearance and easy access to all components for maintenance and repairs.

B. Install piping, flues, breeching and ducts so that they do not interfere with equipment access.

C. Install level, secure and out of moisture. Provide shims, anchors, support straps, angles, grouted bases, or other items as required to accomplish proper installation.

D. All screws, nuts, bolts and washers shall be galvanized, cadmium plated or stainless steel. After fabrication, hot-dip galvanize unfinished ferrous items for outdoor, below grade or other use subject to moisture.

E. Extend 1/2” Schedule 40 black steel pipe lubrication tubes from all hard to reach locations to front of equipment or to access points. Terminate with proper type of lubrication fitting.

3.6 VALVES AND STRAINERS

A. If no shut-off is indicated, provide ball valves at inlet connections and balance valves at outlet connections to fixtures and equipment. Provide proper valve trim for service intended.

B. Use no solder end valves unless noted otherwise; provide adapters in copper tubing systems.

C. Locate valves with stems above horizontal plane of pipe. In general, locate valves within six (6) feet of floor, out from under equipment, in accessible locations with adequate clearance around hand wheels or levers for easy operation.

D. Provide all valves, cocks and strainers, full pipe size unless indicated otherwise.

E. Provide hand wheel operators on all valves 6” and larger, under 6” lever operators may be used.

F. Provide tool operated valve with stainless steel shaft extension and 'on deck' tool operation for surge chamber butterfly isolation valve.

3.7 IDENTIFICATION OF PIPING

A. Identify each valve by a numbered brass tag with hole and brass chain mounted on valve stem or handle. Tag to be a minimum of 1” in diameter and numbers at least ¼” high stamped into tag. Valves and plumbing lines shall be labeled clearly with the source or destination descriptions.

B. Install an identification chart in a plastic or glass framed enclosure, which schematically illustrates the proper operation of all piping systems and indicates number and location of all valves and control devices within the system.

C. The direction of flow for the recirculation equipment shall be labeled clearly with directional symbols such as arrows on all piping in the equipment area. Where the recirculation equipment for more than one pool is located on site, the equipment shall be marked as to which pool the equipment serves.

3.8 TESTS

A. Perform tests in presence of Owner’s Representative with no pressure loss or noticeable leaks.

B. Do not include valves and equipment in tests. Include connection to previously tested sections if systems are tested in sections.

C. Perform tests as follows:

System	Test Pressure	Test Medium	Duration
Skimmer Lines and Lawson Main Drain sump lines	20 psig	Water*	4 hours
Pool Piping	50 psig	Water*****	4 hours
Pool Main Drains	30 psig	Water*	4 hours
Domestic Water	150 psig	Water*****	4 hours

***Never test PVC pipe or fittings with air or other gases, always use water.**

3.9 PIPE MATERIAL APPLICATION

A. PVC Schedule 40: Below grade swimming pool piping and domestic water piping up to 12” line size; use standard solvent weld fittings.

B. PVC Schedule 80: Above grade swimming pool piping up to 12” line size; use solvent weld Schedule 80 or epoxy coated cast iron fittings.

C. Type L Hard Copper: Above grade domestic water piping.

D. CPVC Schedule 80; Pool Heater Piping.

E. Schedule 40 Steel: Natural gas piping.

3.10 CUTTING AND DRILLING

A. Cutting or drilling necessary for installation of Work of this Section shall be done only with approval of Owner's Representative.

3.11 CLOSING-IN OF UNINSPECTED WORK

A. Do not cover or enclose Work before testing and inspection. Re-open Work prematurely closed and restore all Work damaged.

3.12 QUIETNESS

A. Quietness is a requirement. Eliminate noise, other than that caused by specified equipment operating at optimum conditions, as directed by Owner's Representative.

3.13 FLUSHING OF LINES

A. Flush or blow out pipes free from foreign substances before installing valves, stops or making final connections. Clean piping systems of dirt and dust prior to initial start-up.

B. Just prior to plastering the pool, under the observations of the IOR, the pool mechanical system shall be flushed using the pool circulation pump. Circulate water through the mechanical system until the effluent water from the pool return heads runs clean.

3.14 CLEAN-UP

A. After all Work has been tested and approved, the Swimming Pool Subcontractor shall thoroughly clean all parts of the equipment installations, including all pool pipe and fittings in the pool mechanical room. Exposed parts shall be cleaned of cement, plaster and other materials and all grease and oil spots removed with solvent.

B. The Swimming Pool Subcontractor shall remove debris from the Project site. Cartons, boxes, packing crates and excess materials not used, occasioned by this work shall be disposed of to the satisfaction of the Owner's Representative.

C. If the above requirements of clean up are not performed to the satisfaction of the Owner's Representative, the Owner reserves the right to order the work done, the cost of which shall be borne by the Swimming Pool Subcontractor.

END OF SECTION

SECTION 13 1108
SWIMMING POOL ELECTRICAL

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Provide labor, materials and equipment as required to install the swimming pool electrical system including but not limited to:

1. A complete and operable system of service equipment, switchboards, panelboards, conduits, switches, time clocks and wiring for power and lighting, motor control centers.

2. Junction and/or pull boxes, conduits, disconnects, starters, contactors, wiring and connection of all motors and mechanical equipment, including connection and wiring of line voltage controls associated with the mechanical systems.

3. Swimming pool underwater lighting systems.

4. Swimming pool timing system outlets and scoreboard.

5. Complete grounding system as required and shown on the Drawings.

6. Complete equipotential bonding system as required and shown on the Drawings.

7. Adjusting and preliminary operation of the completed electrical system as described in Article 3.6, A of this Section.

8. Cleaning of all completed Work and installation adjustment of all trim and decorative items.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.

2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.

3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Ordinances and Codes: Materials and construction shall conform with all applicable code requirements, including:

1. National Electrical Code, latest edition; Electrical Safety Orders of the State of California; Department of Industrial Relations; regulations of the State Fire Marshal; rules and regulations of the Board of Underwriters of the Pacific, UL 50, 50E and NEMA 250 rating

2. Chapter 31 of the 2019 California Building Code.

C. Verification of Conditions:

1. The locations shown on the Drawings are diagrammatic only and the exact finish location of equipment and materials cannot be indicated. Therefore, locations of all Work and equipment shall be verified to avoid interferences, preserve head room and keep openings and passageways clear. Changes shall be made in locations of equipment and materials which may be necessary to accomplish these purposes.

D. Preliminary Operations and Testing:

1. Motor driven equipment shall be tested for correct rotation and completion of all connections.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 3300.

B. Required submittals include:

1. Conduit and Fittings as specified in Article 2.2 of this Section.

2. Panelboards as specified in Article 2.6 of this Section.

3. Circuit Breakers as specified in Article 2.7 of this Section.

4. Motor Starters as specified in Article 2.10 and 2.11 of this Section.

5. Fuses as specified in Article 2.13 of this Section.

6. Time Clocks as specified in Article 2.14 of this Section.

7. Ground Fault Circuit Interrupters as specified in Article 2.15 of this Section.

8. NEC required corrosion resistant enclosures, cabinets and boxes as specified in Article 2.8, 2.11, 2.16 & 2.18 of this Section.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool electrical materials before, during, and after installation and to protect the installed Work specified in other Sections.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Materials shall be new, in unbroken packages and bear the U.L. label of approval.

B. Equipment of one type shall be by same manufacturer. One type of equipment for classifications such as:

1. Switchboards, panels, buss duct, disconnect switches and allied items.

2. Conduit.

3. Wire.

4. Conduit fittings.

5. Fixtures of the same general type.

6. Wiring devices.

2.2 CONDUIT AND FITTINGS

A. Conduit within or under buildings or where exposed outdoors shall be rigid metal threaded, hot dipped, galvanized, or U.L. approved plastic except where noted otherwise on the Drawings. Metallic conduit shall be of the same metal between outlets or terminals.

B. Use flexible metallic conduit only for short connections of motors and where specifically called for on Drawings. Maximum length shall be 40". Use only liquid tight flexible metal conduit. Install an unbroken #12 AWG insulated copper grounding conductor in each liquid tight flexible conduit with permanent connection at motor junction box and service panel ground.

C. Protect, before installation, metallic conduit runs in all slabs laid on grade or in contact with the earth or exposed in damp locations, with two (2) heavy coats of asphaltum rust-resisting compound.

D. Encase conduits 2-1/2" or larger run underground, outside, or under buildings, in concrete envelopes a minimum of 3" thick, except as indicated otherwise on Drawings or stubouts. Conduits 2 and smaller laid 18" below finish surface in soil.

E. Low voltage runs underground outside buildings, 1-1/4" or smaller, may be G.I. or sherardized steel conduit, with machine applied wrapping equal to double wrap or Scotch-Wrap #50 tape, half lapped and quadrupled at joints in lieu of concrete encasement.

F. Service conduits through foundations or concrete members shall run through metal sleeves with adequate clearances for full movement of the conduit. Do not run conduits through footings.

G. Secure conduits run exposed on surfaces with one-hole heavy-duty straps or fasten with matching fittings to inserts or trapezes, parallel to building walls and ceilings.

H. Cap all conduit or duct stub-outs with standard factory caps; except cap threaded steel conduit with B.I. water pipe caps in outdoor locations.

I. Use conduit fittings as manufactured by Crouse-Hinds Company, Appleton Electric Co., or approved equal.

J. Employ U.L. liquid tight fittings for use with liquid tight flexible metal conduit.

K. Use unions as manufactured by Appleton, O-Z/Gedney, or approved equal. The use of running threads will not be permitted.

L. Exposed conduit and fittings in chemical rooms shall be nonmetallic rigid polyvinyl chloride, corrosion resistant rated suitable for installation in corrosive environments and in accordance with the latest NEC requirements

2.3 EQUIPOTENTIAL BONDING/GROUNDING

A. Bond together and ground to a common ground at a single point all metallic conduit, piping systems, pool reinforcing steel, metal parts of ladders, lifeguard stands, handrails and their supports and the like. The solid copper bonding conductor shall not be smaller than #8 copper.

2.4 WIRING CONNECTIONS

A. Make connections without strain on conductors, allowing the conductors to take a natural position after connections or taps are made. Include all strand of wire in making the connection.

B. Make connections for wiring by one of the following means:

1. Make all taps or connections to conductors with compression type connectors except those smaller than #8 B&S gauge may have soldered connections. Solderless connections for #10 AWG or smaller may be used and shall be "Scotchlok", Buchanan, or approved equal. For #8 AWG or larger, they shall be T&B "LockTite", Burndy "Versitaps", or approved equal.

2. All cable or conductor terminal lugs shall be Burndy "Quicklug", Ilsco, or approved equal. Two-piece stamped lugs and solder lugs will not be approved.

3. Paint taped splices in damp or outdoor locations with two (2) coats of insulating paint.

4. Tag all branch circuit wires with circuit number at the panelboard and at each point of use with linen or plastic tags.

2.5 CONDUCTORS

A. Copper RHW or THW. Do not make splices between boxes.

2.6 COLOR CODING

A. Neutrals (identified conductors shall be white).

B. Phase conductors shall be red for phase B; blue for phase C.

C. Green shall be used for mechanical equipment and receptacle grounds only.

2.7 MOTOR WIRING

A. Make final connections to motors with the required AWG (Minimum #12), Flamenol machine tool wire, 19 strand. Control wiring for equipment shall be Flamenol machine tool wire, 19 strand of required AWG. Provide corrosion resistant junction boxes at each item of equipment to change from standard building wiring to machine tool wire.

B. Phase motors as proper in direction of rotation.

2.8 PANELBOARDS

A. Panelboards shall be flush or surface mounting as indicated with circuit breakers as shown on panel schedule, hinged lockable doors, index card holders and proper bussing.

B. Where indicated on the drawings, panelboards shall be furnished with subfeed breakers and/or lugs, split bussing, contractors, time switches, relays, etc., as required.

C. All panelboards shall be keyed alike.

D. All panelboard enclosures shall be corrosion resistant rated in accordance with the latest NEC requirements.

E. Furnish corrosion resistant panelboard enclosures and terminal cabinets with Yale 46515 flush locks and LL806 keys except where indicated otherwise herein. Fasten the trim to panel boards and terminal cabinet by means of concealed, bolted or screwed fasteners accessible only when the door is open.

F. Panelboards 208/120 volt, three phase, 4 wire, S/N or 120/240 volt, single phase, 3 wire, S/N.

Panelboard types as manufactured by:	
Westinghouse	Type B10B
General Electric	Type NLAB
Square D	Type NQOB

G. Panelboards for 480/277 volt, three panes, 4 wire, S/N.

Panelboard types as manufactured by:	
Westinghouse	Type Pow-R-Line 2
General Electric	Type AE
Square D	Type NEHB
Sylvania	Type NH1B
I.T.E.	Type Approved Equal

H. Panelboard for bussing sizes thru 400 amp shall be 20" wide surface mounted type. Recess mounted type shall have a 20" wide (maximum) recess metal enclosure with trim plate cover extending 1" on all sides of enclosure. Depth shall be 5-3/4" nominal. Height of panel as required for devices.

I. Provide 6" additional gutter space in all panels where double lugs are required, or where cable size exceeds bus size. Minimum bottom gutter space shall be 6" high. 12" additional gutter space may be required for aluminum feeders where used.

J. Panelboards shown on the drawings with relays, time clocks or other control devices shall have a separate metal barriered compartment mounted above panel with separate hinged locking door to match panelboard. Provide mounting sub-base in cabinet for control devices and wiring terminal strips.

K. Panelboard shall have a circuit index card holder removable type, with clear plastic cover. Index card shall have numbers imprinted to match circuit breaker numbers.

2.9 CIRCUIT BREAKERS

A. Breakers shall have a minimum short circuit interrupting rating of 10,000A symmetrical for panelboard voltage thru 240 volt and 14000A for panelboards thru 600 volts or as specified on the drawings. In no case shall the interrupting rating be less than the bus withstand rating unless noted otherwise on the drawings.

B. Circuit breakers as manufactured by the following companies only are acceptable:

1. General Electric Company

2. Square D Company

3. Westinghouse Company

4. I.T.E. Company

C. Circuit breakers shall be arranged in the panels so that the breakers of the proper trip settings and numbers correspond to the numbering in the panel schedules on the drawings. Circuit numbers of breakers shall be black-on-white micarta tabs or other previously approved method. Circuit number tabs which can readily be changed from front of panel will not be accepted. Circuit number tabs shall not be attached to or be a part of the breaker.

D. Where two or three pole breakers occur in the panels, they shall be common trip units. Single pole breakers with tie-bar between handles will not be accepted.

E. All circuit breakers shall be padlockable in the "off" position. Locking facilities shall be riveted or mechanically attached to the circuit breaker (submit sample for approval). Other means of attachment shall not be accepted without prior written approval of Architect.

F. Where branch circuit breakers supply the power to motors and signal systems, the breakers shall be furnished with lockout clips, mounted in the "on" position. The breakers shall be able to trip automatically with lockout clips in place.

G. Panelboard circuit breakers shall be bolt-on type.

2.10 BUSSING

A. Bussing shall be rectangular cross section copper, or full-length silver or tin-plated aluminum.

B. Bussing shall be braces to withstand symmetrical short circuit ratings as follows or as noted on drawings. In no case shall bus short circuit bracing be less than specified circuit breakers.

C. Each panelboard shall be equipped with a ground bus secured to the interior of the enclosure. The bus shall have a separate lug for each ground conductor. No more than one conductor shall be installed per lug.

2.11 POOL MECHANICAL EQUIPMENT ENCLOSURES, TERMINAL CABINETS & MISC CABINETS

A. All pool mechanical equipment enclosures, terminal cabinets and miscellaneous cabinets in the pool mechanical room or chemical storage rooms shall be corrosion resistant rated in accordance with the latest NEC requirements. Enclosures and all cabinets shall be flush mounted (except where noted a surface) of the size indicated on the drawings, and complete with hinged lockable doors and the number of 2-way screw terminals required for termination of all conductors. Terminal cabinet locks to operated form same key used for panelboards. The trim to terminal cabinets shall be fastened by means of concealed bolted or screwed fasteners accessible behind door to terminal cabinets. Terminal cabinets shall have 5/8" plywood backing.

B. Provide engraved nameplate on each enclosure and cabinet indicating its designation and system (i.e., Swimming Pool - Panel 'SP').

2.12 MOTOR CONTROL INDIVIDUAL STARTERS

A. Manual Motor Starters:

1. Provide flush or surface mounting manual motor starters with number of poles and size of thermal overload heaters as required for the motor being controlled (equipped with overload heaters, one for each motor lead). Back boxes shall be supplied with all flush mounting starters whether they are toggle type requiring only a 4" square outlet box or the larger type requiring a special box and cover designed to accept the particular unit. All box types shall be corrosion resistant rated in accordance with the latest NEC requirements.

2. Unless otherwise noted on the drawings, all manual starters for single phase motors, smaller than 1 h.p., shall be the compact toggle type. Manual starters for all single phase motors, 1 to 5 h.p., and all three phase motors up to 5 h.p. shall be the heavy duty type.

3. Where manual motor starter is shown with pilot light, the pilot light shall be installed in a separate outlet box adjacent to the starter outlet, and engraved nameplate in indicate function of pilot light.

4. The following motor starters as manufactured by:

Manufacturer	**Single Phase 1HP and Below**	**Others**
Arrow Hart	Type RL	Type LL
General Electric	CR 101	Class CR 1062
I.T.E.	Class C10, C11 or C12	Class C20
Square D Company	Class 2510, Type A	Class 2510, Type B & C

Westinghouse	Type MS	Type A100
Allen Bradley	Approved Equal	Approved Equal.

B. Individual Magnetic Motor Starters:

1. Magnetic motor starters shall be A.C. line voltage, across-the-line units in a corrosion resistant rated enclosure in accordance with the latest NEC requirements.

2. All starters located outside of a building whether or not indicated shall be W.P. (weatherproof), and all starters noted W.P. shall be furnished in a corrosion resistant rated stainless steel enclosure in accordance with the latest NEC requirements.

3. Starter shall be horsepower rated for the motor controlled, and shall be equipped with properly sized overload elements. Every pole shall be with overload element.

4. Verify the exact motor current and voltage characteristics with the Contractor supplying the motor before installation of a starter.

5. Each starter shall be equipped with "Hand-Off-Auto" switch or stop-start pushbutton as required.

6. Coils shall be designed to operate on voltage indicated on control diagrams and have built-in-under the voltage release for coil circuit to drop motor starter off the line when the line voltage drops below normal operating voltage.

7. The coil control circuit shall be independently fused, sized to protect coil.

8. Starters to be equipped with running pilot light indication with a "Push-to-Test" feature.

9. Magnetic starters shall have a minimum of two auxiliary contacts. Additional auxiliary contacts shall be provided as required to comply with the requirements of the wiring diagrams on the electrical and mechanical drawings and the description of the function in the Mechanical Section of the Specifications.

10. Minimum starter size shall be NEMA size I unless indicated otherwise.

11. The following types of magnetic motor starters as manufactured by:

Manufacturer	**Type**
General Electric	Class CR 106
I.T.E.	Class A20
Square D Company	Class 8536
Westinghouse	Type A200 (Size 4 Max.) or Class II-200 (Sizes 5-8)

2.13 INDIVIDUAL COMBINATION MOTOR STARTERS

A. Combination starter shall incorporate fused disconnect switch and individual magnetic motor starter in a common enclosure. Combination starters shall be mounted in corrosion resistant rated enclosure in accordance with the latest NEC requirements.

B. Starters shall comply with NEMA standards, size and horsepower as indicated on drawings General Electric, Square D, Westinghouse or I.T.E.

C. The disconnect handle used on combination starters shall control the disconnect device with the door opened or closed. The disconnect handle shall be clearly marked as to whether the disconnect device is "ON" or "OFF", and shall include a two-color handle grip, the black side visible in the "OFF" position indicating a safe condition, and the red side visible in the "ON" position indicating an unsafe or danger condition.

D. All starters used in combination starters shall be manufactured in accordance with the latest published NEMA standards, sizes, and horsepower ratings. These starters shall be furnished with three melting alloy type thermal overload relays.

E. Thermal units shall be of one-piece construction and interchangeable. The starter shall be inoperative if a thermal unit is removed.

2.14 MOTOR CONTROL CENTER, INTERLOCKS AND CONTROL DEVICES

A. Refer to mechanical and plumbing drawings and specifications and provide all control devices including timeswitches, relays and interconnection of starters of required.

B. Mount all relays and timeswitches in a separate compartment in motor control center unless otherwise indicated.

C. Whether shown on mechanical and plumbing drawings or control center schedules or not, where motors are controlled by external devices (i.e., thermostats, relays, float or pressure switches, etc.) or interlocked with other motors, each motor starter to be equipped with a "Hand-Off-Auto" selector switch in starter cover. Other starters equipped with a "Start' Stop" pushbutton station in starter cover. The Contractor shall be responsible to submit a complete and detailed set of shop drawings, electrical schematic design along with electrical component cut sheets from the MCC panel or the interlock control device manufacturer. RSD Total Control: Allan Pearson 949-380-7878, South Coast Controls: Anthony Ellis 714-998-5656 or approved equal.

2.15 FUSES

A. Fuses shall be dual element, current limiting type, U.L. Class RK5 unless otherwise indicated on the drawings. Provide one spare set of fuses of each size and type in each motor control center.

2.16 TIME CLOCKS

A. Time clocks shall be provided for all underwater lighting systems and swimming pool circulation pumps not controlled by filter microprocessors.

B. Contacts shall have a minimum rating of 40 amperes at 277V.

C. Timing motor shall be heavy duty synchronous, self starting, high torque type, and shall be rated at 120, 208, 240, 277 volt 60 Hz.

D. Motor shall operate normally at temperature range of -60 degrees Fahrenheit to +120 degrees Fahrenheit.

E. Dial shall be 3" diameter, clearly calibrated with day/night zones and 24 hour rotation, with gear to provide one revolution yearly which automatically varies the on/off settings each day according to seasonal changes. Day and month of the year shall show clearly through calendar window on the dial.

F. Time clocks shall be equipped with 7-spoke omitting wheel marked with days of the week.

G. Time clocks shall be housed in a corrosion resistant rated enclosure in accordance with the latest NEC requirements.

H. Acceptable manufacturers are Tork, Intermatic Paragon, or approved equal.

2.17 GROUND FAULT CIRCUIT INTERRUPTERS

A. Minimum rating shall be 20 amperes, 125V, 5 milliampere trip setting, Class A per UL943.

B. Manufacturer to be Crouse-Hinds, Leviton, or approved equal.

2.18 BOXES

A. Boxes shall be of the size required by ordinances or larger, must be corrosion resistant in accordance with the latest NEC requirements where concealed or exposed on ceilings or walls.

B. Outlets to be surface where wiring is exposed and flush in areas where conduit is concealed.

C. Provide surface outlets with proper corrosion resistant surface covers. Box and cover shall be deep enough to provide at least 1/4" clearance between back of device and back of box. Where box contains more than one device, use a corrosion resistant rated gang box with proper cover in accordance with the latest NEC requirements. Surface outlet boxes shall be of the threaded hub type wherever below 8'0".

D. If necessary for cable installation, additional pull boxes or junction boxes may be installed in accessible locations. Exposed pull boxes and junction boxes shall be corrosion resistant rated in accordance with the latest NEC requirements.

E. Where exposed to weather pull boxes larger than outlet boxes are required, galvanized code gauge sheet steel boxes may be used with covers attached by brass machine screws may be used. Boxes exposed to the weather shall be approved for the purpose, and conduit entrances shall be on the bottom made by means of an interchangeable hub with gasket and adapter nut. Pull boxes not shown on Drawings may be added only after approval of size and location is obtained.

F. For outlets exposed to weather or where noted, cast outlet boxes shall be Crouse-Hinds, Appleton, or approved equal. Boxes shall have proper number and size hubs. Device plates, covers, adapters and boxes shall be as manufactured by Crouse-Hinds, Appleton, or approved equal.

G. Exposed junction boxes, outlet boxes and pull boxes for pool chemical rooms shall be non - metallic suitable for a corrosive environment and in accordance with the latest NEC requirements

2.19 IDENTIFICATION MARKINGS

A. Plainly mark all motor and electrical appliance control equipment indicating the equipment controlled with engraved metal tags.

B. Provide laminated plastic nameplates on panelboards on the outside of the door at the top indicating panel designation and feeder source.

C. Provide laminated plastic nameplates on distribution switchboards and motor control centers at the top center indicating panel designation and feeder source.

D. Identify each distribution switchboard and motor control center circuit breaker with a laminated plastic nameplate indicating its' use.

E. Type panelboard directories on the forms provided with the equipment, indicating the use of each branch circuit breaker.

F. Fasten all laminated plastic nameplates to surfaces with two (2) or more screws.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify conditions at the Project site before submitting bid. Be responsible for providing all necessary wiring for the new electrical systems. Wherever wiring is being disrupted due to remodeling or changes, reconnect existing and provide new wiring circuits to accomplish a fully operable system at no additional cost to the Owner.

3.2 COORDINATION

A. The Drawings are essentially diagrammatic and indicate the desired location, size, routes, connection points, etc., and are to be followed as closely as possible. Proper judgment must be exercised in executing the Work so as to provide the best possible installation in the available space and to overcome difficulties, limitations or interference wherever encountered. Be responsible for the correct placement of this Work, the proper location and connection in relation to Work of other trades, for determining the exact location of all conduits, outlets and equipment, and for installing the conduits in such a manner as to conform to the structure, avoid obstruction, preserve headroom and keep openings and passageways clear. Particular attention is directed to the close coordination required on exposed Work. Locations shown on Architectural or Mechanical Drawings if different than those shown on Electrical Drawings should be communicated to the Owner’s Representative in writing for clarification.

3.3 INSTALLATION

A. Trenching and Backfill: Conform with requirements of Section 13 1101. Provide minimum cover as required by Code.

B. Conduit Installation:

1. Conduit and metallic raceway systems shall be mechanically and electrically continuous from sources of current to all outlets in a manner to provide a continuous grounding path. Close ends of conduit during construction to prevent entrance of dirt or moisture.

2. Securely fasten conduit to the building construction within three feet of each outlet and within every ten feet thereafter. Secure it to boxes, cabinets, pull boxes, terminals with two locknuts and ends equipped with bushings or a terminal fitting. Cut square with ends carefully reamed.

3. Make bends or elbows so that the conduit will not be injured or flattened.

4. Use insulated metallic bushings in all places where bushings are required.

5. Run exposed conduits level or plumb and parallel to the construction members of the building. No cutting across or diagonal runs will be permitted. Neatly surmount structural obstructions encountered on conduit runs by the use of fittings or pull boxes.

6. Identify feeder conduits by stamped metal tags secured to exposed section of conduit in main or sub-panels.

7. Make up all threaded conduit joints gas and watertight with conductive sealer except conduit above ground in dry indoor locations.

8. Rigidly support all boxes independently of the conduit system.

C. Connections to Equipment:

1. Fully connect, in an approved manner, all electrical outlets, apparatus, motors, equipment, fixtures, wiring devices and appliances whether they are installed under the Electrical Contract or not, which require electrical connections, to the corresponding electrical system outlet.

2. Where the Work of this Section requires connections to be made to equipment that is furnished and set-in-place under other Sections, obtain such roughing-in dimensions from the manufacturer or supplier of each item as required and assume full responsibility for the installation of the connections thereto.

3.4 ADJUSTMENT AND CLEAN-UP

A. Preliminary Operation: Should the Owner's Representative deem it necessary to operate the electrical installation or any part thereof prior to Substantial Completion of the Work, consent to such preliminary operation and supervise conduction of same. Subcontractor shall pay all costs occasioned by such operation. Preliminary operation shall not be construed as an acceptance of any Work installed under this Contract.

B. Clean-up: Upon completion of the Work of this Section, immediately remove all swimming pool electrical materials, debris and rubbish occasioned by this Work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 1155
SWIMMING POOL PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Labor, materials, and equipment required to complete the painting of swimming pool interior as indicated and specified. Work includes the painting of pool shell interior up to the waterline tile and painting floor lane markers and lane targets in a contrasting color as required by the documents.

1.2 SUBMITTALS

A. Samples: Submit paint color sample, paint products and primer product information for approval. Colors of all paint, shall be as directed by the Owner. Painting shall not be started until approvals are received. Approved samples will be retained, on the site, and the finish work shall match the approved samples.

1. Samples of smooth surfaced and non-textured coatings shall be prepared on standard 8-1/2 inch by 11-inch Spray-Out Panels, or as paint samples supplied by the manufacturer.

2. Each sample, on the back side, shall contain the project name, color number, type of material, manufacturer and Subcontractor's name.

B. Certification of Materials: With every delivery of paint materials, the manufacturer shall certify that the materials comply with the requirements of this Section.

1.3 DELIVERY AND STORAGE

A. Store materials and mix only in spaces designated for the purpose by the Owner. Keep all such spaces clean and take necessary precautions to prevent fire. Hang out all oily rags flat and singly in the open air.

1.4 GUARANTEE

A. Materials and workmanship guarantee shall be in accordance with the requirements of the Contract Documents, except the guarantee shall be furnished jointly by the Contractor and the materials manufacturer.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Materials shall be pure, first quality, and shall be delivered to the project site in original unbroken containers bearing the maker's name, brand number, and the batch number. Open and mix ingredients on the premises and remove any rejected materials from the premises.

B. Paints shall be those approved and listed by the Owner. The approved list contains certain paint materials as manufactured by the following:

Hi Bild Epoxy Primer Nelsonite

Poolpoxy Hi-Bild Nelsonite

2.2 GUTTER, PUMP PIT, BACKWASH PIT & SURGE CHAMBER WATERPROOFING

A. Xypex, Miracote Miraflex Membrane C, or approved equal. Mix and apply per manufacturer's recommendations for specific application. Color shall be Gray.

PART 3 - EXECUTION

3.1 INSPECTION OF SURFACES

A. Before Work under this Section is started, the painter with the Contractor and the Owner shall examine all surfaces and related Work to receive painter's finishes. The Contractor shall be informed, in writing, of unacceptable areas. All such areas shall be corrected by the Contractor prior to the start of the Work.

3.2 PROTECTION

A. Contractor shall be responsible for the protection and correction of the Work of all trades from smears, splashes, stains, and damage that occur during the progress of the Work.

1. Exercise care so as not to injure or spatter painting materials on adjacent Work. Any painting materials spattered or where not called for, defaced surface shall be cleaned and the original finish restored.

3.3 PREPARATION OF SURFACES

A. All surfaces shall be in proper condition to receive the finish specified. Prepare surfaces as specified in Section "Preparation for Painting" and as specified herein.

B. Finish surfaces which are not properly prepared and cleaned or which are not in condition to receive the finish specified, shall be corrected before priming is done. All surfaces to receive paint shall be prepared in accordance with the paint manufactures recommended procedure. No priming shall be done until surfaces are approved.

C. Metal surfaces to be painted shall be thoroughly cleaned of all rust, corrosion, oil, and foreign materials, and all blisters and loose paint removed.

3.4 PRIMING

A. Priming: Surfaces specified to receive a painter's finish shall be primed as hereinafter specified. Surfaces of miscellaneous metal and steel not embedded in concrete Priming of surfaces and priming coat shall be as follows:

1. Allow a minimum of 30 days for newly poured concrete to cure. Preferably painting should be done after all construction has been completed.

2. Acid wash concrete floor: use a solution of one part muriatic acid (20 Baume strength) and one part water. Mix this solution in a plastic bucket. Add Nelsonite Prep A (follow label instructions for amount to add). Nelsonite Prep A will help “Kill” the fumes and “body up“ the solution. Apply with a plastic sprinkling container and brush with an acid

etch brush. Fresh acid must touch every inch of the floor and walls. Start at the deep end and work your way to the shallow end. Do the bottom in at least two sections. It is best to agitate the acid solution with the acid etch brush. Allow the acid to stay on the surface for no more than five minutes.

3. Rinse the acid solution with water under pressure. Rinse thoroughly and leave no traces of any water acid solution.

4. Allow the surface to dry. This may take days depending on the temperature and humidity levels while the surface to be painted should not be damp. It cannot be wet.

5. Apply one coat of Nelsonite Hi Bild Primer. Read product profile of the label before using this product. Apply per the manufactures recommended procedure.

6. Allow primer coat to dry for twenty-four hours; however, do not allow primer coat to dry more than seventy two hours before applying topcoat.

7. Apply Nelsonite Poolpoxy Hi Bild in the color specified by owner.

8. Wait minimum of five days before filling Pool with water. Refer to Poolpoxy Hi Bild profiles for individual cure times.

9. Clean and remove any stains or footprint from paint surface prior to filling swimming pool.

3.5 APPLICATION

A. Do not apply painting materials to wet, damp, dusty, dirty, finger marked, rough, unfinished, or defective surfaces. Application of Nelsonite pool coatings shall be in accordance with manufactures directions and product profile.

B. Except as specified, surfaces to be finished shall have the finish applied with good workmanship. All coats shall be applied evenly and with full coverage. Finished surfaces shall be free of sags, runs and other imperfections.

1. Spray painting will be permitted only when approved by the Owner.

2. Where stipple finish is specified, the stipple roller shall be of a texture approved by the Owner.

3. Paint rollers may be used on interior pool wall concrete and masonry surfaces for all coats.

a. Approved Roller Equipment: Rollers may be either lambs wool or synthetic material. Roller nap length shall not exceed 3/4 inch for interior sand finish plaster, masonry and similar surfaces; 3/8 inch for smooth plaster, gypsum drywall, plywood and similar surfaces, and 1-1/4 inch for exterior dash finish plaster, masonry and similar surfaces. Extension roller handles shall not extend 5' -0" for interior Work and 8' -0" for exterior Work.

b. Limitations: Rollers shall not be used on wood surfaces except plywood as above specified.

C. SLIP RESISTANCE

1. Pool Steps can be made slip resistant by using Nelsonite ADD A GRIP or 60 mesh white silica sand. Sprinkle the texturing agent amply on the first coat of Pool Paint while still wet. Sweep off excess or loose texturing agent after first coat is dry and before application of the second coat.

D. RACING LANES AND TARGETS

1. Racing lanes and Targets Must be applied within 24 to 48 hours of application of POOLPOXY HI BILD, or the surface to be painted must be lightly sanded to aid intercoat adhesion.

2. Apply paint to specified surfaces according to the project documents.

3.6 REPAINTING

A. Where paint has been removed down to original surfaces they shall be repainted with three coats; the same as for new Work for the particular surface to be repainted.

B. Where paint has not been removed down to original surfaces, area shall be repainted with two coats as specified for second and third coats. The prime coat may be omitted, except that spot priming will be required where any "bare" areas occur. Repaint surface shall be free of any loose of bubbled paint and loose paint must be removed. All painted surfaces to be repainted shall be sanded prior to repainting.

3.7 INSTALLATION OF GUTTER, PUMP PIT, BACKWASH PIT & SURGE CHAMBER WATERPROOFING

A. Provide two (2) coats of the specified gutter and surge chamber waterproofing prior to plastering the swimming pool. Prepare surfaces to receive waterproofing and cure in conformance with manufacturer's recommendations. Provide steel trowel application method to ensure uniform smooth, dense surface finish.

3.8 CLEANING

A. Remove rubbish, waste, and surplus material and clean all woodwork, hardware, floors and other adjacent Work of any Pool paint spatter.

END OF SECTION 13 1155

DIVISION 21

FIRE SUPRESSION

SECTION 21 13 13

FIRE-SUPPRESSION SPRINKLER SYSTEM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fire sprinkler system for protection of buildings.

2. Sstandpipe system.

C. Related Requirements: The requirements of this Section, NFPA 13 and NFPA 14 shall take precedence over requirements found in the following:

1. Division 01 - General Requirements.

2. Section 07 8413: Penetration Fireproofing.

3. Section 09 9000: Paints and Coatings.

4. Section 10 4413: Fire Extinguishers and Cabinets

5. Section 22 0500: Common Work Results for Plumbing.

6. Section 22 0513: Basic Plumbing Materials and Methods.

7. Section 22 0553: Plumbing Identification.

8. Section 22 1000: Plumbing.

9. Section 26 0500: Common Work Results for Electrical.

10. Section 28 3100: Fire Detection and Alarm.

11. Section 31 2323: Excavation and Fill for Utilities.

12. Section 33 1100: Site Water Distribution Utilities.

1.02 SUBMITTALS

A. Manufacturer’s Data:

1. Submit complete and detailed equipment and material list of items to be furnished and installed under this section.

2. Submit manufacturer's specifications and other data required to demonstrate compliance the plans and specified requirements.

B. Drawings:

1. Submit shop drawings of wet pipe fire protection sprinkler system in compliance to NFPA 13, Standard for the Installation of Sprinkler Systems, Sprinkler systems shall comply with the provisions of NFPA 13.

2. Shop drawings shall fully comply with the most stringent provisions of this specification and plans, and with the applicable codes and standards.

3. Shop drawings shall be same size as the Contract Drawings and shall be produced using AutoCAD.

C. Regulatory Requirements:

1. Installation of fire sprinkler system shall not vary from the plans unless alterations have been approved by the State Fire Marshal at DSA.

2. Complete DSA standard testing forms and get sign-off by the Project Inspector.

D. Closeout Submittals: Submit in accordance to Section 01 7700, Contract Closeout, and as specified herein:

1. Record Drawings:

a. Record drawings of installed Work shall be maintained current on the Project site, available for Fire Marshal and the Project Inspector to review.

b. At completion of installation submit Record Drawings signed by installing Contractor in AutoCad format, including:

1). Record Specifications.

2). Record Product Data: Include specific model, type and size for equipment and material installed.

3. Record Test Results.

4. Maintenance Manuals.

1.03 QUALITY ASSURANCE

A. Comply with applicable national or local codes and standards.

B. Except where exceeded by the requirements of these specifications, the following are made part of this section: prints and details, and provisions of the NFPA 13 Standard for Installation of Sprinkler Systems and NFPA 14 Standard for the Installation of Standpipes and Hose Systems.

C. Qualifications of Manufacturer: Products used in work of this section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a 5 year history of successful production that is acceptable to the Architect.

D. Qualifications of Installer: Installer shall have a current C-16 license in the State of California in the installation of fire sprinkler systems.

1.04 FIRE SERVICE WATER CONNECTION

A. The Owner shall pay fees and provide for the fire main POC (point of connection), consisting of the installation of a single detector check valve (if one is required) and meter shut off valve inside a meter vault.

B. Fire Service Mains shall be provided with approved Meter Service Backflow protection. An approved Reduced Pressure Principle Backflow Prevention Assembly (RP) to meet minimum backflow protection requirements for meter service protection (MSP) shall be provided on the fire main, according to the California Plumbing Code (CPC) and according to the current Los Angeles Department of Water and Power WATER SERVICE RULE 16-D where applicable (see section 2.02.D for backflow assemblies). Double Check Assemblies shall only be used with the written approval of the Water Purveyor.

1.05 PRODUCT HANDLING

A. Comply with the provisions specified in Sections 22 0500 and 22 0513.

1.06 COORDINATION

A. Coordinate activities in accordance with provisions of Section 22 0500.

1.07 JOB CONDITIONS

A. Unscheduled utility flow interruptions are not permitted. Schedule service interruptions in advance, with the OAR.

1.08 EXTRA MATERIALS FOR MAINTENANCE

A. Provide spare sprinkler heads in quantity equal to 2 percent of total number of each type of sprinkler head installed. There shall be no less than two heads of each type and temperature rating provided, and in no case less than six spare sprinkler heads per building. There shall be no fewer than 6 spare sprinkler heads for up to 300 sprinkler heads installed; no less than 12 spare sprinkler heads for up to 1,000 sprinkler heads installed; and no less than 24 spare sprinkler heads for the sites with more than 1,000 sprinkler heads installed. Spare sprinkler heads shall be kept inside of spare sprinkler head box(s). A spare sprinkler wrench for each type of sprinkler head shall also be provided inside of each spare sprinkler head box, at each building. Locations of spare sprinkler boxes shall be located at:

1. Fire Sprinkler Riser, when enclosed and secure.

2. Plant Manager’s Office, when Fire Sprinkler Riser is exposed.

PART 2 - PRODUCTS

2.01 FIRE PROTECTION SYSTEM DESCRIPTION

A. General: Provide systems complete including, but not limited to:

1. Provide underground and above ground sprinkler and standpipe piping including trenching and backfilling. Materials and equipment shall be UL/FM listed and approved as required by NFPA for their application. Required signage shall be provided and installed as required by NFPA 13 and NFPA 14.

2. Provide overhead sprinkler system with sprinklers installed as required according to type, location and temperature rating.

B. Sprinkler Heads:

1. Provide chrome pendant spray type sprinkler heads with matching escutcheons in areas with finished ceilings. Exterior escutcheons shall be poly-coated or concealed type to prevent rusting and oxidation.

2. Provide upright sprinklers in areas with exposed piping.

3. Provide poly-coated glass bulb corrosion resistance type sprinklers heads in areas exposed to a corrosive environment such as parking garages and coastal air.

4. Sprinklers shall be glass bulb type, with hex-shaped wrench boss integrally cast into the sprinkler body to reduce the risk of damage during installation,

5. Sprinklers in concealed spaces, exterior locations, and other areas that will experience over 100 degrees F ambient temperature shall be furnished with 200 to 225 degree rated sprinklers. Sprinkler heads in boiler rooms, furnace rooms, or heater rooms shall be furnished with sprinklers rated at 250 to 290 degrees F. If a sprinkler is directly affected by a spotlight, steam, or other heat source, a 350 degree F or higher sprinkler head shall be furnished. Sprinkler heads in other locations, unless otherwise noted, shall be 155 to 165 degrees F rated.

6. Automatic fire sprinkler head type shall be as follows:

   a. In areas with ceiling heights of nine-feet or lower, sprinkler heads installed shall be recessed or fully concealed.

   b. Ceilings eight-feet or lower shall be provided with fully concealed sprinkler heads.

   c. Areas with ceiling height of nine-feet or lower, that are not constantly supervised such as corridors, arcades, students restrooms, and other restrooms shall be provided with fully concealed sprinkler heads.

7. Sprinkler heads in light hazard occupancies are required to be Quick Response sprinklers as required in NFPA 13. Sprinkler heads shall be of the same manufacturer throughout the building/site as indicated. Sprinklers shall typically be ½ inches NPT, standard orifice, minimum 5.6 nominal K factor, UL listed for 175 psi, and listed for light and ordinary hazard occupancies.

8. Other specialized sprinkler heads such as walk-in refrigerator or freezer heads, side wall, ¾ inches sprinklers above 5.6 K factor, and those sprinklers with a K factor below 5.6, shall only be used where required by project condition. Large drop sprinkler heads and extended coverage sprinkler heads shall not be installed.

9. Sprinkler head location shall be designed and installed in an aesthetically pleasing manner and should generally be located in center of 24-inch by 24-inch ceiling tiles and in center of 24-inch by 48-inch ceiling tiles in the 24-inch direction and no closer than 12-inch from the edge in the 48-inch direction.

10. UL/FM listed Sprinkler head guards shall be provided on Sprinkler heads installed at seven feet six inches above floor or lower in exposed locations, or that are deemed subject to damage. Sprinkler head guards shall securely fasten with bolt-on feature to the base of the sprinkler or be a factory installed guard. Guards shall also be provided on upright and sidewall heads where sprinklers are installed at seven feet six-inch heights or lower.

C. Fire Sprinkler and Standpipe Systems:

1. Underground piping: Comply with the requirements of Section 33 1100, Site Water Distribution Utilities.

2. Provide an underground UL/FM listed PVC or Ductile iron supply line connected to detector check meter or water main as indicated. Install site water mains no closer than 10'- 0" parallel to the building foundations. Underground fire water lines shall be installed 36 inches below grade. Tracer wire shall be installed in accordance with Section 33 1100: Site Water Distribution Utilities.

3. Fire Department Connection (FDC) with check valve (wafer type) shall be provided after the backflow preventor, and before the building fire sprinkler riser(s), located where the FDC will be accessible to the fire department from the street or sidewalk without obstructions. No shut off valve shall be allowed on the FDC line as per NFPA 13. FDCs shall have a height between two and four-foot above the ground.

4. PIVs shall be electrically supervised regardless the number of fire sprinkler served (CBC 903.4), and set at a height of three feet to the top and have the handle locked in place with a break-a-way lock.

5. Provide a UL listed, FM approved FDC, approved RP type backflow assembly, check valves, shut-off valves, drain valves, ITV, and flow indicator at the locations required. (Test-and-drain combination valves are prohibited.)

6. Flow indicator shall activate the fire alarm system between 45 and 90 seconds, and activate a local alarm on the outside of the building continuously with water flow. Connection of this switch is a part of the Work of Division 26. Shut-off including valves on the fire main backflow preventor shall be electrically supervised according to CBC 903.4,, NFPA 13 and Section 28 3100 – "Fire Detection and Alarm".

7. Pipe through ceilings at head locations shall be furnished with a two piece, or fully concealed escutcheon. Unless otherwise designated, escutcheons shall be identical and match the other escutcheons of the same type throughout the building or site. Piping through walls and ceilings shall have a split ring chrome escutcheon.

   a. Flexible stainless steel sprinkler head drop system may be used. Flexible drops shall be UL listed, FM approved, and shall be compatible with ceiling systems. Flexible drop length shall be included in the Hydraulic Calculations. The drop system shall include the required support bracing.

8. Furnish and install required signs, spare heads, special wrenches, and spare sprinkler head boxes as required to satisfy NFPA 13, NFPA 14 and this specification.

9. Sprinkler system piping shall be provided with complete drainage as required by NFPA. Test valve discharge shall be piped away from planters to asphalt areas. Furnish protection of piping against accidental or malicious damage.

10. Upon completion of the Work of this section, and before Substantial Completion, subject system, including underground supply connection, to tests required. A minimum hydrostatic test shall be two hundred pounds (200 psi) or fifty pounds (50 psi) in excess of the maximum system working pressure, whichever is greater, for two hours with no leaks or loss of pressure per NFPA 13. The Project Inspector shall be furnished with a NFPA 13 test certification.

11. Local fire sprinkler alarm requirements shall be accomplished with a vane or paddle type water flow detector switch and an electrically powered fire sprinkler horn located on the street side of the building and connected to the fire alarm control panel with secondary power provided from the fire alarm batteries. The drilled out disk shall be attached to the mounting U-bolt. Time delay shall be set at 45 to 60 seconds. Mechanically activated water bells with alarm valve and pressure switch are prohibited.

12. Seismic separation assemblies shall be located between the buildings if space allows accessibility. Otherwise they shall be located inside the building providing the most space. Swing joints may be fabricated on site using flexible groove couplings and six grooved (Victaulic) 90 degree elbows in a teepee formation (see NFPA 13, figure A.9.3.3). Seismic separation assemblies can also be made utilizing a manufactured, UL/FM listed swing joint assembly rated at a minimum 175 psi.

13. Hanging, bracing and support shall utilize only UL/FM listed approved products, and comply with NFPA 13, Chapter 9 requirements for rod and bolt sizes except for the following: 4 and 6 inch pipe shall be supported by a minimum ½ inch hanger rod, 8 inch pipe shall be supported by a minimum 5/8 inch hanger rod, 10 and 12 inch pipe shall be supported by a minimum ¾ inch hanger rod. Hanger rods in exterior locations and in parking structures shall have Electrodeposited Zinc Coating per ASTM B633 to prevent rusting.

14. Building Fire Sprinkler riser assemblies shall be provided as follows. Every building shall be provided with an accessible and electrically supervised riser shut off valve at a height not to exceed five-feet above the floor. Every building riser assembly shall be equipped with a check valve followed by a main drain valve and then the flow indicating switch and pressure gauge immediately after the shut-off valve. In cases where a riser assembly is provided for each floor in the building, a check valve, main drain and flow switch shall be provided for each floor; the main building shut-off shall not be required. An electrically supervised Post Indicator Valve located outside the building may serve as the building riser shut-off valve.

2.02 MATERIALS

A. Access Panel:

FAP-1 Square, steel, prime-coated, with vandal-proof door lock operated by Allen wrench:

Smith	Josam	Elmdor	Or equal
4760		DW – AKL	

B. Globe or Angle Valves: UL/FM listed.

AV-1 Bronze angle valve: 2 inches and smaller, screwed-in bonnet, threaded ends, rising stem:

Nibco	Kennedy	Fairbanks	United	Or equal
T-301	98 SD	0210	126T	

C. Automatic Fire Sprinkler Head, UL/FM listed:

AFSH-1 Brass pendant type for areas with suspended ceilings:

Victaulic	Tyco	Viking	Reliable	Or equal
V27	TY 3231	VK302	F1FR56	

AFSH-2 Brass upright type for areas with no ceilings:

Victaulic	Tyco	Viking	Reliable	Or equal
V27	TY3131	VK300	F1FR300	

AFSH-3 Chrome or poly coated semi recessed type with semi-recessed escutcheon:

Victaulic	Tyco	Viking	Reliable	Or equal
V27	TY3231	VK302	F1FR56	

AFSH-4 Fully concealed type sprinklers; chrome cover:

Victaulic	Tyco	Viking	Reliable	Or equal

V38	TY3531	VK462	F4FR
		VK404	G4A

D. Backflow Prevention Assemblies:

BPV-1 Reduced Pressure Principle Backflow Prevention Assembly (RP) type for meter service protection (MSP) requirements:

Ames	Febco	Watts	Wilkins	Or equal
4000SS	860 OS&Y	909 RP	975 RP	
C400	880 OS&Y	957 RP	375 RP	
M400		994 RP		

BPV-2 Reduced Pressure Principle Detector Assembly (RPDA) for MSP requirements:

Ames	Febco	Watts	Wilkins	Or equal
5000SS	860 DA	909 RPDA	950 DA	
C500	880 DA	957 RPDA	350 DA	
M500		994 RPDA		

E. Gear Operated Butterfly Valves:

GOBFV-1 Grooved end Gear Operated Butterfly Valve, 300 psi, for fire protection sprinkler risers. UL listed, FM approved, with weatherproof gearbox and double pole/double throw monitor switch, double seal design for bubble tight shut off at 175 psi. Corrosion-resistant, fusion-bonded nylon II body coating, easy to read position indicator:

Kennedy	Nibco	Victaulic	Tyco	Or equal
Figure 82M	GD-4765-8N, 300 psi	705W 300 psi	580 300 psi	

GOBFV-2 Wafer Type Gear Operated. Butterfly Valve, same requirements as GOBFV-1:

Kennedy	Nibco	Or Equal
Figure 82W	WD-3510 300 psi	

F. Check Valves:

CV-1 Bronze check valves: 2 inches and smaller, 200 psi WOG, bronze disc, swing type, conforming to MSS-SP-80-97, threaded ends:

Crane	Nibco	Stockham	United	Or Equal
37	T-433-Y	B-319	62T	

CV-2 Iron check valves: 2-1/2 inches and larger, class 175, composition disc, swing type, bolted cap, UL listed, FM approved flanged ends:

Stockham	Kennedy	Tyco	Clow	Or Equal
G-940	126	Model G	F5380	

CV-3 Wafer Type Check Valve:

United Wafer Check #90	Nibco KW-900-W	Mueller A-2102

Or equal.

CV-4 Grooved Check valve 2 ½ inch and larger:

United	Gruvlock	Reliable	Victaulic	Tyco
67	7800	Mode “G”	Series 717	590F

Or equal.

G. Escutcheons

ES-1 Chrome plated, or white poly-coated, 2-piece canopy (escutcheon), 2.25 to 3.5 inches in extended position:

FPPI	Tyco	Reliable	Or equal
01 - 401 Chrome or White	No. 401 Chrome or White	HBC (chrome) HBW (white)	

ES-2 Chrome plated or white poly coated, 2-piece recessed:

FPPI	Tyco	Reliable (semi recessed)	Or equal
01 - 400	410	GF2-C (chrome)	
01 - 402	420	GF2-W (white)	

H. Fire Department Connections:

FDC-1 UL listed, FM approved, type, 4 inch by 2-1/2 inches by 2-1/2 inches bronze body fire department hose connection (FDC):

Crocker	Potter-Roemer	Tyco	Powhaten	Or equal
6405 or 6420	5710 or 5730	86	21-201 or 31-133	

I. Flow Indicators:

FIA-1 Listed by State Fire Marshal, with double pole, double-throw switch, one normally open and one normally closed, UL listed and FM approved:

Potter-Roemer VSRF Series	Notifier WFR Series	Or equal

J. Outside Stem and Yoke Gate Valves:

OS&Y-1 Bronze Gate Valves: 2 inches and smaller, class 175, solid bronze wedge disc, OS&Y, copper silicon alloy stem, UL/FM listed, threaded ends:

Stockham	Crane	Nibco	United	Or equal

B-133	459	T-14	18	

OS&Y-2 Iron gate valves: 2 ½-inch and larger, class 175, IBBM, OS&Y, solid wedge disc, Teflon-impregnated packing, UL/FM listed, flanged ends:

Stockham	Crane	Kennedy	Mueller	Victaulic
G-634	467	68	A-2073	771

Or equal.

OS&Y-3 2 ½-inch and larger, epoxy coated, resilient wedge, 175 pounds gate valve for riser valves, P.I.V., and shut off:

Clow	Nibco	Kennedy	Mueller	Or equal
F-6136	617-0	KV-4068	A-2360	

K. Gate Valves:

GV-1 Bronze gate valves: 2-inch and smaller, class 175, solid bronze wedge disc, rising stem copper silicon alloy stem, UL/FM listed, threaded ends:

Stockham	Crane	Grinnell	United	Or equal
B-133	459 Fig. 66	14		

GV-2 Iron gate valves: 2 ½-inch and larger, class 175, IBBM, solid wedge disc, Teflon impregnated packing, UL/FM listed, flanged ends:

Stockham	Crane	Kennedy	Mueller	Victaulic
G-634	467	68	A-2052	772

Or equal.

L Gear Operated Ball Valves:

GOBV-1 Threaded ball valve for sizes two inches and smaller:

Nibco KT-505W-4 Victaulic 728 Or equal.

M. Seismic Swing Joints:

SJ-1 UL/FM Approved flexible seismic connector with grooved, or threaded ends for seismic separation requirements.

SJ-2 Fabricated swing joints as per NFPA 13 using six groove 90 degree elbows and flexible groove couplers such as Victaulic style 75.

N. Post Indicator Valves:

PIV-1 Vertical Indicator Posts: Furnished for underground valves, post must provide a means of knowing if the valve is open or shut, UL/FM listed. (Where a backflow assembly is provided, the shutoff valves on the backflow preventer satisfy the requirement for a post indicator valve to control the fire main and FD Connection):

Stockham	Kennedy	Grinnell	Or equal
G-951	2945	F-750	
Clow	Mueller	Victaulic	
F-576	2945	774	

PIV-2 Posts Indicator valve: Furnished for underground valves. Ductile iron fusion bonded epoxy coated resilient wedge gate valves: 4 inches and larger, class 175 lb, non-rising stem, mounting plate for indicator post, UL/FM listed, flanged or mechanical ends (in accordance with NSF 61).

Stockham	Kennedy	Clow	Mueller	Victaulic
G-635	71X	F-6100	2360	772
O equal				

O. Sprinkler Guards:

SPG-1 Sprinklers installed at seven feet six inches above floor or lower in exposed locations, or that are deemed subject to damage shall be equipped with a UL/FM listed, head guard. Guards shall be listed, supplied and approved for use with the sprinkler by the sprinkler manufacturer. Sprinkler head guards shall securely fasten with bolt-on feature to the base of the sprinkler or be a factory installed guard. Guards shall also be provided on upright and sidewall heads where sprinklers are installed at seven feet six-inch heights or lower.

Reliable	Viking	Tyco	FPPI	Victaulic
Or equal.				

P. Sprinkler Horn:

SPH-1 UL/FM approved, surface-mounted, weatherproof and red finished:

Horn:	Bell:	Wheelock equal
HRK System Sensor	SSM-24-10 System Sensor	
24 V-DC	24 V-DC	
Weatherproof with	Weatherproof with	
BBS-2 back-box for	WBB box for	
Surface mount	Surface mount installation	
Or equal		

Q. Hangers, Supports, Bracing:

HSB-1 Tolco products or UL listed and FM or equal.

R. Threaded fittings:

TF-1 Ductile iron, 300 psi rated, UL listed, FM or NFPA approved.

TF-2 Cast iron fittings, 175 psi rated, UL listed, FM or NFPA approved:

Anvil Ward Taylor Or equal

TF-3 Malleable Iron, 300 psi rated, UL, Listed, FM or NFPA approved

TF-4 Galvanized, 175 psi rated, UL Listed, FM or NFPA approved

S. Fire Sprinkler Pipes and Standpipes:

FSP-1 Fire sprinkler pipe: 1 inch through 8-inch, Schedule 40, black or galvanized steel meeting ASTM Standards A53, A135, or A795. Pipe Corrosion Resistance Ratio (CRR) shall be 1.00 or greater. Pipe may be threaded or grooved.

a. Piping 2 inches and smaller shall have threaded joints and fittings in concealed, non-accessible locations. Groove coupler connections (Victaulic, Viking VGS, or equal) on pipe sizes 1 inch through 2 inches are acceptable in accessible areas with required seismic bracing provided. Plain end connections such as “Plainlock” and “FIT” are prohibited.

b. For pipe sizes 2 ½-inch and larger, grooved type (Victaulic, Viking VGS, or equal), welded, threaded and flanged connections may be used. Any connection that does not utilize a threaded, welded or grooved connection is prohibited, except for mechanical tee bolt-on branch outlet fittings sizes 2-inch and smaller (Victaulic 920 and the 920N).

c. Submit Verification from manufacturer stating that piping material furnished meets above criteria; (i.e.: threadable pipe has a UL assigned CRR of 1.00 minimum, that it meets ASTM A53, A135 or A795, and it is UL listed, FM or NFPA approved.)

FSP-2 Ductile iron pipe, AWWA C151 (for pipes below grade). Gasketed self retaining joints per ASME/ANSI B16.4.

FSP-3 Plastic, PVC, thick wall (cast iron OD sized), DR 14 (200 PSI). UL listed for fire main service (underground). Gasketed self retaining joints - Johns Manville Blue Brute AWWA C900, JM Eagle C900 water pipe or equal.

FSP-4 Fire Sprinkler Pipe: 1 inch through 3-inch, Copper meeting NFPA 13 Standards. Pipe may be grooved.

FSP-5 Flexible Fire Sprinkler Head Connectors: 1 inch pipe size flexible stainless steel fire sprinkler head connectors “Flex Head Industries” Models 2024, 2036, 2048, 2060 and 2072, or equal..

2.03 ACCESSORIES AND APPURTENANCES

A. Escutcheons: Polished chrome plated split-ring type for exposed piping at every penetration inside finished rooms.

B. Guards: Provide sprinklers with guards at ceiling at or under seven feet six-inch high and where subject to damage or vandalism.

C. Miscellaneous: Provide accessories and appurtenances for a complete system.

2.04 FIRE HOSE VALVES

A. Schedule Numbers:

SPV-1 Valve, Fire Hose, cast brass angle valve, UL listed and Factory Mutual approved; 1 ½-inch at 175 psi, female NPT outlet with 1 ½-inch male NPT by 1 ½-inch male NST adapter nipple.

POTTER-ROEMER	POWHATAN	UNITED
4070	500	88
Or equal		

SPV-2 Valve, Standpipe for 2 ½-inch for 150 or higher psig working pressure, male NST outlet for fire department hose connection. Cast brass, replaceable composition disc, and rough chromium-plated body (unless provided inside UL listed valve cabinet) with hand wheel.

POWHATAN	UNITED	POTTER-ROEMER
DXWDGV-250F DXAV5-250F	88H	4065
Or equal		

2.05 STANDPIPE VALVE CABINETS

A. Schedule Numbers:

SPVC-1 Cabinet semi-recessed type center break door with lock.

POTTER-ROEMER #1810 Series, DVL or E	GUARDIAN
National Fire Equipment Ltd. Model C-975 with glass door or Model CVB-200 solid door	Or Equal

SPVC-2 Surface mounted cabinet for masonry walls, same as SPVC-1.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel or groove plain end ferrous pipe ends.

B. Remove scale and foreign matter, from inside and outside of pipes, before assembly.

C. Provide piping connections to equipment with flanged or grooved connections.

3.03 INSTALLATION

A. Install underground supply line connected to detector check or water main indicated. Braced or clamped bends shall be in accordance with requirements of NFPA 24. Provide vertical clamp rods at flange and spigot piece of risers, long enough to pass through riser's base flange where required. Furnish concrete thrust blocks where required. Tracer wire shall be installed as per Section 22 0553: Plumbing Identification on PVC underground piping.

B. Install FDCs, check valves, shut-off valves, gauges, Inspector’s test and drain assemblies and flow indicator. FDC must be installed so that it is unobstructed and accessible for the Fire Department’s first response unit.

C. Pipe through floors, wall, and ceilings, at head locations, shall be furnished with required sleeves, and escutcheons and fire caulking where indicated and/or required by code. Escutcheons shall be polished chrome plated unless other finish is selected by the Architect.

D. Sprinkler system shall be provided with complete drainage facilities in accordance with CBC standards. Drain discharge may discharge into a sewer, storm drain, sump pit or street gutter. Fire sprinkler drains shall not discharge onto a playground or across a sidewalk. Discharge to plumbing fixtures is prohibited due to the inability of a plumbing fixture to receive a full flow of water from a fire sprinkler drain valve under working pressure.

E. Upon completion of the Work of this section, and before Substantial Completion, subject the entire system, including underground supply connections, to tests as required by NFPA 13, and CBC standards and furnish the Owner with a certificate of compliance as required.

F. Close nipples are prohibited. Threaded unions are prohibited. Where a threaded union or coupling is needed, a groove type fitting (Victaulic or equal) shall be used instead. If a groove style coupling is used in a concealed area, an access panel allowing full access to that connection shall be provided.

G. Fire sprinkler systems piping hangers, seismic bracing, anchors and supports shall conform to NFPA 13, CBC and other applicable codes and the requirements of this specification.

H. Grooved joints shall be installed in accordance with the manufacturer's latest published installation instructions. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Gaskets shall be of an elastomer grade suitable for the intended service, and shall be molded and produced by the coupling manufacturer.

I. Tee branch outlets on fire sprinkler mains shall be by the use of a threaded ductile iron tee fitting, a groove type tee fitting, (Victaulic or equal), or by the use of a thread-a-let welded on by a certified welder as required by NFPA. Mechanical tee bolted branch outlet fittings are prohibited except for branch outlet sizes 2-inch and smaller.

J. Sprinkler lines within the building shall be concealed within the structure. Risers shall be installed in utility, supply rooms or similar service areas whenever possible, and shall not obstruct access, or maintenance of other equipment within the space. Mains and risers shall be located within the area protected by the sprinkler system unless otherwise approved by fire authorities having jurisdiction.

K. Sprinklers that have been dropped, damaged, have cracked bulbs, or show a visible loss of fluid shall not be installed.

L. Sprinkler bulb protectors shall be removed by hand after sprinkler installation. Tools or other devices to remove the protector that could damage the bulb in any way shall not be used.

M. Routing of piping in non-concealed exposed areas shall be subject to the Architect's review in the final shop drawings.

N. Underground piping shall have a minimum of 36 inches of cover to grade. Underground pipe shall be installed on a flat not less than 6-inch thick undisturbed sand bed. After required pressure-leak test, pipe shall be covered with sand not less than 6 inches thick, before backfilling. Comply with NFPA Standards. Piping is not allowed to be underground below the building floor slab.

O. Provide approved backflow prevention assemblies. Installations of backflow prevention assemblies shall be tested and certified by a certified Los Angeles County backflow prevention device tester prior to Substantial Completion. Tests shall be performed in the presence of the Project Inspector. Test reports shall be turned over to the Project Inspector for mailing to proper agency.

P. Provide shunt trip when sprinklers are installed in the elevator machine rooms and elevator hoist way unless the sprinklers are located 2 feet or less from the hoist way pit floor.

Q. Test valve (ITV) shall be located at the opposite end of the sprinkler system from the supply. Test-and-drain type combination valves are prohibited. ITV discharge and main drain lines shall be piped to a sump pit or to the outside of the building to within a foot from the ground where it will drain away from the building to an exterior storm drain.

R. Each building with a sprinkler riser shall be furnished with an accessible shut off riser valve installed no higher than five feet from the finish floor. Each floor shall have a

separate shut off valve with flow switch, and shall be securely enclosed or secured with a chain and break-a-way lock. Also see section 2.01- C-12 of this specification.

3.04 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.05 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose at off-project site.

END OF SECTION

DIVISION 22

PLUMBING

SECTION 22 05 00 –

COMMON WORK RESULTS FOR PLUMBING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section provides the basic plumbing requirements that apply to the Work of Division 22.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 22: Plumbing

3. Division 23: HVAC

4. Division 26: Electrical.

1.02 REGULATORY REQUIREMENTS

A. Current federal Safe Drinking Water Act (SDWA) regulations require the furnishing of lead-free pipe, solder, and flux in the installation or repair of plumbing in non-residential facilities connected to public drinking water systems. Under this regulation, solders and flux are considered lead-free when they contain 0.2 percent lead or less. Under California regulations pipes and pipe fittings are considered lead-free when they contain 0.25 percent lead or less as defined in California Assembly Bill 1953 (AB 1953). No pipe, pipe fittings, or any other fitting or fixture intended to convey or dispense water for human consumption by drinking or cooking is allowed in the domestic plumbing system, if they do not meet the low lead definition of AB 1953. Weighted average lead content of the wetted surface area of pipes, fittings and fixtures may not exceed 0.25 percent.

1. Provide lead-free water pipe, solder, and flux materials that meet the standards as outlined by the federal SDWA regulations and California AB 1953 if installed in drinking water system.

2. Collect pipe, solder, and flux material samples as required by the Project Inspector. Test samples shall be delivered to an Owner designated testing laboratory for testing of lead content.

a. Test samples for lead content by the atomic absorption spectrophotometry method.

3. Materials found not conforming to SDWA and California AB 1953 regulations shall be deemed defective Work and shall be replaced with lead-free materials.

4. Comprehensive testing of the remaining materials for their lead content shall be performed as required by the Project INSPECTOR.

A. Materials, fabrication, equipment, and installation shall comply with industry standards and code requirements. Where manufacturer's recommendations exceed industry standards, the manufacturer's recommendation shall establish the minimum standard. As a minimum, standards from the following organizations shall apply:

1. ANSI - American National Standards Institute.
2. ASME - American Society of Mechanical Engineers.
    a. ASME Boiler and Pressure Vessel Code.
    b. ASME B31 - Standards for Pressure Piping.
3. ASHRAE - American Society of Heating, Refrigerating and Air-Conditioning Engineers.
4. ASTM - American Society for Testing and Materials.
    a. ASTM A53 Specification for Welded and Seamless Pipe.
5. AWWA - American Water Works Association.
6. CSA - Canadian Standards Association.
7. FM Global - Factory Mutual Global
8. IAPMO - International Association of Plumbing and Mechanical Officials.
9. NFPA - National Fire Protection Association.
10. OSHA - Occupational Safety and Health Administration.
11. SMACNA - Sheet Metal and Air Conditioning Contractors' National Association.
12. UL - Underwriters Laboratories Inc.
13. Intertek (ETL Certification).

B. Materials, fabrication, equipment, and installation shall comply with federal, state, and local codes including, but not limited to, the following:

1. CBC, California Building Code, and CMC, California Plumbing Code.
    a. Latest edition as adopted by the City of Los Angeles, the County of Los Angeles, and the State of California including amendments effective on the Effective Date of the Contract.
2. California Code of Regulations, Title 8, Industrial Relations, Division 1, Chapter 4, Division of Industrial Safety.

3OSHA - Occupational Safety and Health Administration.

4. CDPH - California Department of Public Health.
5. SCAQMD - South Coast Air Quality Management District.

C. Specifications or Drawings shall not be construed to permit deviation from the requirements of governing codes unless approval has been obtained from legally constituted authorities having jurisdiction, and the Architect. The Contract Documents may contain more stringent requirements than those legally required.

D. Permits and Fees: Refer to the General and Supplementary Conditions.

1.03 SUBMITTALS

A. Provide submittals in accordance with Section 01 3300: Submittal Procedures and with specific requirements of Division 22 sections, as applicable.

B. The above information shall become the basis for inspecting and testing materials and actual installation procedures performed in the Work.

C. Shop Drawings: Submit one additional copy when control diagrams having line voltage connections are indicated. Shop Drawings shall be specifically prepared for the Work of this Project. Drawings prepared in accordance with requirements of Section 01 3113: Project Coordination and Section 01 3300 may be provided by the Architect to serve as a background for the Shop Drawings. Shop Drawings shall comply with the requirements of Section 01 3113 and Section 01 3300 and shall indicate at a minimum:

1. Complete system layout of equipment, components, plumbing fixtures, piping, indicating service clearances, and pipe sizes, fitting types and sizes and pipe elevations, distances of pipes and equipment from building reference points and hanger support locations. The above items shall be coordinated on the shop drawings according to the requirements of Section 01 3113.

2. Schedule and description of equipment, piping and fittings.

1.04 PROJECT RECORD DOCUMENTS

A. Comply with provisions of Section 01 7700: Contract Closeout.

B. Project Record Drawings:

1. Provide a complete set of plumbing and fire protection drawings in AutoCAD and, if available, BIM, complete with external reference drawings, fonts, blocks and plotter pen color/line thickness settings on CD-ROM. Also submit one set of full size reproducible plots on vellum and 3 sets of prints.

2. Before Contract Completion, deliver corrected and completed prints to the OAR. Delivery of project record documents to the OAR does not relinquish responsibility of furnishing required information omitted from project record documents.

C. Operation and Maintenance Manuals:

1. Submit two copies of operation and maintenance manuals in required form and content. If no revisions are required, furnish one additional copy. If revisions are required, one copy shall be returned with instructions for changes; perform such changes and return three copies of manuals. Manuals shall be bound in accordance to Section 01 7700. Deliver manuals to the OAR. Submit an electronic copy of the entire manual in PDF file format.

2. Contents of Manual:

a. Title sheet with Project name, including names, addresses and telephone number of Contractor, installer, and related equipment suppliers.

b. Manufacturer's operating instructions including, but not limited to, the following:

1) Identification of components and controls.

2) Trouble shooting checklist and guidelines.

3) Recommendations for optimum performance.

4) Warnings and safety precautions on improper or hazardous operational procedures or conditions

c. Manufacturer's product data and parts and maintenance booklet for each item of equipment furnished under Division 22 that includes the following as a minimum:

1) Manufacturer’s model, identification and serial numbers.

2) Exploded view of assembly drawings identifying each component or part with the relevant part number.

3) Directory of manufacturer's representatives, service contractors and part distributors.

4) Maintenance and trouble-shooting instructions, including schedule for preventive maintenance, periodic inspection and cleaning criteria.

d. Project Record Drawings: Complete set of plumbing, fire protection and control system drawings in 50 percent reduced print format shall be furnished with the manual. Submit the above record drawings on CD-ROM in AutoCAD and, if available, BIM, complete with external reference drawings, fonts, blocks, and plotter pen color/line thickness settings.

e. Testing, Adjusting, and Balancing reports: Submit as specified in Section 23 0593.

f. South Coast Air Quality Management District (SCAQMD) permits to install and operate boilers, water heaters and other fuel burning equipment and third-party source test reports as required by SCAQMD to allow start-up and operation of equipment.

g. Los Angeles County industrial waste permits.

h. Valve directory complete with location, function, size, and model of each valve with reference to the project record drawings.

i. Equipment and component identification chart complete with location, function, size, and model of each equipment or component with reference to the project record drawings.

1.05 COORDINATION

A. Contract Documents indicate extent and general arrangement of Work under Division 22. Contractor shall coordinate work in accordance with Section 01 3113 requirements and make adjustments as required to provide maximum headroom, a neat arrangement to keep passageways and openings clear to provide accessibility and provisions for maintenance, and to meet code requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage: Deliver materials to Project site in their original unopened containers with labels intact and legible at time of delivery. Store in strict accordance with manufacturer's recommendations.

B. Do not store plastic pipe or materials in direct sunlight.

1.07 PRELIMINARY OPERATION

A. OAR may require any portion of plumbing Work to be operated before Substantial Completion. Such operation shall be in addition to regular tests, demonstrations and instructions required under the Contract Documents, and shall be performed as required.

B. Notify the INSPECTOR at least 24 hours in advance of lighting or re-lighting pilots.

1.08 TRAINING OF OWNER PERSONNEL

A. Training of Owner's personnel shall include:

1. A minimum of 4 hours of on-site overview of the overall Plumbing System.

2. Refer to Division 22 sections for specific training on each of the components of the Plumbing System.

B. Contract shall include the cost of training Owner operation and maintenance personnel in operating, adjusting, maintenance, trouble-shooting, and Project site repair of each component, equipment, or system provided under this Contract.

C. Operational and maintenance training shall be conducted on the Project site, unless indicated otherwise.

D. Upon completion of Owner training, a completion certificate indicating the nature of the training and a description of the systems, complete with equipment and component lists shall be issued to each trainee. The certificate should be issued in duplicate with one copy retained by OAR.

E. An attendance sheet with the names and signatures of all participants attending the training shall be submitted to the OAR and kept as part of the project documents.

1.09 GUARANTEES AND DAMAGE RESPONSIBILITY

A. Sound of water flowing in piping shall not be transmitted to building structure. Operation of mechanical system shall not produce operational sounds that can be heard outside of rooms enclosing apparatus or equipment.

PART 2 – PRODUCTS

2.01 MATERIALS AND EQUIPMENT

A. Unless otherwise specified, materials and equipment shall be new, in good and clean condition. Equipment, materials, and components shall be of the make; type and model number noted on Drawings or specified. Pieces of equipment of the same type shall be by the same manufacturer.

B. Whenever an item is listed by a single proprietary name, with or without model number and type, it shall be for purpose of design only, to indicate characteristics and quality desired. Proprietary designation listed on Drawings, or listed first in Specifications, is used as a basis for design to establish a standard for quality and performance and space requirements.

C. Equipment and materials indicated or required to be installed outdoors shall be of the type that is designed, manufactured, listed or approved by authorities having jurisdiction for outdoor installation by being resistant to the adverse effects of weather. The additional protective measures against outdoor weather required by the manufacturers' installation instructions and prevalent practice shall be provided.

D. For substitution of materials or products, refer to the General Conditions.

PART 3 – EXECUTION

3.01 SERVICE INTERRUPTIONS, OFF-SITE, GAS AND WATER

A. Schedule Work so there shall be no service interruptions of existing systems or systems during normal hours of operation of affected systems and facilities.

B. When service interruptions are mandatory, arrange in advance with the OAR as to time and date of such interruptions.

C. Systems, which are interrupted, shall be returned back into operation in such manner that they will function as originally intended.

3.02 CUTTING, NOTCHING, AND BACKING

A. Conform to California Building Code, Title 24, Part 2, for notches and bored holes in wood and for pipes and sleeves embedded in concrete and for cuts in steel, as detailed on structural Drawings.

B. Where pipes pass through, or are located within one inch of any construction element, install a resilient pad, ½ inch thick minimum, to prevent contact.

C. Furnish provisions for recesses, chases, and accesses and provide blocking and backing for proper reception and installation of plumbing Work.

3.03 LOCATION OF PIPING AND EQUIPMENT

A. Location of piping, apparatus and equipment indicated on the Drawings is approximate and shall be altered to avoid obstructions, preserve headroom, and provide free and clear openings and passageways.

B. Trenches parallel to footings shall not be closer than 18 inches to the face of footings and shall not be below a plane having a downward slope of 2 horizontal to one vertical, from a line 9 inches above bottom of footing.

C. Pipe in tunnels shall be installed close to one side of tunnel to provide maximum space for passage. Pipe shall not be installed through crawl hole unless otherwise specified or detailed on Drawings.

D. Place equipment in locations and spaces indicated, disassemble and/or reassemble equipment as required by Project conditions.

3.04 TESTS AND TESTING

A. Tests shall be as required under the applicable sections of Division 22, including this Section.

B. Additional tests may be required in the case of products, materials, and equipment if:

1. Submitted items are altered, changed, or cannot be determined as exactly conforming to the Contract Documents.

2. Performance testing and results may also be required on certain items which are as specified, including fan, and pump performance.

C. Piping Tests:

1. Perform tests required to demonstrate that operation of plumbing systems and their parts are in accordance with Specifications covering each item or system, and furnish materials, instruments and equipment necessary to conduct such tests. Tests shall be performed in presence of the Inspector, and representatives of any governmental agency having jurisdiction. Work shall not be concealed or covered until required results are provided.

2. If required tests are not performed, Owner may provide in accordance with the Contract Documents.

3. Pressure gauges furnished in testing shall comply with CPC. Air shall be bled from lines requiring hydrostatic or water tests.

4. Systems shall be pressure-tested in accordance with pipe testing schedule below. Pipe test shall indicate no loss in pressure after a minimum duration of 4 hours at test pressures indicated. Where local codes require higher test pressures than specified herein for fire sprinkler systems, local codes shall govern.

5. Fuel gas lines shall be first tested with piping exposed, before backfilling trenches or lathing; second with piping in finished arrangement, backfilled and paved where required, and walls finished.

6. Piping systems may be tested as a unit or in sections, but entire system shall successfully meet requirements specified herein, before final testing by the Inspector.

7. Repair of damage to pipes and their appurtenances or to any other structures resulting from or caused by these tests, shall be provided.

D. Pipe Testing Schedule:

System Tested	**Test Pressure (psig)**	**Test With:**
Durham system, glass or plastic acid waste, vent and roof drain (except pipes running under a slab or underground)	Fill with water to top of highest vent; allow to stand two hours, or longer, as required by Inspector. Minimum head required for any joint shall be 10 feet in building.	Water
Cast-iron soil, waste and interior downspout, condensate drain from air conditioning equipment	10 feet of water, vertically	
Storm water disposal lines	Running water test	Water
Vacuum pump or condensate pump discharge and condensate return piping	150	Water
Domestic water piping	200	Water
Standpipes, wet or dry	300	Water
Fire sprinkler piping	200	Water
Gas piping(steel threaded or plastic)	60 (both tests)	Air
Gas piping (steel welded)	100 (both tests)	Air
Gas welding station	1-1/2 Working pressure 100 min.	Dry nitrogen
Compressed air piping	175	Air

E. Equipment Performance Assurance Tests:

1. Before operating any equipment or systems, a thorough check shall be performed to determine that systems have been flushed and cleaned as required and that equipment has been properly installed, aligned, lubricated, and serviced. Factory instructions shall be checked to verify installations have been completed and recommended lubricants have been installed in bearings, gearboxes, crankcases, and similar equipment. Particular care shall be furnished in lubricating bearings to avoid damage by over-lubrication and blowing out seals. Equipment shall also be checked for damage that may have occurred during shipment, after delivery, or during installation. Damaged equipment, products, and materials shall be replaced or repaired as required.

2. Upon completion of the above, adjust the system settings to within normal operating conditions to prevent the system from being damaged upon start-up.

3. Run-test the equipment after start-up for five consecutive days. Tests shall include operation of all equipment and systems for a period of not less than two 8 hour periods at 90 percent of the full specified capacities.

4. Equipment Start-up Reports: For each equipment or system on which start-up is performed, submit 8 copies of start-up report for review by the Architect.

   a. The start-up report shall include the manufacturer's standard start-up form completed and signed by the start-up technician.

5. Provide, maintain, and pay costs for equipment, instruments, and operating personnel as required for specified tests.

6. Provide electric energy and fuel required for tests.

7. Final adjustment to equipment or systems shall meet specified performance requirements.

8. Equipment, systems, or Work deemed defective during testing shall be replaced or corrected as required. Test until satisfactory results are provided.

F. Specific Coordinated Plan for Test and Balance:

1. Provide a narrative of the operational intent that clearly describes the function and sequence of operation of each component, equipment, or system installed. Instruct designated Owner personnel in the operation of the installed systems.

2. Prior to final test and balance, plumbing equipment and systems shall be operated and tested as indicated in Article 3.04.F above to demonstrate satisfactory overall operation of the installed systems.

3. Welding performed as part of this Division may be subject to radiographic inspections at random in accordance with requirements specified in Section 22 0513: Basic Plumbing Materials and Methods.

3.05 NOISE AND VIBRATION REDUCTION

A. Correct noise or vibration caused by plumbing systems. Provide all necessary adjustments to specified and installed equipment and accessories to reduce noise to the lowest possible level

B. Correct noise or vibration problems caused by failure to install work in accordance with Contract Documents. Include all labor and materials required as a result of such failure. Pay for re-testing of corrected noise or vibration problems by the project acoustical consultant including travel, lodging, test equipment expenses, etc.

3.06 PROTECTION, CARE AND CLEANING

A. In addition to storage criteria of the General Conditions, and provisions under Section 01 5000: Construction Facilities and Temporary Controls, the following shall be provided:

1. Provide for the safety and good condition of materials and equipment until Substantial Completion. Protect materials and equipment from damage.

2. Protect installed Work.

3. Replacements: In case of damage, immediately provide repairs and/or replacements as required.

4. Protect covering for bearings, open connections to tanks, pumps, compressors and similar equipment.

5. Interior of piping shall be maintained free of dirt, grit, dust, and other foreign materials.

6. Fixtures, piping, finished brass or bronze, and equipment shall have grease, adhesive, labels, and foreign materials removed. Chromium, nickel plate, polished bronze or brass Work shall be polished. Glass shall be cleaned inside and out.

7. Before initial start-up and again before Substantial Completion, piping shall be drained and flushed to completely remove grease and foreign matter. Pressure regulating assemblies, traps, strainers, boilers, flush valves, and similar items shall be thoroughly cleaned. Tag system with an information tag listing responsible party and date of element, before initial start-up and again before Substantial Completion. Compressed air, oil, and gas piping shall be blown out with oil-free compressed air or inert gas.

END OF SECTION

SECTION 22 05 13

BASIC PLUMBING MATERIALS AND METHODS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section prescribes basic materials and methods generally common to the Work of Division 22.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 22: Plumbing.

3. Division 26: Electrical.

4. Section 33 1100: Site Water Distribution Utilities.

1.02 SUBMITTALS

A. Provide in accordance with Division 01, Section 22 0500 and specific requirements of each section of Division 22.

B. Types of welding rods to be used.

1.03 QUALITY ASSURANCE

A. Standards: Comply with applicable national, state, and local codes and standards: ASTM, ASME, and ANSI. Federal Specifications, AWWA, SISPI, NFPA, FM, UL, CPC (California Plumbing Code), CMC (California Plumbing Code), CSA.

B. Qualifications of Manufacturer: Products used in the Work of this Section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a history of successful production as reviewed by the Architect.

1.04 COORDINATION

A. Coordinate related Work in accordance with provisions of Section 01 3113: Project Coordination.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide the following products if they are indicated in the Contract Documents or if they are required for the proper installation, function or operation of equipment, systems or components indicated in the Contract Document.

B. Provide the following products as a complete assembly with required accessories for a complete and functioning entity in compliance with governing codes and applicable standards as specified in Section 22 0500, manufacturer's instructions or as required.

1. Omission of minor details in the Contract Documents does not waive and/or otherwise relinquish compliance with the above requirements.

2.02 MANUFACTURERS AND MATERIALS

A. Ball Valves: Bronze, 2-inch and smaller:

BV-1: Class 150, 600 psi, CWP, 2 piece construction reinforced Teflon seats, full port, adjustable packing gland, stainless ball and stem, threaded ends.

Hammond UP-8303A/UP-8305/UP-8513, NIBCO T-685-80-LF/TS-685-66-LF, Milwaukee UPBA400S/450S, or equal.

Provide valve Handle shall be stainless steel when valve is installed below grade or in the ground valve box.

BV-2: Class 150, 600 psi, CWP two piece construction with reinforced TFE seats, full port, adjustable packing gland, (no threaded stem designs allowed), threaded ends.

NIBCO T-685-80-LF, Hammond UP-8303A, Milwaukee UPBA-400 or equal.

NIBCO T585 S6R66 (Stainless Steel), Milwaukee BA-260 (Stainless Steel).

Provide BV-1A shall be used on hot domestic and cold water systems.

BV-3 Class 150, 600 psi CWP, 2-piece construction, bronze body, reinforced Teflon seats, adjustable packing gland, (no threaded stem designs allowed), threaded ends.

Hammond UP8301A, NIBCO T-585-70, Milwaukee BA-400, or equal.

Provide BV-2 to be used only where water is NOT used for water consumption.

Ball Valves in Insulated Piping: Use extended operating handle of non-thermal conducive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation and memory stops that are fully adjustable after insulation is applied. NIBCO Nib-Seal Handle.

B. Butterfly Valves:

Provide Butterfly Valves in a domestic plumbing system intended to convey water for human consumption shall comply with Quality Assurance, article 1.03 of this Section.

BFV-1 Centerline Series A, 200 psi CWP tight shut-off.

1. Body: Lug type ductile iron. Suitable for bi-directional dead-end service at rated pressure without use of downstream flange.

2. Disc: Bronze, or aluminum bronze.

3. Stem: One or two-piece, 400 series stainless steel.

4. Seat and O-Rings: EPDM.

5. Upper and Lower Stem Bearings: Copper alloy or non-metallic material.

6. Operators: Valves 6 inches and smaller, with lever handle. Valves 8 inches and larger, with manual gear operator and disc position indicator.

7. Manufacturers:

a) Valves 2.5 to 6-inch: NIBCO, Milwaukee ML-233E, Hammond 6411-03, or equal.

b) Valves 8-inch and larger: Milwaukee ML 333E, Hammond 6411-03, NIBCO LD 2000, or equal.

C. Check Valves:

Provide check valves in a domestic plumbing system intended to convey water for human consumption shall comply with Quality Assurance, article 1.03 of this Section.

1. Bronze, 2-inch and smaller:

CHV-1: 200 psi, CWP horizontal swing, Y pattern, renewable seat and disc, threaded ends.

NIBCO T-413-Y-LF, Milwaukee UP-509, Hammond UP-904 or equal.

Provide on domestic hot and cold water systems.

CHV-2: Class 125 200 psi, swing check, bronze body, Teflon disc, soldered ends.

Stockham B-310TY, Crane 1340, NIBCO S-413-Y, Milwaukee 1509-T, Hammond IB-912 or equal.

Provide on junior fire sprinkler systems less than 3 fire sprinkler heads.

CHV-3: 200 psi, CWP, bronze body, horizontal swing, Y pattern, renewable seat and disc, solder ends.

Nibco S-413-Y-LF, Milwaukee UP 1509-T, Hammond Up-946 or equal.

Provide on domestic hot and cold water systems.

2. Cast Iron 2 1/2-inch and larger:

CHV-4: Class 125, 200 psi, CWP, IBBM, renewable seat and disc, bolted cap, threaded ends:

Crane 372, Stockham G-927, NIBCO T-918-B, or equal.

Provide on multiple domestic hot and chilled water pump systems, multiple steam boiler return lines from steam trap.

CHV-5: Special low-pressure check valve for installation in gas lines.

Circle Seal Products Co.
119B-PP-0-15 psi; #1:1/8 inch IPS; #2:1/4 inch IPS #3:3/8 inch IPS.

Provide on low pressure gas in chemistry laboratory systems.

D. Earthquake Valve:

EQV-1 Mechanically triggered by seismic movement, complying with state of California seismic response specifications, UL listed and certified by D.S.A. Size and pressure as required or indicated on Drawings. (Minimum 1/4 psi, maximum 10 psi. Earthquake valve shall shut off gas automatically during an earthquake to prevent an explosion or fire. Valve shall be Koso California seismic valve, or equal.

1. Not sensitive to vibrations caused by passing trucks or accidental bumping.

2. Sensitive to wide amplitude G's only. Preset at factory for the correct G-rating.

3. Positive sealing from minus 10 degrees F. to 150 degrees F.

4. Visual open-close indicator.

5. Manual reset.

6. Plumb line for mounting.

7. Tripping mechanism has non-creeping rolling latch.

8. Install valve per manufacturer’s recommendations only.

Provide automatic shut-off for gas systems during earthquake at gas.

D. Expansion Tank:

ET-1 Pressurized, vertical, steel expansion tank for potable water systems with FDA approved, replaceable, heavy duty, butyl rubber blend diaphragm, polypropylene lined dome, 1/2 inch, 3/4 inch, 1 inch or 1 ½-inch NPT system connection, 1/2 inch or 3/4 inch drain, 0.302 inch-32 standard automobile tire valve type charging connection, lifting rings and a floor mounting skirt for vertical installation. The tank must be constructed in accordance with Section VII of the ASME Boiler and Pressure Vessel Code and stamped for 125 psi working pressure. The tank must be also rated for a continuous working temperature of 240 degrees F. Provide weather and rust resistant coating.

Bell and Gossett, Wheatley, Taco, Amtrol or equal.

ET-2 except for potable water system such as domestic hot water system. Provide at each domestic hot water heater or system.

E. Flow Control Valve – Manual:

FC-1 Flow control valves: Bell and Gossett Series CB circuit setter balancing valve, line size, with integral pointer (to register degree of valve opening), differential pressure meter connections with built-in check valves and lockable memory stops. Armstrong Series CBV circuit-balancing valves, Victaulic/TA Hydronics, or equal.

Provide balancing and controlling of domestic hot water system flow for different branch circuits.

F. Gate Valves:

Provide gate valves in a domestic plumbing system intended to convey water for human consumption shall comply with Quality Assurance, article 1.03.

1. Bronze, 2-inch and smaller:

GV-1 Class 125, 200 psi CWP, bronze body and bonnet non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Hammond IB645, Crane 1701, Milwaukee 105, American 3F, NIBCO T-113, or equal.

Provide shut-off and isolation of equipment and device for gas system.

GV-2 Class 125, 200 psi, CWP, bronze body and bonnet, non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

NIBCO T-113-LF, Milwaukee UP 105, Hammond UP 645 or equal.

Provide on domestic hot and cold water systems.

GV-3 Same as GV-1, except solder ends:

NIBCO S 113, Milwaukee 115, Hammond IB 647, or equal.

Provide in yard box, to each group of fixtures behind access panels, where valves are located near ceiling and beams.

GV-4 Class 125, 200 psi, CWP, bronze body and bonnet, non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

NIBCO T-113-LF, Milwaukee UP 105, Hammond UP 645 or equal.

Provide on domestic hot and cold water systems.

GV-5 Class 125, 200 psi WOG, rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Stockham B-100, Crane 428, NIBCO T-111, Milwaukee 148, Hammond IB-640, or equal.

Same as GV-3 except where clearance is not an issue. Adequate clearance for operation must be provided because hand wheel and stem rise. Provide inlet and outlet connections to water heaters and pumps, make up water lines to HVAC equipment and expansion tanks.

GV-8A Class 250, 250 psi, CWP, O S and Y, IBBM, resilient seat gate valve, flanged ends.

Watts 408-OSY-RW, Kennedy 7168 or equal.

The epoxy coated valves are recommended in the domestic cold water system where corrosives in the water line might cause damage to the inside of valve and where pressure rating in excess of 200 psi is required.

GV-9 Class 125 250 psi CWP iron body, flanged ends, bolted bonnet with wheel handle, resilient wedge, non-rising stem.

Provide in walls for cold water system pipe sizes 2 ½-inch and larger.

NIBCO F-619-RW or equal.

GV-10 Class 125, 250 psi CWP iron body, flanged ends, bolted bonnet with 2-inch operating nut, resilient wedge, non-rising stem, fusion bonded epoxy coated.

Provide for using below grade for cold water system pipe sizes 2 ½-inch and larger.

NIBCO F-619-RW-SON or equal.

G. Globe Valves:

1. Bronze, 2-inch and smaller:

Provide in a domestic plumbing system intended to convey water for human consumption shall comply with Quality Assurance of Article 1.03.

GLV-1A Class 125, 200 psi, CWP, screw-in bonnet, Teflon disc, threaded ends:

Milwaukee UP 502, Hammond UP 440 or equal.

GGLV-2 Class 125, 200 psi, CWP, screw in bonnet, Teflon disc, solder ends.

Hammond IB-418, Milwaukee 1502, NIBCO S-211-Y, or equal.

GLV-2A: Class 125, 200 psi, CWP, screw in bonnet, Teflon disc, soldered ends.

Milwaukee UP 1502, Hammond UP 418 or equal.

Provide on domestic hot and cold water systems.

H. Heater Vent Pipe:

1.Schedule Number:

HVP-1 Shall be UL approved for service specified. Concealed heater vent pipe, including pipe in or through attic spaces, shall be Los Angeles City approved double wall metal vent pipe. For recessed wall heaters, furnish B.W. type. All others may be Type B, or B.W. Clearances must comply with Los Angeles City code and conditions of UL listing.

American Metal Products Co., Inc., Simpson Dura-Vent, AmeriVent, Hart & Cooley Mfg. Co., Metalbestos, or equal.

Provide component parts of a vent assembly, including vent cap, shall be companion items of same manufacturer. Each item shall be UL-approved and listed.

I. Liquid Level Gage:

LLG-1 Refrigerant type, carbon steel with stainless steel trim or all forged steel construction, back-seating standard design. Upper and lower valve furnished with ball check valves; 1/2 inch diameter glass on center. Four 3/16 inch diameter gage glass guard rods or slotted steel guard.

Peneberthy, Henry, Conbraco, or equal.

Magnetic Lever Valves:

MLV-1 Bronze, stainless steel and bronze trim, 2-way, packless normally closed, metal seat.

General Controls, K-10AA2030 or equal.

Provide for Can washing system. Provide for can washing installation.

K. Piping:

PROVIDE FOR PIPES IN A DOMESTIC PLUMBING SYSTEM INTENDED TO CONVEY WATER FOR HUMAN CONSUMPTION SHALL COMPY WITH QUALITY ASSURANCE ARTICLE 1.03.

1. Piping shall be continuously and permanently marked with manufacturer's name, type of material, size, pressure rating, and the applicable ASTM, ANSI, UL, or NSF listing. On plastic pipe, date of extrusion must also be marked.

2. Underground non-ferrous pressure pipes shall be installed with proper color tracer wires. Refer to color code provisions in Section 22 0553: Plumbing Identification.

P-1 Cast iron: Hubless, service weight, ASTM A888, CISPI 301, conforming to CISPI 310 and installed in accordance to IAPMO 1S 06. American Foundry, Tyler, or AB & I or equal.

P-2 Galvanized steel, Schedule 40, ASTM A53., US Steel or equal.

P-3 Copper drainage tube, underground, type L hard, ASTM B 88, Mueller, Cerro Brass or equal.

P-4 Copper drainage tube, inside structure and above grade. Type DWV hard temper, ASTM B 306, Mueller, Anaconda, Cerro Brass, Cambridge-Lee, Halstead or equal.

P-5 Purple pipe, PVC, schedule 40 for reclaimed or recycled water (below ground only for non-potable irrigation systems), type 1, grade 1, PVC-1120, Cell Class 12454 B.

P-6 Copper water tube, Type L hard, ASTM B88. Mueller, Cambridge-Lee, Halstead or equal. (when used above ground only)

P-7 Copper water tube, Type K hard, ASTM B88, by Mueller, Cerro Brass, Cambridge-Lee, Halstead or equal.

P-8 Polyethylene plastic pipe, ASTM D 2513, standard dimension ratio. 11, rated at 80 psi working pressure at 73 degrees Fahrenheit (F). for 3-inch and smaller, SDR 11.5 rated at 76 psi at 73 degrees F. for 4-inch and above, butt or socket type fittings, joined by heat fusion, orange or yellow color.

CPCHEM (Chevron Phillips Chemical Company LP) PE 2406, or equal.

Provide for natural gas below grade only. Transition to anodeless steel riser at meter, regulator, or building wall.

P-9 Red seamless brass 85-5-5-5, iron pipe size (IPS), threaded pipe, ASTM B43. Mueller, Cerro Brass, Cambridge-Lee, Halstead or equal.

P-10 Black steel pipe, Schedule 40, ASTM A53, Type E, ERW by US Steel, or equal.

P-11 Seamless copper tubing, tempered drawn, Type M, ASTM B88 by Mueller, Cerro Brass or equal.

P-12 High Silicon Iron Casting, 1 ½-inch and 2-inch, threaded for science room vents when ferrous waste piping is provided, ANSI-A21.10, WWP-356-36, ASTM D1784-699, by Duriron or equal.

P-13 PVDF (Polyvinylidene Fluoride) schedule 40 pipes, conforming to ASTM F1673, ASTM D3222 and complying with UL723 (ASTM E84). The joints may be no-hub or electro-fusion type. Installer shall be certified by manufacturer for joint installation. Orion, Fuseal or equal.

Provide for installations where the corrosive waste piping passes through air plenums as defined by California Mechanical Code (CMC) and underground.

P-14 Polypropylene chemical waste, flame retardant pipe, conforming to ASTM F1412 and ASTM D4101. The joints may be no-hub or electro-fusion type. Installer shall be certified by the manufacturer for joint installation. Orion, Fuseal or equal.

Provide fireproof wrapping where the corrosive waste piping passes through air plenums as defined by CMC. This type may be used for underground.

P-15 PVC, thick wall, cast-iron OD sized, UL listed, AWWA listed, NSF listed, Class 200 with tracer wire, Blue Brute, or equal.

Provide Domestic water, irrigation and main fire line below ground only (4-inch and over).

P-16 Type 316L Stainless steel chemical waste pipe, marked with manufacturer's identification and fittings. Mechanical press fit joints with EPDM seals Manufacturer's representative shall instruct installers and certify them for joint installation. Piping system shall be provided with a five-year manufacturer’s material warranty.

Blucher-Josam or equal.

THIS TYPE SHALL NOT BE USED FOR UNDERGROUND INSTALLATIONS. ONLY WHERE THE CORROSIVE WASTE PIPING PASSES THROUGH AIR

PLENUMS AS DEFINED BY CMC.

P-17 304 / 304L Stainless Steel, .049 wall, ASTM A312. Pipe must be certified for use with the Vic-Press 304TM piping system, by Trent Tube, Victaulic or equal.

THIS TYPE SHALL NOT BE USED FOR UNDERGROUND INSTALLATIONS. ONLY WHERE THE CORROSIVE WASTE PIPING PASSES THROUGH AIR PLENUMS AS DEFINED BY CMC.

P-18 CPVC (Chlorinated polyvinyl Chloride) schedule 40 pipe, conforming to ASTM D1784 and complying with UL723 (ASTM E84). The joints shall be of solvent cement type conforming to ASTM F493. Installer shall be certified by the manufacturer for this type of joint installation. Spears, Corzan, Charlotte or equal.

P-19 PVC, schedule 40, extruded from 100 percent virgin Polyvinyl Chloride (PVC) compound, meeting requirements of class 1254-13 of ASTM D1784.

L. Pipe Fittings:

Pipe fittings in a domestic plumbing system intended to convey water for human consumption shall comply with Quality Assurance, article 1.03.C.

PF-1 Cast iron, soil or waste no-hub coupling with neoprene gaskets, stainless steel corrugated shields and stainless steel clamps. 2 bands for size 1 ½-inch thru 4-inch, IAPMO, ASTM C 564 and CISPI 310.

American Foundry, Mission, Tyler, or equal.

PF-2 Cast iron, soil or waste, Heavy-duty no-hub coupling with neoprene gaskets, stainless steel corrugated shields and stainless steel clamps. 4 bands for size 5-inch thru 10-inch. IAPMO, ASTM C564 and CISPI 310.

American Foundry, Mission, Tyler, or equal.

PROVIDE WITH P-1 AS REQUIRED BY THE ENGINEER DUE TO SITE SPECIFIC CONDITIONS.

PF-3 Malleable iron, Class 150, threaded, galvanized, beaded, ANSI B 16.3. P-2

Stockham, Stanley Flagg, Grinnell Oreual.

PROVIDE WITH P-2.

PF-4 Cast brass drainage fittings ASA B 16.23, ASTM B 42. Provide with copper drainage tube.

Mueller Brass, Nibco, Stanley Flagg, Lee Brass Or equal.

PROVIDE WITH P-3 AND P-4.

PF-5 Wrought copper - solder type ANSI B 16.22

Mueller Brass, Nibco, Lee Brass or equal.

PROVIDE WITH P-6 PIPE, SOLDER, AND FLUX SHALL BE LEAD-FREE FOR DRINKING WATER. FLUX SHALL BE AN APPROVED WATER-SOLUBLE MATERIAL.

PF-6 Polyethylene plastic fittings, ASTM D 3261 and D 2683, standard dimension ratio 11, rated at 80 psi working pressure at 73 degrees F. for 3 inches and smaller, SDR 11.5 rated at 76 psi at 73 degrees F. for 4 inches and above, butt or socket type fittings, joined by heat fusion, color orange or yellow.

CPCHEM, (Chevron Phillips Chemical Company LP) or equal.

Provide with P-8.

PF-7 Polyethylene transition risers, for Pff-6 above, Transition fitting must have a minimum vertical height of 36 inches from the horizontal connection which will allow for a 6-inch steel riser above ground. Polyethylene transition risers shall be anodeless.

Central Plastics Company or equal.

Installed in a gas piping system for the purpose of providing a transition from horizontal below ground (polyethylene) to a vertical above ground (steel). Transition must be made on the horizontal side of the gas piping system and meet ASTM standards for Polyethylene plastic pipe and fittings.

PF-8 Bronze and brass, 250 psi, threaded, ASA B16.17 and F S WW-P-460.

PROVIDE WITH P-9.

Mueller Brass, Lee Brass Or equal.

PF-9 Malleable iron, Class 125, ANSI B 16.3, threaded or welded Schedule 40 black steel for 2-inches and below and welded for 2 ½-inch and above, by Stockham or equal.

PROVIDE WITH P-10.

PF-10 Cast iron, threaded, Class 125, ANSI B 16.1.

PROVIDE WITH P-12.

Stockham or equal.

PF-11 Cast-iron OD sized,, bell and spigot gasket joints.

PF-12 Steel butt weld type, ASTM A 234WPB.

PROVIDE WITH P-12.

PF-13a No-hub couplings for factory grooved PVDF or polypropylene, schedule 40 piping. The coupling shall be of the same material and gauge as the pipe. Each coupling shall have 300 series stainless steel outer band and 5/16 inch bolts, nuts and washers plated to meet a 100-hour salt spray test per ASTM B117. Installer shall be certified by the manufacturer for this type of joint installation. Orion, Fuseal or equal.

PROVIDE WITH P-13.

PF-13b The pipe and fitting shall be joined using the socket fusion system conforming to ASTM 2657. Installer shall be certified by the manufacturer for this kind of joint installation. Orion, Fuseal or equal.

PROVIDE WITH P-14.

PF-13c CPVC (Chlorinated Polyvinyl Chloride) schedule 40 pipe and fittings, conforming to ASTM D1784 and complying with UL723 (ASTM E84), shall be joined using solvent cement conforming to ASTM F493. Installer shall be certified by the manufacturer for this kind of joint installation. Spears, Corzan or equal.

PROVIDE WITH P-18.

PF-14a Drains, bottle traps and similar devices for CPVC, PVDF or polypropylene, schedule 40 piping, shall be of same material and gauge as the pipe with mechanical joints. Installer shall be certified by the manufacturer for this kind of joint installation. Orion, Fuseal or equal.

FURNISH WITH MATCHING PIPE ONLY. PROVIDE FIREPROOF WRAPPING WHERE THE POLYPROPYLENE PIPING PASSES THROUGH AIR PLENUMS AS DEFINED BY CMC.

PF-14b Type 316L Stainless steel joint for chemical waste piping systems including drain or bottle traps. Blucher-Josam or equal.

FURNISH WHEN USED WITH MATCHING PIPE ONLY. THIS TYPE SHALL NOT BE USED FOR UNDERGROUND INSTALLATIONS AND ONLY WHERE THE CORROSIVE WASTE PIPING PASSES THROUGH AIR PLENUMS AND THE AVAILABLE SPACE IS NOT SUFFICIENT FOR FIRE PROOF WRAPPING OF POLYETHYLENE PIPING. GRADE TO SUIT INTENDED SERVICE. PROVIDE WITH PIPING SCHEDULE P-16.

Victaulic Vic Press 304TM or equal.

PF-15 Precision cold drawn austenitic 304/304L stainless steel, with elastomer O-rings

PF-16 Grooved end type– ASTM A395 and A536 ductile iron; ASTM A234 WPB forged steel; fabricated from ASTM A53 carbon steel. Couplings shall be supplied with angle-pattern bolt pads for rigidity, except in locations where flexibility is desired. Gaskets shall be pre- lubricated. Galvanized or painted, by Victaulic or equal.

GRADE TO SUIT THE INTENDED SERVICE. PROVIDE WITH PIPING SCHEDULE NUMBER P-2 OR P-10.

PF-17 Grooved end type– ASTM B75 or B152 and ANSI B16.22 wrought copper, bronze sand casting per ASTM B584-87 copper alloy CDA 836 per ANSIbB16.18. Couplings shall be CTS style 606 supplied with angle pattern bolt pads for rigidity, coated with copper coated alkyd enamel. Gaskets shall be pre-lubricated Flush seal type by Victaulic or equal.

FOR DOMESTIC HOT AND COLD WATER 2 ½-INCH AND LARGER COPPER APPLICATIONS. PROVIDE WITH PIPING SCHEDULE NUMBER P-6.

PF-18 CPVC fittings must conform to ASTM D2846 specification for chlorinated polyvinylchloride (CPVC) plastic for hot and cold water distribution system.

PF-19 Plastic fittings, schedule 40 molded from PVC type I compound, conforming to the requirements of specification ASTM D2466.

M. Pipe Isolators:

PLA-1 Absorption pad shall be not less than ½ inch thick, unloaded. Pad shall completely encompass pipe.

Provide for copper piping.

Holdrite, LSP, Stoneman, Potter-Roemer, Trisolator, PR-Isolator, or equal.

PLA-2 PLASTIC CUSHION TO FORM AN INSULATING LINER AND ELIMINATE METAL TO METAL CONTACT WHEN SECURING COPPER TUBES AND PIPES IN AIR CONDITIONING AND REFRIGERATION INSULATION PREVENTING GALVANIC EROSION. (ACOUSTICAL TYPE FOR SOUND ABSORPTION).

Hydra-Zorb Cushion Clamps, Acousto-Clamp, or equal.

N. Pressure Gage: Aluminum or steel case, minimum 4 ¼-inch dial; pressure type or combination vacuum-pressure type, with provisions for field calibration. Dial indicator to indicate pressure in psi with accuracy to within plus or minus 0.5 percent of maximum dial reading. Furnish gages with restriction screw, size 60, to eliminate vibration impulses. Black case and ring, bourdon tube of seamless copper alloy with brass tip and socket. Three way gage cock, constructed of brass with stuffing box, 1/2 inch couplings, with fixed or movable cap nut to shut off pressure gage.

PG-1 Pressure type, black drawn steel case, 4-1/2-inch glass dial, range approximately twice line pressure.

Marsh Keckley, Trerice, Weksler, Weiss, or equal.

O. Plug Valves:

PV-1 2 inches and smaller: Rockwell No.114, lubricated plug type, 200-pound., water operating gauge pressure iron body and plug, regular pattern, threaded, with indicating arc; by Walworth, Homestead, WKM, or equal.

Provide Isolation and on-off application for gas system.

PV-2. 2 ½-inch and larger: Rockwell No.115 and No.165 lubricated plug type, 200 pound water operating gauge. Iron body and plug, regular pattern, flanged, with indicating arc. Walworth, Homestead, WKM, or equal.

P. Safety Relief Valves:

SRV-1 Combination temperature and pressure relief type. CSA approved. Set to open at 125 psi pressure.

Watts 40L Cash-Acme NCLX-1

Provide for Steam system, hot water system.

SRV-2 Same as SRV-1, except provide on storage type water heater with anode in dip tube.

Watts 10 x L, Cash-Acme NCLX-1

SRV-3 Spring type, ASME and NB stamped and certified with manual lifting device for air or gas.

Bailey, Cash-Acme, Watts, Keckley or equal.

Provide for Gas system and compressed air system.

Q. Strainers:

STR-1 Description: Wye type with monel or stainless steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on Drawings, provide with valved (globe valve) blowout piping, same size as blowout plug.

1. 2-inch and smaller:
   C.M. Bailey No.100-A, 250 lb., cast iron body, threaded, Keckley 'B', Spirax Sarco Y-type, or equal.

2. 2 ½-inch and larger:
   C.M. Bailey No.100-A, 125 lb., cast iron body, flanged, or Victaulic style 732, 300 psi, ductile iron body, grooved, fusion bonded epoxy coated.

   C.M.Bailey, Armstrong, Muessco, Keckley 'A', or equal.

   Provide for Oil and gas systems.

STR-2 Y pattern cast iron bodies, 125 psi, monel screen. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2 inches, flanged ends fusion bonded epoxy coated for 2 ½-inch and larger perforations, in accordance with the following:

1. Steam service - 40 square mesh.

2. Other services - 16 square mesh.

Bailey No.100, Armstrong, RP&C, Keckley or equal.

Provide as same as STR-1.

STR-3 Flanged, bucket type, semi-steel body, 125 psi, stainless steel screen with 1/8 inch diameter perforations, all sizes.

Bailey No.1, Zurn 150 Series, RP&C, Keckley GFV or equal.

Provide for Domestic cold and hot water system. Mount above grade for water service.

STR-4 Grooved, T-pattern, ductile iron body, 300 psi, stainless steel frame and mesh basket, grooved ends.

Provide for Domestic hot and cold water system except for high pressure system.

R. Vent Caps:

VC-1 Vandal-proof hood type, for plumbing vent lines.

Stoneman Engineering and Mfg., Semco 1550

Provide for Sanitary drainage system.

S. Vacuum Valves:

VV-1 Vacuum valves; for vacuum serve, 125 psig working pressure, cast iron body, spring loaded lubricated plug type.

General Controls, Honeywell, Valmatic, or equal.

Provide for Domestic hot and cold water system.

T. Protective Coating for Underground Steel Piping Applied to Underground Automotive:

VV-1 Vacuum valves; for vacuum service, 125 psig

Provide for WORKING HOIST PIPING ONLY.

1. Black steel or galvanized steel piping indicated for below grade installation, shall be protected as specified prior to delivery to the Project site:

    a. Sandblast black steel pipe to a gray finish. Sandblast galvanized steel pipe lightly only.

    b. Install one coat of cut back asphalt to galvanized pipe immediately after sandblasting. Pre-heat black pipe to 180 degrees F. immediately before coating.

    c. Install one coat of high-temperature (melting point of 240 degrees F. minimum) Grade B asphalt enamel.

    d. Install one wrapping of 20 mils thick glass, fiber mat, Owens-Corning Coromat or L.O.F. Blueflag with 1/4 inch overwrap. Glass fiber shall be dry at time of installation.

    e. Install a second coat of asphalt enamel as specified above. Glass fiber mat shall be centered in the asphalt enamel.

    f. Install an overwrap of Kraft ripple paper.

2. Total thickness of pipe wrapping shall be not less than 1/8 inch. Entire coating operation shall be accomplished by mechanical means in a continuous operation. Hand installation of protective coating is not permitted.

3. Each piece of wrapped pipe shall be legibly identified at no greater than 5 feet intervals by fabrication company. Each material submittal shall include the name of the fabrication company. Maintain one reviewed Sample on the Project Site.

4. Acceptable manufacturers of wrapping are: Hunt, Mobile, Conway or equal.

5. Fittings (including couplings), unprotected pipe adjacent to fittings, and damaged pipe protection shall be wrapped at Project site as follows:

    a. Fittings and pipe to be wrapped shall be thoroughly cleaned of material foreign to pipe manufacturer.

    b. Install one coat of Plicoflex No. 105 or Protecto Wrap No. 1170 adhesive primer to metal.

c. Wrap pipe and fittings with a minimum thickness of 3/32 inch of Plicoflex No. 310 pipe line butyl molding tape, or Protecto Wrap No. 200 molding tape. Install 3 layers, each layer overlapping next approximately 2/3 width of tape, without stretching. Tape and primer shall be of the same manufacturer.

d. Wrap vinyl tape, 10 mil thickness, over molding tape with 1 inch minimum overlap.

J.M. Trantex, 3M Scotchwrap or equal.

5. Pipe and fittings specified to be wrapped shall be tested with a holiday detector, after pipe has been installed in trench and before backfilling, in presence of the Project Inspector. Furnish a Tinkler and Raser model E-P holiday detector, or similar equipment for this test. Work, which is deemed defective, shall be repaired or replaced. The Project Inspector may test for damaged pipe wrapping after backfilling.

6. Instead of wrapping underground steel pipe as specified above, pipe may be machine-wrapped before delivery to the Project site as follows:

a. Pipe shall be cleaned of moisture, oil, grease, scale, and other foreign material by cleaning with non-oily solvent and wire brushing. Remove metal burrs and projections.

b. Install one coat of Plicoflex No.105 adhesive primer to cleaned pipe. If thinning is required, furnish only non-oily thinners as recommended by tape manufacturer.

c. Wrap coated pipe with Plicoflex No.340-25 tape (15 mil butyl and 10 mil vinyl laminate) Tape shall be installed by machine wrapping at approved plant only. Maintain tension (minimum of 5 pounds per inch of width) on tape over entire diameter of pipe. Tape shall be permanently identified and visible on vinyl side.

d. Fittings, unprotected pipe, and damaged pipe protection shall be wrapped as indicated above.

U. Pipe and Fitting Requirements Schedule: Unless otherwise specified or indicated on Drawings, pipe and fittings shall be installed in accordance with the following table:

TABLE I
PIPE AND FITTING SCHEDULE

Use	Limits	Pipe	Fittings
Domestic hot and Cold water, underground	Up To88 inches	P-6	PF-5
Copper, underground only		P-7	PF-5
Cold water, underground (Site piping)	4-inch and over	P-144	PF-11
Domestic hot and cold water, in building and above ground	All	P-6	PF-5
In building above ground	2 to 8-inch	P-6	PF-5
Compressed air	Underground or in concrete	P-9	PF-8

	Above ground	P-10	PF-3
Condensate drains and drains From HVAC Equip.		P-6	PF-5
Downspouts, interior above and below grade, up to 5 feet from building.		P-1	PF-1 Or PF-2
Acid Vent	All	P-12	PF-10
Fire Mains (Fire Hydrant)	Underground	P-15	PF-11
Gas Natural	Underground	P-8	PF-6
Gas Natural	Above ground	P-10	PF-9
Copper Drainage Tube (Underground)	Waste and Vent	P-3	PF-4
Copper Drainage Tube (Above Ground)	Waste and Vent	P-4	PF-4
Vents	New Building	P-1	PF-1 or PF-2 (IRE) if required by engineer
Vents	Existing Buildings and Exposed Downspouts	P-2	PF-3
Vents	For acid waste lines underground	P-13, 14, 16, 17, 18	PF- 13a, 13b, 13c, 14a, 14b or 15
Waste lines, Sanitary		P-1	PF-1 or PF-2 (IRE) if required by engineer
Waste lines, Acid	To nearest water dilution jet	P-13, 14, 16, 17, 18	PF- 13a, 13b, 13c,14a, 14b or 15

V. Flanges: Flanges shall be furnished and installed at each flanged connection of each type of equipment, tanks, and valves. Faces of flanges being connected shall be furnished alike. Connection of a raised face flange to a flat-faced flange is not permitted. Flanges shall conform to following schedules:

TYPE OF PIPE	FLANGE
Screwed black or galvanized grooved steel pipelines.	125 pound black cast iron screwed flange, flat faced or grooved flange adapters, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401, or equal.
Welded or grooved steel pipe, except high pressure steam lines.	150 pound black forged steel welding flanges, 1/16 inch raised face ASTM A 105, Grade II or grooved flange adapters, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401, or equal.
Copper and brass pipe or tubing.	150 pound cast bronze, flat-faced flange with solder end or grooved flange adapters, Victaulic Style 641, Tyco-Grinnell Fig. 61, Gruvlok Fig. 6084, or equal.

1. Gasket material for flanged connections shall be full faced or ring type to suit facing on flanges and shall be furnished in accordance with following schedule

SERVICE	TYPE
Cold water	1/16 inch thick neoprene

Grooved end flange adapters supplied with pressure responsive elastomeric Gaskets supplied with grooved flange adapters shall be pre-lubricated by the manufacturer. Grade of gasket to suit intended service.

W. Unions:

1. Unions shall be furnished and installed in accordance with the following requirements (unless flanges are furnished):

   a. At each threaded or soldered connection to equipment and tanks, except in Freon or fuel gas, piping systems, whether indicated or not.
   b. Immediately downstream of any threaded connection to each manually operated threaded valve or cock, and each threaded check valve, yard box or access box except those in Freon piping systems, whether indicated or not.
   c. At each threaded connection to threaded automatic valves (except those in Freon piping systems) such as reducing valves and temperature control valves, whether indicated or not.
   d. If grooved piping is used, couplings shall serve as unions. Additional unions are not required

2. Unions shall be located so that piping can be easily disconnected for removal of equipment, tank, or valve.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this Section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Provide all materials and equipment for the Work. Furnish and install necessary apparatus, parts, materials, and accessories.

B. Pipe Installation:

1. Install piping parallel to wall and provide an orderly grouping of proper materials and execution.

2. Piping shall clear obstructions, preserve headroom, provide openings and passageways clear, whether indicated or not. Verify the Work of other Divisions to avoid interference.

3. If obstructions or the Work of other Divisions prevent installation of piping or equipment as indicated by the Drawings, perform minor deviations as required by the Architect.

4. Install piping after excavation or cutting has been performed. Piping shall not be permanently enclosed, furred in, or covered before required inspection and testing is performed.

5. Exposed polished or enameled connections from fixtures or equipment shall be installed with no resulting tool marks or threads at fittings. Residue or exposed pipe compound shall be removed from exterior of pipe.

6. Piping shall be concealed in chases, partitions, walls, and between floors, unless otherwise directed or specifically noted on Drawings. When penetrating wood studs, joists, and other wood members, provide such members with

reinforcement steel straps of Continental Steel & Tube Co., ULINE, Independent Metal Strap, or equal.

7. Reduce fitting where any change in pipe size occurs. Bushings shall not be furnished unless specifically reviewed by the Architect, or indicated on Drawings.

8. Piping subject to expansion or contraction shall be anchored in a manner, which permits strains to be evenly distributed. Swing joints or expansion loops shall be installed. Seismic restraints shall be installed so as not to interfere with expansion and contraction of piping. Seismic loops required at all building separations.

9. Immediately after lines have been installed, openings shall be capped or plugged to prevent entrance of foreign materials. Caps shall be left in place until removal is necessary for completion of installation.

10. Couplings shall not be installed except where required pipe runs between other fittings are longer than standard length of type of pipe being installed and except where their installation is specifically reviewed by the Architect.

11. Water piping shall be installed generally level, free of traps, unnecessary offset, arranged to conform to building requirements, clear of ducts, flues, conduits, and other Work. Piping shall be arranged with valves installed to provide for complete drainage and control of system. Piping shall not be installed which causes an objectionable noise from flow of water therein under normal conditions. Refer to Section 23 0500: Common Work Results for Plumbing.

12. Water lines may be installed in same trench with sewer lines, provided bottom of water line is 12 inches minimum above top and to the side of sewer line.

13. Changes in pipe sizes shall be furnished with eccentric reducers, flat on top. Offsets to clear obstruction shall not be installed so as to produce air pockets.

C. Pipe Sleeves and Plates:

1. Provide pipe sleeves of Schedule 40 black steel pipe or Schedule 40 PVC plastic pipe in concrete or masonry walls, footings, and concrete floors below grade. Provide adjustable submerged deck type sleeves at locations where pipes pass through concrete floors, except concrete slab floors on grade, and at locations where soil pipe for floor type water closets passes through concrete floors.

   FOR FIRE RATED WALL PENETRATIONS FOLLOW THE UNIFORM BUILDING CODE.

2. Sleeves shall provide ½ inch clearance around pipes, except plastic pipe shall have 1 inch clearance. Caps of deck type sleeves shall be removed just prior to installation of pipe. Area around sleeves shall be smooth and without high or low spots. Sleeves in walls shall not extend beyond exposed surface of wall. Sleeves in concrete floors and walls shall be securely fastened to forms to prevent movement while concrete is being placed.

3. Piping installed on a roof shall clear the roof surface by 10 inches minimum, with or without insulation. Bottom of individual fittings may infringe on 10 inches clear space but not groups of fittings or fittings located within 27 inches of each other.

4. Stiles shall be provided to facilitate crossing of piping when parallel piping runs are laterally greater than 12 inches out-to-out, or any pipe is higher than 18 inches, and more than 40 feet long or runs between two or more major pieces of equipment or housings greater than 20 feet apart. Stiles shall be not less than 20 inches wide with a minimum tread depth of 10 inches. Where stiles are required, they shall be located so greatest obstructed distance is 30 feet.

5. Where pipes pass through waterproofed walls, floors, or floors on grade, sealant with Link-Seal Modular Seals, or equal, between pipe and sleeve to provide a waterproof joint. Where earth is in contact with pipe on both sides of a wall or foundation, the waterproof joint is not required. Commercial rubber compression units may be furnished instead of sealed sleeves if reviewed by the Architect.

6. A swing joint, or other required device, shall be furnished and installed in hot water lines with 10 feet of sealant or compression joint to allow for expansion.

7. Provide polished, chrome-plated flanges when plumbing pipes pass through walls at plumbing fixtures, etcetera as specified in Section 22 4000 Plumbing. Provide polished steel, chromium-plated split floor and ceiling plates at locations where pipes pass through walls, floors, ceilings, and partitions in finished portion that neatly conceals pipe insert.

8. Pipe sleeves shall be provided where pipes intersect footings or foundation walls and sleeve clearances shall provide for footing settlement, but not less than one inch all around pipe.

D. Welding of Pipe and Qualifications of Welder:

1. Joints above grade or accessible conduit or tunnels in steel piping may be either welded or screwed unless specifically indicated otherwise on Drawings or specified. Joints in below grade steel piping, whether in insulation or not, shall not be welded, unless otherwise indicated.

2. Welded joints in pipe shall be continuous around pipe and shall comply with ASME B31: Code for Pressure Piping, unless otherwise specified.

3. Each pipe weld shall be stamped with welder's identification mark. Welding shall be performed by welders possessing a valid certificate of qualification for welding carbon steel welding pipe in horizontal position (2G) and horizontal fixed position (5G) in accordance with the requirements of Section IX of the ASME Boiler and Pressure Vessel Code, by an Owner-recognized, DSA approved testing laboratory.

4. Before any welder performs welding on the Work, furnish the INSPECTOR with a copy of welder's valid qualification papers and obtain verification. Welder qualification is not valid unless it has been issued while welder was performing work for current employer, and has performed type of work described by qualification in the preceding 3 months.

   REFERENCE: ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-29 TESTS OF WELDERS AND WELDING OPERATORS.

5. Welding performed under these Specifications is subject to special tests and inspections including rigid Ultra Sonic Testing (UT) and radiographic inspection at random, in accordance with Technique for Radiographic Examination of Welded Joints by an Owner recognized, DSA approved testing laboratory.

ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-51 RADIOGRAPHIC EXAMINATION OF WELDED JOINTS.

E. Unacceptable Welds and Repairs to Welding:

1. Welds containing any of the following types of imperfections shall be deemed defective Work:

   a. Cracks of any type.

   b. Zones of incomplete (in excess of 1/32 inch) fusion or penetration.

   c. Elongated slab inclusions longer than 1/4 inch.

   d. Groups of slag inclusions in welds having an aggregate length greater than thickness of parent metal in a length 12 times the thickness of the parent metal.

   e. Undercuts greater than 1/32 inch.

   f. Overlaps, abrupt ridges or valleys.

2. When a defective weld is detected by examination as outlined above, two additional welds shall be radiographed at locations selected by the Project Inspector. If the two selected welds demonstrate compliant welding, then the two tested welds shall be deemed to be in compliance. Welding revealed by radiographs to be defective Work shall be removed, repaired, and tested by radiograph.

3. If either of the two selected welds demonstrates welding deemed to be defective Work, all welding in that portion of the Work shall be deemed defective Work and either: all welds shall be cutout, prepare new ends for welding and weld to comply with this Specification, or radiograph all welds, removing and repairing only such welding deemed to be defective Work.

4. Repair welding shall be performed in a manner in full compliance with ASME B31. The welded joints or repairs shall be spot examined with UT or radiographic tests in accordance with foregoing requirements.

   REFERENCE, ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-52.

5. Owner shall cause to be performed additional random UT and radiographic examinations of welds. Owner shall be responsible for the costs of any UT and radiographic examinations found to be in compliance with specified requirements.

6. Installer shall be responsible for the costs of UT and radiographic re-examinations of welds deemed defective Work and not in compliance with this Specification, and shall repair or replace said welds in accordance with specified requirements.

F. Welding Rods: Submit a written list of materials and proposed type of welding rods.

G. Backing Rings: Backing rings may be submitted for installation provided the Product Data is submitted with the material list.

H. Qualification Tests for Low-pressure Welding:

1. Tests shall be performed on 3-inch standard weight pipe ASTM A53, Grade A, and shall be welded by acetylene and electric arc. Each sample shall consist of 2 pieces, each 10 inches long, with 30-degree bevel at point weld.

2. Two 20-inch samples shall be performed in the 2G and two 20-inch samples in the 5G positions, with positions defined in Section IX, ASME Boiler and Pressure Vessel Code. Welds shall have the reinforcement ground or machined flush to the surface of the pipe before testing. Samples shall be tested as full section tensile.

3. Weld shall develop a load of 90 percent of 50,000 psi, i.e., 45,000 psi or shall develop a fracture in parent metal.

4. Each qualified welder shall carry an identification card listing welder's name, date of test, and type of welding tests passed; signed by the welder and the laboratory.

5. A valid certificate of qualification issued in compliance with requirements of the ASME Boiler Pressure Vessel Code Section IX shall qualify a welder for issuance of a certificate for low-pressure pipe welding.

I. Certificates of Qualification for Welding of Unfired Pressure Vessels:

1. Certificates of qualification shall be issued by a laboratory recognized by the Owner in compliance with the requirements of the ASME Boiler Pressure Vessel Code Section IX. Qualifications shall be for both acetylene and arc welding of Schedule 40 ASTM A53, Type B ,steel welded or seamless pipe in the Horizontal Position (2G) and the Horizontal Fixed Position (5G) as defined by said code.

2. Certificate described above is not valid unless it has been issued while welder was working for his current employer, and unless welder has performed type of work described by certificate in the preceding three months. Requirements for possession of a valid certificate shall not be waived for welders fabricating unfired pressure vessels when the Specifications require compliance with ASME code or when welding pipe carries working pressures greater than 75 psi and temperatures greater than 250 degrees F.

J. Pipe Joints and Connections:

1. Pipe and tubing shall be cut per IAPMO Installation Standards. Pipe shall have rough edges or burrs removed so that a smooth and unobstructed flow shall be provided.

2. Hot tapping of gas lines is strictly prohibited.

2. Threaded Pipe: Joints in piping shall be installed according to the following service schedule:

a. Soap Piping: Litharge and glycerine, or Expando, Gasoila, or equal.

b. Plastic Piping: Teflon pipe joint compound tape.

c. Oxygen Piping: Wash treads with S.P., rinse, blow-dry and apply litharge and glycerine.

d. Cleanout Plugs: No compound shall be used. After inspection and test, plugs shall be removed, cleaned, greased, and replaced.

b. Other services furnish sealant, suitable and as reviewed by the Architect.

3. Threads on pipe shall be cut with sharp, clean, unblemished dies and shall conform to ANSI/ASME B2.1 for tapered pipe threads.

4. Joint compounds shall be smoothly placed on male thread and not in fittings. Threaded joints shall be installed tight with tongs or wrenches and sealant of any kind is not permitted. Failed joints shall be replaced with new materials. Installation of thread cement or sealant to repair a leaking joint is not permitted.

5. Sharp-toothed Stillson, or similar wrenches, is not permitted for the installation of brass pipe or other piping with similar finished surfaces.

K. Copper Tubing and Brass Pipe with Threadless Fittings:

1. Silver brazed joints shall be used for attaching fittings to non-ferrous metallic refrigerant piping.

2. Non-pressure gravity fed condensate lines may be soldered with 95/5 solder.

3 Silver brazing alloy, Class BCUP-5. Surfaces to be joined shall be free of oil, grease, and oxides. Socket of fitting and end of pipe shall be thoroughly cleaned with emery cloth and wiped to remove oxides. After cleaning and before assembly or heating, flux shall be installed to each joint surface and spread evenly. Heat shall be applied in accordance with instructions in the Copper Tube Handbook issued by Copper Development Associates. Joints constructed of rough bronze fittings shall be provided as recommended by manufacturer.

4. Do not overheat piping and fittings when installing silver brazing.

5. Joints in non-ferrous piping for services not covered above shall be installed with solder composed of 95/5 tin/antimony, ASTM B32, Grade 5A. Surfaces to be jointed shall be free of oil, grease, and oxides. Sockets of fitting and end of pipe shall be cleaned with emery cloth to remove oxides. Solder flux shall be sparingly installed and solder added until joint is completely filled. Do not overheat. Excess solder, while plastic, shall be removed with a small brush in order to provide an uninterrupted fillet completely around joint. Random inspection of joints shall be conducted by Project Inspector to ensure joints are lead-free.

6. Grooved end joints for copper piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

L. Ring-Type Pipe: Joints shall be installed in accordance with manufacturer's instructions with grooved couplings, fittings and rubber rings. Couplings and pipe shall be compatible and of the same manufacturer. Rings shall be accurately located and installed by grooves in coupling. Pipe shall be installed with zero deflection unless otherwise specified. Pressure pipe shall be furnished with thrust blocks at each offset point.

M. Welded Pipe Joints:

1. Joints in welded steel pipelines shall be installed by oxyacetylene or electric arc process. Welding shall be continuous around pipe and provided as specified.

2. Butt welds shall be of the single V-type, with ends of pipe and fittings beveled approximately 37 ½ degrees. Piping shall be aligned before welding is started with the alignment maintained during welding.

3. Welds for flanges and socket fittings shall be of the fillet type with a throat dimension not less than pipe wall thickness.

N. Grooved End Pipe Joints: Grooved end joints for carbon steel piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to grove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

O. Joints shall be Vic-Press 304TM, or equal, made with Victaulic Series 'PFT' tools and the appropriate sized jaw. Pipe shall be certified for use with Vic-Press 304TM system, and shall be square cut, properly deburred and cleaned, and marked at the required location to insure full insertion into the fittings and/or couplings.

P. Polyethylene (Plastic) Pipe:

1. Joints shall be installed by the heat fusion method, in accordance with manufacturer's recommendations and IAPMO installation standard IS 12, for natural gas.

2. Pipe Riser at Meter, Regulator and Building Wall: Prefabricated, anodeless type, utilizing a grade level transition between underground polyethylene pipe and gas supply steel pipe of riser outlet, R. W. Lyall Co., or equal. Below grade to above grade transition shall be installed in a welded, epoxy coated, steel casing.

3. Connections to Existing Pipe Line or Branch:

a. Steel-to-plastic (PE): Provide manufacturer's prefabricated standard transition fitting, transition from epoxy-coated steel pipe to plastic, R. W. Lyall Co., or equal.

b. Plastic-to-plastic, PVC to PE: Provide manufacturer's prefabricated standard transition fitting, transition from PVC to epoxy-coated steel pipe to PE; R.W. Lyall Co., or equal..

c. Plastic-to-plastic, PE to PE: Provide manufacturer's standard fused tapping tee assembly with shut-off feature.

4. Provide PE reinforcing sleeves where PE pipe is fused to multi-saddles, service punch tee, reducing tees, transition fittings and anodeless risers.

Q. Valves: Valves shall conform to the following:

1. Piping systems shall be furnished with valves at points indicated on Drawings and specified, arranged to provide complete regulating control of piping system throughout building and the Project site.

2. Valves shall be installed in a neat grouping, so that parts are easily accessible and maintained.

3. Valves shall be full size of line in which they are installed, unless otherwise indicated on Drawings or otherwise specified, and shall be one of types specified.

4. Provide chain operators on valves 2-inch and larger located 7 feet or more above the servicing floor level.

5. Valves for similar service shall be of one manufacturer.

6. Except where otherwise specified, valves shall be Belimo, Victaulic, Stockham, Crane, Jenkins, Milwaukee, Hammond, American, NIBCO, Hoffman, or equal.

7. Ball valves below grade in yard boxes shall have stainless steel handles.

8. Hose bibs in dense garden areas shall be ¾ inch in size with one hose bib in the lunch pavilion 1 inch in size. Other hose bibs shall be ¾ inch lock shield type. Bibs shall be furnished with vacuum breaker protection.

9. Safety valves and pressure relief valves shall have stamp of approval as required by ASME and shall be provided with annual test lever. Where a hot water storage tank is heated by means of a coil, pressure relief valve shall have a steam BTU discharge rating of the coil. Discharge pipe from safety or pressure relief valves shall be not less than one pipe size larger than inlet pipe size of valve. Discharge pipe shall terminate as indicated and shall be free of traps. In addition to locations specified, pressure relief valves shall be installed in the following locations:

    a. On discharge side of each pressure-reducing valve.

    b. On each water heater connected to a hot water storage tank and other pressure vessels.

    c. On cold water line to each water heater or hot water storage tank when there is a check valve, backflow prevention valve or similar device between water heater or hot water storage tank and meter or relief valve at the pressure reducing valve assembly.

    d. On discharge side of each air compressor.

    e. On each air receiver connected to an air compressor.

10. Temperature relief valves and combination temperature and pressure relief valves shall be as specified and furnished as set forth in this Section. Discharge pipe from relief valves shall be not less than discharge area of valve or valves it connects, based on discharge area of valves, and shall terminate as indicated and free of any traps. Valves shall be installed at following locations:

11. A combination temperature and pressure relief valve or combination of valves on each heating hot water storage tank. Temperature sending element shall extend into water inside tank.

12. Manual air vent valve assemblies shall be installed at each high point of hot water space heating and chilled water piping systems. Valves shall discharge

through 1/4 inch diameter copper tubing and drain to nearest floor sink. Automatic type air vent valve shall only be installed where specifically indicated. Radiator, convectors, and finned pipe convectors shall be fitted with packless radiator valves, angle or straight pattern. Each convector or radiator installed as part of a space hot water heating system shall be furnished with a manual-type air vent valve.

R. Strainers: Strainers shall be installed on each water main (except for fire line) downstream of the meter, above grade, when a pressure regulator assembly is not installed. Main strainer shall be of Y-flange or groove type. On closed loop chilled and heating hot water systems pump systems, a strainer shall be installed at each pump inlet and upstream of each flow control valve assembly. The control valve assembly may include a modulating temperature control valve and a flow-limiting valve, manufactured by Griswold, AutoFlow, Flow Control Industries, Inc., or equal.

S. Hangers and Supports:

1. Piping shall be securely fastened to building structure by approved iron hangers, supports, guides, anchors, and sway braces to maintain pipe alignment to prevent sagging and to prevent noise or excessive strain on piping due to uncontrolled or seismic movement under operating conditions. Hangers and supports shall conform to Manufacturer's Standardization Society Specification SP-69. Hangers shall be relocated as required to correct unsatisfactory conditions that may become evident when system is placed into operation. Appliances, heat exchangers, storage tanks, and similar equipment shall be securely fastened to structure in accordance with seismic requirements. Outdoor metal hangers and supports shall be hot-dipped galvanized steel, unless otherwise specified.

2. Hose faucets, compressed air outlets, and similar items at ends of pipe branches shall be rigidly fastened to building construction near point of connection.

3. Piping shall not be supported by wire, rope, wood, plumbers' tape, or other non-recognized devices.

4. Hangers and supports shall be designed to support weight of pipe, fittings, weight of fluid and weight of pipe insulation, and shall have a minimum factor of safety of five, based on ultimate tensile strength of material installed.

5. Burning or welding of any structural member under load is not permitted. Field welding not specified on Drawings or reviewed Shop Drawings is not permitted without review by Architect and DSA.

6. Burning holes in beam flanges or other structural members is not permitted without review by the Architect and DSA.

7. Pipe hangers on piping covered with low temperature insulation shall be installed on outside of insulation and not in contact with pipe unless otherwise detailed on Drawings. Insulation shall be protected by 18 gage galvanized steel shield, with a minimum length of 10 inches, installed completely around pipe covering between covering and hanger. Installing hangers directly on pipe and butting adjoining sections of insulation against hanger is permitted provided void and hanger rod are properly insulated and sealed so that no sweating occurs at hangers.

8. Hanger rods shall be fastened to structural steel members with suitable beam clamps. Clamps shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

    a. Tolco I beam, Fig.62 for maximum 1000 pounds.

    b. Tolco I or WF beam, Fig. 329, for maximum of 1290 pounds.

9. Hanger rods shall be fastened to concrete inserts in concrete slabs or beams. Inserts shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

    a. Tolco Fig.310 for maximum of 600 pounds.

    b. Tolco Fig. 309 for maximum of 1140 pounds.

10. For fastening to wood ceilings, beams, or joists, furnish Grinnell Fig. 128R, Grinnell Fig. 153, Tolco 78, or equal pipe hanger flange fastened with drive screws. Under wood floors, 3/8 inch hanger rods shall be hung from 2-inch by 2-inch by 1/4 inch angle clips 3 inches long, with 2, staggered 10d nails, clinched over joist.

11. Hanger rod sizes for copper, iron, or steel pipe: 3/8 inch for pipe sizes ½ inch through 2-inch, ½ inch for pipe sizes 3-inch, 4-inch and 5-inch, 5/8 inch for pipe size 6-inch, and ¾ inch for 8-inch and 10-inch pipe.

12. Turnbuckles, if furnished, shall provide a load carrying capacity equal to that of the pipe hanger with which they are being installed.

13. Pipe hangers shall be of same size, or nearest larger manufactured size available, as pipe or tubing on which they are being installed.

14. Hangers, clamps, and guides furnished for support of non-metallic pipe shall be padded with 1/8 inch thick rubber, neoprene, or soft resilient cloth.

15. Where special pipe-supporting requirements in the Specifications conflict with any standard requirements specified herein, the Specification requirements shall govern.

16. Vertical Piping:

    a. Vertical pipe risers shall be securely supported with riser clamps of recognized type. Risers in reinforced concrete buildings shall be furnished with extension clamps fastened to pipe above each concrete floor slab with extended arms of clamp to rest on slab. Clamps shall be provided with lead or Teflon liners when installed on copper tubing. Clamps shall be plastic-coated when installed on non-ferrous pipe or tubing.

    b. Copper tubing in sizes 1 ½-inches and larger and steel pipelines passing up through building shall be supported at each floor of building or every 15 feet whichever is less.

    c. Copper tubing sizes 1 ¼-inches and smaller shall be supported at not intervals not more than 6 feet on center. Special provisions shall be

installed for vertical lines subject to expansion and contraction caused by operating temperature differences.

d. Vertical cast iron pipelines shall be supported from each floor and at its base. Malleable iron or steel pipe clamps with minimum thickness of 1/4 inch shall be furnished and fastened around pipe for support.

17. Horizontal Piping:

a. Pressure piping on roofs shall be supported from stands, trapezes, or structures so that the bottoms of pipes clear the roof surface by 10 inches.

b. Insulated steam and space heating hot water insulated condensate lines, insulated domestic hot water supply and return piping shall be supported with Tolco Figure 4, B-Line Figure B3140, Grinnell Figure 212, or equal, steel hangers with welded eye rods to permit hinge movement at point of attachment of hangers. Hinge movement at point of support shall be provided by welded eye linked rods Tolco Figure 101L, B-Line Figure B3211X, Grinnell Figure 278, or equal.

c. Domestic cold water piping, water supply and return piping, condenser water piping, insulated refrigerant piping gas piping, compressed air piping, cast iron soil piping, galvanized steel vents, waste and downspout piping and glass to be supported with Tolco Figure 1, B-Line Figure B3100, Grinnell Figure 260, or equal, hangers with rods, turnbuckles and inserts suitable for above hangers.

d. Maximum hanger and support spacing shall conform to CPC schedule for horizontal piping installed above grade.

18. A hanger or support shall be installed close to the point of change in direction of a pipe run, in either a horizontal or vertical plane.

19. When practicable, supports and hangers for cast iron soil pipe shall be installed as close as possible to joints and when hangers or supports are not located within one foot of a branch line fitting, an additional hanger or support shall be installed at fitting.

20. In systems where grooved piping is used, couplings shall be provided with angle pattern bolt pads to comply with support and hanging requirements of ANSI/ASME B31.1, ANSI/ASME B31.9, and NFPA Pamphlet 13.

T. Flashings:

1. Each pipe, duct, or gas-fired equipment vent passing through roof shall be installed with waterproof flashing.

2. Flashing or flanges on pipes, vents, and ducts passing through a tile or slate roof shall be constructed of sheet lead. Flashing for pipes and heater vents passing through a roof shall be 4 pound soft sheet lead. Flashing and flanges for ducts and heater vents passing through exterior walls shall be 22 gage sheet metal. Flanges and flashing shall be installed waterproof at point of connection with pipe or duct. No soldered joints on roof flashings will be allowed.

3. Lead flashing and flanges shall be constructed of 4 pound sheet lead with burned joints. Flange of lead flashing or lead flange on a duct shall extend out onto roof a minimum of 12 inches from pipe or duct. Lead flashing shall extend up the pipe or duct not less than 7 inches.

4. Sheet metal flashing shall be constructed of 24 gage galvanized sheet steel. Flanges on these flashings shall extend out onto roof a minimum of 10 inches from pipe or duct. Flanges on ducts through exterior walls shall extend out from duct a minimum of 2 ½ inches. Flanges on gas-fired equipment single-wall vents shall be of ventilated type. Type B gas vents through a roof shall be furnished with non-ventilated flashing as per NFPA Pamphlet 211.

5. Cast iron, steel, brass, and copper pipe, which terminates less than 18 inches above roof, shall be furnished with a combination counter-flashing and vandal-proof hood for protection against water, birds and foreign matter. Cast iron, steel, brass and copper pipe, which does not terminate within 18 inches of roof, shall be furnished with a counter-flashing sleeve. Pipe, which terminates more than 18 inches above roof, shall be furnished with protection against entrance of water, birds, and foreign matter.

6. Counter-flashing and combination counter-flashing sleeves and vandal-proof hoods shall be cast iron, vandal-proof, threaded, sealed or approved gas-heated sleeve type. Counter-flashing sleeves on each of these items shall extend down over flashing a minimum of ¾ inch.

7. Flashing and flanges on ducts shall be installed waterproof at point of connection to the duct by riveting and soldering. Storm collars shall be securely screwed and installed waterproof around appliance vent pipe immediately above flashing.

8. Vent piping above roof shall be furnished with a combination counter-flashing sleeve and vandal-proof hood.

U. Equipment Installation: Install roof or floor mounted equipment on level platforms, housekeeping pads or curbs and provide sound, vibration and seismic control measures per Section 23 0548 even if not indicated on Drawings.

END OF SECTION

SECTION 22 05 53

PLUMBING IDENTIFICATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Marking and identification on mechanical piping systems, ducts, controls, valves, and apparatus.

B. Related Requirements:

1. Division 01: General Requirements

2. Section 21 1313: Fire-Suppression Sprinkler Systems.

3. Section 22 0513: Basic Plumbing Materials and Methods.

4. Section 22 1000: Plumbing.

1.02 SUBMITTALS

A. Submit in accordance with Division 01 and Section 22 0500: Common Work Results for Plumbing.

B. Submit product data and installation instructions for each item specified.

C. Submit Samples of materials.

1.03 QUALITY ASSURANCE

A. Comply with provisions of:

1. Section 22 0500: Common Work Results for Plumbing.

2. ANSI/ASME A13.1: Scheme for the Identification of Piping Systems.

3. APWA: Uniform Color Code.

4. IAPMO: Uniform Plumbing Code (UPC)

PART 2 – PRODUCTS

2.01 MATERIALS

A. General: Piping systems, controls, valves, apparatus, etc., except those that are installed in inaccessible locations in partitions, walls, and floors, shall be permanently identified.

2.02 VALVES

A. Furnish prepared chart or diagram for each piping system, indicating by identifying letter or model number of each valve in the system, its location, and function.

B. Install charts in aluminum frame with clear glass front and secure on wall where designated by the Project Inspector.

C. Bind copies of each chart in operating instructions manual.

D. Provide each valve with a brass, aluminum, or plastic disc, not less than 1-1/4 inches diameter bearing engraved numbers corresponding to those indicated on chart. Fasten discs to valve with No. 14 brass wire.

E. Provide an additional tag for safety valves and other valves that could be hazardous to safety and health of occupants. Distinguish these tags from regular valve tags by color (such as yellow with black letters, and marked "Danger"); submit Sample tag to the Architect for review.

2.03 INSTRUMENTS AND CONTROLS

A. Identify panel-mounted instruments and controls with engraved bakelite nameplates permanently affixed to panel boards.

B. Identify alarm indicating devices and alarm reset devices by nameplates.

C. Identify automatic valves, flow switches, and pressure switches, with embossed aluminum or plastic tape affixed to controller, indicating service and setting.

2.04 EQUIPMENT

A. Identify each major piece of equipment with engraved bakelite nameplates permanently affixed to the equipment, indicating the room numbers it services, Equipment identification designation shall be the same to its designation indicated on the “As-Built Drawings”. Room numbers in the nameplates shall correspond to the final room numbers.

2.05 ABOVE GRADE PIPE IDENTIFICATION

A. Identify pipes by means of colored labels with directional flow arrows and identification of the pipe content, in conformance to ANSI/ASME A13.1 or the UPC.

B. Materials: Precoiled acrylic plastic with clear polyester coating, all-temperature, self-adhering, as manufactured by Brady, Brimar Industries, Seton, Stranco, Inc., or equal.

C. Size:

Outside Diameter of Pipe or Insulation (in inches)	Length of Color Field (in inches)	Size of Letter (in inches)
¾ to 1 ¼	8	½
1 ½ to 2	8	¾
2 ½ to 6	12	1 ¼

8 to 10	24	2 ½
over 10	32	3 ½

D. Locations:

1. On accessible piping, whether insulated or not (including mechanical rooms, attic and ceiling spaces); except that labels shall be omitted from piping where contained material is obvious due to its connection to fixtures (such as faucets, water closets, etcetera.).

2. Near each valve and branch connection in such accessible piping.

3. At each pipe passage through wall or floor.

4. At not more than 20 feet spacing on straight pipe run between bands required in 2 and 3 above.

5. At each change in direction.

E. Application: Install on clean surfaces free of dust, grease, oil, or any material that will prevent proper adhesion. Replace non-adhering or curling labels with new labels.

F. Color Schedule:

Content of Pipe	Legend	Background Color	Lettering Color
Domestic cold water	Domestic. C.W.	Green	White
Non-potable cold water	Caution: Non-potable Water Do Not Drink (1)(2)	Purple	Black
Domestic hot-water 140ºF	Domestic H.W. 140ºF	Blue	Black
Sanitary waste	San waste	Green	White
Sanitary vent	San vent	Green	White
Storm drain or downspout	Storm drain	Green	White
Indirect drain	Ind drain	Green	White
Sump pump discharge	Pump discharge	Green	White
Fire sprinkler supply	Fire Sprinkler supply	Red	White
Fire sprinkler drain	Sprinkler drain	Red	White
Fuel oil	Diesel oil	Yellow	Black
Gas	Gas	Yellow	White
Reclaimed Water	Caution: Reclaimed Water Do Not Drink (1)(3)	Purple	Black

H. Notes on Schedule:

1. Note (1) indicates 2 ¼ inch by 1 inch yellow label with ½ inch letters reading UNSAFE WATER at one end of primary label.

   Note (2) words should read “CAUTION: NONPOTABLE WATER DO NOT DRINK.” with international *do not drink* symbol.

   Note (3) words should read “CAUTION: RECLAIMED WATER DO NOT DRINK.” with international *do not drink* symbol.

2.06 UNDERGROUND PIPE

A. Detectable Marking Tape:

1. Provide and install detectable marking tape along buried piping. Tape shall be specifically manufactured for marking and locating underground utilities with electronic equipment. Tape shall be acid and alkali resistant, and manufactured with integral wires or foil backing, encased with protective cladding. Tape shall be a minimum of two inches in width.

2. Manufacturer: Reef Industries, Inc., Advantage Brands, Inc., Northtown Company, Mutual Industries, Inc., or equal.

3. Detectable marking tape shall be color-coded per APWA Color Code:

   a. Yellow: Oil and gas.

   b. Blue: Water, irrigation and slurry lines.

   c. Green: Sewer and drain lines.

B. Tracer Wire:

1. Solid copper wire type THWN, 12 AWG gauge, with heat and moisture resistant insulation.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Correct detrimental conditions prior to commencing the Work of this Section. Install markers and identification tags as specified with materials and installation procedures recommended by manufacturer.

B. Place tracer wire on top of non-metal utility lines allowing some slack. Do not wrap tracer wire around pipe. Fasten tracer wire in place at approximately 10 feet on centers with non-metal ties.

C. Install underground detectable pipe marking tape continuously buried 8 to 10 inches above the buried utility pipe. Wrap tape on pipe risers up to a height of 12 inches above grade.

3.02 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 22 07 00

PLUMBING INSULATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. Insulation for plumbing piping.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 22 0500: Common Work Results for Plumbing.

3. Section 22 0513: Basic Plumbing Materials and Methods.

4. Section 22 0553: Plumbing Identification.

5. Section 22 1000: Plumbing.

1.02 REFERENCES

1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

D. California Code of Regulation Title 24.

1. California Green Building Standards Code.

1.03 SUBMITTALS

A. Submit in accordance with Division 01 and Section 22 0500: Common Work Results for Plumbing.

1. Complete material list of items to be furnished and installed under this Section.

2. Manufacturer's specifications and other data required demonstrating compliance with the specified requirements.

3. Shop Drawings, catalog cuts and manufacturer's data indicating insulation, jacketing, adhesives, and coating. Insulating materials shall be certified by manufacturer to comply with the California quality standards for insulating materials.

4. Display sample cutaway sections.

5. Manufacturer's recommended method of installation procedures, which will become part of this Section.

1.04 QUALITY ASSURANCE

A. Qualifications of Manufacturer and Installer, Materials, Fabrication, Execution, and Standard of Quality: Comply with provisions stated under Section 22 0500: Common Work Results for Plumbing and Section 22 0513: Basic Plumbing Materials and Methods.

B. Insulation Work shall be in accordance with the California Building Energy Efficiency Standards, CBC, and Uniform Mechanical Code and the California Green Building Standards Code.

C. Test Ratings:

1. Comply with provisions stated under Section 22 0500 and 22 0513 with emphasis on ASTM E84, NFPA 255, or UL 723. ASTM C167, ASTM C302, UL label or listing of satisfactory test results from the National Institute of Standards and Technology, or a satisfactory certified test report from an acceptable testing laboratory. Approval by the State Fire Marshal is required.

2. Furnish labels, legibly printed with the name of the manufacturer or listings indicate that fire hazard ratings do not exceed those specified for materials proposed for installation. Flame spread index of not more than 25 and smoke developed rating not exceeding 50.

3. Tests shall be performed on each item individually when insulation, vapor barrier covering, wrapping materials, or adhesives are installed separately at the Project site.

4. Test insulation, vapor barrier covering, wrapping materials and adhesives as an assembly when they are factory composite systems.

D. Regulatory Requirements: Insulation furnished and installed under this Section shall meet minimum legal requirements of the Building Energy Efficiency Standards adopted and incorporated in the California Energy Commission, Title 24, Part 2, Chapters 2 through 53 and the California Green Building Standards Code unless otherwise noted, for the piping,

E. Chemically based products such as sealers, primers, fillers, adhesives, etcetera must meet the California air quality regulations.

1.05 PRODUCT HANDLING

A. Protection, Replacement, Delivery and Storage: Comply with provisions stated under Sections 22 0500: Common Work Results for Plumbing and 22 0513: Basic Plumbing Materials and Methods.

PART 2 – PRODUCTS

2.01 MATERIALS

A. General:

1. Insulating material shall be fire resistant, non-corrosive, shall not break, settle, sag, pack or disintegrate under vibration, nor absorb more than 1 percent moisture by weight.

2. Insulating material shall be furnished with thickness indicated in Table 1, and shall furnish thermal resistance in the range of R-4.0 to 4.6 in accordance with inch at 75 degrees F. For any other value of R, insulation thickness shall be calculated accordingly and submitted for review.

3. Asbestos in any quantity in insulating material is not permitted.

4. Provide insulation materials, adhesives, coatings, sealants, fitting covers, and other accessories with a fire hazard rating not to exceed 25 for flame spread, 25 for fuel contributed and 50 for smoke developed, except for materials listed as follows:

a. Nylon anchors for installing insulation to equipment.

b. Treated wood blocks.

5. Flame-proofing treatments subject to moisture damage are not permitted.

TABLE 1 - MINIMUM PIPING INSULATION THICKNESS (1)

Insulation Thickness Required (in inches)

Piping System Type	Temp. Range (degrees F)	Runouts up to 2	1 and less	1.25 to 2	2.5 to 4	5 to 6	8 and larger

		(2)					
Service Water Heating Systems (recirculating, piping supply and return)							
Hot Water	Up to 180	0.5	1.0	1.0	1.5	1.5	1.5
Condensate Drain	½ inch minimum insulation thickness.	0.5	0.5	0.5	0.5	0.5	0.5
From A/C Equipment:	Insulate condensate drain lines within building, in room, inside walls and above ceilings.	0.5	0.5	0.5	0.5	0.5	0.5

NOTES: (1) For piping exposed to ambient temperatures, increase thickness by 0.5 inch.

(2) Runouts to individual terminal units, not exceeding 12 feet in length.

B. Lagging Adhesives: Shall be nonflammable and fire-resistant and shall have a maximum flame spread index of 25 and a maximum smoke developed index of 50 when tested in accordance with ASTM E84. Insulation finished with canvas shall be provided with laps adhered in accordance to manufacturer's recommendation. A finish coat of same material shall be applied to entire outer surface of lagging cloth at coverage specified by manufacturer.

C. Canvas Jackets: Provide 6 ounce, in accordance with square foot minimum, 48 by 48 thread count canvas jacketing.

D. Insulation Jackets:

1. Exterior insulation exposed to weather shall be weatherproofed with Childers aluminum jacketing as basis of design, or Pabco, RPR, or equal. Jacketing shall be manufactured from 1100, 3105 or 5010 aluminum alloy with 3/16 inch corrugations. Smooth or embossed jackets may be permitted in special situations to match an existing installation. Jacketing shall be furnished with an integrally bonded moisture barrier over entire surface in contact with insulation. A minimum thickness of 0.016 aluminum jacketing is to be provided on ducts and piping. A minimum thickness of 0.020 shall be provided on tanks, equipment, and heat exchangers.

2. Insulated elbows, of 90 degrees and 45 degrees, with a nominal iron pipe size of ½ inch to 8-inch shall be provided with Childers aluminum Ell-Jacs insulation covers as basis of design, or Pabco, RPR, or equal, manufactured from 1100 aluminum alloy of 0.024 inch thickness. Insulated elbows with a nominal pipe size of 10-inch to 18-inch shall be provided with Childers 4-piece aluminum Ell-Jacs as basis of design, or Pabco, RPR, or equal.

3. Tees, Flanges, and Valve Insulation in Conjunction with Aluminum Jacketing: Furnish Childers Aluminum Special Fabrications Insulation Covers as manufactured by Childers Products Company, Pabco, RPR, or equal.

E. Adhesives: Adhesives shall be water based, UL Classified, meet the requirements of NFPA 90A and NFPA 90B, have been tested according to relevant ASTM requirements,

and be acceptable to the State Fire Marshal. Name, type and method of installation shall be submitted for review.

F. Valve and Fitting Cover: When installed in conjunction with PVC jacketing, furnish Zeston 25/50 rated polyvinyl chloride fitting covers as manufactured by Johns Manville, Knauf Insulation, Speedline, or equal.

2.02 DOMESTIC HOT WATER PIPING SYSTEM INSULATION

A. General: Insulate domestic hot water supply and return piping, including valves, strainers and fittings with insulation thickness as indicated on Table 1.

B. Materials:

1. Classes of Insulation:

a. Class A: Glass fiber molded pipe insulation suitable for service temperatures up to 850 degrees F. Pipe insulation shall be one piece, preformed, and provide a minimum R factor of 4.0 at 75 degrees F mean temperature. Insulation shall be faced with all-purpose fire retardant vapor barrier jacket. Pipe insulation shall be Johns Manville Micro-Lok, Knauf Redi-Klad 1000, Owens Corning FIBERGLAS Pipe Insulation SSL II-ASJ, or equal.

b. Class B: Flexible open-cell melamine (foam insulation) suitable for service temperature -150 degrees F to 400 degrees F. Thermal conductivity at 75 degrees F, K= 0.26. Pipe insulation, one-piece pre-formed, laminated to heavy non-reinforced PVC jacket, with locking track, factory installed to jacket, to snap insulation and jacket onto pipe. Similar to TechLite 079 Series as manufactured by Accessible Products Co., or equal. Installation shall comply with manufacturers recommendations.

c. Class C: Mineral fiber pipe insulation suitable for service temperatures up to 1200 degrees F. Pipe insulation shall be one-piece, preformed up to 3 inches thick, and provide a minimum R factor of 4.0 at 75 degrees F mean temperature. Insulation shall be faced with all-purpose fire-retardant vapor barrier jacket. Pipe insulation shall be 8 pounds in accordance with cubic foot density by Roxul Techton 1200, Fibrex COREPLUS 1200, Industrial Insulation Group, LLC (IIG) MinWool-1200, or equal.

2. Locations and Class of Insulation Required:

TABLE 2 – LOCATIONS AND CLASS OF INSULATION REQUIRED

LOCATION	CLASS OF INSULATION
Equipment Room	A, B or C
Other Locations	A, B or C

3. Fittings on indoor piping shall be covered with flush, hand-wrapped Class A, B, or C insulation, to match the adjoining pipe insulation and covered with polyvinyl chloride fitting covers: Zeston 2000 25/50 by Johns Manville, Knauf Insulation Proto PVC Fitting Cover, Speedline Polyco Smoke Safe, or equal.

4. Adhesive: Fibrous Adhesive to bond calcium silicate to itself and non-porous surfaces.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Except as specified herein, install material in accordance with recommendations of manufacturer. Do not install insulation materials until tests specified in other sections are completed. Remove foreign material such as rust, scale, or dirt. Surfaces shall be clean and dry. Maintain insulation clean and dry at all times.

B. On cold surfaces where a vapor barrier must be provided and maintained, insulation shall be installed with a continuous, unbroken moisture and vapor seal. Hangers, supports, anchors, or other projections that are fastened to cold surfaces shall be insulated and vapor sealed to prevent condensation.

C. Surface finishes shall be extended in such a manner as to protect raw edges, ends, and surfaces of insulation.

D. Pipe or duct insulation shall be continuous through walls, ceiling or floor openings, or sleeves; except where firestop or firesafing materials are required.

E. Metal shields shall be installed between hangers or supports and the piping insulation. Rigid insulation inserts shall be installed between the pipe and the insulation shields. Inserts shall be of equal thickness to adjacent insulation and shall be vapor sealed accordingly.

F. Insulation shall not be installed in the following locations unless otherwise noted:

1. On unions, flanged connections or valve handles.

2 Over edges of any manhole, clean-out hole, clean-out plug, and to restrict opening or identification of access.

3. Over any label or stamp indicating make, approval, rating, inspection, or similar data, unless provision is made for identification and access to label or stamp.

3.02 INSTALLATION OF DOMESTIC HOT WATER PIPING SYSTEM INSULATION

A. General: Domestic hot water, tempered water supply and return piping and condensate return piping, after having been tested, shall be cleaned and insulated.

B. Application: Insulate condensate return piping, domestic hot water supply and return, including tempered supply and return piping in accordance with manufacturer's instructions and as specified herein.

1. Install insulation on valve bodies up to valve bonnet. Fill void in saddles, in accordance with Section 22 0513: Basic Plumbing Materials and Methods, with insulation and seal joints.

2. Install insulating material to fittings, valves, and strainers and smooth to thickness of adjacent covering. Leave strainer clean-out plugs accessible. Covers fabricated from polyvinyl chloride shall be furnished.

C. Insulation Jackets in Exposed Indoor Locations:

1. Cover completed insulation with canvas jacket tightly pasted to covering with lagging adhesive. Lap jacket seams 1 1/2-inch minimum. Finish entire jacket with coating of undiluted adhesive.

2. Equivalent factory applied pre-sized, glass fiber reinforced, or glass fiber jackets may be furnished. Seal jacket seams with adhesive in accordance with manufacturer's instructions.

3. Johns Manville Zeston 2000, Knauf Insulation Proto PVC Fitting Cover, Speedline Polyco Smoke Safe, or equal, fitting covers may be furnished, with molded or segmented insulation equal to specified insulation applied to fittings. Secure covers in accordance with manufacturer's instructions.

4. In addition to above requirements, cover exposed insulated piping within a distance of 8 feet above floors with 26 gage galvanized steel jacket. Omit jacket in areas accessible only to maintenance personnel, such as mechanical equipment rooms, utility corridors, accessible pipe tunnels and manholes.

D. Concealed Indoor Locations: Cover insulation over fittings, valves, and strainers with canvas. Provide pipe insulation with factory or field applied standard jacket of 4 ounce minimum canvas, fiberglass cloth, or glass fiber reinforced jacket. Seal jacket laps with adhesive in accordance with manufacturer's instructions.

E. Exposed Outdoors: In addition to canvas or fiberglass cloth cover, pipe insulation exposed to weather shall be provided with an additional 0.016 inches thick aluminum jacket with 2-inch lap connected with one inch hem overlap joint located on side of pipe and turned down to shed water. Jacket shall be strapped 12 inches on center with ½-inch wide stainless steel strapping and wing seals. Aluminum jacket shall be mitered to fit fittings.

3.03 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.04 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

END OF SECTION

SECTION 22 10 00

PLUMBING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Labor, materials, tools, and equipment to install plumbing systems as indicated.

B. Related Sections:

1. Division 01 - General Requirements.

2. Section 07 9200: Joint Sealants.

3. Section 10 4413: Fire Extinguishers and Cabinets.

4. Section 11 4013: Food Service Equipment.

6. Section 22 0500: Common Work Results for Plumbing.

7. Section 22 0513: Basic Plumbing Materials and Methods.

9. Section 22 0553: Identification for Plumbing piping and Equipment.

10. Section 22 0700: Plumbing Insulation.

11. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

12. Section 31 2323: Excavation, Backfill for Utilities.

13. Section 33 3000: Site Sanitary Sewer Utilities

1.02 SUBMITTALS

A. Provide in accordance with Division 01 and Section 22 0500: Common Work Results for Plumbing.

B. Provide necessary documentation to Owner for processing rebates for water efficient fixtures.

1.03 QUALITY ASSURANCE

A. Unless otherwise noted, the California Plumbing Code is hereby made part of this section.

B. Conform to provisions of Section 22 0500: Common Work Results for Plumbing.

C. Manufacturer of plumbing products must have ANSI/NSF Standard 61, Section 9 certification to demonstrate compliance with the federal requirements for lead contribution to drinking water, Safe Drinking Water Act SDWA and AB 1953.

1.04 PRODUCT HANDLING

A. Conform to provisions of Section 22 0513: Basic Plumbing Materials and Methods.

PART 2 - PRODUCTS

2.01 PIPING SYSTEMS

A. Materials: Refer to Section 22 0513: Basic Mechanical Materials and Methods.

B. Insulation for Piping: Refer to Section 23 0700: Plumbing Insulation.

2.02 FIXTURES AND DRAINS

A. General: Fixtures specified shall be furnished complete with trim and fittings. Cast iron plumbing fixtures shall be acid resistant enamel, and identified by casting letters "AR" or words "acid-resistant" into metal. Fixtures shall be white unless otherwise specified. Cast iron fixtures shall be white enamel inside and on back, rim and apron, with exposed unfinished surfaces painted white. Fixtures of same general classifications shall be of same make.

B. Finished Brass:

1. Unless otherwise specified, finished brass of a similar type shall be of same manufacturer and model throughout buildings.

2. Finished and exposed brass equipment, except floor, shower and urinal drains shall be chromium-plated and polished. Floor, shower and urinal drains, unless otherwise specified, shall be nickel-bronze metal.

C. Traps, Trap Arms and Tailpieces:

1. Fixture traps shall be all cast brass, chromium-plated and polished. **(No tubular traps).** Exceptions as follows:

a. Traps that are an integral part of a fixture.

b. Traps concealed in floors, walls and furring.

c. Traps standard for service sinks and Industrial Shop equipment.

d. Laboratory traps and tailpieces shall be as specified in section 22-0700.

“Basic Plumbing Materials and Methods”

2. Concealed traps and 17 gage tailpieces may be rough brass finish, except as otherwise specified. Laboratory traps and tailpieces shall be as specified in

Section 22 0700: Basic Plumbing Materials and Methods. Furnish chromium-plated and polished cast brass wall flanges with setscrews and chromium-plated and polished brass casing on discharge side of each trap.

3. Tailpieces shall be not lighter than 17 gage, brass, chromium-plated, and polished. Furnish and install chromium brass plated wall flanges with set screws and chromium-plated 20 gage brass casing on discharge side of each chrome-plated all cast trap.

D. Faucet and Shower Valve Handles: Faucet and shower valve handles shall be solid brass, chromium-plated and polished, and fastened to their stems by Allen type hollow head stainless steel set screws through the side of the handle extending into the stem. Handles with sharp edges or projections shall not be furnished.

E. Fixture Supplies:

1. Supplies for water heaters shall be unplated rigid copper water tube with threaded adaptors for connections to valves and other threaded connections. All other supplies shall be chromium-plated brass with hospital threads or shall be furnished with fittings and valves, which completely cover threads.

2. Exposed supplies for showers shall be chromium-plated brass pipe up to header with hospital threads or shall be furnished with fittings and valves, which completely cover threads.

3. Supplies to water closet tanks, lavatories, and drinking fountains shall be furnished with chromium-plated and polished screwed type angle compression stops with square shank stems and lock shields extending beyond stem. Instead of solid supply piping, polished chrome-plated risers of 3/8 inch outside diameter with ferrule stop end and metal nosepiece may be furnished. The installation of braided stainless or easy hooker's supplies is not permitted. Exception: Supplies that rise vertically from floor shall be furnished with straight type instead of angle type stops.

4. Each supply or pipe that penetrates a finished surface and plumbing pipes passing through a countertop or part of a cabinet shall be furnished with a chromium-plated brass flange except flanges furnished by manufacturer of flush valves as an assembly.

5. Water supplies of plumbing fixtures shall be protected against back-siphonage in event of a vacuum in piping system.

6. Discharge outlets of supply faucets for lavatories and sinks shall clear top of overflow rim by at least one inch.

7. Toilet and urinal flush valves shall be furnished with recognized atmospheric vacuum breakers, installed a minimum of 6 inches above fixture.

2.03 ACCESS PLATES (To cleanouts, valves, water hammer arrestors and hose faucets)

A. Schedule Numbers:

AP-1: Square, unless otherwise noted, steel, prime coated; frame, 18 gage minimum. Door shall be 16 gage minimum with concealed hinge or be removable, with vandal-proof lock operated by Allen wrench. Provide for painted and stucco walls.

SMITH	ZURN	ELMDOR	MILKOR	WATTS	MIFAB	JOSAM

2.04 BACKFLOW PREVENTION ASSEMBLIES

A. Schedule Numbers: See fixture schedules on plans.

2.05 BACKWATER SEWER VALVE ASSEMBLY

A. Schedule Numbers: Not used.

2.06 CLEANOUT ASSEMBLIES

A. Cleanout plug shall be line size.

B. Schedule Numbers:

CO-1: Iron body cleanout tee full line size up to 4 inches and round access plate, plugs shall be brass, countersunk with tapped boss for 5/16 inch No. 18 or ¼ inch No. 20 screws. Provide for finished walls at base of waste stack, above urinal and service sink. AB&I and TYLER may be used as iron body cleanouts. Trim and accessories shall be Smith or Zurn or equal.

SMITH	ZURN	WATTS	MIFAB	JOSAM	OR EQUAL

2.10 DIELECTRIC UNIONS

A. Schedule Numbers: Not used.

2.11 EMERGENCY EYE WASH / EMERGENCY SHOWER

Emergency eye wash/emergency shower equipment must meet OSHA safety order requirements.

A. Schedule Numbers: Not used.

2.12 ELECTRIC WATER COOLERS

A. Water Coolers shall be provided with brass free waterways and lead mitigating water filtering systems (DFWF).

B. Schedule Numbers: Not used.

2.13 FAUCETS

A. Access compliant faucets: Force to activate controls shall be no greater than 5 pounds. Self closing metering, where specified, to remain open 10 seconds minimum when activated.

B. Schedule Numbers: See fixture Schedules on plans.

2.14 FLOOR DRAINS

A. Schedule Numbers: See fixture schedules on plans.

2.15 FLEXIBLE HOSES

A. Schedule Numbers:

FLH-1: Braided stainless steel metal hose (for gas use). US Flex, Metraflex, Nelson Dunn or equal.

FLH-2: Braided bronze metal hose (for non pressure condensate connection use). US Flex, Metraflex, Nelson Dunn or equal.

2.16 FLUSH VALVE ASSEMBLY

A. Schedule Numbers: See fixture schedules on plans.

Valves shall be furnished so that flush will remain constant and not require any adjustment.

1. Each flush valve shall be provided with a loose key, square shank, lock shield angle service stop connected to flush valve with a union connection.

2. Provide l7 gage pressed brass escutcheons for wall and fixture. Escutcheons shall be fastened to not turn or rattle.

3. Each flush valve shall be furnished with a vacuum breaker providing one inch opening to atmosphere, which will not leak under any degree of back pressure and will not restrict rate of flow more than 10% at 10 pounds pressure and will operate noiselessly.

4. Tailpiece shall be not lighter than 17 gage, and shall be part of flush valve assembly.

5. Exposed metal parts of flush valve assembly shall be nickel or chromium-plated on a brass or copper base.

2.17 FLOOR SINKS

A. Schedule Numbers: See fixture schedules on plans.

2.18 HOSE BIBBS

A. Schedule Numbers: See fixture Schedules on plans.

2.19 LAVATORIES

A. Access compliant faucets for Lavatories: Force to activate controls shall be no greater than 5 pounds. Self closing metering, when specified, to remain open 10 seconds minimum when activated.

B. Cast Iron Lavatories shall be acid resistant enamel, and shall conform to Commercial Standards CS 77.63. Unites furnished in conjunction with strainer installation or faucet installation shall be brass. Exposed brass nuts shall be chrome plated.

C. Exposed trim shall be free from sharp edges or points. Fixture shall be furnished with other listed manufacturer specified trim. Instead of solid supply pipe, polished chrome-plated risers, 3/8 inch outside diameter with ferrule stop end and metal nosepiece may be furnished.

D. Insulate cold water, hot water and drain lines under all access compliant lavatories with approved type insulation.

PLUMBEREX	LAV-GUARD	OR EQUAL

Schedule Numbers: See fixture schedules on plans.

2.21 LAUNDRY TRAYS AND TRIM

A. Sinks specification herein shall be furnished with strainer and tailpieces unless otherwise noted. Supplies shall be 3/8-inches outside diameter.

B. Schedule Numbers: See fixture Schedules on plans.

2.22 PIPE HANGERS

A. Refer to Section 22 0513: Basic Plumbing Materials and Methods.

B. Schedule Numbers:

1. PH-1: Complete with clamps, inserts, etcetera.

SUPERSTRUT	UNISTRUT	TOLCO	B-LINE	OR EQUAL

2.23 P-TRAPS

A. Schedule Numbers:

PT-1: Cast brass complete, chrome-plated.

2.24 PRESSURE REGULATING VALVE ASSEMBLIES

A. Schedule Numbers: See fixture schedules on plans.

2.25 ROOF DRAINS

A. Schedule Numbers: Not used.

2.26 SERVICE SINKS and TRIM

A. Schedule Numbers: See fixture schedules on plans.

2.27 SINKS and TRIM

For offices and dining room sinks.

A. Access compliant faucets for sinks: Force to activate controls shall be no greater than 5 pounds. where specified self closing metering to remain open 10 seconds minimum when activated.

B. Cast iron sinks shall be acid resistant enamel, and shall conform to Commercial Standards CS 77.63. Units furnished in conjunction with strainer installation or faucet installation shall be brass. Exposed brass nuts shall be chrome-plated. Refer to the Fixture Supplies paragraph of this section.

C. Exposed trim shall be free from sharp edges or points. Fixture shall be furnished with other listed manufacturer specified trim. Instead of solid supply pipe, polished chrome-plated risers, 3/8-inches outside diameter with ferrule stop end and metal nosepiece may be furnished.

D. For access compliant sinks: Insulate cold water, hot water and drain pipes under sinks with district approved type insulation.

PLUMEREX	LAV GUARD	OR EQUAL

E. Schedule Numbers: See fixture Schedules on plans.

2.28 SERVICE STOP GAS VALVES

A. Schedule Numbers: See fixture Schedules on plans.

2.29 STOP VALVES

A. Stops shall be loose key type, ½-inches IPS inlet and outlet chrome-plated brass casting, except as noted.

B. Schedule Numbers:

2.30 THERMOSTATIC MIXING VALVE ASSEMBLIES (TMVA)

A. General: Valve bodies shall be cast brass or bronze valve assembly provided with holding bracket and shall be installed on wall bracket. Valve shall be rough brass or bronze satin sprayed finish unless otherwise noted. Assembly shall include a 3 5/8-inch diameter dial thermometer, color-coded with white face and black letters. The temperature range between 100 degrees F. and l50 degrees F. shall be background in red or red line enclosed. Valve complete with fail safe feature, square shank loose key stops, checks and strainers on both hot and cold water inlets and shutoff valve on outlet. Valves shall be sized on a 45 psig (maximum) pressure drop

B. Manufacturers: See equipment schedules on plans.

2.31 TRAP PRIMERS

A. Schedule Numbers: See fixture schedules on plans.

2.32 URINALS

A. Schedule Numbers: See fixture schedules on plans.

2.33 WATER CLOSETS

A. General: Water closets shall be vitreous china with Polyvinyl chloride bolt caps. Fixtures with auto-flush valves shall be provided with manual override button.

B. Schedule Numbers: See fixture schedules on plans.

2.34 WATER TEMPERATURE CONTROLLERS

A. Schedule Numbers:

WTC-1: Remote bulb type, plain steel case, baked enamel finish, glass fronted cover, mercury to mercury switch. 80 degrees F. to 240 degrees F. range of not more than 10 degrees F. differential.

MERCOID	HONEYWELL	JOHNSON CONTROLS	OR EQUAL
DA-4-35	T675A1540	A19 SERIES

HONEYWELL	PENN	JOHNSON CONTROLS	OR EQUAL
T-6031D 1007	A19ABC-11	A19 SERIES	

2.35 WATER HEATERS / Domestic / Boilers

A. Gas fired water heaters shall meet the Flammable Vapors Ignition Resistance requirements (FVIR).

B. Gas and electric water heaters must meet NAECA energy efficiency requirements. Exceptions: Table top and point of use models (electric) less than 20 gallons. In capacity and gas models over 75,000 BTUH.

C. Water heaters from 75,000 BTU/hr to Boilers 2,000,000 BTU/hr shall comply with rule 1146.2 “Emission of Nitrogen from large water heaters and small boilers”. Natural gas fired water heaters with heat input rates less than 75,000 Btu/hr shall comply with rule 1121.

D. Instantaneous/Tank-less water heaters of any kind are prohibited. A minimum 6 gallon water heater is to be used.

E. Schedule Numbers: See equipment schedules on plans.

2.36 WATER HAMMER ARRESTORS

WHA- See fixture schedules on plans.

2.37 YARD BOXES

A. Schedule Numbers:

YB-1 Yard Boxes: 14 ¾-inch by 20-inch by 12-inch, cast concrete, with cast iron traffic cover marked "GAS"

Provide for use over gas stops.

BROOKS 36-H MB with No. 36-T Cast	EISEL 363.5	OR EQUAL

iron Cover		

YB-2: Same as YB-1, marked "WATER" Provide for use over water valves.

BROOKS 36- H MB with No. 36-T Cast iron Cover	EISEL 363.5	OR EQUAL

YB-3: Same as YB-1, marked "SEWER"

BROOKS 36- H MB with No. 36-T Cast iron Cover	EISEL 363.5	OR EQUAL

2.38 FIXTURE CONNECTIONS

A. Branches to individual fixtures shall be of the following sizes unless larger sizes are indicated on Drawings:

Fixture	Copper, Cold	Copper, Hot	Trap and Connections	Soil/ Waste	Vent
WC Flush Valve	1 inch	-----	4-inch	4-inch	2-inch
Lavatories	½ inch	½ inch	1 ½-inch by 1 ¼-inch	2-inch	1 ½-inch
Sinks:					
Service	½ inch	½ inch	2-inch	2-inch	1 ½-inch
Kitchen	½ inch	½ inch	1 ½-inch by 1 ½ inch	2-inch	1 ½-inch
Wash	¾ inch	½ inch	1 ½-inch by 1 ½ -inch	2-inch	1 ½-inch
Drinking Fountains:					
Multiple	3/8 inch	-----	1 ½-inch by 1 ½-inch	2-inch	1 ½-inch
Single	3/8 inch	-----	1 ½-inch	2-inch	1 ½-inch

Fixture	Water Supply	Soil/ Horizontal	Vent
Urinals, Wall-Hung Flush Valve			
Standard	¾ inch	2-inch	1 ½-inch
Access Compliant Use	1 inch	2-inch	1 ½-inch
Sill cocks	¾ inch minimum	-----	-----

B. Water headers serving water closets shall be copper water tube, with following size throughout length:

1. 1-1/2 inches for 2 flush valves.

2. 2 inches for 3 to 9 flush valves.

C. Water headers serving urinals shall be of following size throughout length:

1. 1” for 1 or 2 flush valves.

2. 1-1/4” for 3 flush valves.

3. 1-1/2” for 4 to 8 flush valves.

D. Water headers serving showers shall be same as listed above for urinals.

E. Water headers serving lavatories shall be of following size throughout length:

1. 1/2 inch for 2 lavatories.

2. 3/4 inch for 3 and 4 lavatories.

3. One inch for 5 and 6 lavatories.

2.39 HEIGHT OF FIXTURES

A. Heights for standard fixtures.

Fixture	Adult and High School	Middle	Elem.	Kindergarten and Younger
Water Closets	15-inch	15-inch	15-inch	10-inch
Lavatories	32-inch	32-inch	30-inch	25-inch
Drinking Fountains	42-inch	40-inch	32-inch	30-inch
Wash Sinks	30-inch	30-inch	28-inch	24-inch
Urinals, lip height	24-inch	21-inch	18-inch	N/A

B. Heights for access compliant fixtures.

Fixture	Adult	Elementary	Kindergarten and Younger
Toilets, center line from wall	18-inch	15-inch	12-inch
Toilets, height to top of seat	17 to 19 inches	15-inch	10-inch-12-inch
Lavatories, sink top height	34-inch maximum	29-inch maximum	24-inch maximum
Lavatories, sink knee clearance	27-inch minimum	24-inch minimum	19-inch minimum
Urinals, lip height	17-inch maximum	15-inch maximum	N/A
Urinals, flush handle height	N/A	N/A	N/A
Drinking fountains, bubbler height.	36-inch maximum	32-inch maximum	30-inch maximum
Drinking fountains, knee clearance	27-inch minimum	24-inch minimum	22-inch minimum
Wash Sink	Per Drawings		

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this section will be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General:

1. Unless otherwise specified, plumbing fixtures, equipment and appliances that require connections to plumbing line shall be connected. This shall include fixtures specified or indicated as furnished by others, furnished by Owner, or specified in other related sections. Install supplies, stops, valves, traps, wall flanges, or pipe casing for connection of this equipment.

2. Install equipment as indicated on reviewed and accepted Shop Drawings.

3. Avoid interference with Work of other trades. Do not deviate from Drawings without review of the Architect.

B. Examination: Check each piece of equipment in system for defects verifying that parts are properly furnished and installed.

C. For piping Work, refer to Section 22 0513: Basic Plumbing Materials and Methods.

D. Plumbing Fixture and Equipment Installation:

1. Unless otherwise indicated, fixtures shall be installed with 5/16 inch brass bolts or screws of sufficient length to securely fasten fixture to backing, wall, or closet ring.

2. Fixtures installed against concrete or masonry walls shall have their hangers fastened with 5/16 inch brass bolts, Philip Shield type anchors, or 2 unit cinch anchors. Wood or plastic plugs are not permitted.

3. Fixtures installed against wood or metal stud walls shall have their hangers fastened to metal backing plates with 5/16 inch brass bolts screwed into plate. Fixture hangers for urinals shall be fastened centered vertically on metal backing plate with three 5/16 brass bolts each for small individual hangers and six, for larger one piece hangers. Lavatories shall be hung with not less than four 5/16 inch brass bolts or not less than five 1/4 inch brass bolts. Each sink hanger shall be hung with not less than four 5/16 inch brass bolt or not less than five 1/4 inch brass bolts.

4. Pan type drinking fountains shall be hung with 5/16 inch cadmium plated bolts with a bolt in each bolt opening in hanger. Hangers for pan type drinking fountains shall provide 2 inches (plus or minus 1/4 inch) between pan and wall. Spaces due to irregularities between fixtures and tile walls shall be neatly filled with white cement or silicone filler.

5. Backing for hanging of plumbing fixtures and equipment shall be installed in supporting wall at time rough piping is installed. Backing for stud walls shall be

steel plate 1/4 inch thick, not less than 4 inches wide. Backing for urinals shall be ¼-inches thick by 6-inch wide steel plate. Steel plate shall be attached to stud at each end of plate and to each stud it crosses. Plate shall be attached to metal studs by bolting with two ¼ inch U-bolts per stud with bolts through plate and around stud flange or by welding with a 1/8 inch fillet weld full width of stud flange, top and bottom of plate. At wood studs, plate shall be carefully recessed flush with face of stud and attached to each stud with 2 No. 14 flat-head wood screws, 2 inches in length into pre-drilled 1/8 inch holes. Backing for stud walls supporting wall-hung closets shall be as detailed.

6. Rough-in for fixtures, equipment and appliances shall be as indicated on Drawings and as specified, including those items indicated as furnished by others, furnished by Owner, or future capacity. When connections to equipment from capped or plugged lines are required, caps or plugs shall be removed at time equipment is set and stops or valves installed and connections provided as specified.

7. Piping materials for trap arms shall be Brass, Cast Iron or DWV copper

8. Piping shall be stubbed out to exact location of fixtures and stubs shall be installed symmetrical with fixtures. Hot and cold water supplies for center set faucets on lavatories shall be installed on 8-inch centers, unless otherwise specified or required.

9. Kitchen equipment requiring backflow protection with hot and cold water connections shall be installed with approved backflow prevention assemblies; BPV-3 and drain into floor sink with air gap.

E. Cleanouts in Drain, Waste, Vent and Sewer Lines:

1. Cleanouts shall be installed at locations stated in the California Plumbing Code and accessible at following locations:

   a. At locations above first floor as stated on construction documents and 5 feet outside of the building.

   b Install an accessible main line upper terminal cleanout in all restrooms above water closet over flow. (Install above upper terminal water closet where there are more than one water closet in a restroom).

   c. Above faucets of each sink with brass plug.

   d Above service sink with brass plug.

   e. At each Drinking Fountain with brass plug.

   f. At each urinal and locate above urinal with brass plug.

   g. Above overflow level of pot sinks with brass plug.

h. In vertical line at base of each downspout connected to an underground storm drain system extend cleanout to exterior of building.

i. At upper end of a horizontal vent line when any part of horizontal line is below overflow level of fixture it serves.

j. Not to exceed 100-foot intervals in sewer and waste lines exterior of building.

k. At property line connection.

l. Where indicated on Drawings.

2. Cleanouts shall be extended to grade as follows:

a. Not to exceed 100-foot intervals in straight runs of pipe outside buildings.

b. At horizontal changes of direction in aggregate greater than 135 degrees (underground).

c. At property lines.

d. Where cleanouts occur under concrete.

e. Where marked for future connections.

3. Cleanouts in building shall be extended to floor level or above floor level or above floor level in walls or furring when cleanouts are not accessible or where clearance is less than 18 inches.

4. Cleanouts in finished areas in building shall be concealed except that cleanouts above service sinks in janitor's rooms or closet, and cleanouts above service sinks or in exposed piping in boiler or heater equipment rooms, may be exposed. Cleanouts for urinals shall be installed above urinal and shall terminate behind an access plate.

5. Cleanouts in floors of covered areas and those extended to grade in concrete areas shall be floor level type with extensions body brass plugs and detachable nickel-bronze or aluminum alloy scoriated.

6. Concealed cleanouts in vertical lines shall be service weight soil cleanout tees with brass plugs and round cover plates unless otherwise specified or indicated. A snug fitting sleeve of galvanized sheet metal shall be placed around hub of tee and shall extend to flush with finished soil, or cleanout shall be extended to finished wall.

7. Cleanouts extended from below floor to a wall or furring or on horizontal lines above floor that terminate at a wall or furring shall be iron body type with brass plugs and round cover plates.

8. Cover plates over cleanouts in painted walls shall be steel, bonderized and prime coated. Cover plates cover cleanouts in tile walls shall be chromium-plated brass or nickel bronze. Plates shall be attached to cleanout plugs with 5/16 inch No. 18 or 1/4 inch No. 20 stainless steel vandal-proof type screws. Plates shall be one inch larger in diameter than fitting opening.

9. Cleanouts at bases of downspouts shall be tapped soil tees with brass plugs as hereinafter specified, full size of line.

10. Cleanouts extended to grade in exterior sewer lines other than floors or concrete areas shall be a cleanout assembly with secured top, extra heavy-duty, adjustable sleeve, cut-off ferrule, countersunk threaded brass plug and scoriated tractor type cover.

11. Other cleanouts shall be iron body type.

12. Cleanout extensions shall be no-hub cast iron soil pipe. Exterior cleanouts, those in concrete excepted, shall terminate in a 14-inch by 6-inch thick concrete block with cleanout assembly and top of block flush with finish grade.

13. Fittings in lines utilized as cleanouts shall be approved soil fittings including no-hub pipe. Tees and crosses in vent headers excepted.

14. Pipe joint compound shall not be installed on cleanout plug. After lines are tested and approved, each cleanout plug shall be removed, greased, and replaced.

3.03 EXCAVATION, TRENCHING AND BACKFILLING

A. Perform trenching, excavation, and backfilling required for Work of this section as specified herein and in Section 31 2323: Excavating, Backfilling, and Compacting for Utilities.

3.04 SERVICE CONNECTIONS

A. Determine exact location of required water, drain, and sewer connections and provide proper connections.

B. Potable water lines shall be purged completely before connecting to sources of water for the Project. Determine quality of water supply before connection.

3.05 WATER HAMMER ARRESTORS

A. Install water hammer arrestors indicated on Drawings and in following locations (only non-ferrous arrestors may be installed in copper water system):

1. Water lines to lavatory headers, water closet and urinal headers, service sinks, kitchen sinks, wash fountains, drinking fountains, laboratories with medical type faucets and on wash sinks having three or more stations and all other quick closing fixture such as clothes washers, as close to fixture as possible.

2. Between last two fixtures when three or more fixtures, other than those listed in Number 1 above, are served by a common header.

B. When possible, arrestor shall be installed in wall or furring. When arrestor is installed in wall or furring, furnish an access plate large enough to permit removal of arrestor. Access plate shall be a minimum of 2 inches larger in each direction than the arrestor.

C. Fixture water lines shall be provided with mechanical water arrestor hammer dampening devices. Air chambers are not approved.

3.06 CONDENSATE DRAINS - FROM AIR CONDITIONING UNITS

A. Connect drain piping from drain pan of air conditioning unit to condensate disposal location indicated. When coil or unit housing is shock or vibration isolated, connection shall be furnished through a flexible connector not less than 10 inches long. Drain line shall pitch to flow out at not less than one inch in 8 feet. Drain line size shall be per UPC (3/4 inch up to 3 ton only). Drain line shall not be reduced smaller than unit outlet connection.

B. Condensate drain piping installed within building whether in air conditioned space or not shall be insulated. Refer to Section 22 0700: Plumbing Insulation, for type of material required.

C. Condensate Trap:

1. A condensate trap shall be installed for each air conditioning coil. Trap shall be assembled from 2 brass unions: one between A/C unit and inlet of trap, and one at outlet of trap that connects to main drain.

2. Trap configuration shall be per manufacturer's recommendations based on total unit casting static pressure (simulated plugged filter condition), but not less than 3 inch water seal.

3. Running trap design is not permitted.

4. Secondary drain shall not be trapped.

D. Condensate trap shall be checked at equipment operational tests for proper water drainage flow from air conditioning unit. Cooling condensate pan shall be filled with water, filters covered with plastic (plugged filter simulated), unit panels replaced, and unit motor running at design condition. Pan shall drain without hesitation to bottom of inlet connection. Tests are made prior to installation of ceiling.

E. Secondary Overflow Drain:

1. Drain pan installed underneath air conditioning units in concealed ceiling space or units that incorporate dam fitting shall be furnished with secondary drain piped to outside planter area with outflow location clearly visible.

2 If outside building location is not available or feasible, secondary drains shall be piped to a classroom sink, if sink is not available pipe to a room corner away from cabinets, computers, desks, door ways/entrances or stairs.

3 Secondary vertical pipe that penetrates through suspended ceiling shall be furnished with a coupling or threaded adapter so ceiling tile can be removed without damage.

3.07 CONDENSATE DRAINS - FROM WINDOW TYPE HEAT PUMP AND EXTERIOR WALL MOUNT HEAT PUMP UNITS

A. Whether indicated on Drawings or not, window units and wall mount units without built in bottom drain pan for evaporator and condenser coils shall be provided with galvanized steel condensate pan at bottom of unit with drain line that drains into drywell. Install copper 1/2 inch diameter pipe for window type air conditioners and 3/4 inch diameter pipe for exterior wall-mounted heat pump units.

3.08 MAKE-UP WATER SYSTEMS

A. Provide and connect make-up water systems for equipment in other sections.

3.09 GREASE TRAPS (INTERCEPTORS)

A. Grease traps shall be installed only when required by municipal authority. Grease traps shall be separately vented; fixtures connected to grease traps shall be trapped and vented. When grease traps are installed in concrete boxes, fill spaces between grease traps and concrete boxes with sand and place 2 inches of concrete seal over sand. Concrete seals shall pitch toward grease traps with inner edges flush with top of grease traps. Position openings for ease of cleanout.

3.10 GAS SERVICE

A. Above Grade Service: Pipe shall be steel, hammered, free of dirt and scale, and blown out with oil-free air or nitrogen to a clean, dry condition. Piping shall not be installed in or through a ventilation duct or plenum.

B. Underground Service, Gas approved (yellow) Polyethylene Plastic Pipe:
Refer to Section 22 0513: “Basic Plumbing Materials and Methods”.

1. Pipes shall be joined with polyethylene fitting and joined together by thermal fusion in accordance with procedures recommended by Polyethylene plastic pipe and fitting manufacturer.

2. Plastic pipe shall be installed not less than 30 inches below grade..

3. Underground Warning Tape shall be installed 12 inches above buried gas piping. Warning tape shall be yellow with caution statement as follows: “CAUTION – BURIED GAS LINE BELOW”.

4. Plastic pipe shall not be installed in or under a building or structure. Pipe shall be installed under bituminous surfacing or compacted soil area, free from large stones. Pipe may be installed under sidewalks or driveways, as long as no joint occurs. Pipe installed under paved covered areas wider than 40 feet shall be installed in ventilated conduits extending 2 feet past paving.

5. Pipe shall be installed on a 6 inches deep sand bed. After required pressure-leak test, pipe shall be covered with sand not less than 6 inches thick.

6. Piping shall not support weight of valves, metal fittings or other items. Pipe shall be installed strain free.

7. Plastic pipe fittings shall not be stored or left exposed to sunlight. Pipe in open trenches shall be shielded. A sand envelope of 6 inches minimum shall be placed around pipe, with exception of joints, until inspection by IOR is completed. Protection for pipe shall be provided when necessary to leave pipe exposed overnight.

8. Installer of piping is required to have training and to have attained a certification. Non-trained/Non-certified installer must contact the manufacturer or manufacturer's representative to provide on-site fusion training and certification, prior to work commencement

9. Polyethylene plastic pipe shall connect to a steel epoxy coated anodeless type riser to minimum of 6 inches above grade, when exiting the underground installation and transitioning to steel pipe connection.

10. Where a steel pipe riser passes into a structure or building, a double swing or double-offset joint shall be furnished. Pipe shall pass into structure 6-inches above grade and through a sleeve with a minimum one inch clearance. An isolation valve is required before pipe entering the building.

3.11 CLEANING - PLUMBING PIPING SYSTEMS AND FIXTURES

A. Plumbing lines and fixtures shall be flushed to remove dirt and foreign material until water runs clear and no foreign substance or odor is present. Strainers and screens on faucets shall be removed during this cleaning operation.

B. After satisfactory cleaning of strainer and screen replacements has been witnessed by the Project Inspector, post and maintain signs stating: "CAUTION - Water at this construction project has not yet been certified for human consumption." Signs shall be furnished with letters at least 1/2 inch in height, and shall be conspicuously posted at entrances to the Project site. Signs shall be paneled, black and yellow, in conformance with OSHA Section 1910.1455.

3.12 DISINFECTING DOMESTIC WATER PIPING SYSTEMS

A. Newly installed or replaced piping and/or fixtures dispensing potable water shall be disinfected and undergo an approved bacteriological analyses before water system is allowed for public use.

B. Work shall be performed by Technicians Certified by the American Water Works Association (AWWA) and/or the State of California Department Health Services, Grade II Water Treatment Operator Certification or higher issued by the Department of Health Services (DHS) for the State of California. Comply with Title 22, Code of Regulations Division 4, Chapter 13, and Article 2 Operator Certification Grades.

C. Method:

1. A Reduced Pressure Backflow assembly shall be in installed to protect from cross contamination of the local water purveyor's meter service supply when at any time there is any type of water connection with the piping to be disinfected (Chlorinated) and the water meter service supply.

2. System is to be flushed to remove any materials that may have entered the system.

3. Using a chemical feed metering pump and a chlorine tank, the chlorine solution is injected into the water system.

D. Disinfection and De-chlorination procedure (24 or 3 Hour Contact Time):

1. 24-hour Test Method:

a. Prior to disinfection, post signs on all water outlets of the system to be disinfected. Sign or tags shall read, "Water System Being Chlorinated- "Danger Do Not Drink Water" or similar warning.

b. Piping system shall then be adequately flushed with water to remove any particles and eliminate air pockets.

c. Using the continuous feed method, sodium hypochlorite conforming to ANSI/ AWWA B300 will be injected into the water system at a minimum of 50 PPM. A water flow meter provided by the water treatment technician will be used to determine the rate of injection and a chlorine test kit, Hach or equivalent, will be used to monitor the residual.

d. Chlorine residual test will be taken at all appropriate points and outlets to verify 50 PPM residual levels.

e. The chlorinated system shall be shut down for any use and the chlorinated water shall remain in the water system for retention of 24 hours.

f. After 24 hours, chlorine residual levels will again be tested at various points throughout the system to insure a minimum of 25 PPM residual. If the system has not met the minimum of a 25 PPM residual, the above disinfection process shall be repeated.

g. After satisfactory completion of the residual testing, flush out system until Hach or equivalent test reveal the water outlets have a free chlorine residual concentration less than 0.5 PPM. The procedure shall be in accordance with the AWWA standard C651-05.

h. The OAR may allow temporary use of the water system for construction purposes pending results of the bacteriological test analysis. Sign or Tags shall be left on all outlets stating water system is not safe for consumption until laboratory results are complete and meet these specifications.

2. 3 Hour Test Method:

a. If the water systems must be turned on for use as soon as possible, a 3 hours chlorine contact time to allow for disinfection is permitted with the OAR's approval.

b. Prior to disinfection, post signs on all water outlets of the system to be disinfected. Sign or tags shall read, "Water System Being Chlorinated- "Danger Do Not Drink Water" or similar warning.

c. Piping system shall be then adequately flushed with water to remove any particles and eliminate air pockets. Using the continuous feed method, sodium hypochlorite conforming to ANSI/ AWWA B300 will be injected into the water system at a minimum of 200 PPM. A water flow meter provided by the water treatment technician will be used to determine the rate of injection and a chlorine test kit, Hach or equivalent, will be used to monitor the residual.

d. Chlorine residual test will be taken at all appropriate points and outlets to verify 200 PPM levels. The chlorinated system shall be shut down for any use and the chlorinated water shall remain in the water system for retention of 3 hours.

e. After satisfactory completion of a 3 hour disinfection period, flush out system until Hach or equivalent test reveal the water outlets have a free chlorine residual concentration less than 0.5 PPM. The procedure shall be in accordance with the AWWA standard C651-05.

f. The OAR may allow temporary use of the water system for construction purposes pending results of the bacteriological test analysis. Sign or Tags shall be left on all outlets stating water system is not safe for consumption until laboratory results are complete and meet these specifications.

E. Bacteriological Test:

1. After final flushing and satisfactory results from the residual free chlorine concentration test, Bacteriological test samples shall be collected. The intent of the following is to provide insurance for an accurate representation to a complete Bacteriological test of the water system. At least two samples shall be taken from each floor of each building.

2. Bacteriological test samples shall be delivered to a State of California Department of Health Services Certified Laboratory to perform qualitative and quantitative bacterial analyses on the water samples for the presence of any Total Coliform bacteria and Plate Count. This count must be less than 500 cfu/mL.

3. The procedure shall be repeated if it shown by bacteriological examination made by an approved agency that the level of Disinfection does not meet these specifications.

4. After satisfactory results for the bacteriological test are provided to the OAR, warning sign or tags shall be removed.

3.13 VALVES ON PLUMBING SYSTEM

A. Furnish and install gates, ball, globes, angles, and check valves on plumbing Work at following locations whether indicated on drawings or not.

B. Hot and cold valves shall be:

1. Lead free complying with AB1953.

2. Above the ground copper water system, 2-inch and larger, may utilize Victaulic butterfly valves and fittings for their connections. A 2-inch or larger Victaulic valve may be in a wall if an adequately sized access panel is provided for maintenance or removal.

C. Valves shall be accessible and installed within an access panel approximately 3 feet above floor and no more than 7 feet above floor, or in a marked yard box to prevent tampering.

1. Immediately after each water meter, in addition to any valve furnished by utility company, there shall be an accessible valve on the inlet side for a strainer assembly, dual backflow device assembly and/or possibly a dual pressure reducing valve assembly.

2. A gate or ball valve on each water supply before it enters building. Valves shall be accessible from outside building and shall be installed in a marked yard box, unless otherwise indicated on drawings. Ball valves 2 ½-inch size or larger shall omit gate valve handle and furnish 2-inch square operating nut.

3. At multi story buildings, provide an isolation-valve or multiple valves for both hot and cold water in access panel to isolate and control each floor level.

4. For classrooms, shops, offices and boiler or mechanical room, install a gate or ball valve to control hot and cold water lines to each group of fixtures, a group of fixtures shall be considered to be 2 or more fixtures in the same room. When practical, valves shall be installed on the same wall as group of fixtures. Valves shall control only fixtures in rooms in which they are installed.

5. For restrooms, a gate or ball valve shall be installed in each restroom to isolate the hot and cold water supply into a restroom regardless of the number of fixtures. These valves shall control and be accessible only from within the restroom in which fixtures are installed. Valves shall be installed on the same wall as the group of fixtures it serves. Valves shall control only fixtures in restroom in which they are installed. Back to back restrooms shall be isolated separately and individually.

6. Install a gate or ball valve on each building branch line, which serves two or more fixtures, when these fixtures are not provided with a group isolation valve as specified above. These valves shall be located approximately 3 feet but not more than 7 feet above finish floor.

7. Install a gate, ball valve or partition stop for a drinking fountain or a group of drinking fountains.

8. Install a gate, ball valve or partition stop for hot and cold water supply to plumbing fixtures with no accessible supply stops, such as wall mounted faucets.

9. Install a gate, ball valve or partition stop for stops adjacent to, and controlling water flow to each sill cock and hose bib except as follows:

   a. A sill cock immediately below an exterior drinking fountain may be controlled by the same gate, ball valve or partition stop as drinking fountain.

   b. Valves or stops will not be required for individual hose bibs when these hose bibs are on a branch line serving only hose bibs and branch line is furnished with a shut-off valve.

10. Install a lose key angle stop, on each exposed fixture supply, and for each flush valve unless otherwise specified,

11. Install gate or ball valve at each location where a water line is connected to a piece of equipment other than items mentioned above.

12. Install a check valve on each hot water return line where it connects to a hot water storage tank or a water heater.

13. Handles, hand wheels (including dishwasher fill valve handles) and operating nuts shall be furnished of steel, brass, or cast iron and shall be removable. Unless specified to be loose key type, handles shall be securely fastened to their stems. On exposed outdoor valves, omit operating handles and provide operating nuts.

14. Provide a handle or a key for each five, or fraction thereof, loose key valves, bibs, or stops and deliver them to the project OAR.

3.14 VALVES - GAS SERVICE

A. A gas readily accessible shut-off stop shall be installed on each gas line entering a building immediately prior to the point it enters the building. Unless otherwise specified or indicated, shut-off valves for lines entering a permanent structure, buildings or portable buildings, shall be installed in a vertical riser above grade.

1. Gas shut off valve for portable buildings – A dedicated Gas shut off valve shall be provided in a marked Yard Box, for each portable building to facilitate relocation/removal of building without the need to shut off gas to entire school.

B. Gas Shut off valve within a building – A gas shut off valve with handles shall be accessible and serviceable within an access panel. Install valve minimum 3 feet above floor but less than 7 feet above floor.

C. In addition to locations specified, gas shut off valve shall be installed at following locations:

1. Install a lubricated plug gas shut off valve on any line connected to gas main or header at master assembly.

2. Install a lubricated plug gas shut off valve before entering any building or structure.

3. Install a gas valve on each outlet, in addition to any gas stop furnished with equipment.

4. Service to laboratory gas cocks shall be furnished with a special precision check valve, located downstream from gas stop servicing room outlet at each laboratory cock. Unless otherwise specified, 1/8-inches bore shall be provided for each outlet cock.

5. Install a gas shut-off valve on each gas line serving 2 or more gas outlets in same room. Service stop shall be installed not more than 7 feet above floor, and shall be in the room it serves.

6. Install a gas shut-off valve on inlet side of each gas pressure regulating valve.

7. Gas shut-off valves to be furnished with equipment.

8. Install gas shut-off valve at not more than 1,000 foot intervals on each gas main.

9. At multi-story buildings, provide gas-shut off valve(s) to isolate and control each floor or level. Install valves in a concealed manner in walls with access panels.

10. Gas shut-off valves in classrooms and locations subject to tampering shall be protected while remaining accessible.

D. When a gas-shut off valve adjacent to gas-fired equipment is indicated in Contract Documents it shall be furnished and installed as part of Work of this section.

E. When electrical wall switches with emergency push button are specified for controlling gas outlets at Laboratory Classrooms, provide main shut-off gas valve with normally closed electric solenoid valve within an accessible access panel.

3.15 ELECTROLYSIS PREVENTION

A. Brass nipples, 6 inches, with recognized brass unions; flanges shall be furnished and installed at locations described herein. Flanges shall be installed with complete insulating component consisting of gasket bolt sleeves and bolt washers. Dielectric insulators shall be installed at following locations:

1. Where special applications indicated on Drawings require an insulation flange or brass union, with 6-inch brass nipple to be installed in a condensate line, or steam line, flange insulation shall be of a high temperature type, suitable for continuous operation at temperatures up to 220 degrees F. for condensate and 400 degrees F. for steam.

2. Where steel or cast iron in ground connects to copper or brass piping above ground, transition from steel or cast iron pipe to copper or brass pipe shall be provided in an accessible location.

3. Underground dielectric connections shall be furnished in accessible yard boxes.

4. Above ground dielectric connections shall be exposed; or if in finished rooms shall be located in accessible access boxes.

3.16 UNDERGROUND PIPE MARKERS

A. Pipe markers shall be furnished according to Section 22 0553: “Plumbing Identification”

B. Under ground Caution Tape shall be placed 12 to 18 inches above the utility line. The Caution Tape shall be a designated color and marked with the appropriate name for the specific type of utility pipe as follows:

1. Yellow – with the words: CAUTION GAS LINE BELOW

2. Blue – with the words: CAUTION WATER LINE BELOW

3.17 HOT WATER CIRCULATING PUMPS

A. Floor-mounted pumps shall be provided with a 4-inch high concrete base with ½ inch reinforcing bars at 12-inch centers each way and doweled into concrete floor.

B. Piping shall be supported from building structure so as to prevent any strain on pump casing.

C. In-line pumps, unless otherwise specified, shall be centrifugal type with non-overloading characteristics and shall not overload motor above its horsepower rating under operating conditions with ratings based on continuous operation.

D. Centrifugal water pumps shall be rated according to Hydraulic Institute Test Code for Centrifugal Pumps. Pumps shall be furnished with bronze water chamber, bronze impeller and mechanical seal. Rotating parts shall be statically and dynamically balanced.

E. Flanged connections shall be provided on pumps with discharge connections larger than 2 inches. Smaller sizes may be threaded connections.

F. Hot water circulating pump shall be arranged so that pump can be automatically turned off when hot water system is not in operation.

3.18 WATER TEMPERATURE CONTROLLERS

A. Furnish and install a water temperature controller in hot water line adjacent to, and for control of, circulating pumps on hot water return lines when said pump is indicated on Drawings or herein specified. Bulb of temperature controller shall be installed so as to be directly in path of flowing water and so as not to obstruct flow of water.

B. Furnish and install a water temperature controller in hot water storage tanks for control of circulating pump on hot water circulating line when said pump is indicated on Drawings or specified herein.

3.19 COMPRESSED AIR SYSTEMS

A. Compressed air systems including compressors, air line filters, receivers, piping and appurtenances shall be installed as indicated and specified.

B. Component parts of compressor unit shall be installed on a base firmly attached to receiver; motor and compressor shall be properly aligned auxiliary equipment and controls specified, furnished with necessary controls, automatic moisture eliminator fittings, piping, conduits and wiring properly installed and connected in a professional manner. Lubricant shall be furnished to fill until ready for operation. Safety valves shall be installed to permit normal operation and properly protect equipment. Thermal units shall be installed in motor starter to trip at 125 percent of motor nameplate rating. Pressure switches shall be installed to cut in and cut out of settings indicated.

C. Compressor shall be installed on vibration dampers and flexible connections installed in piping to isolate vibration. Dampers shall be furnished with transmissibility of less than 10 percent for grade installation and less than 5 percent for above grade floor installation.

D. Furnished compressed air system shall comply with safety orders of Industrial Accident Commission of State of California, Building and Safety Department of City of Los Angeles, and electrical units shall be listed as UL approved. Piping between first downstream moisture eliminator and receiver shall pitch down to receiver and shall be not less than one pipe size larger than pipe leaving eliminator. Provide drip points at each building with piping pitching down to them. Drip leg at each drip point and moisture eliminator shall be not less than 6 inches long, capped 1 ½-inch pipe with drain petcock. Upon completion of compressed air piping installation and prior to testing of pipe and final connection to compressed air receivers, systems shall be blown out to a clean, dry condition.

3.20 DEPTH OF SEWER LINES

A. Minimum depth of below grade sewer lines shall be 24 inches to centerline of pipe. Sewer lines shall slope ¼ inch per foot minimum, unless otherwise indicated. Minimum depth at Owner property line shall be 6 feet, unless otherwise required.

3.21 BACKFLOW PREVENTION DEVICES

A. Backflow Devices: Installation of backflow devices shall be tested and certified by Los Angeles County backflow device tester before Substantial Completion. Tests shall be

performed in presence of Project Inspector. Test reports shall be turned over to Project Inspector for mailing to proper agency.

3.22 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose off Project site.

3.23 PROTECTION

A. Protect Work of this section until Substantial Completion.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

DIVISION 23

HEATING, VENTILATING, AND AIR CONDITIONING

SECTION 23 05 00

COMMON WORK RESULTS FOR HVAC

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section provides the basic mechanical requirements that apply to the Work of Division 23.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 26: Electrical.

1.02 REGULATORY REQUIREMENTS

A. Materials, fabrication, equipment, and installation shall comply with industry standards and code requirements. Where manufacturer's recommendations exceed industry standards, the manufacturer's recommendation shall establish the minimum standard. As a minimum, standards from the following organizations shall apply:

1. AMCA - Air Movement and Control Association.

2. ANSI - American National Standards Institute.

3. ASME - American Society of Mechanical Engineers.

a. ASME Boiler and Pressure Vessel Code.

b. ASME B31 - Code for Pressure Piping.

4. AHRI - Air-Conditioning, Heating, and Refrigeration Institute.

5. ASHRAE - American Society of Heating, Refrigerating and Air-Conditioning Engineers.

6. ASTM - American Society for Testing and Materials.

a. ASTM A53 - Specification for Welded and Seamless Pipe.

7. CSA - Canadian Standards Association.

8. FM Global - Factory Mutual Global

9. IAPMO - International Association of Plumbing and Mechanical Officials.

10. NFPA - National Fire Protection Association.

11. OSHA - Occupational Safety and Health Administration.

12. SMACNA - Sheet Metal and Air Conditioning Contractors' National Association.

13. UL - Underwriters Laboratories Inc.

14. Intertek (ETL Certification).

B. Materials, fabrication, equipment, and installation shall comply with federal, state, and local codes including, but not limited to, the following:

1. CBC, California Building Code, and CMC, California Mechanical Code.

   a. Latest edition as adopted by the City of Los Angeles, the County of Los Angeles, and the State of California including amendments effective on the Effective Date of the Contract.

2. California Code of Regulations, Title 8, Industrial Relations, Division 1, Chapter 4, Division of Industrial Safety.

3. OSHA - Occupational Safety and Health Administration.

4. CDPH – California Department of Public Health.

5. SCAQMD - South Coast Air Quality Management District.

C. Specifications or Drawings shall not be construed to permit deviation from the requirements of governing codes unless approval has been obtained from legally constituted authorities having jurisdiction, and the Architect. The Contract Documents may contain more stringent requirements than those legally required.

D. Permits and Fees: Refer to the General and Supplementary Conditions.

1.03 SUBMITTALS

A. Provide submittals in accordance with Section 01 3300: Submittal Procedures and with specific requirements of Division 23 sections, as applicable.

B. After Architect's approval, the above information shall become the basis for inspecting and testing materials and actual installation procedures performed in the Work.

C. Shop Drawings: Submit one additional copy when control diagrams having line voltage connections are indicated. Shop Drawings shall be specifically prepared for the Work of this Project. Drawings prepared in accordance with requirements of Section 01 3113: Project Coordination and Section 01 3300 may be provided by the Architect to serve as a background for the Shop Drawings. Shop Drawings shall comply with the requirements of Section 01 3113 and Section 01 3300 and shall indicate at a minimum:

1. Complete system layout of equipment, components, ductwork, and piping, indicating service clearances, duct and pipe sizes, fitting types and sizes, top or bottom of duct and pipe elevations, distances of ducts, pipes and equipment from building reference points and hanger / support locations. All the above items shall be coordinated on the shop drawings according to the requirements of Section 01 3113.

2. Schedule and description of equipment, ductwork, piping, fittings, valves, dampers, and controllers.

1.04 PROJECT RECORD DOCUMENTS

A. Comply with provisions of Section 01 7700: Contract Closeout.

B. Project Record Drawings:

1. Provide a complete set of mechanical and control system drawings in AutoCAD and, if available, BIM, complete with external reference drawings, fonts, blocks and plotter pen color/line thickness settings on CD-ROM. Also submit one set of full size reproducible plots on vellum and three sets of prints.

2. Before Contract Completion, deliver corrected and completed prints to the OAR. Delivery of project record documents to the OAR does not relinquish responsibility of furnishing required information omitted from project record documents.

C. Operation and Maintenance Manuals:

1. Submit operation and maintenance manuals in required form and content. If no revisions are required, furnish one additional copy. If revisions are required, one copy shall be returned with instructions for changes; perform such changes and return manuals. Manuals shall be bound in accordance to Section 01 7700. Deliver manuals to the OAR. Submit an electronic copy of the entire manual in PDF file format.

2. Contents of Manual:

a. Title sheet with Project name, including names, addresses and telephone number of Contractor, installer, and related equipment suppliers.

b. Manufacturer's operating instructions including, but not limited to, the following:

1) Identification of components and controls.

2) Pre-start checklist and start-up procedures.

3) Normal operation settings and checklists.

4) Pre-shut down checklist and shut down procedures.

5) Trouble shooting checklist and guidelines.

6) Recommendations for optimum performance.

7) Warnings and safety precautions on improper or hazardous operational procedures or conditions

c. Manufacturer's product data and parts and maintenance booklet for each item of equipment furnished under Division 23 that includes the following as a minimum:

1) Manufacturer’s model, identification and serial numbers.

2) Exploded view of assembly drawings identifying each component or part with the relevant part number.

3) Directory of manufacturer’s representatives, service contractors and part distributors.

4) Maintenance and trouble-shooting instructions, including schedule for preventive maintenance, periodic inspection and cleaning criteria.

d. Project Record Drawings: Complete set of mechanical and control system drawings in 50 percent reduced print format shall be furnished with the manual. Submit the above record drawings on CD-ROM in AutoCAD and, if available, BIM, complete with external reference drawings, fonts, blocks, and plotter pen color/line thickness settings.

e. Testing, Adjusting, and Balancing reports: Submit as specified in Section 01 4525.

f. South Coast Air Quality Management District (SCAQMD) permits to install and operate boilers, water heaters and other fuel burning equipment and third-party source test reports as required by SCAQMD to allow start-up and operation of equipment.

g. Los Angeles County industrial waste permits.

h. Valve directory complete with location, function, size, and model of each valve with reference to the project record drawings.

i. Equipment and component identification chart complete with location, function, size, and model of each equipment or component with reference to the project record drawings.

1.05 COORDINATION

A. Contract Documents indicate extent and general arrangement of Work under Division 23. Contractor shall coordinate work in accordance with Section 01 3113 requirements and make adjustments as required to provide maximum headroom, a neat arrangement to keep passageways and openings clear to provide accessibility and provisions for maintenance, and to meet code requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage: Deliver materials to Project site in their original unopened containers with labels intact and legible at time of delivery. Store in strict accordance with manufacturer's recommendations.

B. Do not store plastic pipe or materials in direct sunlight.

1.07 PRELIMINARY OPERATION

A. OAR may require any portion of mechanical Work to be operated before Substantial Completion. Such operation shall be in addition to regular tests, demonstrations and instructions required under the Contract Documents, and shall be performed as required.

B. Notify the Project Inspector at least 24 hours in advance of lighting or re-lighting pilots.

1.08 TRAINING OF OWNER PERSONNEL

A. Training of Owner’s personnel shall include:

1. A minimum of 8 hours of on-site overview of the overall Mechanical System.

2. Refer to Division 23 sections for specific training on each of the components of the Mechanical System.

3. A minimum of 8 hours of on-site overview identifying location and function of all Control Valves and Actuator assemblies.

4. A minimum of 40 hours of (in classroom) software training for a minimum of 20 owner’s personnel on EMS/BMS if such systems are utilized in the project. Training shall be conducted at control contractor training facility with computer setup for each person attending.

B. Contract shall include the cost of training Owner operation and maintenance personnel in operating, adjusting, maintenance, trouble-shooting, and Project site repair of each component, equipment, or system provided under this Contract.

C. Operational and maintenance training shall be conducted on the Project site, unless indicated otherwise.

D. Upon completion of Owner training, a completion certificate indicating the nature of the training and a description of the systems, complete with equipment and component lists shall be issued to each trainee. The certificate should be issued in duplicate with one copy retained by OAR.

E. An attendance sheet with the names and signatures of all participants attending the training shall be submitted to the OAR and kept as part of the project documents.

1.09 GUARANTEES AND DAMAGE RESPONSIBILITY

A. Sound of water flowing in piping shall not be transmitted to building structure. Operation of mechanical system shall not produce operational sounds that can be heard outside of rooms enclosing apparatus or equipment.

PART 2 – PRODUCTS

2.01 MATERIALS AND EQUIPMENT

A. Unless otherwise specified, materials and equipment shall be new, in good and clean condition. Equipment, materials, and components shall be of the make; type and model number noted on Drawings or specified. Pieces of equipment of the same type shall be by the same manufacturer.

B. Whenever an item is listed by a single proprietary name, with or without model number and type, it shall be for purpose of design only, to indicate characteristics and quality desired. Proprietary designation listed on Drawings, or listed first in Specifications, is used as a basis for design to establish a standard for quality and performance and space requirements.

C. HVAC equipment products from different manufacturers are never identical. Equipment approved as being equal is interpreted as being equivalent in capacity, performance and quality. The dimensions, weight, configuration and utility requirements could be quite different from the equipment used as the basis of design. Due to these differences, additional coordination and adjustments by the Contractor are required. For the equipment to be deemed truly equal, the additional coordination and adjustments by the Contractor should not incur any additional cost to the Owner and any additional labor to the design team.

D. Equipment and materials indicated or required to be installed outdoors shall be of the type that is designed, manufactured, listed or approved by authorities having jurisdiction for outdoor installation by being resistant to the adverse effects of weather. All the additional protective measures against outdoor weather required by the manufacturers' installation instructions and prevalent practice shall be provided.

E. For substitution of materials or products, refer to the General Conditions.

PART 3 – EXECUTION

3.01 SERVICE INTERRUPTIONS, OFF-SITE, GAS AND WATER

A. Schedule Work so there shall be no service interruptions of existing systems or systems during normal hours of operation of affected systems and facilities.

B. When service interruptions are mandatory, arrange in advance with the OAR as to time and date of such interruptions.

C. Systems, which are interrupted, shall be returned back into operation in such manner that they will function as originally intended.

3.02 CUTTING, NOTCHING, AND BACKING

A. Conform to California Building Code, Title 24, Part 2, for notches and bored holes in wood and for pipes and sleeves embedded in concrete and for cuts in steel, as detailed on structural Drawings.

B. Where pipes or ducts pass through, or are located within one inch of any construction element, install a resilient pad, 1/2 inch thick minimum, to prevent contact.

C. Furnish all necessary provisions for recesses, chases, and accesses and provide blocking and backing as necessary for proper reception and installation of mechanical Work.

3.03 LOCATION OF PIPING AND EQUIPMENT

A. Location of piping, apparatus and equipment as indicated on Drawings is approximate and shall be altered to avoid obstructions, preserve headroom, and provide free and clear openings and passageways.

B. Trenches parallel to footings shall not be closer than 18 inches to the face of footings and shall not be below a plane having a downward slope of 2 horizontal to one vertical, from a line 9 inches above bottom of footing.

C. Pipe in tunnels shall be installed close to one side of tunnel to provide maximum space for passage. Pipe shall not be installed through crawl hole unless otherwise specified or detailed on Drawings.

D. Place equipment in locations and spaces indicated, disassemble and/or reassemble equipment as required by Project conditions.

3.04 TESTS AND TESTING

A. Tests shall be as required under the applicable sections of Division 23, including this Section.

B. Tests required by other sections of the Contract Documents include the following:

1. Test and balance of mechanical equipment and systems: Refer to Section 01 4525: Testing, Adjusting, and Balancing for HVAC.

2. Hydrostatic test of boilers: Refer to Section 01 4525: Testing, Adjusting, and Balancing.

3. Test of smoke and fire detectors: Refer to Division 26: Electrical.

C. Additional tests may be required in the case of products, materials, and equipment if:

1. Submitted items are altered, changed, or cannot be determined as exactly conforming to the Contract Documents.

2. Performance testing and results may also be required on certain items which are as specified, including fan, and pump performance.

D. Piping Tests:

1. Perform tests required to demonstrate that operation of mechanical systems and their parts are in accordance with Specifications covering each item or system, and furnish materials, instruments and equipment necessary to conduct such tests. Tests shall be performed in presence of the Project Inspector, and representatives of any governmental agency having jurisdiction. Work shall not be concealed or covered until required results are provided.

2. If required tests are not performed, Owner may provide in accordance with the Contract Documents.

3. Pressure gages furnished in testing shall comply with CPC. Air shall be bled from lines requiring hydrostatic or water tests.

4. Systems shall be pressure-tested in accordance with pipe testing schedule below. Pipe test shall indicate no loss in pressure after a minimum duration of 4 hours at test pressures indicated. Where local codes require higher test pressures than specified herein for fire sprinkler systems, local codes shall govern.

5. Fuel gas lines shall be first tested with piping exposed, before backfilling trenches or lathing; second with piping in finished arrangement, backfilled and paved where required, and walls finished.

6. Refrigerant piping may be tested with a halide detector or calibrated electronic testing equipment.

7. Piping systems may be tested as a unit or in sections, but entire system shall successfully meet requirements specified herein, before final testing by the Project Inspector.

8. Repair of damage to pipes and their appurtenances or to any other structures resulting from or caused by these tests, shall be provided.

E. Pipe Testing Schedule:

System Tested	**Test Pressure (psig)**	**Test With:**
Steam piping, hot water heating system piping and chilled water piping	150	Water
Vacuum pump or condensate pump discharge and condensate return piping	150	Water
Refrigeration piping		
R-22	400	Dry nitrogen
R-134a	300	Dry nitrogen
R-401a	300	Dry nitrogen
R-401b	300	Dry nitrogen
R-404a	500	Dry nitrogen
R-407c	500	Dry nitrogen
R-410a	600	Dry nitrogen
R-507	500	Dry nitrogen
Radiant panel piping	150	Water

F. Equipment Performance Assurance Tests:

1. Before operating any equipment or systems, a thorough check shall be performed to determine that systems have been flushed and cleaned as required and that equipment has been properly installed, aligned, lubricated, and serviced. Factory instructions shall be checked to verify installations have been completed and recommended lubricants have been installed in bearings, gearboxes, crankcases, and similar equipment. Particular care shall be furnished in lubricating bearings to avoid damage by over-lubrication and blowing out seals. Equipment shall also be checked for damage that may have occurred during shipment, after delivery, or during installation. Damaged equipment, products, and materials shall be replaced or repaired as required.

2. Upon completion of the above, adjust the system settings to within normal operating conditions to prevent the system from being damaged upon start-up.

3. Run-test the equipment after start-up for five consecutive days. Tests shall include operation of heating, ventilating, and air conditioning equipment and systems for a period of not less than two 8 hour periods at 90 percent of the full specified heating and cooling capacities. If equipment passes, install new filters. If equipment fails, it shall be adjusted and retested until system meets all applicable codes.

4. Equipment Start-up Reports: For each equipment or system on which start-up is performed, submit 8 copies of start-up report for review by the Architect.

    a. The start-up report shall include the manufacturer's standard start-up form completed and signed by the start-up technician.

5. Provide, maintain, and pay costs for equipment, instruments, and operating personnel as required for specified tests.

6. Provide electric energy and fuel required for tests.

7. Final adjustment to equipment or systems shall meet specified performance requirements.

8. Equipment, systems, or Work deemed defective during testing shall be replaced or corrected as required. Test until satisfactory results are provided.

G. Specific Coordinated Plan for Test and Balance:

1. Provide a narrative of the operational intent that clearly describes the function and sequence of operation of each component, equipment, or system installed. Instruct designated Owner personnel in the operation of the installed systems.

2. Prior to final test and balance, mechanical equipment and systems shall be operated and tested as indicated in Paragraph 3.04.F above to demonstrate satisfactory overall operation of the installed systems.

3. Immediately before starting tests, air filter media shall be cleaned or renewed. Roll-type filters shall be advanced to provide new clean media. Cleanable type media shall be thoroughly cleaned and re-oiled with new, clean oil as recommended by manufacturer if they are of viscous impingement type. Disposable type filters shall be replaced with new filters. Replaceable media shall be replaced with new media.

4. An accurate means of measuring air flow and temperatures shall be furnished to balance air supply, return, and exhaust systems so uniform temperatures occur in every room and design airflow is obtained through registers, diffusers, and grilles.

5. Systems shall be adjusted to provide airflows indicated including maximum fresh air and maximum return air. Dampers shall be checked for proper settings and operation. Air and water inlet and leaving temperatures at coils shall be checked. Complete operational data including airflows, room temperatures, fan speeds, motor currents, plenum, and duct static pressures shall be tabulated.

6. Welding performed as part of this Division may be subject to radiographic inspections at random in accordance with requirements specified in Section 23 0513: Basic HVAC Materials and Methods.

3.05 NOISE AND VIBRATION REDUCTION

A. Correct noise or vibration caused by mechanical systems. Provide all necessary adjustments to specified and installed equipment and accessories to reduce noise to the lowest possible level

B. Correct noise or vibration problems caused by failure to install work in accordance with Contract Documents. Include all labor and materials required as a result of such failure. Pay for re-testing of corrected noise or vibration problems by the project acoustical consultant including travel, lodging, test equipment expenses, etc.

3.06 PROTECTION, CARE AND CLEANING

A. In addition to storage criteria of the General Conditions, and provisions under Section 01 5000: Construction Facilities and Temporary Controls, the following shall be provided:

1. Provide for the safety and good condition of materials and equipment until Substantial Completion. Protect materials and equipment from damage.

2. Protect installed Work.

3. Replacements: In case of damage, immediately provide repairs and/or replacements as required.

4. Protect covering for bearings, open connections to tanks, pipe coils, pumps, compressors and similar equipment.

5. Interior of ductwork shall be maintained free of dirt, grit, dust, loose insulation, and other foreign materials.

6. Air handling equipment shall not be operated until building is cleaned and air filters are installed.

7. Fixtures, piping, finished brass or bronze, and equipment shall have grease, adhesive, labels, and foreign materials removed. Chromium, nickel plate, polished bronze or brass Work shall be polished. Glass shall be cleaned inside and out.

8. Before initial start-up and again before Substantial Completion, piping shall be drained and flushed to completely remove grease and foreign matter. Pressure regulating assemblies, traps, strainers, boilers, flush valves, and similar items shall be thoroughly cleaned. Tag system with an information tag listing responsible party and date of element, before initial start-up and again before Substantial Completion. Compressed air, oil, and gas piping shall be blown out with oil-free compressed air or inert gas. Refrigerant piping shall be cleaned as specified.

END OF SECTION

SECTION 23 05 13

BASIC HVAC MATERIALS AND METHODS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section prescribes basic materials and methods generally common to the Work of Division 23.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 23: Heating, Ventilating, and Air-Conditioning.

3. Division 26: Electrical.

4. Section 23 0593: Testing, Adjusting, and Balancing for HVAC.

5. Section 31 2323: Excavation and Fill for Utilities.

6. Section 33 1100: Site Water Distribution Utilities.

1.02 SUBMITTALS

A. Provide in accordance with Division 01, Section 23 0500 and specific requirements of each section of Division 23.

1.03 QUALITY ASSURANCE

A. Standards: Comply with applicable national, state, and local codes and standards: ASTM, ASME, and ANSI. Federal Specifications, AWWA, CISPI, NFPA, FM Global, UL, CPC (California Plumbing Code), CMC (California Mechanical Code), CSA.

B. Qualifications of Manufacturer: Products used in the Work of this Section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a history of successful production as reviewed by the Architect.

1.04 COORDINATION

A. Coordinate related Work in accordance with provisions of Section 01 3113: Project Coordination.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide the following products if they are indicated in the Contract Documents or if they are required for the proper installation, function or operation of equipment, systems or components indicated in the Contract Document.

B. Provide the following products as a complete assembly with required accessories for a complete and functioning entity in compliance with governing codes and applicable standards as specified in Section 23 0500, manufacturer's instructions or as required.

1. Omission of minor details in the Contract Documents does not waive and/or otherwise relinquish compliance with the above requirements.

2.02 MANUFACTURERS AND MATERIALS

A. Air Compressor: (Not Used)

B. Air and Dirt Separators: (Not Used)

C. Balancing Valves: (Not Used)

D. Boiler Blow-Off Valve: (Not Used)

E. Ball Valves: Bronze, 2 inches and smaller:

BV-1 Class 150, 600 psi, CWP, 2 piece construction reinforced Teflon seats, full port, adjustable packing gland, stainless ball and stem, threaded ends.

Hammond UP-8303A/UP-8305/UP-8513, NIBCO T-685-80-LF/TS-685-66-LF, Milwaukee UPBA400S/450S, or equal.

BV-2 Class 150, 600 psi CWP, 2-piece construction, bronze body, reinforced Teflon seats, adjustable packing gland, (no threaded stem designs allowed), threaded ends.

Hammond UP8301A, NIBCO T-585-70, Milwaukee BA-400, or equal.

Ball Valves in Insulated Piping: Use extended operating handle of non-thermal conducive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation and memory stops that are fully adjustable after insulation is applied. NIBCO Nib-Seal Handle.

F. Butterfly Valves: (Not Used)

G. Check Valves:

1. Bronze, 2-inch and smaller:

CHV-1 Class 125, 200 CWP swing check, Teflon disc, threaded ends. .

NIBCO T-413-Y, Milwaukee 509-T, Hammond IB-940, or equal.

CHV-2 (Not Used)

2. Cast Iron 2-1/2 and larger:

CHV-3 Class 125, 200 psi, CWP, IBBM, renewable seat and disc, bolted cap, threaded ends:

Crane 372, Stockham G-927, NIBCO T-918-B, or equal.

CHV-4 Class 125, 200 psi, CWP, IBBM, renewable seat, bronze or cast iron disc, bolted cap, flanged ends:

Stockham G-931, Crane 373, NIBCO F-918 B, Milwaukee F-2974-M, Hammond IR-1124-HI, or equal.

CHV-5 (Not Used)

CHV-6 (Not Used)

CHV-7 (Not Used)

H. Expansion Tank: (Not Used)

I. Flow Control Valve – Manual: (Not Used)

J. Venturi Flow Measuring Device: (Not Used)

K. Electronic Flow Readout Meter: (Not Used)

L. Gate Valves:

1. Bronze, 2 inches and smaller:

GV-1 Class 125, 200 psi CWP, bronze body and bonnet non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Hammond IB645, Crane 1701, Milwaukee 105, American 3F, NIBCO T-113, or equal.

GV-2 Same as GV-1, except solder ends:

NIBCO S 113, Milwaukee 115, Hammond IB 647, or equal.

GV-3 Class 125, 200 psi WOG, rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Stockham B-100, Crane 428, NIBCO T-111, Milwaukee 148, Hammond IB-640, or equal.

GV-4 (Not Used)

GV-5 (Not Used)

GV-6 (Not Used)

2. Iron Body Gate Valves; 2 1/2 inches and larger:

GV-7 Class 125, O S and Y, IBBM, bolted bonnet, solid disc, flanged ends:

Hammond IR1140HI, Stockham G623, Crane 465-1/2, NIBCO F-617-0, Milwaukee F 2885M, or equal.

GV-8 (Not Used)

M. Globe Valves:

1. Bronze, 2-inch and smaller:

GLV-1 Class 125, 200 psi, CWP, screw-in bonnet, Teflon disc, threaded ends:

Hammond IB440, Milwaukee 502, Stockham B-13-T, NIBCO T-211-Y, Crane 5TF, or equal.

GLV-2 Class 125, 200 psi, CWP, screw in bonnet, Teflon disc, solder ends.

Hammond IB-418, Milwaukee 1502, NIBCO S-211-Y, or equal.

GLV-3 (Not Used)

GLV-4 (Not Used)

2. Iron Globe Valves, 2 ½-inch and larger:

GLV-5 Class 125, 200 psi, CWP, OS&Y, IBBM, renewable seat and disc, bolted bonnet, flanged ends:

Hammond IR116 HI, Stockham G-512, Crane 351, Milwaukee F2981 M, NIBCO F-718-B, or equal.

GLV-6 (Not Used)

N. Heater Vent Pipe:

1. Schedule Number:

HVP-1 Shall be UL approved for service specified. Concealed heater vent pipe, including pipe in or through attic spaces, shall be Los Angeles City approved double wall metal vent pipe. For recessed wall heaters, furnish B.W. type. All others may be Type B, or B.W. Clearances must comply with Los Angeles City code and conditions of UL listing.

American Metal Products Co., Inc., Simpson Dura-Vent, AmeriVent, Hart & Cooley Mfg. Co., Metalbestos, or equal.

O. Liquid Level Gage:

LLG-1 Refrigerant type, carbon steel with stainless steel trim or all forged steel construction, back-seating standard design. Upper and lower valve furnished with ball check valves; 1/2 inch diameter glass on center. Four 3/16 inch diameter gage glass guard rods or slotted steel guard.

Peneberthy, Henry, Conbraco, or equal.

P. Piping:

1. Piping shall be continuously and permanently marked with manufacturer's name, type of material, size, pressure rating, and the applicable ASTM, ANSI, UL, or NSF listing. On plastic pipe, date of extrusion must also be marked.

2. Underground non-ferrous pressure pipes shall be installed with proper color tracer wires. Refer to color code provisions in Section 23 0553: HVAC Identification.

Q. Pipe Isolators:

PLA-1 Absorption pad shall be not less than 1/2 inch thick, unloaded. Pad shall completely encompass pipe.

Holdrite, LSP, Stoneman, Potter-Roemer, Trisolator, PR-Isolator, or equal.

PLA-2 Plastic cushion to form an insulating liner and eliminate metal to metal contact when securing copper tubes and pipes in air conditioning and refrigeration insulation preventing galvanic erosion. (Acoustical Type for Sound Absorption)

Hydra-Zorb Cushion Clamps, LSP Products Group Acousto Clamp, or equal.

R. Pressure Gage: Aluminum or steel case, minimum 4-1/4 inches dial; pressure type or combination vacuum-pressure type, with provisions for field calibration. Dial indicator to indicate pressure in psi with accuracy to within plus or minus 0.5 percent of maximum dial reading. Furnish gages with restriction screw, size 60, to eliminate vibration impulses. Black case and ring, bourdon tube of seamless copper alloy with brass tip and socket. Three way gage cock, constructed of brass with stuffing box, 1/2 inch couplings, with fixed or movable cap nut to shut off pressure gage.

PG-1 Pressure type, black drawn steel case, 4 ½-inch glass dial, range approximately twice line pressure.

Marsh Keckley, Trerice, Weksler, Weiss, or equal.

S. Safety Relief Valves:

SRV-1 Combination temperature and pressure relief type. CSA approved. Set to open at 125 psi pressure.

Watts 40L, Cash-Acme NCLX-1, Wilkins TP220, or equal.

SRV-2 Same as SRV-1, except provide on storage type water heater with anode in dip tube.

Watts 10 x L, CashAcme NCLX-1, Wilkins TP220, or equal.

SRV-3 (Not Used)

T. Strainers:

STR-1 Description: Wye type with monel or stainless steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on Drawings, provide with valved (globe valve) blowout piping, same size as blowout plug.

1. 2-inch and smaller:

C.M. Bailey No.100-A, 250 lb., cast iron body, threaded, Keckley 'B', Spirax Sarco Y-type, or equal.

2. 2 ½-inch and larger:
C.M. Bailey No.100-A, 125 lb., cast iron body, flanged, or Victaulic style 732, 300 psi, ductile iron body, grooved, fusion bonded epoxy coated.
C.M.Bailey, Armstrong, Muessco, Keckley 'A', or equal.

STR-2 Y pattern cast iron bodies, 125 psi, monel screen. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2 inches, flanged ends fusion bonded epoxy coated for 2 1/2 inches and larger perforations, in accordance with the following:

1. Steam service - 40 square mesh.

2. Other services - 16 square mesh.

Bailey No.100, Armstrong, RP&C, Keckley, or equal.

U. Temperature Control Valves:

TCV-1 Motor-operated valve, Forged brass bodies rated at no less than 400 psi working pressure; Chrome plated brass ball and stem, female NPT union ends, dual EPDM lubricated O-rings and TEFZEL characterizing disc.

Operated by Electronic Valve Actuator, manufactured, brand labeled or distributed by Belimo, TA, Honeywell, or equal.

TCV-2 Valves, automatic, electric, 3-way control.

Packed type bronze body and trim. Metal-to-metal seats designed for tight shut-off. Constant total flow throughout full plug travel. Valve designed for 150 psig steam working pressure. Valve operated by spring return motor with gear train. Valves screwed for sizes 2 inches and smaller.

Honeywell, Powers, Barber-Colman, Leonard, or equal.

TCV-3 (Not Used)

V. Thermometers

1. Industrial:

T-1 Straight type with fixed or ratable stem, extruded or cast brass or cast aluminum case and brass separable well 6 inches minimum scale, angle or straight type range 30 degrees - 240 degrees F.

Weksler, Trerice, Weiss, Ashcroft, Marshalltown, or equal.

T-2 Round type 3 ½-inch minimum dial range of 100 between 30 degrees and 155 degrees F, color coded red above 150 degrees F. Brass chrome plated case.
Ashcroft, U.S. Gage, Marsh, Weiss, or equal.

2. Remote:

T-3 Liquid-filled capillary type with bulbs as required for remote and insertion mounting dials of 3 ½-inch minimum diameter, non-ferrous internal parts, external means for re-calibration, glass or plastic lens and steel or non-ferrous case suitable for wall, duct or panel mounting range 30 degrees to 240 degrees F.

W. Traps: (Not Used)

X. Valves (Air Vent):

VAV-1 Hot or chilled water air release valves shall be cast brass rated for 150 psig design pressure and 270 F operating temperature.

Spirotherm, Bell & Gossett, Taco, or equal.

VAV-2 Hot or chilled water space heating system air valve, brass with nickel trim 1/4 inch connection, disc type for manual or automatic venting.

Hoffman 500, Spirotherm, Watts, or equal.

VAV-3 Brass petcock, 1/4 inch connection by 1/4 inch copper tube to high point of coil or line by means of a tapped cap on top of 6 inches vertical nipple. Petcock to be installed approximately 5 feet 6 inches above finish floor.

Amtrol, Watts, Dole, or equal.

Y. Vacuum Valves:

VV-1 Vacuum valves; for vacuum serve, 125 psig working pressure, cast iron body, spring loaded lubricated plug type.

General Controls, Honeywell, Val-Matic, or equal.

Z. Flanges: Flanges shall be furnished and installed at each flanged connection of each type of equipment, tanks, and valves. Faces of flanges being connected shall be furnished alike. Connection of a raised face flange to a flat-faced flange is not permitted. Flanges shall conform to following schedules:

TYPE OF PIPE	FLANGE
Screwed black or galvanized grooved steel pipelines.	125 pound black cast iron screwed flange, flat faced or grooved flange adapters, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401, or equal.
Welded or grooved steel pipe, except high pressure steam lines.	150 pound black forged steel welding flanges, 1/16 inch raised face ASTM A105, Grade II or grooved flange adapters, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401, or equal.
Copper and brass pipe or tubing.	150 pound cast bronze, flat-faced flange with solder end or grooved flange adapters, Victaulic Style 641, Tyco-Grinnell Fig. 61, Gruvlok Fig. 6084, or equal.

1. Gasket material for flanged connections shall be full faced or ring type to suit facing on flanges and shall be furnished in accordance with following schedule

SERVICE	TYPE
Cold water	1/16 inch thick neoprene
Steam, hot water	1/l6 inch Teflon

Grooved end flange adapters supplied with pressure responsive elastomeric Gaskets supplied with grooved flange adapters shall be pre-lubricated by the manufacturer. Grade of gasket to suit intended service.

AA. Unions:

1. Unions shall be furnished and installed in accordance with the following requirements (unless flanges are furnished):

   a. At each threaded or soldered connection to equipment and tanks, except in Freon or fuel gas, piping systems, whether indicated or not.
   b. Immediately downstream of any threaded connection to each manually operated threaded valve or cock, and each threaded check valve, yard box or access box except those in Freon piping systems, whether indicated or not.
   c. At each threaded connection to threaded automatic valves (except those in Freon piping systems) such as reducing valves and temperature control valves, whether indicated or not.
   d. If grooved piping is used, couplings shall serve as unions. Additional unions are not required

2. Unions shall be located so that piping can be easily disconnected for removal of equipment, tank, or valve.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this Section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Provide all materials and equipment for the Work. Furnish and install necessary apparatus, parts, materials, and accessories.

B. Pipe Installation:

1. Install piping parallel to wall and provide an orderly grouping of proper materials and execution.

2. Piping shall clear obstructions, preserve headroom, provide openings and passageways clear, whether indicated or not. Verify the Work of other Divisions to avoid interference.

3. If obstructions or the Work of other Divisions prevent installation of piping or equipment as indicated by the Drawings, perform minor deviations as required by the Architect.

4. Install piping after excavation or cutting has been performed. Piping shall not be permanently enclosed, furred in, or covered before required inspection and testing is performed.

5. Exposed polished or enameled connections from fixtures or equipment shall be installed with no resulting tool marks or threads at fittings. Residue or exposed pipe compound shall be removed from exterior of pipe.

6. Piping shall be concealed in chases, partitions, walls, and between floors, unless otherwise directed or specifically noted on Drawings. When penetrating wood studs, joists, and other wood members, provide such members with reinforcement steel straps of Continental Steel & Tube Co., ULINE, Independent Metal Strap, or equal.

7. Reduce fitting where any change in pipe size occurs. Bushings shall not be furnished unless specifically reviewed by the Architect, or indicated on Drawings.

8. Piping subject to expansion or contraction shall be anchored in a manner, which permits strains to be evenly distributed. Swing joints or expansion loops shall be installed. Seismic restraints shall be installed so as not to interfere with expansion and contraction of piping. Seismic loops required at all building separations.

9. Immediately after lines have been installed, openings shall be capped or plugged to prevent entrance of foreign materials. Caps shall be left in place until removal is necessary for completion of installation.

10. Couplings shall not be installed except where required pipe runs between other fittings are longer than standard length of type of pipe being installed and except where their installation is specifically reviewed by the Architect.

11. Water piping shall be installed generally level, free of traps, unnecessary offset, arranged to conform to building requirements, clear of ducts, flues, conduits, and other Work. Piping shall be arranged with valves installed to provide for complete drainage and control of system. Piping shall not be installed which causes an objectionable noise from flow of water therein under normal conditions. Refer to Section 23 0500: Common Work Results for HVAC.

12. Water lines may be installed in same trench with sewer lines, provided bottom of water line is 12 inches minimum above top and to the side of sewer line.

13. Hot and chilled water circulating piping installed for space heating or cooling shall pitch up to a high point at a slope of 1/4 inch in 10 feet in the direction of flow. Where supply and return lines are exposed, both lines shall pitch in same direction. Otherwise, where possible, lines shall pitch up toward compression tank.

14. Changes in pipe sizes shall be furnished with eccentric reducers, flat on top. Offsets to clear obstruction shall not be installed so as to produce air pockets.

C. Pipe Sleeves and Plates:

1. Provide and install pipe sleeves of Schedule 40 black steel pipe or Schedule 40 PVC plastic pipe in concrete or masonry walls, footings, and concrete floors below grade. Provide and install adjustable submerged deck type sleeves at locations where pipes pass through concrete floors, except concrete slab floors on grade, and at locations where soil pipe for floor type water closets passes through concrete floors.

2. Sleeves shall provide 1/2 inch clearance around pipes, except plastic pipe shall have 1-inch clearance. Caps of deck type sleeves shall be removed just prior to installation of pipe. Area around sleeves shall be smooth and without high or low spots. Sleeves in walls shall not extend beyond exposed surface of wall. Sleeves in concrete floors and walls shall be securely fastened to forms to prevent movement while concrete is being placed.

3. Piping installed on a roof shall clear the roof surface by 10 inches minimum, with or without insulation. Bottom of individual fittings may infringe on 10 inches clear space but not groups of fittings or fittings located within 27 inches of each other.

4. Stiles shall be provided to facilitate crossing of piping when parallel piping runs are laterally greater than 12 inches out-to-out, or any pipe is higher than 18 inches, and more than 40 feet long or runs between 2 or more major pieces of equipment or housings greater than 20 feet apart. Stiles shall be not less than 20 inches wide with a minimum tread depth of 10 inches. Where stiles are required, they shall be located so greatest obstructed distance is 30 feet.

5. Where pipes pass through waterproofed walls, floors, or floors on grade, sealant with Link-Seal Modular Seals, or equal, between pipe and sleeve to provide a waterproof joint. Where earth is in contact with pipe on both sides of a wall or foundation, the waterproof joint is not required. Commercial rubber compression units may be furnished instead of sealed sleeves if reviewed by the Architect.

6. A swing joint, or other required device, shall be furnished and installed in hot water lines with 10 feet of sealant or compression joint to allow for expansion.

7. Pipe sleeves shall be provided where pipes intersect footings or foundation walls and sleeve clearances shall provide for footing settlement, but not less than one inch all around pipe.

D. Welding of Pipe and Qualifications of Welder:

1. Joints above grade or accessible conduit or tunnels in steel piping may be either welded or screwed unless specifically indicated otherwise on Drawings or specified. Joints in below grade steel piping, whether in insulation or not, shall not be welded, unless otherwise indicated.

2. Welded joints in pipe shall be continuous around pipe and shall comply with ASME B31: Code for Pressure Piping, unless otherwise specified.

3. Each pipe weld shall be stamped with welder's identification mark. Welding shall be performed by welders possessing a valid certificate of qualification for welding carbon steel welding pipe in horizontal position (2G) and horizontal fixed position (5G) in accordance with the requirements of Section IX of the ASME Boiler and Pressure Vessel Code, by an Owner-recognized, DSA approved testing laboratory.

4. Before any welder performs welding on the Work, furnish the Project Inspector with a copy of welder's valid qualification papers and obtain verification. Welder qualification is not valid unless it has been issued while welder was performing work for current employer, and has performed type of work described by qualification in the preceding 3 months.

5. Welding performed under these Specifications is subject to special tests and inspections including rigid Ultra Sonic Testing (UT) and radiographic inspection at random, in accordance with Technique for Radiographic Examination of Welded Joints by an Owner recognized, DSA approved testing laboratory.

E. Unacceptable Welds and Repairs to Welding:

1. Welds containing any of the following types of imperfections shall be deemed defective Work:

a. Cracks of any type.

b. Zones of incomplete (in excess of 1/32 inch) fusion or penetration.

c. Elongated slab inclusions longer than 1/4 inch.

d. Groups of slag inclusions in welds having an aggregate length greater than thickness of parent metal in a length 12 times the thickness of the parent metal.

e. Undercuts greater than 1/32 inch.

f. Overlaps, abrupt ridges or valleys.

2. When a defective weld is detected by examination as outlined above, two additional welds shall be radiographed at locations selected by the Project Inspector. If the two selected welds demonstrate compliant welding, then the two tested welds shall be deemed to be in compliance. Welding revealed by radiographs to be defective Work shall be removed, repaired, and tested by radiograph.

3. If either of the two selected welds demonstrates welding deemed to be defective Work, all welding in that portion of the Work shall be deemed defective Work and either: all welds shall be cutout, prepare new ends for welding and weld to comply with this Specification, or radiograph all welds, removing and repairing only such welding deemed to be defective Work.

4. Repair welding shall be performed in a manner in full compliance with ASME B31. The welded joints or repairs shall be spot examined with UT or radiographic tests in accordance with foregoing requirements.

5. Owner shall cause to be performed additional random UT and radiographic examinations of welds. Owner shall be responsible for the costs of any UT and radiographic examinations found to be in compliance with specified requirements.

6. Installer shall be responsible for the costs of UT and radiographic re-examinations of welds deemed defective Work and not in compliance with this Specification, and shall repair or replace said welds in accordance with specified requirements.

F. Welding Rods: Submit a written list of materials and proposed type of welding rods for review by the Architect.

G. Backing Rings: Backing rings may be submitted for installation provided the Product Data is submitted with the material list.

H. Qualification Tests for Low-pressure Welding:

1. Tests shall be performed on 3-inch standard weight pipe ASTM A53, Grade A, and shall be welded by acetylene and electric arc. Each sample shall consist of two pieces, each 10 inches long, with 30-degree bevel at point weld.

2. Two 20-inch samples shall be performed in the 2G and two 20-inch samples in the 5G positions, with positions defined in Section IX, ASME Boiler and Pressure Vessel Code. Welds shall have the reinforcement ground or machined flush to the surface of the pipe before testing. Samples shall be tested as full section tensile.

3. Weld shall develop a load of 90 percent of 50,000 psi, i.e., 45,000 psi or shall develop a fracture in parent metal.

4. Each qualified welder shall carry an identification card listing welder's name, date of test, and type of welding tests passed; signed by the welder and the laboratory.

5. A valid certificate of qualification issued in compliance with requirements of the ASME Boiler Pressure Vessel Code Section IX shall qualify a welder for issuance of a certificate for low-pressure pipe welding.

I. Certificates of Qualification for Welding of Unfired Pressure Vessels:

1. Certificates of qualification shall be issued by a laboratory recognized by the Owner in compliance with the requirements of the ASME Boiler Pressure Vessel Code Section IX. Qualifications shall be for both acetylene and arc welding of Schedule 40 ASTM A53, Type B, steel welded or seamless pipe in the Horizontal Position (2G) and the Horizontal Fixed Position (5G) as defined by said code.

NOTE: Certificate described above is not valid unless it has been issued while welder was working for his current employer, and unless welder has performed type of work described by certificate in the preceding three months. Requirements for possession of a valid certificate shall not be waived for welders fabricating unfired pressure vessels when the Specifications require compliance with ASME code or when welding pipe carries working pressures greater than 75 psi and temperatures greater than 250 degrees F.

J. Pipe Joints and Connections:

1. Pipe and tubing shall be cut per IAPMO Installation Standards. Pipe shall have rough edges or burrs removed so that a smooth and unobstructed flow shall be provided.

2. Threaded Pipe: Joints in piping shall be installed according to the following service schedule:

a. Refrigerant and Soap Piping: Litharge and glycerine, or Expando, Gasoila, or equal.

b. All other services Furnish sealant, suitable and as reviewed by the Architect.

3. Threads on pipe shall be cut with sharp, clean, unblemished dies and shall conform to ANSI/ASME B1.20.1 for tapered pipe threads.

4. Joint compounds shall be smoothly placed on male thread and not in fittings. Threaded joints shall be installed tight with tongs or wrenches and sealant of any kind is not permitted. Failed joints shall be replaced with new materials. Installation of thread cement or sealant to repair a leaking joint is not permitted.

5. Sharp-toothed Stillson, or similar wrenches, is not permitted for the installation of brass pipe or other piping with similar finished surfaces.

K. Copper Tubing and Brass Pipe with Threadless Fittings:

1. Silver brazed joints shall be used for attaching fittings to non-ferrous metallic refrigerant piping.

2. Non-pressure gravity fed condensate lines may be soldered with 95/5 solder.

3 Silver brazing alloy, Class BCUP-5. Surfaces to be joined shall be free of oil, grease, and oxides. Socket of fitting and end of pipe shall be thoroughly cleaned with emery cloth and wiped to remove oxides. After cleaning and before assembly or heating, flux shall be installed to each joint surface and spread evenly. Heat shall be applied in accordance with instructions in the Copper Tube Handbook issued by Copper Development Associates. Joints constructed of rough bronze fittings shall be provided as recommended by manufacturer.

4. Do not overheat piping and fittings when installing silver brazing.

5. Joints in non-ferrous piping for services not covered above shall be installed with solder composed of 95/5 tin/antimony, ASTM B32, Grade 5A. Surfaces to be jointed shall be free of oil, grease, and oxides. Sockets of fitting and end of pipe shall be thoroughly cleaned with emery cloth to remove oxides. Solder flux shall be sparingly installed and solder added until joint is completely filled. Do not overheat. Excess solder, while plastic, shall be removed with a small brush in order to provide an uninterrupted fillet completely around joint. Random inspection of joints shall be conducted by Project Inspector to ensure joints are lead-free.

6. Grooved end joints for copper piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

L. Ring-Type Pipe: Joints shall be installed in accordance with manufacturer's instructions with grooved couplings, fittings and rubber rings. Couplings and pipe shall be compatible and of the same manufacturer. Rings shall be accurately located and installed by grooves in coupling. Pipe shall be installed with zero deflection unless otherwise specified. Pressure pipe shall be furnished with thrust blocks at each offset point.

M. Welded Pipe Joints:

1. Joints in welded steel pipelines shall be installed by oxyacetylene or electric arc process. Welding shall be continuous around pipe and provided as specified.

2. Butt welds shall be of the single V-type, with ends of pipe and fittings beveled approximately 37 ½ degrees. Piping shall be aligned before welding is started with the alignment maintained during welding.

3. Welds for flanges and socket fittings shall be of the fillet type with a throat dimension not less than pipe wall thickness.

N. Grooved End Pipe Joints: Grooved end joints for carbon steel piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to grove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

O. Joints shall be Vic-Press 304TM, or equal, made with Victaulic Series 'PFT' tools and the appropriate sized jaw. Pipe shall be certified for use with Vic-Press 304TM system, and shall be square cut, properly deburred and cleaned, and marked at the required location to insure full insertion into the fittings and/or couplings.

P. Valves: Valves shall conform to the following:

1. Piping systems shall be furnished with valves at points indicated on Drawings and specified, arranged to provide complete regulating control of piping system throughout building and the Project site.

2. Valves shall be installed in a neat grouping, so that parts are easily accessible and maintained.

3. Pressure Independent Characterized Control valve type shall be suitable for service on which installed.

4. Valves shall be full size of line in which they are installed, unless otherwise indicated on Drawings or otherwise specified, and shall be one of types specified.

5. Provide chain operators on valves 2-inch and larger located 7 feet or more above the servicing floor level.

6. Valves for similar service shall be of one manufacturer.

7. Except where otherwise specified, valves shall be Belimo, Victaulic, Stockham, Crane, Jenkins, Milwaukee, Hammond, American Valve, NIBCO, Hoffman, or equal.

8. Ball valves below grade in yard boxes shall have stainless steel handles.

9. Temperature relief valves and combination temperature and pressure relief valves shall be as specified and furnished as set forth in this Section. Discharge pipe from relief valves shall be not less than discharge area of valve or valves it connects, based on discharge area of valves, and shall terminate as indicated and free of any traps. Valves shall be installed at following locations:

a. A combination temperature and pressure relief valve or combination of valves on each heating hot water boiler. Temperature sending element shall extend into water inside boiler.

10. Manual air vent valve assemblies shall be installed at each high point of hot water space heating and chilled water piping systems. Valves shall discharge through 1/4 inch diameter copper tubing and drain to nearest floor sink. Automatic type air vent valve shall only be installed where specifically indicated. Radiator, convectors, and finned pipe convectors shall be fitted with packless radiator valves, angle or straight pattern. Each convector or radiator installed as part of a space hot water heating system shall be furnished with a manual-type air vent valve.

Q. Strainers: Strainers shall be installed on each water main (except for fire line) downstream of the meter, above grade, when a pressure regulator assembly is not installed. Main strainer shall be of Y-flange or groove type. On closed loop chilled and heating hot water systems pump systems, a strainer shall be installed at each pump inlet and upstream of each flow control valve assembly. The control valve assembly may include a modulating temperature control valve and a flow-limiting valve, manufactured by Griswold, AutoFlow, Flow Control Industries, Inc., or equal.

R. Hangers and Supports:

1. Piping shall be securely fastened to building structure by approved iron hangers, supports, guides, anchors, and sway braces to maintain pipe alignment to prevent sagging and to prevent noise or excessive strain on piping due to uncontrolled or seismic movement under operating conditions. Hangers and supports shall conform to Manufacturer's Standardization Society Specification SP-69. Hangers shall be relocated as required to correct unsatisfactory conditions that may become evident when system is placed into operation. Appliances, heat exchangers, storage tanks, and similar equipment shall be securely fastened to structure in accordance with seismic requirements. Outdoor metal hangers and supports shall be hot-dipped galvanized steel, unless otherwise specified.

2. Piping shall not be supported by wire, rope, wood, plumbers' tape, or other non-recognized devices.

3. Hangers and supports shall be designed to support weight of pipe, fittings, weight of fluid and weight of pipe insulation, and shall have a minimum factor of safety of 5, based on ultimate tensile strength of material installed.

4. Burning or welding of any structural member under load is not permitted. Field welding not specified on Drawings or reviewed Shop Drawings is not permitted without review by Architect and DSA.

5. Burning holes in beam flanges or other structural members is not permitted without review by the Architect and DSA.

6. Pipe hangers on piping covered with low temperature insulation shall be installed on outside of insulation and not in contact with pipe unless otherwise detailed on Drawings. Insulation shall be protected by 18 gage galvanized steel shield, with a minimum length of 10 inches, installed completely around pipe covering between covering and hanger. Installing hangers directly on pipe and butting adjoining sections of insulation against hanger is permitted provided void and hanger rod are properly insulated and sealed so that no sweating occurs at hangers.

7. Hanger rods shall be fastened to structural steel members with suitable beam clamps. Clamps shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

   a. Tolco I beam, Fig.62 for maximum 1000 lbs.

   b. Tolco I or WF beam, Fig. 329, for maximum of 1290 lbs.

8. Hanger rods shall be fastened to concrete inserts in concrete slabs or beams. Inserts shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

   a. Tolco Fig.310 for maximum of 600 lbs.

   b. Tolco Fig. 309 for maximum of 1140 lbs.

9. For fastening to wood ceilings, beams, or joists, furnish Anvil Fig. 128R, Anvil Fig. 153, Tolco 78, or equal pipe hanger flange fastened with drive screws. Under wood floors, 3/8 inch hanger rods shall be hung from 2-inch by 2-inch by 1/4 inch angle clips 3-inch long, with two staggered 10d nails, clinched over joist.

10. Hanger rod sizes for copper, iron, or steel pipe: 3/8 inch for pipe sizes 1/2 inch through 2-inch, 1/2 inch for pipe sizes 3-inch, 4-inch and 5-inch, 5/8 inch for pipe size 6-inch, and 3/4 inch for 8-inch and 10-inch pipe.

11. Turnbuckles, if furnished, shall provide a load carrying capacity equal to that of the pipe hanger with which they are being installed.

12. Pipe hangers shall be of same size, or nearest larger manufactured size available, as pipe or tubing on which they are being installed.

13. Hangers, clamps, and guides furnished for support of non-metallic pipe shall be padded with 1/8 inch thick rubber, neoprene, or soft resilient cloth.

14. Where special pipe-supporting requirements in the Specifications conflict with any standard requirements specified herein, the Specification requirements shall govern.

15. Vertical Piping:

   a. Vertical pipe risers shall be securely supported with riser clamps of recognized type. Risers in reinforced concrete buildings shall be furnished with extension clamps fastened to pipe above each concrete floor slab with extended arms of clamp to rest on slab. Clamps shall be provided with lead or Teflon liners when installed on copper tubing. Clamps shall be plastic-coated when installed on non-ferrous pipe or tubing.

   b. Copper tubing in sizes 1 ½-inches and larger and steel pipelines passing up through building shall be supported at each floor of building or every 15 feet whichever is less.

   c. Copper tubing sizes 1 ¼-inch and smaller shall be supported at not intervals not more than 6 feet on center. Special provisions shall be

installed for vertical lines subject to expansion and contraction caused by operating temperature differences.

d. Vertical cast iron pipelines shall be supported from each floor and at its base. Malleable iron or steel pipe clamps with minimum thickness of 1/4 inch shall be furnished and fastened around pipe for support.

16. Horizontal Piping:

a. Pressure piping on roofs shall be supported from stands, trapezes, or structures so that the bottoms of pipes clear the roof surface by 10 inches.

b. Insulated steam and space heating hot water supply and return piping shall be supported with Tolco Figure 4, B-Line Figure B3140, Anvil Figure 212, or equal, steel hangers with welded eye rods to permit hinge movement at point of attachment of hangers. Hinge movement at point of support shall be provided by welded eye linked rods Tolco Figure 101L, B-Line Figure B3211X, Anvil Figure 278X, or equal.

c. Chilled water supply and return piping, condenser water piping, insulated refrigerant piping may be supported with Tolco Figure 1, B-Line Figure B3100, Anvil Figure 260, or equal, hangers with rods, turnbuckles and inserts suitable for above hangers.

d. Maximum hanger and support spacing shall conform to CPC schedule for horizontal piping installed above grade.

17. A hanger or support shall be installed close to the point of change in direction of a pipe run, in either a horizontal or vertical plane.

18. When practicable, supports and hangers for cast iron soil pipe shall be installed as close as possible to joints and when hangers or supports are not located within one foot of a branch line fitting, an additional hanger or support shall be installed at fitting.

19. In systems where grooved piping is used, couplings shall be provided with angle pattern bolt pads to comply with support and hanging requirements of ANSI/ASME B31.1, ANSI/ASME B31.9, and NFPA Pamphlet 13.

S. Flashings:

1. Each pipe, duct, or gas-fired equipment vent passing through roof shall be installed with waterproof flashing.

2. Flashing or flanges on pipes, vents, and ducts passing through a tile or slate roof shall be constructed of sheet lead. Flashing for pipes and heater vents passing through a roof shall be 4 pound soft sheet lead. Flashing and flanges for ducts and heater vents passing through exterior walls shall be 22 gage sheet metal. Flanges and flashing shall be installed waterproof at point of connection with pipe or duct. No soldered joints on roof flashings will be allowed.

3. Lead flashing and flanges shall be constructed of 4 pound sheet lead with burned joints. Flange of lead flashing or lead flange on a duct shall extend out onto roof

a minimum of 12 inches from pipe or duct. Lead flashing shall extend up the pipe or duct not less than 7 inches.

4. Sheet metal flashing shall be constructed of 24 gage galvanized sheet steel. Flanges on these flashings shall extend out onto roof a minimum of 10 inches from pipe or duct. Flanges on ducts through exterior walls shall extend out from duct a minimum of 2 ½ inches. Flanges on gas-fired equipment single-wall vents shall be of ventilated type. Type B gas vents through a roof shall be furnished with non-ventilated flashing as per NFPA Pamphlet 211.

5. Cast iron, steel, brass, and copper pipe, which terminate less than 18 inches above roof, shall be furnished with a combination counter-flashing and vandal-proof hood for protection against water, birds and foreign matter. Cast iron, steel, brass and copper pipe, which does not terminate within 18 inches of roof, shall be furnished with a counter-flashing sleeve. Pipe, which terminates more than 18 inches above roof, shall be furnished with protection against entrance of water, birds, and foreign matter.

6. Counter-flashing and combination counter-flashing sleeves and vandal-proof hoods shall be cast iron, vandal-proof, threaded, sealed or approved gas-heated sleeve type. Counter-flashing sleeves on each of these items shall extend down over flashing a minimum of 3/4 inch.

7. Flashing and flanges on ducts shall be installed waterproof at point of connection to the duct by riveting and soldering. Storm collars shall be securely screwed and installed waterproof around appliance vent pipe immediately above flashing.

8. Vent piping above roof shall be furnished with a combination counter-flashing sleeve and vandal-proof hood.

T. Equipment Installation: Install roof or floor mounted equipment on level platforms, housekeeping pads or curbs and provide sound, vibration and seismic control measures per Section 23 0548, unless indicated otherwise whether indicated on drawings or not.

END OF SECTION

SECTION 23 05 48

HVAC SOUND, VIBRATION AND SEISMIC CONTROL

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Reduction or elimination of excessive noise or vibration within building due to operation of equipment, machinery, piping, and ductwork as specified.

1. Vibration isolators.

2. Seismic restraint devices.

3. Lining and enclosing ductwork.

4. Acoustic louvers.

5. Sound attenuation boots at supply, return, exhaust and transfer air inlets, outlets and openings.

6. Flexible ducts, conduits and piping.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 23 0593: Testing, Adjusting, and Balancing for HVAC.

3. Section 23 0500: Common Work Results for HVAC.

4. Section 23 0513: Basic HVAC Materials and Methods.

5. Section 23 3000: Air Distribution.

6. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

1.02 GENERAL REQUIREMENTS

A. Provide vibration isolators to eliminate or reduce the transmission of vibration noise to any part of building and mitigate vibration frequency and load imposed by equipment. Vibration isolators, base frames, inertia bases and seismic restraints shall be of sufficient size, flexibility and load distribution configuration to assure that deflection, stability and seismic restraint requirements are met without permitting excessive movement when starting. For typical units, no fewer than four isolators shall be provided. Isolators shall be provided to deflect uniformly under operating gravity and equipment thrust loadings to within plus or minus 10 percent of specified deflection values.

B. Static deflections specified are based on the anticipated equipment characteristics. In the event the equipment proposed by the Contractor has characteristics other than those

indicated, particularly the rated rpm, the static deflection shall be re-evaluated and the proper mountings and other devices shall be provided.

C. Where fabricated vibration isolator units are indicated, furnish manufacturer's standard catalog products with printed loading ratings or certified submittals

D. Seismic Requirements:

1. Refer to Seismic Restraint Manual: Guidelines for Mechanical Systems, published by SMACNA and approved by DSA, for minimum seismic restraints required on mechanical components design and construction details.

2. Provide seismic restraints for mechanical equipment or components specified. Where equipment is specified with proprietary names, design for seismic restraints is for first proprietary name listed.

3. Provide restraints, bracing and anchorage as required for the mechanical equipment, electrical equipment and components specified in the Contract Documents. Restraints, bracing and anchorage shall be installed to resist the total design earthquake or wind loads in any direction in accordance with CBC and SMACNA guidelines.

4. Provide restraints, bracing, and anchorage for the mechanical equipment and components.

5. For rigidly mounted liquid filled steel pipe, comply with the following:

   a. Provisions of NFPA Pamphlet 13, section for sway bracing.

   b. Provisions of NFPA Pamphlet 13, section for earthquake protection.

   c. Hanger spacing as specified in Section 23 0513 under Hanger Spacing Schedule.

   d. SMACNA Seismic Restraint Manual: Guidelines for Mechanical Systems and approval by DSA.

6. For flexibly mounted liquid filled steel pipe, comply with the following:

   a. Provisions of the California Building Code for flexibly mounted equipment.

   b. Provisions of VISCMA (Vibration Isolation and Seismic Control Manufacturer’s Association) Seismic Control Device Installation, Best Practices Manuals.

   c. Installer may provide a DSA or OSHPD approved system such as the SMACNA Seismic Restraint Manual with Addendum No. 1, the Mason Industries Seismic Restraint Guidelines or other proprietary pre-approved system.

7. For ductwork and other mechanical equipment restraints, comply with SMACNA Seismic Restraint Manual: Guidelines for Seismic Mechanical Systems and obtain approval by DSA.

1.03 SUBMITTALS

A. Provide in accordance with Division 01.

1. Catalog cuts and data sheets on specific vibration isolators, seismic restraints, and anchors demonstrating compliance with the Specifications.

2. Shop Drawings for each piece of equipment including dimensions, structural member size, support point, vibration, and seismic restraints.

3. Written approval of frame design to be furnished by the equipment manufacturer.

4. Drawings indicating methods for suspension, support, seismic restraints, guides, etc., for piping, ductwork, etcetera.

5. Drawings indicating methods for isolation of pipes, ducts etcetera, piercing slabs, beams, etcetera.

B. Vibration Test Reports: At completion of installation, submit the following documents. Submission of these documents must be complete before final acceptance of vibration isolation systems is given. Assistance from the vibration isolation equipment Manufacturer may be required.

1. Complete tabulation showing for each vibration isolator:

a. Actual static deflection measured at the project.

b. Specified minimum static deflection.

2. Report certifying:

a. Each piece of operative rotating mechanical equipment does not exceed the specified vibration displacement level.

b. Each piece of isolated equipment or equipment component (ducts, pipes, conduit, etcetera) is not short-circuited by any means.

c. Requirements of Part 2 are satisfied for equipment.

1.04 QUALITY ASSURANCE

A. Standards and Codes: Comply with applicable codes and standards having jurisdiction including, but not limited to:

1. NFPA, Pamphlet 13.

2. ASHRAE Handbook: HVAC Systems and Equipment.

3. SMACNA Seismic Restraint Manual: Guidelines for Mechanical Systems.

4. California Building Code.

5. VISCMA

a. Installing Seismic Restraints for Mechanical Equipment.

b. Installing Seismic Restraints for Duct and Pipe.

B. Qualifications of Manufacturer and Installers: Comply with provisions as set forth in Section 23 0500: Common Work Results for HVAC.

PART 2 – PRODUCTS

2.01 GENERAL

A. Furnish and install vibration dampers, sound isolation pads, flexible connections and similar equipment required to prevent sound of water flowing in pipes, vibration of motors, and motor operated equipment from being transmitted to building structure; and, in case of fans, from being transmitted along ducts. Piping shall be isolated from vibrating equipment by furnishing required flexible connectors.

B. Pumps and similar motor operated equipment shall be installed on anti-vibration units.

C. Fans, except curb-mounted roof-type exhaust fans and wall mounted propeller fans, shall be installed with anti-vibration units, whether indicated on Drawings or not. Fans built into air handling units may be furnished with independent anti-vibration mountings or whole unit may be installed on an external vibration isolation system.

D. Other equipment shall be installed on anti-vibration bases, pads, or hangers, unless specifically noted otherwise on Drawings. Package units, furnished with built in anti-vibration bases, do not require unit bases unless otherwise specified.

1. Unless specified otherwise, anti-vibration bases shall be Mason Industries, M.W. Sausse & Co., the VMC Group, or equal, of the Model Number specified or indicated on the drawings. Furnished base including sub-base, shall be manufactured by same company with fan and integral motor base. Seismic restraints may be incorporated into bases or furnished separately.

2. Inertia anti-vibration bases shall conform to requirements indicated.

3. Unless noted otherwise, furnished anti-vibration bases, including supporting units for inertia bases, shall be of the spring type.

4. Selection of bases or supporting units shall be in accordance with manufacturer's recommendations based on following installed minimum effective isolation efficiencies (where not provided with each piece of equipment):

a.	Centrifugal fans, packaged fan and coil units and cooling towers, less than 800 RPM	80 percent
b.	Centrifugal fans over 800 RPM	90 percent
c.	Centrifugal pumps	95 percent
d.	Reciprocating compressors	95 percent

E. Flexible duct connections shall be provided at inlet and outlets of each fan or HVAC unit, except curb-mounted roof exhaust fans whether indicated on the drawings or not.

F. Flexible pipe or conduit connections shall be provided at piping and conduit connections to HVAC units, pumps, compressors and other moving (reciprocating or rotating) mechanical or electrical equipment provided under this Section whether indicated on the drawings or not.

G. Flexible connections for Freon piping shall be seamless flexible metal hoses of type and length recommended by manufacturer and suitable for system operating pressure.

H. Flexible connections for all other piping shall be flexible metal hose or spool type with flanged ends, unless otherwise specified. Metal hose shall be covered with protective braiding in areas where physical abrasion may occur, or for personnel safety.

I. Spool types shall be similar to American Rubber Co., Mercer Rubber Co., PROCO Products, Inc., or equal, and hose types shall be similar to DME, Inc., U.S. Flex, Pennflex, Anaconda Flexpipe, Keflex, or equal with any required modifications to meet specified requirements. Flanges shall be furnished with steel retaining rings. Units installed on discharge side of pumps shall be furnished for a suitable working pressure of not less than 100 psig, and those on suction side for working pressures of 50 psig or 30 inches Hg vacuum.

J. Units installed in cold water lines (less than 125 degrees F) shall furnish a minimum temperature rating of 180 degrees F and those installed in hot water lines (above 125 degrees F) shall be constructed of special heat resistant materials and be furnished for a minimum temperature rating of 220 degrees F, continuous operation. Units shall be able to withstand a maximum lateral deflection of 3/8 inch. Temperature and pressure ratings shall be molded into body of each spool unit so they are easily identified. Spool types shall be for straight in flow only.

K. Spool type units shall be furnished with control units comprised of a minimum of two tie-rods and anchor plates or internal guide sleeves to prevent excessive elongation or misalignment. Rubber washers shall be provided under bolt heads and rubber grommets in bolt holes to prevent any metal to metal contact between bolts and flanges.

L. Where hose type units are furnished, restraining anchors or braces shall be provided if excessive or undesirable pipe movement occurs when system is operated.

2.02 GENERAL PROPERTIES OF VIBRATION ISOLATORS.

A. Shall be provided with markings so that, after adjustment, when carrying their load, deflection under load can be verified; thus determining that load is within proper range of device and that correct degree of vibration isolation is being provided according to the design.

B. Isolators to operate in direct proportion to their load versus deflection curve. Load versus deflection curves shall be furnished by manufacturer and must be linear over a deflection range of 50 percent above design deflection.

C. Wave motion through isolator shall be reduced to following extent: Isolation above resonant frequency shall follow theoretical prediction based upon an un-dampened single degree of freedom system with a minimum isolation of 50 decibels above 150 cycles per second.

D. Vibration isolator spring diameters shall be no less than their deflected height. Furnish spring with a 50 percent overload safety factor.

E. Unless otherwise indicated, equipment installed on vibration bases shall provide a minimum operating clearance of one inch between structural steel base and floor or support base. Provide flexible connectors in piping and flexible conduit in power wiring to minimize transmission of vibration.

F. Isolators and springs exposed to weather shall be hot-dipped galvanized or powder coated after fabrication and before installation. Hot-dipped zinc coating shall be not less than two ounces per square foot by weight complying with ASTM A123. In addition, provide limit stops to resist wind velocity.

G. Where indicated, provide structural steel bases with height saving brackets, and minimum of three points of support. Isolators shall be furnished with a method for leveling.

H. Design isolators and seismic restraints for positive anchorage against uplift and overturning.

I. Provide and install, under this Section of the Specifications, structural steel required to properly support equipment and steel required to support horizontal thrust arrestors.

2.03 ISOLATOR TYPES

A. Type A: Steel Spring Isolators: Un-housed steel spring isolators, laterally stable and unrestrained. Design springs so that ratio of horizontal to vertical spring (stiffness) constant is between 0.9 and 1.3. Natural frequency of isolator must be 1/3 to 1/4 of driving frequency that is to be controlled. Isolators to provide a minimum additional travel to solid equal to 50 percent of rated deflection. Isolators shall be furnished with built-in leveling bolts complete with sound isolation pads type B. Static deflection as specified.

B. Type B: Sound Isolation Pad: Provide under each spring isolator a sound isolation pad, utilizing high quality durable neoprene pad material, loaded to 40 psi. Build sound pad up to 2 layers of 1/4 inch thick neoprene material; separate layers with a 16 gage galvanized sheet metal plate. Top layer shall provide a hardness of 40 durometers and the bottom layer shall be 40 durometers. Cold bond sound pads together and to isolator baseplate.

C. Type C: Neoprene-in-Shear Isolators: Isolator shall be neoprene-in-shear type as recommended by manufacturer. Isolator shall provide a static deflection under rated load at 1/4 inch.

2.04 EQUIPMENT FRAMES

A. Provide mounting frames and brackets to carry load of equipment without causing mechanical distortion or stress to the equipment.

B. Type A Frame: Wide flange members, rigidized structural steel frame with brackets. Maximum allowable deflection at any point on load frame relative to unloaded frame shall be 0.005 inch. Members to be constructed of wide flange beams, with a depth of not less than 1/10 of length of span between isolators. Frame shall be M.W. Sausse & Co. type RMSB-W, as basis of design, or Mason Industries, Caldyn, or equal.

C. Type B Frame: Channel members, rigidized structural steel frame with brackets. Frame to be constructed of channel steel with section depth equal to 1/10th length of longest structural member. Frame shall be M.W. Sausse & Co. type RMSB-C, as basis of design, or Mason Industries, Caldyn, or equal.

D. Type C Frame: Steel gusset or bracket welded or bolted directly to machine frame in order to accommodate isolator. Frame shall be M.W. Sausse & Co. type RMSG, as basis of design, or Mason Industries, Caldyn, or equal.

E. Type D Frame: Fabricated of rectangular channel steel forms for floating foundations to be filled with concrete on the Project site. Channel depth to be a minimum of 1/12th of longest dimension, but in no case less than 6 inches. Form shall include 1/2 inch reinforcing bars installed each way in a layer 1 ½ inches above bottom and drilled steel members with sleeves mounted below holes to receive equipment anchor bolts. Weight of concrete and frame shall be two times or more than the weight of the unit it supports. Frame shall be M.W. Sausse & Co. type RMSBI, as basis of design, or Mason Industries, Caldyn, or equal.

2.05 MATERIALS AND CONSTRUCTION

A. Duct Silencers: Provide factory fabricated duct silencers of tubular or rectangular type, for low or medium velocity service, with arrangements, sizes, and capacities as indicated on the Drawings.

1. Construction:

a. Fabricate silencers of galvanized steel with casing seams sealed or welded to be airtight at a pressure differential of 8 inches water gage between inside and outside of unit, and stiffen or brace as necessary to prevent structural failure or deformation at same condition, or audible vibration during normal operation. Outer casings of rectangular silencer modules shall be made of 22 gage galvanized steel in accordance with ASHRAE Guide of recommended construction for high-pressure rectangular ductwork. Seams shall be lock formed and mastic filled. Outer casings of tubular silencers shall be made of galvanized steel in 18 to 22 gage. Internal acoustic elements of rectangular silencers shall incorporate integral die formed entry and exit to minimize pressure drop and self-noise. Interior partitions for rectangular silencers shall be fabricated of not less than 26 gage galvanized perforated steel. Interior construction of tubular silencers shall be compatible with the outside casings.

b. Filler material shall comply with the following:

1) Fire Safety Standards: NFPA 90A and NFPA 90B.

2) Temperature: ASTM C411.

3) Air velocity: ASTM C1071, UL 181.

4) Fire Hazard Classification: ASTM E84, UL 723-Class 1, NFPA 255.

5) Corrosion Resistance: ASTM C739, C665.

6) Fungi Resistance: ASTM G21.

7) Water Vapor Sorption: ASTM C1104, less than 1 percent by weight.

8) Formaldehyde, Phenolic Resins or other Volatile Organic Compounds: 0 percent.

c. Airtight construction shall be provided by furnishing a duct sealing compound installed on the Project site. Silencers shall not fail structurally when subjected to a differential air pressure of 8 inches w.g. inside to outside of casing.

2. Acoustic Performance: Silencer ratings shall be determined in a duct-to-reverberant room test facility, which provides for airflow in both directions through the test silencer in accordance with ASTM Standard E477. The test facility shall be accredited by the National Voluntary Laboratory Accredited Program for the ASTM E477 test standard. Data from a non-accredited laboratory is not permitted. The test set-up and procedure shall eliminate effects due to end reflection, directivity, flanking transmission, standing waves, and test chamber sound absorption. Acoustic ratings shall include dynamic insertion loss (DIL) and self-noise (SN) power levels both for forward flow (air and noise in same direction) and reverse flow (air and noise in opposite directions). Data shall be for test silencers no smaller than the following cross-sections:

Rectangular, inches - 24 by 24, 24 by 30, or 24 by 36
Tubular, inches - 12, 24, 36, and 48

a. Noise reduction values (dynamic insertion loss) in decibels reference 10-12 watts, shall not be less than (of the model, size and length) indicated on Drawings.

b. Self generated noise in decibels reference 10 to 12 watts, shall not be more than of the model, size and length indicated on Drawings.

3. Aerodynamic performance: Airflow measurements shall be performed in accordance with ASTM specification E477 and applicable portions of ASME, Air Movement and Control Association (AMCA), and Air Diffusion Council (ADC) airflow test codes. Tests shall be reported on the identical units for which acoustic data is presented. Air pressure drops shall not exceed those (of the model, size and length) indicated on Drawings.

4. Certification: With submittals, provide certified test data on dynamic insertion loss, self-noise power levels, and aerodynamic performance for reverse and forward flow test conditions. Test data shall be for a standard product. Rating tests shall be conducted in the same facility, shall utilize the same silencer, and shall be open to inspection if required by the Architect.

5. Rectangular silencers shall be Industrial Acoustics Company of the model number indicated on the drawing, as basis of design, or Vibro-Acoustics, Dynasonics, SEMCO Silentair, TranSonics, Inc., or equal.

B. Duct Liner: As indicated in Section 23 0700: HVAC Insulation.

C. Flexible Ducts: As indicated in Section 23 0700: HVAC Insulation.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Provide isolators, flexible pipe connectors, flexible electrical conduit and flexible duct connectors at all moving mechanical system components to prevent transmission of vibration noise to any part of building whether indicated on the drawings or not.

B. Install isolators to suit imposed load and the vibration frequency to be absorbed. Isolator units shall furnish adequate strength and flexibility to exhibit proper resiliency under machine load and impact without permitting excessive movement when starting.

C. Where commercial vibration isolator and seismic restraint units are specified, furnish manufacturer's standard catalog products with printed loading ratings, or provide substantiating calculations.

D. Install vibration isolators and seismic restraints in accordance with manufacturer's printed installation instructions.

E. Where equipment is belt driven and motor is not installed on equipment, install motor and driven equipment on unitized support, and install entire support isolators. Unitized support to be provided with adjustable slide rails sized for motor weight and frequency. Support shall be Mason Industries type WF, M.W. Sausse & Co., type RMSF, Caldyn, or equal.

F. Do not install any equipment, piping, conduit, ductwork, etc., that makes rigid contact with building or its structural members, unless reviewed by the Architect.

1. Coordinate Work with other trades to avoid rigid contact with building.

2. Correct, before installation, any conflict with other Work that would result in solid contact to equipment or piping due to inadequate space.

3. Obtain inspection from the Project Inspector for concealed Work before enclosure.

4. Notify manufacturer before installation of vibration isolation devices so that manufacturer may instruct and demonstrate technique for proper installation.

G. The furnishing or installation of vibration isolators must not cause any change of position or alignment of equipment, ductwork, or piping, resulting in stresses in piping or ductwork, connections, or misalignment of shafts or bearings. Equipment, piping, and ductwork shall be maintained in a rigid position during installation. Load shall not be transferred to isolator until installation is complete and under full operational load.

H. Air Compressors, Water Chillers, Pumps, Boilers with Integral Combustion Fans and Miscellaneous Equipment, mounted on roof or raised floors: Install each unit with its motor on a vibration isolated base utilizing type B frames, except where a type D frame is indicated on Drawings. Install steel support frame furnished by equipment manufacturer,

utilizing equipment anchor bolt templates and isolator height saving brackets. Provide springs as specified for type “A” isolator; static deflection shall be a minimum of 2 inches.

I. Fans (2000 rpm or higher) Air Compressors and Miscellaneous Equipment, mounted on grade: As specified for grade mounted boilers except furnish type C isolators.

J. Air Handling, Air Conditioning Units, Floor Mounted Fans, and Cabinet-Installed Fans: Install entire casing including filters, mixing box, fan section, coil sections, etc., on a continuous, integral, structural steel base, as indicated. Furnish type A, B, or C frames, reinforced as necessary to prevent distortion of frame. Furnish isolator type A; static deflection shall be a minimum of l ½ inches.

K. Suspended Fans and Air Conditioning Unit Fan Coils and Unit Ventilators: Suspend each integral unit from overhead structure on steel spring and elastomer hanger isolators. Support deflection under rated load of 3/8 inch. Provide spring static deflection as follows:

Fan RPM	**Min. Deflection**
200 – 400	3 inches
400 – 700	2 inches
Above 700	1 inches

L. Pipe Isolation: Where indicated and as required, furnish and support each pipe from an isolator. Isolator for the first five support locations away from vibrating equipment shall have the same deflection as the equipment isolators. After that, isolators shall be a neoprene-in-shear type of size as recommended by manufacturer; except where indicated on Drawings, pipe hanger rod shall be furnished with a steel spring isolator and elastomeric element, with lower rod capable of 30 degrees total misalignment without contact on spring housing.

M. Seismic Restraints: Floor or pad mounted equipment that do not require vibration isolators, shall be bolted to floor or other support. Floor mounted equipment with vibration isolators shall be provided with lateral and vertical restraining devices on all sides of base to restrict displacement of equipment. On all sides of suspended equipment, provide bracing for rigid supports and provide aircraft cable restraints for resiliently supported equipment.

N. Ductwork, duct acoustical lining, manual volume dampers and flexible ducts: Do not reduce length of duct runs, duct acoustical lining, manual volume dampers and flexible ducts for economy.

O. Installation of flexible ducts at air inlets and outlets: Do not attach flexible ducts directly to air inlets and outlets unless a straight, smooth and uniform air flow can be achieved with sufficient space to make an elbow with a radius of at least three times the diameter of the duct. If sufficient space is not available to make such an elbow, provide a rigid elbow or a lined plenum.

P. Placement of Air Devices: Do not relocate air devices without the Architect’s approval.

3.02 EXAMINATION

A. Arrange for the services of a certified representative of isolation manufacturer to visit the Project site for inspecting installation of devices. In the event the isolators do not meet specified requirements perform necessary revisions. Submit a written report to the

Architect, signed by above representative, indicating all devices are properly installed and are operating as specified or required by isolation manufacturer.

END OF SECTION

SECTION 23 05 53

HVAC IDENTIFICATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Marking and identification required on mechanical piping systems, ducts, controls, valves, apparatus, etc.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 23 0513: Basic HVAC Materials and Methods.

3. Section 23 0900: HVAC Instrumentation and Controls.

4. Section 23 3000: Air Distribution.

5. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

1.02 SUBMITTALS

A. Submit in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

B. Submit product data and installation instructions for each item specified.

C. Submit Samples of materials.

1.03 QUALITY ASSURANCE

A. Comply with provisions of:

1. Section 23 0500: Common Work Results for HVAC.

2. ANSI/ASME A13.1: Scheme for the Identification of Piping Systems.

3. APWA: Uniform Color Code.

Or

4. IAPMO: Uniform Plumbing Code (UPC).

PART 2 – PRODUCTS

2.01 MATERIALS

A. General: Piping systems, controls, valves, apparatus, etc., except those that are installed in inaccessible locations in partitions, walls, and floors, shall be permanently identified.

2.02 VALVES

A. Furnish prepared chart or diagram for each piping system, indicating by identifying letter or model number of each valve in the system, its location, and function.

B. Install charts in aluminum frame with clear glass front and secure on wall where designated by the Project Inspector.

C. Bind copies of each chart in operating instructions manual.

D. Provide each valve with a brass, aluminum, or plastic disc, not less than 1-1/4 inches diameter bearing engraved numbers corresponding to those indicated on chart. Fasten discs to valve with No. 14 brass wire.

E. Provide an additional tag for safety valves and other valves that could be hazardous to safety and health of occupants. Distinguish these tags from regular valve tags by color (such as yellow with black letters, and marked "Danger"); submit Sample tag to the Architect for review.

2.03 INSTRUMENTS AND CONTROLS

A. Identify panel-mounted instruments and controls with engraved bakelite nameplates permanently affixed to panel boards.

B. Identify alarm indicating devices and alarm reset devices by nameplates.

C. Identify damper motors and automatic valves, flow switches, pressure switches, etc., with embossed aluminum or plastic tape affixed to controller, indicating service and setting.

2.04 EQUIPMENT

A. Identify each major piece of equipment with engraved bakelite nameplates permanently affixed to the equipment, indicating the room numbers it services, Equipment identification designation shall be the same to its designation indicated on the “As-Built Drawings”. Room numbers in the nameplates shall correspond to the final room numbers.

2.05 ABOVE GRADE PIPE IDENTIFICATION

A. Identify pipes by means of colored labels with directional flow arrows and identification of the pipe content, in conformance to ANSI/ASME A13.1 or the UPC.

B. Materials: Precoiled acrylic plastic with clear polyester coating, all-temperature, self-adhering, as manufactured by Brady, Brimar Industries, Seton, Stranco, Inc., or equal.

C. Size:

Outside Diameter of Pipe or Insulation	**Length of Color Field**	**Size of Letter**
¾ to 1 ¼-inch	8-inch	½-inch

1 ½ to 2-inch	8-inch	¾-inch
2 ½ to 6-inch	12-inch	1 ¼-inch”
8 to 10-inch	24-inch	2 ½-inch”
over 10-inch	32-inch	3 ½-inch

D. Colors: As indicated in schedule.

E. Locations:

1. On accessible piping, whether insulated or not (including mechanical rooms, attic and ceiling spaces); except that labels shall be omitted from piping where contained material is obvious due to its connection to fixtures (such as faucets, water closets, etc.).

2. Near each valve and branch connection in such accessible piping.

3. At each pipe passage through wall or floor.

4. At not more than 20 feet spacing on straight pipe run between bands required in 2 and 3 above.

5. At each change in direction.

F. Application: Install on clean surfaces free of dust, grease, oil, or any material that will prevent proper adhesion. Replace non-adhering or curling labels with new labels, as required by the Project Inspector.

G. Schedule:

Content of Pipe	**Legend**	**Background Color**	**Lettering Color**
Steam	Steam	Yellow	Black
Steam condensate	Stm. Cond.	Yellow	Black
Chilled water supply	Chill water supply	Green	White
Chilled water return	Chill water return	Green	White
Instrument air	Inst. Air	Green	White
Heating hot water supply	Heating hot water supply	Yellow	Black
Heating hot water return	Heating hot water return	Yellow	Black
Air conditioning condensation drain	A/C condensate	Green	White

	drain		

2.06 UNDERGROUND PIPE

A. Detectable Marking Tape:

1. Provide and install detectable marking tape along buried piping. Tape shall be specifically manufactured for marking and locating underground utilities with electronic equipment. Tape shall be acid and alkali resistant, and manufactured with integral wires or foil backing, encased with protective cladding. Tape shall be a minimum of two inches in width.

2. Manufacturer: Reef Industries, Inc., Advantage Brands, Inc., Northtown Company, Mutual Industries, Inc., or equal.

3. Detectable marking tape shall be color-coded per APWA Color Code:

a. Yellow: Steam.

b. Blue: Water.

c. Red: Electric power lines, cables, conduit and lighting cables. By Division 26.

d. Orange: Communication, alarm or signal cables. By Divisions 26 and 27.

B. Tracer Wire:

1. Solid copper wire type THWN, 12 AWG gage, with heat and moisture resistant insulation.

2.07 IDENTIFICATION OF AIR CONDITIONING EQUIPMENT

A. Provide identification markers to locate air conditioning equipment above T-bar ceilings. Install 3/4 inch to one inch diameter colored self-adhesive dots to T-bar ceiling grid indicating point of access. The following identification markers shall be recorded on the project record documents:

1. Fire Damper and Combination Fire/Smoke Fire Damper: Red.

2. Manual Volume Dampers, Relief Dampers, Motorized Volume Dampers: Blue.

a. Supply air: Full dot.

b. Return air: Half dot.

3. Fan coil unit: Green.

4. Filter Location if separate from fan coil: Yellow.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Correct detrimental conditions prior to commencing the Work of this Section. Install markers and identification tags as specified with materials and installation procedures recommended by manufacturer.

B. Place tracer wire on top of non-metal utility lines allowing some slack. Do not wrap tracer wire around pipe. Fasten tracer wire in place at approximately 10 feet on centers with non-metal ties.

C. Install underground detectable pipe marking tape continuously buried 8 to 10 inches above the buried utility pipe. Wrap tape on pipe risers up to a height of 12 inches above grade.

3.02 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 23 05 93

TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 – GENERAL

1.01 SUMMARY

A. SECTION INCLUDES

1. This Section specifies the requirements for test and balance of HVAC and related systems.

B. RELATED REQUIREMENTS

1. Section 01 1100: Summary of Work.

2. Section 01 3113: Project Coordination.

3. Section 01 3213: Construction Schedule.

4. Section 01 3300: Submittal Procedures.

5. Section 01 7700: Contract Closeout.

6. Section 23 0500: Common Work Results for HVAC.

7. Section 23 0513: Basic HVAC Materials and Methods.

8. Section 23 0548: HVAC Sound, Vibration and Seismic Control.

9. Section 23 0900: HVAC Instrumentation and Controls.

10. Section 23 0923: Environmental Control and Energy Management Systems (Only include when DDC Energy Management and Control Systems are provided).

11. Section 23 3000: Air Distribution.

12. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

PART 2 – PRODUCTS (Not used)

PART 3 – EXECUTION

3.01 DEFINITIONS AND APPLICABLE PUBLICATIONS

A. For the purposes of this Section definitions are as indicated in applicable publications of AABC, NEBB, TABB, ASHRAE, ANSI and SMACNA.

1. TAB: Testing, Adjusting and Balancing.

2. TABB: Testing, Adjusting and Balancing Bureau.

3. AABC: Associated Air Balance Council.

4. NEBB: National Environmental Balancing Bureau.

5. ASHRAE: American Society of Heating, Refrigerating and Air-Conditioning Engineers.

6. ANSI: American National Standards Institute.

7. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

8. OAR: OWNER'S Authorized Representative

3.02 QUALITY ASSURANCE

A. The General Contractor shall contract directly with the test and balance agency. Tests performed by testing agencies contracted with the system's subcontractor will not be accepted. The qualifications of the agency shall comply with Article 3.02, Quality Assurance. The agency shall be responsible for furnishing labor, instruments, and tools required to test, adjust, and balance the heating, ventilating, and air conditioning (HVAC) systems and related plumbing systems, as described and/or as indicated in the Contract Documents.

B. CONTRACTOR shall obtain services of an independent, qualified testing agency acceptable to Architect to perform testing and balancing Work as specified and as follows:

1. Agency shall be currently certified by either the Associated Air Balance Council (AABC), the National Environmental Balancing Bureau (NEBB), or the Testing, Adjusting and Balancing Bureau (TABB). NEBB or TABB certification shall be for Air and Hydronic Testing, Adjusting and Balancing and Sound and Vibration Measurement.

2. Work shall be in accordance with the latest edition of the AABC, NEBB, or TABB National Standards. Where the requirements of the two standards are different, the more stringent requirements shall prevail. Also, if the Contract Documents impose a more stringent standard, then the Contract Documents shall prevail.

C. Performance Criteria: Work of this Section shall be performed in accordance with approved Testing, Adjusting, and Balancing agenda.

D. Test Equipment Criteria: Basic instrumentation requirements and accuracy/calibration required by Section Two of the AABC, Section II of the NEBB, or TABB Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems.

E. Verification: The Test and Balance Agency shall recheck 10 percent (minimum 10) of the measurements listed in the report. The locations shall be selected by PROJECT INSPECTOR or OAR. The recheck will be witnessed by PROJECT INSPECTOR or OAR. If 20 percent of the measurements that are retested differ from the report and are also out of the specified range, an additional 10 percent will be tested. If 20 percent fall outside the specified range, the report will be considered invalid and all test and balance work shall be repeated.

F. Due to more stringent acoustical requirements in the educational environment, the Test and Balance Agency shall recheck the air systems where the sound level is higher than the specified requirements and demonstrate compliance with the methodology specified in this document with emphasis on fan speed adjustment and balancing for optimum acoustical performance. The recheck will be witnessed by PROJECT INSPECTOR or OAR. When there are multiple air systems, a system selected by PROJECT

INSPECTOR or OAR shall be rechecked. If this system is found to be not in compliance, a second system shall be checked. If the second system if also found to be not in compliance, the report will be considered invalid, and all test and balance work shall be repeated.

3.03 SUBMITTALS

A. Submit name of agency to perform the Work. Include in the submittal the certified qualifications of all persons responsible for supervising and performing actual Work of this Section. Agency shall submit a minimum of five commercial or industrial HVAC system TAB projects of similar type, size, and degree of difficulty completed within the last two years. Agency shall provide name and telephone number of contact person for each listed project.

B. Submit, for approval, 6 copies of the Agenda as indicated in Article 3.06 to test and balance all mechanical and relevant plumbing systems.

C. Preliminary Report: Review the Contract Documents, examine Work installations and submit a written report to ARCHITECT, PROJECT INSPECTOR and OAR indicating deficiencies in Work precluding proper testing and balancing of the Work.

D. Final TAB Report: Submit the final TAB report for review by ARCHITECT, PROJECT INSPECTOR, and OAR outlining the conditions and Work completed on each HVAC system. All outlets, devices, HVAC equipment, etc. shall be identified, along with a numbering system corresponding to report unit identification.

E. Submit an AABC “National Project Performance Guaranty” or “NEBB Quality Assurance Certification”, assuring the Project systems were tested, adjusted, and balanced in accordance with the Specifications and AABC, NEBB, or TABB National Standards.

F. CAD drawings: Submit single line, multi-color CAD drawings indicating outside return and supply air, volume control boxes, each outlet and inlet, room numbers, duct sizes at traverse locations, temperatures and pressures, systems balanced, components changed, and CONTRACTOR installed access points. In addition, drawings shall identify controls, equipment settings, including manual damper quadrant positions, manual valve indicators, fan speed control levers, and similar controls, and devices shall be marked on the drawings to show final settings. CAD files shall be submitted on CD-ROM upon final submittal of TAB report. Reports shall identify discrepancies between completed Work and the Contract Documents affecting the performance and longevity of the system.

3.04 GENERAL SCOPE OF WORK

A. The general scope of Work shall include but not be limited to the following:

1. Measure airflow rates of HVAC systems and make adjustments to achieve design airflow rates, tabulate results, and submit reports.

2. Measure water-flow rates of HVAC systems and make adjustments to achieve design water flow rates, tabulate results, and submit reports.

3. Measure flow velocities, temperatures, static pressures or head, rotational speed, and electrical power demand of fans, pumps, and other related HVAC system components, tabulate results, and submit reports.

4. Measure sound levels in each conditioned space, tabulate results, and submit reports.

5. Measure ambient sound levels of outdoor HVAC units and system components such as chillers and cooling towers, tabulate results, and submit reports.

6. Reports shall contain sufficient data for the system designer to evaluate system performance and solve installation problems such as system pressure profiles and pressure drops across system components

3.05 SPECIFIC SCOPE OF WORK

A. The specific scope of Work shall include the following HVAC system components as indicated on the Drawings:

1. Air Conditioning Units.

2. Heating and Ventilating Units.

3. Heating and Cooling Coils.

4. Supply, Return, Relief and Exhaust Fans.

5. Outside Air and Return Air Plenums.

6. Outside Air Intakes.

7. All Supply and Return Ductwork.

8. All associated Air Terminal Devices, i.e. Supply Diffusers, Return Registers, etc.

9. Exhaust Duct Systems.

3.06 TESTING, ADJUSTING, AND BALANCING AGENDA

A. Provide proposed materials, methods, procedures, forms, diagrams, and reports for test and balance Work.

B. Agenda to be completed by the test and balance agency and submitted to ARCHITECT, PROJECT INSPECTOR, and OAR for review and approval.

C. Agenda shall include one complete set of AABC, NEBB, or TABB publications listed in Sub-paragraph 3.02.B.2, applicable publications, or, in case of other test and balance agencies and or organizations, comparable publications to establish an approved, systematic, and uniform set of procedures.

D. Agenda shall also include the following detailed narrative procedures, system diagrams, and forms for test results:

1. Specific standard procedures required and proposed for each system of the Work.

2. Specified test forms for recording each procedure and for recording sound and vibration measurements.

3. Systems diagrams for each air, water, and steam system. Diagrams may be single line.

E. In addition to information recorded for standard AABC, NEBB, or TABB procedures, the following information is required:

1. Fan data.

2. System number, location, manufacturer, model, and serial number.

3. Fan wheel type and size.

4. Motor horse power, type, and rpm.

5. Sheave size, type, number of grooves, and open turns on Variable Pitch Sheave.

6. Number and size of belts, motor and fan shaft sizes, center-to-center of shafts in inches, and adjustment available motor data, including nameplate data, actual amps, rated, and actual motor rpm, volts, phase, hp, kW, starter heater size, and capacity.

7. Fan design airflow and service (supply, return, outdoor air or exhaust).

8. Fan static pressure, suction/discharge, static profile, and static control point.

F. The following traverse data is required:

1. Traverse location, size of duct (inside dimensions), and area of duct in square feet.

2. Column for each hole traversed/lines for each reading.

3. Barometric pressure.

4. Temperature/Static pressure in the duct.

5. Actual CFM corrected to SCFM.

6. Notes.

G. The following air distribution data is required:

1. Room identification.

2. Outlet or intake balance sequence number.

3. Size of outlet or inlet.

4. AK Factor.

5. Design and Actual FPM and CFM.

6. Notes.

H. The following DX coil data is required:

1. Air flow through the coil in CFM.

2. Dry and wet bulb temperatures entering/leaving coil.

3. Enthalpy or total heat difference across coil in BTU/ pound.

4. Capacity in BTU/hour at time of test.

5. Air pressure drop across coil.

6. Notes.

I. The following domestic water heater data is required:

1. Performance test results for rated capacity.

2. Boiler identification number.

3. Nameplate data; manufacturer, model, and serial number.

4. Water temperature entering/leaving the boiler.

5. Outside conditions: temperature, humidity, general cloud cover.

6. Barometric pressure.

J. The following air-cooled split system condensing unit data is required:

1. Performance test results for rated capacity.

2. Unit identification number.

3. Nameplate data, manufacturer, model, and serial number.

4. Compressor nameplate and actual amps, volts, phase, and hertz.

5. RPM of motors, where applicable.

6. Refrigerant type.

7. Suction/Discharge pressure when gage installed.

8. Number of stages.

9. Low-pressure/High-pressure control setting.

10. Condenser fan sequence stages.

11. Crankcase heater watts (nameplate).

12. Hot gas bypass installed - yes/no.

13. SCFM Air Flow Measurement vs. Design CFM.

K. The following air-cooled split system heat pump data is required:

1. Performance test results for rated heating and cooling capacities.

2. Unit identification number.

3. Nameplate data, manufacturer, model, and serial number.

4. Compressor nameplate and actual amps, volts, phase, and hertz.

5. RPM of motors, where applicable.

6. Refrigerant type.

7. Suction/Discharge pressure for both heating and cooling modes when gage installed.

8. Number of stages.

9. Low-pressure/High-pressure control setting.

10. Condenser fan sequence stages.

11. Crankcase heater watts (nameplate).

12. Hot gas bypass installed - yes/no.

13. SCFM Air Flow Measurement vs. Design CFM.

L. The following sound test data is required:

1. Area or location.

2. Sound level in dB(A) as specified in Article 3.19.

3. Sound level at the center band frequencies of eight non-weighted octaves with equipment on and off for 5 rooms selected by the OAR/PROJECT INSPECTOR.

4. Plot of corrected sound-level reading on Noise Criteria (NC) curve for the measurements in Q 3 above.

M. The following vibration test data is required:

1. Equipment identification number.

2. Vibration levels at all accessible bearings, motors, fans, pumps, casings, and isolators.

3. Measurements in mils defection and velocity in inches per second.

4. Each measurement taken in horizontal, vertical, and axial planes as accessible.

N. The following fan coil and unit ventilator data is required:

1. Equipment identification number.

2. Nameplate data; manufacturer, model, and serial number.

3. Tested supply CFM or manufacturer rated CFM if not ducted.

4. Tested outside air in CFM.

5. Motor data and actual amps and volts.

6. Cooling/Heating test data.

7. Static pressure.

8. Notes.

3.07 PROCEDURES

A. Schedule the Work of this Section in order for test and balance activities to be completed prior to the date of Substantial Completion. CONTRACTOR shall place all heating, ventilating, and air conditioning equipment into operation during each day and until all HVAC adjusting, balancing, testing, demonstrations, and instructions on systems are completed. Agency shall prepare and submit reports within ten (10) days from completion of the Work of this Section to allow sufficient time for corrective measures to be completed before Substantial Completion of the Work. When an individual building or portion thereof is ready for occupancy, all equipment relative to such portion of Work shall be put into service, tested, and balanced.

B. Prior to the date of Substantial Completion, and upon completion of test and balance Work, place all exhaust fans in operation, force all air handling units, and air conditioning units into a 100 percent outdoor air economizer mode with heating and cooling locked out and flush the building continuously for a period of fourteen (14) days.

C. Coordinate test and balance procedures with any phased Project requirements so test and balance procedures on each phased portion of the Work will be completed prior to completion of said designated phase.

3.08 FIELD EXAMINATION

A. Before the commencement of test and balance Work, CONTRACTOR shall ascertain that following conditions are fulfilled:

1. Ensure that all water heating and water cooling systems have been flushed, cleaned, and filled and high points vented.

2. Boilers (steam and hot water) are filled.

3. Refrigerant systems are fully charged with specified refrigerant.

4. Over-voltage and current protection have been provided for motors.

5. Equipment has been labeled as required.

6. Curves and descriptive data on each piece of equipment to be tested and adjusted are available as required.

7. Operations and maintenance manuals have been supplied.

8. Controls manufacturer and boiler-burner representatives shall be available for consultation and supervision of adjustments during tests.

9. Verify that heating and cooling coil fins are cleaned, combed and air filters clean, and installed.

10. Verify that duct systems are clean of debris and leakage is minimized, access doors are closed and duct end caps are in place, and fire and volume dampers are in place and open.

11. Automatic control systems are completed and operating.

12. Start up and initial commissioning of all HVAC equipment except fans shall be by the manufacturer.

B. In addition to the above, CONTRACTOR shall establish a specific, coordinated plan which details how each area of existing building will be balanced during the various phases of the Work. The evaluation shall address, at a minimum, the following concerns:

1. OWNER operations.

2. Building safety and security policies. Prior to any fire safety or security systems shutdown at any time during the Work, CONTRACTOR shall first advise and coordinate with OWNER to ensure all concerned parties are notified.

3. Protecting furniture, computers, photocopiers, and other office equipment.

4. Protecting classroom fixtures and equipment.

5. Concerns specific and unique to building related issues.

6. Downtime required for each Air Handling Unit including projected time to return each portion of the building back to its normal occupancy temperature and humidity.

7. Shutdown and reactivation of the fire alarm system to avoid accidental alarms during test and balance and related Work.

3.09 TEST AND BALANCE

A. For each heating, ventilating, or air conditioning system the following shall be performed, recorded, and submitted in an approved format for review. Make, type, and model of unit, and location of each piece of equipment shall be included in the report. Readings shall include but not be limited to following:

1. Air Systems**:**

a. General

1) Verify all ductwork, dampers, grilles, registers, and diffusers have been installed per design and set in the full open position. Agency shall perform the following TAB procedures in accordance with AABC or NEBB National Standards. Where the requirements of the two standards are different, the more stringent requirements shall prevail. Also, if the Contract Documents impose a more stringent standard then the Contract Documents shall prevail.

b. Zone, Branch, and Main Ducts:

1) Adjust ducts to within design CFM requirements by means of Pitot-tube duct traverse.

c. Supply Fans:

1) Fan Speeds: Test and adjust fan RPM to achieve maximum or design CFM. CONTRACTOR shall provide new belt pulleys when required.

2) Current and Voltage: Test and record motor voltage and amperage, and compare data with the nameplate limits. Ensure

fan motor is not in or above the service factor as published by the motor manufacturer.

3) Pitot-Tube Traverse: Perform a Pitot-tube traverse of main supply and return ducts, record total CFM.

4) Outside Air: Test and adjust the outside air using Pitot-tube traverse.

5) Static Pressure: Test and record system static profile of each supply fan.

6) Current and Voltage: Test and record motor voltage and amperage, and compare data with the nameplate limits. Ensure fan motor is not in or above the service factor as published by the motor manufacturer.

d. Return, Relief, and Exhaust Fans:

1) Fan Speeds: Test and adjust fan RPM to achieve maximum or design CFM. CONTRACTOR shall provide new belt pulleys where required.

2) Pitot-Tube Traverse: Perform a Pitot-tube traverse of the main return ducts to obtain total CFM.

3. Static Pressure: Test and record system static profile of each fan.

e. Diffusers, Registers and Grilles:

1) Tolerances: Test and balance each diffuser, grille, and register to within 5 percent of design requirements.

2) Identification: Identify the type, location, and size of each grille, diffuser, and register. This information shall be recorded on air outlet data sheets.

f. Coils: Air Temperature: Once airflow is set to acceptable limits, agency shall take wet bulb and dry bulb air temperatures on the entering and leaving side of each cooling coil. Dry-bulb temperature shall be taken on the entering and leaving side of each heating coil.

g. Duct Leakage Testing:

1) On existing ductwork, agency shall calculate duct leakage by traversing the unit and reading associated diffusers.

2) On new installations each and every section of the entire air distribution system (all supply, return, exhaust, and relief ductwork) shall be tested at 1.5 times design static pressure. All ducts shall demonstrate 5 percent leakage maximum (per CBC).

h. System Pressure Profiles:

1) Prepare pressure profiles from fan (supply, return, and exhaust) or air handling unit to extremities of system.

2) As a minimum, show pressure at each floor, main branch, and airflow measuring device.

3) Make pitot-tube traverses of all trunk lines and major branch lines where required for analysis of distribution system. Airflow measuring devices installed in ductwork, if available, may be utilized.

4) Record residual pressures at inlets of volume controlled terminals at ends of system.

5) Show actual pressures at all static pressure control points utilized for constant or variable flow systems.

i. Fan speed adjustments and balancing for optimum acoustical performance:

1) As the very first step, the speed of all fans (supply, return, and exhaust inside packaged equipment) shall be adjusted to deliver the required fan total air quantity with all volume dampers and other flow rate control devices fully open. Adjustments shall be made with the outdoor air intake dampers, return air dampers, and relief air dampers in the minimum outdoor air position. The adjustments shall be made again in the 100 percent outdoor air position in systems with 100 percent outdoor air economizers.

2) The above adjustment shall be done with wet cooling coils, where cooling coils are provided.

3) The airflow rates at each branch duct shall be adjusted as the second step with air with all volume dampers and other flow rate control devices fully open.

4) The airflow rates at each air inlet and outlet shall be adjusted as the final step. The volume damper in the branch duct shall be used for balancing. Opposed blade dampers at air inlets and outlets where provided shall only be used for fine adjustments and shall not be closed beyond 60 percent open or when the dampers start to generate audible noise.

5) CONTRACTOR shall provide the labor and materials for all dampers, pulleys, and belt changes required for balancing. The design documents indicate the worst-case scenario with safety factors in fan static pressures for contingency. Properly coordinated and installed air systems may require a lower static pressure and a reduction in fan speed.

B. Coils:

1. Tolerances: Test and balance all coils within 5 percent of design requirements.

2. Verify the type, location, final pressure drop, and GPM of each coil.

C. System Mains and Branches including domestic hot water and domestic cold water:

1. Balance water flow in pipes to achieve maximum or design GPM.

3.10 VERIFICATION OF HVAC CONTROLS

A. Agency shall verify in conjunction with CONTRACTOR all control components are installed in accordance with the intent of the Contract Documents and are functioning according to the design intent, including all electrical interlocks, damper sequences, air and water resets, fire stats, and other safety devices.

B. CONTRACTOR shall verify all control components are calibrated and set for design operating conditions and intent.

3.11 TEMPERATURE TESTING

A. To verify system control and operation, agency shall perform a series of three temperature tests taken at approximately two hour intervals in each separately controlled zone. The resulting temperatures shall not vary more than two degrees Fahrenheit from the thermostat or control set point during the tests. Outside temperature and humidity shall also be recorded during the testing periods.

3.12 KITCHEN HOOD TESTING

A. Agency shall test and adjust hood total airflow by duct Pitot-tube traverse. If a Pitot-tube traverse is not practical, an explanation of why a traverse was not made must be made in writing to Architect and subsequently appear on the appropriate data sheet. Face velocities shall be tested under design operating conditions using a maximum of a one square foot grid pattern across the entire open face. CONTRACTOR shall set sash height on hoods to obtain face velocities within 20 percent of 100 feet per minute unless specified otherwise. Agency shall test and adjust exhaust airflows and make-up air flows to maintain design hood pressures and face velocities and design room pressurization. Agency shall test for turbulence and proper air flow patterns at the face and inside the hoods using a hand-held smoke puffer or other approved smoke-emitting device.

3.13 BUILDING/ZONE PRESSURIZATION

A. Agency shall test and adjust building/zone pressurization by setting the design flows to meet the required flow direction and pressure differentials. Positive/Negative area(s) supply air shall be set to design flow and exhaust air rates adjusted to obtain the required pressure differential(s).

3.14 FIRE AND SMOKE DAMPER TESTING

(Not used)

3.15 LIFE SAFETY CONTROLS TESTING

A. This work is to be performed by OWNER and State Fire Marshall. Do not include in agency scope of Work.

3.16 FINAL TABULATION

A. After heating, ventilating, and air conditioning components are satisfactorily tested and balanced, entire system shall be put into operation and all pressures, temperatures, gpm, cfm, velocities, etc., shall be recorded and checked against design schedules. Design requirements shall be listed on reports and final tabulation shall be within a tolerance of plus or minus five percent of design requirements.

B. Readings at various locations as described herein will be made every hour for four (4) hours, during normal working hours for three (3) days. Boilers, forced air furnaces, and chillers shall be started up far enough in advance to meet design conditions during period of testing.

3.17 VIBRATION TESTING

A. Furnish instruments and perform vibration measurements if specified in Division 23. Provide measurements for all rotating HVAC equipment half horsepower and larger, including reciprocating/centrifugal/screw/scroll compressors, pumps, fans, and motors.

B. Record initial and final measurements for each unit of equipment on test forms. Where vibration readings exceed allowable tolerance and efforts to make corrections have proved unsuccessful, forward a separate report to ARCHITECT.

3.18 SOUND TESTING

A. Perform and record sound measurements as specified in this Section and in Section 23 0548: HVAC Sound, Vibration and Seismic Control. Take additional readings if required by ARCHITECT.

B. Measuring equipment and methods shall comply with the current requirements of the AABC, NEBB, TABB and ANSI S12.60. Take measurements with a calibrated Type 1 sound level meter and octave band analyzer.

C. Sound reference levels, formulae, and coefficients shall be according to ASHRAE Handbook: HVAC Applications, Chapter on Sound and Vibration Control.

D. Where sound pressure levels are specified as noise criteria or room criteria in Section 23 0548: HVAC Sound, Vibration and Seismic Control determine compliance with the Contract Documents as follows:

1. Reduce background noise as much as possible by shutting off unrelated audible equipment.

2. Measure octave band sound pressure levels with specified equipment "off".

3. Measure octave band sound pressure levels with specified equipment "on".

4. Use difference in corresponding readings to determine sound pressure due to equipment. Sound pressure level, due to equipment equals sound pressure level with equipment "on" minus factor.

DIFF.:	0	1	2	3	4	5	9-10 or More
FACTOR:	10	7	4	3	2	1	0

5. Plot octave bands of sound pressure level due to equipment for typical rooms, on a graph, which also shows, noise criteria (NC) curves.

E. Where sound levels are required in dbA, measure sound levels using the A-frequency-weighting of meter. Single value readings will be used instead of octave band analysis.

F. Measure sound levels at each octave band as NC or RC (room criteria) if indicated in the Drawings or other Spec Sections. Where measured sound levels exceed specified level, CONTRACTOR shall take all remedial action and necessary sound tests shall be repeated. Sound tests after remedial action shall be in octave band in NC or RC for the room and also at each diffuser, grille, or register in occupied areas. Sound levels shall be measured

approximately five feet above floor on a line approximately 45 degrees to center of opening, on the A- and C-frequency-weighting of the measuring instrument.

G. Measure and record sound levels in decibels for each room per current ANSI S12.60.

H. Report shall include ambient sound levels, taken without air-handling equipment operating, of rooms in which above openings are located. A report shall also be made of any noise caused by mechanical vibration.

END OF SECTION

SECTION 23 07 00

HVAC INSULATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. Condensate drain piping from air conditioning equipment.

2. Refrigerant piping.

3. Supply and return air ducts for heating and cooling systems air ducts.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 23 0500: Common Work Results for HVAC.

3. Section 23 0513: Basic HVAC Materials and Methods.

4. Section 23 0553: Mechanical Identification.

5. Section 23 3000: Air Distribution.

6. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

1.02 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM C167 - Standard Test Methods for Thickness and Density of Blanket or Batt Thermal Insulations.

2. ASTM C302 - Standard Test Method for Density and Dimensions of Preformed Pipe-Covering-Type Thermal Insulation.

3. ASTM C411 - Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation.

4. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

5. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.

6. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

2. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.

3. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Submit in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

1. Complete material list of items to be furnished and installed under this Section.

2. Manufacturer's specifications and other data required demonstrating compliance with the specified requirements.

3. Shop Drawings, catalog cuts and manufacturer's data indicating insulation, jacketing, adhesives, and coating. Insulating materials shall be certified by manufacturer to comply with the California quality standards for insulating materials.

4. Display sample cutaway sections.

5. Manufacturer's recommended method of installation procedures, which will become part of this Section.

1.04 QUALITY ASSURANCE

A. Qualifications of Manufacturer and Installer, Materials, Fabrication, Execution, and Standard of Quality: Comply with provisions stated under Section 23 0500: Common Work Results for HVAC and Section 23 0513: Basic HVAC Materials and Methods.

B. Insulation Work shall be in accordance with the California Building Energy Efficiency Standards, CBC, and Uniform Mechanical Code.

C. Test Ratings:

1. Comply with provisions stated under Section 23 0500 and 23 0513 with emphasis on ASTM E84, NFPA 255, or UL 723. ASTM C167, ASTM C302, UL label or listing of satisfactory test results from the National Institute of Standards and Technology, or a satisfactory certified test report from an acceptable testing laboratory. Approval by the State Fire Marshal is required.

2. Furnish labels, legibly printed with the name of the manufacturer or listings indicate that fire hazard ratings do not exceed those specified for materials proposed for installation. Flame spread index of not more than 25 and smoke developed rating not exceeding 50.

3. Tests shall be performed on each item individually when insulation, vapor barrier covering, wrapping materials, or adhesives are installed separately at the Project site.

4. Test insulation, vapor barrier covering, wrapping materials and adhesives as an assembly when they are factory composite systems.

D. Regulatory Requirements: Insulation furnished and installed under this Section shall meet minimum legal requirements of the Building Energy Efficiency Standards adopted and incorporated in the California Energy Commission, Title 24, Part 2, Chapters 2 through 53, unless otherwise noted, for the piping, ductwork, and equipment.

E. All chemically based products such as sealers, primers, fillers, adhesives, etc. must meet the California air quality regulations.

1.05 PRODUCT HANDLING

A. Protection, Replacement, Delivery and Storage: Comply with provisions stated under Sections 23 0500: Common Work Results for HVAC and 23 0513: Basic HVAC Materials and Methods.

PART 2 – PRODUCTS

2.01 MATERIALS

A. General:

1. Insulating material shall be fire resistant, non-corrosive, shall not break, settle, sag, pack or disintegrate under vibration, nor absorb more than 1 percent moisture by weight.

2. Insulating material shall be furnished with thickness indicated in Table 1, and shall furnish thermal resistance in the range of R-4.0 to 4.6 in accordance with inch at 75 degrees F. For any other value of R, insulation thickness shall be calculated accordingly and submitted for review.

3. Asbestos in any quantity in insulating material is not permitted.

4. Provide insulation materials, adhesives, coatings, sealants, fitting covers, and other accessories with a fire hazard rating not to exceed 25 for flame spread, 25 for fuel contributed and 50 for smoke developed, except for materials listed as follows:

   a. Nylon anchors for installing insulation to ducts or equipment.

   b. Treated wood blocks.

5. Flame-proofing treatments subject to moisture damage are not permitted.

TABLE 1 - MINIMUM PIPING INSULATION THICKNESS (1)

Insulation Thickness Required (in inches)
Space Heating Systems (Steam, Steam Condensate and Hot Water)

Piping System Type	**Temp. Range (degrees F)**	**Run-outs up to 2** (2)	**1 and less**	**1.25 to 2**	**2.5 to 4**	**5 to 6**	**8 and larger**
Hi Pres Temp	Above 350	1.5	2.5	2.5	3.0	3.5	3.5
Med Pres Temp	251 to 305	1.5	2.0	2.5	2.5	3.5	3.5
Low Pres Temp	201 to 250	1.0	1.5	1.5	2.0	2.0	3.5
Hot Water	Up to 200	0.5	1.5	1.5	1.5	1.5	1.5
Steam Cond.	-	0.5	1.0	1.0	1.0	1.5	1.5
Service Water Heating Systems (recirculating, piping supply and return)							
Hot Water	Up to 180	0.5	1.0	1.0	1.5	1.5	1.5
Space Cooling Systems (Chilled water, Brine and Refrigerant)							
Chilled Water	40-60	0.5	0.5	0.75	1.0	1.0	1.0
Refrigerant/Brine	Below 40	1.0	1.0	1.5	1.5	1.5	1.5
Condensate Drain	1/2 inch Minimum insulation thickness.	0.5	0.5	0.5	0.5	0.5	0.5
From Air Conditioning Equipment:	Insulate condensate drain lines within building, in room, inside walls and above ceilings.	0.5	0.5	0.5	0.5	0.5	0.5

NOTES: (1) For piping exposed to ambient temperatures, increase thickness by 0.5 inch.

(2) Run-outs to individual terminal units, not exceeding 12 feet in length.

B. Lagging Adhesives: Shall be nonflammable and fire-resistant and shall have a maximum flame spread index of 25 and a maximum smoke developed index of 50 when tested in accordance with ASTM E84. Insulation finished with canvas shall be provided with laps adhered in accordance to manufacturer's recommendation. A finish coat of same material

shall be applied to entire outer surface of lagging cloth at coverage specified by manufacturer.

C. Canvas Jackets: Furnish 6 ounce in accordance with square foot minimum, 48 by 48 thread count canvas jacketing.

D. Insulation Jackets:

1. Exterior insulation exposed to weather shall be weatherproofed with Childers aluminum jacketing as basis of design, or Pabco, RPR, or equal. Jacketing shall be manufactured from 1100, 3105 or 5010 aluminum alloy with 3/16 inch corrugations. Smooth or embossed jackets may be permitted in special situations to match an existing installation. Jacketing shall be furnished with an integrally bonded moisture barrier over entire surface in contact with insulation. A minimum thickness of 0.016 aluminum jacketing is to be provided on ducts and piping. A minimum thickness of 0.020 shall be provided on tanks, equipment, and heat exchangers.

2. Insulated elbows, of 90 degrees and 45 degrees, with a nominal iron pipe size of ½ inch to 8 inches shall be provided with Childers aluminum Ell-Jacs insulation covers as basis of design, or Pabco, RPR, or equal, manufactured from 1100 aluminum alloy of 0.024 inch thickness. Insulated elbows with a nominal pipe size of 10 inches to 18 inches shall be provided with Childers 4-piece aluminum Ell-Jacs as basis of design, or Pabco, RPR, or equal.

3. Tees, Flanges, and Valve Insulation in Conjunction with Aluminum Jacketing: Furnish Childers Aluminum Special Fabrications Insulation Covers as manufactured by Childers Products Company, Pabco, RPR, or equal.

E. Adhesives: Adhesives shall be water based, UL Classified, meet the requirements of NFPA 90A and NFPA 90B, have been tested according to relevant ASTM requirements, and be acceptable to the State Fire Marshal. Name, type and method of installation shall be submitted for review.

F. Valve and Fitting Cover: When installed in conjunction with PVC jacketing, furnish Zeston 25/50 rated polyvinyl chloride fitting covers as manufactured by Johns Manville, Knauf Insulation, Speedline, or equal.

2.02 SPACE HEATING PIPING SYSTEM

(Not Used)

2.03 COOLING PIPING SYSTEM INSULATION

A. General: Insulate refrigerant piping.

B. Materials:

1. Classes of Insulation:

a. Class A: Expanded polystyrene pipe insulation, self-extinguishing type, either molded or extruded; Dow Chemical Co. STYROFOAM, ITW Insulation Systems XPS PIB, Foam-Control EPS, or equal.

b. Class B: Glass fiber molded pipe insulation ASTM C547. Pipe insulation shall be one piece, preformed, and provide a minimum R factor of 4 at 75 degrees F mean temperature. Insulation shall be faced with all-purpose fire retardant vapor barrier jacket. Pipe insulation shall be Johns Manville

Micro-Lok, CertainTeed Snap-On, Owens Corning FIBERGLAS SSL II-ASJ, or equal.

c. Class C: Expanded (foamed) urethane (polyurethane) or polyisocyanurate pipe insulation of self-extinguishing type molded or fabricated, Dyplast Products, LLC ISO-C1/2.0, ITW Trymer, Specialty Products & Insulation Co. Polyisocyanurate Pipe Insulation, Armacell Armalok, or equal.

d. Class D: Foamed plastic pipe insulation, self-extinguishing type, ASTM C534 Type 1 - tubular. Pipe insulation shall be one-piece preformed, flexible tubing type and provide a maximum K factor of 0.28 at 75 degrees F mean temperature. Pipe insulation shall be Armacell Armaflex, Aeroflex Aerocel, Rubatex INSUL-TUBE 180, or equal.

2. Locations and Class of Insulation Required: For thickness required, refer to Table 1 of this Section.

TABLE 3 – SERVICE, LOCATION AND CLASS OF INSULATION REQUIRED

SERVICE	LOCATION	CLASS OF INSULATION
Condensate drains from air conditioning equipment	Indoors at all locations including above ceilings and between stud walls	D
Refrigerant suction Liquid line as required	All locations except underground	D
All other piping, except underground	All locations except underground	A, B, C

3. Adhesives:

a. Polystyrene adhesives: Synthetic rubber and resin adhesives specifically designed to adhere extruded and expanded rigid polystyrene and urethane insulation to themselves and to other porous and non-porous substrates.

b. Vapor barrier laps and penetrations: Furnish protective coating and lagging adhesive on butt joints of foil-faced vapor barriers, and where pins and staples puncture facings.

2.04 HIGH TEMPERATURE EQUIPMENT INSULATION

(Not Used)

2.05 LOW TEMPERATURE EQUIPMENT INSULATION

(Not Used)

2.06 DUCTWORK AND PLENUM INSULATION

A. General: Insulate ductwork and plenums with not less than the amount of insulation tabulated in Table 4. Insulation may be omitted under the following conditions:

1. Exposed return air ductwork in conditioned space.

2. Return air ductwork between wall studs inside an interior wall.

TABLE 4 - INSULATION OF DUCTS AND PLENUM

INSULATION TYPES

Duct Location	Heating and Cooling
On roof or exterior of building	L2
Attics, Garages, and Crawl Spaces	F-3 or L-2 See Note 3
In walls, within floor-ceiling spaces	F-1 or L-1 See Note 3
Hot and cold plenums	F-2 or L-2 See Note 3
Within unconditioned space or in basement	F-3 or L-2 See Note 3

B. Insulation Types:

1. F-1: 1 ½ inch blanket fiberglass, factory-laminated with all-service jacket vapor barrier.

2. F-2: 2 inch blanket fiberglass, factory-laminated with all-service jacket vapor barrier.

3. F-3: 3 inch blanket fiberglass, factory-laminated with all-service jacket vapor barrier.

4. L-1: 1 inch internal duct lining. Flexible type for ducts and rigid board for plenums.

5. L-2: 2 inch internal duct lining. Flexible type for ducts and rigid board for plenums. Duct joints shall be waterproofed.

C. Notes:

1. Minimum insulation provided shall be as required by the current California Administrative Code Title 24 for the most restrictive condition.

2. Refer to the materials indicated in this section for external insulation and internal lining.

3. External insulation shall be replaced with internal duct lining (of equivalent thermal resistance value unless noted otherwise) where indicated on the drawings or specified elsewhere for sound attenuation.

4. Provide internal duct lining (1 inch unless noted otherwise) where indicated on the drawings or specified elsewhere for sound attenuation.

D. Materials:

1. Fire-Resistive Insulation Materials and Coatings: Submit State Fire Marshal pre-approved materials only.

2. Adhesives: See Paragraph 2.01.E for applicable products.

3. External Insulation: Provide glass fiber blankets that are factory-laminated with Foil Reinforced Kraft (FRK) vapor barrier facing; Johns Manville Microlite, Owens-

Corning SOFTR Duct Wrap, Knauf Insulation Friendly Feel Duct Wrap, or equal. Provide a minimum installed R value as required by the CEC Building Energy Efficiency Standards; but not less than scheduled below:

TABLE 5

INSULATION OF DUCTS AND PLENUM INSTALLED

THERMAL RESISTANCE R VALUES

Type	Labeled Thickness	Installed R Value (hr.ft^2.°F/Btu)
F1	1 ½-inch”	4.2
F2	2-inch	5.6
F3	3-inch	8.3
L1	1-inch	4.2
L2	2-inch	8.3

4. Internal Lining: Acoustic duct liner and liner board, or equal; Johns Manville Permacote Linacoustic, Johns Manville Spiracoustic Plus, Owens Corning QuietR Rotary Duct Liner, or equal. Internal lining shall conform to:

   a. Fire Safety Standards: NFPA 90A and 90B.

   b. Operating Temperature: ASTM C411.

   c. Air velocity: ASTM C1071, UL 181.

   d. Fire Hazard Classification: ASTM E84, UL 723-Class 1, NFPA 255.

   e. Corrosion Resistance: ASTM C739 and ASTM C665.

   f. Fungi Resistance: ASTM G21.

   g. Water Vapor Sorption: ASTM C1104, less than 1 percent by weight.

   h. Formaldehyde, Phenolic Resins or other Volatile Organic Compounds: 0 percent.

   i. Minimum R value as required by the latest edition of the California Energy Efficiency Standards, but not less than 4.0 at 75 degrees F.

   j. Acoustical Performance: ASTM C423 & ASTM E795 Minimum NRC of 0.75 for interior spaces, minimum NRC of 0.90 for exposed to weather.

   k. Hot and cold plenums separated by single partition: Minimum NRC of 0.75, both sides.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Except as specified herein, install material in accordance with recommendations of manufacturer. Do not install insulation materials until tests specified in other sections are completed. Remove foreign material such as rust, scale, or dirt. Surfaces shall be clean and dry. Maintain insulation clean and dry at all times.

B. On cold surfaces where a vapor barrier must be provided and maintained, insulation shall be installed with a continuous, unbroken moisture and vapor seal. Hangers, supports, anchors, or other projections that are fastened to cold surfaces shall be insulated and vapor sealed to prevent condensation.

C. Surface finishes shall be extended in such a manner as to protect raw edges, ends, and surfaces of insulation.

D. Pipe or duct insulation shall be continuous through walls, ceiling or floor openings, or sleeves; except where fire-stop or fire-safing materials are required.

E. Metal shields shall be installed between hangers or supports and the piping insulation. Rigid insulation inserts shall be installed between the pipe and the insulation shields. Inserts shall be of equal thickness to adjacent insulation and shall be vapor sealed accordingly.

F. Insulation shall not be installed in the following locations unless otherwise noted:

1. On vacuum return lines less than 50 feet long.

2. On unions, flanged connections or valve handles.

3. Over edges of any manhole, clean-out hole, clean-out plug, access door or opening to a fire damper, so as to restrict opening or identification of access.

4. Over any label or stamp indicating make, approval, rating, inspection, or similar data, unless provision is made for identification and access to label or stamp.

3.02 INSTALLATION OF HEATING PIPING SYSTEM INSULATION

(Not Used)

3.03 INSTALLATION OF COOLING PIPING SYSTEM INSULATION

A. General: Refrigerant piping and condensate drain lines, after having been tested, shall be cleaned and insulated.

B. Application: Insulation on refrigerant suction lines and liquid lines, if indicated, and air conditioner interior drain lines shall be jacketed with fire-resistant vapor barrier of laminated aluminum foil consisting of 2 plies with glass-yarn reinforcing. Jacket joints shall be lapped and sealed with an approved adhesive. Insulation shall be secured with aluminum bands not less than 0.005 inch thick by 3/4 inches wide, spaced not over 12 inches on centers, or as recommended by manufacturer.

1. Longitudinal Seams: Butt hinged sections of covering tightly together and seal down jacket flap with adhesive, or with factory-applied, self-sealing lap with pressure-sensitive sealer protected with release paper.

2. End Joints: Wrap joint with a 3-inch wide (minimum) self-sealing tape.

3. Fittings and Valves: Fittings and valves shall be covered with same material of same thickness as pipe insulation, sealed with an approved, vapor-sealing tape or compound and covered with Johns Manville Zeston polyvinyl-chloride cover, Knauf Insulation Proto PVC Fitting Cover, Speedline Polyco Smoke Safe, or equal.

4. Pipe hangers shall be insulated or attached to pipe by an insulating insert, butted between adjoining insulation sections.

C. Additional Jackets:

1. Exposed Indoor Insulation: Cover with 26 gage galvanized sheet metal jacket to 8 feet above floors, except in mechanical equipment rooms and accessible pipe tunnels.

2. Exposed Outdoor Insulation: In addition to canvas or fiberglass cloth cover, provide 0.016 inch thick aluminum jacket with one inch wide aluminum bands and seals. Install appropriate jackets on valves and fittings.

3.04 INSTALLATION OF HIGH TEMPERATURE EQUIPMENT INSULATION

(Not Used)

3.05 INSTALLATION OF LOW-TEMPERATURE EQUIPMENT INSULATION

(Not Used)

3.06 INSTALLATION OF DUCTWORK AND PLENUM INSULATION

A. External Covering:

1. Before installing duct insulation, sheet metal ducts shall be clean, dry, and tightly sealed at joints and seams.

2. Duct exterior insulation shall be firmly wrapped around ductwork with joints lapped a minimum of 2 inches. Insulation shall be securely fastened with 18 gage copper-lined steel wire, or 16 gage soft-annealed galvanized wire spaced approximately 12 inches on centers and at loose ends, presenting a neat and workmanlike appearance. Where duct width is such that wiring will not fasten insulation firmly against duct an adhesive shall be furnished to fasten insulation to duct with wiring being installed at ends of insulation segment.

3. Duct insulation in finished rooms shall be covered with wrapped fiberglass cloth cover. Install on each corner of duct 26 gage galvanized steel small nose, wide flange corner bead of appropriate height. In unfinished rooms, the insulation shall have a vinyl or similar coating. In all rooms, insulation shall be fastened to the ducts with an approved adhesive instead of wire. Corners shall be cut and formed instead of bending the insulating material. Raw edges shall be taped.

4. Insulation on ductwork transporting conditioned air, both supply and return, and outside air intake ducts shall be furnished with a factory-applied, fire-resistant vapor barrier.

5. Exposed Ducts or Plenum:

a. Install insulation to ducts or plenum furnished with butt joints, without voids and with adhesive over entire surface of duct. Cover insulation with canvas jacket, fastened tightly to insulation with lagging adhesive. Install 2 finish coats of undiluted adhesive.

b. When installing jacket, finished covering shall be even and level, without humps, with constant diameters on round ducts maintained.

c. For non-lined insulated ducts or plenums exposed to weather: Insulation finish shall be 0.016 inch thick aluminum sheet with joints lapped not less than 3 inches, sealed, and secured with 6 gage by 3/8 inches aluminum sheet metal screws, or aluminum handgun-type rivets.

B. Lining General:

1. Floors of cold plenums and fan enclosure plenums shall not be insulated.

2. Cover short damper sections on lined ducts on outside to permit free operation of dampers and linkage.

3. Dimensions of ducts indicated are net inside dimensions and must include thickness of duct liners to obtain the required duct size.

4. Install insulation in square turns, where required, to cover interior surfaces before duct turns are installed.

C. Interior insulation (lining) of ducts shall be as specified in above.

1. Liner material installed during fabrication of duct with sealed face only exposed to air stream. Insulation shall be fastened to sheet metal with an approved fire-retardant adhesive, with minimum 90 percent coverage and edges firmly adhered. Mechanical fasteners shall supplement the adhesive on top sections of ducts more than 12 inches wide and on sides of ducts more than 24 inches high, and shall be spaced on 16-inch centers maximum. Fastener posts shall be cut off approximately ¼ inch from metal disc.

D. Interior insulation in ducts or plenums shall not have exposed edges. Edges open to entering or leaving air streams shall be covered, secured in place and sealed with approved duct liner edge sealers.

3.07 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.08 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

END OF SECTION

SECTION 23 08 00

HVAC SYSTEMS COMMISSIONING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. General requirements for Commissioning (Cx) of HVAC systems and equipment including installation, start-up, testing, documentation, and training according to the Construction Documents.

2. Standard procedures for the execution of commissioning work shall be in conformance with Division 01, Section 01 9113: General Commissioning Requirements. Coordinate work with the Commissioning Agent (CxA).

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 01 4523: Testing and Inspection.

3. Section 01 4525: Testing, Adjusting, and Balancing for HVAC.

4. Section 01 7900: Maintenance and Operations Staff Demonstration and Training.

5. Section 01 9113: General Commissioning Requirements.

6. Section 23 0500: Common Work Results for HVAC.

7. Section 23 3000: Air Distribution.

8. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

9. Section 26 0500: Common Work Results for Electrical.

10. Section 26 0513: Basic Electrical Materials and Methods.

11. Section 26 0519: Low Voltage Wires (600 Volt AC).

12. Section 26 0526: Grounding and Bonding.

13. Section 26 0586: Motors and Drives.

14. Section 26 0800: Electrical Systems Commissioning.

15. Project Commissioning Plan (CxP).

1.02 REFERENCES

A. Applicable codes, standards, and references: inspections and tests shall be in accordance with the following applicable codes and standards:

1. InterNational Electrical Testing Association – NETA.

2. National Electrical Manufacturers Association – NEMA.

3. American Society for Testing and Materials – ASTM.

4. Institute of Electrical and Electronics Engineers – IEEE.

5. American National Standards Institute – ANSI.

6. National Electrical Safety Code – NESC.

7. California Building Code – CBC.

8. California Electrical Code – CEC.
9. California Mechanical Code – CMC.
10. Insulated Cables Engineers Association – ICEA.
11. Occupational Safety and Health Administration – OSHA.
12. National Institute of Standards and Technology – NIST.
13. National Fire Protection Association – NFPA.
14. American Society of Heating and Air-Conditioning Engineers – ASHRAE

    (The HVAC Commissioning Process, ASHRAE Guideline).
15. Associated Air Balance Council – AABC (National Standards for Total System Balance).

1.03 SUBMITTALS

A. Submittals package shall include the following:

1. Commissioning required submittals in accordance with Division 01 Specification Sections.
2. Copy of the Architect's reviewed and accepted submittals to the CxA via the OAR.
3. List of team members who will represent the Contractor in the Pre-functional Equipment Checks (PEC) and Functional Performance Tests (FPT), at least six weeks prior to the start of Pre-functional Equipment Checks.
4. Detailed manufacturer installation and start-up, operating, troubleshooting and maintenance procedures, a copy of full details of Owner-contracted tests, full factory testing reports, if any, and Warranty information, including responsibilities of Owner to keep Warranty in force clearly defined.
5. Installation and checklist documentation shipped with equipment and field checklist forms to be used by factory or field technicians.
6. Detailed manufacturer's recommended procedures and schedules for PECs, supplemented by Contractor's specific procedures, and FPTs, at least four weeks prior to the start of PEC.

1.04 MEETINGS, SEQUENCING AND SCHEDULING

A. Meetings: Attend the Cx meetings as required under Section 01 9113 and Cx Plan.

B. Sequencing and Scheduling: The work described in this Section shall begin only after work required in related Divisions 23 and 26 Sections has been successfully completed and tests, inspection reports, and Operation and Maintenance manuals required have been submitted and accepted. The start-up and PEC shall be completed and submitted to the Owner at least two weeks prior to beginning FPT.

1. Coordinate HVAC work with the work of other trades prior to scheduling of any Cx procedures.
2. Coordinate the completion of HVAC testing, inspection, and calibration prior to start of Cx activities.

1.05 QUALITY CONTROL

A. Comply with Division 01 quality control specifications.

B. Incorporate manufacturer's recommended Cx procedures for the systems and equipment to be commissioned under this Section.

C. Comply with Section 01 4525: Testing, Adjusting, and Balancing for HVAC.

1.06 EQUIPMENT AND SYSTEMS TO BE COMMISIONED

A. Split Systems.

B. gas fired heater

C. Fan Coil Units.

D. Exhaust Fans.

E. Ventilators.

F. Water Heaters, Gas

PART 2 – PRODUCTS

2.01 TEST EQUIPMENT

A. Equipment to be utilized in the commissioning process shall meet the following requirements:

1. Provide test equipment as necessary for the testing of the equipment and systems to be commissioned.

2. Provide testing equipment and accessories that are free of defects and certified for use.

3. Provide testing equipment with current calibration labels as per NIST Standards.

4. Equipment shall be calibrated on the manufacturer’s recommended intervals with calibration tags affixed to the instrument. In the absence of calibration tags, calibration documentation shall be submitted to the CxA at least thirty days prior to use; this documentation shall include description and serial number of instrument and calibration data and date.

5. Testing equipment shall be maintained in good operating condition for the duration of the project.

PART 3 – EXECUTION

3.01 COMMISSIONING PROCESS REQUIREMENTS

A. Work to be performed prior to commissioning:

1. Complete phases of the work so the system(s) can be started, tested, adjusted, balanced, and otherwise commissioned.

2. If modifications or corrections to the installed system(s) are required to bring the system(s) to acceptance levels due to Contractor’s incorrect installation or defective materials, such modifications shall be made at no additional cost to the Owner.

3. Normal start-up services required to bring each system into full operational state:

a. Testing, motor rotation check, control sequences of operation, full and part load performance.

b. Commissioning shall not start until each system is complete and start-up has been performed.

B. Pre-Commissioning responsibilities:

1. Inspection, calibration and testing of the equipment required to commission the following systems:

a. HVAC System(s).

C. Commissioning Process Requirements:

1. Refer to Section 01 9113: General Commissioning Requirements and related Sections for information on meetings, start-up plans, Pre-Functional and FPT, operations and maintenance data, training requirements, and other Cx activities.

3.02 PREPARATION

A. Provide certified HVAC technicians as required, with tools and equipment necessary to perform Cx activities specified.

B. Provide certified testing agency personnel and equipment factory representatives as require in the Cx plan and other related Sections.

C. Verify that work required in this Section and in Section 01 9113 is complete prior to starting of FPT.

D. Verify that complete operational manuals have been reviewed and accepted by the CxA as specified before starting FPT.

3.03 TESTING

A. Testing procedures shall include the following minimum information:

1. Test number.

2. Equipment used for the test, with manufacturer and model number and date of last calibration.

3. Date and time of the test.

4. Indication of whether the record is for a first test or retest following correction of a problem or issue.

5. Identification of the system, subsystem, assembly, or equipment.

6. Conditions under which the test was conducted, including (as applicable); ambient conditions, set points, override conditions, status, and operating conditions that impact the results of the test.

7. Systems and assemblies test results and performance and compliance with contract requirements.

8. Issue number, if any, generated as the result of the test.

9. Name(s) and signature(s) of witnesses and the person(s) performing the test.

B. Contractor shall participate and perform Cx related testing requirements as specified.

C. General Requirements for Mechanical, Controls, and Testing and Balance:

1. Construction and Acceptance Phases:

a. Provide assistance to CxA in preparing FPT procedures specified. Sample test forms are include in the project Cx Plan.

b. Develop full startup and initial checkout plan using manufacturer’s start-up procedures and Cx checklists for commissioned equipment. Submit to CxA for review and approval prior to startup.

c. During startup and initial checkout process, execute mechanical-related portions of PEC for the equipment and systems to be commissioned.

d. Perform and clearly document completed startup and system operational checkout procedure. Providing four copies of the results to the Owner.

e. Resolve any open punch list items before FPT. Air testing and balance shall be completed with discrepancies and problems remedied before FPT of respective air -related systems.

f. Provide skilled technicians to execute starting of equipment and to execute PFT. Ensure that technicians are available and present during agreed upon schedules and for sufficient duration to complete necessary tests, adjustments, and solutions to identified problems.

g. Maintain a log of events and issues of tests and related Cx activities. Submit handwritten reports of discrepancies, deficient or uncompleted work by others, contract interpretation requests, and lists of completed tests as specified.

h. Correct open issues and re-test as needed to prove compliance with system operational standards.

i. Prepare Operation and Maintenance Manuals and provide training for the Owner maintenance personnel and end-users per Section 01 7900.

j. Coordinate with equipment manufacturers to determine specific requirements to maintain validity of Warranty and notify the Owner.

k. Execute simulated seasonal FPT, witnessed by the Owner and the CxA, as specified. Document results and perform corrections as needed for system acceptance and make necessary adjustments to Maintenance and Operations Manuals and Record Drawings.

3.04 SENSOR CALIBRATION

A. Field-installed temperature, relative humidity, CO_2, pressure sensors, pressure gages, and actuators (dampers and valves) shall be calibrated using the methods described below. Calibration procedures shall be documented during execution of the Start-up and the PEC. Alternate methods may be used, if approved by the CxA.

B. Test instruments shall have had a NIST certified calibration within the last 12 months. Sensors installed in the unit at the factory with provided calibration certification need not be field calibrated.

C. Sensors:

1. Verify that sensor locations are appropriate and away from causes of erratic operation.

2. Verify that sensors with shielded cable are grounded only at one end.

3. For sensor pairs that determine a temperature difference, make sure they are reading within 0.2 degrees F of each other.

4. For sensor pairs that determine a pressure difference, make sure they are reading within 2 percent of each other.

5. Calibration: Put the equipment in operation. Make a reading with a calibrated test instrument within six inches of the site sensor. Verify that the sensor reading (via the permanent thermostat or gage) is within the tolerance listed in the table below of the instrument-measured value. If not, calibrate or replace sensor.

6. Tolerances:

Sensor	Required Tolerance (+/-)
Outside air, space air, duct air temps	0.4 degrees F
Watt-hour, voltage, and amperage	1 percent of design
Pressures, air, water and gas	3 percent of sensor range (inc. design value)
Flow rates, air	10 percent of sensor range (inc. design value)
Flow rates, natural gas	5 percent of sensor range (inc. design value)
Sound level	5 db - Type 1 meter (Per Calibrator Mfg.)
Domestic Hot Water Temperature	1.5 degrees F
Domestic Hot Water Pressures Water and Gas	3 percent of sensor range (inc. design value)
Flow Rates, Domestic Water	4 percent of sensor range (inc. design value)
Flow Rates	5 percent of sensor range (inc. design value)

3.05 ADJUSTING

A. Perform work required to rectify installations not meeting contract requirements at no additional cost to the Owner.

B. Corrective work shall be completed in a timely manner to permit completion of the Cx process.

C. If systems' Cx deadline, as defined in the Project Schedule, goes beyond the scheduled completion without resolution of the problem(s), the Owner reserves the right to obtain supplementary services or equipment to resolve the problem.

3.06 TRAINING

A. Provide training plan for systems to be commissioned as required in applicable Division 23 specification sections and Section 01 7900.

END OF SECTION

SECTION 23 08 13

ENVIRONMENTAL CONTROLS AND ENERGY MANAGEMENT SYSTEMS COMMISSIONING

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. General requirements for the Commissioning (Cx) of the Environmental Controls and Energy Management System (ECEMS), and interfacing with other systems such as, lighting controls and HVAC systems interconnection, including installation, start-up, testing and documentation according to Construction Documents and Commissioning Plan (CxP).

2. Standard procedures for the execution of commissioning work shall be in conformance with Division 01, Section 01 9113: General Commissioning Requirements. Coordinate work with the Commissioning Agent (CxA).

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 01 4523: Testing and Inspection.

3. Section 01 7700: Contract Closeout.

4. Section 01 7900: Maintenance and Operations Staff Demonstration and Training.

5. Section 01 9113: General Commissioning Requirements.

6. Section 23 0500: Common Work Results for HVAC.

7. Section 23 0513: Basic HVAC Materials and Methods.

8. Section 23 0800: HVAC Systems Commissioning.

9. Section 23 0900: Instrumentation and Controls.

10. Section 23 0923: Environmental Controls and Energy Management Systems.

11. Section 23 3000: Air Distribution.

12. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

13. Section 26 0500: Common Work Results for Electrical.

14. Section 26 0513: Basic Electrical Materials and Methods.

15. Section 26 0519: Low Voltage Wires (600 Volt AC).

16. Section 26 0526: Grounding and Bonding.

17. Section 26 0586: Motors and Drives.

18. Section 26 0800: Electrical Systems Commissioning.

19. Section 26 2419: Motor Control Centers and Motor Control Devices.

20. Project Commissioning Plan.

1.02 REFERENCES

A. The latest version of applicable codes, standards, and references: Inspections and tests shall be in accordance with the following applicable codes and standards, except as provided otherwise herein:

1. National Electrical Manufacturers Association – NEMA.
2. American Society for Testing and Materials – ASTM.
3. American National Standards Institute – ANSI.
4. California Electrical Code – CEC.
5. Occupational Safety and Health Administration – OSHA.
6. National Institute of Standards and Technology – NIST.
7. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE). – Building Management and Energy Management Systems Commissioning, ASHRAE Guideline.
8. California Building Code – CBC.
9. California Mechanical Code – CMC.
10. InterNational Electrical Testing Association (NETA) Acceptance Testing.

1.03 SUBMITTALS

A. Submittals shall include the following:

1. Required Cx submittals in accordance with Division 01 Specifications.
2. Copy of the Architect's reviewed and accepted submittals to the CxA via the OAR.
3. List of team members who will represent the Contractor in the Pre-functional and Functional Performance Testing, at least two weeks prior to the start of Pre-functional Equipment Checks.
4. Detailed manufacturer installation and start-up, operating, troubleshooting and maintenance procedures, checklist documentation and field checklist forms to be used by factory or field technicians, and a copy of full details of Owner-contracted tests, full factory testing reports, if any, and Warranty information, including responsibilities of Owner to keep Warranty in force, clearly defined.
5. Detailed manufacturer's recommended procedures and schedules for Pre-functional Equipment Checks, supplemented by Contractor's specific procedures, and Functional Performance Tests, at least four weeks prior to the start of Pre-functional Performance Tests.
6. System logic documentation and sequence of operations for review and approval.
7. Provide Level 1 passwords.
8. After facility's commission is complete, submit completed Pre-functional Equipment Checklists and Functional Performance Test checklists organized by system and by subsystem. Bind information in a single package. The results of failed tests shall be included along with a description of the corrective actions taken.

1.04 MEETINGS, SEQUENCING AND SCHEDULING

A. Meetings: Attend Cx meetings as required under Section 01 9113, any other related Sections and the CxP.

B. Sequencing and Scheduling: The work described in this Section shall begin only after work required in related Division 23 and 26 Sections have been successfully completed, and tests, inspection reports and Operation & Maintenance manuals required have been submitted and reviewed. The start-up and Pre-functional Equipment Checklists shall be completed and submitted to the Owner's Authorized Representative (OAR) prior to the Functional Performance Tests.

1. Coordinate electrical work with the work of other trades prior to scheduling of any Cx procedures.

2. Coordinate the completion of electrical testing, inspection, and calibration prior to start of Cx activities.

3. Cx activities shall be scheduled in accordance with project's Section 01 9113 and Cx plan.

1.05 QUALITY CONTROL

A. Comply with Owner's Quality Control Specifications.

B. Incorporate manufacturer's recommended Cx procedures for the systems and equipment to be commissioned under this Section.

C. Typical quality control procedures include but are not limited to the following:

1. Attend CxA progress and coordination meetings.

2. Establish trend logs of system schedules as required in Section 23 0923.

3. Demonstrate system operation and compliance with contract documents.

4. Manipulate systems and equipment to facilitate testing.

5. Provide instrumentation necessary for verification and performance testing.

D. Provide ECEMS technician(s) to work at the direction of the CxA for software optimization assistance for a minimum of 8 hours. Refer to Part 3 for a description of the software optimization.

E. Compensation for Retesting: Compensate Owner for site time necessitated by incompleteness of systems or equipment at time of Functional Performance Testing (FPT). Testing failures, which require on-site time for retesting, will be considered actual damages to the Owner. Parties under contract with the Owner who are affected by the retesting shall be included in the contract modification.

F. Allow sufficient time before final commissioning dates to complete electrical testing, inspection, and calibration to avoid delays in the commissioning process.

G. During the commissioning activities, provide labor and materials to make corrections when required, without undue delay.

1.06 COORDINATION

A. Coordinate the completion of electrical testing, inspection, programming and calibration prior to start of commissioning activities.

B. Coordinate factory field-testing per the requirements of this Section.

C. Coordinate commissioning efforts with CxA prior to commencing any activities.

PART 2 – PRODUCTS

2.01 TEST EQUIPMENT

A. Equipment to be used in the commissioning process shall meet the following requirements.

1. Provide test equipment as necessary for start-up and commissioning of the EMS system.

2. Provide testing equipment and accessories that are free of defects and are certified for use.

3. Provide testing equipment with current calibration labels as per NIST Standards; Equipment shall be calibrated on the manufacturer's recommended intervals with calibration tags affixed to the instrument. In the absence of calibration tags, calibration documentation shall be submitted to the CxA at least thirty days prior to use; this documentation shall include description and serial number of instrument and calibration date and time.

4. Testing equipment shall be maintained in good operating condition for the duration of the project.

5. Testing equipment shall be UL Listed.

B. Instrumentation required to verify readings and test the system and equipment performance shall be provided by the Contractor and made available to CxA. Generally, no testing equipment will be required beyond that required to perform Contractor's work under contract documents.

2.02 TESTING AND AIR BALANCING AND COMMISSIONING

A. Provide a portable operator's terminal or hand-held device to facilitate testing, adjusting, and calibration of controls. This device shall support functions and allow querying and editing of parameters required for proper calibration and start up.

B. Connections shall be provided local to the device being calibrated. For instance, for VAV boxes, connection of the operator's terminal shall be either at the sensor or at the terminal box. Otherwise, a wireless system shall be provided to facilitate this local functionality.

PART 3 – EXECUTION

3.01 COMMISSIONING PROCESS REQUIREMENTS

A. Work prior to commissioning:

1. Complete phases of the work so the system(s) can be started, tested, adjusted, balanced, and otherwise commissioned.

2. If contractual modifications are required to bring the system(s) to acceptance levels, such modifications shall be made at no additional cost to the owner.

3. Normal start-up services required to bring each system into full operational state:

a. Testing, motor rotation check, control sequences of operation, full and part load performance.

b. Commissioning will not start until each system is complete and start-up has been performed.

B. Pre-Commissioning responsibilities:

1. Inspection, calibration and testing of the equipment required to commission the following systems:

a. Environmental Controls and Energy Management Systems.

b. Interface and connections of EMS system with lighting controls, electric utility meter, gas meter, photo voltaic system, or as otherwise indicated in contract documents.

C. Commissioning Process Requirements:

1. Refer to Section 01 9113: General Commissioning Requirements and related Sections for information on meetings, start-up plans, Functional Performance Testing (FPT), operations and maintenance data, training requirements, and other Commissioning activities.

3.02 PREPARATION

A. Provide certified EMS technicians as required, with tools and equipment necessary to perform Cx activities specified.

B. Provide certified testing agency personnel and equipment factory representatives as required in the Cx plan and other related Sections.

C. Verify that work required in this Section and in Section 01 9113 is complete prior to starting of FPT.

D. Verify that complete operational manuals have been reviewed and accepted by the CxA as specified before starting FPT.

3.03 START-UP, TESTING, ADJUSTING, AND CALIBRATION

A. Work or systems installed shall be fully functioning prior to Demonstration and Acceptance Phase. Start, test, adjust, and calibrate work as described below:

1. Inspect the installation of devices. Review the manufacturer's installation instructions and validate that the device is installed in accordance with them.

2. Verify proper electrical voltages and amperages, and verify that circuits are free from faults.

3. Verify integrity/safety of electrical connections.

4. Coordinate with testing and air balance (TAB) subcontractor to obtain, Cx and fine-tune control settings that are determined from balancing procedures.

5. Test, calibrate, and set digital devices. Test equipment shall be 50 percent more accurate that the filed device over the same range. Calibrate each instrumentation device by making a comparison between the ECEMS display and the reading at the device. (e.g., if field device is plus or minus 0.5 percent accurate, test equipment shall be plus or minus 0.25 percent accurate over the same range). Record the measured value and displayed value for each device in the ECEMS start-up report.

6. Check and set zero and span adjustments for transducers and transmitters.

7. Dampers:

a. Check for adequate installation including free travel throughout range and adequate seal.

b. Where loops are sequenced, check for proper control with overlap.

8. Check each digital control point by making a comparison between the control command at the central command unit and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the ECEMS display. Record the results for each devise in the ECEMS start-up report.

9. For outputs to reset other manufacturer's devices (for example, VSDs) and for feedback from them, calibrate ranges to establish proper parameters. Coordinate with representative of the respective manufacturer and obtain their approval of the installation.

10. Verify proper sequences by using the checklists to record results and submit with ECEMS start-up report. Verify proper sequence and operation of specified functions.

11. Verify that safety devices trip at appropriate conditions. Adjust setpoints accordingly.

12. Tune control loops to obtain the fastest stable response without hunting, offset or overshoot. Record tuning parameters and response test results for each control loop in the ECEMS start-up report. Except from a startup, maximum allowable variance from setpoint for controlled variables under normal load fluctuations shall be as follows. Within 3 minutes of any upset (for which the system has the capability to respond) in the control loop, tolerances shall be maintained (exceptions noted):

    a. Duct air temperature: plus or minus 1 degree F.

    b. Space temperature: plus or minus 2 degrees F.

    c. Hot water temperature: plus or minus 3 degrees F

    d. Duct pressure: plus or minus 0.25 inches w.g.

    e. Water pressure: plus or minus 1 psid.

    f. Air flow control: plus or minus 5 percent of setpoint velocity.

    g. Space pressurization: plus or minus 0.05 inches w.g.

13. For interface and DDC control panels:

    a. Ensure devices are properly installed with adequate clearance for maintenance and with clear labels in accordance with the record drawings.

    b. Ensure that terminations are safe, secure and labeled in accordance with the record drawings.

    c. Check power supplies for proper voltage ranges and loading.

    d. Ensure that wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.

    e. Check for adequate signal strength on communication networks.

    f. Check for standalone performance of controllers by disconnecting the controller from the LAN. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.

    g. Ensure that outputs and devices fail to their proper positions/states.

    h. Ensure that buffered or volatile information is held through power outage.

    i. With system and communications operating normally, sample and record update/annunciation times for critical alarms fed from the panel to the Operator Interface.

    j. Check for adequate grounding of DDC panels and devices.

14. Operator Interfaces:

a. Verify that elements on the graphics are functional and are properly bound to physical devices or virtual points, and that hot links or page jumps are functional and logical.

b. Output specified ECEMS reports for review and approval.

c. Verify that the alarm printing and logging is functional and per requirements.

d. Verify that trends are archiving to disk and provide a sample to the CxA and owner for review.

e. Verify that e-mail alarm annunciation is functional.

f. Verify that functionality of remote operator interfaces.

g. Verify that required third party software applications required with the bid are installed and are functional.

h. Verify proper interface with fire alarm, lighting control system, photo voltaic system, gas and electrical meters.

B. Submit start-up test report: Report shall be completed, submitted, and reviewed prior to Substantial Completion.

3.04 SENSOR CHECKOUT AND CALIBRATION

A. General Checkout: Verify that sensor locations are appropriate and are away from causes of erratic operation. Verify that sensor with shielded cable are grounded only at one end.

B. Calibration: Calibrate sensors using one of the following procedures:

1. Sensors Without Transmitters – Standard Application: Make a reading with a calibrated test instrument within 6 inches of the site sensor at various points across the range. Verify that the sensor reading (via the permanent thermostat, gage, or ECEMS) is within the tolerances specified for the sensor. Where sensors are subject to wide variations in the sensed variable, calibrate sensor within the highest and lowest 20 percent for the expected range.

C. Sensor Tolerance: Sensors shall be within the tolerances specified for the device.

3.05 ECEMS DEMONSTRATION

A. Demonstrate the operation of the ECEMS hardware, software, and related components and systems to the satisfaction of the CxA and Owner. Schedule the demonstration with the Owner's representative two weeks in advance. Demonstration shall not be scheduled until hardware and software submittals and the start-up test report are reviewed. If the work fails to be demonstrated to conform with contract specifications, so as to require scheduling of additional site visits by the CxA and Owner's representative for re-demonstration, reimburse owner for reasonable local costs of subsequent CxA site visits as detailed elsewhere in these specifications.

B. Supply personnel and equipment for the demonstration, including, but not limited to, instruments, ladders, etcetera. Contractor-supplied personnel shall be competent with and knowledgeable of project-specific hardware, software, and the HVAC systems. Training documentation and submittals shall be at the job site.

C. Demonstration shall typically involve small representative samples of systems and equipment randomly selected by the owner and CxA.

D. The system shall be demonstrated following the same procedures used in the start-up test by using the Commissioning checklist. Demonstration shall include, but not necessarily be limed to, the following:

1. Demonstrate that required software is installed on ECEMS workstations. Demonstrate that graphic screens, alarms, trends, and reports are installed as submitted. Demonstrate directory structure and file system matches that submitted.

2. Demonstrate that points specified and shown can be interrogated or commanded (as applicable) from workstations, as specified, in less than the maximum response time.

3. Demonstrate correct calibration of input/output devices using the same methods specified for the start-up tests. A maximum of 10 percent of I/O points shall be selected at random by the CxA or owner for demonstration. Upon failure of any device to meet the specified end-to-end accuracy, an additional 10 percent of I/O points shall be selected at random by CxA for demonstration. This process shall be repeated until 100 percent of randomly selected I/O points have been demonstrated to meet specified end-to-end accuracy.

4. Demonstrate that DDC and other software programs exist at respective field panels. The DDC programming and point database shall be as submitted.

5. Demonstrate that DDC programs accomplish the specified sequences of operation including failure sequences.

6. Demonstrate that the panels automatically recover from power failure, as specified. Demonstrate alarms as specified.

7. Demonstrate that the stand-alone operation of panels meets the requirements of these Specifications. Demonstrate that the panels' response to LAN communication failures meets the requirements of these Specifications.

8. Identify access to equipment selected by CxA or by the owner. Demonstrate that access is sufficient to perform required maintenance.

9. Demonstrate that required trend graphs and trend logs are set up per the requirements. Provide a sample of the data archive. Indicate the file names and locations.

E. ECEMS demonstration shall be completed and prior to Substantial Completion.

F. Tests successfully completed during the demonstration will be recorded as passed for the Functional Performance Testing (FPT) and will not have to be retested.

3.06 RESOLUTION OF DEFICIENCIES

A. Maladjustments, misapplied equipment, or deficient Contractors performance may result in additional work being required for Cx acceptance.

1. Perform work required to correct the installations not meeting contract requirements at no additional cost to the Owner.

B. Corrective work shall be completed in a timely manner to permit completion of the Cx process.

1. Refer to Article 3.07 above, Section 01 9113, and Cx plan for retesting requirements necessary to achieve required system performance.

2. If the system's Cx deadline, as defined in the CxP, goes beyond the scheduled completion of Cx without resolution of the problem, the Owner reserves the right to obtain supplementary services or equipment to resolve the problem.

3.09 ECEMS ACCEPTANCE PERIOD

A. After approval of the ECEMS demonstration and prior to contract close-out acceptance phase shall commence. Acceptance period shall not be scheduled until HVAC systems are in operation and have been accepted, required cleaning and lubrication has been completed (i.e., filters changed, piping flushed, strainers cleaned, and the like), and Testing and Balancing report has been submitted and reviewed. Acceptance Period and its approval will be performed on a system-by-system basis if mutually agreed upon by the Contractor and the owner.

B. Operational Test: At the beginning of the Acceptance Phase, the system shall operate properly for two weeks without malfunction, without alarm caused by control action or device failure, and with smooth and stable control of systems and equipment in conformance with these specifications. At the end of the two weeks, forward the trend logs to the CxA for review and acceptance. CxA shall determine is the system is ready for Functional Performance Testing (FPT) and document any problems requiring Contractor attention.

1. If the systems are not ready for Functional Performance Testing (FPT), correct problems and provide notification to the owner's representative that problems have been corrected. The acceptance period shall be restarted at the mutually scheduled time for an additional one-week period. This process shall be repeated until CxA issues notice that the ECEMS is ready for Functional Performance Testing (FPT).

C. During the acceptance period, maintain a hard copy log of alarms generated by the ECEMS. For each alarm received, diagnose the cause of the alarm, and list on the log for each alarm the diagnosed cause of the alarm, and the corrective action taken.

3.10 TREND LOGS

A. Configure and analyze trends required under Section 23 0923.

3.11 TREND GRAPHS

A. Trend graphs as specified in Section 23 0923 shall generally be used during the acceptance phase to facilitate and document testing. Prepare controller and workstation software to display graphical format trends during the acceptance period. Trend graphs shall demonstrate compliance with contract documents.

B. Each graph shall be clearly labeled wit HVAC subsystem title, date, and times.

3.12 WARRANTY PHASE

A. Trending: Throughout the Warranty phase, trend logs shall be maintained as required for the acceptance period. Forward archive trend logs to the CxA and Owner for review. CxA or Owner will review these and notify Contractor of Warranty work required.

3.13 SOFTWARE OPTIMIZATION ASSISTANCE

A. Provide the services of an ECEMS technician at the project site to be at the disposal of the CxA and Owner. The technician is to make changes, enhancements, and additions to control unit or workstation software that has been identified by the CxA or Owner during the Construction and Commissioning of the project and that are beyond the specified contract requirements. The cost for this service to include a total of 40 hour will be included with the bid. Request for assistance shall be for contiguous or non-contiguous 8 hour days, unless otherwise mutually agreed upon by the Contractor, CxA, and OAR. The Owner Authorized Representative (OAR) shall notify Contractor two days in advance of each day of requested assistance.

B. The ECEMS technician provided shall be trained in the programming and operation of the controller and workstation software. If the ECEMS technician provided cannot perform

every software task requested by the CxA or Owner in a timely fashion, provide additional qualified personnel at the project site as requested by the CxA or Owner.

END OF SECTION

SECTION 23 09 00

HVAC INSTRUMENTATION AND CONTROLS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Temperature controls for air conditioning, heating, and ventilating systems as indicated. Work includes, but is not be limited to, the following:

1. Automatic control valves and automatically operated dampers.

2. Pneumatic or electric relays (magnetic starters excluded), electric or mechanical linkages, duct sensors, thermostats, dampers and motorized valves, and appurtenances and accessories.

3. Wiring outlet boxes and conduits for control systems, including wiring to connect magnetic starters to control systems.

4. Air compressor and receiver tank for pneumatic control systems, with appurtenances and air piping, including pressure regulator, automatic moisture eliminators, air line filters, relief valves, pressure gages and shut-off valves, drains, pneumatic piping distribution to control equipment, etcetera.

5. Testing and adjusting temperature control system.

6. Furnishing record drawings and operational data of systems as installed and finally adjusted.

7. Formal instruction of Owner personnel in operation of equipment.

B. Following items are specified in other Sections:

1. Magnetic starters, contacts, power relays and variable resistors or controllers for motors, and other electrical devices.

2. Load carrying wiring for above listed devices and wiring for starting switches not interconnected with temperature control system. (Division 26: Electrical).

3. Electrical power to control panels and other equipment. (Division 26: Electrical).

4. Installing automatic valves in pipelines.

5. Installing automatic dampers.

6. Automatic controls and valves not connected with comfort heating, ventilating, and air conditioning systems.

7. Packaged self contained equipment specified complete with temperature controls.

8. DDC control equipment specified in Section 23 0923: Environmental Control and Energy Management Systems.

C. Related Requirements:

1. Division 01: General Requirements.

2. Division 26: Electrical.

3. Section 23 0500: Common Work Results for HVAC.

4. Section 23 0513: Basic HVAC Materials and Methods.

5. Section 23 0800: HVAC Systems Commissioning.

6. Section 23 0923: Environmental Control and Energy Management Systems.

8. Section 23 3000: Air Distribution.

9. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

1.02 SUBMITTALS

A. Provide in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

1. Complete list of items proposed to be furnished and installed under this Section.

2. Manufacturer's specifications and other data required to demonstrate compliance with specified requirements.

3. Manufacturer's printed installation procedures.

B. Shop Drawings: Provide Shop Drawings, in the same size as the Drawings, prepared, signed and sealed by a mechanical engineer licensed in the State of California. Shop Drawings shall indicate temperature control diagrams, complete with equipment appurtenances required for system. Include sequence of operation description for each system. Submit in accordance with of Division 01.

C. Sequence of Operation: Provide complete, detailed, step-by-step sequence of operation for each item of equipment.

D. Operating Instructions: Comply with provisions of Section 23 0500: Common Work Results for HVAC. Explain and demonstrate operation of system to Owner representatives as required.

E. Guarantee: Refer to Section 23 0500: Common Work Results for HVAC.

1.03 QUALITY ASSURANCE

A. Manufacturer and Installer Qualifications: Comply with provisions stated under Section 23 0500: Common Work Results for HVAC.

1.04 PRODUCT HANDLING

A. Production, Replacement, Delivery and Storage: Refer to Section 23 0500: Common Work Results for HVAC and Section 23 0513: Basic HVAC Materials and Methods.

PART 2 – PRODUCTS

2.01 TEMPERATURE CONTROLS

A. Provide temperature controls of pneumatic, electric, electronic microprocessor - DDC type, or a combination thereof, as indicated on Drawings, to provide required sequences or operational control.

2.02 MANUFACTURERS

A. Equipment in system shall be of same manufacturer or their standard furnished items. Testing, initial start-up, and adjusting of control system shall be under continuous observation of the mechanical engineer responsible for Shop Drawing preparation.

B. Electronic, or direct digital microprocessor based control equipment shall be one of following manufacturers, unless otherwise noted:

1. Honeywell, Inc.

2. Johnson Controls, Inc.

3. Invensys.

4. Equal.

2.03 ELECTRIC EQUIPMENT AND ACCESSORIES

A. Electric control equipment and accessories include, but are not limited to, the following:

1. Electric control devices as indicated on Drawings and described herein, including thermostats, temperature controllers, valve and damper operators, switches, relays, and control panels for instruments as required to provide a complete and operable system.

2. Wiring and conduit, unless otherwise noted, or control systems including wiring required, to connect magnetic starters, specified in other sections, to control systems.

B. Room Thermostats:

1. Thermostats for unitary air conditioning units shall be as specified in Section 23 8000: Heating, Ventilating and Air Conditioning Equipment. Thermostats located on outside walls shall be installed on insulated backplates or as specified by unit manufacturer.

2. Provide the following room thermostats for each specific application as follows, where manufacturer’s thermostats are not specified in Section 23 8000:

a. Honeywell, Johnson Controls, Invensys, or equal, for heating only; Honeywell, Johnson Controls, Invensys, or equal, for cooling only.

b. Honeywell, Johnson Controls, Invensys, or equal, microelectronic commercial thermostat with sub-base for electronic control of 18 to 30 VAC single zone HVAC equipment. Thermostat is either stand alone, or

arranged in a temperature averaging network consisting of 2, 3, 4, 5, or 9 sensors for corresponding rooms or zones.

c. Honeywell, Johnson Controls, Invensys, or equal, proportional thermostat, low-voltage, 3-wire controller for valve, damper motors and balancing relays. Unit manufacturer may specify or recommend optional thermostat.

d. Provide tamper-proof locking thermostat guards for items specified above. Covers shall be opaque beige plastic in student occupied areas, clear plastic cover in administrative areas. Provide Honeywell, Johnson Controls, Invensys, or equal, universal thermostat guards or as recommended by thermostat manufacturer.

C. Duct-Mounted Thermostats: Duct-mounted thermostats shall be modulating or 2-position as required to accomplish sequence of operation.

D. Valve and Damper Motors: Damper motors shall be furnished with oil-immersed gear trains and ample capacity to handle required loads under normal operating conditions. Where indicated, spring return type motors are to be provided. Valve motors to be 2-position or proportional, spring return or now spring return.

E. Time Clocks:

1. TC-1: Time clock shall be solid-state digital electronic type capable of 28 on/off set points to be distributed through the week, complete with a day repeat feature, time and set points to be adjustable to nearest minute with a minimum on duration of one minute and a maximum of 7 days. UL Listed, enclosed in standard case NEMA Type 1, Intermatic, Tork, Paragon, or equal, with battery operated carry-over.

2. TC-2: Interval timer (bypass), except for window units, shall be manually set and spring operated type, 0 to 6 hours, and without hold feature. Provide Intermatic, M.H. Rhodes, Paragon, or equal.

3. TC-3: Bypass timer for window type air conditioner units shall be DPDT switch configuration, 12 hours, and without hold feature. Provide M.H. Rhodes, Intermatic, Tork, or equal. Provide double gang box as specified in Division 26: Electrical.

F. Wiring: Wiring in connection with control systems regardless of voltage, except power supply circuits, is part of the Work of this Section. Wiring shall comply with Division 26: Electrical.

G. See Section 23 0923 for DDC/Electronic controls.

PART 3 – EXECUTION

3.01 TEMPERATURE CONTROL SYSTEM INSTALLATION

A. Control system shall be installed in accordance with control manufacturer's instructions and reviewed Shop Drawings.

3.02 CONTROL PANELS OR CABINETS

A. Switches, clocks, temperature control instruments, and remote bulb thermometers, whose capillary tubes are less than 25 feet in length, shall be mounted in control panels with required wiring, piping, and tubing behind panel. Control panels shall be galvanized steel sheet metal, with light gray hammertone enamel finish, not lighter than 14 gage. Control panels shall be UL Listed. Panels shall be attached to wall at locations indicated, or as required. Adjustable apparatus shall be provided with P-Touch, or equal, labels to indicate function. A clear space of 30 inches in front shall be maintained.

B. Control cabinets shall be provided with door locks. Door locks shall be the flush type, latched, 5/8 inch for metal door, keyed to a Corbin Cat. No. 60 key. Cabinet shall be prime coated and finish painted as specified in Section 09 9000: Painting and Coating. Cabinet shall be flush mounted.

3.03 ROOM THERMOSTAT

A. Room thermostats shall be wall mounted at a height of approximately 4 feet. Room thermostats are not permitted on outside walls, at marker boards, between shelving, in recesses or above heat producing equipment. Units shall be installed as close to edge of tack board as possible. Room thermostats shall be furnished with tamperproof cover. Thermostats shall be furnished with set point windows and integral thermometers. Office thermostats shall be furnished with extended adjustment knobs; others shall have key adjustments. Room thermostats shall be furnished with non-switching sub-bases.

3.04 COORDINATION

A. Coordinate this Work with other aspects of system balancing to obtain a complete operating mechanical system in accordance with design intent, including coordinating with balancing of the system.

B. Coordinate this Work with all aspects of alarm, fire alarm, and smoke detector, specified in Division 26: Electrical.

3.05 SEQUENCE OF OPERATION

A. Each system, pneumatic, electric, electronic, or direct digital control shall operate as graphically and described on Drawings and in accordance with reviewed sequence of operation.

3.06 CONTROL SYSTEM ADJUSTMENTS

A. Perform adjustments under operating conditions to provide sequence of operation for controls indicated. If required operating conditions cannot be obtained before Substantial Completion, due to outdoor seasonal temperatures, return to the Project site when requested by the Owner and readjust control system when outdoor temperatures will permit proper operating conditions. Start readjustment within seven calendar days after notification. Final settings of controls and pressure ranges indicated by gages shall be indicated on project record documents.

3.07 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

3.08 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 23 09 23

ENVIRONMENTAL CONTROLS AND ENERGY MANAGEMENT SYSTEMS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Environmental controls and energy management systems, including equipment, materials, installation, start-up, testing, documentation and training according to construction documents. The project drawings establish the scope of HVAC controls work in conjunction with the scope of work indicated in Section 23 0900: HVAC Instrumentation and Controls. This Section complements the requirements of Section 23 0900, and construction drawings for controls and system communications.

B. Related Requirements:

1. Division 01: General Requirements.
2. Section 01 4523: Testing and Inspection.
3. Section 01 7900: Maintenance and Operations Staff Demonstration and Training.
4. Section 01 9113: General Commissioning Requirements.
5. Section 21 1313: Fire-Suppression Sprinkler Systems.
6. Section 23 0500: Common Work Results for HVAC.
7. Section 23 0513: Basic HVAC Materials and Methods.
8. Section 23 0800: HVAC Systems Commissioning.
9. Section 23 0813: Environmental Controls and Energy Management Systems Commissioning.
10. Section 23 3000: Air Distribution.
11. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.
12. Section 26 0500: Common Work Results for Electrical.
13. Section 26 0513: Basic Electrical Materials and Methods.
14. Section 26 0519: Low-Voltage Wires (600 Volt AC).
15. Section 26 0526: Grounding and Bonding.
16. Project Commissioning Plan (CxP).

1.02 REFERENCES

A. The latest version of applicable codes, standards, and references. Inspections and tests shall be in accordance with the following applicable codes and standards, except as provided otherwise herein.

1. International Electrical Testing Association – NETA.

2. National Electrical Manufacturers Association – NEMA.

3. American Society for Testing and Materials – ASTM.

4. Institute of Electrical and Electronics Engineers – IEEE.

5. American National Standards Institute – ANSI.

6. National Electrical Safety Code – NESC.

7. California Building Code – CBC.

8. California Electrical Code – CEC.

9. California Mechanical Code – CMC.

10. Insulated Cables Engineers Association – ICEA.

11. Occupational Safety and Health Administration – OSHA.

12. National Institute of Standards and Technology – NIST.

13. National Fire Protection Association – NFPA.

14. American Society of Heating, Refrigerating, and Air-Conditioning Engineers – ASHRAE
(The HVAC Commissioning Process, ASHRAE Guideline).

15. International Building Code – IBC.

16. International Mechanical Code – IMC.

17. InterNational Electrical Testing Association (NETA) Acceptance Testing.

1.03 SUBMITTALS

A. Provide in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

B. Shop Drawings shall include but not limited to:

1. Cover page with legend, common notes, symbol schedule, and drawing index.

2. Complete point to point environmental controls and energy management network communication diagram(s) for Distributed Digital Controls (DDC) of each system:

a. Identify all components.

b. Indicate conduit and wire characteristics, sizes and quantities.

c. Provide bill of materials.

3. Floor plans showing control panels and intercommunication wiring.

a. Show system(s) interface connections.

4. Valve Schedules where required.

5. Operations and Maintenance Manuals.

6. As-built submittal drawings.

7. Installation Instructions of each control device.

8. PC Workstation.

9. Software flow diagram of each unique system sequence of operation.

10. Software licenses and electronic keys.

11. Supplemental local or factory training schedule for post warranty support.

12. A complete list of recommended spare parts with pricing for the Owner's use in keeping the environmental control system downtime to a minimum.

13. Composite CD-ROM with AutoCAD drawings in a ".dwg" format.

1.04 QUALITY CONTROL

A. Contractor shall have adequate experience installing systems of similar size and complexity with the control product line proposed for this project.

1. Qualifications of Installer: Minimum five years experience installing products and systems of similar scope and complexity.

2. Installer shall submit certification from the equipment manufacturer indicating that installer is an authorized representative of the equipment manufacturer and is trained on network applications.

3. Installer shall maintain a fully equipped service organization capable of furnishing repair service to the equipment and shall maintain a spare set of major parts for the system at all times.

4. Installer shall furnish a letter from manufacturer of equipment certifying equipment has been installed according to factory standards and that system is operating properly.

5. Contractor shall have completed and commissioned a minimum of 10 service agreements that provide similar support services to those needed for this project.

6. System startup and testing shall be performed under the direct observation of the Project Inspector and OAR.

B. Materials and equipment installed shall be new.

C. System installation shall not begin until Shop Drawings are submitted and reviewed by the Architect or Engineer of Record.

D. Components for Direct Digital Control (DDC) shall comply with ASHRAE standards.

E. The installer shall provide the system components required by code and for the life safety of the service personnel.

F. System shall be able to interface with open protocol BACnet systems.

G. Provide components required by code for the system to perform the required sequence of operations. Install, test and adjust the system accordingly.

H. System components shall operate per industry standards. The standards shall be as defined by ASHRAE, SMACNA, AABC, NEBB, TABB, and the literature of the manufacturers listed in this Section.

I. Provide Field Engineering Tools for user modification of the system.

1.05 WARRANTY

A. Components, system software, and parts shall be guaranteed against defects in materials, fabrication, and execution for three years from date of system acceptance. Provide labor and materials to repair, reprogram, or replace components at no charge to the Owner during the warranty period. Corrective software modifications shall be updated on user documentation and archived software disks.

B. The Installer shall provide one year labor warranty.

C. Provide a list of applicable warranties for equipment and components, this list shall include warranty information, names, addresses, telephone numbers, and procedures for filing a claim and obtaining warranty services.

D. Respond to the Owner’s request for warranty service within four hours during normal business hours. Submit records of the nature of the call, the work performed, and the parts replaced or service rendered.

1.06 TRAINING

A. Provide a competent instructor who is factory trained and has comprehensive knowledge of system components and operations to provide full instructions to designated personnel in the system operation, maintenance, and programming. Training shall be specifically oriented to installed equipment and systems.

1. Provide four hours of onsite owner familiarization and training for the installed system. Training shall include system overview, time schedules, override commands, emergency operation, and programming and report generation. Owner employees attending this training session shall be provided with the following documentation:

    a. System layout point to point connection diagram.

    b. System components cut sheets.

    c. Operations and maintenance data.

2. Programmer and maintenance training shall include database entry; trend logs application programs, diagnostic routines, reporting, failure recovery and calibration.

    a. Provide a 16 hours training session as follows:

        1) Training session shall accommodate a minimum of 20 personnel and be facilitated at a location no more than 50 miles from the Project Site. Obtain Owner's approval for training locations exceeding 50 miles. In such cases, the Contractor shall be responsible for transportation expenses.

        2) Training shall cover instruction, theory, and expose the trainees to system's features, components, architecture, operations, programming, report generation, communications, and any other pertinent information required for the operations and maintenance of the system.

        3) Instructor(s) shall give the trainees the opportunity to practice on a simulated or actual (installed) system.

        4) The training session shall cover, but not be limited to the following instruction modules or sessions:

            a) System Architecture:

                (1) System layout and components interrelations and hierarchical structure.

                (2) Controllers interfacing and functions.

                (3) Server functionality and data management, error messages, and alarm conditions.

                (4) Connectivity and communication losses.

            b) User Operations:

                (1) Familiarization and navigation with the EMS operating System.

(2) Window panes, menus, navigation buttons, alarm response windows, system passwords and accessibility features and options, monitoring and managing data points (inputs, outputs, numeric values, time and date, strings).

(3) Views: Provide sufficient information as to train staff on how and where to access programs, functions, adjust or alter diagnostic points and related data, override messages, reports and actions taken.

c) Trending: Setting trend(s) intervals, accessing data trends and history logs for diagnosis points or groups, and reporting. Working with trended data graphical displays, including but not limited to hiding points, setting display types and colors, viewing and setting scales.

d) Graphics: Standard symbols and color codes, graphics customization, how and where to access and manage the system with the graphic displays, including changing points and values, using HOA switches and viewing results, mapping to or with other graphic sources and functions, including groups, navigation, sequence of operations, and displays and reports.

e) Alarms: Reading and interpreting alarms, acknowledging and silencing alarms, routing and setting priorities, viewing and responding e-mailed and paged alarms.

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Environmental controls and energy management systems shall be approved products of Alerton, Automated Logic, Honeywell, Johnson Controls, TAC, Trane, Carrier, or equal.

2.02 SYSTEM ARCHITECTURE

A. The system shall be capable of providing a peer-to-peer network of distributed stand-alone DDC controllers that meet ANSI/ASHRAE Standard 135 for open protocol communications.

B. The primary network communications bus for DDC systems shall be industry standard Ethernet protocol operating at 100MBPS. Secondary bus configuration shall be MS/TP with a minimum speed of 38Kb. A maximum of 32 controllers shall be connected to any one MS/TP bus.

C. The supplied computer software shall employ object-oriented technology (OOT) for representation of data and control devices within the system. For each global, system or unitary controller, provide a PICS document showing the installed device's compliance level. Minimum compliance is Level 3 with the ability to support data read and write functionality.

D. Maximum acceptable response time from any alarm occurrence (at the point of origin) to the point of annunciation shall not exceed three seconds for network connected controllers or user interfaces.

E. Projects requiring standalone controls shall not include workstations or DDC network controllers.

F. The system shall be able to interface with subsystems that utilize ANSI/CEA-709.1: Control Network Protocol Specification.

2.03 USER INTERFACE WORKSTATION

A. The Operator Workstation shall include a computer with an Intel processor, keyboard, mouse, 24 inch LCD color display and the latest version of Microsoft Windows operating system software. The workstation shall connect to the network through an internal 10/100MBPS Ethernet interface card. Provide a Graphical User Interface (GUI) application program for intuitive operation of the network system.

B. Software licensing shall be provided for local or remote unlimited simultaneous users of the system, unlimited future point expansion, user graphical display generation and non-vendor controllers. Licenses and electronic keys shall be included with the M&O manuals for project acceptance. Conditional Licenses will not be acceptable.

C. The system shall be programmed to email selected alarms to designated response personnel.

D. Provide a Web Server to automatically convert system displays on the workstation to an Internet page readable from standard PC browsers. The server shall be a separate device to provide security protection for the building system from outside hackers.

1. Coordinate individual system components IP addresses, switch port assignments, security settings such as but not limited to SNMP alarm delivery, HTTPS/SSL settings, VLAN assignment and authorized IP address ranges with the Owner's Information Technology Division. Coordination activities with ITD shall be executed through the OAR.

2. Provide IP address label on the interior of each cabinet door or equipment.

3. The system shall support the ability to notify school or Owner designated personnel by SMS or Email messages, utilizing the Owner's mail server when problems or situations that require immediate attention arise.

E. Operator Workstation shall display data associated with the project as called out on drawings or object type list supplied. Graphic files shall be created using digital, full color photographs of system installation, AutoCAD or Visio drawing files of field installation drawings and wiring diagrams from as-built drawings. Operator's workstation shall display data using three-dimensional graphic representations of mechanical equipment. System shall be capable of displaying graphic files, text, trend data and dynamic object data together on each display screen with animation of equipment operation.

F. Controllers shall be programmed using graphical software tools that allow connection of function blocks for visual sequencing of control logic. Function blocks shall display real time data and be animated to show status of data inputs and outputs when in real time operation. Animation shall also show change of status on logic devices and countdown of timer devices in a graphical format.

G. Operator Tracking Log shall record operator changes to the system for future review. This shall include, but not be limited to setpoint changes, time schedule overrides, alarm limits, etc.

H. The system shall be equipped with a battery back-up source capable of providing 30 minutes of operation (computer and monitor) in the absence of normal power, to allow for an orderly shut down and data back-up.

2.04 GLOBAL CONTROLLER

A. Building controllers shall incorporate the functions of a 3-way BACnet router. Controller shall route BACnet messages between the high-speed LAN (Ethernet 100MHz), master slave token passing (MS/TP) LANs, a point-to-point (PTP/RS-232) connection and telephone modem.

B. Provide global control strategies for the system based on information from any point objects in the system. Programming shall be object-oriented using graphical control function blocks. Global strategies shall include, but not limited to unit scheduling, electrical demand limiting, optimized start-stop of equipment, central plan reset control, etc.

C. Battery shall retain static RAM memory and real-time clock functions for a minimum of 1.5 years (cumulative). Battery shall provide up to five minutes of powerless operation for orderly shutdown and data backup.

D. Each building controller shall support a minimum of 250 BACnet Schedule Objects and 250 BACnet Calendar Objects.

E. Each building controller shall log a minimum 1,000 trend logs. Any point object in the system (real or calculated) may be logged. Sample time interval shall be adjustable at the operator's workstation. Building controller shall periodically upload trended data to networked operator's workstation for long term archiving if desired. Archived data shall be available for use in third-party spreadsheet or database programs.

F. Alarms may be generated within the system for any object change of value or state either real or calculated. This includes events such as analog object value changes, binary object state changes and various controller communication failures. Each alarm may be automatically dialed out to a telephone pager or emailed to any Internet PC computer.

G. Provide a 1.5 KVA UPS with battery back-up capability to provide a minimum of 30 minutes of operation (computer and monitor) for orderly shutdown and data backup. Make connections and test the system for proper operation in the presence of the Project Inspector.

H. The global controller shall be equipped with electrical demand limiting capacity interface features capable of receiving KW demand pulse signals from the facility utility meter.

1. The system shall include a demand-limiting program with at least two types of load shedding. The following options shall be available:

a. Shed/Restore equipment in digital format. It shall include at least 5 priority levels of equipment shedding. Load shedding on a given priority level shall include two methods. In one the loads shall be shed and

restored in a “first-off/first-on” mode and in the other; the loads shall be shed/restored in a linear fashion.

b. Adjust operator selected control setpoints in analog format based on energy usage when compared to shed and restore settings.

c. Shedding may be implemented independently on each and every zone or piece of equipment connected to the system.

d. Status of every load shed shall be capable of being displayed on every operator terminal connected to the system. Statuses shall be displayed along with the English description of each load.

2.05 APPLICATION (system and unitary) DDC CONTROLLERS.

A. Application controllers shall include universal inputs with 10-bit resolution that accept 3K and 10K thermistors, 0 to 10VDC, 0 to 5 VDC, 4 to 20 mA and dry contact signals. Any input on a controller may be either analog or digital with a minimum of three inputs that accept pulses. Controller shall also include support and modifiable programming for interface to intelligent room sensor with digital display. Controller shall include binary and analog outputs on board. Analog outputs shall be switch selectable as either 0–10VDC or 0–20mA. Software shall include scaling features for analog outputs. Application controller shall include a supply voltage to power external sensors.

B. Program sequences shall be stored in EEPROM or flash memory. No batteries shall be needed to retain logic program. Controller shall execute program sequences 10 times per second and be capable of multiple PID loops for control of multiple devices. Calculations shall be completed using floating-point math. Programming of application controller shall be completely modifiable in the field over the installed BACnet LANs or remotely via modem interface.

C. Central Plant Controllers shall interface to chiller gateways. Point objects shall reside in the central plant controller. Hand-Off-Auto switches shall be provided for direct wired output control circuits.

D. Controllers for VAV boxes shall include one onboard airflow sensor microprocessor driven and pre-calibrated at the factory. Pre-calibration shall be at 16 flow points as a minimum. Factory calibration data shall be stored in EEPROM. Calibration data shall be field adjustable to compensate for variations in VAV box type and installation. Calibration parameters shall be adjustable through intelligent room sensor. Operator workstation, portable computers and special hand-held field tools shall not be needed for field calibration. Boxes shall be controlled using pressure independent control algorithms and flow readings shall be in CFM

E. Controllers for Dual Duct boxes shall include two onboard airflow sensors and function similar to the VAV box controller. Multiple VAV box controllers or controllers with remote airflow sensors are not acceptable.

2.06 TEMPERATURE SENSORS

A. Temperature sensors shall be 10K ohm thermistor factory-calibrated to within 0.5 degrees F, totally interchangeable with housings appropriate for the application.

B. Wall sensors shall be installed 48 inches above finished floor. Duct sensors to be installed such that the sensing element is in the main air stream. Immersion sensors to be installed in wells filled with thermal compound. Outside air sensors shall be installed away from exhaust or relief vents, not in an outside air intake and in a location that is in the shade most of the day.

2.07 CURRENT SWITCH

A. Current sensing switch shall be self-powered with solid-state circuitry and a dry contact output. A multi-turn setpoint adjustment shall set the trip point status. An LED shall indicate the on or off status.

2.08 CONTROL RELAY

A. The relay shall be contained in a plenum rated NEMA 1 enclosure with a ½" NPT conduit fitting. Coil voltage shall be 24 or 120 VAC with a contact rating of 10A. An LED on the enclosure cover shall indicate the relay is energized.

2.09 ENCLOSURES

A. Controllers, power supplies and relays shall be mounted in dedicated NEMA enclosures when located in a clean dry indoor environment. Indoor enclosures shall be NEMA 12 when installed in other than a clean environment.

B. Enclosures for outdoor applications shall be rated NEMA 3R and be mounted on the north exposure of the controlled unit.

C. Enclosures shall have hinged, locking doors with common keying for control panel on the Project Site.

D. Enclosures shall have permanently affixed to the door an engraved nametag identifying the equipment served. The nametag shall be a minimum 1 inch by 3-inch with ½ inch lettering.

PART 3 – EXECUTION

3.01 CONTROLS INSTALLATION

A. Wiring methods for control system shall be as defined in the Division 26 specifications. Wire types shall conform to manufacturers' recommendations.

B. Mount control panels adjacent to associated equipment on vibration-free walls or freestanding angle iron supports. One cabinet may accommodate more than one system in same equipment room. Control panel assemblies must be UL listed.

C. Provide software and hardware required to provide controls and monitoring of diagnostic points indicated in specification Section 23 8000.

D. Coordinate with Division 26 electrical installer so that "Hand/Off/Auto" selector switches are installed to override automatic interlock controls when switch is in the "Hand" position. Safety shutdown interlock wiring shall disable the equipment regardless of the position of the H-O-A switch.

3.02 ROOM SENSORS INSTALLATION

A. Room sensors shall be wall mounted at a 48-inch height above finished floor. Room sensors are not permitted on outside walls, at chalkboards, between shelving, in recesses or above heat producing equipment. Coordinate with Division 26 for sensor or thermostat mounting adjacent to light switches.

3.03 COORDINATION

A. Coordinate the work with other aspects of mechanical, electrical, fire-life safety and security systems, and photo voltaic systems to obtain a complete and operating system in accordance with the contract documents.

B. Meet with the OAR and school principal and other school staff to determine when each zone or building will be occupied so scheduling of the operation of heating, ventilating and air conditioning equipment may be provided at the proper times.

3.04 DDC CONTROL SYSTEM ADJUSTMENTS

A. Make adjustments under operating conditions to provide sequence of operation for each control system per design intent. If required operating conditions cannot be obtained prior to completion date of the contract due to outdoor seasonal temperatures, return to the job site when requested by the Owner and re-adjust control system when outdoor temperatures will permit proper operating conditions. Start re-adjustment within seven calendar days after notification.

3.05 PERFORMANCE AND ACCEPTANCE:

A. Test and calibrate each device including but not limited to the following for proper operation, connection, signal value or response.

1. Building Controllers.
2. Custom Application Controllers.
3. Application Specific Controllers.
4. Input / Output Devices. (Sensors, actuators and monitoring devices)
5. Operator Interfaces.

B. Verify that systems are standalone and operable upon network failure.

C. Verify that systems return to normal operation automatically upon resumption of network operation or return of power.

D. Test each system for functions of the required control sequence of operation either by normal control operation or forced operation as required. Log and submit results.

E. Test the network for connectivity, data transmission rates, input/output responses, and other appropriate parameters Failure modes, including network failure, individual control system failure, and power outages, shall be simulated and responses logged, with any effects on network operation noted and corrected.

F. Test each preprogrammed time and holiday schedule.

G. Commissioning requirements of Divisions 01, 23, and 26 apply to this Section.

H. Schedule of Responsibilities: Refer to Appendix A. The schedule identifies the responsibilities of the Contractor for the installation of the environmental controls and energy management system. Deviations and clarifications of this schedule only if allowed by the OAR, provided trade contractor coordination and schedule requirements are met. Submit a record copy of the Schedule of Responsibilities to the OAR at the commencement of this Section's Work.

3.06 WIRING AND INFRASTRUCTURE

A. Provide necessary wiring, terminations, connections and conduit infrastructure for the complete system as indicated in the construction documents.

B. Exterior cables whether above or below ground level shall be rated for exterior applications. When entering a building provide a code sized pull box with necessary hardware to transition exterior rated cables to interior applications.

C. Underground EMS cables are permitted to be installed with lighting control wiring in underground applications. Provide innerduct to separate EMS cables from lighting control system cables.

3.07 DATA LOGGING REQUIREMENTS

A. The system must be capable of storing the system's collected and diagnosis data for a minimum of seven days.

B. Program the system for a standard seven day schedule including holydays.

3.08 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off Project Site.

3.09 PROTECTION

A. Protect Work of this Section until Substantial Completion.

END OF SECTION

APPENDIX A

SCHEDULE OF RESPONSIBILITIES

	ITEM	FURNISH BY	INSTALL BY	POWER BY	CONTROL WIRING BY
1	Magnetic Motor Starters:				
	a. Automatic controlled, with or without HOA switches.	E	E	E	DDC
	b. Manually controlled	E	E	E	N/A
	c. Manually controlled furnished as factory wired unit equipment	M	M	E	E
	d. Special duty type (part winding, multi-speed, etc.)	M	See Note 1	E	See Note 1
	e. Adjustable frequency drives with or without manual bypass.	DDC	E	E	DDC
	f. Domestic booster pump. Motor Controls	M	M	E	See Note 2 DDC
2	Line voltage contactors.	E	E	E	DDC
3	Control relay transformers (other than starters).	DDC	DDC	E	DDC
4	Control and Instrumentation panels	DDC	NI	E	DDC
5	Automatic control valves, automatic dampers and damper operators, solenoid valves, insertion temperature and pressure sensors including wells	DDC	M	E	DDC
6	Control interlock wiring between chillers, pumps, cooling towers, fans and air handling units and other miscellaneous mechanical equipment.	DDC	DDC	E	DDC
7	Duct Smoke Detectors	E	M	E	E
8	Dampers				
	a. Control Dampers	M	M	N/A	DDC
	b. Smoke Dampers and Combination Fire/Smoke Dampers	M	M	E	E
9	Airflow Stations with transmitter.	M	M	E	DDC
10	Air terminal devices (I.e., VAV and fan powered boxes).	M	M	E	DDC
11	Intelligent Devices and Control Units provided with packaged mechanical equipment such as: Large VAV and constant volume package units Boilers and Chillers.	M	M	E	NI
12	Intelligent Devices and Control Units not provided by equipment manufacturer such as: Air handling units, Heat pumps, AC units (small < 20 tons), Air terminal units (VAV boxes)	DDC	DDC	E	DDC
13	Intelligent Devices and Control Units provided with electrical systems such as: Occupancy / motion sensors, Lighting Control Panels, Switches and dimmers, Switch Multiplexing Control Units, Door Entry Control Units.	E	E	E	DDC
14	Gateways for proprietary non-BACnet equipment	M	M	E	DDC
15	Communications network devices such as Routers, Bridges and Repeaters.	DDC	DDC	DDC	DDC

Abbreviations	
DDC	DDC Contractor (controls contractor)
M	Mechanical Contractor
E	Electrical Contractor
N/A	Not Applicable

Notes:

1. Magnetic motor starters (special duty type) shall be set in place under electrical division except when part of factory wired equipment, in which case they shall be set in place under mechanical division.
2. Where a remote motor disconnect is required in addition to the one provided integral to a Variable Frequency Drive (VFD), controls contractor shall provide the necessary control interlock between the disconnects.

SECTION 23 30 00

AIR DISTRIBUTION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Provide ductwork and appurtenances required for a complete air transmission and distribution system for the heating, ventilating, and air conditioning systems indicated on Drawings and as specified.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 09 9000: Painting and Coating.

3. Section 23 0500: Common Work Results for HVAC.

4. Section 23 0800: HVAC Systems Commissioning.

5. Section 23 0513: Basic HVAC Materials and Methods.

6. Section 23 0548: HVAC Sound, Vibration and Seismic Control.

7. Section 23 0700: HVAC Insulation.

8. Section 23 0900: HVAC Instrumentation and Controls.

9. Section 23 0923: Environmental Control and Energy Management Systems.

10. Section 23 8000: Heating, Ventilating and Air Conditioning Equipment.

1.02 SUBMITTALS

A. Provide in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

B. Manufacturer's Data:

1. Complete list of items to be furnished and installed under this Section. Material lists that do not require performance data shall include manufacturer names, types and model numbers.

2. Manufacturer's specifications and other data required to demonstrate compliance with specified requirements.

3. Literature shall include descriptions of equipment, types, models, sizes, capacity tables or curves marked to indicate performance characteristics, electrical requirements, options selected, space requirements, including allowances for servicing, and other data. Data shall include name and address of nearest service

and maintenance organization that regularly stocks repair parts. Listings of items that function as parts of an integrated system shall be furnished at one time.

4. Submit complete acoustical test reports showing that proposed products have been tested in accordance with latest editions of relevant ASHRAE and AHRI Standards (ANSI/ASHRAE Standard 70 for air inlets and outlets; ANSI/ASHRAE Standard 130 and AHRI 880 for terminal units) and will be suitable for operation in Project spaces with specified maximum noise criteria (NC) requirements. The results of all testing shall be certified by an independent testing agency and submitted to the Architect for approval. The submittal shall include a complete description of the test conditions, methods and procedures.

5. Submittals shall include a tabulation of proposed products, identification of Project spaces where proposed products are to be installed, maximum allowable NC for all Project spaces, and product NC (at specific design air volume) for all Project spaces.

6. Shop Drawings: Shop Drawings indicating methods of installation of equipment and materials, sizes and gages of ducts, and details of supports. Items to be covered shall include but not be limited to following:

   a. Layout of ductwork and equipment drawn to scale to establish that equipment will fit into allotted spaces with clearance for installation and maintenance. Indicate proposed details for attachment, anchoring to, and hanging from structural framing of building. Indicate vibration isolation units, foundations, supports, and openings for passage of pipes and ducts.

   b. Drawings indicating locations and sizes of sleeves and prepared openings for pipes and ducts.

   c. Typical details of supports for equipment and ductwork.

1.03 QUALITY ASSURANCE

A. Installer's and Manufacturer's Qualifications: Comply with provisions stated under Section 23 0500: Common Work Results for HVAC.

B. Sound power level measurements and Manufacturers' NC value calculations shall be conducted in complete accordance with the latest version of ANSI/ASHRAE Standards 70 and 130 and AHRI 880.

1.04 PRODUCT HANDLING

A. Protection, Replacements, Delivery and Storage: Comply with provisions stated in Section 23 0500: Common Work Results for HVAC.

1.05 COORDINATION

A. Coordinate activities in accordance with provisions of Section 23 0500: Common Work Results for HVAC.

PART 2 – PRODUCTS

2.01 GENERAL

A. Unless otherwise noted, provisions, including amendments thereto, of the HVAC Duct Construction Standards of Sheet Metal and Air Conditioning Contractor's National Association (SMACNA) and the California Mechanical Code (CMC), are hereby made part of this Section.

B. Rectangular, round and flat oval ducts shall be manufactured and installed in accordance with requirements of the HVAC Duct Construction Standards – Metal and Flexible of SMACNA.

C. Sheet metal ducts shall be fabricated from galvanized steel, aluminum or stainless steel.

D. Galvanized steel ducts shall be fabricated of galvanized steel sheet, lock forming grade, conforming to ASTM A653 and A924.

E. Galvanized steel ducts gage thickness and permissible joints and seams of concealed ductwork shall conform to requirements in HVAC Duct Construction Standards – Metal and Flexible of SMACNA and the CMC unless noted otherwise on the drawings. The more stringent requirements shall prevail. Galvanized steel ducts gage thickness and permissible joints and seams of exposed ductwork shall conform to requirements in Tables 2 and 3, Minimum Metal Gages, of this Section. When more stringent requirements are noted on the drawings the most stringent requirement shall prevail.

F. Button punch snap-lock seams, using Lockformer or equal, shall be permitted only in concealed areas using 20 and 22 gage galvanized steel ducts with screws added at the ends. Button punch snap-lock is not permitted for aluminum or duct lighter than 22 gage.

G. Ducts shall be reinforced in accordance with SMACNA standards: Cross-broken Duct: Duct sizes 19 inches wide and larger which have more than 10 square feet of unbraced panel shall be beaded or cross-broken. This requirement is applicable to 20 gage or less thickness and 3 inches w.g. or less pressure. For details, refer to SMACNA manual.

H. Round and Oval Galvanized Steel and Aluminum Ducts:

1. Round Spiral Ducts and Fittings: Fabricated from galvanized sheet steel shall be machine-formed spiral pipe with sealed spiral locking joints. Fittings shall be furnished with continuous corrosion-resistant welds. Provide gages of ducts and fittings recommended by manufacturer.

2. Details of seams and transverse joints for round duct and fittings shall conform to SMACNA standards.

3. Flat oval ducts shall be provided as indicated on the Drawings. Reference standard details in SMACNA manual.

4. Minimum duct wall thickness for concealed flat oval duct construction shall conform to requirements in HVAC Duct Construction Standards – Metal and Flexible of SMACNA and the CMC. The more stringent requirements shall prevail. Gage thickness and permissible joints and seams of exposed ductwork shall conform to requirements in Table 1, of this Section.

5. These provisions apply for ducts furnished for indoor comfort heating, ventilating and air conditioning service only.

I. Flexible Ducts

1. Flexible duct shall be non-metallic, insulated for conditioned air supply and return. The flexible ducts shall be factory fabricated with exterior reinforced laminated vapor barrier, 1 ½-inch thick fiber glass insulation (K = 0.25 at 75 degrees F), encapsulated zinc-coated spring steel wire helix and impervious, smooth, non-perforated interior vinyl liner and factory fabricated steel connection collars. For the composite assembly, including insulation and vapor barrier, comply with NFPA Standard 90A or 90B and tested in accordance with UL Standard, UL 181. Non-insulated metallic ducts shall be provided for exhaust only.

2. Methods of installations, standards for joining and attaching, and supporting flexible duct shall conform to applicable provisions of SMACNA manual.

3. Specifications herein shall not supersede installation requirements by flexible duct manufacturer if those are more stringent.

J. Aluminum Ducts:

1. Material for aluminum duct shall be of 3003-H14 alloy aluminum sheets, with such designation embossed or stenciled on each sheet. Minimum tensile strength shall be 19,000 psi.

2. Aluminum duct gage thickness and permissible joint and seams shall conform to Table 1, Construction Details for Rectangular ducts, in this Section.

3. Aluminum ductwork shall be furnished to transport moisture-laden air from shower rooms, shower drying rooms, dishwashers and discharge ducts from evaporative condenser and cooling towers.

4. Unless otherwise noted, follow construction details for steel construction standards as indicated for unreinforced duct, reinforced duct, or cross-broken duct.

5. Button punch snap-lock seams on aluminum ducts are not permitted.

K. Fittings and Other Construction Details: Details of fittings such as elbows, turning vanes, branch take-off and connections, duct access doors, connections for grilles, registers and ceiling diffusers, flexible connector at fan, etcetera, shall conform to applicable provisions of this Section or SMACNA manual.

L. Duct Seam and Joint Sealant: Provide sealant or tape for metal ducts at duct joints which are defined as transverse joints between duct sections including girth joints, branch and sub-branch intersections, duct collar tap-ins, fitting subsections, louver and air terminal connections, access doors and frames, and abutments to building structure. Also provide the same at duct seams which are defined as longitudinal joint between duct sections. Spiral lock seams in factory fabricated round or oval ducts are excluded.

1. Sealant for low-pressure ducts shall be: Design Polymerics DP1010 or DP1020, Childers CP-145A/CP-146 Chil-Flex, Foster's 32-19 Duct-Fas, Miracle-Kingco Glenkote Seal-Flex, Ductmate Industries PROseal or FIBERseal, or equal.

2. Provide sealing material for medium-pressure ducts as described in the SMACNA manual for those pressures.

3. Sealant materials shall comply with the flame spread and smoke developed rating of current CMC when tested in accordance with ASTM E84.

4. Sealant for exposed to weather ducts shall pass the Weather Resistance Test per ASTM G154 at 2000 hours QUV.

M. Restrictions:

1. Zinc-coated steel duct shall not be installed for ductwork transporting moisture-laden air. Flexible duct may only be furnished where specifically indicated on Drawings. Aluminum ducts shall not be installed for internal pressures above 2 inches of water.

2. Fiberglass duct is not permitted as a substitute for sheet metal duct.

2.02 ACOUSTICAL DUCT AND PLENUM LINERS

A. Duct liners shall conform to requirements of Section 23 0700: HVAC Insulation.

2.03 DAMPERS

A. Manually Operated Volume Control Dampers:

1. VD-1, Rectangular: Multi-blade type, opposed blade operation, 16 gage galvanized steel blades; center pivoted on 3/8 inch diameter steel trunnions; interlocking edges; dampers shall be in own angle frame, full duct size as indicated on Drawings; frame of minimum 16 gage steel channel construction. Provide with damper operator and axles positively locked to blade. Ruskin MD35, Pottorff MD-42, Greenheck MBD-15 or equal.

2. VD-2, Round: Frame shall be constructed of not less than 20 gage galvanized steel, blades of not less than 20 gage galvanized steel channel construction with factory neoprene seals, ½ inch diameter axle shafts and locking hand quadrant. Ruskin MDRS25, Greenheck MBDR-50, or equal.

3. VD-3, Oval: Frame shall be constructed of not less than 14 gage galvanized steel channels with factory blade seals of not less than 12 gage galvanized steel with not less than ½ inch diameter axle shafts. Provide Ruskin standard construction for frame, blade and axle size, thickness and material variation. Provide adjustable locking hand quadrant. Ruskin CDO25, or equal.

2.04 AIR DISTRIBUTION DEVICES

A. General:

1. Grilles, registers, diffusers and appurtenances shall conform to requirements specified herein and shall be of type and sizes as specified and indicated on Drawings. Performance shall be in accordance with ANSI/ASHRAE Standard 70 including airflow velocity, pressure, temperature, and sound measurements.

2. Sponge neoprene, rubber, vinyl or felt border gaskets shall be provided for surface-mounted registers, grilles or diffusers.

3. The noise generating characteristics of all specified grilles, registers, and diffusers shall be tested to, and comply with, all requirements of this specification. Representative samples shall be subjected to tests in accordance with applicable standards and procedures in order to demonstrate such compliance. A special test for this project is not required if the manufacturer has previous certified test results that can be made applicable to this project. Maximum Sound Levels of diffusers, grilles and registers shall be as follows:

Office area:	NC 30
Shower & lockers areas:	NC 30.

4. Provide suitable frame types to match the ceiling types as specified or indicated on the Architectural Drawings.

5. Ceiling diffusers shall be provided with equalizing grids.

6. Ceiling mounted grilles, registers and diffusers shall be provided with a factory applied, baked enamel, dull finish, bone white to match acoustical ceiling tile.

7. Grilles or registers mounted on painted walls or other surfaces shall be furnished with a baked prime coat and finish painted in accordance with Section 09 9000: Painting and Coating.

8. Do not provide opposed blade dampers at diffusers and registers to balance the airflow, as they tend to create noise. Provide a manual volume damper at each branch take-off and also at branch duct to each diffuser and register upstream of the flexible duct connections. Air throw patterns shall be as indicated on the drawings.

9. Diffusers, registers and grilles indicated or scheduled on the drawings to comply with special requirements shall take precedence over the standard items specified.

B. Ceiling Diffusers - Round, Square, Rectangular:

1. CD-1 For areas of less than 10 feet ceiling height only. Units shall be square or rectangular modular core type as indicated on the drawings. Anemostat QC Series, Krueger Model 1240, Price SMCD Series, or equal.

2. CD-2 For areas of higher than 10 feet ceiling height. Units shall be square or rectangular louver faced type. Anemostat D Series, Krueger Model SH, Price SMD/AMD Series, or equal.

C. Grilles - Return, Exhaust, Ceiling, Square, Rectangular:

1. GR-1 Acoustical Tile on Plaster Ceiling: Return and exhaust grilles shall be single deflection type with horizontal fixed face bars set at straight or 45 degree angle, ½ inch spacing and flush and flanged for surface mounting. Anemostat S3HD Series, Kruger Model S80/S85, Price 500/600 Series, or equal.

2. GR-2 Prefabricated Acoustical Tile Ceiling with Inverted Exposed T-Bars: Return and exhaust grilles shall be with single deflection horizontal fixed face bars, set at straight or 45 degree angle, ½ inch spacing and flush, lay-in panel type with nominal overall dimension of 24-inch by 24-inch. Anemostat Type SAC3L Series, Krueger Model S80/S85, Price 500/600 Series, or equal.

D. Registers, Supply, Return, Wall:

1. WR-1: Sidewall supply register shall be double deflecting type with loose key-operated opposed blade volume control. Anemostat S2 Series, Krueger Model 80/880, Price 500/600 Series, or equal.

2. WR-2: Sidewall return register shall be single deflecting type with horizontal fixed face bars set at 45 degree angle flush and flanged for surface mounting and complete with loose key-operated opposed blade volume control. Anemostat S3 Series, Krueger Model S80/S85, Price 500/600 Series, or equal.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this Section will be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 DUCTWORK

A. Construct ductwork according to details of fabrication and methods of support, as indicated in the SMACNA manuals and CMC, unless specified or indicated otherwise in this Section or on Drawings. In event of conflict, the most stringent requirement shall be provided.

B. Unless otherwise required, construct ducts to conform accurately to dimensions indicated and to be straight and smooth on inside, with joints neatly finished.

C. Duct dimensions indicated are net inside dimensions. If the indicated duct is to be furnished with an acoustic lining, add twice the thickness of the acoustic liner in both the duct width and height dimensions to provide the gross sheet metal duct dimensions.

D. Where aluminum is welded, provide a minimum thickness of 16 gage, and use gas inert tungsten process of welding.

E. Anchor ducts to building structural slab, framing and roof decking and detail method of anchoring and fastening if not indicated on Drawings. Supports shall be seismically constructed.

F. Construct and install ducts to be completely free from vibration under operating conditions.

G. Indicate on layout drawing, required for suspended ductwork, location of supports, loads imposed on each fastening or anchor, typical details for anchorage, and details for special anchorage for supports attached to metal roof decking.

H. Attach supports only to building structural framing members and concrete slabs.

I. Where supports are required between structural framing members, detail and install suitable intermediate metal framing.

J. Ducts transporting air-conditioned or heated supply air shall be insulated in accordance with requirements of Section 23 0700: HVAC Insulation.

1. Ducts exposed to weather shall be furnished with exterior insulation with weather jacket or interior lining as indicated on Table 2, Section 23 0700: HVAC Insulation.

K. Ferrous angles and structural members and joining collars specified for construction and support of ductwork and plenums shall be primed with one heavy coat of required asphaltic aluminum paint before installation or fabrication. Metal surfaces shall be thoroughly cleaned before installation of paint. Galvanizing may be provided instead of painting. Installed duct hanger rods concealed in furred ceilings and walls are not required to be primed or painted.

L. Broken places in galvanized coating shall be acid washed and then completely soldered over or painted with galvanizing paint.

3.03 DUCT CONSTRUCTION

A. Minimum ductwork gages, joints, reinforcing, and bracing of concealed ductwork shall conform to SMACNA and CMC. Exposed ductwork shall conform to the following tables in addition to SMACNA and CMC. The most stringent standards shall prevail. Hoods, plenums, and castings shall not be lighter than the duct gage listed in Table 2 for corresponding dimensions. Additional bracing shall be provided to prevent objectionable panel vibration.

B. Provide longitudinal seams of the grooved snap lock and standing, sealed and taped, or sealed spiral or continuously welded. For exhaust duct, taping may be omitted.

TABLE 1 - SHEET METAL THICKNESS FOR CIRCULAR DUCTS AND FLAT-OVAL (FOR STATIC PRESSURES LISTED)

Gage Thickness

2-inch Water Column	Diameter of Duct	Horizontal Girth	
Maximum S.P.	Maximum	Maximum	Joints
Round / Oval	Diameter Support	Distance	
26 / 24	Up to 9 inch	10-foot	2-inch slip
26 / 24	9 to 14-inch	8-foot	4-inch
24 / 22	14 to 23 inch	8-foot	4-inch
22 / 20	23 to 37-inch	8-foot	4-inch
20 / 18	37 to– 51-inch	6-foot	1 ¼-inch by 1 1/8-inch flange

C. Construction Details for Rectangular Sheet Metal Ducts for Low-Pressure Systems - Velocities not Exceeding 2,000 Feet Per Minute:

1. For pressures in excess of 2 inches water column, duct wall thickness shall be 2 gages heavier than set forth in this table.

2. Duct specifications shown below are applicable when ducts larger than 18 inches are cross-broken. Where cross breaking is not provided, duct wall thickness shall be 2 gages heavier on ducts 19 inches to 60 inches wide unless longitudinal standing seams are furnished.

TABLE 2 - MINIMUM METAL GAGES - UNREINFORCED RECTANGULAR DUCT
(2" W.G. OR LESS)

Minimum Gage Thickness Steel / Aluminum	Max. Side, Gross Dimensions	Duct Permissible Girth Joints	Horizontal Support Maximum Distance
26 / 24	Up to 10-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot
24 / 22	11 to 12-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot
22 / 20	13 to 14-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot
20 / 18	15 to 18-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot
18 / NA	19 to 20-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot
16 / NA	21 to 24-inch	Drive-slip, plain S-slip, or 1 inch government lock	10-foot

TABLE 3 - MINIMUM METAL GAGES - REINFORCED RECTANGULAR DUCT
(2" W.G. OR LESS)

Reinforcement Ratings To Comply with SMACNA Standards			
Minimum Gage Thickness Steel / Aluminum	Max. Side, Gross Dimensions	Duct Permissible Girth Joints	Reinforcement Spacing Max. Distance
26 / 24	Up to 14-inch	Drive-slip, plain S-slip, or 1 inch government lock with B rated reinforcement	6'
24 / 22	13 to 18-inch	Drive-slip, plain S-slip, with C rated reinforcement	8'
	19 to 30-inch	Standing S/D -slip, 1 inch bar slip, or 1 inch government lock with E rated reinforcement	5'
22 / 20	31 to 36-inch	1 inch bar slip, reinforced bar slip, or 1 inch government lock with F rated reinforcement	5'
	37 to 48-inch	1 5/8-inch standing S or 1 inch government lock with G rated reinforcement	4'
20 / 18	49 to 54-inch	1 5/8-inch standing S or 1 inch government lock with H rated reinforcement or G rated tie rods	4'
18 / NA	55 to 84-inch	1 5/8-inch standing S or 1 inch government lock with I rated reinforcement or G rated tie rods	4'
	85 to 108-inch	2 ½-inch standing seam with K rated reinforcement or H rated tie rods	4'

* Button punch snap-lock seams, using Lockformer or equal, shall be permitted only in non-accessible areas using 20 and 22 gage galvanized steel ducts with screws added at the ends. Button punch snap-lock is not permitted for aluminum or duct lighter than 22 gage.

D. Ferrous angles and structural members and joining collars specified for the construction and support of ductwork and plenums shall be primed with one heavy coat of asphalt aluminum paint before installation or fabrication. The metal surface shall be thoroughly cleaned before application of the paint. Galvanizing may be provided instead of painting. Installed duct hanger rods concealed in furred ceilings and walls is not required to be primed or painted.

E. Broken places in galvanized coating shall be acid washed and then completely soldered over or painted with galvanizing paint.

F. S-type or drive-slip type girths or longitudinal seams shall not be furnished for ductwork installed outdoors or mounted on roofs.

G. Broken places in galvanized coating shall be acid washed and then completely soldered over or painted with galvanizing paint.

3.04 DUCTS AND PLENUMS WITH LINERS

A. Ducts and plenums lined with acoustical insulation shall be as indicated on Drawings.

B. Duct dimensions indicated on Drawings are net. Add thickness of acoustic liners to obtain gross sheet metal duct dimensions.

C. For duct liner specifications and installation, refer to Section 23 0700: HVAC Insulation.

3.05 DUCT ELBOWS AND TURNING VANES

A. Duct elbows, including supply, exhaust, and return, shall be provided with a centerline radius of 1.5 times duct width parallel to radius whenever possible; centerline radius shall not be less than width of duct parallel to radius.

B. Where space does not permit above radius, or where square elbows are indicated on Drawings, turning vanes shall be installed whether indicated on Drawings or not.

C. Turning vanes shall be thick double-wall vane type, Ductmate Industries PROrail, or equal. Duro Dyne vane rail system duct turns may be furnished, provided they are of thick double wall type and Shop Drawings are submitted and reviewed by the Architect. Duct turning vanes shall be of same material as ductwork and shall be rigidly fastened in ductwork.

3.06 DUCT JOINTS AND SEAMS

A. Conditioned air supply ducts shall be furnished with joints and seams sealed, taped or welded for air tightness, except spiral seam factory machine formed duct components. Spiral seam is exempted. Joints between slip-fit components may be assembled with all seams and joint connections fastened with screws and taped.

B. Other ducts shall be furnished with joints and seams sealed by using sealant, taping, soldering, or welding. Ducts for grease hood exhaust shall be furnished with grease-tight welding or brazing on external surface for joints and seams. Fiberglass ducts shall be provided with a thermally activated closure system, Johns Manville Fortifiber Therm-Lock with Automatic Bond Indicator dots, or equal.

C. S-slip or drive-slip type girths or longitudinal seams are not permitted on exterior or exposed rooftop mounted ductwork.

D. Caulking, taping, or other joint or seam treatment shall be provided in accordance with recognized standards.

E. Seams around fan, coil housing and plenums shall be sealed with gaskets or sealing compound to provide an airtight assembly.

F. Stainless steel ductwork connected to range hoods and fume hoods shall be provided with grease-tight, gas tight welded seams, and shall be constructed and installed so that grease or other material cannot become pocketed in any portion thereof, and system shall slope downward toward hood not less than 1/4 inch per lineal foot. Gasketed flanged joints with sealing compound shall be used only at fan and fume hood connections.

G. Alternative duct connectors such as Ductmate Industries, Mez Industries, or equal may be used if the following conditions are met:

1. One of the specifically listed connectors is submitted and approved by the Architect and OAR.

2. The correct size connector, application, and gage of material conform to SMACNA Standards.

3. The connector is installed per manufacturer's specifications.

3.07 DUCT TRANSITION

A. Slopes in sides of transition pieces shall be no greater than 1 to 5. Abrupt changes or offsets in duct system are not permitted, except when reviewed by the Architect.

3.08 DUCT TEST HOLES

A. Holes in ducts and plenums shall be provided for pilot or static tubes for obtaining air measurements to balance or check air systems. Holes shall be covered with neoprene gasketed sheet metal cover or plugged with a fitted neoprene plug chained to duct.

3.09 FLEXIBLE CONNECTIONS

A. At points where sheet metal connections are installed to fans or air handling units, or where ducts of dissimilar metals are connected, a flexible connection of commercial grade, Duro Dyne Durolon, Ventfabrics Ventglas, Ductmate Industries Proflex, or equal, non-combustible material shall be installed and securely fastened by zinc-coated steel clinch-type bands or a flange type connection. Inlet and outlet openings shall be axially in-line, maximum deviation of centerline shall be less than 5 percent of diameter or shortest dimension of a rectangular inlet of fan or air handling unit, with system at rest. Duct end of connection shall be seismically restrained if more than 4 feet from last support.

3.10 AIR TERMINAL DEVICES

A. General: Install supply devices after ducts, plenums, and casings have been cleaned and blown free of small particles, as specified. Devices shall be aligned to be parallel to ceiling construction or walls and ceiling surfaces, and shall be pulled tightly to compress gaskets and to fit neatly against surfaces.

B. Diffusers: Support surface mounted ceiling diffusers from angles or channels resting on and fastened to ceiling construction. Do not support from ducts. Install lay-in diffusers on T-bar ceilings with hanger wires from each corner and not supported by ceiling structure. Provide sheet metal adaptor box above each diffuser to allow space for volume controller with round collars for connection to round ducts where indicated on Drawings. Fasten duct-mounted diffusers to duct collars.

C. Registers and Grilles:

1. Install wall supply registers at least 6 inches below ceiling, unless otherwise indicated. Locate return and exhaust registers 6 inches below ceiling unless otherwise indicated.

2. Support ceiling diffuser type inlets, registers, and grilles as required above for ceiling diffusers.

3. Fasten wall mounted and duct mounted registers and grilles to flanges of duct collars.

3.11 DAMPERS

A. Manually operated dampers, gravity dampers, fire dampers, and motor operated dampers shall be furnished and installed as specified and indicated. Upon completion of installation, dampers shall be checked, lubricated, and adjusted so that they operate freely, without binding. Dampers shall be of standard commercial manufacture, complete with damper frame. Where painting is required, they shall be shop finished unless otherwise noted.

1. Provide and install manual volume dampers per SMACNA standards to allow balancing per AABC, NEBB or TABB Procedures and Standards whether indicated on the drawings or not.

2. Balancing dampers shall be installed in main supply ducts from fan discharge plenums, where two or more ducts are connected to each plenum, although such balancing dampers may not be indicated. Each zone shall be provided with a manual volume damper. Sheet metal screws shall be installed through handles and into ducts to lock damper in place after test and balance.

3. Each supply, return, and exhaust branch shall be provided with manual volume dampers.

4. Do not provide opposed blade dampers at air inlets and outlets.

5. Each supply, return, and exhaust inlet or outlet shall be provided with a manual volume damper. This damper shall be a minimum of 5 feet upstream of the air outlet and inlets. An acoustic flexible duct should be provided between the outlet and inlet and the damper for concealed ducts.

6. Dampers installed in accessible locations shall be provided with locking and indicating quadrants. Ventfabrics Ventlok, Duro Dyne, Young Regulator Co., or equal.

7. Dampers installed in ductwork in furred ceiling spaces or in roof spaces with less than 30 inches of clearance below beams, joists, or other construction, and where access panels are not provided shall be furnished with damper rods extended below ceiling and terminated with a concealed damper regulation. Ventfabrics Ventlok, Young Regulator Co., Duro Dyne, or equal.

8. Dampers not identified as splitter, extractor, or butterfly dampers shall be of multi-louver type arranged for opposed blade operation. Damper shall be same dimension as adjoining duct and be tight closing. Blades shall not be greater than 9 inches. Dampers shall be not less than 18 gage steel.

9. Motor operated dampers shall be furnished by temperature control manufacturer as part of temperature control equipment and shall conform to requirements of Section 23 0900: HVAC Instrumentation and Controls.

10. Dampers shall be provided with accessible operating mechanisms. Where operators are exposed in finished portions of building, operators shall be chromium-plated with exposed edges rounded. Splitter dampers are not permitted unless specified and reviewed by the Architect.

11. Dampers shall not be installed in combustion air ducts.

12. Access panels shall be installed for access at each damper's operating mechanism.

3.12 BACKDRAFT DAMPERS

A. Backdraft dampers shall be installed at locations indicated in accordance with the State of California Building Energy Efficiency Standards, Title 24, CCR.

3.13 DUCT SLEEVES AND PREPARED OPENINGS

A. Furnish duct sleeves for 15-inch diameter ducts or less passing through floors, walls, ceilings, or roof and install during construction of the floor, wall, ceiling, or roof. Install round ducts larger than 15 inches diameter and square and rectangular ducts passing through floors, walls, ceilings or roof through prepared openings. Provide duct sleeves and prepared openings for duct mains and duct branches.

B. Provide one inch clearance between duct and sleeve or between insulation and sleeves for insulated ducts, except at grilles, registers and diffusers.

C. Provide prepared openings for round ducts larger than 15 inches in diameter and for square and rectangular ducts with one inch clearance between duct and openings or between insulation and opening for insulated ducts, except at grilles, registers and diffusers.

D. Provide closure collar of galvanized sheet metal not less than 4 inches wide unless otherwise indicated on Drawings on each side of walls or floors where sleeves or prepared openings are provided except where grilles or diffusers are installed. Install collar tight against surface. Fit sharp edges of collar installed around insulated duct to preclude tearing or puncturing insulation covering vapor barrier. Fabricate collars from round ducts in steel. Provide not less than 4 nails to attach collar where openings are 12 inches in diameter or less and not less than 8 nails where openings are 20 inches in diameter or less.

E. Pack space between sleeve or opening and duct or duct insulation with commercial grade packing yarn.

3.14 FLEXIBLE DUCT RUNOUTS

A. Runouts from branches, risers or mains to air terminal units and outlets may be pre-insulated, factory fabricated flexible ducts complying with NFPA 90A. Flexible ductwork shall not exceed 7 feet in length. When required to suspend flexible ducts, furnish hangers of type recommended by manufacturers of pre-insulated flexible duct and install at intervals recommended. Method of attachment to other components of air distribution system for a vapor-tight joint shall be in accordance with printed instructions of flexible duct manufacturer. Bend radius shall be 1-1/2 times diameter of duct, measured from centerline. Bends greater than 90-degree angle are not permitted. Non-metallic flexible duct shall be permitted only in T-bar suspended ceilings.

3.15 DUCT HANGERS AND SUPPORTS

A. Exposed or easily accessible ductwork: Single horizontal ducts shall be suspended from heavy steel hanger straps securely fastened to overhead structural members. Ducts shall be supported by a hanger strap passing around and fastened to duct with not less than two Parker No. 10 screws set approximately 2 inches in from each edge, to form a supporting stirrup attached to overhead supports. Rectangular ducts shall be provided with two hanger straps, one located on each side of duct. Round ducts may be installed from a single hanger strap unless conditions require that duct be held tight against ceiling, in which case two hanger straps may be brought down each side of duct, oriented at right angles to axis of duct and securely fastened to duct standing leg seam or angle iron stiffener with a minimum of two bolts, measuring 1/4 inch, for each side of duct. Hanger straps shall be galvanized with a minimum size of 1 1/8-inch by 14 gage. Angles of galvanized steel of 1 1/8-inch by 1 1/8-inch by 16 gage (14 gage for ducts 60 inches or greater) may be furnished instead of straps.

B. Non-accessible ductwork: Non exposed and hidden from sight during regular school operations ductwork, rigid round, rectangular, and flat oval metal ducts, shall be installed with support systems conforming to SMACNA Standards.

C. Where ducts are installed one above the other, they shall be individually supported on a trapeze of steel angles with 3/8 inch supporting steel rods securely fastened to overhead construction. A minimum distance of 3 inches shall be maintained between ducts wherever possible, but in no event shall distance be less than 2 inches. Minimum sizes of steel angles shall be 1 ½-inch by 1 ½-inch by 1/8 inch for duct sizes through 60 inches in greatest dimension, 2-inch by 2-inch by 1/8 inch for duct sizes 61 inches through 84 inches, 2-inch by 2-inch by 3/16 inch for duct sizes 85 inches through 96 inches, and 2-inch by 2-inch by 1/4 inch for duct sizes over 97 inches.

D. Ducts 30 inches square area and greater and ducts 20 feet long and longer shall be seismically restrained. Refer to Section 23 0548: HVAC Sound, Vibration and Seismic Control.

E. Hangers shall not be supported by, or fastened to, non-structural members including blocking. Toggle or Molly type bolts are not permitted.

F. Vertical ducts shall be supported with suitable angles on each side of each duct located at each floor and at intervals not to exceed 8 feet. Angles shall be sized and installed according to SMACNA Standards for required span so that they will be rigid, without bending or sagging.

G. Roof-mounted ductwork shall be installed a minimum 12 inches above roof and shall be supported by galvanized welded pipe, one on each side, fastened to roof structure, flashed and sealed to roof membrane. Install supports at each turn, unit connections, and each penetration, and space at maximum 6 feet off-center in general. Pitch pockets are not allowed.

3.16 ACCESS PLATES AND DOORS

A. Access plates and doors shall be furnished and installed where stops, valves, fire dampers, fusible links, coils, damper operating mechanism, control equipment, lubrication fittings, air filters, air handling equipment and similar items normally requiring adjustment or servicing are installed in concealed spaces.

B. Access plates and doors shall be located to permit convenient access to equipment sized to permit removal of equipment for servicing. Access plates shall be no less than 12-inch by 12-inch in clear opening. Proper servicing of equipment requires adequate access for

maintenance personnel. Access doors shall not be less than 24-inches by 24-inch, unless otherwise detailed. Two or more valves shall not be located in same access area unless sufficient clearance is provided for operation, servicing and removal of each valve.

C. Openings in ducts or plenums whose longer dimension does not exceed 12 inches may be covered by a plate of same material as duct, gasketed and fastened to duct or plenum with sheet metal screws.

D. Access plates in floors shall not be less than 8-inch by 8-inch and shall be carborundum surface brass with cast brass frames anchored into concrete. Access plates in tile walls shall be chromium plated brass and polished. Serrated plates furnished as part of a clean-out assembly are permitted in floors instead of a separate plate.

E. Access plates and doors in walls and ceilings of finished rooms and in locations normally accessible to students shall be furnished with continuous piano hinges, unless otherwise specified, and a special flush type spring-loaded latch requiring an Allen wrench to operate. Access devices shall be installed after plastering in plaster ground openings.

F. Access panels or doors penetrating one-hour fire resistive ceilings shall meet code requirements for such openings.

G. Access panels shall be fire-rated; Milcor, or equal. Access doors shall be as required for installation in openings penetrating one-hour fire resistive ceilings. Access doors shall be furnished with a flush, key-operated cylinder lock, furnished with two keys each, instead of Allen headlock for non-rated ceilings.

H. Access panels that are part of an integrated ceiling are specified in Section 09 8433: Cementious Wood Fiber Acoustical Units. Identification markers shall be affixed to adjacent supports, under this portion of Work, to indicate location and type of mechanical device to be serviced.

I. Access panels installed in ducts or plenums located in heater or equipment rooms containing gas-fired equipment shall be furnished with heavy-duty spring closing hinges and refrigerator door type catches unless otherwise required. When these panels are intended for maintenance personnel access, catches shall be operable from both interior and exterior.

J. Other access panels, except those specified above, shall be furnished with suitable hinges and one or more sash fasteners.

K. Panels located in ducts and plenums shall be installed with gaskets made of synthetic rubber, felt, or similar material to provide an airtight installation. Panels shall be constructed and reinforced to prevent vibration.

L. Label the words "FIRE DAMPERS" on panels over fire dampers and words "DO NOT OPEN - HEATER IS OPERATING" on panels located in heater or equipment rooms. Letters shall be approximately 3 inches high, if space is available.

M. Furnish a key to operate latch access plates, one for each access plate, but not to exceed five keys for any one Project.

N. Access plates and panels shall be furnished with manufacturer's name or trade mark and model number cast or stamped thereon, or upon a label permanently affixed thereon.

O. Provide duct through roof flashing as detailed in the SMACNA standards or as indicated on Drawings.

P. Refer to SMACNA for access plate and door construction.

3.17 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose off the Project site.

3.18 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

END OF SECTION

SECTION 23 80 00

HEATING, VENTILATING AND AIR CONDITIONING EQUIPMENT

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Air conditioning and air handling equipment including but not limited to:

1. Split system heat pump unit.

2. Infrared Radiant Heater

3. Fans.

B. Related Requirements:

1. Division 01: General Requirements.

2. Section 07 6000: Flashing and Sheet Metal.

3. Section 22 1000: Plumbing.

4. Section 23 0500: Common Work Results for HVAC.

5. Section 23 0513: Basic HVAC Materials and Methods.

6. Section 23 0548: HVAC Sound, Vibration and Seismic Control.

7. Section 23 0900: HVAC Instrumentation and Controls.

8. Section 23 0923: Environmental Control and Energy Management System.

9. Section 23 3000: Air Distribution.

1.02 DESIGN REQUIREMENTS

A. Work of this Section is based on HVAC equipment units indicated as Basis of Design in Part 2 of this Section. Products from different HVAC equipment manufacturers listed are never identical, although equivalent in capacity, performance and quality. In the cases where dimensions, weight, configuration and utility requirements differ from the products used as a basis of design, the Contractor, at no additional cost to the Owner, shall coordinate and submit, for Architect review, revisions to the design.

1.03 SUBMITTALS

A. Provide in accordance with Division 01 and Section 23 0500: Common Work Results for HVAC.

B. For products listed that are not the basis of design, submit the following in addition to above requirements:

1. Title 24 Calculations: Replace HVAC unit values in calculation files provided by the Architect and submit for review.

1.04 QUALITY ASSURANCE

A. Provide submittals in accordance with Section 23 0500: Common Work Results for HVAC.

1.05 PROJECT RECORD DOCUMENTS

A. Provide Owner instructions on equipment operation and maintenance procedures, as indicated in Section 23 0500: Common Work Results for HVAC.

1.06 WARRANTY

A. Compressors shall be provided with manufacturer's five year warranty, (replacement only).

B. Manufacturer shall warrant parts, except heat exchangers, for a period of five years.

C. Heat exchangers shall be provided with manufacturer’s ten year warranty, (replacement only).

PART 2 – PRODUCTS

2.01 EQUIPMENT

A. Capacities of air conditioning equipment indicated on Drawings are net capacities actually required. Standard catalog ratings shall be adjusted to actual Project site environmental conditions.

2.02 HEAT PUMP AND FAN COIL UNITS

A. Manufacturer: LG, Mitsubishi or Carrier Toshiba, or equal.

1. Basis of Design: [LG]

B. HP and matching indoor fan coil unit and condenser unit: Furnish heat pump, split type, air-cooled, roof or ground installation with ducted connections or free blow. Units shall be air-cooled heat pump/direct expansion fan coil combinations. Heat pump outdoor section shall be factory assembled and furnished with direct-drive condenser fans with horizontal or vertical air discharge, scroll type compressor, refrigerant coil, fan motors, pre-wired control panel. Unit shall also be provided with a fully piped refrigerant circuit, fully charged with an environmentally friendly refrigerant that is not scheduled for phase out. Provide additional refrigerant for extended lines. Indoor fan coil unit shall be furnished with horizontal discharge and will include evaporator coil, fan and motor, condensate pan with drain, thermal expansion valve, pre-wired control panel and remote thermostat control. Nominal unit cooling, heating capacities, electrical characteristics, and operating conditions shall be as indicated on Drawings.

C. Quality Assurance:

1. Cooling capacity rated in accordance with current AHRI Standard 210/240 and 270. Units shall be listed in AHRI.

2. Unit construction shall comply with ANSI/ASHRAE 15, latest revision, and with NEC.

3. Units shall be constructed in accordance with UL standards and shall carry UL label of approval. Units shall have CSA approval.

4. Units shall be listed in CEC directory.

5. Unit cabinet shall be capable of withstanding ASTM B117 500 hour salt spray test.

6. Air-cooled condenser coils shall be leak tested at 217 psig and pressure tested at 450 psig with coil submerged water.

7. Unit shall provide an EER/SEER/COP complying with CCR, Title 24, Building Energy Efficiency Standards and per the drawings.

D. Evaporator and condenser coils: Evaporator and condenser coils shall be copper with mechanically bonded, smooth aluminum plate fins. Tube joints shall be brazed with copper or silver alloy. Coils shall be pressure-tested at factory. Protective metal guard for inlet and outlet of outdoor coil.

E. Fans:

1. Condenser Fan and Motors: Condenser fan shall be high efficiency or ECM type motor direct driven, propeller type arranged for horizontal or vertical discharge. Condenser fan motors shall be furnished with inherent protection, and shall be permanently lubricated type, resiliently mounted for quiet operation. Each fan shall be furnished with a safety guard.

2. Evaporator fan section shall be furnished with high efficiency or ECM type motor centrifugal, forward curved, double width, double inlet fan or fans installed on a solid shaft. Fan shall be statically and dynamically balanced and shall rotate on permanently lubricated bearings.

F. Unit Cabinets:

1. Cabinets shall be fabricated of galvanized steel, bonderized and finished with baked enamel.

2. Cabinet interior shall be insulated with minimum one inch thick neoprene covered fiberglass.

3. Outdoor unit compartment shall be isolated and have an acoustic lining to assure quiet operation.

G. Compressor: Compressor shall be hermetic scroll type.

1. Compressor shall be furnished with access valves and it shall be installed on rubber isolators to reduce sound vibration.

2. Furnish with high and low-pressure protection.

3. Each heat pump shall be furnished with factory installed suction accumulator. Field installed accumulators are not permitted.

4. It shall be furnished with high and low-pressure protection, brass external vapor supply line service valves, vapor return line service valves with service gage connection port, service gage port connections on compressor suction and

discharge lines with Schrader-type fittings with brass caps, filter drier, pressure relief, liquid line solenoid valves, thermostatic expansion valves, and a holding charge of refrigerant.

H. Refrigeration Components: Refrigerant circuit components shall include brass external liquid line service valve with service gage port connections, suction line service valve with service gage connection port, service gage port connections on compressor suction and discharge lines with Schrader type fittings with brass caps, accumulator, bi-flow filter drier, pressure relief, reversing valve, heating mode metering device, and a holding charge of refrigerant.

I. Controls and Safeties:

1. Compressor motor assembly shall be protected with high and low-pressure switches, internal overloads, internal thermostat, internal relief valve, and anti-recycle relay, or time cycle device to prevent rapid cycling of compressor after any off cycle.

2. Control panel shall be pre-wired in unit casing.

3. The control circuit shall incorporate a safety circuit to render refrigerant system (compressor and outdoor air motor) inoperative should there be a loss of airflow or refrigerant.

4. Units shall also be furnished with automatic condenser-fan motor protection, high condensing temperature protection, compressor motor current and temperature overload protection, high pressure relief and condenser fan failure protection.

J. EMS Diagnostic Points:

1. Supply air temperature.

2. Return air temperature.

3. Space temperature.

4. Filter status.

5. Fan status.

6. Compressor status.

7. Other diagnostic point required by current Title 24, automated fault detection and diagnostics (FDD).

K. Low Ambient Operation: Head pressure control shall be provided for operation at outside air temperature below 45 degrees F.

L. Safeties:

1. High condensing temperature protection.

2. Compressor motor current and temperature overload protection.

3. High pressure relief.

4. Outdoor fan failure protection.

M. Filters:

1. Filters shall be 2-inch standard size high capacity replaceable media type, MERV 8, or equal, installed in an external 2-inch rack filter section and complete with an access door.

2. An-line filter-drier shall be furnished with equipment and installed at Project site.

N. Start-up: Factory test each unit before shipment to Project site. Performance test shall include full refrigeration start-up, fan and controls start-up. Each unit shall be provided with its own report with its own serial number. Non-tested units are not permitted to be delivered to Project site. Provide full start-up of units to include full refrigeration and provide a written report.

O. Parts Availability: Submit proof in writing that majority (minimum 80 percent) of replacements parts are commonly available and not proprietary. Also, submit proof in writing that a local parts sales and service facility exists, where replacement parts will be warehoused in quantity. Guarantee timely availability for parts that are proprietary.

2.03 INFRARED RADIANT HEATERS (RH-1)

Provide gas fired, forced draft, sealed combustion, radiant tube infra-red heaters with the following features:

A. Quality Assurance:

1.	Construction:	ANSI Z83.20 / CSA 2.34 "Gas-Fired Low-Intensity Infrared Heaters".
2.	Installation:	Z223.1 National Fuel Gas Code
3.	Gas Piping:	Z223.1 National Fuel Gas Code
4.	Electrical wiring:	NFPA 70 National Electrical Code

B. Burner Box: Natural Gas model, burner design with silicone gasketed doors and internally mounted blower, nickel plated steel burner cup, outside air adapter, hot surface ignition, four-try ignition, interlock safety switch, all components easily accessed, durable spot welded construction, mica flame observation window, balanced air rotor, controls are separated from the combustion air stream. Burner assembly shall be epoxy-polyester powder painted for corrosion resistance. Stainless steel flexible gas line and gas shut-off assembly included. Heater shall be equipped with permanently lubricated motor with thermal overload protection.

C. Burner Controls: All burners shall be factory wired for 120 Vac operation, Hot Surface Ignition (HSI), modulating gas valve and control for burner operation sequencing and modulation control. Provide the following as a minimum.

1. Fail-Safe Controls: To assure fail-safe operation, design shall include an air proving safety pressure switch to verify blower operation before gas valve opens. Blower air pressure shall be continuously monitored by a pressure sensor. A sensed reduction in pressure shall result in corresponding reduction in gas input for maximum safety and combustion quality.

2. Ignition Controls: All units shall be equipped with a control for ignition sequencing. Ignition shall be fully automatic HSI. The ignition sequence shall have a

prepurge and timed trial for ignition with multiple ignition trial before lockout occurs. The heater shall be capable of a minimum of 4 trials for ignition to provide maximum reliability. Heater shall have blower post-purge after burner shutdown. Heater shall have automatic one hour reset from lockout.

3. Modulation Controls: All units shall be equipped with a control board to modulate both gas input and combustion air simultaneously. Heater input shall modulate continuously (not staged) throughout input range from minimum rated input to maximum rated input. Control shall be configurable for modulating burner input by the following methods: automatically by 24V thermostat; or automatically by zone sensor inputs; or directly by remote analog signal; or manually by potentiometer.

4. Zone Control: All units shall be equipped with a control configurable to allow multiple heaters to be connected to a single heat demand control device. No user programming shall be required. Heat demand control device shall be connected to heater configured as a “central” unit. Remaining units in the zone shall be configured as “satellite” units and controlled by the “central” unit via low voltage control wiring.

D. Zone Temperature Sensor: Shall include 40-75ºF setpoint adjustability and low voltage ON/OFF switch as available from radiant heater manufacturer that is suitable for mounting on a standard 4 x 2 junction box. Temperature sensor shall be wired only to one heater per zone designated as the “central” heater. Modulation control signal shall be wired in series from “central” heater to each “satellite” heater in the zone via control wiring.

E. Radiant Tube - Heat Exchanger: Radiant Tube shall be 4 in. O.D. Heat Treated Aluminized steel tube x 16-gauge wall with an emissivity factor of 0.80 or greater. Hot rolled steel tubing shall not be used. Burner Tube shall be ALUMI-THERM® steel (aluminized steel/titanium alloy) tube for the first 10 ft. of each radiant heater. Heat exchanger must be supported in accordance with acceptable practices, local codes, seismic requirements, and applicable standards and as indicated on plans. Heat exchanger tube shall pitch down at least 1/2 inch in 20 ft. on radiant tube, away from burner box.

F. Manufacturers: Infrared heating system shall be VANTAGE II modulating radiant heaters as manufactured by Roberts-Gordon LLC, Buffalo, New York or equivalent by CoRayVac or Solaronics.

2.04 ROOF MOUNTED POWER EXHAUST VENTILATORS

A. RMEV-1

(Not Used)

B. RMEV-2:

(Not Used)

C. RMEV-3:

1. Manufacturer: Fan shall be model ACRUB as manufactured by Loren Cook Company, Greenheck CUBE Series, Carnes VUBK, or equal.

2. Spun aluminum, roof mounted, belt driven, upblast centrifugal exhaust ventilator, with components as indicated and specified. Sizes, performances, and accessories shall be as indicated on equipment

schedules on Drawings. Also, provide accessories for proper operation and balancing of fans in accordance with design intent and sequence of operation.

3. Certification: Fan shall be manufactured at an ISO 9001 certified facility. Fan shall be listed by Underwriters Laboratories Inc. (UL 705) and ETL listed for Canada. Fan shall bear AMCA Certified Ratings Seals for Fan Sound and Air Performance.

4. Housing: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16 gage marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have a one piece inlet spinning and continuously welded curb cap corners for maximum leak protection. The windband shall have a rolled bead for added strength. A two piece top cap shall have stainless steel quick release latches to provide access into motor compartment without use of tools. An integral conduit chase shall be provided into motor compartment to facilitate wiring connections. The motor, bearings and drives shall be mounted on a minimum 14 gage steel power assembly, isolated from unit structure with rubber vibration isolators. These components shall be enclosed in a weather-tight compartment, separated from exhaust airstream. Lifting lugs shall be provided to help prevent damage from improper lifting. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA Transit Tested Certified packaging.

5. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency. Wheel shall be balanced in accordance with AMCA Standard 204, Balance Quality and Vibration Levels for Fans.

6. Motor: Motor shall be heavy-duty type with permanently lubricated sealed ball bearings and furnished at specified voltage, phase, and enclosure.

7. Bearing: Bearings shall be designed and individually tested specifically for use in air handling applications. Construction shall be heavy-duty regreasable ball type in a cast iron pillow block housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.

8. Belts and Drives: Belts shall be oil and heat resistant, non-static type. Drives shall be precision machined cast iron type, keyed and securely attached to wheel and motor shafts. Drives shall be sized for 150 percent of installed motor horsepower. The variable pitch motor drive must be factory set to specified fan RPM.

D. RMEV-4:

1. Manufacturer: Fan shall be model ACRUD as manufactured by Loren Cook Company, Greenheck CUE Series, Carnes VUDK, or equal.

2. Spun aluminum, roof mounted, direct driven, upblast centrifugal exhaust ventilator, with components as indicated and specified. Sizes,

performances, and accessories shall be as indicated on equipment schedules on Drawings. Also, provide accessories for proper operation and balancing of fans in accordance with design intent and sequence of operation.

3. Certification: Fan shall be manufactured at an ISO 9001 certified facility. Fan shall be listed by Underwriters Laboratories Inc. (UL 705) and ETL listed for Canada. Fan shall bear AMCA Certified Ratings Seals for Fan Sound and Air Performance.

4. Housing: Fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16 gage marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have a one piece inlet spinning and continuously welded curb cap corners for maximum leak protection. The windband shall have a rolled bead for added strength. An integral conduit chase shall be provided into motor compartment to facilitate wiring connections. The motor shall be enclosed in a weather-tight compartment, separated from exhaust airstream. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA Transit Tested Certified packaging.

5. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. An aerodynamic aluminum inlet cone shall be provided for maximum performance and efficiency. Wheel shall be balanced in accordance with AMCA Standard 204, Balance Quality and Vibration Levels for Fans.

6. Motor: Motor shall be heavy-duty type with permanently lubricated sealed bearings and furnished at specified voltage, phase, and enclosure.

2.05 CEILING CABINET FANS

A. CCF-1:

1. Manufacturer: Fan shall be GC 200-900 Series as manufactured by Loren Cook Company, Greenheck SP or CSP Series, Carnes VCDK or VCDD Series, or equal.

2. Provide ceiling, wall, or inline mounted, direct driven, centrifugal exhaust fans of sizes, capacities and configurations indicated on drawings, complete with accessories for installation of fans. Also, provide accessories for proper operation and balancing of fans in accordance with design intent and sequence of operation.

3. Certification: Fan shall be manufactured at an ISO 9001 certified facility. Fan shall be listed by Underwriters Laboratories (UL 705) and ETL listed for Canada. Fan shall bear AMCA Certified Ratings Seal for Sound and Air Performance.

4. Housing: The fan housing shall be minimum 20 gage galvanized steel and acoustically insulated. Blower and motor assembly shall be mounted to a minimum 14 gage reinforcing channel and shall be easily removable from housing. Motor shall be mounted on vibration isolators. Unit shall

be supplied with integral wiring box and disconnect receptacle shall be standard. Discharge position shall be convertible from right angle to straight through by moving interchangeable panels. The outlet duct collar shall include a reinforced aluminum damper with continuous aluminum hinge rod and brass bushings. To accommodate different ceiling thickness, an adjustable prepunched mounting bracket shall be provided. A powder painted white steel grille shall be provided as standard. Unit shall be shipped in ISTA Transit Tested Certified packaging.

5. Wheel: Wheel shall be centrifugal forward curved type, constructed of galvanized steel. Wheel shall be balanced in accordance with AMCA Standard 204, Balance Quality and Vibration Levels for Fans.

6. Motor: Motor shall be open drip proof type with permanently lubricated bearings, built-in thermal overload protection and disconnect plug. Motor shall be furnished at specified voltage.

2.06 GRAVITY EXHAUST VENTILATORS

A. GEIV-1:

1. Manufacturer: Unit shall be model PR or TR as manufactured by Loren Cook Company, Greenheck GRS Series, Twin City, or equal.

2. Spun aluminum, roof mounted gravity ventilators of sizes, capacities and configurations indicated on drawings, complete with accessories for installation of ventilators. Also, provide accessories for proper operation of ventilators per code and in accordance with design intent and sequence of operation.

3. Certification: Fan shall be manufactured at an ISO 9001 certified facility.

4. Housing: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16 gage marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have continuously welded curb cap corners for maximum leak protection. The spun aluminum baffle shall have a rolled bead for added strength. Birdscreen constructed of 1/2" mesh shall be mounted across air opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA Transit Tested Certified packaging.

5. Provide gravity type back-draft or relief dampers at relief or exhaust ventilators (with counterweights if required). Gravity relief dampers shall fully open at 0.01” static pressure.

6. Intake ventilators shall be provided with normally closed, motorized dampers that are interlocked with fan to open upon fan activation unless fan is provided with such a damper.

2.07 FILTERS

A. Air filters shall be of pleated, high capacity, disposable type of efficiencies indicated on drawings. Each filter shall consist of a non-woven cotton fabric media, media support grid, and enclosing frame. Filter shall be UL 900 listed, Class 2.

B. Filter media shall provide an average efficiency as specified on drawings per ASHRAE Standard 52.2.

C. Initial resistance of air filters shall not exceed following limits for each efficiency level at face velocities indicated. Lower resistance requirements, if indicated on drawings shall have precedence.

30 percent (MERV 8)	0.27 inch water gage at 500 feet per minute
75 percent (MERV 11)	0.28 inch water gage at 500 feet per minute
85 percent (MERV 13)	0.30 inch water gage at 500 feet per minute
95 percent (MERV 14)	0.38 inch water gage at 500 feet per minute

D. Media support shall be a welded wire grid or a rigid frame with an effective open area of not less than 96 percent.

1. Media support shall be bonded to filter media to eliminate possibility of media oscillation and media pull-away.

2. Media support grid shall be formed in such a manner that it effectively forms a radial pleat design, providing total use of filter media.

E. Enclosing frame shall be bonded to air entering and air exit side of each pleat, to ensure pleat stability. Inside periphery of enclosing frame shall be bonded to filter pack, thus eliminating possibility of air bypass.

F. Holding frames shall be factory fabricated of 16 gage galvanized steel, or equivalent and shall be furnished with gaskets and spring type positive sealing fasteners. Fasteners shall be capable of being attached or removed without use of tools.

G. Manufacturers: Camfil Farr, Koch, or AAF.

2.08 LOUVERS, AIR CONDITIONING (use in conjunction with relief damper)

A. Standard steel louvers shall be furnished complete with frames, blades, finish and construction details per Drawings and manufacturer’s recommendations.

B. Louvers shall be furnished with horizontal blades, 2 inches deep for air through wall installation in conjunction with gravity relief damper for backdraft protection that will open at 0.01 inch wc room static pressure as indicated on Drawings. Blades shall be 16-gage steel, spaced at 1 7/8-inch at 30 degrees angle, and with baked epoxy coating. Panel size shall be as indicated but not less than 24 inches width by 18 inches in height.

PART 3 – EXECUTION

3.01 GENERAL

A. Examine areas under which Work of this Section will be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 EQUIPMENT FOUNDATIONS

A. Provide foundations (housekeeping pads, level platforms or curbs) for mechanical equipment whether indicated on drawings or not. Equipment foundations shall be of sufficient size and weight, and of proper design to preclude shifting of equipment under operating conditions, or under abnormal conditions imposed upon equipment.

B. Provide foundations (housekeeping pads, level platforms or curbs) for mechanical equipment whether indicated on drawings or not. Foundations shall meet requirements of equipment manufacturer and, when required by Architect, obtain from equipment manufacturer, approval of foundation design and construction, for equipment to be installed. Equipment vibration shall be maintained within design limits, and shall be dampened and isolated. Isolators shall be bolted to a structural member so as to be readily removable.

3.03 EQUIPMENT DESIGN AND INSTALLATION

A. Uniformity: Unless otherwise specified, equipment of same type or classification shall be product of same manufacturer.

B. Application: Only provide equipment as reviewed by Architect.

C. Equipment Installation: Equipment installation shall be in strict accordance with these Specifications, and installation instructions of manufacturers. Equipment installed on concrete foundations shall be grouted before piping is installed. Piping shall be installed in such a manner as not to place a strain on equipment. Flanged joints shall be adequately extended before installation. Piping shall be graded, anchored, guided and supported, without low pockets.

1. Install equipment in a neat and skillful manner, properly aligned, leveled, and adjusted for satisfactory operation.

2. Install so connecting and disconnecting of piping and accessories can be readily accomplished, parts are readily accessible for inspection, service and repair. Space shall be provided to readily remove filters, coils, compressors and fan wheels. Access doors shall be hinged with cam lock door handles.

3. Provide flexible connections for duct, pipe and conduit connections at moving equipment.

3.04 ROOF-TOP EQUIPMENT MOUNTING

A. Downflow Packaged Units: Install unit on a prefabricated mounting frame or curb secured directly to roof. Follow manufacturers recommended installation manuals. Submit Shop Drawings for review by Architect.

B. Horizontal Flow Packaged Units: Install unit on platform or prefabricated mounting frame or curb secured directly to roof designed to suit roof conditions and requirements of provided unit. Submit Shop Drawings for review by Architect.

3.05 NOISE AND VIBRATION

A. Operation of Equipment: Mechanical equipment and piping systems shall operate without exceeding specified noise and/or vibration levels.

B. Corrective Measures: If specified noise and/or vibration levels are exceeded, provide necessary changes to reduce noise and/or vibration levels to within specified levels.

3.06 FIELD TESTS AND INSPECTION

A. General: Perform field inspections, field tests, and trial operations as specified in Section 23 0500: Common Work Results for HVAC. Provide labor, equipment and incidentals required for testing. The Project Inspector will witness field tests and trial operations as specified in Section 23 0500: Common Work Results for HVAC.

B. Equipment and Material: Equipment and material certified as being successfully tested by manufacturer, in accordance with referenced Specifications and standards, will not require re-testing before installation. Equipment and materials not tested at place of manufacture will be tested before or after installation, as applicable or necessary, to determine compliance with reference Specifications and standards.

C. Start-Up and Operational Test: System shall be started up and initially operated with components operating. During this test, various strainers or filters shall be periodically cleaned until no further accumulation of foreign material occurs. Adjust safety and automatic control instruments as required to provide proper operation and control sequence. Refer to Section 23 0500: Common Work Results for HVAC.

D. Extent of Field Tests: After installation and before completion, Work of this Section shall be subjected to required field tests, including those specified here and in Section 23 0500: Common Work Results for HVAC.

E. Operation and Maintenance Data: Provide required operation and maintenance data as specified in Section 23 0500: Common Work Results for HVAC.

3.07 REFRIGERANT PIPING

A. Unless otherwise indicated, main liquid and suction lines from condensing unit to evaporator coil shall be of sizes specified by manufacturer.

B. Refrigeration piping shall be refrigeration grade copper tubing, type L hard-drawn. In instances where refrigeration lines are installed in an inaccessible location and must be snaked through conduit or a trench, that portion of tubing required to complete connections through conduit or trench may be soft drawn. Maintain entire system clean and dry during installation. Pipe shall be sealed until installed.

C. Refrigeration piping, both hard and soft-drawn, shall be straight and free from kinks, restrictions and horizontal runs shall be sloped towards compressor one inch to 10 feet wherever possible. Vapor line oil traps shall be installed on bottom of vertical risers and inverted oil trap shall be installed on top of vertical risers.

D. Joints shall be installed with Sil-Fos 15, Silvaloy 15, or equal, high melting point solder.

E. Flare nuts required on suction lines shall be of short forged or frost-proof type. Other fittings shall be standard sweat-soldered type. Ells and return bends shall be long radius type. Install leak lock material.

F. Refrigeration Piping: Joints shall be silver brazed and leak tested. Field fabricated lines shall be thoroughly flushed and cleaned before connection. Bleed nitrogen through lines during silver brazing, and cap and seal lines when not completed and connected to equipment.

G. Sleeve penetrations of floors, walls and ceiling to allow for free motion of piping. Provide 24 gage galvanized iron pipe and chrome-plated escutcheon plates. Pack annular space

between pipe and sleeve with incombustible material such as fiberglass and seal each end with mastic to provide a waterproof seal.

H. Install insulated couplings at points of connection between dissimilar metals for cathodic protection. Insulate copper tubing from ferrous materials and hangers with 2-inch thickness of 3-inch wide strip, 10 mil polyvinyl tape wrapped around pipe.

I. Support piping by iron hangers and supports. Hydra-Zorb cushion clamps, LSP Products Group Acousto Clamp, or equal, on non-insulated piping, and Klo-Shure coupling clamp on insulated piping, or equal.

J. Provide saddles to protect pipe insulation.

K. Provide connections of copper and brass pipe and tubing with Harris Products Group Safety-Silv 56, Lucas-Milhoupt, Inc., or equal, complying with ANSI/AWS A5.8 and NSF 51.

L. Insulate refrigerant suction lines.

M. On split heat pump systems, insulate both vapor and liquid lines. For insulation materials, refer to Section 23 0700: HVAC Insulation.

3.08 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off Project site.

3.09 PROTECTION

A. Protect Work of this Section until Substantial Completion.

END OF SECTION

DIVISION 26

ELECTRICAL

SECTION 26 0500

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.01 SUMMARY

A. This Section specifies the basic requirements for electrical installations and includes requirements common to more than one section of Division 26. It expands and supplements the requirements specified in sections of Division 01.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 03 3000 - Cast-in-Place Concrete.

3. Section 09 9000 - Painting and Coating.

4. Division 23 - HVAC.

5. Division 27 – Communications.

6. Division 28 - Electronic Safety and Security.

C. Applicable Standards

1. ASTM D 709 (2007) – Laminated Thermosetting materials.

2. ANSI/NEMA FB-1 (2010) – Standard for Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable.

3. ANSI/NEMA 250 (2008) – Enclosure for Electrical Equipment (1000 Volts Maximum).

4. California Electrical Code (CEC).

5. IEEE C57.12.28 (2005) – Standard for Pad-Mounted equipment (Enclosure Integrity).

6. UL 1 (2005) – Standard for Flexible Metal Conduit.

7. UL 1242 (2007) – Standard for Electrical Intermediate Metal Conduit.

8. UL 506 (2008) – Specialty Transformers.

9. UL 6 (2010) – Electrical Rigid Metal Conduit-Steel.

10. UL 797 (2007) – Electrical Metallic Tubing-Steel.

11. UL 870 (2008) – Standard for Wireways, Auxiliary Gutters, and Associated Fittings

1.02 BASIC ELECTRICAL REQUIREMENTS

A. Quality Assurance:

1. Workers possessing the skills and experience obtained in performing work of similar scope and complexity shall perform the Work of this Division.

2. Refer to other sections of the Specifications for other qualification requirements.

B. Drawings and Specifications Coordination:

1. For purposes of clearness and legibility, Drawings are essentially diagrammatic, and the size and location of equipment is indicated to scale whenever possible. Verify conditions, dimensions, indicated equipment sizes, and manufacturer's data and information as necessary to install the Work of this Division. Coordinate location and layout with other Work.

2. Verify final locations for rough-ins with field measurements and with the requirements of the equipment to be connected.

3. Drawings indicate required size and points of termination of conduits, number and size of conductors, and diagrammatic routing of conduit. Install conduits with minimum number of bends to conform to structure, avoid obstructions, preserve headroom, keep openings and passageways clear, and comply with applicable code requirements.

4. Routing of conduits may be changed provided that the length of any conduit run is not increased more than 10 percent of length indicated on the Drawings.

5. Outlet locations shall be coordinated with architectural elements prior to start of construction. Locations indicated on the Drawings may be distorted for clarity.

6. Coordinate electrical equipment and materials installation with building components and the Work of other trades

7. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations.

8. Coordinate connection of electrical systems with existing underground utilities and services.

C. Terminology:

1. Signal Systems: Applies to data, fire alarm, annunciator, sound, public address, buzzer, telephone, television, inter-communication, elevator access controls, lighting control systems and security systems.

2. Low Voltage: Applies to signal systems operating at 120 volts and less, and power systems operating at less than 600 volts.

3. UL: Underwriter's Laboratories Inc, Nationally Recognized Testing Laboratory (NRTL), or equal.

D. Regulations: Work shall comply with the requirements of authorities having jurisdiction and the California Electrical and Building Codes. Material shall conform to regulations of the National Board of Fire Underwriters for electrical wiring and apparatus. Materials shall be new and listed by UL, or another NRTL.

E. Structural Considerations for Conduit Routing:

1. Where conduits pass through or interfere with any structural member, or where notching, boring or cutting of the structure is necessary, or where special openings are required through walls, floors, footings, or other buildings elements, conform to CBC, Part 2, Title 24, Section 1906.3 for conduits and pipes embedded in concrete and Sections 2308.9.10 and 2308.9.11 for notches and bored holes in wood; for steel, as detailed on the structural steel Shop Drawings.

2. Where a concrete encasement for underground conduit abuts a foundation wall or underground structure which the conduits enter, encasement shall rest on a haunch integral with wall or structure, or shall extend down to footing projection, if any, or shall be doweled into structure unless otherwise indicated. Underground structures shall include maintenance holes; pull boxes, vaults, and buildings.

F. Electrically Operated Equipment and Appliances:

1. Furnished Equipment and Appliances:

a. Work shall include furnishing and installing wiring enclosures for, and the complete connection of electrically operated equipment and appliances and electrical control devices which are specified to be furnished and installed in this or other sections of the Specifications, wiring enclosures shall be concealed except where exposed Work is indicated on the Drawings.

b. Connections shall be provided as necessary to install equipment ready for use. Equipment shall be tested for proper operation and, if motorized, for proper rotation. If outlets are of incorrect electrical characteristics or any specified equipment fails to operate properly, repair and/or replace the outlet and/or equipment.

2. Equipment and Appliances Furnished by Others:

a. Equipment and appliances indicated on Drawings as "not in contract" (NIC), "furnished by others," or "furnished by the Owner," will be delivered to the Project site. Required electrical connections shall be performed for such equipment and appliances. Motorized equipment will be furnished factory-wired to a control panel or junction box unless otherwise indicated. Appliances will be furnished equipped with portable cord and cap. Provide disconnect switches where required.

b. Connections to equipment furnished under this Division shall be part of the Work of this section. Work shall include internal wiring, installation, connection and adjustment of bolted drive motors in which the motor is supplied as a separate unit, and connections only for equipment furnished with factory installed internal wiring, except as further limited by Drawings and this Specification. Work shall include furnishing and installing suitable outlets, disconnecting devices, starters, push-button stations, selector switches, conduit, junction boxes, and wiring necessary for a complete electrical installation. Work shall also include furnishing and installing conduit and boxes for HVAC control systems, furnished under Division 23. Devices and equipment furnished shall be of same type used elsewhere on the Work or as specified.

c. Electrical equipment furnished under other sections, for installation and connection under Work of this section, will be delivered to the Project site ready for installation.

d. Mechanical equipment furnished under other sections, and requiring electrical connection under this section, will be set in place as part of the Work of the section furnishing such equipment unless noted otherwise.

e. Suitability and condition of equipment furnished under other sections shall be determined in advance of installation. Immediate notice of damage, unsuitability, or lack of parts shall be given to the entity providing such equipment.

G. Protection of Materials:

1. Protect materials and equipment from damage and provide adequate and proper storage facilities during progress of the Work. Damaged materials and/or equipment shall be replaced.

H. Cleaning:

1. Exposed parts of Work shall be left in a neat, clean, usable condition. Finished painted surfaces shall be unblemished and metal surfaces shall be polished.

2. Thoroughly clean parts of apparatus and equipment. Exposed parts to be painted shall be thoroughly cleaned of cement, plaster, and other materials. Remove grease and oil spots with solvent. Such surfaces shall be wiped and corners and cracks scraped out. Exposed rough metal shall be smooth, free of sharp edges, carefully steel brushed to remove rust and other spots, and left in proper condition to receive finish painting.

3. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

I. WARRANTIES

1. Provide one year warranty on all material and labor performed, unless noted otherwise in specific sections.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 GENERAL REQUIREMENTS

A. Exposed conduits shall be painted to match the surfaces adjacent to installation.

B. Salvaged materials removed from buildings shall be removed from the Project site as required.

C. Where existing structural walls are cored for new conduit runs, separation between cored holes shall be three inches edge to edge from new or existing holes, unless otherwise required by the Architect. All coring to be laid out and reviewed by Architect prior to drilling. Contractor to verify location of structural steel, rebar, stress cabling or similar prior to lay out.

D. Electrical equipment shall be braced and anchored for CBC Seismic Design requirements, or as otherwise indicated on the Drawings.

3.02 DELIVERY STORAGE AND HANDLING

A. Deliver products to project site with proper identification, which shall include names, model numbers, types, grades, compliance labels, and similar information needed for District identification; all products and materials shall be adequately packaged and protected to prevent damage during shipment, storage, and handling.

B. Coordinate deliveries of electrical materials and equipment to minimize construction site congestion.

3.03 CUTTING AND PATCHING

A. Cutting and patching of electrical equipment, components, and materials shall include the removal and legal disposal of selected materials, components, and equipment.

B. Do not endanger or damage installed Work through procedures and processes of cutting and patching.

C. Repair or restore other work, or surfaces damaged as a result of the work performed under this contract.

3.04 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose off the Project site.

B. Remove equipment and implements of service, and leave entire work area neat and clean, to the satisfaction of the Owner Authorized Representative.

3.05 PROTECTION

A. Protect the Work of this section until Completion.

END OF SECTION

SECTION 26 0513

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Boxes, enclosures, keys and locks.

2. Receptacles and switches.

3. Identifications and signs.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Division 26 – Electrical.

3. Division 27 – Communications.

4. Division 28 - Electronic Safety and Security.

PART 2 - PRODUCTS

2.01 BOXES, ENCLOSURES, KEYS AND LOCKS

A. Outlet Boxes and Fittings:

1. Outlet boxes installed in concealed Work shall be galvanized steel, pressed, or welded type, with knockouts.

2. In exposed Work, where conduit runs change direction or size, outlet boxes and conduit fittings shall be cast metal with threaded hubs cast integral with box or fitting.

3. Fittings shall be cast metal and non-corrosive. Ferrous metal fittings shall be cadmium-plated or zinc galvanized. Castings shall be true to pattern, smooth, straight, with even edges and corners, of uniform thickness of metal, and shall be free of cracks, gas holes, flaws, excessive shrinkage, and burnt-out sand.

4. Covers for fittings shall be galvanized steel or non-corrosive aluminum and shall be designed for particular fitting installed.

5. Light fixture outlets shall be 4-inch octagon, 4-inch square, 2 1/8-inch deep or larger, depending upon number of conductors or conduits therein. Plaster rings shall be furnished with round opening with two ears drilled 2 23/32 inches center to center.

6. For local device outlets provide 4-inch square 2 1/8-inch deep, boxes for single gang, 5-inch square boxes for two-gang, and special solid gang boxes with gang plaster ring for more than two switches.

7. For TV outlets, and horns and strobes provide manufacturer's supplied back box as needed. For television outlets, provide 4-gang deep boxes and 4-gang plaster rings.

8. Plaster rings shall be provided on flush-mounted outlet boxes except where otherwise indicated or specified. Plaster rings shall be same depth as finished surface. Install approved ring extension to obtain depth to finish surface.

9. In existing plywood wall or drywall construction, and where flexible steel conduit is fished into walls, single-gang and 2-gang outlets for wiring devices may be sectional steel boxes with plaster ears. Boxes shall be fastened to plywood with flat-head screws in each plaster ear screw hole. Boxes fastened to gypsum board shall be Raco, Appleton, Cooper, Bowers, or equal.

10. Factory made knockout seals shall be installed to seal box knockouts, which are not intact.

11. Where flexible conduit is extended from flush outlet boxes, provide and install weatherproof universal box extension adapters.

B. Junction and Pull boxes:

1. Junction and pull boxes, in addition to those indicated, shall only be used in compliance with codes, recognized standards, and Contract Documents.

2. Interior and non-weatherproof boxes shall be constructed of blue or galvanized steel with ample laps, spot welded, and shall be rigid under torsion and deflecting forces. Boxes shall be furnished with auxiliary angle iron framing where necessary to ensure rigidity.

3. Covers shall be fastened to box with a sufficient number of machine screws to ensure continuous contact all around. Flush type boxes shall be drilled and tapped for cover screws if boxes are not installed plumb.

Surfaces of pull and junction boxes and covers shall be labeled in black marker ink designating system, panelboard and circuit designation contained in box. In exposed Work, designation shall be installed on inside of pullbox or junction box cover.

4. Weatherproof NEMA 3R pull and junction boxes shall conform to foregoing for interior boxes with following modifications:

   a. Cover of flush mounting boxes shall be furnished with a weather-tight gasket cemented to, and trimmed even with, cover all around.

   b. Surface or semi-flush mounting pull and junction boxes shall be UL, or another Nationally Recognized Testing Laboratory (NRTL) listed as rain-tight and shall be furnished complete with threaded conduit hubs.

   c. Exposed portions of boxes shall be galvanized and finished with one prime coat and one coat of baked-on gray enamel, unless already furnished with factory baked-on finish.

5. Junction and pull boxes shall be rigidly fastened to structure and shall not depend on conduits for support.

C. Floor Outlets:

1. Provide floor outlets, as specified on plans. Floor boxes with flush brass floor plates shall be set to finish flush with finish floor covering, whether it be carpeted, wood, resilient floor covering, or other finish materials.

D. Keys and Locks:

1. Provide two keys with furnished door locks, including cabinet door locks and switchboard locks, two keys for lock switches on switchboards or control panels, and two keys with interlocks or other furnished lock switches. Deliver keys to Owner.

2.02 RECEPTACLES AND SWITCHES

A. Receptacles:

1. Duplex receptacles shall be heavy-duty specification grade, grounding type. Terminal screws shall be back and side wired with internal screw pressure plates. Mounting strap shall feature heavy-duty brass

construction. Receptacle back body shall be PVC. Receptacle face shall be White, impact resistant nylon. Receptacles shall have triple wipe brass power contacts.

2. Duplex receptacles on circuits supplied by Emergency Generator shall have red color bodies and red color cover plates.

3. Single receptacles shall be heavy-duty specification grade, grounding type. Terminal screws shall be back and side wire with internal screw pressure plates. Mounting strap shall feature heavy-duty brass construction. Receptacle back body shall be thermoplastic. Receptacle face shall be white, impact resistant nylon. Receptacles shall have triple wipe brass power contacts. For circuits consisting of one single receptacle only, ampere rating of receptacle shall be same as circuit breaker or fuse.

4. 15 and 20 amps single receptacles on circuits supplied by panel boards with integral surge suppression shall be Pass & Seymour NEMA 5-20R model number 5361-BL (blue), and NEMA 5-15R model number 5261-BL (blue) respectively. Equal receptacles by other Owner approved manufactures are acceptable.

5. Provide specification grade ground-fault circuit interrupter (GFCI) type receptacles in accordance with 2010 UL standards. GFCI receptacles shall have a trip indication light. Receptacle terminal screws shall be back and side wire with internal screw pressure plates. Test and reset buttons shall match device body and shall be ivory. GFCI receptacles shall be white color, manufactured in standard configuration. Exterior mounted receptacles shall be mounted inside weatherproof enclosure.

6. Provide weatherproof receptacles, except where otherwise indicated or specified, consisting of GFCI receptacles, as specified herein, and metal plates with die-cast lockable hinged lids and weatherproof mats;

7. Provide transient voltage surge suppression (TVSS) receptacles offering metal oxide varistors (MOVs) protecting normal and common modes, (L-N, L-G, N-G) with 500V suppressed voltage. TVSS devices shall offer 3-mode equal protection with 210 joules minimum per mode of energy absorption and 13,000 amp maximum surge capability. TVSS devices shall have 3 thermal fuses and two over-current protection fuses. TVSS devices shall have LED visual only surge status indicator to alert user to surge suppression circuit condition. Visual indicator will be illuminated (red) when power is on and surge suppression circuit is fully functional. Visual indicator will not be illuminated when power is off

or unit experiences loss of surge suppression protection. Terminals shall be back and side wire including ground terminal. Color shall be blue.

NEMA #	Pass& Seymour	Hubbell	Leviton
(20 amps) NEMA 5-20R	5352BLSP	HBL5360SA	5380B
(15 amps) NEMA 5-15R	5252BLSP	HBL5260SA	5280B

8. Receptacles within 6 feet of water fountains, counter tops, or any sources of water shall be GFCI type.

B. Switches:

1. Local Switches:

a. Provide local switches, high strength thermoplastic toggle, specification industrial grade, rated 20 amps at 120-277 volts AC only, with plaster ears, external screw pressure plate back and side wired, and standard size composition cups which fully enclose mechanism. Switches shall be approved for installation at currents up to full rating on resistive, inductive, tungsten filament lamp and fluorescent lamp loads, and for up to 80 percent of rating for motor loads. Switches shall have oversized silver alloy contacts for long life and better heat dissipation. Provide switches as single pole, double pole, 3-way, 4-way, non-lock type. Provide non-lock type switches with white handles. Switches on circuits supplied by Emergency Generator shall have red color handle and red color cover plates.

b. Provide lock type switches, specification industrial grade, 20 amp, 120-277 volts with metal or nylon key guides with on/off indication, and operable by same key. Key shall be standardized vertically oriented, tamper resistant, forked key with two each 5/16-inch long forks, 5/32-inch spacing between forks and 5/16-inch width overall.

c. Pilot light switches shall be rated 20 amps and shall conform to specifications for local switches. Switches shall be furnished with red, Lexan handles that are lighted by long-lasting neon lamps. Pilot light shall light when load is on. Pilot light 120 volt switches

d. Provide where required, remote control switches for mechanically held contactors arranged for 3-wire control, toggle type, momentary contact, single pole, 3-position with center off position, rated 20 amps at 120-277 volts AC only, with plaster ears, binding

screws for side wiring, standard size composition cups which fully enclose mechanism.

e. Provide where required, remote control switches for magnetically held contactors arranged for 3-wire control, toggle type, maintained contact, single pole, 3-position with center off position, rated 20 amps at 120-277 volts AC only, with plaster ears, binding screws for side wiring, standard size composition cups which fully enclosed mechanism.

f. Momentary Contact locking key type switch. 20A 120/277V center off. Key shall be District standardized vertically oriented, tamper resistant, forked key with two each 5/16" long forks, 5/32" spacing between forks and 5/16" width overall.

g. Momentary Contact switch low voltage 1 pole 3A 24VAC 3 position center off. Key for locking switch shall be District standardized vertically oriented, tamper resistant, forked key with two each 5/16" long forks, 5/31" spacing between forks and 5/16" width overall.

2. Time Switches and Photoelectric Controls for existing construction.

a. Provide time switches with a 7-day, solid-state, electronic type capable of fully automatic or manual operation and housed in a sheet steel enclosure unless built into a panel or switchboard. Contacts rated for 25 amps resistive or inductive, each pole 240 VAC; 5 amps tungsten or 277 VAC pilot duty, each pole 240 VAC. Time switches to contain a non-volatile clock and non-volatile memory with a built-in rechargeable super capacitor power carry-over system. Battery carryover is not acceptable. Provide a minimum of 15 on/off set points per week. Timing to be in one minute increments with a minimum on or off time of one minute. Time switch digital displays to indicate days of week, hours, and minutes. Display to contain a load status light to indicate when equipment is in operation. Time switches; Paragon Model EC7000 Series, Tork Model EW 101B series, Intermatic ET7000 series, or equal. Features required for application:.

1) Liquid crystal display panel.

2) Holiday scheduling: Up to 40 dates may be assigned special holiday schedules, up to one year in advance.

3) Automatically adjusts to and from daylight savings time and for leap year.

4) Contact ratings: 10 amp at 240 VAC.

5) Safety override switch for each circuit to either provide shut down of circuit or to override on.

6) Selective review: All or part of schedule shall be displayed at touch of a key.

7) Super Capacitor for power carry over system.

8) Supply voltage: 120 V.

9) 365-day advance scheduling.

b. Photoelectric control: Shall be rated 2,000 watts, 120V with single pole, single throw, normally closed contact, enclosed in a die-cast aluminum gasketed enclosure with 1/2 inch conduit fitting, Tork series 2100, or equal.

3.

2.03 IDENTIFICATION AND SIGNS

A. Identification Plates:

1. Provide identification plates for the following unless otherwise specified, for switchboards, unit substations, motor control centers, control panels, push-button stations, time switches, contactors, motor starters, motor switches, panelboards, and terminal cabinets.

2. Identification plates shall be of plastic stock and shall adequately describe function, voltage and phase of identified equipment. Where identification plates are detailed or described on Drawings, inscription and size of letters shall be as indicated. For lighting and power panels, identification plates shall indicate panel designation, voltage, and phase of panel. For terminal cabinets, identification plates shall indicate system contained in terminal cabinet.

3. Identification plates shall be black-and-white nameplate stock of bakelite with characters cut through black exposing white. Identification plates for Emergency Circuits and equipment shall be red-and-white nameplates.

4, Plates shall be furnished with beveled edges and shall be securely fastened in place with No. 4 Phillips-head, cadmium-plated steel, self-tapping screws. Characters shall be 3/16 inch high, unless otherwise indicated.

B. Markings:

1. Install identification markings to surface-mounted starters, switches, disconnect switches, contactors, and other devices controlling motors and appliances. Provide abbreviations required along with an identifying number. Markings to be provided with locking type stencils using paint of a contrasting color. Figures shall be 3/8 inch high unless otherwise indicated. Dymo Industries Inc., self-sticking plastic labels, with embossed characters made with a typewriter may be installed instead of stencils and paint; p-touch self adhesive plastic, or Brother P-Touch self sticking laminated plastic labels may be installed.

PART 3 - EXECUTION

3.01 INSTALLATION AND SUPPORT OF BOXES

A. Install outlet boxes flush with finished surface of wall or ceiling. Install plumb and securely fastened to structure, independent of conduit. Except where otherwise indicated, provide factory-fabricated adjustable attachment bar hangers between studs to support outlet boxes. When installation is performed in fire rated walls, maintain the wall's rating integrity by means of approved fire stop methods.

B. Outlet boxes installed in suspended or furred ceilings with steel runner or furring channels shall be supported, except where otherwise indicated, by a Unistrut P-4000 Tessco A1200HS-10, Cooper B-Line B22s-HG, or equal channel spanning main ceiling runner channels. Each box shall be supported from its channel by a 3/8 inch 16 threaded steel rod with a Unistrut P-4008, Fastenal #48604, Copper B-Line 78101140346 or equal nut and a Tomic No. 711-B Adapta-Stud, or equal. Rod shall be tightened to a jamb fit with channel and its nut. Box shall be locked to rod by means of a 1/2 inch locknut on stud and a 3/8 inch 16 hex nut locking stud to rod.

C. Heights of outlets and equipment indicated on Drawings shall govern. In absence of such indications, following heights shall be maintained with heights measured to centerline unless otherwise noted:

1. Install wall-mounted telephones, light switches, and other switches, 48 inches above finished floor. Refer to other Division 26, 27 and 28 Sections.

2. Install panelboards and terminal cabinets 6 feet 6 inches from finish floor to top of cabinet.

3. Install television outlets at a height corresponding to location of television monitor, or a minimum of 15 inches above finished floor.

4. The use of extension boxes shall be limited to not more than 1 times the original depth of junction box.

3.02 COVER PLATES

A. Provide a plate on each switch, plug, pilot light, data, interphone, public telephone, and television outlet, and on existing and reset outlets where so indicated or required. Plates shall be of stainless steel unless otherwise specified.

B. Flush wiring device and signal system outlets indicated to be blank covered, shall be covered with blank stainless steel plates. Flush lighting outlets to be blanked shall be covered with Wiremold 5736 steel covers, or equal, painted to match surrounding finish. Provide stainless steel covers to blank indicated or required surface-mounted outlets.

C. In the following cases, and at required locations. Switch and receptacle plates shall be engraved with the device(s), or fixtures being controlled, or as indicated:.

1. Three-gang and larger gang switches in locations other than classrooms.

2. Lock switches.

3. Pilot switches.

4. Switches so located that operator cannot see fixtures, or items of equipment controlled while his hand is on the switch.

5. Switches not in same room with fixtures or items of unit heaters, air curtains, fly fans, etcetera.

6. Receptacles operating at other than 120 V shall be identified with the operating voltage.

7. Switches operating on 277 V shall be identified with the operating voltage.

8. Where indicated on Drawings.

D. Designations shall be as indicated on Drawings or as specified by Architect.

E. Standard GFI cover plates shall be Pass & Seymour 4600, Raco 5028-0, or equal. GFI cover plates shall be provided with a CAM lock mechanism with two keys or a padlock hasp that does not protrude through the face of the cover and will allow the shank of locks keyed Corbin No. 60 keys.

3.03 IDENTIFICATION OF CIRCUITS AND EQUIPMENT

A. Provide descriptive nameplates or tags permanently attached to switchboards, motor control centers, transformers, panelboards, circuit breakers, disconnect switches, starters, pushbutton control stations and other apparatus installed for operation or control of circuits, appliances, fire alarm control panel(s), fire alarm annunciator(s), power supplies, terminal cabinets, energy management control units, and Information technology system backbone and distribution equipment points.

B. Provide nameplates of engraved laminated plastic, or etched metal. Submit Shop Drawings denoting dimensions and format to Architect before installation. Fasten to equipment with escutcheon pins, rivets, self-tapping screws, or machine screws. Self-adhering or adhesive backed nameplates are not permitted.

C. Fasten tags to feeder wiring in conduits at every point where runs are broken or terminated, including pull wires in empty conduits. Indicate circuit, phase, and function. Tag branch circuits in panel boards and motor control centers. Tags may be manufactured of pressure-sensitive plastic or embossed self-attached stainless steel or brass ribbon.

D. Provide circuit identification cards and cardholders in all panel boards. Cardholders shall consist of metal frame retaining a clear plastic cover permanently attached to inside of panel door. List of circuits shall be typewritten on a card. Circuit description shall include name or number of circuit, area and connected load.

E. Junction and pull boxes shall have covers stenciled with box number when indicated on Drawings, or circuit numbers according to panel schedules. Data shall be lettered in a conspicuous manner with a color contrasting with finish.

F. Name shall be correctly engraved, with a legend indicating function or areas, when required by codes or indicated on Drawings.

3.04 PROTECTION

A. Protect Work of this section until Completion.

3.05 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off Project site.

END OF SECTION

SECTION 26 0519

LOW-VOLTAGE CONDUCTORS (600 VOLT AC)

PART 1 - GENERAL

1.01 SUMMARY

A. Provisions of Division 01 apply to this section.

B. Section Includes: Low-voltage wire, splices, terminations and installation.

1.02 SUBMITTALS

A. Provide in accordance with Division 01.

PART 2 - PRODUCTS

2.01 WIRES

A. Wires shall be single conductor type THHN or THWN insulated with polyvinyl chloride and covered with a protective sheath of nylon, rated at 600 volts. Wires may be operated at 90 degrees C. maximum continuous conductor temperature in dry locations, and 75 degrees C. in wet locations and shall be listed by UL Standard 83 for thermoplastic insulated wires, listed by Underwriter's Laboratories (UL) for installation in accordance with Article 310 of the California Electrical Code (CEC). Conductors shall be solid copper for 12 AWG and smaller conductors, and stranded copper for 10 AWG and larger conductors. Conductors shall be insulated with PVC and sheathed with nylon. Wires shall be identified by surface markings indicating manufacturer's identification, conductor size and metal, voltage rating, UL symbol, type designations and optional rating. Indentations for lettering are not permitted. Wires shall be tested in accordance with the requirements of UL standard for types THWN, or THHN.

B. Conductors shall be solid Class B or stranded Class C, annealed uncoated copper in accordance with UL standards, or another Nationally Recognized Testing Laboratory (NRTL).

2.02 STANDARDS

A. THWN/THHN wires shall comply with the following standards:

1. UL 83 for thermoplastic insulated wires.

2. UL 1063 for machine tool wires and cables.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Wires shall not be installed until debris and moisture is removed from conduits, boxes, and cabinets. Wires stored at site shall be protected from physical damage until they are installed and walls are completed.

B. Wire-pulling compounds furnished as lubricants for installation of conductors in raceways shall be compounds approved and listed by UL, NRTL, or equal. Oil, grease, graphite, or similar substances are not permitted. Pulling of 2 AWG or larger conductors shall be performed with a cable pull machine. Any runs shorter than 50 feet are exempt. When pulling conductors, do not exceed manufacturer's recommended values

C. The Project Inspector will observe installation of feeder cables. Notify the Project Inspector not less than two working days in advance of the proposed time of feeder installation.

D. At outlets for light, power, and signal equipment, pigtail splices with 8-inch circuit conductor leads for connection to fixtures, equipment, and devices.

E. Pressure cable connectors, pre-insulated 3M Scotchlok, Hubbell Power, O-Z/Gedney or equal, Y, R or B spring-loaded twist-on type, may be furnished in splicing number 8 AWG or smaller wires for wiring systems; except public address and telephone systems.

F. Joints, splices, taps, and connections to switchboard neutral, bonding or grounding conductors, conductors to ground busses, and transformer connections for wires 6 gage and larger shall be performed with high-pressure cable connectors approved for installation with copper conductors. Connectors shall be insulated with heavy wall heat shrink WCSM, or cold-applied roll-on sleeve RVS. Insulation level shall be a minimum of 600V and joints, splices, and taps shall be qualified to ANSI C 119.1, UL, NRTL, or equal listed mechanical pressure connections.

G. Connections to any bussing and high-press cable connectors shall be securely bolted together with corrosion-resistant plated carbon steel, minimum grade five machine screws secured with constant pressure-type locking devices.

H. Connection of any bonding or grounding conductors shall be securely bolted together with corrosion-resistant plated carbon steel, minimum grade five machine screws secured with constant pressure-type locking devices.

I. Wire switchboards, panel cabinets, pull boxes, and other cabinets except public address, shall be neatly grouped and tied in bundles with nylon ties at 10-inch intervals. In switchboards, panels and terminal blocks, wires shall be fanned out to terminals. If bundles are longer than 24 inches, a maximum of nine current carrying conductors may be bundled together.

J. Install conductor lengths with a minimum length within the wiring space. Conductors must be long enough to reach the terminal location in a manner that avoids strain on the connecting lug.

K. Maintain the conductor required bending radius.

L. Neutral conductors larger than 6 gage, which are not color identified throughout their entire length, shall be taped, painted white or natural gray, or taped white where they appear in switchboards, cabinet, gutters or pull boxes. Neutral conductors 6 gage and smaller shall be white color identified throughout their entire length.

M. Wiring systems shall be free from short circuits and grounds, other than required grounds. The contractor shall be responsible for the testing of feeder and branch circuit conductor's insulation resistance. The insulation of the conductors shall be tested prior to connections to any panelboards, switchboards, variable frequency drives, lighting control systems, ballasts, and wiring devices such as but not limited to GFI receptacles, TVSS receptacles, or equipment. Insulation testing of panelboards and switchboards shall be independently performed from the insulation testing of any conductors as specified in other sections of this specification.

1. Utilize the services of an approved independent testing laboratory to perform megger time-resistance insulation testing of feeder conductors. Tests must be conducted with wires disconnected at both ends.

    a. Provide calibration program records to assure the testing instrument to be within rated accuracy. The test equipment

accuracy shall be in accord with the requirements stated by the National Institute of Standards and Technology (NIST).

b. Test equipment shall be provided with a label stating the date of last calibration. As a minimum the equipment shall have been calibrated within the past 12 months.

c. Test reports shall include the following:

1) Identification of the testing organization.

2) Equipment identification.

3) Ambient conditions.

4) Identification of the testing technician.

5) Summary of project.

6) Description of equipment being tested.

7) Description of tests.

8) Test results.

9) Analysis, interpretation and recommendations.

2. Utilize the services of an approved independent testing laboratory or a qualified contractor's employee (Technician certified in accordance with ANSI/NETA ETT-2000 Standard for Certification of Electrical Testing Personnel) to perform megger time-resistance insulation testing of branch circuit conductors. Tests must be conducted with wires disconnected at both ends.

a. Test equipment and report requirements stipulated under paragraph 3.01.N.1 apply to branch circuit testing.

3. Tests shall be performed in the presence of the Project Inspector.

4. Insulation resistance shall not be less than 100 mega-ohms.

3.02 COLOR CODES

A. General Wiring:

1. Color code conductor insulation as follows:

SYSTEM VOLTAGE		
Conductor	240/120 Delta	480Y/277
Phase A	Black	Brown
Phase B	Red	Orange
Phase C	Blue	Yellow
Neutral	White	Natural Gray

Neutrals shall be colored-distinguished if circuits of two voltage systems are used in the same raceway.

2. For phase and neutral conductors 6 gage or larger, permanent plastic-colored tape may be furnished to mark conductor end instead of coded insulation. Tape shall cover not less than 2 inches of conductor insulation within enclosure.

3.03 FEEDER IDENTIFICATION

A. Feeder wires and cables shall be identified at each point the conduit run is broken by a cabinet, box, gutter, etc. Where terminal ends are available, identification shall be by means of heat shrink wire markers, which provide terminal strain relief. Markers shall be by Tyco Electronics, Panduit, Brady Perma-Sleeve, or equal. Identification in other areas shall be by means of wrap-around tape markers from Tyco Electronics, Panduit, Brady Perma-Code or equal. Markers shall include feeder designation, size, and description.

3.04 TAPE AND SPLICE KITS

A. Splices, joints, and connectors joining conductors in dry and wet locations shall be covered with insulation equivalent to that provided on conductors. Free ends of conductors connected to energized sources shall be taped. Voids in irregular connectors shall be filled with insulating compound before taping. Thermoplastic insulating tape approved by UL, NRTL, or equal for installation as sole insulation of splices shall be furnished and shall be installed according to manufacturer's printed specifications.

3.05 PROTECTION

A. Protect the Work of this section until Completion.

3.06 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 26 0526

GROUNDING AND BONDING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Provide and install grounding system as indicated or required.

B. Related Requirements:

1. Refer to related sections for their system grounding requirements.

2. Refer to Aquatic design drawings and specifications for the Pool grounding and bonding.

3. Section 26 0500: Common Work Results for Electrical.

4. Division 27: Communications.

1.02 QUALITY ASSURANCE

A. Reference Standards:

1. IEEE 142 Green Book.

2. Underwriter's Laboratories (UL).

3. California Electrical Code.

4. Building Industry Consultant Services International (BICSI) (Signal).

5. EIA/TIA (Signal and power).

6. Nationally Recognized Testing Laboratory (NRTL) or equal.

1.03 SYSTEM DESCRIPTION

A. Metallic objects on the Project site that enclose electrical conductors, or that are likely to be energized by electrical currents, shall be effectively grounded.

B. Metal equipment parts, such as enclosures, raceways, and equipment grounding conductors, and earth grounding electrodes shall be solidly joined together into a continuous electrically conductive system.

C. Metallic systems shall be effectively bonded to the main grounding electrode system.

D. A separately derived AC source shall be grounded to the equipment grounding conductor, and to separate “made” electrode of building grounding electrode system.

E. Electrical continuity to ground metal raceways and enclosures, isolated from equipment ground by installation of non-metallic conduit or fittings, shall be provided by a green insulated grounding conductor of required size within each raceway connected to isolated metallic raceways, or enclosures at each end. Each flexible conduit over six feet in length shall be provided with a green insulated grounding conductor of required size.

F. Cold water, or other utility piping systems, shall not be utilized as grounding electrodes due to the installation of insulating couplings and non-metallic pipe in such installations. In addition to bonding to cold water pipe provide at least one of the following made grounding electrodes:

1. A dedicated “made” electrode, fabricated of at least 20 feet of galvanized 1/2 inch diameter rebar encased by at least two inches of concrete, and placed next to the bottom of a concrete foundation, or footing in direct contact with earth A welded extended portion shall surface at the location of the common grounding electrode bus bar and be extended by a 3/0 CAD welded bare copper cable, or be CAD welded directly to the bus. The CAD weld shall be at least four inches above finished floor in a dry location. The main grounding electrode and associated grounding conductors shall be in an enclosure and in conduit.

2. Grounding electrodes as specified hereafter in this section.

3. Concrete enclosed electrode, fabricated of at least 20 feet of No. 2 AWG, minimum size, bare copper conductor, encased by at least two inches of concrete, located within or near bottom of a concrete foundation, or footing, which is in direct contact with earth. Footing rebar shall be connected to copper wire with approved connectors. An external electrode, as specified hereafter or as required by the CEC, shall be installed and connected to foundation or footing rebar.

G. Non-current carrying metal parts of high-voltage equipment enclosures, signal and power conduits, switchboard and panelboard enclosures, motor frames, equipment cabinets, and metal frames of buildings shall be permanently and effectively grounded. Provide a CEC sized grounding conductor in every raceway.

H. Within every building, the main switchboard or panelboard, shall be bonded to the cold water line. Metallic piping systems such as gas, fire sprinkler, or other systems shall be bonded to the cold water line.

1.04 SUBMITTALS

A. Provide in accordance with Division 01.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Furnished yard boxes shall be precast concrete and shall be approximately 14 inches wide by 19 inches long by 12 inches deep or larger, if necessary to obtain required clearances. Boxes shall be furnished with bolt-down, checkered, cast iron covers and cast iron frames cast into boxes. Yard boxes shall be Jensen Precast, Oldcastle Precast, Western Precast, Kistner , or equal.

B. “Made” electrodes shall be copper-clad steel ground rods, minimum 3/4 inch diameter by ten feet long.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Grounding electrodes shall be installed in the nearest suitable planting area, where not otherwise indicated on Drawings, and each electrode shall terminate within a concrete yard box installed flush with finish grade. In planting areas, finish elevation of concrete yard boxes shall be two inches above planting surfaces.

B. If concrete enclosed electrode is provided, grounding wire shall be terminated to a suitable copper plate with grounding lugs and must be enclosed in a raceway or box..

C. Grounding rods shall be driven to a depth of not less than eight feet. Permanent ground enhancement material, (GEM) as manufactured by Erico Electrical Products, Loresco Powerset, Tessco Ultrafil or equal, shall be installed at each ground rod to improve grounding effectiveness. Install in accordance with manufacture's installation instructions.

D. Grounding electrodes shall provide a resistance to ground of not more than 25 ohms.

E. When installing grounding rods, if resistance to ground exceeds 25 ohms, two or more rods connected in parallel, or coupled together shall be provided to meet grounding resistance requirements.

F. Ground rods shall be separated from one another by not less than ten feet.

G. Parallel grounding rods shall be connected together with recognized fittings and grounding conductors in galvanized rigid steel conduit, buried not less than 12 inches below finish grade.

3.02 TESTING

A. Provide the services of an approved independent testing laboratory to test grounding resistance of “made” electrodes, ground rods, bonding of building steel, water pipes, gas pipes and other utility piping. Tests shall be performed as follows:

1. Visually and mechanically examine ground system connections for completeness and adequacy.

2. Perform fall of potential tests on each ground rod or ground electrode where suitable locations are available per IEEE Standard No. 81, Section 8.2.1.2. Where suitable locations are not available, measurements will be referenced to a known dead earth or reference ground.

3. Perform the two point method test per IEEE No. 81, Section 8.2.1.1 to determine ground resistance between ground rod and building steel, and utility piping - such as water, gas and panelboard grounds. Metal railings at building entrances and at handicapped ramps shall also be tested.

4. Test shall be performed in the presence of the Inspector.

B. Submit 3 copies of test results to the Architect. Test results shall be submitted on an official form from the independent testing laboratory recording Project location, test engineer, test conditions, test equipment data, ground system layout or diagram, and final test results.

3.03 PROTECTION

A. Protect the Work of this section until Completion.

3.04 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 26 0533

RACEWAYS, BOXES, FITTINGS, AND SUPPORTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Raceways and wire ways.
2. Conduit installation.
3. Underground requirements.

B. Related Requirements:

1. Section 26 0500: Common Work Results for Electrical.
2. Section 26 0513: Basic Electrical Materials and Methods.
3. Division27: Communications.
4. Division 28 - Electronic Safety and Security.

C. Applicable Standards and Codes.

1. EIA/TIA 569 Standards.
2. National American Standards Institute (ANSI).
3. National Electrical Manufacturer’s Association (NEMA).
4. Nationally Recognized Testing Laboratory (NRTL).
5. California Electrical Code (CEC).
6. Uniform Building Code (UBC).
7. Underwriters Laboratory (UL).

1.02 SUBMITTALS

A. Materials List: Provide in accordance with Division 01.

PART 2 - PRODUCTS

2.01 RACEWAYS

A. Conduit Materials:

1. Metallic conduit, and tubing shall be manufactured under the supervision of an UL, or another NRTL factory inspection and label service program. Each ten-foot length of conduit and tubing shall bear the UL or another NRTL label and manufacturer's name.

2. Rigid metallic conduit shall be rigid steel, heavy wall, mild steel, zinc-coated, with an inside and outside protective coating manufactured in accordance with ANSI C 80.1. Couplings, elbows, bends, conduits, bushings and other fittings shall be the same materials and finish as the rigid metallic conduit. Fittings, connectors, and couplings shall be threaded type, manufactured in accordance with ANSI C 80.1 and UL 6.

3. Electrical metallic tubing shall be steel tubing, zinc-coated with a protective enamel coating inside, manufactured in accordance with NEMA C 80.3. Fittings, couplings, and connectors shall be gland compression type, set screw couplings and connectors not permitted. All parts shall be manufactured in accordance with NEMA C80.3 and UL 6A Electrical metallic tubing is designated hereinafter as EMT. Steel and rain tight fittings shall be approved and listed for the intended application.

4. Flexible steel conduit shall be of flexible interlocking strip construction with continuous zinc coating on strips, manufactured in accordance with UL 1.

    a. Connectors and couplings shall be required fittings of the type, which threads into convolutions of flexible conduit.

5. Liquid-tight flexible metal conduit shall be galvanized heavy wall, flexible locked steel strip construction, UV rated, with smooth moisture and oil-proof, abrasion-resistant, extruded plastic jacket. Connectors shall be as required for installation with liquid-tight flexible conduit and shall be installed to provide a liquid-tight connection.

6. Non-metallic conduit shall be rigid PVC electrical conduit extruded to schedule 40 dimensions of Type II. Grade 1 high impact, polyvinyl chloride, sweeps, couplings, reducers and terminating fittings shall be listed under the UL, or another NRTL, and shall bear the manufacturer's listed marking.

7. Metal Clad (MC) cable system is not allowed.

B. Sleeves for Conduits: Sleeves shall be adjustable type by Carlon, U.S. Plastic, PEP Plastic or equal.

C. Where conduit enters a building through a concrete foundation below grade, or ground water level, or where it is necessary to seal around a conduit where it passes through a concrete floor or wall, provide O-Z/Gedney Type FSK Thru Wall and Floor Seal, equivalent Cooper Crouse Hinds Thru-Wall, Legrand Thru-Wall, or equal.

D. Conduit Seal Fittings:

1. Provide conduit seal fittings where indicated on the Drawings. Conduit seals shall be of rigid galvanized steel. Seals in horizontal conduit installations shall be Thomas & Betts EYS, Appleton Type ESU, Crouse Hinds Type EYS, or equal. Seals in vertical conduit installations shall be Thomas & Betts EYD, Appleton Type SF, Crouse Hinds Type EYD, or equal, with continuous drain. When installing conduit seals make provision for percent fill space reduction in accordance with CEC.

2. Install sealing compound after wire has been installed. Ensure drain is not blocked in vertical seals when installing compound. Where conduit seals are installed in hazardous area applications, there shall be no conduit coupling, fitting, etc., between seal and boundary of hazardous area.

E. Penetration in Fire-Rated Structures: Provide 3M, or equal, sealant and fire barriers for installing fire-rated seals around penetrations through floors, walls, and elevator hoistways. Fire stop system must be UL, or another NRTL listed, and classified for through-penetration applications of metallic conduits and busways.

F. Pull Wires: Install 1/8 inch polypropylene cords in empty or spare conduits.

PART 3 - EXECUTION

3.01 CONDUIT INSTALLATION

A. General Requirements:

1. Provide complete and continuous systems of metallic conduit, outlet boxes, junction boxes, fittings and cabinets for systems of electrical wiring including lighting, power, and signal systems, except as otherwise specified.

2. EMT may be installed in interior concealed applications and in areas approved by owner. EMT shall not be installed in concrete, directly buried underground, outdoors, in boiler rooms, elevator pits, or where subject to damage.

3. Conduits in stud walls, in furred spaces less than 25' in length or for final connection to recessed fixtures or to motors or moving or vibrating equipment shall be flexible conduit in dry locations and liquid-tight flexible conduit in damp locations or where exposed to weather

   Flexible Steel conduit shall not exceed 1-1/2 inches in size.

4. Exposed conduits in Mechanical, Pool equipment rooms Chemical rooms, and where subject to corrosive environment, shall be Galvanized Rigid Steel. GRS.

5. Liquid-tight flexible steel conduit shall only be installed, except where otherwise specified, for final connection of motor terminal boxes, shop equipment, cafeteria equipment, HVAC equipment and other equipment, or for frequent interchange, and shall be of sufficient length, not exceeding 36 inches, to permit full travel or adjustment of motor on its base. Liquid-tight flexible conduit shall not be used for equipment not requiring adjustment or frequent interchange.

6. Connectors for flexible metal conduit shall be made of steel, and of the types which threads into convolutions of conduit. Connectors for watertight flexible metal conduit shall be as required for installation and shall be installed to provide a watertight connection.

7. Exposed conduit where indicated, shall be installed vertically and horizontally following the general configuration of the equipment, using cast threaded hub conduit fittings where required and shall be clamped to equipment with suitable iron brackets and one hole pipe strap.

8. Underground feeder distribution and branch circuit conduits for systems shall be non-metallic PVC conduit, except where otherwise specified or indicated.

9. Conduit shall be concealed unless otherwise indicated. Conduits exposed to view, except those in attic spaces and under buildings, shall be installed parallel or at right angles to structural members, walls, or lines of building. Conduits shall be installed to clear access openings.

10. Running threads are not permitted. Provide conduit unions where union joints are necessary. Conduit shall be maintained at least six inches from covering of hot water and steam pipes and 18 inches from flues and breechings. Open ends of conduits shall be sealed with permitted conduit seals during construction of buildings and during installation of underground systems. Furnish and install pull boxes where required by Code and where necessary in the raceway system to facilitate conductor installation. In general, conduit runs of more than 100 ft., or with more

than three right-angle bends, shall have a pullbox installed at a convenient intermediate location. Support boxes independently of raceways, walls and partitions. Boxes shall have removable screw covers and shall be accessible.

11. Where conduits are terminated in groups at panelboards, switchboards, and signal cabinets, etc., provide templates or spacers to fasten conduits in proper position and to preserve alignment. Conduits terminating at signal cabinets shall only enter cabinets in the following locations:

    a. Conduits entering top, side, and bottom of cabinets shall be aligned in a single row, centered two inches from rear of cabinet.

    b. Conduits entering back of cabinet shall be aligned in a single row centered two inches from top of cabinet.

    c. Conduits shall not be spaced closer than three inches on centers.

12. Conduits above metal lath ceilings shall be rigidly suspended with pipe hangers or pipe racks or shall be secured to superstructure with factory fabricated pipe straps. Conduits in metal lath or steel stud partitions shall be tied to furring channels or studs. In ceiling spaces and in partitions, tie wires shall be spaced not more than 5 feet apart, shall fasten conduit tight against channels and studs at point of tie and shall not support any of conduit weight. Tie wire shall be 16 gage galvanized double annealed steel.

13. Where auxiliary supports, saddles, brackets, etc., are required to meet special conditions, they shall be fastened rigid and secure before conduit is attached.

14. Conduit in ceiling spaces, stud walls, and under floors, shall be supported with factory fabricated pipe straps or shall be suspended with pipe hangers or pipe racks. Pipe straps shall be attached to and shall fasten conduit tight at point of support against ceiling and floor joists, rafters, and wall studs, or two-inch x four-inch headers fitted between joists or wall studs.

15. Conduits installed on exposed steel trusses and rafters shall be fastened with factory fabricated conduit straps or clamps, which shall fasten conduit tight against supporting member at point of support.

16. Pipe hangers for individual conduits shall be factory fabricated. Steel rods shall be 3/8 inch for two-inch conduit hangers and smaller and shall be 1/2 inch for 2 ½-inch conduit hangers and larger.

17. Pipe racks for groups of parallel conduits and for supporting total weights not exceeding 500 pounds shall be trapeze type and shall consist of a cross channel, Steel City Kindorf B-900, Unistrut P-1000, equivalent Cooper B-Line or equal, suspended with a 3/8 inch minimum diameter steel rod at each end. Rods shall be fastened with nuts, top and bottom to cross-channel and with square washers on top of channel. Conduits shall be clamped to top for cross-channel with conduit clamps, Steel City Kindorf C-105 or Unistrut P-1111 through P-1124, equivalent Cooper B-Line, or equal. Conduits shall not be stacked one on top of another, but a maximum of two tiers may be on same rack providing an additional cross-channel is installed. Where a pipe rack is to be longer than 24 inches, or if the supported weight exceeds 500 pounds, submit Shop Drawings of installation to the Architect for review.

18. Conduits suspended on rods more than two feet long shall be rigidly braced to prevent horizontal motion or swaying. Installation shall meet zone 4 seismic requirements.

19. Factory fabricated pipe straps shall be one or two-hole formed galvanized clamps, heavy-duty type, except where otherwise specified.

20. Hangers, straps, rods, or pipe supports under concrete shall be attached to inserts set at time concrete is placed, or with approved concrete anchors. Under wood, install bolts, lag bolts, or lag screws; under steel joists or trusses, install beam clamps. Contractor shall submit size of anchors, bolts, screws, and installation method to Architect for approval prior to start of any work.

21. Conduits shall be supported at intervals required by Code, but not to exceed ten feet. One inch and smaller exposed conduits shall be fastened with one-hole malleable iron straps. Perforated straps and plumber's tape is not permitted for the support of conduits.

    Conduits shall be securely fastened in place of maximum 4 foot intervals, and within 12”of every outlet box, hangers, supports, or fastening shall be provided at each elbow and at end of each straight run terminating at a box or cabinet.

22. Conduits stubbed up through a roof or an arcade shall be flashed with a waterproof flashing. Refer to Division 07 for additional requirements.

23. Bushings and locknuts for rigid steel conduit shall be steel threaded insulating type. Setscrew bushings are not permitted.

24. Flex conduits shall be cut square and not at an angle.

25. Routing of conduits may be changed providing length of any conduit run is not increased more than ten percent of the length indicated on Drawings.

B. Slabs on Grade:

1. Unless specifically reviewed by the Architect, conduits 1 ¼-inches and larger are not permitted to be installed in structural concrete slabs. Where conduits are permitted, and are installed in concrete slabs on grade, slabs shall be thickened at bottom where conduits occur to provide three inches of concrete between conduit and earth. Required excavation shall be part of the Work of this section.

2. If concrete slab is five inches or more in thickness with a moisture barrier plastic sheet between earth and slab, one inch and smaller conduits shall be installed in the slab with a minimum of one inch concrete between earth and conduit.

C. Concrete Walls, Beams, and Floors: Provide sleeves where conduits pierce concrete walls, beams, and floors, except floor slabs on grade. Sleeves shall provide 1/2 inch clearance around conduits. Sleeves shall not extend beyond exposed surfaces of concrete and shall be securely fastened to forms. Where conduits pass through walls below grade, seal with required sealant and backer materials between conduit and sleeve to provide a watertight joint. Sealant shall be as indicated in Section 07 9200: Joint Sealants.

D. Underground Requirements:

1. Conduits and multicell raceways installed underground shall be entirely encased in three inch thick concrete on all sides , except where otherwise specified. Provide required spacers to prevent any deflection when concrete is placed and to preserve position and alignment. Conduits and raceways shall be tied to spacers. Anchors shall be installed to prevent floating of conduits and raceways during placing of concrete. Provide red colored concrete to encase conduits of systems operating above 600 volts.

2. Underground conduits and raceways shall be buried to a depth of not less than 24 inches below finished grade to top of the concrete envelope, unless otherwise specified.

3. Assemble sections of conduit with required fittings. Cut ends of conduit shall be reamed to remove rough edges. Joints in conduits shall be provided liquid-tight. Bends at risers shall be completely below surface where possible.

4. Conduits and raceways in a common trench shall be separated by at least three inches of concrete. Electrical power and/or lighting conduit runs installed in a common trench with conduits containing signal system wiring such as public address, telephone, intrusion detection, fire alarm, television, computer networking, and clock systems shall maintain a separation of a minimum of six inches from these types of signal system conduits and raceways. Electrical power, lighting and signal conduits and raceways installed in a common trench with other utility lines such as gas, water, sewer and storm lines shall maintain 12 inches separation from these types of utility lines.

5. The Inspector will observe underground installations before and during concrete placement. A mandrel shall be drawn through each run of conduit in presence of the Inspector before and after placing concrete. Mandrel shall be six inches in length minimum, and have a diameter that is within 1/4 inches of diameter of conduit to be tested.

6. Non-metallic conduit installations shall comply with following additional requirements. Joints in PVC conduit shall be sealed by means of required solvent-weld cement supplied by conduit manufacturer. Non-metallic conduit bends and deflections shall comply with requirements of applicable electrical code, except that minimum radius of any bend or offset for conduits sized from 1/2 inch to 1 ½-inch inclusive shall not be less than 24 inches. Bends at risers and risers shall be PVC-coated rigid steel conduit. Radius of curve of bends or offsets in non-metallic conduit for public telephone system shall be not less than ten times trade size of conduit, unless otherwise specifically permitted.

8. Underground conduit systems provided for utility companies shall be furnished to meet the requirements of the utility companies requiring service.

9. Protect inside of conduit and raceway from dirt and rubbish during construction by capping openings.

10. Add bell-end bushings for conduit stub-up including underground entries to pull boxes, and manholes. Under floor standing switchboards and motor control centers provide a four-inch galvanized nipple with ground bushing.

13. Underground conduits and raceways shall be swabbed prior to wire pull.

3.02 STUBS

A. Panelboard: Install two one inch conduits from each flush mounted panelboard to access under floor space and to access above ceiling space where these conditions occur. Cap conduits with standard galvanized pipe caps.

B. Floor: At points where floor stubs are indicated in open floor areas, for connections to equipment, conduits shall be terminated with couplings, tops

flush with finished floor. Stubs shall extend above couplings the indicated distance. Where capped stubs are designated, couplings shall be closed with cast iron plugs with screw drive slots.

3.03 PROTECTION

A. Protect the Work of this section until Completion.

3.04 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 26 2200

LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: This specification covers single-phase and three-phase general purpose individually mounted dry-type transformers, 600 V maximum, for power and lighting applications. It includes transformers as specified and as indicated on Drawings.

B. Work, material or equipment shall comply with the codes, ordinances and regulations of the local government having jurisdiction, including the regulations of serving utilities and any participating government agencies having jurisdiction.

C. Related Requirements:

1. Division 01 - General Requirements.

2. Section 26 0500: Common Work Results for Electrical.

3. Section 26 0513: Basic Electrical Materials and Methods.

4. Section 26 0526: Grounding and Bonding.

5. Section 26 0519: Low-Voltage Wires (600 Volts AC)

6. Section 26 0533: Raceways and Boxes, Fittings and Supports.

D.

E. Codes and Applicable standards: Products and installation shall meet or exceed the latest edition of the following standards.

1. ANSI/IEEE C57.96, Distribution and Power Transformers, Guide for Loading Dry-Type Transformers; Appendix to ANSI C57.12 Standards.

2. Department of Energy, Energy Act of 2005.

3. International Electrical Code adopted by the State of California.

4. ANSI/NEMA 250 Enclosure for Electrical Equipment (1000 Volts Maximum)

5. IEEE C57.12.91, Test Code for Dry-Type Distribution and Power Transformers.

6. IEEE C57.110 – IEEE Recommended Practice for establishing liquid-filled and dry-type power and distribution transformer capability when supplying nonsinusoidal load currents.

7. 1100-IEEE Recommended Practice for Powering and Grounding Sensitive Electronic Equipment.

8. NEMA standard 20, Dry-Type Transformers for General applications.

9. UL 506, Specialty Transformers.

10. UL 1561, Dry-Type General Purpose and Power Transformers.

11. NEMA TP-1, Guide for Determining Energy Efficiency for Distribution Transformers.

12. NEMA TP-2, Standard Test Method for Measuring the Energy Consumption of Distribution Transformers.

13. NEMA TP-3, Standard for the Labeling of Distribution Transformer Efficiency.

14. CSA 802.2-00 Minimum Efficiency Values for Dry Type Transformers

15. California Building Code (CBC)

16. Tri-axial shake test results conducted in accordance with AC156 test protocol.

17. NFPA 70 National Electric Code

F. No requirement of these drawings and specifications shall be construed to void any of the provisions of the above standards. Any conflicts or changes required to the contract documents in order to obtain compliance with applicable codes shall be brought to the immediate attention of the Owner Authorized Representative by the Contractor.

G. ACRONYMS

ANSI American National Standards Institute

AOR Architect of Record

CEC	California Electrical Code
EOR	Engineer of Record
IBC	International Building Code
IEEE	Institute of Electrical and Electronics Engineers
NEC	National Electrical Code
NEMA	National Electrical manufacturers Association

1.02 DESIGN REQUIREMENTS

A. Premium Efficiency transformers with internal losses at 35 percent loading reduced by 30 percent when using temperature and material correction factor to 75 degrees C per NEMA Standard TP1

B. Load Mix: Transformer shall be UL 1561 listed to feed a mix of equipment load profiles such as computer without detracting or significant degradation of efficiency.

C. Construction: Windings shall be continuous wound copper with brazed or welded terminations.

1. Insulation and Varnish Systems: Epoxy Polyester impregnation

2. Terminals, including those for changing taps must be readily accessible by removing a front cover plate.

D. Performance of transformers shall meet or exceed the requirements of applicable codes and standards, the DOE Energy Policy Act of 2005 - Public Law 109-58 and the latest requirements of the California Energy Commission Appliance Efficiency Regulations. In addition; transformers shall be designed to an efficiency standard higher than the lowest legal standard for the purpose of contributing to LEED Energy and Atmosphere (Optimized Energy Performance) and Utility Rebates.

E. Transformers shall be self-cooled type with 220 degrees C. insulation and a maximum temperature rise of 80 degrees C. under continuous full load conditions with an ambient of 40 degrees C.

F. Transformers shall be furnished with four 2.50 percent (two above and two below normal voltage) taps. Windings shall be of fire-resistant type, designed for natural convection cooling through normal air circulation.

G. Core mounting frames and enclosures shall be of welded and bolted construction with sufficient mechanical strength and rigidity to withstand shipping, installation, and short circuit stresses.

H. Enclosure cover plates shall be sheet steel, captive bolted to enclosure framework. Enclosure shall provide suitable ventilating openings with rodent-proof screens, NEMA 1 enclosure. Enclosure shall be provided with lifting lugs and jacking plates as required. Transformers installed outdoors shall be provided with weatherproof NEMA 3R enclosure and weather proof kit.

I. Transformers shall be furnished complete with mounting channels and mounting bolts. Metal parts, excepting cores and core mounting frames shall be furnished clean, rust-proofed, and provided with a coat of an inert primer.

J. Transformers up to 35 KVA shall not exceed 40 decibels. Transformers 36 KVA or more shall be a minimum of 5 decibels below NEMA standards per unit. Transformers shall be provided with vibration dampers consisting of California Dynamic, Mason Industries, Korfund or equal neoprene mounting pad and Elastorib sheeting. Size and number of shock mounts shall be in accordance with manufacturer's recommendations.

K. Transformers shall be UL listed.

L. Each transformer to be installed under this section shall be sound tested at the factory. Contractor shall provide two copies of transformers tests reports for EOR’s review.

M. Equipment shown on drawings to scale is approximate only and based upon a general class of equipment specified. The Contractor shall verify dimensions and clearances prior to commencement of work.

N. Verify points of connection with the manufacturer’s requirements, instructions, or recommendations prior to installation. Actual dimensions, weights, clearances and installation requirements shall be verified and coordinated by the contractor.

1.03 SUBMITTALS

A. Provide in accordance with Division 01.

B. Shop Drawings: Include make, catalog number, dimensions, weight, KVA Rating, Percent Impedance, finish, type, insulation class, design temperature, sound levels, efficiency and taps provided. Include regulation at 80 percent and 100 percent of full load, no-load loss, full-load loss, percent efficiency, percent impedance, noise level and continuous capacity rating.

C. Provide a connection schematic diagram.

1.04 WARRANTY

A. Transformers shall be warranted to be free from defects in materials, fabrication and execution for a period of three years from the date of substantial completion.

PART 2 - PRODUCTS

1.02 EQUIPMENT

A. Transformers manufactured by Siemens, Square D, General Electric, PowerSmiths, MGM, and Cutler Hammer or equal.

B. There shall be no openings through which foreign objects such as sticks, rods, wires, or the like might contact live parts. Provide means for padlocking compartment doors.

PART 3 - EXECUTION

3.01 DELIVERY AND STORAGE

A. Deliver, storage, protect and handle products in accordance with the manufacturer's recommendations.

3.02 INSTALLATION

A. Transformer core frame shall be installed level on shock absorbing pads within enclosure. Comply with seismic requirements of CBC.

B. Mounting bolts on floor mounted transformers shall be extended into pads only and shall not be in direct contact with building structural members.

C. Flexible jumpers shall be installed for grounding continuity from enclosure to conduits or bus ducts where required.

D. Transformers installed outdoors or below grade shall be mounted on concrete pads as specified in Section 03 3000: Cast-In-Place Concrete.

E. Install transformer ventilation openings not closer than 6 inches from wall surfaces.

F. Do not install transformers in corrosive environments such as swimming pool pump and boiler rooms, or similar areas.

3.03 VOLTAGE CHECK

A. Set taps on transformers to provide satisfactory operating voltages with present loads energized, including new loads and existing loads. A check shall be performed in the presence of the Project Inspector at a panel fed from each transformer, which is farthest from transformer. Voltages at transformers ranging from 118 to 122 volts inclusive, for 120 volt systems and proportionately equivalent for higher voltage systems are permitted.

B. Provide instruments and accessories required to perform checks. Voltmeters shall be accurate within .075 percent or one percent and shall have scales permitting voltage readings to be performed on upper half of scale. Calibration of the meters shall be observed by the Project Inspector.

C. Adjust transformer taps under full load operating conditions, to provide normal operating voltages at the loads.

3.04 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.05 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off Project site.

B. Repair scratched or marred surfaces affected during the execution of work. Repair surfaces shall match original finish.

END OF SECTION

SECTION 26 2416

PANELBOARDS AND SIGNAL TERMINAL CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Lighting and power distribution facilities, including panelboards.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 26 0500: Common Work Results for Electrical.

3. Section 26 0513: Basic Electrical Materials and Methods.

4. Section 26 2600: Power Distribution Units.

5. Section 26 5000: Lighting.

6. Division 27: Communications.

7. Division 28: Electronic Safety and Security.

1.02 SUBMITTALS

A. Provide in accordance with Division 01.

B. Shop Drawings: Include a front elevation indicating cabinet dimensions, make, location and capacity of equipment, size of gutters, type of mounting, finish, and catalog number of locks. General layout of internal devices, wiring drawings with wire numbers and device connections, vendor cut sheets of devices in enclosure and bill of materials listing description, manufacturer, part number, and quantity of items shall be included.

C. Installation Instructions: Submit manufacturer's written installation instructions.

1.03 DESIGN REQUIREMENTS

A. Panelboards:

1. Panelboards shall be wall-mounted, enclosed safety type with voltage as indicated, three phase, four-wire, solid neutral, mains as indicated on Drawings or specified.

2. Single pole branches shall be molded case, thermal magnetic circuit breakers with inverse time delay, trip free, quick-make, quick-break mechanism and silver alloy contacts. Circuit breakers shall be fully rated, with ampere rating marked on handle and shall indicate on/off and tripped positions. Ground fault interrupters shall be incorporated into circuit breakers where indicated. They shall be listed by UL, or other NRTL as ground fault devices. Provide appropriate lug kit of sufficient size to accommodate the feeders.

3. Two- and three-pole branches shall be enclosed, and shall be thermal magnetic circuit breakers with inverse time delay, tamper-proof, ambient compensated, single handle, internal common trip, and quick-make, quick-break mechanism with silver alloy contacts. Circuit breakers shall be fully rated or as otherwise indicated on the Drawings.

4. Main and subfeeder circuit breakers shall be enclosed, thermal magnetic type with inverse time delay, single handle common trip, quick-make, quick-break mechanism, corrosion-resistant bearings and silver alloy contacts. Ampere frame size and trip rating shall be as indicated on Drawings. Breakers over 225 amperes shall be furnished with interchangeable trip units. Handles of main and subfeeder circuit breakers shall be provided cabinet door. Voltage rating shall be as indicated on Drawings.

5. Circuit breakers shall be fully rated and of one-piece, bolt-on type and shall meet short-circuit interrupting capacity requirements indicated on Drawings6. Internal connections shall be fabricated with plated copper bus bars and the busses shall extend for full length of space available for branch circuit breakers. Feeder cable connectors shall be installed at point of feeder entrance. Terminals shall be furnished with copper conductors. Panelboards fed by conductors having over-current protection greater than 200 amperes shall be protected on supply side by over-current devices having a rating not greater than that of panelboards. Copper bussing shall be fully rated. Heat rated bussing is not acceptable.

7. Except where otherwise indicated, circuit breakers shall be in two vertical rows connected to bus bars in a distributed phase arrangement. Two-pole branches shall be balanced on busses. Single pole branches shall be numbered adjacent to its circuit breaker, with odd numbers on left and even numbers on right.

8. Specified circuit breaker spaces shall be furnished with hardware required for future installation of circuit breakers.

9. Provide locking devices for individual circuit breakers. Padlocking devices shall be secured to circuit breakers and by panel dead front plates.

B. Panelboard Cabinets:

1. Panelboard cabinets shall be code gage galvanized steel or blue steel; fronts, doors, and trims shall be code gage furniture steel. Cabinets shall be furnished with at least six-inch high gutters at top and bottom where feeder cable size exceeds four gage or where feeder cable passes through cabinet vertically. Cabinets shall be furnished with top and bottom gutters sized as required by inspection department having jurisdiction, but never less than six inches where more than one feeder enters top or bottom of cabinets. Side gutters shall not be less than four inches wide. Width of cabinets shall be 20 inches, unless otherwise indicated on Drawings.

2. Doors shall be cut true, shall accurately fit opening and finish smooth across joints. Rabbets shall be inside. Hinges shall be entirely concealed except for barrels and pins. Hinge flanges shall be welded to door and trim. Doors shall be equipped with flush type, spring-latching, locks for metal doors., 3. Where contactors, time switches, and control devices are specified or indicated to be installed within panelboard cabinets, a separate compartment and door shall be provided at top of cabinet for such devices. Door shall be sized as required to permit removal of contactor and other devices intact. Gutters shall be provided at sides and top of compartment. Doors shall be equipped with flush type, spring-latching, locks for metal doors keyed to Park standard keys.

4. Provide and install panelboard manufacturer’s permanent circuit number kit option.

5. Panelboards with control devices in compartment shall arrive at the Project site completely assembled with control devices installed and wired.

6. Outdoor cabinets and cabinets in the Pool Equipment Room shall be NEMA Type 3R. Construction shall be formed from code gage galvanized steel with ANSI No. 61 gray enamel finish. Provide heavy-duty, three point latching, vault type door handles with padlocking provisions. Provide stainless steel or galvanized butt hinges on doors. Padlocks shall be furnished, keyed to Park standard keys.

7. Self-tapping screws and bolts not permitted.

C. Panelboard Schedule: Provide a neatly typewritten schedule with number or name of room or area, or load served by each panelboard circuit. Room numbers or names shall be determined at the Project site and shall not necessarily be those indicated on the Drawings. Schedule shall also indicate panel designation, voltage and phase, building and distribution panel or switchboard from which it is fed. Schedule shall be installed in a frame under transparent plastic 1/32 inch thick on inside of each panelboard cabinet door.

D. Panelboard nameplate: Provide a nameplate identifying panelboard. Plates shall be black and white plastic nameplate stock, with character cut through black exposing white and shall bare designation of service. Name plate shall be mechanically fastened to switchboard.

E. Provide additional labeling on dead-front of panelboard. Label shall be a P-Touch or equal with a minimum width of 3/8 inch with black letters on white background. Label shall re-identify panelboard and also identify name and location of power source feeding this panel. Location information shall include building name if located in different building and name or room location. If power source is installed in same room, label should indicate source name and “In this Room”

F. Panelboard Standards: Panelboards shall be UL, or other NRTL listed and labeled. Panelboards shall meet latest revisions of following standards:

1. California Electric Code, Article 384.

2. UL 67, Panelboards.

3. UL 50, Cabinets and Boxes.

4. UL 943, GFCI.

5. UL 489, Molded Case Circuit Breakers.

6. NEMA PB1.

7. Federal Specifications W-P- 115C and WC-375B.

G. Signal Terminal Cabinets:

1. Signal terminal cabinets shall conform to the Specifications for panelboard cabinets, except as modified herein.

2. Terminal cabinets shall be flush type, with two-inch trim or surface mounted type, as indicated on Drawings. Terminal cabinets shall be furnished with sections and barriers to separate each system. Sections over 24 inches in width shall be provided with double doors and locks. Terminal cabinets, or sections of terminals housing separate systems, shall measure 12 inches long by 18 inches high by 5 ¾-inch deep, unless otherwise indicated on Drawings. Trims for sectional cabinets shall be of one-piece construction.

3. Terminal cabinets shall be furnished with ¾ inch thick plywood. Plywood shall be fastened in place with machine screws or factory installed mounting screws.

4. Flush-mounted terminal cabinets shall be finished as specified for flush-mounted panelboard cabinets. Surface and semi-flush mounted terminal cabinets shall be finished as specified for surface-mounted panelboard cabinets.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Panelboards shall be manufactured by Siemens, General Electric, Eaton, Square D.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Panelboards shall be located so they are readily accessible and not exposed to physical damage.

B. Panelboards installed outdoors and in the Pool Equipment Room shall be specifically listed for wet locations and shall be weatherproof in NEMA Type 3R cabinets.

C. Panelboard locations shall provide sufficient working space around panels to comply with the California Electrical Code.

D. Panelboards shall be securely fastened to structure and mounted on surface by at least four points.

E. Unused openings in cabinets shall be effectively closed as required by the manufacturer.

F. Cabinets shall be grounded as specified in Article 250 of the California Electrical Code.

G. Conduits shall be installed so as to prevent moisture or water from entering and accumulating within the enclosure.

H. Lugs shall be suitable and listed for installation with the conductor being connected.

I. Conductor lengths shall be maintained to a minimum within the wiring gutter space. Conductors shall be long enough to reach the terminal location in a manner that avoids strain on the connecting lugs.

J. Maintain the required bending radius of conductors inside the cabinet.

K. Clean the cabinet of foreign material such as cement, plaster, and paint.

L. Distribute and arrange conductors neatly in the wiring gutters.

M. Use the manufacturer's torque values to tighten lugs.

N. Before energizing panelboards, the following steps shall be taken:

1. Retighten connections to the manufacturer's torque specifications. Verify that required connections have been provided.

2. Remove shipping blocks from component devices and panelboard interiors.

3. Manually exercise circuit breakers to verify they operate freely.

4. Remove debris from panelboard interior.

O. Follow manufacturer's instructions for installation.

P. **Do not install in highly corrosive environments, unless rated for the application**.

3.02 PROTECTION

A. Protect the Work of this section until Completion.

3.03 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 26 2419

MOTOR CONTROL DEVICES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Disconnect switches and motor starters for motors or equipment and connections to the motors.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Division 23: Heating, Ventilating, and Air Conditioning “HVAC”.

3. Section 26 0500: Common Work Results for Electrical.

4. Section 26 0513: Basic Electric Materials and Methods.

5. Section 26 0526: Grounding and Bonding.

1.02 SUBMITTALS

A. Shop Drawings: Include a front elevation, indicating dimensions, make, location and capacity of equipment, type of wiring, size of gutters, type of mounting, size of anchoring bolts and finish. Installation shall be in compliance with CBC seismic design requirements.

B. Product Data: Submit catalogs indicating make, ratings, dimensions, and catalog number for disconnect switches, motor starters, and control devices.

1.03 DESIGN REQUIREMENTS

A. Motor overload protection of manual reset type, as part of a motor starter and set at not to exceed 125 percent of motor full load current rating, shall be provided for each motor exceeding 1/8 horsepower in size except where indicated otherwise and except for following: Motors of sufficient impedance to prevent overheating on failure to start (such as clock motors), and motors provided with an approved built-in manual reset type device, responsive to

motor current and set at not to exceed 125 percent of the motor full load current rating, which will interrupt current to motor.

B. Switchboard components shall be provided with nameplates. Plates shall be black and white plastic stock, with characters cut thorough black exposing white, and shall bear designation of service, feeders controlled, and fuse sizes.

PART 2 - PRODUCTS

2.01 EQUIPMENT

A. Disconnect Switches:

1. Heavy duty type switches shall be 240 volt or 480 volt as required, totally enclosed, externally operated, with quick-make, quick-break operating mechanism, interlock cover, and provisions for locking cover in closed position and locking switch in on and off positions. Switches shall be single-throw, unless otherwise indicated or specified. Switches controlling direct current loads shall be DC rated.

2. Switches shall be furnished with switch blades, which are fully visible in off position when switch door is open. Current carrying parts shall be plated to resist corrosion and promote cool operation. Switches shall be furnished with removable arch suppressors where necessary to permit easy access to line side lugs. Lugs shall be front removable and UL, or other Nationally Recognized Testing Lab listed for 75 degrees C. copper wires.

3. Switch enclosure shall be NEMA Type 1 for indoor locations and rain-tight, NEMA Type 3R, rainproof for outdoor locations and the Pool Equipment Room. NEMA Type 3R enclosures shall be manufactured from galvanized steel with gray baked enamel and shall be furnished complete with rainproof bolt on hubs. Covers shall be attached with pin type hinges. Removable closing cap types are not permitted. Quick release latches shall be permitted only when furnished tamper-resistant to prevent breakage due to vandalism, and furnished with Corbin 66 locks keyed to Corbin 60 key. Switches shall be fusible or non-fusible as indicated on Drawings. Fusible switches shall accept cartridge fuses. Current rating of switches, number of poles, solid neutral facilities, and current rating of fuses shall be as indicated on Drawings. Switches shall

have proper horsepower rating equal to or greater than horsepower of motor controlled. Only lower horsepower rating of dual rated switches will be permitted as a switch rating. Switches shall accept Class H, Class J and Class R fuses.

4. Padlocking device shall lock operating handle and cover with one padlock regardless of on or off position. Switches shall be heavy duty type, as manufactured by Square D, General Electric, Cutler Hammer or equal. Furnish a minimum of two padlocks and two keys with each switch. Padlocks shall be Corbin No. 66 keyed to Corbin No. 60 keys.

5. Switches shall be UL listed and shall comply with NEMA Standard KS-1.

6. Furnish one spare fuse for each fusible disconnect switch installed. Spare fuses shall be same type and rating as those installed.

B. Motor Starters:

1. Motor starters shall be AC magnetic across-line starters unless otherwise indicated on Drawings.

2. AC magnetic across-the-line starters shall be furnished with manual reset thermal overload protective devices including heating elements. Starters shall be furnished in a NEMA Type 1, NEMA Type 3R or other type of enclosure as indicated on Drawings. Starters shall be furnished with HOA selector switches or push-buttons, as indicated on Drawings. NEMA size, voltage rating, number of poles, and special features shall be as indicated on Drawings. Horsepower rating of each starter shall be equal to or greater than motor horsepower. Starters for motor circuits rated at 240 volts and above shall be provided with a control circuit transformer, having a 120 volt secondary. Combination magnetic starters are permitted. Three-phase starters shall be furnished with three-element protection.

3. Manual across-line starters shall be furnished with manual reset thermal overload protective devices, including heating elements, start-stop-reset device or H.O.A. switch as indicated on Drawings, operable from front. Enclosure shall be NEMA Type 1 for indoor installation and NEMA Type 3R for outdoor installation or as indicated on the Drawings. NEMA size, voltage rating and number of poles shall be determined by motor horsepower, voltage and phase indicated on Drawings.

Horsepower rating of each starter shall be equal to or greater than motor horsepower. Combination manual starters are permitted.

4. Thermal switch starters shall be tumbler type with plaster ears, binding screws for wiring, standard size composition cups which fully enclose mechanism, and shall be designed to fit standard outlet boxes. Thermal switches shall be fractional horsepower motor starters with thermal overload protective devices including heating elements and with handle providing on-off-reset control. Horsepower rating, voltage rating, and number of poles shall be determined from motor horsepower and voltage indicated on Drawings. Switches shall be key operated where so indicated on Drawings. Furnish one key with each key type switch. Horsepower rating of each switch shall be equal to or greater than motor horsepower.

5. Relays furnished for directly controlling motors shall be installed in NEMA Type 1 enclosure for indoor installations and NEMA Type 3R for outdoor installations, unless otherwise indicated or specified and shall be horsepower rated. Relay size, voltage rating and number of poles shall be determined from motor horsepower and voltage indicated on Drawings.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Equipment shall be located so that it is readily accessible and not exposed to physical damage.

B. Equipment locations shall provide sufficient working space around the equipment to comply with the California Electrical Code.

C. Equipment installed outdoors shall be specifically approved for wet locations and shall be installed in a weatherproof NEMA Type 3R enclosure.

D. Equipment shall be securely fastened to the mounting surface.

E. Equipment enclosure shall be grounded to comply with Article 250 of the California Electrical Code.

F. Conduits shall be installed so as to prevent moisture or water from entering and accumulating within the equipment enclosure.

G. Lugs shall be suitable and permitted for installation with the conductor being connected.

H. Conductor lengths shall be maintained to a minimum within the wiring space. Conductors shall be long enough to reach the terminal location in a manner that avoids strain on the connecting lugs.

I. Maintain the required bending radius of conductors inside the cabinet.

J. Distribute and arrange conductors neatly within the equipment space.

K. Tightening of wire lugs or any conductor connections shall be performed in the presence of the Project Inspector. Torque values shall be those recommended by manufacturer.

L. Remove shipment blocks from component devices.

M. Manually exercise switches and circuit breakers to verify they operate freely.

N. Remove debris from equipment interior.

O. Follow manufacturer’s instructions for installation.

P. Furnish one spare fuse for each fusible switch installed. Spare fuses shall be of the same type and rating as those installed.

Q. Record Drawings: Submit project record drawings indicating the motor control center exactly as it was installed, including wiring diagrams of components.

R. Installation Instructions: Submit manufacturer's written installation instructions, including recommendations for handling, protection and storage.

S. Installation in corrosive environments such as boiler rooms, pool equipment, and other similar spaces is not allowed.

3.02 PROTECTION

A. Protect the Work of this section until Completion.

3.03 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 26 3100

PHOTOVOLTAIC SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY

A. These specifications cover Photovoltaic (PV) System (s) requirements including, but not limited to equipment, hardware, software, documentation, labor, materials, and supervision required for the installation of grid-connected PV systems.

B. Section Includes, but is not limited to the following:

1. Infrastructure, wiring, connections, and testing.
2. Solar panels and panel arrays.
3. Disconnects.
4. DC combiners.
5. Inverters.
6. Monitoring equipment and Control software.
7. Metering equipment and interfacing with utility company meter.
8. Identifications and signs.
9. Training.

1.02 RELATED REQUIREMENTS:

A. Division 01 - General Requirements

B. Division 02: Existing Conditions.

C. Division 05: Metals.

D. Division 06: Woods, Plastics, and Composites.

E. Division 07: Thermal and Moisture Protection.

F. Section 26 0500: Common Work Results for Electrical.

G. Section 26 0513: Basic Electrical Materials and Methods.

H. Section 26 0519: Low Voltage Wires (600 Volt AC).

I. Section 26 0526: Grounding and Bonding.

J. Section 26 0533: Raceways, Boxes, Fittings, and Supports.

K. Division 32: Exterior Improvements.

1.04 SUBMITTALS

A. Shop Drawings on standard 24 inches by36 inches size shall include but not be limited to:

1. Cover page with legend, common notes, symbol schedule, vicinity and key map, code compliance, contractor and engineer's names and contact information, and drawing index.

2. Site plan showing infrastructure layouts, PV arrays locations, and identifiable features.

3. Riser diagram and General Notes:

a. Connection to utility AC disconnects and main electrical switchboard.

b. Indicate conduits, power and communication wires, and combiners, disconnects, inverters, meters, etc.

c. Provide PV system(s) power production calculations and total system(s) rating.

4. Complete point to point PV System interconnection diagram(s):

a. Identify DC and AC components.

b. Indicate conduit and wire characteristics, sizes and quantities.

c. Indicate conduit fills and voltage drops.

d. Provide combiner box schedule.

e. Provide bill of materials.

5. Floor plans and roof plans showing HVAC equipment, PV arrays, inverters, combiner boxes, disconnects, edge zones, electrical equipment room, roof access hatches, skylights, etcetera.

a. Indicate system(s) interface connections.

b. Provide AC and DC wiring plans.

c. Provide electrical equipment room layouts and equipment elevation details.

6. Assembly Details. Provide as minimum the following details:

a. Array attachment details.

b. Support details and spacing dimensions.

c. Deflector attachment details.

d. Module to module wiring diagrams.

e. DC wire tray attachment and DC combiner mounting details.

f. Data acquisition System (DAS) wiring details.

g. Roof mounted conduit supports and roof penetrations.

h. Grounding details.

i. Warning typical signs details.

1) Utility lockable AC disconnects sign.

2) Interactive system point of interception sign.

3) DC switches warning sign.

4) Solar array warning sign.

7. Operations and Maintenance Manuals.

8. As-built submittal drawings.

9. Installation Instructions of each control device.

10. PC monitoring Workstation.

11. Software licenses and electronic keys.

12. Supplemental local or factory training schedule for post warranty support.

13. A complete list of recommended spare parts with pricing for the Owner's use in keeping the PV system downtime to a minimum.

14. Composite CD ROM with AutoCAD drawings in a "dwg." format.

1.05 QUALITY CONTROL

A. The Contractor shall have a California Solar or Electrical Contractor's license.

1. Components and interconnection wiring shall be installed by state certified electricians. Contractor or Installer's electricians shall be certified in accordance with Labor Code sections 3099, and 3099.2 and section 209.0 of the California Code of Regulations.

B. Contractor shall have adequate experience installing systems of similar size and complexity.

1. Qualifications of Installer: Minimum five years experience installing products and systems of similar scope and complexity.

2. Installer shall have completed at least five projects of equivalent scope and complexity.

3. Installer shall submit certification from the equipment manufacturer indicating that installer is an authorized representative of the equipment manufacturer and is trained on the installations of the specified PV system products.

4. Installer shall maintain a fully equipped service organization capable of furnishing repair service to the equipment.

5. Installer shall furnish a letter from manufacturer of equipment certifying equipment has been installed according to factory standards and that system is operating properly.

6. Contractor shall have completed and commissioned a minimum of five service agreements that provide similar support services to those needed for this project.

7. System startup and testing shall be performed under the direct observation of the Project Inspector and OAR.

C. Materials and equipment installed shall be new and listed as an approved technology by the California Energy Commission (CEC) Emerging Technology Buydown Program.

D. The installer shall provide the system components required by code and for the safety of the District's service personnel.

E. System components shall operate per industry standards.

F. If PV modules using Cadmium are included, then the environmental impact of the Cadmium usage must be disclosed to the District, including any special maintenance requirements, and proper disposal or recycling of modules at the end of their useful life. Modules containing Cadmium must comply with the EPA Landfill Disposal Requirements. Any additional costs related to PV modules containing Cadmium must be clearly identified.

The District may choose at its discretion to reject any Cadmium containing modules.

G. Comply with City of Los Angeles requirements for system commissioning.

1.06 WARRANTY

A. System shall be warranted in accordance with state regulations for photovoltaic systems.

1. The PV System Equipment Manufacturer shall provide a ten year material warranty at 90 percent of its rated power, and 20 years at 80 percent of its rated power.

2. System warranties and materials, fabrication and execution guaranties shall be in effect during the Solar License Agreement.

B. System components (other than PV modules) shall be guaranteed against defects in materials, fabrication and execution for a minimum of three years from date of system acceptance. Provide labor and materials to repair, reprogram, or replace components at no charge to the Owner during the warranty period. Corrective work or system modifications shall be updated on user documentation and archived software disks.

1. Warranty shall include annual on-site inspection, including: system testing (operating current of each electrical system), system adjustments and routine maintenance.

2. Repair or replacement of defective parts.

3. System performance monitoring and historical data access for customer via secure website. Data is required to include: system energy and power production, ambient temperature, wind speed, and insolation.

a. The system shall be connected ahead of the facilities computer network firewall. Provide necessary work, materials and installation to connect the system to the MPOE.

4. Daily system monitoring by vendor, including reporting of problems to customer and dispatch of resources for expeditious resolution of problems.

5. The maintenance agreement shall include a response time of four hours for major system failures (emergency service), and 48 hours for minor repairs (routine service). Proposed agreement shall

include biannual site visits for preventative maintenance inspection so that systems are validated prior to the warranty expiration date.

C. Provide a list of applicable warranties for equipment and components, this list shall include warranty information, names, addresses, telephone numbers, and procedures for filing a claim and obtaining warranty services.

D. Respond to the Owner's request for warranty service within four hours during normal business hours. For calls, submit records of the nature of the call, the work performed, and the parts replaced or service rendered.

1.07 TRAINING

A. Provide a factory employed instructor to provide full instructions to designated District personnel in the system's operation, maintenance, and programming. Training shall be specifically oriented to installed equipment and systems.

1. The instruction period shall be scheduled and coordinated by the OAR.

2. Provide four hours of onsite owner familiarization and training for the installed system. Training shall include system overview, override commands, normal and emergency operation and response, programming features and report generation. District employees attending this training session shall be provided with the following documentation:

a. System layout point to point connection diagram.

b. System components cut sheets.

c. Operations and maintenance data.

d. Safety rules for the operations and maintenance of PV systems.

3. Programmer and maintenance training shall include database entry; trend logs application programs, diagnostic routines, reporting, failure recovery and calibration.

a. Provide a 40 hours training session as follows:

1) Training session shall accommodate a minimum of 20 City of LA personnel and be facilitated at a location no more than 50 miles from the City of LA Headquarters.

Contractor shall obtain Owner's approval for training locations exceeding 50 miles from City of LA headquarters; in such cases, the Contractor shall be responsible for City of LA personnel transportation expenses.

2) Training shall cover instruction, theory, and expose the trainees to system's features, components, architecture, operations, programming, report generation, communications, and any other pertinent information required for the operations and maintenance of the system.

3) Instructor(s) shall give the trainees the opportunity to practice on a simulated or actual (installed) system.

4) The training session shall cover, but not be limited to the following instruction modules or sessions:

   a) System Architecture:

      (1) System layout and components interrelations and hierarchical structure.

      (2) Controllers interfacing and functions.

      (3) Server functionality and data management, error messages, and alarm conditions.

      (4) Connectivity and communication losses.

   b) User Operations:

      (1) Familiarization and system operability.

      (2) Window panes, menus, navigation buttons, alarm response windows, system passwords and accessibility features and options, monitoring and managing data points (inputs, outputs, numeric values, time and date, strings).

      (3) Views: Provide sufficient information as to train City of LA staff on how and where to access programs, functions, adjust or alter diagnostic points and

related data, override messages, reports creation.

c) Trending: Setting trend(s) intervals, accessing data trends and history logs for diagnosis of system performance and reporting. Working with trended data graphical displays, including but not limited to hiding points, setting display types and colors, viewing and setting scales.

d) Graphics: Standard symbols and color codes, graphics customization, how and where to access and manage the system with the graphic displays, including changing points and values, viewing results, mapping to or with other graphic sources and functions, including groups, navigation, sequence of operations, and displays and reports.

e) Alarms: Reading and interpreting alarms, acknowledging and silencing alarms, routing and setting priorities, viewing and responding e-mailed and paged alarms.

PART 2 – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Photovoltaic modules systems: The PV modules shall be framed flat-panel crystalline or amorphous silicon modules.

1. The array shall achieve the required kWp DC STC output for the entire system under peak sun conditions. The AC output shall not be less than 80 percent of the DC kWp rating.

2. Each PV module shall include bypass diodes installed in the module junction box.

3. PV modules shall be listed on the California Energy Commission's PTC list and must qualify for eligibility under the California Solar Initiative (CSI) Program, and the LADWP Solar Incentive Program.

4. DC Photovoltaic Panel Output:

a. PV Module Open-Circuit Voltage shall be 45.2V or less.

b. PV String Open-Circuit Voltage shall be 600V or less.

c. Voltage range: Plus or minus ten percent.

5. PV model or arrays:

	MANUFACTURER	MODEL NUMBER	DESCRIPTION
1	ET Solar Industry, Ltd.	ET-P672 -255 to 280	Polycrystalline Module
2	Evergreen Solar Inc.	ES-A-200, 205, 210, 215	String Ribbon solar panel
3	General Electric	GEVp-200-M	Polycrystalline Module
4	Kyocera Solar, Inc.	KD200 P & F Series	Polycrystalline Module
5	REC	Peak Energy Series	Polycrystalline Module
6	Schott Solar, Ic.	SCHOTT POLY 220,225,230,235	Polycrystalline Module
7	Sharp Corporation	ND-L200 Series	Polycrystalline Module
8	Silken California Corp.	SLK60P6L 230, 235	Polycrystalline Module
9	Solar Power Inc./LDK	LDK230	Polycrystalline Module

6. Equal or better PV modules may be submitted for review by the Owner.

B. Inverters:

1. Inverters shall be listed on the California Energy Commission's PTC list and must qualify for eligibility under the California Solar Initiative (CSI) Program, and the LADWP Solar Incentive Program.

2. The PV system shall have at least one inverter. Inverter units shall be solid state device capable of accepting the output of the photovoltaic panels and providing rated output as indicated in construction documents.

a. The inverter shall be equipped with the following items:

1) DC input disconnect.

2) Surge protection.

3) Ground fault interrupter.

4) Isolation transformer.

5) AC output circuit breaker.

6) Data Monitoring System.

3. The inverter shall be able to sustain an overload across its output terminals up to 150 percent load, while supplying any load within its rating and without reducing its output voltage.

4. The inverter shall be capable of at least 300 percent current for short circuit conditions. If the short circuit is sustained, the inverter shall shutdown and disconnect automatically from the load bus.

5. Each inverter unit shall be equipped with fault sensing and static isolation, and with an output circuit breaker for removal of faulted module(s) from the system.

6. Power semiconductors in the inverter shall be fused with fast acting fuses to prevent cascading failures. Each fuse shall be provided with a blown fuse and alarm indicating diodes on the control panel.

7. AC Inverter System Output:

   a. Voltage regulation plus or minus 0.5 percent balance load. plus or minus two percent for 50 percent unbalanced load.

   b. Voltage adjustment range plus or minus five percent manually.

   c. Frequency regulation 0.1 percent.

   d. Phase Displacement:

      1) Balanced load, 120 percent plus or minus one percent.

      2) Fifty percent unbalanced, 120 percent plus or minus three percent.

8. Inverters:

	MANUFACTURER	MODEL NUMBER	DESCRIPTION

1	Advanced Energy Industries, Inc.(AESolaron)	Solaron 333kW (3159000-110)	333 kW 480, or 208 Vac Three Phase Utility Interactive Inverter
2	PV Powered Inc	PVP100KW-480, 208	100kW (480 or 208Vac) 3-Phase Utility Interactive Inverter with 295-600Vdc input
3	SatCon Power Systems Canada Ltd.	S-TYPE AND POWERGATE	225 kW 480, or 208Vac Three Phase Utility Interactive Inverter
4	Xantrex Technology, Inc	GT250-480-PG	250 kW 480 Vac Three Phase Utility Interactive Inverter.

9. Equal or better Energy Commission approved inverters may be submitted for review by the Owner. Installations shall not be allowed without written consent from the Owner. Proposed inverters shall have equal or smaller footprint.

C. Combiner Box: As recommended by the PV modules manufacturer.

1. The system shall have at least a terminal box or boxes, providing the electrical the electrical string(s) a waterproof entry to the conduit leading to the combiner box(es).

2. The terminal box and combiner box can be one physical unit.

3. The PV system shall have a combiner box(es), containing fuses and a bus to combine the outputs of the strings. A set of wires shall run from the combiner box to the inverter(s).

4. Combiner output shall be compatible with inverter input.

D. Edge Connector: As indicated by the PV module manufacturer.

1. Method of electrical interconnection for PV laminates shall be by means of a factory supplied plug connecting cable.

2. Cables measuring 12 to 18 inches shall be supplied with a male-type connector on each end, or with newer technology as recommended by the solar array manufacturer.

3. Each laminated light for PV modules shall be provided with a factory supplied female-type connector.

E. Accessories: Junction boxes, anchors, wiring lugs and other accessories shall be provided in accordance with Division 26 requirements, and in compliance with California Electrical Code requirements and the PV modules manufacturing recommendations.

F. Data Acquisition System: System approved by the California Energy Commission that meets applicable state regulations.

G. System Performance Meters: Provide revenue grade Interval Data Recording (IDR) meters complete with industry standard telemetry for communication with Ethernet, cellular or other common output capabilities. Refer to contract drawings for meter(s) location(s).

1. Provide connection to a password protected website accessible by LAUSD personnel for the purposes of metering, monitoring and data collection of solar production.

2. Meters shall be connected to a monitoring or data collection recording solar production through Time of Use (TOU) increments applicable to the local utility standards, with a minimum 15 minute intervals.

3. Meters:

	MANUFACTURER	MODEL NUMBER	DESCRIPTION
1	AESolaron	Solaron 333kW (3159000-110)	LCD. Performance Based Incentive Program eligibility with certificate documenting accuracy to less than two percent.
2	Elster	AlphaPlus - A1R+	100kW (480 or 208Vac) 3-Phase Utility Interactive Inverter with 295-600Vdc input
3	Leviton	2000, 3000Series	LCD and Remote. Meets Performance Based Incentive Program eligibility with certificate documenting

			accuracy to less than two percent. Unit includes CTs approved by manufacturer for revenue grade applications.
4	Energy Tracking. LLC	WEM-MX-ARV-DBL-EFC	LCD with Backlight. Meets Performance Based Incentive Program eligibility with certificate documenting accuracy to less than two percent. With e-mail, FTP, LAN Reporting. Voltage: Auto Ranging from 120 ~ 480.
5	Fat Spaniel Technologies, Inc/Power-One	Solar Plant Vision	PC or WEB base meter with e-mail, FTP, LAN Reporting. Voltage: Auto Ranging from 120 ~ 480.

4. Equal or better meters listed by the California Energy Commission could be submitted for review. No installations shall be allowed without written consent from the Owner.

2.02 SYSTEM RATING

A. System shall be sized to provide the KW system output indicated on drawings at full load rated power.

B. The systems shall be rated for outdoor installation. The system equipment shall be capable of operating under the locations maximum and minimum documented temperatures during summer and winter times. The entire system must be rated and warranted to withstand and operate under these conditions.

C. Rated PV system capacity must be specified in direct current (DC) kilowatts peak under both STC and PTC conditions.

1. The STC or Standard Test Conditions rating assumes direct current referred as “kWdc-stc”. It is also refer as kilowatts peak, or “kWp”. Specific PV module manufacturer maximum and minimum power data must be specified for this rating.

2. The PTC rating or PV USA Test Conditions rating is based on 1,000 Watts per square meter solar irradiance, 20 degree Celsius ambient temperature and one meter per second wind speed.

2.03 STRUCTURAL IMPACT AND WIND LOADING

A. The PV array weight shall add no more than eight pounds per square foot to the facility roof structure in the array area.

B. The system shall be installed as part of a structural support system designed for the application, and approved by LADBS.

C. PV arrays shall be seismically restrained from falling off the roof or excessive movement on the roof. Panels shall be installed to resist sliding and pop-up resulting from lateral and vertical seismic forces and displacements per CBC.

PART 3 – EXECUTION

3.01 GENERAL

A. PV system shall not be used for any purpose other than its intended functions.

B. Equipment mounted in exterior locations shall be rated NEMA 3R.

C. Semiconductor devices shall be hermetically sealed. Vacuum tubes shall not be used.

D. Relays shall be dust tight.

E. Wiring methods for power distribution and controls shall be as defined in the Division 26 specifications. Wire types shall conform to manufacturers’ recommendations.

F. Bolted connections of bus bars, lugs, and cables shall be in accordance with the requirements of applicable codes and standards.

G. Power connection shall be marked and torque to the required value.

H. Commissioning requirements of Divisions 01 and 26 apply to this section.

I. Coordinate the Work with other aspects of roofing, mechanical, structural, and electrical systems to obtain a complete and operating system.

3.02 SYSTEM INSTALLATION

A. Provide equipment and required wiring. Provide required conductor terminations to devices for a complete system to function as specified and indicated on Drawings. Refer to Section 26 0519: Low-Voltage Conductors (600 Volt AC), for installation and color coding requirements.

B. Terminations shall be in terminal cabinets or on equipment terminals.

C. Conductors shall be installed within conduits, boxes, and terminal cabinets in a totally enclosed installation. Provide conductors required to connect incoming and outgoing circuits.

D. Wiring within equipment and terminal cabinets shall be installed to conform to contract documentation and NFPA 72 standards. Wiring shall be cabled, laced, and securely fastened in place so that no weight is imposed on equipment or terminals.

E. Conductors shall be color-coded per specification section 26 0519 Low Voltage Conductors (600 Volt AC) and tagged with code markers at terminal cabinets, and equipment. A wire index shall be typed and installed on terminal cabinet doors. Index shall be covered with clear plastic adhesive covers. Wiring shall be identified as to building and location of devices.

F. Complete installation shall comply with local building codes, manufacturer’s instructions, and applicable industry standards.

G. Location of boxes and raceways on Drawings is approximate, unless dimensions are indicated. Do not scale Drawings to determine locations and routing of conduits. Location of the infrastructure and equipment shall conform to architectural features of the building and other Work already in place, and must be ascertained in the field before the start of Work.

H. Drawings generally indicate Work to be provided, but do not indicate all bends, transitions or special fittings required to clear beams, girders or other Work already in place. Investigate conditions where conduits are to be installed, and furnish and install required fittings.

I. The roof shall be inspected prior to start of any work. Any observed deficiencies shall be brought up to the attention of the OAR prior to commencing any work.

J. Loose gravel on the area designated for the PV arrays shall be removed. The collected gravel shall be removed.

K. Prepare framing to receive PV modules in accordance with manufacturer's recommendations and in compliance with accepted shop drawings.

L. Adequate ventilation shall be provided to ensure that system components are operated within their environmental ratings.

M. Temperature sensors shall be provided to monitor the temperature of indoor system components, such as Inverters and power monitoring system. Upon detection of temperatures in excess of the manufacturer's recommended operating temperature range, the sensor shall trigger audible and visual alarms.

N. Provide warning signs as required by applicable codes.

3.03 MONITORING

A. Provide an on-site Data Acquisition System (DAS). The DAS shall be equipped to log the information critical to the evaluation of system performance, including AC current energy production, solar irradiance, ambient temperature, and wind speed.

B. The information shall be stored on the logger at 15-minute intervals and transmitted to a City of LA designated processing facility. Information shall be stored and backed-up per CEC and utility company requirements.

C. For the duration of the service agreement between City of LA and the third party monitoring company, data services shall include the processing, quality assurance, storage, and daily backup of system performance data.

D. Provide annual reports of system's performance on the anniversary of the system.

1. The report shall include a full-color chart showing the predicted energy output for a typical year, the predicted energy output for the current year, and the actual energy produced in each month of the year.

2. The report shall be prepared for each individual system in the site, and as an aggregate for the entire site's electrical energy production.

3. The DAS shall include a data logger, modem for data retrieval, NEMA 4 enclosure, dry bulb measuring device, anemometer, solar sensor and radiation shield.

3.04 TESTING

A. A 48 hour notice shall be provided to the Owner authorized Representative (OAR), Project Inspector, and Commissioning Agent before final testing.

B. Demonstrate in presence of the Project Inspector, and Commissioning Agent that circuit and wiring tests are free of shorts and grounds and that installation performs as specified herein and within manufacturer's guidelines.

C. PV modules shall be factory tested for design performance.

D. Inverter shall be factory tested for performance; results shall be included in the Operation and Maintenance Manual.

E. Provide commissioning and system startup.

F. Installer is responsible for identifying required tests, coordinating, scheduling, and conducting tests before Substantial Completion. Tests shall include the following:

1. System response, data logging and transmission, and performance.

2. System features and components under normal operation.

3. System shutdown from utility override switches.

4. Before energizing the cables and wires, check for correct connections and test for short circuits, ground faults, continuity, and insulation.

5. When the system is equipped with optional features, consult the manufacturer manual to determine proper testing procedures.

G. Defects resulting from tests shall be corrected prior to substantial completion.

H. Software Modifications:

1. Provide the services of a factory trained and authorized technician to perform system software modification, upgrades or changes. Response time of the technician to the Project site shall not exceed 24 hours.

3.05 SERVICE MANUALS

A. Contractor shall deliver to OAR, three copies of the service manuals. Each manual shall include the following:

1. Installation manuals, programming manuals, user manuals, and part numbers if applicable for every major system component. Catalog cut sheets are not acceptable.

2. A printed copy of the system configuration, including system labeling codes, and passwords.

3. An electronic copy of the system configuration program on compact disk.

4. Final test report.

5. Detailed explanation of the operation of the system.

6. Instructions for routine maintenance.

7. Detailed wiring diagrams and updated shop drawings that include revisions made in the field via plan changes, RFIs, Field Change Directives, and any other construction change documents including interface details with other systems.

8. Provide a CD ROM electronic copy of the updated system As-Built Drawings to the OAR, prepare this copy in the latest version of AutoCAD; along with the electronic copy provide a full size bond copy. Include one CD-ROM of the up-dated As-Built Drawings into each of the Service Manuals. CD and folded drawings shall be secured and inserted into the Service Manuals via a three-hole punched protective CD case and protective envelopes for the drawings.

9. Materials and required deliverables shall be submitted to the OAR.

3.06 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.07 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off Project site.

END OF SECTION

SECTION 26 5000

LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior solid-state luminaires that use LED technology.
2. Lighting fixture supports.

B. Light fixtures model numbers were determined at the time this specification was written; model numbers may need to be modified, or may require the addition or deletion of options to fully meet specification requirements.

C. Related Requirements:

Division 01 - General Requirements.

Section 26 0500: Common Work Results for Electrical.

Section 26 0513: Basic Electrical Materials and Methods.

Section 26 0526: Grounding and Bonding.

Section 26 0519: Low-Voltage Wires (600 Volt AC).

DEFINITIONS

D. CCT: Correlated color temperature.

E. CRI: Color Rendering Index.

F. Fixture: See "Luminaire."

G. IP: International Protection or Ingress Protection Rating.

H. LED: Light-emitting diode.

I. Lumen: Measured output of lamp and luminaire, or both.

J. Luminaire: Complete lighting unit, including lamp, reflector, and housing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Arrange in order of luminaire designation.
2. Include data on features, accessories, and finishes.
3. Include physical description and dimensions of luminaires.
4. Include emergency lighting units, including batteries and chargers.
5. Include life, output (lumens, CCT, and CRI), and energy efficiency data.
6. Photometric data and adjustment factors based on laboratory tests

    a. Manufacturers' Certified Data: Photometric data certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
    b. Testing Agency Certified Data: For indicated luminaires, photometric data certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.

B. Shop Drawings: For nonstandard or custom luminaires.

1. Include plans, elevations, sections, and mounting and attachment details.
2. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

C. Product Certificates: For each type of luminaire.

D. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For luminaires and lighting systems to include in operation and maintenance manuals.

1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.

1.5 QUALITY ASSURANCE

A. Luminaire Photometric Data Testing Laboratory Qualifications: Luminaire manufacturer's laboratory that is accredited under the NVLAP for Energy Efficient Lighting Products.

B. Provide luminaires from a single manufacturer for each luminaire type.

C. Each luminaire type shall be binned within a three-step MacAdam Ellipse to ensure color consistency among luminaires.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect finishes of exposed surfaces by applying a strippable, temporary protective covering before shipping.

1.7 WARRANTY

A. Warranty: Manufacturer and Installer agree to repair or replace components of luminaires that fail in materials or workmanship within specified warranty period.

B. Warranty Period: Provide a two year labor warranty.

C. Provide material warranty as specified:

1. Lamps: two years.

2. Ballasts: five years.

3. Standards: one year.

4. Controls: three years.

D. Warranty period begins at substantial completion or project acceptance for beneficial occupancy.

PART 2 - PRODUCTS

2.1 MATERIAL AND FABRICATION

A. Lighting fixtures shall be the type indicated on Drawings and as specified. Fixtures of same ty shall be of one manufacturer.

B. Fixtures shall be of the types and manufacturers described in the FIXTURE TYPES SCHEDULE on the Drawings, with lamps, wattage and voltage as indicated on Drawings Specific manufacturer and model number references are indicated as a standard of performance and quality; other manufacturers' models may be supplied provided the product meets or exceeds the specifications. The alternate fixtures must achieve the same photometric levels and uniformity ratios.

C. All fixtures shall be baked-on enamel or powder-coated, unless otherwise specified in subsections below.

D. Lighting fixtures shall have a minimum luminaire efficiency rating (LER) equal or greater than 75.

E. Seismic Performance: Luminaires and lamps shall be labeled vibration and shock resistant.

2.2 LUMINAIRE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NRTL Compliance: Luminaires for hazardous locations shall be listed and labeled for indicated class and division of hazard by an NRTL.

C. Recessed Fixtures: Comply with NEMA LE 4.

D. Bulb shape complying with ANSI C79.1.

E. CRI of minimum 85. CCT as indicated in the Lighting Fixture Schedule.

F. Rated lamp life of minimum **35,000** hours.

G. Lamps dimmable from 100 percent to 0 percent of maximum light output.

H. Integral driver.

I. Nominal Operating Voltage **120 V AC**

J. Retain "Lens Thickness" Subparagraph below for all diffuser and globe types.

1. Lens Thickness: At least 0.125 inch (3.175 mm) minimum unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before fixture installation. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 TEMPORARY LIGHTING

A. If approved by the Architect, use selected permanent luminaires for temporary lighting. When construction is sufficiently complete, clean luminaires used for temporary lighting and install new lamps.

3.3 INSTALLATION

A. Comply with NECA 1.

B. Install luminaires level, plumb, and square with ceilings and walls unless otherwise indicated.

C. Install lamps in each luminaire.

D. Supports:

1. Sized and rated for luminaire weight.
2. Able to maintain luminaire position after cleaning and relamping.
3. Provide support for luminaire without causing deflection of ceiling or wall.
4. Luminaire mounting devices shall be capable of supporting a horizontal force of 100 percent of luminaire weight and vertical force of 400 percent of luminaire weight.

E. Ceiling-Grid-Mounted Luminaires:

1. Secure to any required outlet box.
2. Secure luminaire to the luminaire opening using approved fasteners in a minimum of four locations, spaced near corners of luminaire.
3. Use approved devices and support components to connect luminaire to ceiling grid and building structure in a minimum of four locations, spaced near corners of luminaire.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals.

3.5 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
2. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery power and retransfer to normal.

B. Luminaire will be considered defective if it does not pass operation tests and inspections.

C. Prepare test and inspection reports.

3.6 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting the direction of aim of luminaires to suit occupied conditions. Make up to 2 visits to Project during other-than-normal hours for this purpose. Some of this work may be required during hours of darkness.

1. During adjustment visits, inspect all luminaires. Replace lamps or luminaires that are defective.
2. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.
3. Adjust the aim of luminaires in the presence of the Owner.

END OF SECTION 265119

DIVISION 31

EARTHWORK

SECTION 31 1000
SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Removal of vegetation, grass, grass roots, shrubs, tree stumps, trees, upturned stumps, weed growth, tree roots, brush, masonry, concrete, rubbish, debris and other materials.

2. Removal of concrete and bituminous surfaces.

3. Removal of existing fences and gates

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 2200 - Grading.

3. Section 31 2313 - Excavation and Fill.

4. Section 32 0190 – Tree preservation

1.2 SUBMITTALS

A. Shop Drawings: Submit site plan indicating extent of site clearing.

B. Existing conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or videotape

2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

C. Contractor shall be responsible for obtaining all necessary permits, approvals and Construction Manager's authorization for disposal of material resulting from clearing and grubbing operations in areas not already specified in the contract documents.

1.3 QUALITY ASSURANCE

A. Comply with Standard Specifications for Public Works Construction, current edition, as a minimum requirement.

B. Where construction is to be performed in the vicinity of the plan-protection zone, the work shall be carried on in a manner which will cause minimum damage. Under no circumstances are additional trees, outside the limits of grading to be removed without written permission from the City. Trees and shrubbery that are not to be removed shall be protected from injury or damage resulting from the

Contractor's operations. It shall be the responsibility of the Contractor to alert his staff, his suppliers, and all sub-contractors of the intent of these Specifications pertaining to the protection of vegetation. During the execution of his work, the Contractor shall use the same care and protection of all vegetation within their work area.

C. Protection of Persons and Property (existing structures and site improvements).

1. Provide barricades, warning signs at open depressions and holes on adjacent property and public accesses.

2. Provide operating warning lights during hours from dusk to dawn each day or as otherwise required.

3. Protect existing remaining structures, utilities, sidewalks, pavements other facilities from damage as caused by settlement, undermining, washout or other hazards created by site-clearing operations of this Section.

4. Provide and maintain pedestrian and vehicular access in accordance with Work Area Traffic Control Handbook (WATCH), latest edition.

D. Use means necessary to prevent air pollution or dust from becoming a nuisance to the public, to neighbors and to others performing work on or near the job-site. Comply with governing regulations.

E. Maintain access to the job-site, other neighboring property, street and alley at all times.

1.4 DEFINITIONS

A. Clearing: Clearing is defined as removing existing vegetation within the limits of work shown on the plans. All vegetated material generated during clearing shall be hauled off-site to an authorized disposal site.

B. Grubbing: Grubbing is defined as removing sticks, brush, stumps, grass, weeds, roots, decayed vegetated matter, and woody debris resting on or protruding through the ground surface and all objectionable woody matter which is embedded in the underlying soils within the limits of work. All material generated during grubbing is to be hauled off-site to an authorized disposal site.

C. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on landscape Drawings.

D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

PART 2 - PRODUCTS - NOT USED

PART 3 – EXECUTION

3.1 GENERAL

A. Prior to starting job-site clearing operations in the company of the City Engineer or Consultant Architect, Soil Engineer and Inspector; visit the job site and verify the extent of the work.

3.2 TREE AND STUMP REMOVAL

A. Remove trees and stumps indicated or required to be removed. Remove trees, together with bulk of roots, to a minimum depth of 4 feet below required grade, and within a radius of approximately 7 feet beyond perimeter of trunk at grade.

B. Fill and compact excavation from tree and stump removal. Fill in 6-inch layers, each compacted to 90 percent of maximum density in accordance with ASTM D1557.

1. Back filling shall not commence until the excavation is inspected and tested.

3.3 CONCRETE AND BITUMINOUS SURFACING REMOVAL

A. Break up and completely remove existing concrete surfacing, curbs, gutters, walks and bituminous surfacing to the indicated limits. Cutting shall be performed to a neat and even line with proper tools or a concrete cutting saw. Minimum depth of cut shall be 1½ inches, unless otherwise indicated. Remove concrete broken beyond the indicated limits to the nearest joint or score line, and replace with new concrete to match existing.

3.4 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 31 2200
GRADING

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. General exterior grading, cutting and filling, including grading for building area, paving, planting areas, banks and hillsides.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 - Site Clearing.

3. Section 31 2313 - Excavation and Fill.

4. Section 31 2326 - Base Course.

5. Section 32 9000 - Planting.

1.2. PROJECT REQUIREMENTS

A. General:

1. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

2. Before grading, contact Underground Service Alert of Southern California (USASC) for information on public buried utilities and pipelines. Retain the services of an underground utility locator for onsite utilities.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Materials shall conform to requirements specified in this and related sections.

PART 3 - EXECUTION

3.1. PREPARATION

A. Protect and maintain installed stakes until their removal is required for the work. Provide replacement grade or location stakes lost or disturbed.

B. Install grade stakes and compare to indicated grades. If discrepancies are found between existing grades and grades indicated on drawings, do not proceed until discrepancies are resolved.

3.2. ROUGH AND FINE GRADING

A. Rough grade area sufficiently high to require cutting by fine grading:

1. Grade area for bituminous surfacing and other paving to the indicated grades, equal to the section of the indicated base and pavement.

2. Slope banks to required finish grades as cut progresses, or leave cuts full and finish grade by mechanical equipment to provide grades and soil densities indicated on the drawings.

3. Rough grade, fill, and compact banks beyond indicated finish grades. Finish grade banks and slopes to indicated grades, and specified soil densities.

4. Grade Only Areas: In areas not indicated to receive pavement, rough grade to approximate finish grades and then scarify, moisten, and roll to obtain required density and indicated finish grades.

5. Tolerances: Finish grades shall be within a tolerance of 0.05 inch per foot above or below grades indicated. Provide an average grade as indicated.

B. Base or Subgrade:

1. After subgrade has been constructed to approximate required grades, scarify to a depth of at least 6 inches:

a. After scarifying, process loosened material to a finely divided condition and adjust moisture content to optimum condition by addition of water, addition and blending of a dry suitable material, or by drying of existing material.

b. Subgrade material shall be compacted by tamping, sheepsfoot rollers or pneumatic tire rollers. Required relative compaction shall be 95 percent minimum for the top 6 inches below subgrade.

c. Install base course in accordance with Section 31 2326 - Base Course.

2. Tolerance of completed grades, of base or subgrade, shall not vary more than 0.03 inch per foot from grades indicated. Provide an average grade as indicated.

3.3. SHORING

A. Provide shoring, as necessary, to properly and safely support earth sides of excavations, existing curbs, sidewalks, gutter, and drives and stairs, against movement and collapse.

B. Design and Calculations: Provide in accordance with requirement of CalOHSA.

C. Remove shoring upon completion of the work of this section, or when no longer needed, unless required otherwise by authorities having jurisdiction.

3.4. EXCESS MATERIAL DISPOSAL

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

3.4. PROTECTION

A. Protect the work of this section until substantial completion.

END OF SECTION

SECTION 31 2316
EXCAVATION AND FILL FOR PAVING

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Excavating, backfill, and compacting for paved areas.

2. Installation of fill materials.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 - Site Clearing.

3. Section 31 2200 - Grading.

4. Section 31 2323 - Excavation and Fill for Utilities.

5. Section 32 2326 - Base Course.

6. Section 32 0117 - Pavement Repair.

7. Section 32 1216 - Asphalt Paving.

8. Section 32 1313 - Site Concrete Work.

1.2. PROJECT REQUIREMENTS

A. Import and export of earth materials:

1. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.3. SUBMITTALS

A. Imported soils: The City Engineer shall obtain initial product sample for testing in accordance with the terms of Article 3.5 of this section.

1.4. QUALITY ASSURANCE

A. Comply with Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Material Testing.

1.5. PROJECT CONDITIONS

A. Information on drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the project site.

B. A copy of the foundation investigation and soils report is available for examination at the Architect's office during regular office hours of Architect.

PART 2 - PRODUCTS

2.1. BASE MATERIALS

A. Concrete Slabs on Grade: Provide "Crushed Aggregate Base "as specified in the Standard Specifications for Public Works Construction, Section 200: "Rock Materials," with ¾ inch maximum size aggregates. Provide a 3 inch thick base, unless noted otherwise.

B. Bituminous Surfacing: As indicated on drawings and specified in Section 31 2326 - Base Course.

2.2. FILL AND BACKFILL MATERIALS

A. Fill and backfill materials shall be previously excavated materials or imported fill material, free of clods and stones larger than 3 inches, foreign materials, vegetable growths, sod, expansive soils, rubbish and debris. Material shall conform to these specified requirements and related sections.

B. Fill material, exhibiting a wide variation in consistency and moisture content, shall be blended or aerated to stabilize and upgrade the material.

C. Imported Fill Material:

1. Provide suitable materials, obtained from project site excavations, for earthwork and fill materials. If excavated materials are not of suitable quality, import additional materials as necessary.

2. Imported fill shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade, and shall not have more than 60 percent of fines passing 200 mesh sieve. Material shall have a coefficient of expansion of not more than 2 percent from air dry to optimum moisture content and not more than 6 percent from air dry to saturation. Imported material shall be clean and free of rubbish, debris, and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

D. Other Fill Materials: Brick rubble and broken concrete originating from the project site may be legally disposed of off the project site or incorporated in fill, if reviewed by the City Engineer. Unless otherwise required, no such materials may be imported from outside the project site.

E. Permeable Backfill:

1. Provide permeable backfill material behind retaining structures consisting of gravel, crushed gravel, crushed rock, natural sands, manufactured sand, or combinations of these materials conforming to the following gradations:

Sieve Size:	Percentage Passing:
3/4 inch (19mm)	100
3/8 inch (10mm)	80 to 100
No. 100	0 to 8
No. 200	0 to 3

2. Those portions of fill material passing a No. 4 sieve shall provide a sand equivalent of at least 60.

3. Provided backing for weep holes shall consist of two cubic feet of aggregate in burlap sacks, securely tied. Aggregate shall conform to requirements for No. 3 concrete aggregate as specified in subsection 200-1.4 of the Standard Specifications for Public Works Construction.

4. Permeable Backfill Alternate Materials: Instead of the materials specified for retaining structures backfill, a drainage matting system, Miradrain by Mirafi, Inc., or equal, may be provided if reviewed by the City Engineer

PART 3 – EXECUTION

3.1. SITE PREPARATION

A. Clear the project site as required in Section 31 1000 - Site Clearing.

3.2. PROTECTION

A. Protect and guard excavations against danger to life, limb, and property as required by, but not limited to, Cal-OSHA regulations.

B. Protect adjacent existing improvements, including landscaping, against damage.

3.3. EXISTING UTILITY LINES

A. Protect existing utility lines from damage or displacement.

B. Remove conduits or pipes not in service, exposed during work, unless a minimum cover of 2 feet is provided. Remove concrete, clay or other non-metallic pipe over 8 inches in diameter, unless otherwise indicated.

3.4. EXCAVATION

A. Unclassified Excavations: Comply with the Standard Specifications for Public Works Construction, Section 300: "Earthwork," except as modified herein.

3.5. FILL

A. Unclassified Fill and Compaction: Comply with the Standard Specifications for Public Works Construction, Section 300: "Earthwork," except as modified herein.

B. Provide fill materials as specified in Part 2 - Products. If excavated materials from the project site are not of required quality or sufficient quantity, import additional materials as necessary.

C. In addition to the requirements of this section, import and/or exported materials shall comply with the requirements of Section 01 4524 - Environmental Import/Export Material Testing.

D. Imported fill materials shall be sampled by the City Engineer for compliance with the requirements of Part 2 of this Section.

E. The City Engineer shall submit samples to an approved independent testing laboratory for testing.

F. Initial sampling shall be performed by the City Engineer before importing material to the project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The City Engineer shall obtain both the initial and additional samples from the identified site, and shall submit samples to the approved independent testing laboratory for testing.

G. The City Engineer shall perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing tested for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

H. The independent approved testing laboratory shall perform the required tests and report results of tests noting if the tested material passed or failed such tests, and shall furnish copies to the Project Inspector, Architect, Contractor, City Engineer, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer, and the material was tested in accordance with applicable provisions of the Contract Documents and CBC. Upon completion of the work of this section, the independent testing laboratory and City Engineer shall submit a verified report to the City as required by CBC.

I. Bills of lading or equivalent documentation shall be submitted to the Project Inspector on a daily basis.

J. Upon completion of import operations, provide the City Engineer a certification statement attesting that imported material has been obtained from the identified source site.

3.6. INSTALLATION OF MATERIALS

A. Fill or backfill materials shall be installed in horizontal layers of 6 inches, unless otherwise required. Each layer shall be evenly placed and moistened or aerated as necessary. Unless otherwise reviewed by the City Engineer, each layer of fill material shall cover the length and width of the area to be filled before the next layer of material is installed. Top surface of each layer shall be installed to an approximate level with a crown or crossfall of at least 1 in 50, but no more than 1 in 20. Provide adequate drainage at all times during construction of the work of this section.

3.7. COMPACTING

A. Each layer of fill material shall be compacted by tamping, sheepsfoot rollers, or pneumatic-tired rollers to provide specified relative compaction. At inaccessible locations, provide specified compaction by manually held, operated, and directed compaction equipment.

B. Unless otherwise indicated, compact each layer of earth fill to a relative compaction of at least 95 percent.

C. When fill materials, or a combination of fill materials, are encountered or provided which develop densely packed surfaces as a result of installation or compacting operations, scarify each compacted layer before installing the next succeeding layer.

3.8. INSPECTION AND TESTING

A. The City Engineer will inspect and test excavations, sample material quality as required in Part 2, and observe installation and compaction of fill materials.

B. The City Engineer will sample imported fill materials from their designated source before delivery to the project site.

C. Installation of backfill shall be observed by the City Engineer.

D. The City Engineer will inspect and test excavation work before the installation of fill and/or other materials.

E. Compaction: Test compaction in accordance with ASTM D1557, Method C.

3.9. PROTECTION

A. Protect the work of this section until substantial completion.

3.10. CLEANING

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 31 2319
EXCAVATION AND FILL FOR STRUCTURES

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Excavating, backfilling, and compacting for buildings and structures.

2. Fill materials.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 - Site Clearing.

3. Section 31 2200 - Grading.

4. Section 31 2616 - Excavation and Fill for Paving.

5. Section 31 2323 - Excavation and Fill for Utilities.

1.2. PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.3. SUBMITTALS

A. Imported Soils: The City Engineer shall obtain initial product sample for testing in accordance with the terms of Article 3.05 of this section.

B. Shoring calculations as required in Article 3.03 of this section.

1.4. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Material Testing.

1.5. PROJECT CONDITIONS

A. Information on drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the project site.

B. A copy of the foundation investigation and soils report is available for examination at the Architect's office during regular office hours of Architect.

PART 2 - PRODUCTS

2.1. FILL AND BACKFILL MATERIALS

A. Fill and backfill materials shall be a granular material previously removed from excavation or imported fill material, free of large clods and stones larger than 3 inches, foreign materials, vegetable growths, sod, expansive soils, rubbish and debris. Material shall conform to these specified requirements and related sections.

B. Fill material exhibiting a wide variation in consistency and/or moisture content shall be blended and/or aerated to stabilize and upgrade the material.

C. Imported Fill Material:

1. Provide suitable materials obtained from the project site excavations for earthwork and fill materials. If excavated materials are not of suitable quality or sufficient quantity import additional materials as necessary.

2. Imported fill shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade, and shall not have more than 60 percent of fines passing 200 mesh sieve. Material shall have a coefficient of expansion of not more than 2 percent from air dry to optimum moisture content and not more than 6 percent from air dry to saturation. Imported material shall be clean and free of rubbish, debris and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

D. Other Fill Materials: Brick rubble and broken concrete originating from the project site may be legally disposed of off the project site or incorporated in fill, if reviewed by the City Engineer. Unless otherwise provided, no such materials may be imported from outside the project site.

E. Permeable Backfill:

1. Provide permeable backfill material behind retaining structures consisting of gravel, crushed gravel, crushed rock, natural sands, manufactured sand, or combinations of these materials conforming to the following gradations:

Sieve Size	Percentage Passing
3/4 inch	100
3/8 inch	80 to 100
No. 100	0 to 8
No. 200	0 to 3

2. Those portions of fill material passing a No. 4 sieve shall provide a sand equivalent of at least 60.

3. Provided backing for weep-holes shall consist of 2 cubic feet of aggregate in burlap sacks, securely tied. Aggregate shall conform to requirements for No. 3 concrete aggregate as specified in subsection 200-1.4 of the Standard Specifications for Public Works Construction.

4. Permeable Backfill Alternate Materials: Instead of the materials specified for retaining structures backfill, a drainage matting system, Miradrain by Mirafi, Inc., or equal, may be provided if reviewed by the City Engineer.

PART 3 - EXECUTION

3.1. SITE PREPARATION

A. Clear the project site as required in Section 31 2200 - Site Clearing.

3.2. PROTECTION

A. Protect and guard excavations against danger to life, limb, and property as required by, but not limited to, Cal-OSHA regulations.

B. Protect adjacent existing improvements, including landscaping, against damage.

C. Shore, crib, or lag excavations and earthen banks as necessary to prevent caving-in, erosion or gullying of sides.

D. Divert or de-water excavations until concrete is placed, forms are removed, and backfilling is complete.

3.3. SHORING

A. Provide shoring, as necessary, to properly and safely support earth sides of excavations, curbs, sidewalks, gutter, drives and stairs, against movement and collapse.

B. Design and Calculations: Provide in accordance with requirement of Cal-OHSA. Remove shoring upon completion of work, or when no longer needed.

3.4. EXCAVATION

A. Form sides of footings, pads, grade beams, and slab foundations, unless otherwise indicated. Provide excavations of sufficient size to permit installation and removal of forms and other work as required.

B. Machine-drill excavation for round footings to size and depth indicated. Provide a collar or casing, or other adequate protection, to exclude dirt and debris. Protect excavations with plank covers until concrete is placed.

C. Provide excavation bottoms level and free from loose material. Excavate to indicated or required elevations of undisturbed earth.

D. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. If soil becomes soft, soggy, or saturated, excavate to firm undisturbed soil and fill as required. Slope adjacent grades away from excavations to minimize entry of water.

E. Calculate excavation quantities based on elevations or depths indicated on drawings.

F. Provide 2,000 psi concrete for backfill of over-excavated areas to indicated or required elevations.

G. Special preparation of bottom of excavated planes areas: Excavate areas designated on drawings as bottom of excavated planes (B.E.P.), by excavating and filling to indicated grades and elevations.

3.5. IMPORT/EXPORT OF MATERIALS

A. Provide fill materials as specified in Part 2- Products. If excavated materials from the project site are not of required quality or sufficient quantity, import additional materials as necessary.

B. In addition to the requirements of this section, import and/or exported materials shall comply with the requirements of Section 01 4524 - Environmental Import/Export Material Testing.

C. Imported fill materials shall be sampled by the City Engineer for compliance with the requirements of Part 2 of this section.

D. The City Engineer shall submit all samples to an approved independent testing laboratory for testing.

E. Initial sampling shall be performed by the City Engineer before importing material to the project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The City Engineer shall obtain both the initial sample and additional samples from the identified site and shall submit samples to the approved independent testing laboratory for testing.

F. The City Engineer shall perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

G. The independent approved testing laboratory shall perform the required tests and report results of tests, noting if the tested material passed or failed such tests, and shall furnish copies to the Project Inspector, Architect, Contractor, City Engineer, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer and the material was tested in accordance with applicable provisions of the Contract Documents and CBC. Upon completion of the work of this section, the independent testing laboratory and the City Engineer shall submit a verified report to the City as required by CBC.

H. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

I. Upon completion of import operations, provide the City a certification statement attesting that all imported material has been obtained from the identified source site.

3.6. BACKFILLING

A. After concrete has been placed, forms removed, and concrete work inspected, backfill excavations to indicated or required grades. Backfill simultaneously on each side of walls or grade beams. Remove rubbish, debris, and other waste materials from excavations before placing backfill.

B. Before installing any backfill, adequately cure concrete and provide bracing to stabilize structures. Protect waterproofing or dampproofing against damage during backfilling operations with required protection board. Remove bracing as backfill operation progresses.

C. Do not furnish or install expansive soils for below grade building walls.

D. Install each layer of material not to exceed thickness of 6 inches unless otherwise required.

E. Rigidly control the amount of water, to be installed, to provide optimum moisture content for type of fill material furnished. Do not over-saturate or compact by flooding or jetting.

F. Install wall backfill before installing railings and fences on walls.

G. Impervious backfill materials shall be installed in layers along with and by the same methods specified for structure backfill. Impervious backfill materials shall be at the approximate grade and elevation and where exposed to erosion shall be covered with at least a 12 inch layer of fill material as reviewed by the geotechnical engineer.

H. Install weep hole drainage at the backside of walls so the backing completely covers the weep holes, is horizontally centered, and extends at least 12 inches above the bottom of the weep opening. Provide an 8-inch square section of ¼-inch galvanized or aluminum screen, with a minimum wire diameter of 0.03 inch, and install at the backside of each weep hole before installing the backfill material.

I. Where a reviewed drainage matting system is provided instead of permeable backfill for retaining structures, install in accordance with the manufacturer recommendations.

3.7. COMPACTING

A. Compact each layer of fill material by tamping, sheepsfoot rollers or pneumatic-tired rollers, to such extent as to provide specified relative compaction. At inaccessible locations, compact to specified requirements with hand-held, operated and directed compaction equipment.

B. Unless otherwise indicated, compact each layer of fill material to a relative compaction of at least 95 percent.

C. Do not compact by flooding or jetting.

D. When fill materials, or a combination of fill materials, are encountered or provided which develop densely packed surfaces, as a result of installation or compacting operations, scarify each layer of compacted fill before installing the next succeeding layer.

3.8. INSPECTION AND TESTING

A. The City Engineer will inspect and test excavations, sample material quality as required in Part 2, and observe installation and compaction of fill materials.

B. The City Engineer will sample imported fill materials from their designated source before delivery to the project site.

C. Installation of backfill shall be observed by the City Engineer.

D. The City Engineer will inspect and test excavation work before the installation of fill and/or other materials.

E. Compaction: Test compaction in accordance with ASTM D1557, Method C.

F. The Project Inspector will inspect foundation excavations when completed and ready for forms, after forms are in place and before first placement of concrete.

3.9. PROTECTION

A. Protect the work of this section until substantial completion.

3.10. CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 31 2323
EXCAVATION AND FILL FOR UTILITIES

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Excavating, backfilling, and compacting utility trenches such as: water, gas, irrigation, storm drain, sewer lines, concrete-encased conduits, and manholes, vaults, valve boxes, catch basins, underground tanks, thrust blocks, yard boxes, pull boxes and other utility appurtenances.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 - Site Clearing.

3. Section 31 2200 - Grading.

4. Section 31 2316 - Excavation and Fill for Paving.

5. Section 31 2319 - Excavation and Fill for Structures.

6. Section 32 0117 - Pavement Repair.

7. Section 32 1313 - Site Concrete Work.

8. Section 32 8413 - Potable Water Irrigation.

9. Section 32 8426 - Reclaimed Water Irrigation.

10. Section 33 1100 - Site Water Distribution Utilities.

11. Section 33 3000 - Site Sanitary Sewer Utilities.

12. Section 33 4000 - Storm Drainage Utilities.

13. Division 22 - Plumbing.

14. Division 26 - Electrical.

1.2. PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.3. SUBMITTALS

A. Imported Soil: The City Engineer shall obtain initial product sample for testing in accordance with the terms of Article 3.5 of this section.

1.4. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works construction, current edition except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Material Testing.

1.5. PROJECT CONDITIONS

A. Information on drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the project site.

B. A copy of the foundation investigation and soils report is available for examination at the Architect's office during regular business hours of the Architect.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Bedding material from trench bottom to one foot above the pipe:

1. Sand, gravel, crushed aggregate or native free-draining granular material providing a sand equivalent of at least 30 or a coefficient of permeability greater than 1.4 inches per hour.

2. Sand complying with the specifications for cement concrete aggregates.

B. Backfill Materials:

1. Excavated trench material to be installed for backfilling shall be clean, free of large clods, and stones larger than 2½ inches in any dimension.

2. Cement-sand slurry shall be provided with one sack of cement per cubic yard of the mixture.

3. Imported Fill Material: Imported fill material shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade, and shall not have more than 60 percent of fines passing a 200 mesh sieve. Material shall provide a coefficient of expansion of not more than 2 percent from air dry to optimum moisture content and not more than 6 percent from air dry to saturation. Imported materials shall be clean and free of rubbish, debris, and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

PART 3 - EXECUTION

3.1. GENERAL

A. Before excavation, contact the "Underground Service Alert of Southern California" (USASC) for information on buried public utilities and pipelines. For onsite utilities, retain an underground locating service.

B. Barricade trenches, ditches, pits, sumps, and similar work outside the barricaded working area with chain link fence as specified in Section 01 5000 - Construction Facilities and Temporary Controls, and in accordance with Cal-OSHA standards and requirements.

C. Saw-cut concrete or bituminous paving for trench installation.

D. Trenches over 5 feet in depth shall conform to the Cal-OSHA.

E. Where indicated and required to excavate in lawn areas, protect adjoining lawn areas outside of the work area. Replace or install removed sod, upon completion of backfill, by installing sod level with adjacent lawns. If installation of removed sod fails, furnish sod and install to match existing lawns.

F. Backfill over excavations to the required elevations with earth, gravel, sand, or concrete and compact as required. Provide excavations, free from standing water by pumping, draining, or providing protection against water intrusion. Slope adjacent grades away from excavations to minimize entry of water.

G. Do not install piping lengthwise under concrete walks without review by the City Engineer.

H. Do not excavate trenches parallel to footings closer than 18 inches from the face of the footing, or below a plane having a downward slope of two horizontal to one vertical, from a line 9 inches above bottom of footings.

1. Unless otherwise indicated on drawings, depth of excavations outside the buildings, shall allow for a minimum coverage above top of pipe, tank, or conduit measured from the lowest adjoining finished grade, as follows:

Steel Pipe	24 inches below finished grade
Copper Water Tube	18 inches below finished grade
Cast-Iron Pressure Pipe	36 inches below finished grade
Plastic Pipe (other than waste)	30 inches below finished grade
Tanks or other structures	36 inches below finished grade
Soil, Sewer & Storm Drain	minimum 18 inches below finished grade, and as required for proper pitch and traffic load. (Install polypropylene sewer pipe with at least 24 inches coverage)
Irrigation Pipe:	nonpressure pipe 12 inches, pressure pipe 24 inches

2. Trench width shall provide ample space for fitting and joining. Excavate for piping bells and fittings, bell and spigot pipe, and other fittings.

I. Unless indicated otherwise, excavate trenches to the required depths for utilities, such as pipes, conduits, and tanks, with minimum allowances of 6 inches at the bottom and 6 inches at the sides for bedding of unprotected piping or as required for concrete encasement of conduits as indicated on drawings. Grade bottom of trenches to a uniform smooth surface. Remove loose soil from the excavation before installing sand bedding or concrete encasement.

J. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. If soil becomes soft, soggy, or saturated, excavate to firm undisturbed soil and fill as required. Slope adjacent grades away from excavations to minimize entry of water.

K. Provide a minimum clear dimension of 2 inches from sides of wall excavation to outer surfaces of buried pipes or conduits installed in the same trench or outside surfaces of containers and tanks.

L. Backfill shall not be installed until required inspections and testing is completed.

M. Backfill electrical, or other excavated utility trenches located outside of barricaded installation areas, within 24 hours after inspection by the Project Inspector.

N. Install backfill materials in layers, not exceeding 4 inches in thickness, and compact to 95 percent of the maximum density.

O. If materials excavated from the project site are not permitted for trench backfill in paved areas, backfill trenches with a cement-sand slurry mix. Install backfill to an elevation of the existing undisturbed grade plus one inch.

P. Install and compact sand bedding to provide a uniform full length bearing under piping and conduits.

Q. Where portions of existing structures, walks, paving, or other improvements are removed or cut for piping or conduit installation, replace the material with equal quality, finished to match adjoining existing improvements. Repair pavement as specified in Section 32 0117 - Pavement Repair.

3.2. IMPORT/EXPORT OF MATERIALS

A. Provide fill materials as specified in Part 2- Products. If excavated materials from the project site are not of required quality or sufficient quantity, import additional materials as necessary.

B. In addition to the requirements of this section, import and exported materials shall comply with the requirements of Section 01 4524 - Environmental Import/Export Material Testing.

C. Imported fill materials shall be sampled by the City Engineer for compliance with the requirements of Part 2 of this section.

D. The City Engineer shall perform the tests by utilizing an independent approved testing laboratory.

E. Initial sampling shall be performed by the City Engineer before importing material to the project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The City Engineer shall obtain both the initial sample and additional samples from the identified site and shall submit all samples to the approved independent testing laboratory.

F. The City Engineer shall perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

G. The independent approved testing laboratory shall perform the required tests and report results of all tests, noting if the tested material passed or failed such tests, and shall furnish copies to the Project Inspector, Architect, Contractor, City Engineer, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer, and the material was tested in accordance with applicable provisions of the Contract Documents and CBC. Upon completion of the work of this section, the independent testing laboratory and City Engineer shall submit a verified report to the City as required by CBC.

H. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

I. Upon completion of import operations, provide the City a certification statement attesting that imported material has been obtained from the identified source site.

3.3. INSPECTION AND TESTING

A. The City Engineer will inspect and test excavations, sample material quality as required in Part 2, observe installation and compaction of fill materials.

B. Compaction test shall be performed in accordance with ASTM D1557, method "C."

3.4. PROTECTION

A. Protect the work of this section until substantial completion.

3.6. CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 31 2326

BASE COURSE

PART 1 – GENERAL

1.1. SUMMARY

A. Section Includes:

1. Installation of base material.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 - Site Clearing.

3. Section 31 2200 - Grading.

4. Section 31 2316 - Excavation and Fill for Paving.

5. Section 32 1216 - Asphalt Paving.

6. Section 32 1313 - Site Concrete Work.

1.2. SUBMITTALS

A. Prior to import, submit written certification to the City Engineer that Crushed Miscellaneous Base (CMB) does not contain Polychlorinated biphenyls (PCB) above laboratory detection limits, when tested in accordance with EPA Method 8082, and obtain written approval from jurisdictional agency prior to import at the subject site, refer to Article 2.2 for sampling frequency.

B. Product Data: Submit material source, technical information and test data for base materials. Gradation and quality certifications shall be dated within 30 days of the submittal.

C. Sample: Submit sample of proposed base course material.

1.3. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction, current edition.

PART 2 - PRODUCTS

2.1. UNTREATED BASE MATERIALS

A. The following base materials shall conform to the requirements of the Standard Specifications for Public Works Construction: Section 200 - Rock Materials.

1. Crushed Miscellaneous Base.

a. CMB meeting requirements of Article 1.2, A, may be used onsite for pavement base only.

b. CMB may be used off site when in accordance to the Greenboook.

B. Materials generated on site shall not be used as a base course material.

2.2. SOURCE QUALITY CONTROL

A. Sampling and testing of imported and/or exported crushed miscellaneous base (CMB) shall be performed in accordance with the following Table 1 schedule:

TABLE 1: MINIMUM SAMPLING FREQUENCY	
Volume (CY)	Sampling Frequency
0 to 500	1 per 100 Cubic Yards
501 to 1,000	1 per 250 Cubic Yards
1,001 to 5,000	1 per 250 Cubic Yards for first 1,000 Cubic Yards 1 per 500 CY thereafter
5,001 to 20,000	12 samples for first 5,000 Cubic Yards 1 per 1,000 Cubic Yards thereafter
over 20,000	1 per 2,000 Cubic Yards for first 20,000 Cubic Yards 1 per 2,500 CY thereafter

2.3. MATERIAL APPROVAL

A. Base material shall be inspected by the Project Inspector for gradation and material content prior to installation. The City may choose to have additional tests performed by the City Engineer before installation.

PART 3 - EXECUTION

3.1. INSTALLATION

A. Install base course material in layers, not exceeding 4 inches in thickness, unless required otherwise. Grade and compact to indicated levels or grades, cut and fill, water and roll until the surface is hard and true to line, grade and required section. Provide a relative compaction of at least 95 percent, unless otherwise required.

B. Grade base course to elevations indicated on drawings, ready to receive surfacing, in accordance with Section 31 2200 - Grading.

3.2. PROTECTION

A. Protect the work of this section until substantial completion.

3.3. CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

END OF SECTION

DIVISION 32

EXTERIOR IMPROVEMENTS

SECTION 32 0117
ASPHALT PAVEMENT REPAIR

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Bituminous Surfacing Repair: Areas removed for utility trenches, heaved by tree roots, cracked areas, protruding areas where pavement meets hard surfaces, depressed areas, holes and areas around new structures, and raveled bituminous pavement.

B. Related Sections:

1. Division 01 - General Requirements.

2. Section 01 3593 - Off-site Improvement Procedures.

3. Section 31 2200 - Grading.

4. Section 31 2316 - Excavation and Fill for Paving.

5. Section 31 2319 - Excavation and Fill for Structures.

6. Section 31 2323 - Excavation and Fill for Utilities.

8. Section 31 2326 - Base Course.

9. Section 32 1216 - Asphalt Paving.

10. Section 32 1313 - Site Concrete Work.

11. Section 32 1236 - Seal for Bituminous Surfacing.

1.2. SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating areas to be repaired.

B. Product Data: Submit manufacturer’s technical data for materials and products.

1.3. QUALITY ASSURANCE

A. Comply with Standard Specifications for Public Works Construction, current edition.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Base Course Materials: Section 31 2326 - Base Course.

B. Asphalt Paving Materials: Section 32 1216 - Asphalt Paving.

C. Seal Materials: Section 32 1236 - Seal for Bituminous Surfacing.

D. Headers: Section 32 1216 - Asphalt Paving.

2.2. BITUMINOUS MATERIALS

A. Provide materials and products of the class, grade or type indicated, conforming to relevant provisions of Section 203 - Bituminous Materials of the latest Standard Specifications for Public Works Construction.

PART 3 - EXECUTION

3.1. PAVEMENT REMOVAL

A. Remove bituminous and concrete pavement in accordance with applicable provisions of Section 300 - Earthwork of the Standard Specifications for Public Works Construction.

B. Pavement Heaved by Roots: Remove pavement to limits of distortion and expose roots. Trim roots to provide at least 12 inches clearance to pavement.

C. Remove protruding bituminous surfaces flush with the surrounding grade, using a suitable tool or equipment, so that adjacent finishes are not blackened.

D. Remove raveled and depressed bituminous pavement to limits indicated or required.

E. Saw cut existing improvements, trim holes and trenches in bituminous and concrete pavement to permit mechanical hand tampers to compact the fill.

F. Remove broken concrete by saw cutting. If the required cut line is within 30 inches of a score, joint line, or edge, cut and remove to the score, joint line, or edge.

3.2. EXCAVATING, BACKFILLING AND COMPACTING

A. Conform to requirements in Section 31 2313 - Excavation and Fill; Section 31 2316 - Excavation and Fill for Paving; Section 31 2319 - Excavation and Fill for Structures; or Section 31 2323 - Excavation and Fill for Utilities, as required.

B. Where subgrade or base is deemed to be unstable or otherwise unsuitable, excavate such materials to firm earth, and replace with a required material. Install and compact fill materials in accordance with the requirements of related specification sections.

3.3. HEADERS

A. Install headers along edge of bituminous surfacing abutting turf, earth, or planting area, unless indicated otherwise.

B. Install headers so the bottom surface has continuous bearing on solid grade. Where excavation for headers is undercut, thoroughly tamp soil under the header. Compact backfill on both sides of header to the density of the adjacent undisturbed grade.

C. Fasten headers in place with redwood or Douglas fir stakes of length necessary to extend into solid earth a minimum of 12 inches. Stakes shall be of sound material, neatly pointed, driven vertically, and securely nailed to headers. Space stakes, not to exceed 4 feet on centers, with top of stakes set one inch below top of header. Provide a minimum of two 12d galvanized common nails through each stake.

D. Remove existing headers where new surfacing is installed adjacent to existing surfacing.

E. Install temporary headers at transverse joints of paving where continuous paving operations are not maintained.

F. Provide additional stakes and devices as required to fasten headers.

3.4. BASE COURSE

A. Unless otherwise indicated, base course shall be crushed aggregate base, fine grade, and 3 inches thick or equal to thickness of the existing base whichever is greater.

B. Fill grade and compact as specified in Section 31 2200 - Grading.

3.5. RESURFACING

A. Holes and Trenches: Remove loose dirt and backfill with cement-sand slurry allowing for surfacing one inch thicker than existing. Resurface flush with existing adjoining pavement, installing the same type of materials, and section provided in existing improvements.

B. Other Areas: Other surface improvements damaged or removed shall be cut to a neat even line and excavated one inch below the bottom of the existing pavement. Resurface by following the original grades and installing the same type of materials provided in existing improvements.

C. Where bituminous surfacing abuts concrete, masonry, walks or paving, tamp joint smooth, if necessary, as described above to obtain a uniformly even joint true to line and grade. Tamp and smooth materials before asphalt cools.

3.6. REPAIRING AND RESEALING EXISTING SURFACES

A. Preparation of Surfaces: Prior to filling cracks, clean existing bituminous surfacing of loose and foreign materials and coat with a film of asphalt emulsion.

B. Repair of Existing Surfacing:

1. Fill cracks ½ inch wide or less with RS-1 emulsion and silica sand or other required material. Cracks larger than ½ inch wide shall be filled with Type C2 Asphalt Concrete as specified. Cracks shall be filled to the level of adjacent surfacing.

2. Where low areas, holes, or depressions occur in existing surfacing, repair with emulsified asphalt. Install material, strike off the emulsified asphalt with a straightedge flush with

adjoining surfacing. Finish with a steel trowel, and after dehydration, compact by rolling or tamping.

C. Testing: Flood test the entire area in presence of the Project Inspector. Entire area tested shall be free of standing water or puddles.

D. Surface Seal: After surface has been repaired and tested, install seal coat over entire area indicated. Surface seal shall be as specified in Section 32 1236 - Seal For Bituminous Surfacing.

3.7. CLEANING

A. Remove all stains, on the project site and adjacent properties, caused by or attributed to the work of this section.

B. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

3.8. PROTECTION

A. Protect the work of this section until substantial completion.

END OF SECTION

SECTION 32 1216
ASPHALT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Paving for parking areas, areas between buildings, and adjacent to planting and turf areas as indicated.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 2200 - Grading.

3. Section 32 0117 - Pavement Repair.

4. Section 31 2326 - Base Course.

5. Section 32 1236 - Seal for Bituminous Surfacing.

6. Section 32 1313 - Site Concrete Work.

1.2 SUBMITTALS

A. Shop Drawings: Submit site plan indicating extent of paving and accessories.

B. Product Data: Manufacturer’s technical data for materials and products.

1.3 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction.

1.4 PROJECT CONDITIONS

A. Information on drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the project site.

B. A copy of the soils report is available for examination in the office of the Architect during regular office hours of the Architect.

PART 2 - PRODUCTS

2.1 BITUMINOUS MATERIALS

A. Provide materials of the class, grade, or type indicated on the drawings, conforming to relevant provisions of Section 203 - Bituminous Materials of the Standard Specifications for Public Works Construction.

B. The asphalt binder to be mixed with aggregate shall be paving asphalt conforming to 203-1. Unless otherwise shown on plans the binder grade shall be as shown in table.

2.2 ASPHALT BINDER

A. Provide asphalt binder grade conforming to relevant provisions of Section 203 - Bituminous Materials of the Standard Specifications for Public Works Construction. Unless otherwise shown on plans asphalt binder grade shall conform to the following

Area	**Binder Grade**
South Coast (Los Angeles Basin, Santa Clarita Valley, Santa Monica Mountains)	PG 64-10

2.3 HEADERS

A. Concrete: Per specification Section 32 1313 - Site Concrete Work.

B. Wood:

1. Redwood, Construction Heart Grade, size 2 by 6, unless otherwise indicated.

2. Stakes: 2 by 4 redwood or 2 by 3 Douglas fir, Construction Grade.

3. Nails: Common, galvanized, 12d minimum.

PART 3 - EXECUTION

3.1 HEADERS

A. Install headers along edge of bituminous surfacing abutting turf, earth, or planting area, unless indicated otherwise.

B. Install headers so the bottom surface has continuous bearing on solid grade. Where excavation for headers is undercut, thoroughly tamp soil under the header. Compact backfill on both sides of header to the density of the adjacent undisturbed earth.

C. Where wood headers are indicated on drawing, fasten headers in place with redwood or Douglas fir stakes of a length necessary to extend into solid grade a minimum of 12 inches. Stakes shall be of sound material, neatly pointed, driven vertically, and securely nailed to headers. Space stakes, not to exceed 4 feet on center, with top of stakes set one inch below top of header. Provide a minimum of two 12d galvanized common nails through each stake.

D. Remove existing headers where new surfacing is installed adjacent to existing surfacing.

E. Install temporary headers at transverse joints of paving where continuous paving operations are not maintained.

F. Provide additional stakes and anchorage as required to fasten headers in place.

3.2 CONSTRUCTION OF ASPHALT CONCRETE PAVEMENT

A. Thickness of Surfacing: Unless otherwise indicated on drawings or specified, install bituminous surfacing to a compacted thickness of 2 inches.

B. Provide surfacing material over base course as specified in Section 31 2326 - Base Course.

C. Surfaces of walls, concrete, masonry, or existing bituminous surfacing indicated to be in direct contact with installed bituminous surfacing shall be cleaned, dried, and uniformly coated with an asphaltic emulsion film.

D. Thicken edges of bituminous surfacing that do not abut walls, concrete, or masonry, and edges that join existing bituminous surfaces. Remove headers at existing bituminous surfacing where new bituminous surfacing is to be installed. Thicken edges an additional 2 inches, and taper to the indicated or specified thickness 6 inches back from such edges.

E. At stairways, adjust thickness of paving such that the first tread is equal in height to all other treads.

F. Provide adequate protection for concrete, planting areas, and other finish work adjacent to areas indicated to receive bituminous surfacing.

G. Placing:

1. Do not install bituminous surfacing when atmospheric temperature is below 40 degrees F or when fog or other unsuitable weather conditions are present. Temperature of mixture at time of installation shall not be lower than 260 degrees F in warm weather or higher than 320 degrees F in cold weather.

2. Where 2-inch or 3-inch thick surfacing is indicated or specified, install surfacing in one course. Where surfacing is indicated or specified to be 4 inches or more in thickness, except for thickened edges, install bituminous surfacing in courses of approximately equal thickness with each course not exceeding 2½ inches in thickness.

H. Stakes or Screeds: Provide grade or screed stakes, spaced not more than 15 feet apart, in flow lines with grades of less than one percent. Continuous screeds may be provided instead of stakes.

I. Spreading: Install bituminous surfacing in a manner to cause least possible handling of mixture. In open areas and wherever practicable, install by mechanical means with a self-propelled mechanical spreader. In confined or restricted areas, install mixture with hot shovels and rakes, and smooth with lutes.

J. Joints: Provide vertical joints between successive runs. Install joints true to line, grade, and cross section. Lapped joints are not permitted.

K. Rolling:

1. Finish roll with a self-propelled tandem roller weighing at least 8 tons. Break down roll with a self-propelled roller weighing between 1-½ and 8 tons.

2. Roll in a manner that preserves flow lines and the established finished grades. Break down roll in areas adjacent to flow lines parallel to flow lines. Break down roll after bituminous surfacing is installed without shoving or cracking of mixture under roller. Continue finish rolling until surfacing is unyielding, true to grade, and meets requirements for specified smoothness. Areas inaccessible to finish roller may be finish rolled with breakdown roller, or tamped with hot tamping irons and smoothed with hot smoothing irons or hand roller.

3. Where bituminous surfacing abuts concrete, masonry, walks or paving; tamp joint smooth, if necessary, as described above to obtain a uniformly even joint, true to line and grade. Tamp and smooth to properly compact.

4. Compacted bituminous surfacing shall be provided with a bulk specific gravity of at least 2.31 when tested in accordance with ASTM D1188.

3.3 TOLERANCE

A. Smoothness: Surface of bituminous surfacing after rolling shall be even, smooth, and uniform in texture with no voids or rock pockets, free of roller marks or other irregularities, and not varying by more than 0.03 foot, except at local depressions or in raised areas as indicated, when a 10-foot straightedge is placed on surface.

B. Grade: Finished grade shall not vary more than 0.02 feet above or below required grade. Variations within prescribed tolerance shall be compensating so that the average grade and cross-section are provided.

C. Premium paving tolerances:

1. General: Test in-place asphalt concrete courses for compliance with requirements or thickness and surface smoothness. Repair or remove and replace unacceptable paving as directed by the City Engineer.

2. Thickness: Tolerances for thickness shall be ¼ inch, plus or minus.

3. Planarity: The asphalt substrate shall not vary from the planned cross slope by more than plus or minus 0.1 percent. The finished asphalt shall not vary, under a 10 feet straight edge, greater than 1/8 inch plus or minus. Flood test the surface with the use of a water truck. If, after 30 minutes on a 70 degree F day, “bird baths” are evident at a depth more than 1/8 inch, repair asphalt.

4. Corrective Measures: Determine if the planarity, cross slopes, and general specifications have been met. If all of the conditions have been met, notify the City Engineer in writing of the acceptance of the asphalt paving.

3.4 TESTING

A. After first coat of surface seal has been installed, and after a 24-hour period, the flood test shall be completed in the presence of the Project Inspector. Repair areas of standing water or puddles and flood test locally. Install surface seal, and retest as necessary.

3.5 SURFACE SEALING

A. After bituminous surfacing has passed flood test, clear and allow to dry, and provide one more coat of surface seal as specified in Section 32 1236 - Seal for Bituminous Surfacing.

B. Where indicated, provide multiple coats of surface seal to existing bituminous surfacing.

C. Where new bituminous surfacing joins existing bituminous surfacing, overlap surface seal a minimum of 12 inches onto existing bituminous surfacing.

3.6 PROTECTION

A. Protect the work of this section until substantial completion.

3.7 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 32 1236
SEAL FOR BITUMINOUS SURFACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Surface sealer over bituminous surfacing.

B. Related Requirements:

1. Division 01 - General Requirements.

3. Section 32 0117 - Pavement Repair.

6. Section 32 1216 – Asphalt Paving.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's product information and application procedures for bituminous surfacing

1.3 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction.

1.4 MAINTENANCE

A. Extra Materials: Provide 10 gallons in unopened containers.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide materials of the class, grade, or type indicated on the drawings, conforming to relevant provisions of Section 203 - Bituminous Materials of the Standard Specifications for Public Works Construction.

2.2 ASPHALT BINDER

A. Provide one of the following surface seals:

Product Name	Manufacturer
1. Guard-Top	CALMAT/Industrial Asphalt
2. Over kote	Diversified Asphalt Product
3. Park Top	Western Colloid Products
4. Sure Seal	Asphalt Coating Engineering
5. Super Drive Top.	SAF-T Seal. Inc.
6. Equal	

PART 3 - EXECUTION

3.1 SURFACE PREPARATION

A. Thoroughly wash surfaces with water to remove dirt, debris, excessive oil and grease, or other foreign matter.

3.2 APPLICATION

A. Install seal coat in strict accordance with manufacturer's written directions and recommendations.

B. Install two coats of surface seal to new bituminous surfacing. First coat shall be installed before flood testing. Clean surface, and allow to dry before installing second coat. Second coat shall be installed after bituminous surfacing has passed flood test.

C. Where new bituminous surfacing is installed adjacent to existing bituminous surfacing, overlap surface seal a minimum of 12 inches onto existing bituminous surfacing.

D. Where existing bituminous surfacing is indicated to be patched and sealed, install two coats of surface seal after patching. Refer to Section 32 1216 - Asphalt Paving.

3.3 PROTECTION OF SURFACES

A. Protect sealed and unsealed surfaces from damage and traffic during performance of the work of this section, and until surface seal has thoroughly set and cured. Do not permit traffic of any kind for at least 24 hours after completion of installation.

B. Protect the work of this section until substantial completion. The manufacturer’s name, and brand name or trademark;

3.4 TESTING

A. The City reserves the right to obtain samples, perform tests to ensure compliance with the specifications, and to review weight slips and invoices of materials delivered to the project site.

3.5 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 32 1313
SITE CONCRETE WORK

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Portland cement concrete pavement, cement walks, curbs, gutters, ramps, mowing strips, fence post footings, catch basins, pipe bedding and encasements, thrust blocks, transition structures, flagpoles and light standard bases and footings.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 03 2000 - Concrete Reinforcement.

3. Division 23 - HVAC.

4. Division 26 - Electrical.

5. Section 31 2200 - Grading.

6. Section 31 2316 - Excavation and Fill for Pavement.

7. Section 31 2326 - Base Course.

8. Section 32 0117 - Asphalt Pavement Repair.

9. Section 32 1216 - Asphalt Paving

10. Section 33 1100 - Site Water Distribution Utilities.

11. Section 33 3000 - Site Sanitary Sewer Utilities.

12. Section 33 4000 - Storm Drainage Utilities.

1.2. SUBMITTALS

A. Shop Drawings: Submit plans, elevations and details of concrete site work.

B. Product Data: Submit mix designs and manufacturer’s technical data for materials and products. Submit a 3-inch by 3-inch concrete sample of each specified color.

C. Material Sample: Submit one concrete bumper to the Project Inspector for destructive testing.

1.3. QUALITY ASSURANCE

A. Comply with Standard Specifications For Public Works Construction.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Concrete, Mortar and Related Materials: Comply with applicable provisions of Standard Specifications for Public Works Construction, Section 201 - Concrete, Mortar and Related Materials:

1. Concrete: 28-day compressive strength 2,500 psi, unless specified otherwise.

2. Reinforcing Mesh: ASTM A185, 4 by 4/W1.4 by W1.4 welded wire mesh.

3. Expansion Joint Filler: Preformed expansion joint filler, bituminous type, complying with ASTM D994.

B. Form Materials:

1. Side forms: Douglas fir, construction grade or better or metal forms.

2. Stakes: Douglas fir, construction grade or better or metal stakes.

PART 3 - EXECUTION

3.1. CONSTRUCTION OF FORMS FOR CAST-IN-PLACE STRUCTURES

A. Concrete Pavement: Install Portland cement concrete pavement in compliance with the Standard Specifications for Public Works Construction, Section 302- Roadway Surfacing.

B. Miscellaneous Exposed Concrete: Install concrete curbs, walks, gutters, cross gutters, access ramps, driveways, catch basins, yard boxes, vaults and similar structures, in compliance with the Standard Specifications for Public Works Construction, Section 303 - Concrete and Masonry Construction.

C. Exposed Concrete Bases: Install bases, such as for post, flagpole, light standards and similar bases, in compliance with the Standard Specifications for Public Works Construction, Section 303 - Concrete and Masonry Construction.

D. Post, flagpole, light standard footings below grade, underground conduit bedding, encasements, thrust blocks and similar structures may be placed directly in excavations conforming to the required sizes.

E. Reinforcement installation and concrete placement, surface finishes, curing and removal of forms shall be performed in compliance with applicable provisions of Standard Specifications for Public Works Construction, Section 303 - Concrete and Masonry Construction. Provide heavy broom finish at slopes exceeding 6 percent and medium broom finish at slopes up to 6 percent.

3.2. CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

3.3. PROTECTION

A. Protect the work of this section until substantial completion.

END OF SECTION

SECTION 32 31 19
FABRICATED DECORATIVE METAL FENCES AND GATES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shop-fabricated decorative fences and gates.
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 05 05 13 for shop-applied primer.
   2. Section 05 05 23 for non-structural metal fastenings.
   3. Section 05 50 00 for dissimilar metal corrosion protection.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Fabricator: Company or individuals must have at least 10 years' experience fabricating fences and gates installed on at least 100 previous projects similar to this project in size, material, design, and complexity
   2. Installer: Company or individuals must have at least 5 years' experience installing fences and gates for at least 30 previous projects similar to this project in size, material, design, and complexity.
   3. Welders: Welding personnel and supervisors must comply with the "*Qualification*" requirements of AWS quality standard publications. Only certified welders current in their certification may perform or supervise any welding work.
   4. Supervisors: Individuals must have at least 7 years' experience installing fences and gates for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading fence and gate installers.

B. Submittals: Submit product data, shop drawings, written descriptions of specified qualifications, and delegated design submittals.

PART 2 - PRODUCTS

2.01 FENCES AND GATES

A. Posts and Rails: Indicated on the Drawings.

B. Infill: Indicated on the Drawings.

2.02 MATERIALS

A. Steel:

1. Steel Plate: ASTM A 36 (mild steel).
2. Hot-Rolled Steel Rods, Bars, and Shapes: ASTM A 36 (mild steel), merchant quality.
3. Steel Structural Tubing: ASTM A 500, Grade A, black, round or shaped hot-formed tubing as indicated, outside diameter or dimensions as indicated, and calculated wall thickness as required by engineering calculations for type of use indicated. Provide seamless tubing.
4. Mechanical Tubing: ASTM A 513, black, Type 5 M.D. (mandrel drawn or Drawn over a Mandrel).

2.03 ACCESSORIES

A. Fastenings: Provide backings, inserts, loose connection hardware, fasteners, anchors, attachments, connectors, and other items supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

B. Flanges and Anchors: Unless otherwise indicated, provide cast or formed metal of the same type, material, and finish as the supported metal fabrications.

C. Grout:
1. Description: Pre-packaged, non-shrink, non-metallic, non-corrosive, non-staining, non-gaseous grout conforming to ASTM C 1107, Grade A (drypack) and Grades B and C (flowable grout) of a consistency suitable for application within a 30-minute working time.
2. Type: Grout specifically recommended by the manufacturer for interior and exterior applications.
3. Minimum 28-day Compressive Strength: At least 7,500 pounds per square inch.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

2.04 FINISHES

A. Hot-Dip Galvanizing: Specified in Section 05 05 12.

B. Shop Priming: Specified in Section 05 05 13.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
2. Verify that in-place construction conforms to the manufacturer’s requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed items
3. Set fences and gates true to line, to required levels and lines, plumb, square, and cut and fitted without warp or rack; sloped or level as required; with flush well-fitted joints; and in alignment with adjacent construction.
4. Shim as required with concealed shims.
5. Dry-pack fences and gates supported on concrete and masonry to provide firm, level bearing surfaces.

6. Provide temporary bracing or anchors for items indicated as built into concrete, masonry, or similar construction.
7. Fit exposed connections accurately to form flush hairline joints.
8. Securely attach fences and gates in place to supporting construction.

B. Special Techniques:
1. Adjust fences and gates before anchoring to ensure matching alignment at abutting joints.
2. Space posts at spacing indicated or, if not indicated, as required by design loads.
3. Plumb posts in each direction.
4. Secure posts and rail ends by welding directly to steel supporting members.

C. Installation Tolerances: Install fences and gates to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

D. Correction and Repair:
1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged, and defective work.

E. Protection:
1. Protect installed fences and gates in place from deterioration and damage until Substantial Completion.
2. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 32 84 00
LANDSCAPE IRRIGATION

PART 1: GENERAL

1.1 REQUIREMENTS

A. Work included in this section: The work shall include all materials, labor, services, transportation, equipment, trenching, laying of pipes and control wires, installation of valves, sprinkler heads, etc., backfill, testing, adjustments, and record drawings so that the finished system is complete in every respect and shall be ready for operation satisfactory to the City.

B. The requirements of the General Conditions, Supplementary General Conditions, and Division 1 apply to this section.

C. Related work not included in this section:
Grading
Landscape planting
Water service to supply points
Electrical (115 volts only for Controller)
Appenix, Protection of Trees

1.2 SHOP DRAWINGS SUBMITTALS

A. Section 01000 – General Requirements and Submittal List

1. Product Data: Indicate materials, construction, configuration, dimensions, and finishes.
2. Assurance/Control Submittals:
Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

B. Equipment or materials installed or furnished without prior approval of the City Engineer may be rejected and the Contractor may be required to remove such materials from the site at their own expense.

1.3 INTENT OF SPECIFICATIONS

A. It is the intention of these specifications to install an irrigation system free from defects in materials and workmanship.

B. In the event of any discrepancies between the plans and the Specifications, the final decision to be followed shall be made by the City Engineer.

1.4 SCOPE OF WORK

A. The work included in these specifications shall consist of furnishing all labor, tools, materials, appliances, tests, permits, taxes, etc., necessary for the installation of a landscape irrigation system, and the removal of all debris legally from the site.

B. The system shall irrigate all areas and shall be left ready for operation to the satisfaction of the City Engineer.

C. Workmanship shall be first class, competent, and to the satisfaction of the City Engineer.

1.5 GENERAL REQUIREMENTS

A. All local, municipal and state laws, rules and regulations governing any portion of this work shall be made a part of these specifications and their provisions carried out. However, when

specifications or drawings describe materials, workmanship or construction of better quality, or larger size, it shall take precedence over the rules and regulations.

B. Before submitting a bid, each bidder shall carefully examine the irrigation drawings and specifications. Contractors shall visit the site and note all existing conditions and limitations applying to the work and include in bid, a sum sufficient to cover the cost of all items.

C. If the Contractor wishes to substitute a product that is believed to be equal and meets all the mechanical, material, and operational requirements of the products as specified, contractor shall submit a letter stating, (1) the qualifications of the substituted product, (2) reasons for requesting the substitution, (3) the credit the Contractor will offer to the City if such substitution be formally accepted as an equal.

D. The Contractor shall be responsible to cover all pipe openings, valves, etc., before and after being set in place to prevent obstructions in the pipe and valves.

E. The Contractor shall provide all temporary storerooms and shops at the site for safe and proper storage of his materials, tools, etc. These rooms shall be constructed only in locations approved by the City and shall in no way interfere with the work of any other contractor. When these rooms interfere with any installation, it shall be removed and/or relocated by the Contractor at contractor's expense after having been notified by the City Engineer that such removal is necessary.

F. Any existing buildings, equipment, piping, oil lines, pipe coverings, sewers, sidewalks, landscaping, etc., damaged during the course of the work shall be replaced or repaired in a manner satisfactory to the City Engineer and at the Contractor's own expense, and before final payment will be made.

G. The Contractor shall be responsible for damages to the grounds, walks, roads, building, piping systems, electrical systems and their equipment and contents caused by leaks being installed or having been installed. Contractor shall repair, at own expense, all damage so caused. All repair work shall be done in a manner satisfactory to the City Engineer.

1.6 GUARANTEE

A. The entire irrigation system, done under this Contract, shall be guaranteed against all defects and faults or material and workmanship, and sustain in working order for one (1) year from date of completion without expense to the City Engineer.

B. Materials used shall carry a minimum one (1) year manufacturer's guarantee over and above Contractor's guarantee.

C. If, during guarantee period, settlement occurs and adjustments in pipes, valves and sprinkler heads, planting areas or paving are necessary to bring the system to the proper level of the permanent grades, the Irrigation Contractor shall make all adjustments without extra cost to the City Engineer.

D. After the system has been completed, the Contractor shall instruct the City in the operation and maintenance of the system. Contractor shall coordinate all training between the product manufacturer representatives and the City maintenance personnel.

E. In the event the Contractor does not respond to the City's request for repair work under this guarantee within a period of 48 hours, the City may make such repairs as he may deem necessary at the full expense of the Contractor.

PART 2: MATERIALS

All materials shall be new and of size and type as called out on the drawings. All materials of like-kind shall be of one manufacturer. Materials or equipment installed or furnished that do not meet the Landscape Architect's, City's or governing agencies standards will be rejected and shall be removed from the site at no expense to the City

2.1 LIST OF MATERIALS FOR APPROVAL

A. Within 20 days after award of contract, the Contractor shall submit to the City Engineer for approval, four (4) copies of a complete materials list, together with manufacturers' name and numbers covering all material to be furnished under this contract. Contractor shall also furnish 4 copies of descriptive literature with catalog cuts marked with highlighter pen on all items to be used on this project. Digital submittals are preferred, and equipment shall still be marked with highlighter to indicate the specific equipment being ordered. No work shall be commenced before receipt of approved material list and descriptive material. List shall cover items listed below and all items indicated on drawings:

Red brass pipe and fittings
Cast Iron Pipe and ductile iron fittings
Pipe compound
Plastic pipe & fittings
Plastic pipe primer & solvent
Threaded plastic pipe
Teflon tape
Control wire & connectors
Valve operating wrenches
Pressure Regulator
Master Valve
Flow Sensor
Shut-off / isolation valves
Valve boxes
Controllers & Controller Accessories
Remote control valves
Quick coupling valves & couplers
Sprinkler heads
Rotors
Nozzles / Bubblers
Dripline and Dripline Fittings

2.2 SHUT-OFF VALVES

Except when a part of the backflow preventer, ½" through 2" shall be 200 lb. WOG bronze gate valves, non-rising stem, hand wheel, Teflon impregnated packing gland, solid wedge disc.

2.3 VALVE BOXES FOR MAIN SHUT-OFF VALVES

Valve boxes for main shut-off valves shall be of size and type as called out on the drawings.

2.4 MAINLINE

A. All irrigation mainline that is 4" or larger shall use ductile iron fitting, Megalug or equal with CL 150, D18 C900 PVC per drawings and details.

B. Pressure main line piping for sizes 2" – 3" shall be PVC Class 315 with sovent primer and welded joints.

2.5 PIPE AND FITTINGS – RED BRASS

Red brass pipe shall be Federal Specification Number WWP-351, medium weight, IPS, with threads to conform to ASA Specification B2.

2.6 PIPE COMPOUND

Pipe compound shall be pure approved type for metal to metal joints.

2.7 DI-ELECTRIC ISOLATION

Di-electric isolation shall be provided between all connections joining ferrous and non-ferrous metals, or old (existing) ferrous and new ferrous metals. Submit, for approval, type intended for use.

2.8 SOLVENT WELDED PLASTIC PIPE

A. All PVC pipe shall be permanently and continuously marked with manufacturer's name, pipe size (IPS) Class or Schedule, SDR number (Class-pipe only), ASTM (D-2241-69 for Class pipe and D-1785-68 for Schedule pipe), manufacturer's lot number and NSF approval. Pipe with dents, wrinkles, die or heat marks is not acceptable. Pipe shall be delivered to the site in 20-foot lengths.

B. Schedule 40 PVC plastic pipe shall be used for pipe sizes up to and including 2 inch diameter on both the discharge and supply side of control valves. Class 315 PVC plastic pipe shall be used for pipe sizes from 2.5-inch up to and including 3-inch diameter.

2.10 RESTRAINED PLASTIC PIPE

Class 150, DR 18, C900 PVC pipe shall be used for pipe sizes of 4-inch up to and including 10-inch diameter.

2.11 THREADED PVC NIPPLES

Threaded PVC nipples are to be of Schedule 80, Type 1, 4-inch minimum length, except where detailed otherwise on drawings.

2.12 PVC LATERALS (NON-PRESSURE PIPING)

Laterals shall be 1120/1220 normal impact, schedule 40, solvent-weld type PVC pipe.

2.13 PIPE COMPOUND FOR PVC

Threaded connections, including PVC to steel make-up, shall be best grade Teflon tape.

2.14 PRIMER

Primer for PVC solvent weld connections shall be as recommended by the manufacturer of the PVC pipe, to be chemically compatible with the pipe, fittings and solvent.

2.15 SOLVENT

Solvent for PVC solvent weld connections shall be as recommended by the manufacturer of the PVC pipe, to be chemically compatible with the pipe, fittings and primer.

2.16 REMOTE CONTROL VALVES

All remote control valves shall be electrically operated, normally closed, slow closing, 24 VAC 50/60 Hz solenoid actuated globe pattern design, and be installed per the details. The valve body shall be constructed of heavy-duty glass-filled UV-resistant nylon and have stainless steel studs and flange nuts; diaphragm shall be of nylon reinforced nitrile rubber.

2.17 CONTROL WIRE

Control wires to electrically operated solenoid valves shall be direct burial type UF#14 AWG copper, 3/64 inch thick PVC coating. UL approved for Class 2 wiring for 24 volts, 60 cycle AC use UL recognized waterproof connectors to connect control wires to solenoids.

2.18 CONTROL WIRE CONNECTIONS

Control wires to electrically operated solenoid valves shall be direct burial type UF#14 AWG copper, 3/64 inch thick PVC coating. UL approved for Class 2 wiring for 24 volts, 60 cycle AC use UL recognized waterproof connectors to connect control wires to solenoids.

2.19 QUICK COUPLING VALVES AND ASSEMBLIES

Quick couplers shall be 1 inch i.p.s., two piece, brass or bronze construction equipped with a cover, unless otherwise specified on plans. The Contractor shall provide one quick coupler key with hose swivel for each five quick couplers installed. Contractor shall supply a minimum of one quick coupler key with hose swivel, and shall be installed per details.

2.20 VALVE BOXES

Valve boxes shall be concrete with a cast iron locking lid. The cover shall be permanently embossed, "GV" for gate valve, "RCV" for remote control valves, "QC" for quick coupler valves, MV for Master Valves, or FM for Flow Meter. Paint is not acceptable. Contractor shall supply one (1) valve box cover key for each five (5) valve boxes installed. Provide a minimum of two (2) cover keys. Boxes are to be installed per details.

2.21 EMISSION DEVICES: SPRINKLER HEADS, BUBBLERS, DRIPLINE

Irrigation Emitter Devices (Sprinkler heads, bubblers, dripline, etc.) shall conform to make, size, type and performances as called out on the drawings.

2.22 PRESSURE REGULATOR

The system shall be protected with a Pressure Regulator, installed on the inlet side of the backflow preventer. The Pressure Regulator shall conform to make, size, type and performance as called out on the drawings.

2.23 MASTER VALVE

The system shall be protected with the installation and connection of Master Valve, and shall conform to make, size, type and performances as called out on the drawings.

2.24 FLOW SENSOR

The irrigation system shall be protected with the installation and connection of a flow sensor. The make, size, type and performances shall be as called out in the drawings and shall conform to the flow demands of the irrigation system as designed.

2.25 CONTROLLER(S) AND ACCESSORIES

The Irrigation Controller(s) and accessories (including weather station or rain sensors) shall conform to make, size, type and performances as called out on the drawings.

2.26 AIR RELEASE VALVE

1. Install minimum of one air release valve per dripline station.
2. Valve shall be installed per mfg. recommendations.
3. Valve per plan, or approved equal.

2.27 FLUSH POINT

1. Install one flush point at the lowest point in each dripline station. Install in a valve box.
2. Flush point shall be installed per mfg. recommendations.
3. Flush point as indicated in plan, or approved equal.

PART 3: EXECUTION

3.1 NEW PIPELINE INSTALLATION – GENERAL

A. When pipelines run parallel they shall be separated horizontally by a minimum distance of 12". When pipelines cross each other they shall be separated vertically by a minimum distance of 3".

B. No irrigation trenching shall pass closer than eight feet of the base of any tree. No tree root larger than 2" diameter shall be cut without approval of the City Engineer.

3.2 COVER OVER MAINLINES:

A. Maintain 30 inches of cover over mainlines 3” and smaller in diameter. All trenching shall be per details.

3.3 COVER OVER LATERAL LINES:

A. Maintain 24 inches of cover over all lateral lines.

B. Pipe bedding and backfill: bedding shall surround the pipe to two feet above the top of the pipe. Bedding shall be placed in 6 inch lifts. All bedding shall be densified by water jetting. Water jetting shall be sufficient to thoroughly wet bedding material around the pipe. There shall be no rocks over 1/2" in greatest dimension and no organic matter placed in the bedding material. Backfill shall be the material placed above the bedding. Backfill shall be placed in one-foot lifts and densified by water jetting. Jetting shall be continued until backfill collapses and water is forced to the surface. Pipe trenches thoroughly densified by water settling shall have a minimum relative compaction of 85%. There shall be no rocks over 2" in greatest dimension or organic matter in the backfill. Trench areas which exhibit insufficient densification shall be subject to compaction tests as requested by the Contract Administration Inspector or the City Engineer. All such compaction tests shall be at the expense of the Contractor. Additional tests may be required until the 85% minimum compaction is achieved. Finished trenches shall match finish grades flush with adjacent finish grades. The Contractor shall be responsible for maintaining the trenches flush and smooth until final acceptance of the project.

C. The maximum trench width shall be two and a half diameters of the pipe.

3.4 PIPES CROSSING UNDER PAVING:

A. Where irrigation piping crosses a vehicular roadway or other paving having a width of less than 25 feet, a PVC Schedule 40 PVC sleeve which is a minimum of two pipe sizes larger than the piping to pass through it, shall be jacked under the paving at a depth of 36” minimum. Where remote control wiring crosses under paving having a width of less than 25 feet, a 3-inch PVC Schedule 40 PVC sleeve shall be jacked under the paving at a depth of 36” minimum. All sleeves shall extend 3’ (3 feet) minimum beyond the edges of paving.

B. Where irrigation piping crosses a vehicular roadway or other paving having a width greater than 25 feet, a trench shall be excavated across the roadway or paving to accommodate a Class 315 PVC sleeve a minimum of two pipe sizes larger than the piping to pass through it, at a depth of 36” below the bottom of the paving, as measured from the top of the sleeve. Where remote control wiring crosses under paving having a width greater than 25 feet, a 3-inch Schedule 40 PVC sleeve shall be installed at a depth of 36” below the bottom of the paving, as measured from the top of the sleeve. The backfill of the trench shall be a 2 sack cement slurry. The slurry shall extend from the bottom of the trench to within one inch of the bottom of the existing paving. The trench in the existing paving shall be repaired with a like paving material and join the existing paving both horizontally and vertically.

3.5 REMOTE CONTROL WIRING UNDER PAVING

Remote control wire under paving shall be placed in a 3” class 315 PVC sleeve buried at a depth

of 36. Roadways or paths less than 25 feet in width shall have the sleeve jacked under the roadway.

3.6 FITTINGS ON MAINLINES:

All outlets from a mainline shall be accomplished with line sized tees with an outlet of the specified size. No saddle tees shall be permitted.

3.7 INSTALLATION OF VALVE BOXES

Boxes shall be set flush with finish grades, including sloped areas, and all soil within 12 inches of the perimeter of the box shall be compacted by water settlement as indicated in the trench repair section of this specification. Boxes are to be positioned per details.

3.8 LAYOUT OF PIPING

Pipe layout as shown on irrigation plan is schematic, except where pipe location has been dimensioned. Contractor may route piping in the most expedient manner consistent with the requirements set forth herein, including avoidance of tree roots. This project is likely to contain significant tree roots. Care should be taken not to disturb or damage roots of existing trees. Contractor shall adhere to As-Built requirements as shown below.

3.9 PLACEMENT OF IRRIGATION HEADS

Note: Irrigation plans for spray, rotary spray or rotors are designed, as a minimum standard, for head-to-head coverage. Stream bubblers and rotary nozzles may be designed for pattern to pattern coverage. Head locations shall be scaled from center of head symbol directly from the irrigation plan. Accuracy of placement shall be within plus or minus two feet for all rotary heads having a throw of 25 feet or greater; within plus or minus 8 inches for all head types with a throw of under 25 feet. Where heads are located adjacent to paving, and the paving drains back into a planter, the heads shall be placed within three inches of such paving. Water waste is strictly prohibited by California Law (AB 1881). If spacing demands additional or fewer materials, notify City Engineer before commencing work.

3.10 INSTALLATION OF IRRIGATION HEAD / IRRIGATION EMITTER

A. Install all sprinkler heads with spacing and coverage indicated on the drawings. Coverage should be sufficient to irrigate areas intended to receive supplemental irrigation to support plant growth and health.

B. To insure proper coverage spray heads and rotary heads shall be installed on separate control valves.

C. Install heads and or change heads, nozzles, or orifices as may be required to provide or adjust coverage.

D. Branch lines, swing joints or sprinkler risers shall not be sized smaller than the sprinkler heads inlet they serve.

E. Pop-up Head Installation:
   1. Pop-up head shall be installed flush with finished grade and 9 inches from edge of walks, and 12 inches from buildings to parking areas, or whenever sprays are located adjacent to impervious surfaces.
   2. Install pop-up heads on factory assembled triple-swing joints or triple-swing joints assembled with PVC Schedule 80 nipples and Marlex 90 degree elbows.

F. Dripline shall be installed per manufacturer recommendations.

3.11 TRENCHING

A. Check all grades so that work may proceed, keeping materials at specified depth.

B. Do all excavation for installation of work included in contract. Mechanical trenching machines shall be of approved type to cut trenches with straight sides. Trenches shall be only wide enough to lay the pipe and control wires. Perform minor adjustments to avoid existing utilities as directed without additional cost. “Pulling” of pipe and/or control wires will not be permitted.

C. Existing Trees

1. Where it is necessary to excavate adjacent to existing trees, the Contractor shall use all possible care to avoid injury to trees and tree roots.
   a. Excavation in areas where two (2) inch and larger roots occur shall be done by hand.
   b. All roots two (2) inches and larger in diameter, except directly in the path of pipe or conduit, shall be tunneled under and shall be heavily wrapped with burlap to prevent scarring or excessive drying.
   c. Where a ditching machine is run close to trees having roots smaller than two (2) inches in diameter, the wall of the trench adjacent to the tree shall be hand trimmed, making clean cuts through.
   d. Roots one (1) inch and larger in diameter shall be painted with two coats of Tree Seal, or equal.
   e. Trenches adjacent to tree should be closed within twenty-four (24) hours; and where this is not possible, the side of the trench adjacent to the tree shall be kept shaded with burlap or canvas.

D. Contractor is responsible for repairs of all damaged plumbing or electrical during construction digging or trenching.

3.12 ASSEMBLY OF PIPES

A. Metal Pipe

Do not bend or spring pipe, make all offsets or changes in direction with fittings. Cut threads with sharp, clean dies to conform to ASA Specification B2. Assemble pipes free from dirt and scale, ream and deburr. Make up joints by applying oil base compound to male threads only. Remove excessive compound after make-up.

B. PVC Plastic Pipe

1. Handle with care when loading, unloading, transporting and storing material to avoid damage. Store pipe and fittings under cover before using. Transport in vehicle with bed of sufficient length to carry pipe flat and fully supported. Store pipe in same manner. Notify City Representative when each pipe and fittings shipment reaches the site for his or her observation. Rejected materials shall be immediately removed from the site and replaced with new shipment of different batch number.

2. Solvent welding - Use non-synthetic brush to spread primer and solvent using no larger than pint-sized cans. Clean and refill cans each day. Cut pipe square, ream, chamfer outside end at 10 degrees. Clean and dry pipe and fitting socket. Scrub full length of inside socket and pipe end with primer, prime inside socket again. Immediately apply solvent to pipe end and to socket, then again to pipe end. Bottom the pipe in socket and turn 90 degrees. Hold joint together 30 seconds. Wipe off excess solvent. Allow to set 30 minutes before moving. Centerload pipe with small amount of backfill to prevent arching and whipping under pressure, leaving all joints exposed.

3. Threaded connections - Use Teflon tape on plastic threaded joints. Screw hand tight and another half turn by wrench. On PVC to metal pipe, work the metal connection first.

3.13 LAYING OF LINES

A. All lines set in place under paving shall extend 18" minimum beyond edge of paving.

B. Snake PVC plastic pipes side to side in trench bottom keeping 4" horizontal clearance between two pipes in same trench. Do not lay pipe in trench containing water or at less than 32 degrees F. Centerload immediately, leaving joints exposed.

3.14 LAYING OF CONTROL WIRES

Lay wires in common trench with main lines wherever possible. Splicing is allowed with 24" expansion loop only in electrical junction box with bolt down lid. Follow all two-wire controller manufacturer recommendations. All splices shall be waterproof. No trench to be covered before City has inspected wire runs. Any field splices shall be located in separate valve box marked on "As-builts". Field splice boxes shall be of a sufficient size to provide for future maintenance.

3.15 AUTOMATIC CONTROL SYSTEM INSTALLATION

The foundation of the automatic controller shall be per details.

3.16 LOW VOLTAGE WIRE CONNECTIONS

Connectors shall be DBY or DBR as manufactured by 3M Corp., or as recommended by the controller manufacturer. Install all wire connections per controller manufacturer and valve manufacturer recommendations.

3.17 CONTROL WIRE

Mainline control wires shall be taped together at five (5) foot intervals with black electrical tape, then laid parallel to pressure line with 18 inches minimum cover to finish grade.

Control wiring located under paved areas shall be encased in Schedule 40 PVC pipe and shall extend a minimum of 12 inches beyond pavement.

Wires shall be color coded, white for common ground wire, red or black for valve control wires.

Wire splicing shall only be performed in controller cabinet and at remote control valve boxes. Splices shall be made with a mechanical connector equal to "Scotch-lok" and encased in epoxy resin to provide a permanent watertight connection.

Stubbed out control wires shall terminate in yard boxes, and marked “STUB OUT”.

Wire passing under future or existing paving or structures shall be encased in Schedule 40 PVC pipe extending at least 12 inch beyond edges of the paving or structure.

3.18 INSTALLATION OF IRRIGATION CONTROL WIRING

A. Do not tape wire bundles to the mainline piping.

B. The Contractor shall run two extra black control wires from the automatic controller to the farthest valve on the system, or to the farthest valve at each end of the controller area, if the farthest area extends in two directions from the controller.

C. Each exterior controller enclosure shall have a ground rod.

3.19 IRRIGATION SYSTEM FLUSHING AND TESTING

A. The irrigation system shall be flushed in the presence of the Inspector. Flushing shall start with the valve closest to the point of connection and proceed with each consecutive valve toward the valve farthest from the point of connection. Each lateral system shall have each riser capped during the flushing commencing with the riser closest to the valve and proceeding to the farthest riser. After the entire irrigation system has been flushed the system shall be pressure tested in accordance with section 308-5.6 of the SSPWC.

B. The irrigation system mainlines shall be pressure tested following the flushing of the complete system. The mainlines shall be tested for 24 hours at 125 p.s.i. with all control valves in place and closed. During the test, the Contractor shall provide pressure gauges downstream from

the backflow device and upstream from the farthest remote control valve in the system.

3.20 PRESSURE TESTS

Perform all hydrostatic tests in presence of the City Representative after flushing lines. Maintain 125 PSI without any pressure drop on main lines for 2 hours with all air expelled from line and with all valves in place. All leaks shall be corrected in mechanical manner without use of epoxy fillers or other filler compounds. Contractor shall provide all equipment for tests including force pump and pressure gauges.

3.21 BACKFILL

After the work has been installed, flushed, tested, and proven tight in the presence of the City Engineer, backfill with fine materials. Allow no rocks or other objects larger than one inch diameter to fall in the first 6" of cover. Backfill in 4" layers and tamp properly to avoid any voids. Flooding of trenches shall be done only with the approval of the City Engineer. However, all sandy soils, as determined by the City Engineer, shall be flooded during the backfill-compaction operation. Compact backfill over lateral lines to equal density of adjoining undisturbed soils, and compact to 90 percent over main lines. All trenches shall be left flush to the adjoining undisturbed grades. All backfill under surfaces to be paved for vehicular use shall be compacted to 95%. Any work covered prior to observations by the City Engineer shall be uncovered at the expense of the Contractor to allow for such observations if demanded by the City Engineer. Any surplus soil shall be distributed on site or properly disposed of off-site as directed by the City Engineer.

3.22 ADJUSTING SYSTEM

Adjust entire system prior to coverage test, and again at conclusion of maintenance period.

A. Set all shut-off valves in the system to full open position.

B. Adjust all stationary heads to uniform coverage on each system using adjusting screws in each sprinkler head and by control of the throttle device on each remote control valve.

C. Adjust arcs of all heads to prevent overspray on areas to be kept dry. Replace nozzles in heads to different arcs, i.e., 180 degrees nozzle to 120 degree nozzle, etc. to provide proper and more adequate coverage. These changes or adjustments shall be made without additional cost.

E. Install check valves to prevent drainage from any sprinkler head.

3.23 COVERAGE TEST

When installation of the sprinkler system is completed, perform a coverage test in the presence of the City Engineer and Landscape Architect to determine that coverage for planting areas is complete and adequate. Where inadequate coverage occurs, or where site conditions require, the Contractor shall provide necessary material and perform work to correct all inadequacies without additional cost. These tests and corrections shall be accomplished before any ground cover or shrubs are planted.

3.24 RECORD DRAWINGS (AS-BUILTS) AND CONTROLLER CHARTS

A. As built plans shall be maintained daily throughout the construction period and turned over to the City Engineer at the Operational Final Inspection, as indicated in the General section of this Notice to Contractors in the Record Drawings Submittal section.

B. The Contractor shall provide two copies of a controller chart showing the irrigation system installed. The chart shall be done on a half size photographic reproduction of the irrigation plan and shall reflect the as-built data. Each station shall be shown in a different color and control wire locations shall be indicated. The complete plan shall be laminated on each side with a 20 mil acrylic plastic sheet. A 3/4" brass grommet shall be placed in each top corner. The Contractor shall obtain approval of the controller chart from the Project Manager, before

proceeding with the plastic lamination.

3.25 SITE CLEANING

Clean and dispose, legally, all debris from site. Remove all storage rooms and all other constructions and make site ready for planting work to follow. Debris not cleared for landscape work may be backcharged.

3.26 WARRANTY FOR IRRIGATION SYSTEM WORK

The entire sprinkler irrigation system shall be warranted to be free from defects in materials and workmanship, and installed in accordance with this Notice to Contractors and the SSPWC. The Contractor shall be required to repair or replace any defects in material or workmanship which may develop within one (1) calendar year from the date of acceptance, ordinary wear and tear and unusual abuse or neglect excepted. Further, the Contractor shall be required to make any necessary repairs within 24 hours of notification at no cost to the City. If the Contractor or his agent fail to make such repairs within the stipulated time, the Owner shall make such repairs or have repairs made by a third party and bill the Contractor for all expenses that accrue from making such repairs.

3.27 GUARANTEE AGAINST SETTLEMENT

If, within one (1) calendar year from the date of acceptance, settlement occurs along mainlines, lateral lines, at valve boxes, or other irrigation related appurtenances, and adjustments in pipes valves and sprinkler heads are required to bring the system, finish grade, or paving to the level of the permanent grades, the Contractor shall make all adjustments without additional cost to the City, including complete restoration of any planting, paving, or other improvements damaged as a result of settlement.

3.28 FIRE LINE/IRRIGATION MAINLINE INSTALLATION, (RESTRAINED PIPE JOINTS), C900 PVC

A. Fire line/Mainline piping 4" to 10" diameter, if indicated on the plan, shall be Class 150, DR 18, C-900 PVC with Pacific Western 'Twin Seal' joints, or equal, provide 36" of cover over the top of pipe. All fittings shall be ductile iron, AWWA C153, compact configuration, with mechanical joints. All ductile iron compact configuration fittings shall be of U.S. manufacture All fitting to pipe joints shall be restrained with an EBAA 2000 series 'Megalug' retainer gland. Retainer gland bolts shall be tightened as specified in the manufacturer's instructions. All bolts shall be tightened using a torque wrench only. Tighten each 'Megalug' wedge nut in an alternate sequence with a torque wrench. The maximum torque on the 'Megalug' wedge nuts shall be 30 ft./lbs. The Contractor shall verify the torque of the bolts with a torque wrench to the BCA Inspector and shall have a torque wrench available on site until job acceptance.

C. Two joints, each side of the fittings or valves, shall be installed with EBAA 1600 series ductile iron bell retainers. The maximum torque of the side bolts of the bell retainer shall be 90 ft./lbs. There shall be a minimum of 25 feet of pipe between the fitting and the bell retainer farthest from the fitting.

C. The 'Megalug' restrainer gland and the bell restrainer work as a unit to fully restrain the pipe. There is no need for thrust blocks on the system.

3.29 BACKFLOW DEVICE INSTALLATION AND CERTIFICATION

The Contractor shall obtain certification of the backflow device and submit two copies of the certification to the City Engineer at the Operational Final. The backflow certification shall be made on the County Health Department standard form and filed with the County Health Department, Cross Connection Section, Room 150, 2525 Corporate Place, Monterey Park, CA, 91754. The contractor shall paint all backflow prevention devices above ground with two coats of forest green enamel. Mask all identification tags prior to painting, (308-5.3). After certification remove all test cocks, replace with threaded brass plugs, and deliver test cocks to the City Engineer.

3.30 RECLAIMED WATER IRRIGATION PIPING AND PROCEDURES

Not applicable to this project.

3.31 DOMESTIC PIPING IN CONJUNCTION WITH RECLAIMED WATER

Not applicable to this project.

3.32 RECLAIMED WATER PIPELINE INSTALLATION – GENERAL

Not applicable to this project.

3.33 OBSERVATIONS

Observations will be performed by representatives of the City (including the Landscape Architect) at the following times and at random visits when the observer may be on the site. When observations have been conducted, show evidence of when and by whom these observations were made.

A. Prework conference. To be conducted prior to any irrigation work under this contract.

B. Sprinkler head staking.

C. Observation of flushing.

D. Observation of pressure tests.

E. Observation of coverage performance.

F. Final observations of the completed installation.

G. Contractor shall not cover any work prior to observation by the City Representative.

H. All observances shall be requested at least 48 hours in advance. All work shall meet the City Engineer's approval, or be rectified at no additional cost to the City. Contractor shall be financially responsible for all members of the team of observers for unprepared observation appointments.

3.34 ITEMS FURNISHED

At time of final acceptance, Contractor shall deliver to the City:

A. One control valve key, 30" long, for every six remote control valves installed.

B. One coupler key with hose bibb attached for every six quick coupler valves installed.

C. One loose key for every six quick coupler valves installed.

D. Two special wrenches suitable for operating each type of shut-off valve installed.

E. Two tools for disassembly and assembly, or adjustment, of each type equipment used in this installation requiring such special tools.

F. Two valve box keys for every 12 lock lid valve boxes used in this installation.

G. Operating instructions and parts lists, as printed by each manufacturer of each type of equipment installed. Refer to "Materials" section of the specifications and legend on drawings.

H. List of equipment with names and addresses of local manufacturer representatives.

I. "As-built" drawings and controller charts.

J. Provide 10 extra sprinkler heads & emitter devices / nozzles per each indicated in the irrigation schedule on the drawings.

3.35 FINAL ACCEPTANCE

Prior to walking irrigation system with the City Representative, the Contractor shall pre-walk irrigation system with their own crew to ensure compliance with plans and specifications.

The Contractor shall operate each system in its entirety for the City's Representative at the time of final observation. Any items deemed not acceptable by the City Representative shall be reworked to the complete satisfaction of the Representative. All equipment shall be checked and adjusted in height, location, performance and appearance at time of final acceptance. All damaged portions shall be replaced with new materials of like-kind.

The Contractor shall show evidence to the City Representative that the City has received all accessories, charts, record drawings, and equipment as required before final site observation can occur.

END OF SECTION

SECTION 32 90 00
PLANTING

PART 1 – GENERAL

1.1 SCOPE

A. PLANTING WORK includes, but not limited to, the following:

1. Preparing existing topsoil/site soil
2. Soil preparation and fine grading
3. Maintenance of planting areas for 90 days

B. RELATED WORK specified elsewhere:

1. Landscape Grading
2. Selective Demolition
3. Landscape Irrigation
4. Planting Notes on Sheets
5. Appendix, Protection of Trees

C. VERIFICATION OF DIMENSIONS AND QUANTITIES

1. All scaled dimensions are approximate. Before proceeding with any work, the contractor shall carefully check and verify all dimensions and quantities and shall immediately inform the Landscape Architect of any discrepancies between the drawings and/or the specifications and the actual conditions. No work shall be done in any area where there is such discrepancy until approval for same has been given by the Landscape Architect or the City Engineer.

D. SUBMITTALS

1. Comply with provisions of General Specifications.
2. Submit complete lists of landscape materials and equipment, including manufacturers name and address, specific trade names, catalog numbers complete with illustrations and descriptive literature and clearly mark or underline proposed items; list source of landscape mulch.
3. Submit complete list of plants including nursery source, plant botanical name, quantity, container size and photograph of plant to be supplied. The list shall include all unavailable plants and which nurseries were contacted during contractor's search.
4. Shop Drawings: Required for any landscape structure.

E. CERTIFICATIONS

1. Certified Label for all plant material marked with a * on the planting plan list of plants. Each plant supplied to the project, and indicated by the * mark must be tagged for accuracy of identification and verification of the correct variety by having a Verified Tag or label affixed. This label must display the variety with the botanical name of the correct plant printed on the same label. Any plant varieties marked on the planting plan with the above instruction that does not arrive on-site with the required label will be rejected at the contractor's expense, and cannot be installed on the project.
2. In addition to other required certification, furnish a certificate with each delivery of bulk material, including mulch, and mycorrhizal inoculant, stating its source, quantity, type of material furnished and that such item or material conforms to the requirements of this section.

F. MULCH

1. Shredded fir bark. Submit mulch sample for approval prior to use.
2. Granite Cobble – size and conditions specified on plan and details.

G. OBSERVATION

1. All observation herein specified shall be made by the City Engineer or Landscape Architect. The contractor shall request observation at least 48 hours in advance of the time observation is required. Observation will be required on the following parts of the work:

   a) During preliminary grading, soil preparation, and initial weeding.
   b) When finish grading has been completed, and prior to the planting of ground cover or seeded turf.
   c) When planting and all other indicated or specified work has been completed but prior to maintenance period.
   d) Final observation at completion of maintenance period.

2. The contractor shall be on the project site at the time of each observation.

H. AGRONOMICAL SOILS REPORT

1. Contractor to provide and review Agronomical Soils Report and provide amendments to the soil in proposed planting areas per the recommendations of the soils report. See planting notes on sheets.

I. MAINTENANCE

1. Contractor shall continuously maintain all areas included in the Contract during progress of the work, the 90-day maintenance period, and until final acceptance of the work.

2. If plantings are not acceptable at the end of the maintenance period for the entire work, due to defective maintenance, the maintenance shall be continued by the Contractor until all work meets the Specifications and can be approved.

3. Maintenance shall include continuous operations of watering, weeding, mowing, rolling, trimming, edging, cultivating, fertilizing, spraying, insect and pest control, seeding, and/or other operations necessary to assure good normal growth.

4. All planted areas shall be kept free of debris and shall be weeded at not more than 10-day intervals.

5. During the installation period and maintenance, the Contractor shall be responsible for maintaining adequate protection for all areas. Any damaged planting shall be repaired at the Contractor's expense.

6. At the termination of the maintenance period, all plant materials shall be live, healthy, undamaged, and free of infestations. All lawn areas shall be completely covered at the time of final acceptance. Inferior plantings shall be replaced and brought to a satisfactory condition before final acceptance of the work will be made.

J. GUARANTEE

1. The Contractor shall warrant all trees 15 gallon sized and larger for one year starting with the end of the establishment period. This warranty does not include items damaged due to the City’s neglect and/or to acts of God.

2. The Contractor, within 15 days of written notification by the City Engineer, shall remove and replace all guaranteed plant material that for any reason fails to meet the requirements of the guarantee. Replacement material and plantings shall be to the same specifications as required for the original planting and all replacements shall be guaranteed as specified for the original guaranteed materials.

PART 2 – PRODUCTS

2.1 MATERIALS

A. AMMONIUM PHOSPHATE

1. Shall be a standard agricultural grade of ammonium phosphate having guaranteed analysis of 16-20-0.

B. ESTABLISH - GENERAL PURPOSE FERTILIZER

1. Shall have a minimum analysis of 1-1.3-5,(N-P-K), derived from rock phosphate, peat moss, chicken manure, sand, sulfate of potash, gypsum, and EDDHA chelate. As manufactured by Earth Works Soil Amendment, Inc., (310) 322-9702, or an approved equal.

C. FEATHER MEAL

1. Shall have a minimum analysis of 12-0-0,(N-P-K), derived from feathermeal. As manufactured by Earth Works Inc., (310) 322-9702, or an approved equal.

D. FERTILIZER TABLETS

1. Shall be fertilizer tablets shall be Agriform 21 gram, 20-10-5, available from Western Farm Service, (805) 487-4961 or an approved equal.

E. GYPSUM

1. Shall be agricultural grade.

F. MYCORRHIZAL INOCULUM

1. Tea bags or drench, per manufacturer's specifications per plant size. Tri-C Products 1-800-927-3311 or equal

G. HYDROSEED MULCH FIBER

1. Shall consist of virgin wood fiber of Aspen or Alder. It shall not contain any waste paper, newsprint or straw material. The mulch shall contain a green dye to facilitate application. Fiber shall be as manufactured by Conwed Co., (Green Tag), Silva-Fiber by Weyerhauser Co., or an approved equal, (212-1.2 (e)).

H. HYDROSEED STABILIZER

1. Shall consist of natural muciloid materials supplied by Ecology Controls M-binder, (805) 684-0436, no equal.

I. HYDROBLEND SOIL ACTIVATOR

1. Shall have a minimum analysis of 1.2-1.4-5, (N-P-K), derived from rock phosphate, peat moss, chicken manure, sulfate of potash, gypsum. As manufactured by Earth Works Inc., (310) 322-9702, or an approved equal.

J. MULCH

1. Shall be shredded fir bark mulch, free of all foreign matter including weed and tree seeds. Submit sample of mulch and source to Landscape Architect / City Engineer for approval prior to application. Available from American Soil in Simi Valley (805) 578-0052 or an approved equal.

K. NITROFORM UREAFORM

1. Shall be a standard commercial grade of nitroform having a guaranteed analysis of 38-0-0.

L. ORGANIC AMENDMENT

1. Shall be organic soil amendment, see soils report.

M. OVERSEED TOPDRESSING, EARTH WORKS ORGANIC TOPDRESSING

1. Shall be derived from composted wood products, peat moss, chicken manure and a wetting agent. As manufactured by Earth Works Inc., (310) 322-9702, or an approved equal.

N. GRANITE COBBLE TOPDRESSING (MULCH)

1. Shall be locally sourced granite cobble per the sizes indicated on plans and details or an approved equal.

O. POTASSIUM SULFATE

1. Shall be a standard agricultural grade of potassium sulfate having guaranteed analysis of 0-0-50.

P. PRE-EMERGENT HERBICIDE

1. Shall be Balan Granular, by Elanco, or an approved equal. All pre-emergent herbicides, when required, shall be specified and applied by a licensed Pest Control Advisor.

Q. ROUNDUP

1. Shall be a water-soluble herbicide for non-selective control of weeds containing 480 grams per liter of the active ingredient Isopropylamine salt of N-(phosphonomethyl) Glycine (Glyphosate) per U.S. gallon, as manufactured by Monsanto Chemical Company, or approved equal.

R. SOILS

1. Designated as imported soil for pit planting only as specified herein. The soil test will determine the suitability of soil before installation. Transport soil from the source to its final position unless stockpiling is specified.

2. Imported Soil for limited pit planting only:

   a) From a source outside the Project site and in compliance with this section.

   b) Architect may make such inspections and perform such tests as deemed necessary to determine the material meets all requirements.

   c) At least 30 days before scheduled installation, submit the proposed source of soil and a Sample to the Architect. Submit a written request for review, accompanied by a written report of a soils testing laboratory registered by the State of California for agricultural soil evaluation which states that the proposed source complies with these Specifications.

d) Comply with all recommendations of the soils testing laboratory and provide any soil amendments necessary to achieve proper nutrient levels to support healthy plant growth.

e) Imported topsoil shall be of a uniform composition and structure, fertile and friable sandy loam garden soil, and be free of roots, clods and stones larger than 1 inch in greatest dimension, pockets of coarse sand, noxious weeds, sticks, brush and other litter and not be infested with nematodes or other undesirable insects and plant disease organisms. Imported topsoil shall meet the following additional requirements:

(1) Gradation Limits: Sand – 50-80%, clay – 20% maximum, and silt – 30% maximum. The sand, clay and silt gradation limits shall be as defined in ASTM D 422.

(2) Agricultural Suitability and Fertility: The soil shall be fertile and friable garden soil suitable for sustaining and promoting the growth of the specified plants.

3. Light-Weight Soil for raised storm water planters:

a) Shall be a custom mix of coco chips, coco coir, rice hulls, and volcanic cinder (1/16" – 3/16")

b) Shall have a percolation rate of .5" per hour or greater.

c) Available from Cal Blend Soils, (626) 359-1083.

S. TURFGRASS SEED

1. Seed for seeding and re-seeding turf areas shall be Ballfield Mix 3A by Agronoc-Tec Seed Co., (800) 543-4109, or approved equal.

T. WATER HOLDING POLYMER

1. Shall be "Broadleaf P-4".

U. PLANTS

1. All plants are to be nursery grown under similar climactic conditions as the site. Plants shall conform to the American Standard for Nursery Stock, ANSI Z60.1-2004 as published by the American Nursery & Landscape Association, unless specified otherwise in the plans.

2. Plant Acceptance:

a) Sample trees, shrubs and groundcovers, as specified in the plans, shall be approved for use and shall be made available to the Landscape Architect for approval, prior to ordering and delivering. Name of the grower, guarantee of availability of quantities and conformance to the specifications must be furnished in writing to the Landscape Architect prior to ordering of the approved plant. Digital color photographs may be used for approval. All plant material must be tagged with botanic name and hybrid variety.

b) Upon approval of the plant material, ordering may be placed.

c) Plants shall be transported so that they are not exposed to wind, extremes of temperature, or conditions, which would cause them to dry or sunburn.

d) **Plants shall be inspected at time of arrival** to insure they are healthy and in good condition. Any plant found not in conformance with the specifications, shall be rejected. A copy of the shipping bill shall be provided to the inspector at the

time of delivery, to insure the proper quantities of plants have been delivered (see Certification requirements above).

B. DECORATIVE GRAVELS

1. Shall be a max. of ¾" crushed granite.
2. Contractor to provide sample for approval.

PART 3 – EXECUTION

3.1 METHODS

A. TOPSOIL PREPARATION – GENERAL

1. The topsoil shall be the existing class "C" on-site topsoil. Remove all stones over 1 inch in greatest dimension, to a depth of 6 inches below finish grade, (308-2.3.1).

2. Prior to planting, the top two (2) inches of all areas (including slopes) shall be free of weeds, stones, and other deleterious matter one (1) inch in diameter and larger.

B. TOPSOIL PREPARATION

1. If not otherwise specified, all turf areas shall receive the following soil preparation. Uniformly broadcast the following materials per 1,000 square feet:

a) 20 pounds of 12-12-12 quick release commercial fertilizer. These quantities are for bid purposes only. Refer to soils report for final quantities.
b) Gypsum – 15 pounds
c) Organic amendment –3 cubic yards in planting areas, sufficient amount to provide soil organic matter in the range of 4% to 7% on a dry weight basis.

2. The soil preparation materials shall be cultivated into the soil to a depth of 6 inches minimum and thoroughly watered, (308-2.3.1).

C. FINISH GRADING (for Turf Areas)

1. Finish grading of turf areas shall take place after the soil has dried out to a workable condition following the soil preparation operations. The soil shall be remodeled and smoothed to the required grades and contours, then rolled in two directions at right angles with a water ballast roller weighing 200 to 300 pounds. Any resulting irregularities in the grade after the initial rolling shall be re-raked, cut or filled, then re-rolled until the grade is free from irregularities. No heavy objects shall be taken over the areas at any time. The final finish grade shall be uniform, without abrupt changes in grade, within one-tenth of a foot of the grades shown on the plan, and approved by the City Engineer prior to seeding, (308-2.4).

D. WEED ABATEMENT ("GROW AND KILL")

1. Weed abatement shall apply to all turf, hydroseed, shrub, tree, and all areas to be planted as shown on plans. The abatement operation shall be commenced only after removals, grading, hardscape construction, installation of irrigation system, soil preparation, and fine grading of turf and planting areas have been completed.

2. NOTE: It is required that herbicides be applied by a licensed PEST CONTROL APPLICATOR.

E. CONTRACTOR RESPONSIBILITY DURING WEED ABATEMENT OPERATION AND APPLICATION PRECAUTIONS

1. The Contractor is responsible or any and all damage done to plant materials outside of the treatment area. Contractor shall replace, in kind and size, any plant material damaged or killed through the application of herbicide.

2. The following precautions shall be observed in handling and applying herbicide:

   a) Before applying, Contractor shall read and understand all instructions provided by the manufacturer.
   b) Product shall not be used when winds are gusty or in excess of 3 miles per hour, or when any other conditions exist which would result in drift.
   c) Avoid combinations of pressure and nozzle type or adjustment that result in mist.
   d) Do not apply during rain, or if rain is forecast within twelve hours. If rain occurs within twelve hour period, material must be reapplied after plant growth has dried out.
   e) Contractor shall observe extreme care not to allow spray to contact desirable plant material. Use cardboard, plywood, or other appropriate material to shield plant materials outside of the treatment area from overspray.
   f) Do not apply to bare ground.
   g) Do not add any other product to herbicide mix, including spreader-stickers or surfactants.

F. WEED ABATEMENT: GROW AND KILL METHOD

1. Contractor shall follow the “grow and kill” steps set forth below:

   Step 1. Clear the site of all dead or living vegetative growth by hand or mechanical means.
   Step 2. Thoroughly water all turf and planting areas daily to keep soil evenly moist for a period of at least two weeks.
   Step 3. At the conclusion of the growth period, treat all plants within the treatment area with Roundup at an application rate of five (5) quarts of Roundup mixed in 50 gallons of clean water per acre applied by spraying. Thoroughly moisten all plant material with herbicide.
   Step 5. Do not water or otherwise disturb treated areas for a period of two (2) weeks.
   Step 6. After two-week kill period, remove all dead plant growth. If any living plants are observed, entire plant, including roots, shall be removed by hand. Minimize physical disturbance of the soil.

G. WEED SUPPRESSION (NON-HERBICIDE WEED REMOVAL)

1. Weed suppression, shall apply to all turf and planting areas. The suppression operation shall be commenced only after removals, grading, hardscape construction, installation of irrigation system, soil preparation, and fine grading of turf and planting areas have been completed. Contractor shall thoroughly water all turf and planting areas for a period of two weeks minimum prior to commencing removal. Contractor shall clear site of all dead vegetation and living weeds by hand or mechanical means. All removed vegetation shall be properly disposed of off-site.

H. TREE AND SHRUB PLANTING

1. Plant pits for all 1 gallon, 5 gallon, 15 gallon, and all boxed size trees, shall be twice the width and equal to the depth of the container rootball. Note that this requirement differs from the SSPWC (308-4.5).

2. Unless otherwise specified, the backfill mix for all plants shall be 60% percent on site soil and 40% percent Type I organic soil amendment and 1 lb. of "Establish," general purpose fertilizer per gallon of container, or 1 lb. per each 4" of box size. “Broadleaf P-4” water holding poylmer shall also be added to the backfill mix at the rate of 1 oz. per foot of rootball diameter.

3. Each plant pit shall also receive "Agriform" slow release fertilizer tablets, 21 gram, 20-10-5, as shown in the relevant planting details, and as follows:

   1 gallon – 1 tablet
   5 gallon – 3 tablets
   15 gallon - 5 tablets
   One (1) tablet per 4” of box size

4. Space tablets evenly around the perimeter of the rootball, approximately 3 inches below finish surface. After shrub or tree has been planted, water by hand to hydrate polymer.

5. Remove all watering basins around trees planted in lawn areas at the end of the maintenance period. All trees planted in lawn areas shall have a 36 inch diameter unplanted area around each tree.

6. Contractor shall apply an 8-8-4 commercial slow release fertilizer to all planting areas at a rate of 20 pounds per 100 square feet upon completion of the ground cover planting and at thirty (30) day intervals there after until the end of the plant establishment period. Thoroughly water all planting areas following the application of the fertilizer. All fertilizer application shall be performed under inspection of the project manager.

I. METHOD “A” TURF PLANTING – REPAIR, SEEDING

1. Irrigation trenches shall be fully compacted and the grade brought flush with the adjacent undisturbed finish grade. Irrigation trench areas and areas where equipment has damaged the existing turf shall be seeded per this section.

2. Sow seed at a rate of three (3) pounds of GN1 Bermuda per 1,000 sq. ft. Mulch all seed with 1/4"(or 3/4 cubic yard per 1,000 sq. ft.) of Bio-organic Finale.

J. METHOD “B” TURF PLANTING, HYDROSEEDING

1. The lawn seed mix for turf planting shall contain the following materials at the rates specified:

   Mulch Fiber – 1,500 lbs./acre (.0345 lbs./sq.ft.)
   Stabilizer – 120 lbs./acre (.0028 lbs./sq.ft.)
   Fertilizer – Hydroblend, at 3,000 lbs./acre (.0688 lbs./sq.ft.)
   Seed by Weight – 3 lbs. GN1 Bermuda grass, (coated) per 1,000 sq. ft.

2. The Contractor shall supply a delivery receipt to the BCA Inspector certifying conformance with the specified hydroseed mix and indicating that the slurry has not been mixed for longer than two hours. Slurry which has been mixed longer than two hours shall be recharged with 50 percent more of the specified seed mix, at the Contractor's expense, (308-4.8.2(b)). Delivery tickets shall be forwarded to the City Engineer.

K. MULCHING

1. All planting areas except lawn shall receive a minimum three (3) inch deep layer of mulch per the Planting Details and this specification’s materials list. Mulch shall be

spread evenly throughout planting beds and tree watering basins. Do not bury ground cover. Cobble mulch to be installed per plan and details.

L. MAINTENANCE AND PLANT ESTABLISHMENT

1. The Contractor shall be responsible for maintenance within the area of work throughout the period of construction and the plant establishment period. The maintenance shall include continuous operations of picking up trash and emptying trash cans daily, watering, the removal of all weeds in planting areas and all broad leaf weeds in lawn areas, mowing, rolling, trimming, edging, cultivation, fertilization, spraying, control of pests, insects and rodents, reseeding, plant replacement (irrespective of cause), or any other operations necessary to assure normal plant growth and the collection and removal of all trash daily. Any malfunctions of, or damage to, the irrigation system caused by the Contractor in the prosecution of his work shall be repaired within 24 hours.

2. The plant establishment period shall be for a period of 90 days unless extended as described in this section. The plant establishment period shall be started when all planting and related work has been completed, in accordance with the contract documents. The beginning of the plant establishment period shall be determined by an on-site review by the City Engineer. Trees and shrubs shall be healthy and vigorous at the completion of the maintenance period. Broken or vandalized tree stakes shall be repaired to a condition as initially installed within seven (7) days of damage.

3. All turf areas shall have 95 percent coverage with bare areas not exceeding three square inches. All turf shall be of the grass specified and be free from all broad leaf weeds. The turf shall not be allowed to grow higher than three (3) inches and shall be mowed to a one and one half (1 ½) inch height. The turf shall be mowed at least twice during the plant establishment period.

4. The entire area of work shall be kept free of weeds, trash or other debris during the maintenance period. The Contractor shall maintain the area of work at maximum seven (7) day intervals and perform any needed mowing of existing lawns within the area of work when the grass reaches a four (4) inch height.

5. Five weeks after lawn seeding the Contractor shall apply a slow release 38-0-0 granular fertilizer at a rate of 15 pounds per 1000 sq. ft. to all lawn areas. The fertilizer shall be applied in the presence of the BCA Inspector.

6. The Contractor shall immediately replace any and all plant materials and/or grass which, for any reason dies or is damaged while under the Contractors care. Replacement shall be made with seed and/or plants as indicated or specified for the original planting.

7. The designated plant establishment period is part of the total contract time. The plant establishment period will be extended at fourteen (14) day intervals if, at the end of the plant establishment period, the planting, irrigation and other improvements do not reflect the intent of the plans and Notice to Contractors. All extensions of the plant establishment period shall be subject to the assessment of liquidated damages, (308-6).

END OF SECTION

SECTION 32 91 19
LANDSCAPE GRADING

PART 1: GENERAL

1.1 SUMMARY

A. Section includes final grade topsoil for finish landscaping.

PART 2: PRODUCTS

2.1 MATERIAL

A. Existing site soil preparation.

2.2 IMPORTED TOP SOIL

A. Imported top soils shall be Class A soil, obtained from a source designated by the Contractor and approved by the City Engineer or the Landscape Architect.

B. Contractor shall guarantee the quality of the top soil with an approved agricultural suitability evaluation report. Submit the soils report to the City Engineer for approval 30-days prior to any soil placement.

PART 3: EXECUTION

3.1 EXAMINATION

A. Administrative Requirements: Coordination and project conditions.

B. Verify trench backfilling has been inspected.

3.2 SUBSTRATE PREPARATION

A. In scheduled turf areas remove debris, roots, branches, stones, in excess of ½ inch in size.

B. In all other scheduled planting areas remove debris, roots, stones in excess of 1 inch in size.

C. Loosen and scarify surface to depth of 24 inches where planting is scheduled. Loosen and scarify in areas where equipment used for hauling and spreading soil has compacted subsoil to a depth of 24 inches.

3.3 PLACING TOPSOIL/SOIL AMENDMENTS

A. Grade soil/soil amendments in areas where seeding, and planting, are required to thickness as scheduled to a nominal depth as per Landscape Planting Plans. Place soil/soil amendments during dry weather.

B. Fine grade existing topsoil/soil amendments to eliminate rough or low areas. Maintain profiles and contour of subgrade.

C. Where trees have been removed, fill area and compact to meet final grades.

D. Remove roots, weeds, rocks, and foreign material while spreading.

E. Manually spread topsoil close to plant material.

F. Lightly compact and roll placed topsoil.

G. Remove surplus soil from site.

H. Leave stockpile area and site clean and raked, ready to receive landscaping.

3.4 PROTECTION OF INSTALLED WORK

A. Protect landscaping and other features remaining as final Work.

B. Protect existing structures, fences, sidewalks, utilities, paving and curbs.

C. Prohibit construction traffic over topsoil.

- END OF SECTION -

DIVISION 33

UTILITIES

SECTION 33 1100
SITE WATER DISTRIBUTION UTILITIES

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Site water distribution systems located outside the building perimeter, extending to an existing water line or meter.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Division 22 – Plumbing.

3. Section 31 2323 - Excavation and Fill for Utilities.

4. Section 32 0117 - Pavement Repair.

5. Section 32 1313 - Site Concrete Work.

6. Section 33 3000 - Site Sanitary Sewer Utilities.

1.2. SUBMITTALS

A. Shop Drawings: Submit site plan indicating locations of lines, valves, and related appurtenances.

B. Product Data: Manufacturer’s catalog data for materials. Include technical data for accessories, gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publications have been performed, and the performance requirements have been satisfied.

1.3. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. ANSI:

a. ANSI B16.18 Cast Copper Alloy Solder Joint Pressure Fittings.

b. ANSI B18.5.2.1M Metric Round Head Short Square Neck Bolts.

2. ASME:

a. ASME B16.3 Malleable Iron Threaded Fittings.

b. ASME B16.4 Grey Iron Threaded Fittings.

c. ASME B16.22 Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.

d. ASME B16.26 Cast Copper Alloy Fitting for Flared Copper Tubes.

e. ASME B18.2.2 Nuts for General Applications (Inches Series).

f. ASME B18.5.2M Metric Round Head Square Neck Bolts.

3. ASTM:

a. ASTM A47 Standard Specification for Ferritic Malleable Iron Castings.

b. ASTM A48 Standard Specification for Gray Iron Castings.

c. ASTM A53 Standard Specification for Pipe, Steel, Black and Hit-Dipped, Zinc-Coated Welded and Seamless.

d. ASTM A307 Standard Specification for Carbon Steel bolts and Studs, 60,000 psi Tensile Strength.

e. ASTM A536 Standard Specification for Ductile Iron Castings.

f. ASTM A563 Standard Specification for Carbon and Alloy Steel Nuts.

g. ASTM B61 Standard Specification for Steam or Valve Bronze Castings.

h. ASTM B62 Standard Specification for Composition Bronze or Ounce Metal Castings.

i. ASTM B88 Standard Specification for Seamless Copper Water Tube.

j. ASTM C94 Standard Specification for Ready-Mixed Concrete.

k. ASTM D1527 Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe, Schedules 40 and 80.

l. ASTM D1785 Standard Specification for Poly Vinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80 and 120.

m. ASTM D2235 Standard Specification for Solvent Cement for ABS Plastic Pipe, and Fittings.

n. ASTM D2241 Standard Specification for PVC Plastic Pipe Fittings, Schedule 40.

o. ASTM D2282 Standard Specification for ABS Plastic Pipe.

p. ASTM D2466 Standard Specification for PVC Plastic Pipe Fittings, Schedule 80.

q. ASTM D2468 Standard Specification for ABS Plastic Pipe Fittings, Schedule 40.

r. ASTM D2564 Standard Specification for PVC Plastic Piping Systems.

s. ASTM D2774 Standard Practice for Underground Installation of Thermoplastic Pressure Piping.

t. ASTM D2855 Standard Test Method for Making Solvent-Cemented Joints with PVC Pipe and Fittings.

u. ASTM D3139 Standard Specification for Joints Pressure Pipes Using Flexible Elastomeric Seals.

v. ASTM F402 Standard Practice for Safe Handling of Solvent Cements, Primer and Cleaners Used for Joining Thermoplastic Pipes and Fittings.

w. ASTM F477 Standard Specification for Elastomeric Seals for Joining Plastic Pipes.

4. American Water Works Association (AWWA) Standards:

a. AWWA C104/A21.4 Cement-Mortar Lining For Ductile-Iron Pipe and Fittings For Water.

b. AWWA C110/A21.10 Ductile-Iron and Gray-Iron Fittings, 3 inches through 48 inches, for Water and Other Liquids.

c. AWWA C111/A21.11 Rubber-Gasket Joints for Ductile-Iron pressure Pipe and Fittings.

d. AWWA C153/A21.53 Ductile-Iron Compact Fittings, 3 inches through 16 inches, for Water and Other Liquids.

e. AWWA C500 Metal Seated Gate Valves for Water and Sewage Systems.

f. AWWA C503 Wet- Barrel Fire Hydrants.

g. AWWA C508 Swing-Check Valves for Waterworks Service, 2 inches through 24 inches NPS.

h. AWWA C509 Resilient Seated Gate Valves for Water and Sewerage Systems.

i. AWWA C511 Reduced-Pressure Principal Backflow-Prevention Assembly.

j. AWWA C600 Installation of Ductile-Iron Water Mains and Their Appurtenances.

k. AWWA C651 Disinfecting Water Mains.

l. AWWA C800 Underground Service Line valves and Fittings.

m. AWWA C900 PVC Pressure Pipe, 4 inches through 12 inches, for Water Distribution.

n. AWWA M23 PVC Pipe - Design and Installation.

5. Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry:

a. MSS SP-80 Bronze Gate, Globe, Angle and Check Valves.

6. Uni-Bell PVC Pipe Association (UBPPA):

a. UBPPA UNI-B-3 Installation of PVC Pressure Pipe.

b. UBPPA UNI-B-8 Direct Tapping of PVC Pressure Water Pipe.

c. UBPPA UNI-B-13 Standard Performance Specification on joined restrained devices for use with Poly Vinyl Chloride (PVC) Pipe.

7. Underwriters Laboratories Inc. (UL):

a. UL 246 Hydrants for Fire-Protection Service.

b. UL 262 Gate Valves for Fire-Protection Service.

c. UL 312 Check Valves for Fire-Protection Service.

d. UL 789 Indicator Posts for Fire-Protection Service.

B. Provide valves from the same manufacturer.

C. No pipe, pipe fitting, or any other fitting or fixture intended to convey or dispose water for human consumption, for drinking or cooking, is allowed in the domestic plumbing system if it does not meet the low lead definition of Health and Safety Code 116875. Weighted average lead content of the wetted surface area of pipes, fittings and fixtures may not exceed 0.25 percent.

1.4. PRODUCT HANDLING

A. Store items above ground on platforms, skids, or other required supports.

B. Protect materials from direct sunlight.

C. Protect coating and linings on piping, fittings, and accessories from damage. Repair and/or replace damaged coatings or linings.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Pipe:

1. Pipe sizes up to 2.5 inches shall be copper water tubing, Type L hard, ANSI H23.1, ASTM B88, IAPMO IS. Muller Brass, Cambridge-Lee Halstead, or equal.

2. If soil report indicates corrosive condition, an approved protective wrap shall be used to completely isolate and protect underground copper tubing, and extend past the surface a minimum 12 inches. The excess wrapping shall be trimmed down and taped to copper tubing with 10 mill PVC pipe tape at grade level of concrete or asphalt.

3. Underground pipe sizes 3 inches and larger shall be PVC water main pipe material complying with ASTM D1784 Cell Class 12454B and AWWA C900. Piping shall be plain end or gasket bell end, pressure class 200 (DR14) with cast iron pipe equivalent outside diameter.

4. Stainless steel pipe, sizes 2 inches and larger may be used above or below ground in lieu of copper, ductile iron, or plastic. Stainless steel pipe shall be schedule 10 or 304 above ground and schedule 316 below ground conforming to ASTM A312. Flanges shall be HR carbon steel plated conforming to ASTM A36. Flange exterior coating shall be Zinc plated conforming to ASTM B633. Welding wire/rod shall be 308L SS wire rod conforming to ASME SF A5.9.

    a. Underground connections shall be welded stainless steel pipe or made with a welded flange connection.

    b. Above ground connections may be with either flange or grooved Victaulic type coupler. Victaulic couplers shall be classified according to ANSI/NSF 61.

B. Poly Vinyl Chloride (PVC) Water Main Fittings shall be gray-iron or ductile iron conforming to AWWA C110/A21.10 or AWWA C153/A21.53 and shall have cement mortar lining conforming to AWWA C104/A21.4, standard thickness unless otherwise indicated on drawings. Fittings shall be mechanical joints.

C. PVC Joints and Jointing Materials:

1. Pipe joints shall be push on as specified in ASTM D3139.

2. Joints between pipe and metal fittings, valves, and other accessories shall be mechanical joints as specified in AWWA C111/A21.11.

3. Provide each joint connection with an elastomeric gasket suitable for the bell or coupling installation.

4. Gaskets for push on joints for pipe shall conform to ASTM F477.

5. Gaskets for push on joints and compression type joints or mechanical joints for connections between pipes and metal fittings, valves, and other accessories shall be as specified in AWWA C111/A21.11.

6. Sleeve-type mechanically coupled joints may be provided instead of push-on joints on plain-end PVC plastic joints. Comply with requirements of ASTM D3139.

D. Gates Valves for PVC:

1. Gate valves in a domestic plumbing system intended to convey water for human consumption shall comply with quality assurance, Article 1.3.c of this specification.

2. Non-rising stem type with resilient wedge gates or iron body bronze wedge gates and mechanical joint ends conform to AWWA C500.

3. Non-rising stem type with mechanical joints ends shall conform to AWWA C509.

4. Valves designed for a working pressure of 175 psi shall be inside-screw type with operating nut, and resilient wedge type gate. Valve shall be provided with mechanical joints as required for the pipe to which it is intended to connect.

5. Valves with UL listing of 262 shall conform to AWWA C500. Valves shall open by counter-clockwise rotation of valve stem.

6. Stuffing boxes shall be provided with O-ring stem seals and shall be bolted and constructed to permit easy removal of parts for repair.

7. Sleeve type mechanical couplings may be provided instead of mechanical and push on joint ends.

8. Valve ends and gaskets for connection to sleeve type mechanical couplings shall conform to specified requirements for the joint or coupling.

E. Gate Valves in Valve Pits:

1. Outside screw and yoke rising stem type valves with resilient wedge gates and flanged ends shall conform to AWWA C500.

2. Outside screw and yoke rising stem type valves with flanged ends shall conform to AWWA C509.

3. Outside screw and yoke type Valves with double disc gates or split-wedge type gate and flanged ended ends shall be designed for 175 psi and conform to UL 262.

4. Provide valves with hand wheels that open by counterclockwise rotation of the valve stem.

5. Stuffing boxes shall be provided with O-ring stem seals and shall be bolted and constructed to permit easy removal of parts for repair.

F. Check Valves for PVC:

1. Valves shall be swing-check type conforming to AWWA C508 or UL 312.

2. Valves shall be provided with cast iron or steel body and cover, flanged ends and clear port opening.

3. Valves shall be designed for a working pressure of 175 psi.

G. Fire Hydrants:

1. Before procurement, verify approval issued by the County of Los Angeles or Fire Department having jurisdiction.

2. Hydrants shall be wet barrel types conforming to AWWA C503 or UL 246.

3. Only 1¾-inch pentagonal nuts are to be provided on stems and protective caps.

4. Specified hydrants:

a.	Clow/Rich	# 850 or 860
b.	James Jones	#J3700 Fluted Barrel
c.	LB Ironworks	#702 Lido or 425
d.	Equal.	

H. Valve Boxes: 14¾ inches by 20 inches by 12 inches cast concrete with cast iron, traffic grade cover marked “WATER” (for use over water valves).

1. Brooks 36-H MB with No. 36-T cast iron cover EISEL 363.5, or equal.

I. Mechanical Thrust Restraint:

1. Restraint shall be incorporated into the follower gland.

2. Restraint shall consist of individually actuated wedges that increase resistance to pull out as internal pressure or external forces increase.

3. Gland shall be ductile iron conforming to ASTM A536.

4. Provide twist off nuts and tee-head bolts of the same size to ensure proper actuating of restraint devices.

5. Restraining device shall be provided with pressure rating equal to that of the pipe on which it is installed.

6. Restraining gland shall be UL listed.

7. Mechanical thrust restraint devices shall be EBAA Iron “Megalug” or equal.

J. Restraint Device Adapters:

1. Restrained flange adapters shall be provided instead of threaded or welded flange spool pieces on plain end of ductile iron or PVC pipe.

2. Flange adapters shall be manufactured of ductile iron conforming to ASTM A536 and be provided with flange bolt circles compatible with ANSI/AWWA C115/A21.15.

3. Restraint of flange adapter shall consist of a multiple number of individually actuated gripping wedges to maximize restraint capability.

4. Torque limiting actuating screws shall be provided to insure proper initial set of gripping wedges.

5. Flange adapter shall be capable of deflection during assembly or permit lengths of pipe to be field cut to allow at least 0.6 inch of gap between end of pipe and mating flange without affecting integrity of seal.

6. Flange adapter shall be provided with a safety factor of at least 2:1 for rated pressure.

7. Restraint device adapters shall be EBAA Iron “Megaflange”, or equal.

K. Tracer Wire for Nonmetallic Pipes: Tracer wires shall be electrically continuous #14 copper tracer wire, Type TW, blue plastic covered for domestic water and red for fire sprinkler. (Aluminum wire is prohibited). Provide in sufficient length to be continuous over each installed section of nonmetallic pipe.

L. Pipe markers shall be a concrete plaque inscribed with the word “WATER.”

M. Water Service Line Materials:

1. Copper Tubing: Copper tubing shall conform to ASTM B88, Type L.

2. Fittings for Copper Tubing: Fittings for solder-type joints shall conform to ANSI B16.18 or ASME/ANSI B16.22. Fittings for compression-type joints shall conform to ASME/ANSI B16.26, flared tube type.

3. Water Service Line Appurtenances:

a. Corporation stops shall be ground key type, manufactured of bronze conforming to ASTM B61 or ASTM B62, and suitable for the working pressure of the system. Ends shall be suitable for solder-joint or flared tube compression type joint connection. Threaded ends for inlet and outlet of corporation stops shall conform to AWWA C800. Coupling nut for connection to flared copper tubing and shall conform to ASME/ANSI B16.26.

b. Goosenecks shall be type K copper tubing. Joint ends for goosenecks shall be as required for connecting to corporation stop and service line. Where multiple gooseneck connections are required for individual service, connect goosenecks to service line through brass or bronze branch connection; the total clear area of branches shall be at least equal to clear area of service line. Length of goosenecks shall be as indicated or required.

c. Curb or service stops shall be ground key, round way, inverted key type; bronze, conforming to ASTM B61 or ASTM B62; and rated at 150 psi. Ends shall be as required for connection to service piping. Arrow shall be cast into body of curb or service stop indicating direction of flow.

d. Gate valves 2.5 inches and larger shall be MSS SP-80, Class 150, solid wedge, or resilient wedge gate, and non-rising stem. Valves shall be provided with flanged end connections. Provide hand wheel operators if easily accessible. Provide operating nut if inside a vault, pit or valve box.

e. Gate valves in valve pits 2 inches and smaller shall be MSS SP-80, Class 150, bronze, solid wedge, inside screw, rising stem. Valves shall be provided with flanged end connections or threaded end connections with union on one side of valve and hand wheel operator.

f. Valve boxes shall be provided at each gate valve installed underground. Valve boxes shall be a size suitable for valve on which it is installed.

N. Water meter will be installed by water purveyor for the area, unless noted otherwise.

O. Strainers:

STR-1 Description: Wye type with monel or stainless steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on drawings, provide with valved (globe valve) blow out piping, same size as blow out plug:

2 inches and smaller: C.M. Bailey #100-A, bronze, 250 pound, or ductile iron with fusion bonded epoxy coating.

2½ inches and larger: Watts 77F-DI-FDA-125 pound, or other ductile iron fusion bonded epoxy coated flanged strainer, conforming to ASTM A312 for the strainer body, and ASTM A240 for the stainless steel strainer element. (No iron body strainer shall be used on potable water that is not fusion bonded epoxy coated inside and out.)

C.M.Bailey, Armstrong, Wilkins, Watts, or equal.

STR-2 "Y" pattern, cast iron bodies, 125 psi, monel screen 16 square mesh. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2 inches, flanged ends for 2½ inches and larger perforations, in accordance with the following:

Bailey #100, Armstrong, Rp & C , Keckley, or equal.

STR-3 Bucket type, flange, semi-steel body, 125 psi, stainless steel screen with 1/8 inch diameter perforations (mounted above grade for water service). All sizes, for mains serving fire sprinkler risers:

Bailey #1, Zurn 150 Series, Rp 7 C, Watts 97fb-Fsfe, or equal.

STR-42" and larger: Watts 077-F-SS Stainless steel flange type strainer, or equal conforming to ASTM A312 for strainer body, ASTM A240 for the SS strainer element and ASTM A36 for base flange material.

P. Backflow Preventer Assemblies:

1. Assembly shall be provided with flanged connections, ductile iron with fusion bonded epoxy coated construction, bronze, or stainless steel.

2. Backflow preventer shall be suitable for cold water working pressure of 175 psi.

3. Internal parts shall be designed for replacement without removing valves from line.

4. Double check backflow preventer assembly shall consist of two independently acting spring cam or poppet style check valves, 2 shut-off valves and 4 test cocks. Check valve shall be designed to provide drip tight closure against reverse flow, low pressure drop at maximum flow capacity. Spring-loaded checks shall cause valve to seal against a higher inlet pressure than outlet pressure when there is no flow.

5. Double check backflow preventer assembly shall meet AWWA Standard C510-89. Assembly shall be Ames 2000ss, Febco 850, Watts 709, Wilkins 350, or equal.

6. Reduced pressure backflow preventer assembly shall consist of two check valves located between two shut-off vales with an area of reduced pressure between two check valves, and a relief device arranged to discharge to atmosphere.

    a. Comply with AWWA Standard C511.

b. Fluctuation in piping pressure shall not cause cycling. Backflow preventer shall automatically maintain low pressure zone to positively prevent backflow of water into system. Assembly shall automatically indicated failure of any part vital to backflow prevention by the continuous discharge relief device.

c. Reduced pressure backflow preventer assembly shall be Cla-Val Model RP-4, or equal.

7. Backflow prevention assemblies (devices), shall be tested and certified by a certified backflow tester, and a test report shall be provided to the water agency having jurisdiction. Testing shall be performed in the presence of the project inspector.

PART 3 - EXECUTION

3.1. EXCAVATION, BACKFILLING AND COMPACTING

A. Conform to requirements in Section 31 2323 - Excavation and Fill for Utilities or Section 31 2313 - Excavation and Fill.

3.2. PIPE INSTALLATION

A. Project site water lines shall terminate approximately 5 feet from buildings, unless otherwise indicated on drawings. Temporarily cap or plug terminals for future connection to building.

3.3. CLEARANCES OF WATER LINE

A. Building or Structures: Two feet.

B. Parallel to Sewer Line:

1. Water line 4 inches or less in diameter shall not be installed in a common trench with the building sanitary drain unless the bottom of the water line is at least 12 inches above the top of the building sanitary drain, or where the water line is installed on a solid shelf, excavated on one side of the common trench, with a minimum clear horizontal distance of 12 inches from the building sanitary drain.

2. Water mains 6 inches and larger in diameter shall be separated from the project site sanitary sewer, receiving more than one building sanitary drain or acid pipeline, in accordance with the requirement of the State of California Human and Welfare Agency Department of Health Services.

C. Crossing Sewer Line:

1. A water main shall be separated from sanitary sewer in accordance with the requirements of the State of California Administrative Code, Title 22, Section 64630(e)(2).

2. Install water main a minimum of 12 inches clear, above or below a sanitary sewer.

3. A water main 6 inches or greater in diameter, crossing under a project site sanitary sewer line, shall be installed with joints located at least 10 feet away from each side of the sanitary sewer line.

4. A water main 6 inches or greater in diameter, crossing over a project site sanitary sewer line, shall be installed with joints located at least 4 feet away from each side of a purple pipe or sanitary sewer line.

D. Install water mains no closer than 10 feet horizontally clear from the edge of sewage leach fields, seepage pits, and septic tanks.

3.4. PIPE INSTALLATION AND JOINING

A. Remove fins and burrs from pipe and fittings.

B. Clean piping, fitting, valves, and accessories before installing. Maintain items in a clean condition.

C. Provide proper facilities for lowering sections of pipe into trenches. Do not drop into piping, fittings, or other materials into trenches. Accurately cut pipe and install without springing or forcing. Replace any piping or fitting that does not provide sufficient space for proper installation of joining material.

D. Blocking or wedging between bells and spigots is not permitted. Install bell and spigot pipe with bell end pointing in the direction of flow.

E. Install piping to the lines and grades indicated or required. Low points and dips are not permitted. Support piping at proper elevation and grade with secure and uniform supports. Wood support blocking is not permitted. Where sand cement slurry will not be furnished for backfill, install piping so that full length of each section of pipe and each fitting will solidly rest on pipe bedding. Excavate recesses to accommodate bells, joints, and couplings. Provide anchors and supports where indicated or required for installation. Provide proper allowances and devices for expansion and contraction of piping and systems.

F. Maintain trenches free of standing water until pipe joints have been installed.

G. At the end of each day, close open ends of pipe with temporary caps of the same material as the pipe.

H. Do not install piping when trench or weather conditions prevent proper installation.

3.5. INSTALLATION OF TRACER WIRE AND PIPE MARKERS

A. Tracer Wire: Install continuous length of tracer wire for full length of each run of nonmetallic pipe. Fasten wire to top of pipe in such a manner that it will not be displaced during construction operations. Wire shall be fastened to pipe at no greater than 20-foot intervals. Wire shall terminate above finished grade with a 12-inch lead taped around each riser. Provide a tracer wire to grade under a permanent marker where straight-line transitions of metallic to non-metallic pipe are installed.

B. Underground Pipe Markers: Provide markers at grade where non-metallic pipe is installed and for each horizontal change in direction.

3.6 CONNECTIONS TO EXISTING WATER LINES

A. After project inspector has inspected installation, perform connections to servicing water lines. Schedule service shutdown for connecting new system at a time causing minimum disruption.

B. Use a tap or drilling machine with valve and mechanical joint type sleeves for connections to waterlines under pressure, only if other means of scheduling a shutdown time have been unsuccessful, and with the approval of the City Engineer, and Project Inspector.

C. Bolt sleeves around mains; bolt valve conforming to AWWA C500 to branch. Open valve, attach drilling machine, perform tap, close valve, and remove drilling machine, without interruption of service. Notify the Project Inspector in writing at least five days prior to the date of scheduled connections.

3.7. INSTALLATION OF PVC PLASTIC WATER MAINS

A. Unless otherwise indicated, install pipe and fittings as specified and in accordance with UBPPA UNI-B-3 and AWWA M23, Chapter 7, “Installation”.

B. Jointing:

1. Provide push on joints with elastomeric gaskets specified for this type of joint, furnishing either elastomeric-gasket bell-end pipe or elastomeric-gasket couplings. For pipe-to-pipe push on joint connections, provide pipe with push on joint ends furnished with factory installed bevel; for push on joint connections to metal fittings, valves and other accessories, square cut spigot end off pipe end.

2. Provide push on joint lubricant recommended by manufacturer.

3. Install push on joints for pipe-to-pipe connections in accordance with UBPPA UNI-B-3 and AWWA M23, Chapter 7, "Installation."

4. Install push on joints for connection to fittings, valves, and other accessories in accordance with requirements of UBPPA Uni-B-3 and with applicable requirements of AWWA C600.

5. Compression-type joints/mechanical-joints with gaskets, glands, bolts, nuts and internal stiffeners shall be installed in accordance with the requirements of UBPPA UNI-B-3 and AWWA C600 and Appendix A to AWWA C 111/A21.11.

    a. Square cut spigot off end of pipe for compression-type joint/mechanical-joint connections and do not re-bevel.

6. Sleeve-type mechanical couplings shall be provided in strict accordance with coupling manufacturer’s recommendations using internal stiffeners as specified for compression-type joints.

7. Provide mechanical thrust restraint devices for anchorage and piping unless thrust blocks are indicated on the Drawings. Thrust blocks shall be installed in accordance with the requirements of UBPPA UNI-B-3 except that size and location of blocks shall be as indicated. Thrust blocks shall be provided as specified in Section 32 1313 - Site Concrete Work.

3.8. INSTALLATION OF VALVES

A. Provide gate valves conforming to AWWA C500 and UL 262 in accordance with AWWA C600 for valve and fitting installation and with recommendations of AWWA C500 Appendix “Installation, Operation, and Maintenance of Gate Valves”.

B. Provide gate valves conforming to AWWA C600 in accordance with AWWA C509 for valve and fitting installation and with recommendations of AWWA C500 Appendix “Installation, Operation, and Maintenance of Gate Valves”.

C. Provide gate valves on PVC water mains in accordance with AWWA M23 Chapter 7, “Installation.”

D. Provide check valves and fittings in accordance with applicable requirements of AWWA C600 unless noted otherwise on the drawings.

E. Provide gate and check valve joints as specified for the type of joints between pipe and fittings.

3.9. INSTALLATION OF HYDRANTS

A. Install hydrants according to requirements of AWWA C600 for hydrant installation and as indicated. Provide joints as specified for the type of joints between pipe and fittings.

B. Install hydrant with a 6-inch key gate valve between 4 and 10 feet from the hydrant.

3.10. INSTALLATION OF BACKFLOW PREVENTERS

A. Install reduced pressure backflow preventers to comply with RULE 16D of LADWP in the jurisdictional boundaries of Los Angeles Department of Water and Power.

3.11. WATER SERVICE LINE CONNECTION TO WATER MAINS

A. Connect service line to main by corporation stop and gooseneck. Install service stop as indicated on the drawings. Connect service lines to PVC plastic water mains in accordance with UBPPA UNI-B8 and AWWA M23, Chapter 9, “Service Connections”.

B. Special Requirements for Plastic Piping: Unless otherwise indicated, install pipe and fittings in accordance with ASTM D2774 and ASTM D2855. Handle solvent cements for plastic pipe jointing in accordance with ASTM F402. Install joints according to ASTM D2855. Install other joints to materials other than pipe materials in accordance with plastic pipe manufacturer’s recommendations.

C. Connect plastic pipe service lines to corporation stops and gate valves according to plastic pipe manufacture’s recommendations.

3.12. INSTALLATION OF STRAINERS:

A. Strainers shall be installed on each water main downstream of the meter, above grade at the pressure regulating station. When a pressure regulating station (assembly) is not provided, “wye” type flange strainer shall be provided, with a shut off valve on the inlet and the outlet side.

B. If the water main is serving fire sprinkler risers or hydrants, then an approved fire service strainer shall be used: Watts 97DB-FSFE, or equal.

3.13. DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. When water piping has been installed and tested, sterilize system before use and/or substantial completion.

B. Inject solution of liquid chlorine or sodium hypochlorite and water containing at least 50 PPM of free chlorine into a system in a manner to ensure that entire system is completely filled with solution. During this procedure operate valves and test outlets for residual chlorine. Continue injection until outlets indicate at least 59 PPM of free chlorine.

C. After injection, isolate system and hold solution in retention for a period of at least 8 hours. Perform tests for residual chlorine after retention. If such tests indicate less than 50 PPM of residual chlorine, repeat entire procedure. After satisfactory sterilization has been verified, flush entire system until traces of chlorine have been removed or until chlorine content is no greater than in existing water supply.

3.14. ELECTROLYSIS PREVENTION

A. A minimum 6-inch long brass nipple shall be installed at locations specified or as required. Flanges shall be provided with a complete insulating component consisting of; gasket bolt sleeves and bolt washers. Dielectric insulators shall be installed at locations indicated or as required. Dielectric fittings are prohibited.

B. Where steel or cast iron below grade connects to copper or brass piping above grade, the transition from steel or cast iron pipe to copper or brass pipe shall be installed in an above grade accessible location.

C. Underground connections between dissimilar metals shall be in accessible yard boxes.

D. Above ground dielectric connections shall be exposed.

3.15. ABANDONING WATER LINES AND STRUCTURES

A. Water lines and appurtenances to be abandoned in place shall be cut and removed from areas where new work is being installed.

B. Cap or plug abandoned existing drain lines below grade in a yard box and according to CBC.

3.16. TESTS AND INSPECTIONS

A. Provide labor, equipment, materials, test equipment and incidentals required for performing required field tests.

B. Tests shall not be performed for five days after concrete thrust blocks have been installed.

C. Testing Procedure: Water mains and service lines shall be tested in accordance with applicable specified standard.

1. Test PVC plastic water system in accordance with UBPPA UNI-B-3 for pressure and leakage. The amount of leakage from PVC piping shall not exceed the amounts given in UBPPA UNI-B-3, except that no leakage is permitted for joints installed with sleeve type mechanical couplings.

2. Test water service lines in accordance with applicable requirements of AWWA C600. No leakage is permitted.

3. Pressure testing: Before pressure test, fill portion of piping being tested with water for a minimum of 24 hours. Provide hydrostatic pressure of at least 50 psi greater than the maximum working pressure of tested system, but no less than 200 psi hydrostatic test pressure for system piping of 2 inches in diameter and larger. Provide and maintain hydrostatic test pressure for at least two hours to ensure no leakage of any portion of piping or appurtenances under pressure test.

3.17. CLEANING

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

3.18. PROTECTION

A. Protect the work of this section until substantial completion.

END OF SECTION

SECTION 33 3000
SITE SANITARY SEWER UTILITIES

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Site sanitary sewer systems from the building, to the existing site sanitary sewer.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Division 23 - Mechanical.

3. Section 31 2313 - Excavation and Fill.

4. Section 31 2323 - Excavation and Fill for Utilities.

5. Section 32 0117 - Pavement Repair.

6. Section 32 1313 - Site Concrete Work.

1.2. SUBMITTALS

A. Shop Drawings: Submit site plan denoting locations of lines, valves, and appurtenances.

B. Product Data: Manufacturer’s catalog data for materials. Include technical data for accessories, gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publication have been performed, and the results required by design have been met.

1.3. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. Standard Specifications for Public Works construction, current edition.

2. California Plumbing Code, CPC, current edition.

3. California Administrative Code, Title 22, Section 64630(e)(2).

PART 2 – PRODUCTS

2.1. MATERIALS

A. Pipeline:

1. Acid pipeline from neutralizing tank to building sanitary drain, or project site sanitary sewer: See Division 15 for corrosive waste piping.

2. Building or project site sanitary sewer:

a. Cast iron soil, hubless, service weight, with stainless steel-banded hubless coupling. FS WW-P-401, conforming to CISPI 310 and IAPMO IS 6. Manufactured by American Foundry, Tyler, or equal.

b. Vitrified clay extra strength with plain end, meeting the requirements of ASTM C700, installed with mechanical compression couplings. Joints conforming to ASTM C425. Installation shall be in accordance with ASTM C12. Manufactured by Mission Clay Products, or equal.

c. Acrylonitrile-Butadiene-Styrene Schedule 40 plastic drainpipe and fittings meeting the requirements of ASTM D2661 and D3311. Provide ABS solvent cement for piping and joint connections and install in accordance with IAMPO Standards IS 5, 9, and UPC Section 718.

B. Cleanout Assemblies: Cleanout plug shall be line size.

1. In covered concrete-paved floors: Iron body with UPC recognized plug, top, and adjustable sleeve, cut-off ferrule, polished brass/nickel/bronze, and secured scoriated cover:

Square:	SMITH	JOSAM	ZURN	Equal	
4053	56030-2	Z-1400			
Round:	SMITH	JOSAM	WADE	ZURN	Equal
4033	56010-2	W-6000	Z-1400		

2. Outside covered concrete-paved floors: Secured cover, extra heavy-duty, adjustable sleeve, cut-off ferrule, UPC recognized brass type plug, scoriated tractor type cover:

SMITH	JOSAM-	ZURN	WADE	Equal
4233	56050-2	Z-1402-HD	W-7030-Y	

2. In yard boxes: Raised threaded head brass plug.

WADE 8590A, SMITH, ZURN, JOSAM, or equal.

C. Yard Boxes: Brooks No. 3-TL, NDS, EJIW, or equal, with cast-iron locking cover with the word “SEWER,” embossed on the cover in one inch high upper case lettering.

D. Concrete, Mortar and Related Materials: Conform to Section 32 1313 - Site Concrete Work, unless noted otherwise.

E. Metal Covers, Frames and Accessories:

1. Conform to Section 206 – Miscellaneous Metal Items of the Standard Specifications for Public Works Construction.

2. Metal Covers and Frames: Vandal-resistant design and construction.

3. Hot-dip galvanize steel parts after fabrication and prior to assembly in accordance with Section 210 – Paint and Protective Coating of the Standard Specifications for Public Works Construction.

F. Bedding Materials: Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities, as required.

PART 3 – EXECUTION

3.1. SANITARY SEWER INSTALLATION

A. Install sanitary sewers in a uniform alignment and slope to the point of connection as indicated. Before trench excavation, verify size, material, depth, and location of the point of connection.

B. Pipe slope shall not be less than ¼ inch per foot or 2 percent unless pipe inverts are indicated. Where invert elevations are indicated, install pipe at a uniform slope between inverts.

C. Join pipes and fittings as recommended by the manufacturer.

3.2. CLEARANCE OF SANITARY SEWERS

A. Buildings or Structures: Two feet.

B. Parallel to water line:

1. Building sanitary drain is not permitted to be installed in a common trench with a potable water line unless the bottom of the water line is at least 12 inches above the top of the sanitary sewer.

2. In addition, the potable water line shall be installed on a solid shelf excavated on one side of the common trench with a minimum clear horizontal distance of 12 inches from the sanitary sewer or building sanitary drain.

3. Project site sanitary sewer, receiving more than one building sanitary drain or acid pipeline, shall be separated from a potable water line in accordance with the requirements of the California Health and Human Services Agency Department of Public Health.

C. Crossing Water Line:

1. Building sanitary drain shall be installed a minimum of 12 inches below the potable water line.

2. Project site sanitary sewer shall be separated from the potable water main in accordance with the requirements of the State of California Administrative Code, Title 22, Section 64630(e)(2).

3.3. MANHOLES

A. Provide manholes in accordance with the Standard Plans for Public Works Construction, unless otherwise indicated.

B. Adjust manholes in accordance with the sub-section 302-5.8 Manholes (and other structures) of the Standard Specifications for Public Works Construction.

3.4. CLEANOUTS

A. Provide cleanout at the upper terminal for each sanitary pipeline, at intervals not exceeding 100 feet in straight run and any fraction thereof, and for each aggregate horizontal change in direction exceeding 135 degrees.

B. Install required cleanouts before back filling horizontal pipelines.

C. In unpaved and asphalt-paved areas, install cleanouts in yard boxes 2 inches below the yard box cover.

D. In concrete-paved areas, extend cleanouts flush with finish grade.

E. In traffic areas, install countersunk cleanout plugs where raised heads protrude.

3.5. ABANDONED SEWERS AND STRUCTURES

A. Plug or cap every abandoned sanitary sewer within 5 feet of the property line in a code required manner.

B. Demolish abandoned sanitary structures such as cesspool, septic tank, sewage pit, and manholes to a minimum depth of 5 feet below the finish grade, including removal of sewage. Disconnect any piping. After inspection, completely fill with earth, sand, gravel, cement-sand slurry, or other required material.

3.6. TESTING

A. After installation, test each sanitary drain and/or sewer and each section between successive manholes for either infiltration or exfiltration. Test shall be conducted in accordance with Section 306 - Underground Conduit Construction of the Standard Specifications for Public Works Construction.

B. Where excessive ground water is encountered test the pipeline for infiltration.

C. When infiltration or exfiltration exceeds allowable amounts as set forth in the Section 306 formula, perform repairs or replacements as necessary to comply with the required limits.

3.7. PROTECTION

A. Protect the Work of this section until substantial completion.

3.8. CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

END OF SECTION

SECTION 33 4000
STORM DRAINAGE UTILITIES

PART 1 - GENERAL

1.1. SUMMARY

A. Section Includes:

1. Catch basins, grates and frames, culverts, curb inlets, drainage pipes, sub-surface drains, manhole covers and frames, and surface run-off collection.

2. Stormwater treatment systems:

a. Infiltration BMP.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 01 7415 - Storm Water Pollution Prevention Plan.

3. Section 01 7417 – BMP Implementation Plan.

4. Section 22 1000 - Plumbing.

5. Section 31 2323 - Excavation and Fill for Utilities.

6. Section 32 0117 - Pavement Repair.

7. Section 32 1313 - Site Concrete Work.

C. Definitions:

1. BMP: Best Management Practice.

2. Post Construction BMP: Devices, installed by the Contractor for stormwater management, to be left onsite after construction completion.

3. SWPPP: Storm Water Pollution Prevention Plan.

1.2. SUBMITTALS

A. Shop Drawings: Submit site plan denoting locations of lines, valves, and appurtenances.

B. Product Data: Manufacturer’s catalog data for all required materials. Include technical data for accessories, information concerning gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publications have been performed, and the results required by design have been met.

D. Closeout Documents: Submit two CD's and one hard copy of the following documents to the City Engineer at substantial completion:

1. Maintenance Log: Provide Microsoft Excel spreadsheet containing the following information:

a. Maintenance log and upkeep records of the installed post construction BMP. Include the following headers as a minimum: "Date of Service", "Location of BMP", "Type of Maintenance or Service", "Notes", "Next Scheduled Preventive Maintenance Due", and "Inspector Signature".

b. Maintenance Requirements: Include the following headers as a minimum: "BMP Description", "Location of BMP and Map Grid Location" and "Type of Maintenance or Service Needed", i.e.; weekly, monthly, quarterly, etcetera. "Stock No.", "Manufacturer Contact Information", along with "Frequency" i.e.: weekly, monthly, quarterly, etcetera and "Special Instructions".

2. Maintenance Manuals: Provide Maintenance Manual, for installed storm drainage BMP components, along with requirements, replacement or maintenance schedule, and plans with the location of each BMP component. This manual shall include product information cut sheets, shop drawings, vendor information for each component and warranty.

3. Record drawings: 'As-Builts' site plan(s) showing post construction BMP. Provide a copy of a marked record set, with red pencil identifying any variations from design documents.

4. Training Documentation:

a. City designated attendees sign off training sheet.

b. Two DVD's of materials covered in the training and components installed.

5. Post-construction BMP Maintenance Plan: Submit complete plan per Attachment "A", edit per as-built conditions and provide missing information.

1.3. QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction, current edition.

1.4. TRAINING OF CITY PERSONNEL

A. At substantial completion, and when the storm drainage system is operational, representatives from the contractor and manufacturer(s) of the components, specified and installed at the site, shall provide up to 8 hours of training. Date, time and location for the training shall be coordinated through the City Engineer. Have the City designated attendees sign off training sheet and provide a copy to the City Engineer.

B. Training period shall cover but not be limited to the following:

1. Explain the operation of storm drainage system and its design intent.

2. Explain the maintenance requirements of every component of the system.

3. Provide recommendations of practices to minimize or eliminate negative impact on the system.

4. Provide maintenance schedule, as recommended by the manufacturers, for every component, and review it with the City Maintenance and Operations staff.

5. Conduct a site walk, identify every component of the system and demonstrate its operation.

6. Training shall be conducted with the use of a Maintenance log and Maintenance manual.

1.5. SURPLUS MATERIALS

A. Provide sufficient additional materials for each component of BMP that requires replacement or service during the first year.

PART 2 – PRODUCTS

2.1. MATERIALS

A. Storm Drain Pipe: Provide in conformance with Section 207 - Pipe and Section 208 - Pipe Joint Types and Materials of the Standard Specifications for Public Works Construction.

B. Concrete, Mortar and Related Materials: Conform to Section 32 1313 - Site Concrete Work.

C. Metal Covers, Grates, Frames and Accessories:

1. Conform to Section 206 - Miscellaneous Metal Items of the Standard Specifications for Public Works Construction.

2. Hot-dip galvanize steel parts after fabrication and before installation, in accordance with Section 210 - Paint and Protective Coatings of the Standard Specifications for Public Works Construction.

3. Grates and Frames: Vandal-proof design and construction.

E. Bedding Material for Pipe: Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities.

F. Subsurface Drain Fabric: Non-woven geotextile filter fabric:

1. TenCate Geosynthetics Americas, Mirafi 140N.

2. US Fabrics, Inc., 120NW.

3. Propex Fabrics, Inc., Geotex 451.

4. Equal.

2.2. STORMWATER TREATMENT SYSTEMS

A. Retention Systems

1. Permavoid Pv-150

2.3. NAMEPLATES:

A. Stainless steel or aluminium nameplate permanently fastened to BMP showing the following information:

1. BMP ID number and BMP type.

2. Next service day, followed by a 1-inch by 4-inch long blank space.

3. Manufacturer name, model number, telephone number, and stock ID number.

4. Installation or production date.

5. 1-inch by 4-inch blank space for the City's use.

PART 3 – EXECUTION

3.1. EXCAVATION, BACKFILLING AND COMPACTING

A. Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities.

3.2. INSTALLATION OF PIPE

A. Conform to Section 306 - Underground Conduit Construction of the Standard Specifications for Public Works Construction.

B. Non-ferrous drainpipe, installed with less than 12 inches of cover to finish grade, shall be provided with a 4-inch thick concrete pipe encasement.

3.3. DRAINAGE APPURTENANCES

A. Catch basins, junction chambers, manholes, box culverts, outlet chambers and other drainage structures: Construct as indicated on drawings and as specified in Section 32 1313 - Site Concrete Work.

B. Ensure that post construction BMP have a visible identifying manufacturer tag with product identification, manufacturer contact information, date of last service and date of next service due.

C. Provide storm drain stencil per City requirements.

3.4. STORMWATER TREATMENT SYSTEMS

A. System to be installed per manufacturer's instructions.

3.5. ABANDONED DRAINAGE LINES AND STRUCTURES

A. Cap or plug existing drain lines that are cut and abandoned, and remove existing drainage structures that are abandoned.

3.6. CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the project site.

B. Maintain post construction BMP after installation, and keep a maintenance log to be turned over to the City Engineer at substantial completion.

3.7. PROTECTION

A. Protect the work of this section until substantial completion.

Appendix A– Geotechnical Data Report, Granada Hills Pool Replacement Project, 16730 Chatsworth Street, Los Angeles, California by Geocon West, Inc. dated July 31, 2017

1.0 INTRODUCTION

This report presents the results of our geotechnical investigation for the proposed Granada Hills Pool Replacement project. The project site, as shown on Figure 1 –Vicinity Map, is located near the Chatsworth Street and Petit Avenue intersection in Granada Hills Park. The project address is 16730 Chatsworth Street. The purposes of this investigation were to evaluate the nature and engineering properties of the subsurface materials and develop geotechnical recommendations for design and construction of the project. The City of Los Angeles, Department of Public Works, Bureau of Engineering, Geotechnical Engineering Group (GEO) has prepared this report in response to the Architectural Division's request on March 17, 2017.

2.0 PROJECT DESCRIPTION

The project consists of demolishing the existing pool and constructing a new one. The proposed pool footprint is presented on Figure 2 – Site Plan. As shown on Figure 2, the new pool length will remain the same; however, the width will be enlarged slightly. The east side will extend out approximately 15 feet from its current location. The project also includes construction of a new pool deck, a diving platform, a shade structure, and other site improvements. We understand the existing bathhouse will be renovated but new foundations and/or foundation upgrades are not anticipated at this time. This report does not provide recommendations for the bathhouse renovation. Storm water infiltration is also proposed.

The proposed grades are expected to be within one to two feet of the existing ones, except for in the existing and proposed pool areas. The earthwork will likely involve cuts on the order of 12 feet high and fills on the order of 2 to 3 feet thick. We expect the maximum pool depth to be approximately 12 feet.

Structural loads for the shade structure were not provided to us at the time of this report. We expect the maximum applied bearing pressure to be 2,000 pounds per square foot (psf) for shallow foundations (i.e. footings). The shade structure may be supported on deep foundations instead of shallow footings.

If significant changes to the project are proposed, the findings and recommendations in this report may not be applicable, and a supplemental report may be required. GEO should be provided an opportunity to review any proposed changes and determine if a supplemental report is required.

3.0 GEOTECHNICAL INVESTIGATION

Our geotechnical investigation included field exploration and laboratory testing. Geocon West, Inc. (Geocon) performed the field exploration and laboratory testing for GEO. A copy of their data report is provided in Appendix A of this report. The findings and information presented in this report are based on the information contained in Geocon's data report. GEO has reviewed their report, concurs with the information contained in it, and accepts responsibility for the use of its contents.

3.1 FIELD EXPLORATION PROGRAM

Geocon's field exploration consisted of drilling six hollow-stem auger (HSA) borings. Infiltration test wells were installed in two of the borings. Borings HSA-1 through HSA-3 were drilled to a depth of approximately 26½ feet below ground surface (bgs), and HSA-4 was drilled to a depth of approximately 31½ feet bgs. The infiltration test wells, IT-1 and IT-2, were drilled to depths of approximately 5 and 10½ feet bgs, respectively. The approximate boring locations are presented on the Field Exploration Location Map in Geocon's' data report (Appendix A). The subsurface conditions encountered in the borings and infiltration test wells are discussed in Section 4.3, and the infiltration test results are discussed in Section 4.5.

3.2 LABORATORY TESTING PROGRAM

The laboratory testing program consisted of in-situ moisture content and dry density, direct shear, grain size distribution (i.e. sieve analyses), fines content, Atterberg Limits, expansion index, laboratory maximum dry density and optimum moisture content, and corrosion potential (pH, minimum resistivity, sulfate concentration, and chloride concentration). The laboratory test results were used to develop the soil engineering properties, which are discussed in Section 4.6.

4.0 DISCUSSION OF FINDINGS

The following discussion of findings is based on our observations and the results of the field exploration and laboratory testing programs (Appendix A).

4.1 GEOLOGIC SETTING

The Geologic Map by Thomas W. Dibblee Jr. (1991), as shown on Figure 3 – Geologic Map, indicates the site is underlain by Quaternary alluvium (Qa). The alluvium is described as gravel, sand and clay of valley areas (Dibblee Jr., 1991).

4.2 SITE CONDITIONS

The project site is located on the east side of the Granada Hills Recreation Center. The site is presently developed with an existing swimming pool and a single-story pool house on the west side of the pool. The pool house is not currently being used. The existing pool ranges in depth from 3 feet at the north and south ends to approximately 11 feet deep in the middle portion. The existing pool equipment building, which will remain, is located on the east side of the pool. There is an existing concrete pool deck surrounding the pool and a chain-link fence along the perimeter of the deck. There are several security lights outside of the pool deck area and adjacent to the perimeter fence. There is an existing driveway adjacent and east of the pool area which runs north/south. On the south side of the south perimeter chain-link fence is an existing shade structure which is to remain in place. The site and surrounding areas are relatively flat with an average elevation of approximately 937 feet above mean sea level (NavigateLA).

4.3 Subsurface Conditions

Uncertified fill was encountered in all six HSA borings. The fill thickness varies from approximately 4 to 6 feet below ground surface (bgs). The fill is mostly comprised of poorly graded sand with silt or silty sand, although sandy silt was encountered in HSA-4. Fill indicators including plastic debris, asphalt and brick fragments were observed in the uncertified fill.

The boring logs indicate significant variation in the composition of the native soil, but overall the native soil is mostly fine grained. The upper native soil mostly consists of lean to fat clay; although sandy silt to silt was encountered in HSA-2 and IT-2, it's possible this material may have been classified incorrectly. The clayey soil extends to a depth ranging from approximately 7½ to 15 feet bgs. The underlying soil mostly consists of interbedded silty sand and sandy silt. Refer to the boring logs for additional information.

4.4 Groundwater

Groundwater was not encountered in any of the borings to the maximum explored depth of approximately 31½ feet bgs. Groundwater information obtained from California Department of Conservation, Division of Mines and Geology (DMG, 1998) indicates the shallowest reported historic groundwater depth is on the order of 70 feet bgs. Groundwater levels are expected to fluctuate with seasonal rainfalls, dry weather (i.e. drought conditions), and pumping activities in the vicinity of the site. Nevertheless, groundwater is not expected to affect the proposed project.

4.5 Infiltration Testing

Two borehole infiltration tests were performed to evaluate the feasibility of onsite stormwater infiltration. The infiltration rate was estimated using the general guidelines in the County of Los Angeles, Department of Public Works, Geotechnical and Materials Engineering Division's (2014) Administrative Manual. The infiltration measurements were averaged over a period where a steady-state flow condition was achieved. The adjusted infiltration rates were found to range from approximately 0.05 to 0.07 inch per hour. The feasibility of stormwater infiltration is discussed in Section 6.6 of this report.

These infiltration rates are applicable to conditions near the test well location and between the approximate infiltration depths; however, they should not be considered a guarantee of infiltration conditions at other locations onsite. Minor changes in soil composition can cause significant differences in infiltration rates. The above rates should only be used for design with an understanding of the limitations of the testing method and complexities of subsurface drainage.

4.6 Soil Engineering Properties

Laboratory tests were performed on selected samples to characterize the engineering properties of the fill and native soil. The individual laboratory test results are included in Geocon's data report (Appendix A).

Moisture content and in-situ dry density tests were performed on samples of the native soil to evaluate the total unit weight. The in-situ dry density and moisture content of the native soil was found to range from approximately 86 to 119 pounds per cubic foot (pcf) and 5.8 to 21.6 percent, respectively. The average total unit weight of the native soil was found to range from approximately 99 to 135 pcf with an average value of 125 pcf.

Direct shear tests were performed on three undisturbed samples of the native clayey soil. These materials were sampled at depths between approximately 6 and 11 feet bgs. Based on Geocon's interpretation of the test results, the ultimate friction angle and cohesion value ranges from 24 to 31 degrees and 120 to 520 pounds per square foot (psf), respectively. Based on our interpretation of the test results, the ultimate friction and cohesion value of the native soil is 31 degrees and 100 psf, respectively.

Atterberg Limits tests were performed on four samples of the native clayey soil, which were collected at depths between 5 and 11 feet bgs. The plasticity index (PI) of the native clay was found to range from 17 to 36, with an average of 27. The test results indicate this material has a high shrink-swell potential.

An expansion index (EI) test was performed on the near surface sandy silt (fill material) from HSA-4, and the EI value was found to be 30. The EI value indicates the near surface soil has a low expansion potential.

Finally, a compaction test was performed on a bulk sample of the near surface silty sand (fill material) from HSA-1 to determine the maximum dry density and optimum moisture content. The compaction test results indicate that the optimum moisture content and maximum dry density of this material is approximately 8.0 percent, and 132.0 pcf, respectively.

5.0 SEISMIC CONSIDERATIONS

The following sections present seismic design parameters and discuss seismic hazards for the site.

5.1 2017 LABC Seismic Design Parameters

Seismic design parameters for the project were developed in accordance with the 2017 City of Los Angeles Building Code (2017 LABC). The parameters are based on mapped spectral acceleration values in the 2017 LABC, and the site conditions.

The seismic design parameters for the site are summarized in Table 1.

TABLE 1 – SEISMIC DESIGN PARAMETERS

Parameter	Value	Reference
Site Class	D	ASCE 7-10 Table 20.3-1
S_S	2.301	ASCE 7-10 Figure 22-1
S_1	0.768	ASCE 7-10 Figure 22-2
S_{MS}	2.301	ASCE 7-10 Equation 11.4-1
S_{M1}	1.152	ASCE 7-10 Equation 11.4-2
S_{DS}	1.534	ASCE 7-10 Equation 11.4-3
S_{D1}	0.768	ASCE 7-10 Equation 11.4-4
T_O (seconds)	0.100	ASCE 7-10 Chapter 11
T_S (seconds)	0.501	ASCE 7-10 Chapter 11

The peak ground acceleration (PGA_M) at the site is 0.86g.

5.2 SEISMIC HAZARDS

This section provides the results of our evaluation of earthquake-related geologic/geotechnical hazards for the site, including surface fault rupture, and liquefaction.

5.2.1 Surface Fault Rupture

The project site, as shown on Figure 4 – Seismic Hazard Zones Map, is not located within a State of California Alquist-Priolo Special Study Zone, nor is it located within a City of Los Angeles Fault Rupture Study Zone (NavigateLA). The closest fault is the Northridge Hills Fault, which is approximately 0.7 miles (1.1 km) from the site. Based on this information, the potential for surface fault rupture to occur at the site is considered remote.

5.2.2 Liquefaction

The site is not within a potentially liquefiable zone (see Figure 4). Groundwater was not encountered in our borings to a maximum explored depth of approximately 31½ feet bgs. Furthermore, the historical high groundwater depth is reported to be around 70 feet bgs. Therefore, the potential for liquefaction to occur at the site is considered remote.

6.0 RECOMMENDATIONS

Based on the results of our investigation, the proposed project is considered geotechnically feasible provided the recommendations presented in this report are incorporated into the design and construction. If changes in the design are made, or variations or changed conditions are encountered during construction, GEO should be notified to determine if supplemental recommendations are required.

6.1 EARTHWORK

All earthwork shall be performed in accordance with the geotechnical recommendations presented in this report and the Los Angeles Department of Building and Safety (LADBS), Grading Division requirements. Furthermore, all earthwork shall be performed under GEO's observation.

6.1.1 Site Preparation

Site preparation will initially involve the demolition of the existing swimming pool and concrete deck surrounding the pool. Following demolition, the construction area should be cleared of any vegetation and stripped of miscellaneous debris and other deleterious material. Tree removal, if proposed outside the existing pool deck area, shall include the rootballs and/or root systems. Organic matter and other material that may interfere with construction should be removed. Vegetation and organic matter should not be incorporated into the fill material. Organic rich soil, if present, may be stockpiled for future landscaping. Voids resulting from the demolition shall be backfilled with properly compacted fill (see Section 6.1.5).

Any utilities, whether active or inactive, shall be identified. If required, these utility lines shall be properly abandoned and/or relocated per project plans and specifications. Any depressions resulting from removal of any existing foundations or utility lines shall be properly backfilled and compacted (Section 6.1.6).

6.1.2 Over-Excavation

All existing fill shall be removed beneath the pool. Fill removal is also required beneath the shade structure if it is supported on shallow foundations.

The existing soil beneath the proposed pool shall be excavated to the design subgrade elevation or to expose native soil, whichever is greater. An additional removal of 12 inches shall be performed such that the pool bottom is underlain by at least 12 inches on non-expansive compaction fill. Lateral over-excavation beyond the limits of the pool is not required.

If the shade structure is supported on shallow foundations, the over-excavation and replacement shall result in at least 30 inches of compacted fill beneath the bottom of footing(s). This 30 inches includes the subgrade preparation. The excavation shall extend laterally at least 24 inches beyond the edges of the footings.

Existing fill may be left in-place beneath non-structural footings and the new pool deck. The earthwork beneath non-structural footings, including the subgrade preparation (see Section 6.1.3), shall result in at least 24 inches of compacted fill below the bottom of footing. The excavation shall extend laterally beyond the footing a distance of 2 feet or to the property boundary, whichever is less. The new pool deck shall be underlain by at least 18 inches of compacted fill, which includes the subgrade preparation (see Section 6.1.3).

6.1.3 Subgrade Preparation and Stabilization

Excavation bottoms shall be scarified at least 6 inches, moisture conditioned to within 3 points above the optimum moisture content, and compacted to a minimum 90 percent relative compaction (RC), as determined by ASTM D1557. All excavation bottoms shall be observed, tested, and approved by a representative of GEO and the LADBS Grading Inspector prior to placement of fill.

We were unable to advance a boring in the deeper portion of the existing pool; however, based on our experience from other similar pool reconstruction projects, we expect the fine grained soils in the deeper portions to be soft and yielding. They are likely to exhibit moisture contents significantly higher than the optimum value in terms of relative compaction. If soft and yielding conditions are encountered, the bottom shall be excavated an additional 12 inches. This 12-inch thick removal is separate and in addition to the over-excavation discussed in Section 6.1.2. The "new" bottom shall be lined with Mirafi 600X or approved equal stabilization geotextile. A 12-inch thick layer of ¾-inch to 1-inch crushed rock shall be placed on top of stabilization geotextile. The top of the crushed rock layer shall be covered with Mirafi 140N or approved equal filter cloth.

6.1.4 Temporary Excavations

Based on our observations during subsurface investigation and results of laboratory tests, the materials at the site should be readily excavated by conventional earthmoving equipment in good operating condition. All temporary excavations shall conform to the State of California Construction Safety Orders (CAL/OSHA).

Unsurcharged vertical excavations shall not exceed 5 feet. Unsurcharged excavations greater than 5 feet and to a maximum of 10 feet shall be sloped at a 1:1 (H:V) or flatter inclination from the ground surface to the bottom of the excavation. Excavations greater than 10 feet high shall be sloped at 1.5:1 (H:V).

6.1.5 Fill Materials and Placement

The existing native clay shall not be reused as compacted fill. It should be removed from the job site or placed in landscaped areas. The remaining onsite fill and native soil is suitable for reuse provided it is free of organic material, debris, and does not contain fragments greater than 3 inches in maximum dimension. Drying of wet site soils or mixing of these soils with dryer soils may be required prior to being used as compacted fill.

Import fill may also be used instead of the native soil. Import fill material shall be predominantly granular (minimum 80% passing number 4 sieve and between 10% and 35% passing the number 200 sieve), and non-expansive (EI less than 25). Also, the import fill material shall be free of organic or inorganic debris, contamination and materials with any dimension larger than 3 inches. Import material shall be reviewed for approval by GEO prior to importing to the job site. GEO shall be notified a minimum of three working days prior to scheduled importing of soil to the project site.

Fill material shall be placed in loose lifts not exceeding 8 inches in thickness, moisture conditioned to within 3 percent above optimum, and mechanically compacted.

Primary structural fill shall be compacted to at least 95 percent RC, as determined by ASTM D1557. 90 percent RC is acceptable if the results of a hydrometer test indicate the actual fill material contains at least 15% finer than 0.005 mm sieve. Non-structural (i.e. secondary) fill shall be compacted to a minimum of 90 percent RC.

Fill placement and compaction shall be observed and tested by GEO. Compacted fill soils shall be kept moist (at or slightly above the specified moisture content at the time of compaction), but not flooded, until covered with subsequent construction. If compacted fill becomes disturbed, it shall be reworked or removed and replaced. Certification and inspection approvals for compromised soils are void and invalid.

6.1.6 Utility Trench Backfill

Trench excavations for utility pipes may be backfilled with non-expansive onsite soils under the observation of a representative of GEO. After utility pipes have been laid, properly bedded, and covered per the project specifications, they shall be backfilled to the ground surface or design subgrade with controlled backfill. Controlled backfill shall be moisture conditioned, placed and compacted in accordance with the recommendations presented in Section 6.1.5 of this report. Densification by flooding or jetting is not allowed.

6.1.7 Fill Certification

Upon successful completion of fill placement and compaction, GEO will issue a Compaction Certification for the fill. Unless approved by the Building Inspector during construction, the Contractor shall not pour footings until an approval letter is issued by the LADBS, Grading Division for the Compaction Certification. The contractor may excavate in compacted fill for foundation elements before the fill certification approval letter is issued, but does so at his/her own risk.

6.2 Shallow Foundations

The shade structure may be supported on shallow foundations. Recommendations for bearing capacity and settlement and lateral load resistance are provided in the following sections.

6.2.1 Bearing Capacity and Settlement

Continuous and isolated footings shall bear entirely upon at least 30 inches of compacted fill. Continuous footings shall be at least 18 inches wide, and isolated footings shall be at least 24 inches wide. All footings shall be embedded at least 24 inches below lowest adjacent grade.

Footings may be designed using an allowable (net) bearing capacity of 2,500 psf, which applies to combined dead and sustained live loads. It may be increased by ⅓ when considering transient live loads, including wind and seismic forces.

Based on the allowable bearing value recommended above, total static settlement of the shallow footings is anticipated to be less than 1-inch. Differential settlement is expected to be less than ½-inch.

6.2.2 Lateral Load Resistance

Lateral load resistance for footings will be developed by passive soil pressure against the sides of the footing and by friction acting at the base of the footing. An allowable passive pressure of 275 psf per foot of depth, beginning from 1 foot below the lowest adjacent grade, may be used for design purposes. An allowable passive pressure of 275 psf per foot of depth, beginning from the ground surface, may be used if the footing is located adjacent to an exterior slab or paved surface. The allowable passive pressure is only applicable for level (ground slope equal to or flatter than 5:1) conditions. An allowable coefficient of friction of 0.35 may be used for dead and sustained live loads for frictional resistance of the footings constructed directly on compacted fill. A safety factor of 1.5 has been incorporated into both the allowable passive and frictional resistance values. The passive pressure and frictional resistance may be increased by ⅓ under seismic and wind loading conditions.

6.3 Deep Foundations Alternative for Shade Structure

Shade structures may be supported on cast-in-drilled-hole (CIDH) piles as an alternative to shallow foundations. Recommendations for design and construction are provided in the following sections. It is important to note that the CIDH pile recommendations in the following sections are based on an assumed fill thickness of 6 feet.

6.3.1 Axial Capacity in Compression

The minimum pile diameter and pile spacing shall be 24 inches and 3 pile diameters, respectively. Axial compression capacities are presented on Figure 5 for 24-inch and 30-inch diameter CIDH piles. The minimum pile embedment depth shall be 9 feet below the lowest adjacent grade, and at least 3 feet into native soil, whichever is greater. The actual depths may be deeper and will also depend on the required lateral and tensile loads.

The axial compression capacities presented on Figure 5 assume the piles develop their capacity solely from skin friction or side resistance. As shown on Figure 5, no skin friction was derived from the existing uncertified fill.

The total settlement for each pile is not expected to exceed ½-inch provided the piles are properly constructed (see Section 6.3.4).

6.3.2 Axial Capacity in Tension

The allowable axial tensile capacity may be assumed to be ½ the axial capacity in compression for the 24-inch and 30-inch diameter CIDH piles (Figure 5). The weight of the concrete shaft may be added to the tensile capacity.

6.3.3 Lateral Load Behavior

The lateral load behavior of the CIDH piles was evaluated using using the LPILE (Ensoft, 2013) software program. LPILE (2013) uses load deflection (p-y) curves to approximate the relationship between soil resistance and pile deflection. The lateral load behavior was evaluated for both a free head deflection of ½-inch and a fixed head deflection of ½-inch. Also, we assumed a perfectly elastic pile and a cracked section. The modulus of elasticity for the cracked section was estimated to be 1802500 pounds per square inch (i.e. FS = 2).

The main inputs in the LPILE software for each soil layer are the unit weight and soil shear strength. For the selection of p-y curves, the fill was assumed to behave as "sand" with a total unit weight of 98 pcf, effective friction angle of 20 degrees, and no cohesion. A request for modification of building ordinances for deriving lateral support from the existing undocumented fill will be submitted concurrently with this report. The existing native soil below 6 feet was assumed to behave as "sand" with a total unit weight of 125 pcf, an effective friction angle of 33 degrees, and no cohesion. The results of the LPILE analyses are summarized on Figures 6 through 9.

6.3.4 CIDH Pile Construction

We expect the CIDH piles can be drilled using conventional equipment. Caving conditions are not anticipated; however, if it occurs during pile drilling, steel casing shall be used to support the sides of the pile excavations. The inside diameter of the steel casing shall be at least as large as the diameter of the piles. Drilling shall be completed within the casing.

The contractor shall remove loose soil (i.e. slough) from the bottom of the pile excavation. The drilled holes shall be plumb to within a tolerance of 2 percent. Upon completion of drilling, secure covers shall be placed over the excavations. Concrete placement shall be completed within 12 hours of drilling and drilled holes shall not be left open overnight. CIDH pile excavations shall be observed and approved by GEO.

6.4 Pool Shell

The bottom of the pool shall be entirely underlain by at least 12 inches of non-expansive primary structural fill. The pool shall be designed in accordance with the LADBS requirements, as outlined in LADBS Information Bulletin P/BC 2014-014. To mitigate the effects of total and differential settlement beneath the pool, we recommend the pool shell be designed as a rigid unit that will resist cracking.

The pool walls shall be designed to retain the surrounding soil using an equivalent "at-rest" fluid pressure of 75 pounds per cubic foot (pcf). The recommended lateral earth pressure value assumes that the surface of the backfill behind the pool shell is close to horizontal (inclination of 5:1 or flatter). The foregoing lateral earth pressure accounts for the expansive alluvium on the sides of the pool walls.

If surcharge loads (live or dead) are applied, they should be added to the at-rest earth pressure by applying a uniform (rectangular) pressure. The lateral earth pressure coefficient for a uniform vertical surcharge load this is applied behind the pool walls is 0.46 for an at-rest condition.

Based on LADBS requirements, seismically induced pressures are required for retaining walls higher than 6 feet. The seismically induced increment for pool walls higher than 6 feet was estimated using the provisional recommendations by Lew et al. (2010) and the Mononobe-Okabe (M-O) method. The horizontal acceleration used in the (M-O) method, k_h, was assumed to be 1/3 of the PGA_M. The PGA_M at the project site is equal to 0.86g; therefore, k_h, was assumed to be 0.29g. Also, a total unit weight of 125 pcf was assumed for the site soil. The total active pressure during the earthquake, P_{AE}, was calculated to be 63 pcf. The static active and at-rest were calculated to be 31 and 57 pcf, respectively.

According to Lew et al. (2010), if a seismic earth pressure increment is determined using the M-O method, it should be added to the active earth pressure and not to the at-rest pressure. Thus, we subtracted the at-rest pressure (57 pcf) from P_{AE} (63 pcf), which results in a seismically induced increment of 6 pcf. For design purposes, we recommend using a minimum value of 10 pcf. The seismic earth pressure increment should be applied as a triangular pressure distribution and not an inverted triangular distribution

6.5 Non-Structural Foundations

Spread footing foundations are suitable for support of non-structural foundations, including fences, planter walls, and accessory walls less than 8 feet high. All footings shall be embedded at least 18 inches below the lowest adjacent grade. Continuous footings shall have a minimum width of 12 inches and isolated footings shall have a minimum width of 24 inches. Footings may be designed for an allowable bearing capacity of 1,500 pounds per square foot (psf). Bearing values indicated above are for total dead-load and frequently applied live-loads. The above vertical bearing may be increased by one-third for short durations of loading which will include the effect of wind or seismic forces. Lateral load recommendations are provided in Section 6.2.2 of this report.

6.6 Feasibility of Stormwater Infiltration

Based on the results of two infiltration tests (Appendix B) and the guidelines presented in the City of Los Angeles Low Impact Development Best Management Practices Handbook (2011), the project site can be classified as a Category 3 or "Infeasible" for onsite infiltration. GEO is of the opinion that it onsite stormwater infiltration may be feasible within some of the native silty to clayey sand; however, additional testing would be required to confirm this.

6.7 Corrosion and Sulfate Attack Resistance

Chemical analyses including, pH, minimum resistivity, chloride, and sulfate content tests were performed on two samples; a sample of the fat clay alluvium from HSA-1 and the sandy silt alluvium from HSA-2. The results of the tests are presented in Appendix A.

The soil pH ranged from 8.0 to 8.4, the minimum resistivity ranged from 940 to 1200, and the chloride concentration ranged from 90 to 160 ppm. Caltrans (2012) considers a soil to be corrosive if one or more of the following conditions exist:

- Chloride concentration is 500 ppm or greater;
- Sulfate concentration is 2,000 ppm or greater;
- pH is 5.5 or less.

Based on Caltran's (2012) criteria, the onsite native soil is not corrosive when in contact with ferrous metals. According to criteria by other agencies such as NAVFAC, however, the onsite soils may be classified as very to severely corrosive. If desired or required, a corrosion specialist should be consulted regarding selection of construction materials and/or protective design. The results of the sulfate concentration tests indicate that, based on the American Concrete Institute (ACI, 2008) criteria, these soils have negligible sulfate attack potential on concrete. Refer to ACI 318-08 for appropriate concrete mix design.

7.0 SUPPLEMENTAL GEOTECHNICAL SERVICES

7.1 REVIEW OF PLANS AND SPECIFICATIONS

The grading plans and specifications should implement the recommendations presented in this report and should be reviewed by GEO to ensure proper interpretation and application of our recommendations.

7.2 GEOTECHNICAL OBSERVATION AND TESTING DURING CONSTRUCTION

All grading, excavation, and construction of foundations should be performed under the observation and testing of the Geotechnical Engineer at the following stages:

- During demolition and backfill of the existing pool;
- During site and new pool excavation;
- During subgrade preparation;
- During fill placement and compaction;
- During pile drilling and prior to placement of concrete;
- During footing excavation(s) and immediately prior to placement of foundation and/or pool concrete
- During excavation and backfilling of all utility trenches; and
- When any unusual or unexpected geotechnical conditions are encountered.

8.0 CLOSURE

Dear Mr. Schmidt:

In accordance with your authorization of our proposal dated May 8, 2017, we have prepared this geotechnical data report for the Granada Hills Pool Replacement project in the City of Los Angeles, California. The accompanying report presents information regarding the geotechnical site investigation and laboratory testing programs, and results of the laboratory tests.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOTECHNICAL SITE INVESTIGATION

1. PURPOSE AND SCOPE

This geotechnical data report presents information regarding the geotechnical site investigation, laboratory testing programs, and results of the laboratory tests for the Granada Hills Pool Replacement Project located in the City Los Angeles, California (see Vicinity Map, Figure 1). The purpose of the geotechnical site investigation was to evaluate subsurface soil and geologic conditions underlying the site.

The project consists of demolishing the existing swimming pool and constructing a new swimming pool, a new pool deck, a diving platform, shade canopies, and other site improvements.

2. SUBSURFACE EXPLORATION

The scope of our geotechnical site investigation included a site reconnaissance, field exploration, laboratory testing, and the preparation of this data report. The site was explored on June 19, 2017, by excavating six 8-inch diameter borings utilizing a truck mounted hollow-stem auger drilling machine. The borings were excavated to depths between approximately 5 and 31½ feet below the existing ground surface. In addition, percolation testing for the design of a stormwater infiltration system was performed in borings IT-1 and IT-2 on June 20, 2017. The approximate locations of the exploratory borings are depicted on the Field Exploration Location Map (see Figure 2). A detailed discussion of the field investigation, including the boring logs, is presented in Appendix A.

Organic Vapor Analyzer (OVA) readings were obtained at each sample depth during the boring excavation. The OVA readings, which measure volatile organic compounds, are included in the borings logs.

3. LABORATORY TESTING

Laboratory tests were performed on selected undisturbed and remolded samples obtained during the investigation to determine pertinent physical soil properties as directed by the City of Los Angeles, Geotechnical Engineering Group (GEO). The requested testing included the following;

- In-situ Dry Density and Field Moisture (ASTM D2937)
- Atterberg Limits (ASTM D4318)
- Expansion Index (ASTM D4829)
- Grain Size Distribution (ASTM D6913)
- Grain Size Analysis/Fines Content (ASTM D422)
- Direct Shear (ASTM D3080)
- Laboratory Maximum Dry Density and Optimum Moisture Content (ASTM D1557)
- Corrosion Potential (pH, Minimum Resistivity, Sulfate Concentration and Chloride Concentration)

The in-situ dry density and field moisture content were determined from the sample prior to performing other tests whenever possible, and are reported to the nearest 0.1 pounds per cubic foot for the dry density, and 0.1 percent for the moisture content.

Each soil sample for direct shear testing, for both the undisturbed soil samples and remolded sample, was soaked for at least 24 hours prior to performing testing. The samples were tested at varying normal loads while fully submerged in water, with one sample utilized for each normal load.

Appendix B presents a summary of the laboratory test results.

4. INFILTRATION TESTING

During the June 19, 2017 site exploration, borings IT-1 and IT-2 were utilized to perform percolation testing. The borings were advanced to the depths listed in the table below. Slotted casings were placed in the borings, and the annular space between the casing and excavation was filled with filter pack. The borings were then filled with water to pre-saturate the soils. On June 20, 2017, the casings were refilled with water and percolation test readings were performed after repeated flooding of the cased excavations. Based on the test results, the field-measured percolation rate and the design infiltration rate are provided in the following table. The Reduction Factor (Rf), to convert the field-measured percolation rate to an infiltration rate, is also shown in the table below. This value has been calculated in accordance with the Boring Percolation Test Procedure in the County of Los Angeles Department of Public Works GMED Guidelines for Design, Investigation, and Reporting Low Impact Development Stormwater Infiltration (December 2014).

Boring	Infiltration Depth (ft)	Measured Percolation Rate (in / hour)	Reduction Factor (Rf)	Design Infiltration Rate (in / hour)
IT-1	2-5	0.48	10.12	0.05
IT-2	5-10½	1.26	17.51	0.07

APPENDIX A

FIELD INVESTIGATION

The site was explored on June 19, 2017, by excavating six 8-inch diameter borings utilizing a truck-mounted hollow-stem auger drilling machine. The borings were excavated to depths between approximately 5 and 31½ feet below the existing ground surface. Representative and relatively undisturbed samples were obtained by driving a 3-inch-O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch high by 2⅜-inch diameter brass sampler rings to facilitate removal and testing. Bulk samples of the upper 5 feet of soil from borings were also obtained.

The soils encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The boring logs are presented on Figures A1 through A6. The log depicts the soil and geologic conditions encountered and the depth at which samples were obtained. The approximate locations of the borings are shown on the Field Exploration Location Map (see Figure 2).

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear, consolidation, expansion potential, Atterberg limits, fines content, grain size distribution, corrosivity, in-place dry density and moisture content, and maximum dry density and optimum moisture content. The results of the laboratory tests are summarized in Figures B1 through B14. The in-place dry density and moisture content of the samples tested are presented in the boring logs, Appendix A.

SUPPLEMENTAL GEOTECHNICAL REPORT – GRANADA HILLS POOL REPLACEMENT PROJECT
16730 CHATSWORTH STREET
LOS ANGELES, CALIFORNIA
W.O. E170517A **GED FILE NO. 17-074**

INTRODUCTION

The Los Angeles Department of Public Works, Bureau of Engineering, Geotechnical Engineering Division (GED) has prepared this report to provide supplemental recommendations for the project. The GED previously prepared a geotechnical engineering report dated August 22, 2017, which was approved by the Los Angeles Department of Building and Safety (LADBS), Grading Division on November 9, 2017 (Log Number 100428). All previous recommendations for the project remain applicable, except those specifically modified herein.

PROJECT DESCRIPTION

At the time our original report was prepared, the project included demolishing and replacing the existing pool. The project also included a new pool deck, diving platform, shade structure and other improvements. The proposed project has expanded now includes the construction of several additional structures and improvements. A copy of the most recent site plan, Sheet A1.10, is attached to this report for reference. The additional structures and improvements include:

- Replacement of an existing pool equipment building on the east side of the proposed pool. The surge chamber for the pool will be incorporated into the pool equipment building. We understand the building will contain a sump pit and surge chamber. The sump pit and surge chamber will extend approximately 6 and 10 feet below grade, respectively.

- A concrete ramp on the south side of the pool equipment building.

- A splash pad and surge chamber for the splash pad on the north side of the proposed pool.

- A new lifeguard room addition on the east side of the existing bathhouse. The addition will be about 20 feet long by 10 feet wide.

- Photovoltaic (PV) panels on the north and south sides of the pool. The PV panels will be supported on cast-in-drilled-hole (CIDH) piles.

- Security light poles; one near each of the four corners of the pool.

- Asphalt concrete (AC) pavement on the east side of the proposed splash pad.
- Portland Cement Concrete (PCC) concrete driveway on the north side of the proposed pool equipment building.

SUBSURFACE CONDITIONS

As discussed in the original geotechnical report, uncertified fill was encountered in all six exploratory borings. The fill thickness varies from approximately 4 to 6 feet below ground surface (bgs). The fill is mostly comprised of poorly graded sand with silt or silty sand, although sandy silt was encountered in one of the borings (HSA-4). Fill indicators including plastic debris, asphalt and brick fragments were observed in the uncertified fill. The boring logs indicate significant variation in the composition of the native soil, but overall the native soil is mostly fine grained. The upper native soil mostly consists of lean to fat clay.

RECOMMENDATIONS

Supplemental recommendations are provided in the following sections for earthwork, temporary shoring, shallow foundations, CIDH pile foundations for the proposed PV panels, retaining walls, and preliminary pavement design.

Earthwork

Pool Equipment Building: Footings may be embedded into native soil and/or compacted fill. If the footings are supported on compacted fill, the compacted fill thickness shall be at least 30 inches below the bottom of footing. The excavation shall extend laterally at least ½ the vertical over-excavation depth beyond the edge of the building. Lateral over-excavation is not required for footings embedded into native soil. All existing uncertified fill shall be removed beneath interior concrete slabs and replaced with compacted secondary fill.

Lifeguard Room Addition (E side of Existing Bathhouse): Footings shall be embedded into native soil; therefore, over-excavation is not required. All existing uncertified fill shall be removed beneath the interior concrete slab-on-grade.

Splash pad, Concrete Ramp and Pavement Areas: The existing fill shall be removed to a depth of at least 24 inches below existing grade or finished subgrade, whichever is greater. The vertical over-excavation shall result in at least 24 inches of compacted fill beneath the slab or pavement section. The excavation shall extend laterally at least 2 feet beyond the edges of the concrete slab / pavement.

PV Panels: We anticipate these structures will be supported on CIDH piles; over-excavation is not required in these areas.

Temporary Shoring

Cantilever or braced shoring may be considered at this site as an alternative to temporary excavations. The maximum retained height for a cantilever shoring system shall not exceed 15 feet. All shoring systems shall be designed such that the maximum deflection does not exceed ½-inch. Box shoring, trench shields, and/or speed shores may only be used at the discretion of the GED.

Prior to excavation, it is recommended that walls, structures, or portions of structures within a horizontal distance of 1½ times the depth of the excavation be inspected to determine their present condition. For documentation purposes, photographs should be taken of preconstruction conditions and level surveys should be performed.

During construction, deflection of the shoring system shall be monitored initially on a frequent basis until it can be demonstrated that adjacent structures are not adversely impacted. At that time, less frequent monitoring can be performed. In addition, structures should be periodically monitored for signs of distress. In the event that distress is observed, the GED shall be contacted immediately to provide supplemental recommendations.

Lateral Earth Pressures

Cantilever or braced shoring shall be designed for the lateral earth pressures shown on Figure 1. These values are based on the assumption that (1) the shored soil material is level at ground surface, (2) the exposed height of the shoring is no greater than 15 feet, and (3) the shoring is temporary, and will not be required to support the soil longer than about six months. Surcharge coefficients of 0.31 and 0.47 may be used with uniform vertical surcharges for cantilever and braced shoring lateral earth pressures, respectively. These surcharge pressures should be added to the lateral earth pressures.

Soldier Piles and Lagging Design

Drilled holes for soldier piles shall be backfilled with Controlled Low Strength Material (CLSM) per Greenbook Section 201, from the bottom of lagging (i.e. proposed excavation depth) to the ground surface. The CLSM shall contain a minimum of one sack of Portland cement per cubic yard of slurry and a maximum of two sacks of Portland cement per cubic yard of slurry. Drilled holes below the excavation bottom shall be backfilled with structural concrete. To reduce the potential for sloughing and caving of the soils, continuous lagging shall be installed between the soldier piles. All lumber shall be pressure-treated in accordance with Specification C-2 of the American Wood Preservers Association.

Shallow Foundations

The shallow foundation recommendations provided in the original geotechnical report for footings underlain by at least 30 inches of compacted fill remain applicable.

Footings embedded at least 6 inches into firm and unyielding native soil may be designed for a net allowable bearing capacity of 2,000 pounds per square foot (psf). The net allowable bearing capacity values apply to combined dead and sustained live loads. A 1/3 increase may be used for short term loading conditions such as wind or seismic forces.

The total settlement beneath each structure is not expected to exceed 1-inch. The differential settlement is not expected to exceed ½-inch.

CIDH Pile Foundations – PV Canopies

All recommendations provided in Section 6.3 of the original report remain applicable, except for Section 6.3.3.

Lateral Load Behavior

The lateral load behavior of the CIDH piles was evaluated using the LPILE (Ensoft, 2016) software program. The lateral load was evaluated for a free head condition based on an acceptable deflection criterion of ½-inch at the pile head. We assumed a concrete compressive strength of 3,000 psi for our analyses. LPILE analyses were performed for the following loading conditions, which were provided to us by the structural engineer:

Loading Condition	Shear (kips)	Moment (kip-ft)	Steel Reinforcement (%)	Pile Length (ft)
Canopy 1	4030	16.8	0.58	10
Canopy 2 "Case A"	8028	28.7	0.78	12
Canopy 2 "Case B"	7883	33.6	0.88	12

The results of our LPILE analyses are attached to this report. The results indicate the deflection is ½-inch or less for all three cases; therefore, we consider the designs to be acceptable from a geotechnical standpoint.

Retaining Walls

Lateral Earth Pressures

The lateral earth pressure recommendations provided in Section 6.4 of the original report remain applicable for the below-grade "restrained" walls associated with the new pool equipment building.

Site retaining walls, which are free to rotate at the top (i.e. cantilever), shall be designed to withstand an equivalent active fluid pressure of 40 pcf. This recommended lateral earth pressure of 40 pcf assume: 1) the surface of the backfill behind the walls is close to horizontal (inclination of 5:1 or flatter), 2) the backfill will be non-expansive, and 3) there will be no hydrostatic pressure buildup behind the wall. Care should be exercised to prevent infiltration of surface water behind all site retaining walls.

If surcharge loads (live or dead) are applied, they should be added to the lateral earth pressures above by applying a uniform (rectangular) pressure. Surcharge coefficients of 0.31 and 0.47 may be used with uniform vertical surcharges for active and at-rest conditions, respectively. These surcharge pressures should be added to the lateral earth pressures provided above.

The seismically induced pressure recommendations for a restrained condition, as provided in Section 6.4 of the original report, remain applicable for the pool equipment building walls. Cantilever walls greater than 6 feet high are not anticipated; therefore, these walls do not need to be designed for a seismic earth pressure(s).

Preliminary Pavement Design

R-value tests were not performed on the upper soils as part of the original geotechnical investigation. The recommendations provided in this section assume the upper soils consist of sand to silty sand material, as shown on the boring logs for HSA-1 and HSA-2. We assumed an R-value of 35 for our analyses. We recommend samples of the prepared subgrade be collected and tested following grading to confirm the pavement design sections herein are applicable. *All pavement sections shall be underlain by at least 24 inches of subgrade soil that has been compacted to a minimum of 95 percent RC.* All crushed aggregate base (CAB) and/or crushed miscellaneous base (CMB) shall be compacted to at least 95 percent RC. Recommendations for asphalt and Portland cement concrete pavement design sections are presented below.

Preliminary Asphalt Pavement Sections

The traffic indexes (TIs) were not provided to us at the time of the report. Preliminary pavement sections were calculated for the range of traffic indexes shown in the table below. The recommended conventional flexible pavement layer thicknesses are as follows.

ASPHALT PAVEMENT SECTION LAYER THICKNESSES (INCHES) – OPTION 1

Layer	Traffic Index = 5.0	Traffic Index = 6.0	Traffic Index = 7.0	Traffic Index = 8.0	Traffic Index = 9.0
Asphalt Concrete Surface	2.0	3.0	3.5	4.0	4.5
CAB / CMB	6.5	7.5	9.0	11.0	12.5

ASPHALT PAVEMENT SECTION LAYER THICKNESSES (INCHES) – OPTION 2

Layer	Traffic Index = 5.0	Traffic Index = 6.0	Traffic Index = 7.0	Traffic Index = 8.0	Traffic Index = 9.0
Asphalt Concrete Surface	2.5	3.5	4.0	4.5	5.0
CAB / CMB	5.5	6.0	8.0	10.0	12.0

CAB, CMB, and asphalt concrete shall conform to Sections 203 and 302 of the latest edition of the Standard Specifications for Public Works Construction ("Greenbook").

Portland Cement Concrete Pavement

Portland cement concrete (PCC) pavement may be used as an alternative to AC. For TIs up to and including 7, a section of 6 inches of PCC over 12 inches of CAB/CMB is recommended. For TIs of 8 and 9, the PCC section should be increased to 7 and 8 inches, respectively. The Portland Cement Concrete should have a minimum modulus of rupture of 650 psi at 28 days.

Site Drainage

All pavement areas shall be designed for a minimum surface gradient of at least 1 percent and all flow lines should have gradients of 2 percent in order to prevent water percolation through the pavement and subsequent saturation of the subgrade. It would be desirable to locate the flow lines away from high traffic areas.

CLOSURE

If you have any questions about this report, please contact Easton Forcier at (213) 847-0476.

Problem Title

Project Name: Strathern Park North Baseball Fields

Job Number: 14-090

Client:

Engineer: Easton

Description: Baseball Field Light Pole Foundations

Program Options and Settings

Computational Options:
- Use unfactored loads in computations (conventional analysis)

Engineering Units Used for Data Input and Computations:
- US Customary System Units (pounds, feet, inches)

Analysis Control Options:

- Maximum number of iterations allowed	=	500
- Deflection tolerance for convergence	=	1.0000E-05 in
- Maximum allowable deflection	=	100.0000 in
- Number of pile increments	=	100

Loading Type and Number of Cycles of Loading:
 - Static loading specified

 - Use of p-y modification factors for p-y curves not selected
 - No distributed lateral loads are entered
 - Loading by lateral soil movements acting on pile not selected
 - Input of shear resistance at the pile tip not selected
 - Computation of pile-head foundation stiffness matrix not selected
 - Push-over analysis of pile not selected
 - Buckling analysis of pile not selected

Output Options:
 - Output files use decimal points to denote decimal symbols.
 - Values of pile-head deflection, bending moment, shear force, and
   soil reaction are printed for full length of pile.
 - Printing Increment (nodal spacing of output points) = 1
 - No p-y curves to be computed and reported for user-specified depths
 - Print using wide report formats

Pile Structural Properties and Geometry

Number of pile sections defined = 1
Total length of pile = 10.000 ft
Depth of ground surface below top of pile = 0.0000 ft

Pile diameters used for p-y curve computations are defined using 2 points.

p-y curves are computed using pile diameter values interpolated with depth over the length of the pile. A summary of values of pile diameter vs. depth follows.

Point No.	Depth Below Pile Head feet	Pile Diameter inches
1	0.000	24.0000
2	10.000	24.0000

Input Structural Properties for Pile Sections:

Pile Section No. 1:

Section 1 is a round drilled shaft, bored pile, or CIDH pile

Length of section	=	10.000000 ft
Shaft Diameter	=	24.000000 in
Shear capacity of section	=	0.0000 lbs

Ground Slope and Pile Batter Angles

Ground Slope Angle	=	0.000 degrees
	=	0.000 radians
Pile Batter Angle	=	0.000 degrees
	=	0.000 radians

Soil and Rock Layering Information

The soil profile is modelled using 2 layers

Layer 1 is sand, p-y criteria by Reese et al., 1974

Distance from top of pile to top of layer	=	0.0000 ft
Distance from top of pile to bottom of layer	=	6.000000 ft
Effective unit weight at top of layer	=	98.000000 pcf
Effective unit weight at bottom of layer	=	98.000000 pcf
Friction angle at top of layer	=	20.000000 deg.
Friction angle at bottom of layer	=	20.000000 deg.
Subgrade k at top of layer	=	0.0000 pci
Subgrade k at bottom of layer	=	0.0000 pci

NOTE: Default values for subgrade k will be computed for this layer.

Layer 2 is cemented silt with cohesion and friction

Distance from top of pile to top of layer	=	6.000000 ft
Distance from top of pile to bottom of layer	=	12.000000 ft
Effective unit weight at top of layer	=	125.000000 pcf
Effective unit weight at bottom of layer	=	125.000000 pcf
Undrained cohesion at top of layer	=	100.000000 psf
Undrained cohesion at bottom of layer	=	100.000000 psf
Friction angle at top of layer	=	31.000000 deg.
Friction angle at bottom of layer	=	31.000000 deg.

Epsilon-50 at top of layer = 0.0000
Epsilon-50 at bottom of layer = 0.0000
Subgrade k at top of layer = 0.0000 pci
Subgrade k at bottom of layer = 0.0000 pci

NOTE: Default values for Epsilon-50 will be computed for this layer.
NOTE: Default values for subgrade k will be computed for this layer.

(Depth of the lowest soil layer extends 2.000 ft below the pile tip)

Summary of Input Soil Properties

Layer Num.	Soil Type Name (p-y Curve Type)	Layer Depth ft	Effective Unit Wt. pcf	Undrained Cohesion psf	Angle of Friction deg.	E50 or kpy krm pci
1	Sand	0.00	98.0000	--	20.0000	--
	default					
	(Reese, et al.)	6.0000	98.0000	--	20.0000	--
	default					
2	Cemented	6.0000	125.0000	100.0000	31.0000	default
	default					
	Silt	12.0000	125.0000	100.0000	31.0000	default
	default					

Static Loading Type

Static loading criteria were used when computing p-y curves for all analyses.

Pile-head Loading and Pile-head Fixity Conditions

Number of loads specified = 1

Load No.	Load Type	Condition 1	Condition 2	Axial Thrust Force, lbs	Compute Top y vs. Pile Length
1	1	V = 4030. lbs	M = 201600. in-lbs	0.0000000	No

V = shear force applied normal to pile axis
M = bending moment applied to pile head
y = lateral deflection normal to pile axis
S = pile slope relative to original pile batter angle
R = rotational stiffness applied to pile head
Values of top y vs. pile lengths can be computed only for load types with specified shear loading (Load Types 1, 2, and 3).
Thrust force is assumed to be acting axially for all pile batter angles.

Computations of Nominal Moment Capacity and Nonlinear Bending Stiffness

---

Axial thrust force values were determined from pile-head loading conditions

Number of Pile Sections Analyzed = 1

Pile Section No. 1:

Dimensions and Properties of Drilled Shaft (Bored Pile):

Length of Section	= 10.000000	ft
Shaft Diameter	= 24.000000	in
Concrete Cover Thickness	= 3.000000	in
Number of Reinforcing Bars	= 6	bars
Yield Stress of Reinforcing Bars	= 60000.	psi
Modulus of Elasticity of Reinforcing Bars	= 29000000.	psi
Gross Area of Shaft	= 452.389342	sq. in.
Total Area of Reinforcing Steel	= 2.640000	sq. in.
Area Ratio of Steel Reinforcement	= 0.58	percent
Edge-to-Edge Bar Spacing	= 7.875000	in
Maximum Concrete Aggregate Size	= 0.750000	in
Ratio of Bar Spacing to Aggregate Size	= 10.50	
Offset of Center of Rebar Cage from Center of Pile	= 0.0000	in

Axial Structural Capacities:

Nom. Axial Structural Capacity = 0.85 Fc Ac + Fy As = 1305.261 kips
Tensile Load for Cracking of Concrete = -171.697 kips
Nominal Axial Tensile Capacity = -158.400 kips

Reinforcing Bar Dimensions and Positions Used in Computations:

Bar Number	Bar Diam. inches	Bar Area sq. in.	X inches	Y inches
1	0.750000	0.440000	8.625000	0.00000
2	0.750000	0.440000	4.312500	7.469469
3	0.750000	0.440000	-4.312500	7.469469
4	0.750000	0.440000	-8.625000	0.00000
5	0.750000	0.440000	-4.312500	-7.469469
6	0.750000	0.440000	4.312500	-7.469469

NOTE: The positions of the above rebars were computed by LPile

Minimum spacing between any two bars not equal to zero = 7.875 inches
between bars 4 and 5.

Ratio of bar spacing to maximum aggregate size = 10.50

Concrete Properties:

Compressive Strength of Concrete = 3000. psi
Modulus of Elasticity of Concrete = 3122019. psi
Modulus of Rupture of Concrete = -410.791918 psi
Compression Strain at Peak Stress = 0.001634
Tensile Strain at Fracture of Concrete = -0.0001160
Maximum Coarse Aggregate Size = 0.750000 in

Number of Axial Thrust Force Values Determined from Pile-head Loadings = 1

Number	Axial Thrust Force kips
1	0.000

Definitions of Run Messages and Notes:

C = concrete in section has cracked in tension.
Y = stress in reinforcing steel has reached yield stress.
T = ACI 318 criteria for tension-controlled section met, tensile strain in reinforcement exceeds 0.005 while simultaneously compressive strain in concrete more than 0.003. See ACI 318, Section 10.3.4.
Z = depth of tensile zone in concrete section is less than 10 percent of section depth.

Bending Stiffness (EI) = Computed Bending Moment / Curvature.
Position of neutral axis is measured from edge of compression side of pile.
Compressive stresses and strains are positive in sign.
Tensile stresses and strains are negative in sign.

Axial Thrust Force = 0.000 kips

Bending Max Conc Curvature Stress rad/in. ksi	Bending Max Steel Moment Stress in-kip ksi	Bending Stiffness kip-in2	Depth to N Axis in	Max Comp Strain in/in	Max Tens Strain in/in	Run Msg

--------------------------------------------------------------------------------
   Summary of Results for Nominal (Unfactored) Moment Capacity for Section 1
--------------------------------------------------------------------------------

Moment values interpolated at maximum compressive strain = 0.003
or maximum developed moment if pile fails at smaller strains.
```

Load No.	Axial Thrust kips	Nominal Mom. Cap. in-kip	Max. Comp. Strain
1	0.000	1463.046	0.00300000

Note that the values of moment capacity in the table above are not factored by a strength reduction factor (phi-factor).

In ACI 318, the value of the strength reduction factor depends on whether the transverse reinforcing steel bars are tied hoops (0.65) or spirals (0.70).

The above values should be multiplied by the appropriate strength reduction factor to compute ultimate moment capacity according to ACI 318, Section 9.3.2.2 or the value required by the design standard being followed.

The following table presents factored moment capacities and corresponding bending stiffnesses computed for common resistance factor values used for reinforced concrete sections.

Axial Load No.	Resist. Factor for Moment	Nominal Moment Cap in-kips	Ult. (Fac) Ax. Thrust kips	Ult. (Fac) Moment Cap in-kips	Bend. Stiff. at Ult Mom kip-in^2
1	0.65	1463.	0.0000	950.979765	7858151.
1	0.70	1463.	0.0000	1024.	7838227.
1	0.75	1463.	0.0000	1097.	7817753.

Layering Correction Equivalent Depths of Soil & Rock Layers

Layer No.	Top of Layer Below Pile Head ft	Equivalent Top Depth Below Grnd Surf ft	Same Layer Type As Layer Above	Layer is Rock or is Below Rock Layer	F0 Integral for Layer lbs	F1 Integral for Layer lbs
1	0.00	0.00	N.A.	No	0.00	15632.
2	6.0000	3.9392	No	No	15632.	N.A.

Notes: The F0 integral of Layer n+1 equals the sum of the F0 and F1 integrals for Layer n. Layering correction equivalent depths are computed only for soil types with both shallow-depth and deep-depth expressions for peak lateral load transfer. These soil types are soft and stiff clays,

non-liquefied sands, and cemented c-phi soil.

Computed Values of Pile Loading and Deflection
for Lateral Loading for Load Case Number 1

Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head = 4030.0 lbs
Applied moment at pile head = 201600.0 in-lbs
Axial thrust load on pile head = 0.0 lbs

Depth X	Deflect. y	Bending Moment	Shear Force	Slope S	Total Stress	Bending Stiffness	Soil Res. Es*h	Soil Spr. Lat. Load	Distrib. p

* This analysis computed pile response using nonlinear moment-curvature relationships. Values of total stress due to combined axial and bending stresses are computed only for elastic sections only and do not equal the actual stresses in concrete and steel. Stresses in concrete and steel may be interpolated from the output for nonlinear bending properties relative to the magnitude of bending moment developed in the pile.

Output Summary for Load Case No. 1:

Pile-head deflection = 0.26868849 inches
Computed slope at pile head = -0.00293605 radians
Maximum bending moment = 416654. inch-lbs

```
Maximum shear force              =        -14133. lbs
Depth of maximum bending moment  =     6.20000000 feet below pile head
Depth of maximum shear force     =     8.30000000 feet below pile head
Number of iterations             =              9
Number of zero deflection points =              1

--------------------------------------------------------------------------------
            Summary of Pile-head Responses for Conventional Analyses
--------------------------------------------------------------------------------

Definitions of Pile-head Loading Conditions:

Load Type 1: Load 1 = Shear, V, lbs, and Load 2 = Moment, M, in-lbs
Load Type 2: Load 1 = Shear, V, lbs, and Load 2 = Slope, S, radians
Load Type 3: Load 1 = Shear, V, lbs, and Load 2 = Rot. Stiffness, R, in-lbs/rad.
Load Type 4: Load 1 = Top Deflection, y, inches, and Load 2 = Moment, M, in-lbs
Load Type 5: Load 1 = Top Deflection, y, inches, and Load 2 = Slope, S, radians

Load Load                Load                  Axial    Pile-head  Pile-head  Max
Shear Max Moment
Case Type   Pile-head    Type     Pile-head   Loading  Deflection  Rotation    in

Date and Time of Analysis

Date: October 11, 2018 Time: 10:34:46

Problem Title

Project Name: Strathern Park North Baseball Fields

Job Number: 14-090

Client:

Engineer: Easton

Description: Baseball Field Light Pole Foundations

Program Options and Settings

Computational Options:
- Use unfactored loads in computations (conventional analysis)

Engineering Units Used for Data Input and Computations:
- US Customary System Units (pounds, feet, inches)

Analysis Control Options:

- Maximum number of iterations allowed	=	500
- Deflection tolerance for convergence	=	1.0000E-05 in
- Maximum allowable deflection	=	100.0000 in
- Number of pile increments	=	100

Loading Type and Number of Cycles of Loading:
- Static loading specified

- Use of p-y modification factors for p-y curves not selected
- No distributed lateral loads are entered
- Loading by lateral soil movements acting on pile not selected
- Input of shear resistance at the pile tip not selected
- Computation of pile-head foundation stiffness matrix not selected
- Push-over analysis of pile not selected
- Buckling analysis of pile not selected

Output Options:
- Output files use decimal points to denote decimal symbols.
- Values of pile-head deflection, bending moment, shear force, and soil reaction are printed for full length of pile.
- Printing Increment (nodal spacing of output points) = 1
- No p-y curves to be computed and reported for user-specified depths
- Print using wide report formats

Pile Structural Properties and Geometry

Number of pile sections defined = 1
Total length of pile = 12.000 ft
Depth of ground surface below top of pile = 0.0000 ft

Pile diameters used for p-y curve computations are defined using 2 points.

p-y curves are computed using pile diameter values interpolated with depth over the length of the pile. A summary of values of pile diameter vs. depth follows.

Point No.	Depth Below Pile Head feet	Pile Diameter inches
1	0.000	24.0000
2	12.000	24.0000

Input Structural Properties for Pile Sections:

Pile Section No. 1:

Section 1 is a round drilled shaft, bored pile, or CIDH pile

Length of section	=	12.000000 ft
Shaft Diameter	=	24.000000 in
Shear capacity of section	=	0.0000 lbs

Ground Slope and Pile Batter Angles

Ground Slope Angle	=	0.000 degrees
	=	0.000 radians
Pile Batter Angle	=	0.000 degrees
	=	0.000 radians

Soil and Rock Layering Information

The soil profile is modelled using 2 layers

Layer 1 is sand, p-y criteria by Reese et al., 1974

Distance from top of pile to top of layer	=	0.0000 ft
Distance from top of pile to bottom of layer	=	6.000000 ft
Effective unit weight at top of layer	=	98.000000 pcf
Effective unit weight at bottom of layer	=	98.000000 pcf
Friction angle at top of layer	=	20.000000 deg.
Friction angle at bottom of layer	=	20.000000 deg.
Subgrade k at top of layer	=	0.0000 pci
Subgrade k at bottom of layer	=	0.0000 pci

NOTE: Default values for subgrade k will be computed for this layer.

Layer 2 is cemented silt with cohesion and friction

Distance from top of pile to top of layer	=	6.000000 ft
Distance from top of pile to bottom of layer	=	14.000000 ft
Effective unit weight at top of layer	=	125.000000 pcf
Effective unit weight at bottom of layer	=	125.000000 pcf
Undrained cohesion at top of layer	=	100.000000 psf
Undrained cohesion at bottom of layer	=	100.000000 psf
Friction angle at top of layer	=	31.000000 deg.
Friction angle at bottom of layer	=	31.000000 deg.

Epsilon-50 at top of layer = 0.0000
Epsilon-50 at bottom of layer = 0.0000
Subgrade k at top of layer = 0.0000 pci
Subgrade k at bottom of layer = 0.0000 pci

NOTE: Default values for Epsilon-50 will be computed for this layer.
NOTE: Default values for subgrade k will be computed for this layer.

(Depth of the lowest soil layer extends 2.000 ft below the pile tip)

Summary of Input Soil Properties

Layer Num.	Soil Type Name (p-y Curve Type)	Layer Depth ft	Effective Unit Wt. pcf	Undrained Cohesion psf	Angle of Friction deg.	E50 or kpy krm pci
1	Sand (Reese, et al.)	0.00	98.0000	--	20.0000	default
		6.0000	98.0000	--	20.0000	default
2	Cemented Silt	6.0000	125.0000	100.0000	31.0000	default
		14.0000	125.0000	100.0000	31.0000	default

Static Loading Type

Static loading criteria were used when computing p-y curves for all analyses.

Pile-head Loading and Pile-head Fixity Conditions

Number of loads specified = 1

Load No.	Load Type	Condition 1	Condition 2	Axial Thrust Force, lbs	Compute Top y vs. Pile Length
1	1	V = 8028. lbs	M = 344400. in-lbs	0.0000000	No

V = shear force applied normal to pile axis
M = bending moment applied to pile head
y = lateral deflection normal to pile axis
S = pile slope relative to original pile batter angle
R = rotational stiffness applied to pile head
Values of top y vs. pile lengths can be computed only for load types with specified shear loading (Load Types 1, 2, and 3).
Thrust force is assumed to be acting axially for all pile batter angles.

Computations of Nominal Moment Capacity and Nonlinear Bending Stiffness

---

Axial thrust force values were determined from pile-head loading conditions

Number of Pile Sections Analyzed = 1

Pile Section No. 1:

Dimensions and Properties of Drilled Shaft (Bored Pile):

Length of Section	= 12.000000	ft
Shaft Diameter	= 24.000000	in
Concrete Cover Thickness	= 3.000000	in
Number of Reinforcing Bars	= 8	bars
Yield Stress of Reinforcing Bars	= 60000.	psi
Modulus of Elasticity of Reinforcing Bars	= 29000000.	psi
Gross Area of Shaft	= 452.389342	sq. in.
Total Area of Reinforcing Steel	= 3.520000	sq. in.
Area Ratio of Steel Reinforcement	= 0.78	percent
Edge-to-Edge Bar Spacing	= 5.851289	in
Maximum Concrete Aggregate Size	= 0.750000	in
Ratio of Bar Spacing to Aggregate Size	= 7.80	
Offset of Center of Rebar Cage from Center of Pile	= 0.0000	in

Axial Structural Capacities:

Nom. Axial Structural Capacity = 0.85 Fc Ac + Fy As = 1355.817 kips
Tensile Load for Cracking of Concrete = -174.338 kips
Nominal Axial Tensile Capacity = -211.200 kips

Reinforcing Bar Dimensions and Positions Used in Computations:

Bar Number	Bar Diam. inches	Bar Area sq. in.	X inches	Y inches
1	0.750000	0.440000	8.625000	0.00000
2	0.750000	0.440000	6.098796	6.098796
3	0.750000	0.440000	0.00000	8.625000
4	0.750000	0.440000	-6.098796	6.098796
5	0.750000	0.440000	-8.625000	0.00000
6	0.750000	0.440000	-6.098796	-6.098796
7	0.750000	0.440000	0.00000	-8.625000
8	0.750000	0.440000	6.098796	-6.098796

NOTE: The positions of the above rebars were computed by LPile

Minimum spacing between any two bars not equal to zero = 5.851 inches
between bars 1 and 2.

Ratio of bar spacing to maximum aggregate size = 7.80

Concrete Properties:

Compressive Strength of Concrete = 3000. psi
Modulus of Elasticity of Concrete = 3122019. psi
Modulus of Rupture of Concrete = -410.791918 psi
Compression Strain at Peak Stress = 0.001634
Tensile Strain at Fracture of Concrete = -0.0001160
Maximum Coarse Aggregate Size = 0.750000 in

Number of Axial Thrust Force Values Determined from Pile-head Loadings = 1

Number	Axial Thrust Force kips
1	0.000

Definitions of Run Messages and Notes:

C = concrete in section has cracked in tension.
Y = stress in reinforcing steel has reached yield stress.
T = ACI 318 criteria for tension-controlled section met, tensile strain in reinforcement exceeds 0.005 while simultaneously compressive strain in concrete more than 0.003. See ACI 318, Section 10.3.4.
Z = depth of tensile zone in concrete section is less than 10 percent of section depth.

Bending Stiffness (EI) = Computed Bending Moment / Curvature.
Position of neutral axis is measured from edge of compression side of pile.
Compressive stresses and strains are positive in sign.
Tensile stresses and strains are negative in sign.

Axial Thrust Force = 0.000 kips

Bending Max Conc Curvature Stress rad/in. ksi	Bending Max Steel Moment Stress in-kip ksi	Run Msg	Bending Stiffness kip-in2	Depth to N Axis in	Max Comp Strain in/in	Max Tens Strain in/in

Summary of Results for Nominal (Unfactored) Moment Capacity for Section 1

Moment values interpolated at maximum compressive strain = 0.003
or maximum developed moment if pile fails at smaller strains.

Load No.	Axial Thrust kips	Nominal Mom. Cap. in-kip	Max. Comp. Strain

1	0.000	1873.305	0.00300000

Note that the values of moment capacity in the table above are not factored by a strength reduction factor (phi-factor).

In ACI 318, the value of the strength reduction factor depends on whether the transverse reinforcing steel bars are tied hoops (0.65) or spirals (0.70).

The above values should be multiplied by the appropriate strength reduction factor to compute ultimate moment capacity according to ACI 318, Section 9.3.2.2 or the value required by the design standard being followed.

The following table presents factored moment capacities and corresponding bending stiffnesses computed for common resistance factor values used for reinforced concrete sections.

Axial Load No.	Resist. Factor for Moment	Nominal Moment Cap in-kips	Ult. (Fac) Ax. Thrust kips	Ult. (Fac) Moment Cap in-kips	Bend. Stiff. at Ult Mom kip-in^2
1	0.65	1873.	0.0000	1218.	9822512.
1	0.70	1873.	0.0000	1311.	9791247.
1	0.75	1873.	0.0000	1405.	9637529.

Layering Correction Equivalent Depths of Soil & Rock Layers

Layer No.	Top of Layer Below Pile Head ft	Equivalent Top Depth Below Grnd Surf ft	Same Layer Type As Layer Above	Layer is Rock or is Below Rock Layer	F0 Integral for Layer lbs	F1 Integral for Layer lbs
1	0.00	0.00	N.A.	No	0.00	15632.
2	6.0000	3.9392	No	No	15632.	N.A.

Notes: The F0 integral of Layer n+1 equals the sum of the F0 and F1 integrals for Layer n. Layering correction equivalent depths are computed only for soil types with both shallow-depth and deep-depth expressions for peak lateral load transfer. These soil types are soft and stiff clays, non-liquefied sands, and cemented c-phi soil.

Computed Values of Pile Loading and Deflection
for Lateral Loading for Load Case Number 1

Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head = 8028.0 lbs
Applied moment at pile head = 344400.0 in-lbs
Axial thrust load on pile head = 0.0 lbs

Depth X	Deflect. y	Bending Moment	Shear Force	Slope S	Total Stress	Bending Stiffness	Soil Res. Es*h	Soil Spr. Lat. Load	Distrib. p

* This analysis computed pile response using nonlinear moment-curvature relationships. Values of total stress due to combined axial and bending stresses are computed only for elastic sections only and do not equal the actual stresses in concrete and steel. Stresses in concrete and steel may be interpolated from the output for nonlinear bending properties relative to the magnitude of bending moment developed in the pile.

Output Summary for Load Case No. 1:

Pile-head deflection	=	0.50209607 inches
Computed slope at pile head	=	-0.00687294 radians
Maximum bending moment	=	810045. inch-lbs
Maximum shear force	=	-18424. lbs
Depth of maximum bending moment	=	6.48000000 feet below pile head

Depth of maximum shear force = 9.48000000 feet below pile head
Number of iterations = 80
Number of zero deflection points = 1

Summary of Pile-head Responses for Conventional Analyses

Definitions of Pile-head Loading Conditions:

Load Type 1: Load 1 = Shear, V, lbs, and Load 2 = Moment, M, in-lbs
Load Type 2: Load 1 = Shear, V, lbs, and Load 2 = Slope, S, radians
Load Type 3: Load 1 = Shear, V, lbs, and Load 2 = Rot. Stiffness, R, in-lbs/rad.
Load Type 4: Load 1 = Top Deflection, y, inches, and Load 2 = Moment, M, in-lbs
Load Type 5: Load 1 = Top Deflection, y, inches, and Load 2 = Slope, S, radians

Load Case	Load Type	Load Pile-head	Load Type	Load Pile-head	Axial Loading	Pile-head Deflection	Pile-head Rotation	Max Shear in Pile	Max Moment in Pile
No.	1	Load 1	2	Load 2	lbs	inches	radians	lbs	in-lbs
1	V, lb	8028.	M, in-lb	344400.	0.00	0.5021	-0.00687	-18424.	810045.

Maximum pile-head deflection = 0.5020960677 inches
Maximum pile-head rotation = -0.0068729448 radians = -0.393791 deg.

The analysis ended normally.

Date and Time of Analysis

Date: October 11, 2018 Time: 10:38:58

Problem Title

Project Name: Strathern Park North Baseball Fields

Job Number: 14-090

Client:

Engineer: Easton

Description: Baseball Field Light Pole Foundations

Program Options and Settings

Computational Options:
- Use unfactored loads in computations (conventional analysis)

Engineering Units Used for Data Input and Computations:
- US Customary System Units (pounds, feet, inches)

Analysis Control Options:

- Maximum number of iterations allowed	=	500
- Deflection tolerance for convergence	=	1.0000E-05 in
- Maximum allowable deflection	=	100.0000 in
- Number of pile increments	=	100

Loading Type and Number of Cycles of Loading:
 - Static loading specified

 - Use of p-y modification factors for p-y curves not selected
 - No distributed lateral loads are entered
 - Loading by lateral soil movements acting on pile not selected
 - Input of shear resistance at the pile tip not selected
 - Computation of pile-head foundation stiffness matrix not selected
 - Push-over analysis of pile not selected
 - Buckling analysis of pile not selected

Output Options:
 - Output files use decimal points to denote decimal symbols.
 - Values of pile-head deflection, bending moment, shear force, and
   soil reaction are printed for full length of pile.
 - Printing Increment (nodal spacing of output points) = 1
 - No p-y curves to be computed and reported for user-specified depths
 - Print using wide report formats

Pile Structural Properties and Geometry

Number of pile sections defined = 1
Total length of pile = 12.000 ft
Depth of ground surface below top of pile = 0.0000 ft

Pile diameters used for p-y curve computations are defined using 2 points.

p-y curves are computed using pile diameter values interpolated with depth over the length of the pile. A summary of values of pile diameter vs. depth follows.

Point No.	Depth Below Pile Head feet	Pile Diameter inches
1	0.000	24.0000
2	12.000	24.0000

Input Structural Properties for Pile Sections:

Pile Section No. 1:

Section 1 is a round drilled shaft, bored pile, or CIDH pile

Length of section	=	12.000000 ft
Shaft Diameter	=	24.000000 in
Shear capacity of section	=	0.0000 lbs

Ground Slope and Pile Batter Angles

Ground Slope Angle	=	0.000 degrees
	=	0.000 radians
Pile Batter Angle	=	0.000 degrees
	=	0.000 radians

Soil and Rock Layering Information

The soil profile is modelled using 2 layers

Layer 1 is sand, p-y criteria by Reese et al., 1974

Distance from top of pile to top of layer	=	0.0000 ft
Distance from top of pile to bottom of layer	=	6.000000 ft
Effective unit weight at top of layer	=	98.000000 pcf
Effective unit weight at bottom of layer	=	98.000000 pcf
Friction angle at top of layer	=	20.000000 deg.
Friction angle at bottom of layer	=	20.000000 deg.
Subgrade k at top of layer	=	0.0000 pci
Subgrade k at bottom of layer	=	0.0000 pci

NOTE: Default values for subgrade k will be computed for this layer.

Layer 2 is cemented silt with cohesion and friction

Distance from top of pile to top of layer	=	6.000000 ft
Distance from top of pile to bottom of layer	=	14.000000 ft
Effective unit weight at top of layer	=	125.000000 pcf
Effective unit weight at bottom of layer	=	125.000000 pcf
Undrained cohesion at top of layer	=	100.000000 psf
Undrained cohesion at bottom of layer	=	100.000000 psf
Friction angle at top of layer	=	31.000000 deg.
Friction angle at bottom of layer	=	31.000000 deg.

Epsilon-50 at top of layer = 0.0000
Epsilon-50 at bottom of layer = 0.0000
Subgrade k at top of layer = 0.0000 pci
Subgrade k at bottom of layer = 0.0000 pci

NOTE: Default values for Epsilon-50 will be computed for this layer.
NOTE: Default values for subgrade k will be computed for this layer.

(Depth of the lowest soil layer extends 2.000 ft below the pile tip)

Summary of Input Soil Properties

Layer Num.	Soil Type Name (p-y Curve Type)	Layer Depth ft	Effective Unit Wt. pcf	Undrained Cohesion psf	Angle of Friction deg.	E50 or kpy krm pci
1	Sand (Reese, et al.)	0.00	98.0000	--	20.0000	-- default
		6.0000	98.0000	--	20.0000	-- default
2	Cemented	6.0000	125.0000	100.0000	31.0000	default default
	Silt	14.0000	125.0000	100.0000	31.0000	default default

Static Loading Type

Static loading criteria were used when computing p-y curves for all analyses.

Pile-head Loading and Pile-head Fixity Conditions

Number of loads specified = 1

Load No.	Load Type	Condition 1	Condition 2	Axial Thrust Force, lbs	Compute Top y vs. Pile Length
1	1	V = 7883. lbs	M = 403464. in-lbs	0.0000000	No

V = shear force applied normal to pile axis
M = bending moment applied to pile head
y = lateral deflection normal to pile axis
S = pile slope relative to original pile batter angle
R = rotational stiffness applied to pile head
Values of top y vs. pile lengths can be computed only for load types with specified shear loading (Load Types 1, 2, and 3).
Thrust force is assumed to be acting axially for all pile batter angles.

Computations of Nominal Moment Capacity and Nonlinear Bending Stiffness

---

Axial thrust force values were determined from pile-head loading conditions

Number of Pile Sections Analyzed = 1

Pile Section No. 1:

Dimensions and Properties of Drilled Shaft (Bored Pile):

Length of Section	= 12.000000	ft
Shaft Diameter	= 24.000000	in
Concrete Cover Thickness	= 3.000000	in
Number of Reinforcing Bars	= 9	bars
Yield Stress of Reinforcing Bars	= 60000.	psi
Modulus of Elasticity of Reinforcing Bars	= 29000000.	psi
Gross Area of Shaft	= 452.389342	sq. in.
Total Area of Reinforcing Steel	= 3.960000	sq. in.
Area Ratio of Steel Reinforcement	= 0.88	percent
Edge-to-Edge Bar Spacing	= 5.149847	in
Maximum Concrete Aggregate Size	= 0.750000	in
Ratio of Bar Spacing to Aggregate Size	= 6.87	
Offset of Center of Rebar Cage from Center of Pile	= 0.0000	in

Axial Structural Capacities:

Nom. Axial Structural Capacity = 0.85 Fc Ac + Fy As = 1381.095 kips
Tensile Load for Cracking of Concrete = -175.658 kips
Nominal Axial Tensile Capacity = -237.600 kips

Reinforcing Bar Dimensions and Positions Used in Computations:

Bar Number	Bar Diam. inches	Bar Area sq. in.	X inches	Y inches
1	0.750000	0.440000	8.625000	0.00000
2	0.750000	0.440000	6.607133	5.544043
3	0.750000	0.440000	1.497716	8.493967
4	0.750000	0.440000	-4.312500	7.469469
5	0.750000	0.440000	-8.104849	2.949924
6	0.750000	0.440000	-8.104849	-2.949924
7	0.750000	0.440000	-4.312500	-7.469469
8	0.750000	0.440000	1.497716	-8.493967
9	0.750000	0.440000	6.607133	-5.544043

NOTE: The positions of the above rebars were computed by LPile

Minimum spacing between any two bars not equal to zero = 5.150 inches
between bars 3 and 4.

Ratio of bar spacing to maximum aggregate size = 6.87

Concrete Properties:

Compressive Strength of Concrete = 3000. psi
Modulus of Elasticity of Concrete = 3122019. psi
Modulus of Rupture of Concrete = -410.791918 psi
Compression Strain at Peak Stress = 0.001634
Tensile Strain at Fracture of Concrete = -0.0001160
Maximum Coarse Aggregate Size = 0.750000 in

Number of Axial Thrust Force Values Determined from Pile-head Loadings = 1

Number	Axial Thrust Force kips

1 0.000

Definitions of Run Messages and Notes:

C = concrete in section has cracked in tension.
Y = stress in reinforcing steel has reached yield stress.
T = ACI 318 criteria for tension-controlled section met, tensile strain in reinforcement exceeds 0.005 while simultaneously compressive strain in concrete more than 0.003. See ACI 318, Section 10.3.4.
Z = depth of tensile zone in concrete section is less than 10 percent of section depth.

Bending Stiffness (EI) = Computed Bending Moment / Curvature.
Position of neutral axis is measured from edge of compression side of pile.
Compressive stresses and strains are positive in sign.
Tensile stresses and strains are negative in sign.

Axial Thrust Force = 0.000 kips

-------------------------------------------------------------------------------
   Summary of Results for Nominal (Unfactored) Moment Capacity for Section 1
-------------------------------------------------------------------------------

Moment values interpolated at maximum compressive strain = 0.003
or maximum developed moment if pile fails at smaller strains.

 Load          Axial Thrust        Nominal Mom. Cap.      Max. Comp.
  No.             kips                 in-kip              Strain
 ----         ---------------     -----------------     -----------
```

1	0.000	2087.191	0.00300000

Note that the values of moment capacity in the table above are not factored by a strength reduction factor (phi-factor).

In ACI 318, the value of the strength reduction factor depends on whether the transverse reinforcing steel bars are tied hoops (0.65) or spirals (0.70).

The above values should be multiplied by the appropriate strength reduction factor to compute ultimate moment capacity according to ACI 318, Section 9.3.2.2 or the value required by the design standard being followed.

The following table presents factored moment capacities and corresponding bending stiffnesses computed for common resistance factor values used for reinforced concrete sections.

Axial Load No.	Resist. Factor for Moment	Nominal Moment Cap in-kips	Ult. (Fac) Ax. Thrust kips	Ult. (Fac) Moment Cap in-kips	Bend. Stiff. at Ult Mom kip-in^2
1	0.65	2087.	0.0000	1357.	10742166.
1	0.70	2087.	0.0000	1461.	10704146.
1	0.75	2087.	0.0000	1565.	10573455.

Layering Correction Equivalent Depths of Soil & Rock Layers

Layer No.	Top of Layer Below Pile Head ft	Equivalent Top Depth Below Grnd Surf ft	Same Layer Type As Layer Above	Layer is Rock or is Below Rock Layer	F0 Integral for Layer lbs	F1 Integral for Layer lbs
1	0.00	0.00	N.A.	No	0.00	15632.
2	6.0000	3.9392	No	No	15632.	N.A.

Notes: The F0 integral of Layer n+1 equals the sum of the F0 and F1 integrals for Layer n. Layering correction equivalent depths are computed only for soil types with both shallow-depth and deep-depth expressions for peak lateral load transfer. These soil types are soft and stiff clays, non-liquefied sands, and cemented c-phi soil.

Computed Values of Pile Loading and Deflection
for Lateral Loading for Load Case Number 1

Pile-head conditions are Shear and Moment (Loading Type 1)

Shear force at pile head = 7883.0 lbs
Applied moment at pile head = 403464.0 in-lbs
Axial thrust load on pile head = 0.0 lbs

Depth X	Deflect. y	Bending Moment	Shear Force	Slope S	Total Stress	Bending Stiffness	Soil Res. Es*h	Soil Spr. Lat. Load	Distrib. p

* This analysis computed pile response using nonlinear moment-curvature relationships. Values of total stress due to combined axial and bending stresses are computed only for elastic sections only and do not equal the actual stresses in concrete and steel. Stresses in concrete and steel may be interpolated from the output for nonlinear bending properties relative to the magnitude of bending moment developed in the pile.

Output Summary for Load Case No. 1:

```
Pile-head deflection             =     0.51201054 inches
Computed slope at pile head      =    -0.00718311 radians
Maximum bending moment           =        855469. inch-lbs
Maximum shear force              =        -19451. lbs
Depth of maximum bending moment  =     6.48000000 feet below pile head
Depth of maximum shear force     =     9.48000000 feet below pile head
```

Number of iterations = 75
Number of zero deflection points = 1

Summary of Pile-head Responses for Conventional Analyses

Definitions of Pile-head Loading Conditions:

Load Type 1: Load 1 = Shear, V, lbs, and Load 2 = Moment, M, in-lbs
Load Type 2: Load 1 = Shear, V, lbs, and Load 2 = Slope, S, radians
Load Type 3: Load 1 = Shear, V, lbs, and Load 2 = Rot. Stiffness, R, in-lbs/rad.
Load Type 4: Load 1 = Top Deflection, y, inches, and Load 2 = Moment, M, in-lbs
Load Type 5: Load 1 = Top Deflection, y, inches, and Load 2 = Slope, S, radians

Load Case No.	Load Type	Pile-head Load 1	Load Type	Pile-head Load 2	Axial Loading lbs	Pile-head Deflection inches	Pile-head Rotation radians	Max Shear in Pile lbs	Max Moment in Pile in-lbs
1	V, lb	7883.	M, in-lb	403464.	0.00	0.5120	-0.00718	-19451.	855469.

Maximum pile-head deflection = 0.5120105396 inches
Maximum pile-head rotation = -0.0071831059 radians = -0.411562 deg.

The analysis ended normally.

SUPPLEMENTAL GEOTECHNICAL REPORT NO. 2 – GRANADA HILLS POOL REPLACEMENT PROJECT
16730 CHATSWORTH STREET
LOS ANGELES, CALIFORNIA
W.O. E170517A **GED FILE NO. 17-074**

INTRODUCTION

The Los Angeles Department of Public Works, Bureau of Engineering, Geotechnical Engineering Division (GED) has prepared this report to provide supplemental recommendations for the project. The GED previously prepared a geotechnical engineering report dated August 22, 2017, which was approved by the Los Angeles Department of Building and Safety (LADBS), Grading Division on November 9, 2017 (Log Number 100428). In addition, we prepared a supplemental geotechnical report dated October 25, 2018, which was approved by the LADBS, Grading Division on November 14, 2018 (Log No. 105775).

PROJECT DESCRIPTION

The project has not changed significantly since our supplemental report was prepared. The purpose of this report is to provide supplemental recommendations for:

1. Storm water infiltration,
2. Portland Cement Concrete (PCC) pavements and exterior slabs.

All previous recommendations for the project remain applicable, except those specifically modified herein.

RECOMMENDATIONS

Storm Water Infiltration

The GED initially classified as Category 3 or "Infeasible" for onsite storm water infiltration, as discussed in Section 6.6 of the original report. It is important to note that this classification was based on adjusted infiltration rates that incorporate reduction factors greater than 10. The actual measured infiltration rate between 5 and 10½ feet was approximately 1¼ inches / hour. Upon further review, we recommend the site be classified as Category 1 or "Feasible" provided the infiltration zone is between 5 and 10 feet. For design purposes, an infiltration rate of ½-inch/hour may be used. We understand the system is designed with an overflow pipe that conveys storm water to the storm drain system. The location of the proposed infiltration system is shown on Sheet C400, which is attached to this report.

The infiltration system shall be designed in accordance with the LADBS' "Guidelines for Storm Water Infiltration," as presented in Bulletin 2020-118. The infiltration pit(s) shall be set back at least 15 and 10 feet from adjacent structures and property boundaries, respectively. Infiltration is not expected to result in ground settlement that could affect structures, either on or adjacent to the site. Furthermore, infiltration is not expected to result in soil saturation that could affect retaining / basement structures.

Portland Cement Concrete for Pavements and Exterior Slabs

Recommendations for PCC pavement design and exterior concrete slabs were provided in our original and supplemental reports. It is our understanding the PCC pool deck will be reinforced with No. 4 bars spaced 12 inches on center. The remaining PCC slabs will be reinforced with No. 4 bars spaced 18 inches on center. For clarification, the PCC thickness, base thickness, and earthwork are summarized below.

Location	PCC thickness (in)	CAB / CMB thickness (in)	Min. compacted fill thickness beneath CAB / CMB (in)
Pool Deck and Splash Pad	6	6	24
Heavy Traffic Area	8	8	24
Pedestrian Walkway	5	5	12

The GED considers this design to be acceptable from a geotechnical standpoint.

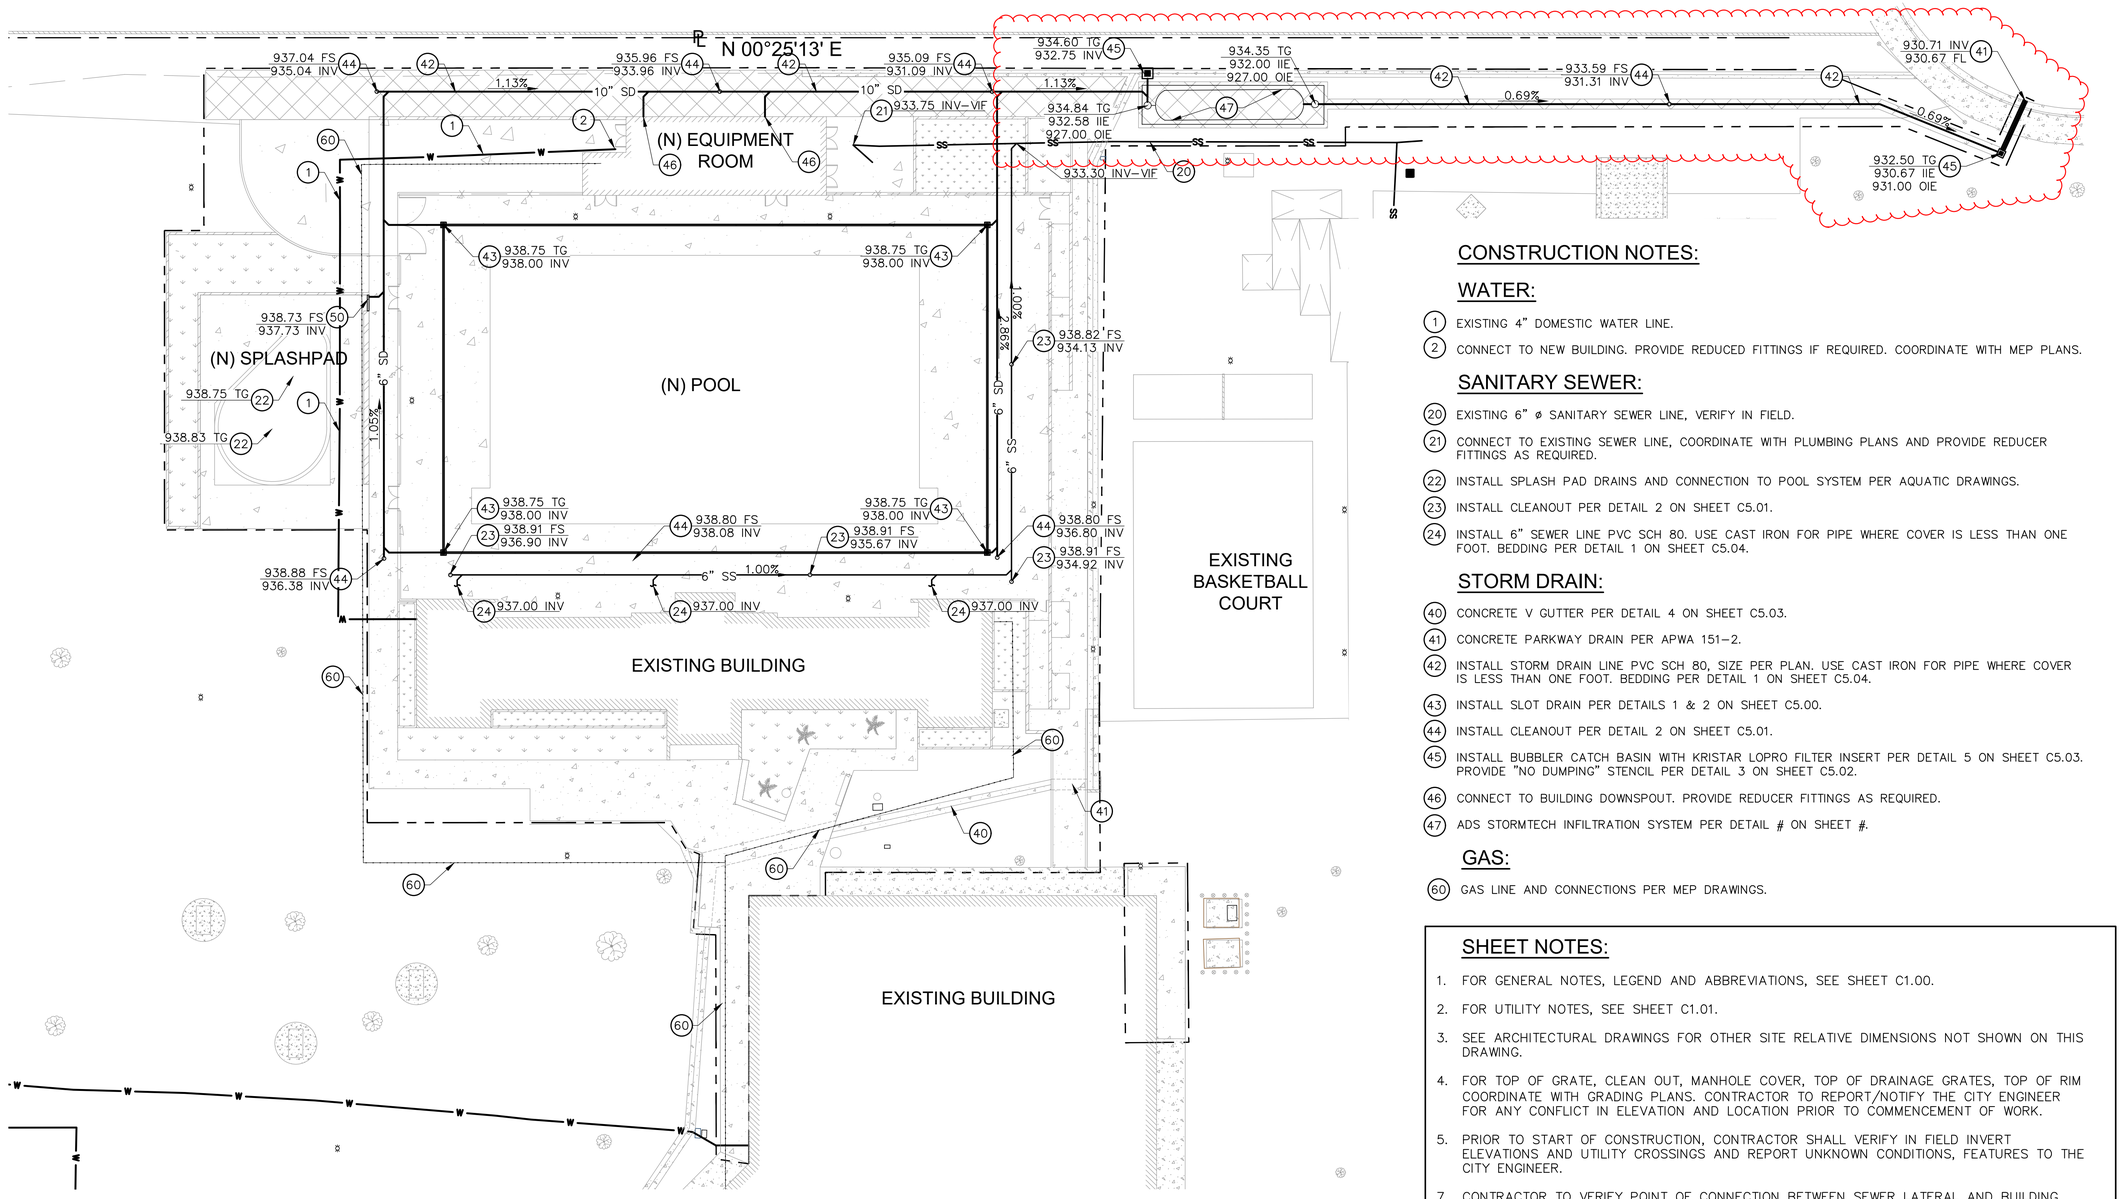
CLOSURE

If you have any questions about this report, please contact Easton Forcier at (213) 847-0476.

2-18-20

Easton R Forcier, GE 2948
Geotechnical Engineer II

Attachment: Sheet C400 – Utility Plan



CONSTRUCTION NOTES:

WATER:

1. EXISTING 4" DOMESTIC WATER LINE.
2. CONNECT TO NEW BUILDING. PROVIDE REDUCED FITTINGS IF REQUIRED. COORDINATE WITH MEP PLANS.

SANITARY SEWER:

20. EXISTING 6" ø SANITARY SEWER LINE, VERIFY IN FIELD.
21. CONNECT TO EXISTING SEWER LINE, COORDINATE WITH PLUMBING PLANS AND PROVIDE REDUCER FITTINGS AS REQUIRED.
22. INSTALL SPLASH PAD DRAINS AND CONNECTION TO POOL SYSTEM PER AQUATIC DRAWINGS.
23. INSTALL CLEANOUT PER DETAIL 2 ON SHEET C5.01.
24. INSTALL 6" SEWER LINE PVC SCH 80. USE CAST IRON FOR PIPE WHERE COVER IS LESS THAN ONE FOOT. BEDDING PER DETAIL 1 ON SHEET C5.04.

STORM DRAIN:

40. CONCRETE V GUTTER PER DETAIL 4 ON SHEET C5.03.
41. CONCRETE PARKWAY DRAIN PER APWA 151–2.
42. INSTALL STORM DRAIN LINE PVC SCH 80, SIZE PER PLAN. USE CAST IRON FOR PIPE WHERE COVER IS LESS THAN ONE FOOT. BEDDING PER DETAIL 1 ON SHEET C5.04.
43. INSTALL SLOT DRAIN PER DETAILS 1 & 2 ON SHEET C5.00.
44. INSTALL CLEANOUT PER DETAIL 2 ON SHEET C5.01.
45. INSTALL BUBBLER CATCH BASIN WITH KRISTAR LOPRO FILTER INSERT PER DETAIL 5 ON SHEET C5.03. PROVIDE "NO DUMPING" STENCIL PER DETAIL 3 ON SHEET C5.02.
46. CONNECT TO BUILDING DOWNSPOUT. PROVIDE REDUCER FITTINGS AS REQUIRED.
47. ADS STORMTECH INFILTRATION SYSTEM PER DETAIL # ON SHEET #.

GAS:

60. GAS LINE AND CONNECTIONS PER MEP DRAWINGS.

SHEET NOTES:

1. FOR GENERAL NOTES, LEGEND AND ABBREVIATIONS, SEE SHEET C1.00.
2. FOR UTILITY NOTES, SEE SHEET C1.01.
3. SEE ARCHITECTURAL DRAWINGS FOR OTHER SITE RELATIVE DIMENSIONS NOT SHOWN ON THIS DRAWING.
4. FOR TOP OF GRATE, CLEAN OUT, MANHOLE COVER, TOP OF DRAINAGE GRATES, TOP OF RIM COORDINATE WITH GRADING PLANS. CONTRACTOR TO REPORT/NOTIFY THE CITY ENGINEER FOR ANY CONFLICT IN ELEVATION AND LOCATION PRIOR TO COMMENCEMENT OF WORK.
5. PRIOR TO START OF CONSTRUCTION, CONTRACTOR SHALL VERIFY IN FIELD INVERT ELEVATIONS AND UTILITY CROSSINGS AND REPORT UNKNOWN CONDITIONS, FEATURES TO THE CITY ENGINEER.
7. CONTRACTOR TO VERIFY POINT OF CONNECTION BETWEEN SEWER LATERAL AND BUILDING PLUMBING SEWER LAYOUT.
8. CONTRACTOR SHALL FIELD VERIFY EXISTING SEWER LINE CONNECTION, SHALL USE AND PAY FOR CCTV TO VERIFY PIPE SIZE, INVERT ELEVATION AND IDENTIFY IF THE EXISTING PIPE IS DAMAGED. IF DAMAGED THE EXISTING PIPE SHALL BE REPLACED BASED ON THE FINDINGS. IF NEW LATERAL IS REQUIRED, CONTRACTOR TO INSTALL 6"ø SEWER LATERAL AT 1% MINIMUM SLOPE.

Subject: **ASBESTOS and LEAD-BASED PAINT SURVEY REPORT**
Granada Hills Pool and Bathhouse Replacement Project
16730 Chatsworth Street
Granada Hills, California
Converse Project No. 18-41-273-01

Mr. Juarez:

Converse Consultants (Converse) is pleased to submit the following *Asbestos and Lead-Based Paint Survey Report.* The report summarizes the activities and the results of survey that was conducted at the referenced property (Property).

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact either George Paler at (626) 930-1258 or Norman Eke at (626) 930-1260.

Sincerely,

CONVERSE CONSULTANTS

George Paler

Definitions

Asbestos-Containing Material (ACM): The United States Environmental Protection Agency (EPA) has defined an ACM to be any substance containing more than one percent (1%) asbestos by weight.

Asbestos-Containing Construction Material (ACCM): The California Environmental Protection Agency (Cal/EPA) defines an ACCM as any substance containing one-tenth of one percent (0.1%) to one percent (1%) asbestos by weight.

Class I Non-friable ACM: A material containing more than one percent (1%) asbestos and that when dry, can be broken, crumbled, pulverized or reduced to powder in the course of demolition or renovation activities. Class I Non-friable ACMs include, but are not limited to, fractured or crushed asbestos cement products, transite materials, roofing felts and tiles, mastics, and resilient floor coverings.

Class II Non-friable ACM: A material containing more than one percent (1%) asbestos and that is neither friable nor Class I non-friable.

Friable ACM: A material containing more than one percent (1%) asbestos and that when dry, can be crumbled, pulverized or reduced to powder by hand pressure.

Lead-Base Paint (LBP): The Los Angeles County Department of Health Services (DHS) has defined an LBP as containing a lead concentration greater than 0.7 milligrams per centimeter squared (mg/cm^2); 600 parts per million; or 0.06 percent by weight.

Copyright 2019 Converse Consultants

Executive Summary

This report presents the results of the Converse Consultants (Converse) *Asbestos and Lead-Based Paint Survey* completed at the Granada Hills Pool and Bathhouse site located at 16730 Chatsworth Street in Granada Hills, Los Angeles County, California (herein referred to as the Property). The purpose of the survey was to identify suspect asbestos-containing materials (ACMs) and lead-based paints (LBPs) prior to renovation/remodeling of the Property.

The work was completed by environmental professionals and has been performed in accordance with our proposal dated October 25, 2018. Our work consisted of the following tasks:

- Performed a destructive survey of the property structure(s) including the roofs of the Bathhouse, Pool Equipment Building and Spectator Shelter.
- Collected bulk samples of suspect ACMs and submitted samples to the laboratory for analysis.
- Submitted samples of exterior stucco and interior wall plaster for additional laboratory analysis by 1,000-point count procedure.
- Performed testing of suspect LBPs by XRF.
- Collected bulk samples of suspect lead-based paint and submitted samples to the laboratory for analysis.
- Preparation of this report.
- Converse completed the survey on January 9, 2019.

Prior to renovation/remodeling activities, the following asbestos-containing material (ACM) will need to be abated if impacted by the planned project:

- Asphaltic Roofing Materials (Roof Core) - Bathhouse (ACM)
- Roof Penetration Mastic – Bathhouse (ACM)
- Grey Rolled Roofing – Pool Equipment Building (ACM)
- Grey Roof Mastic – Pool Equipment Building (ACM)
- Grey Rolled Roofing – Spectator Shelter (ACM)
- Roof Patch Mastic – Spectator Shelter (ACM)
- Exterior Stucco – Bathhouse (ACCM)
- Interior Plaster Walls – Bathhouse (ACCM)

Prior to any renovation and/or demolition activities, the above impacted ACMs will need to be abated. As the ACCM exterior stucco and interior beige rough-finish plaster will be impacted by the planned Bathhouse renovation, the ACCMs must be abated as well. The abatement must be performed by a Cal/OSHA licensed asbestos abatement contractor using currently asbestos trained workers and supervisors and work practices and engineering controls in accordance with Title 8 of California Code of Regulations

Copyright 2019 Converse Consultants

(CCR) 1529 and South Coast Air Quality Management District Rule 1403. ACCM waste may be disposed of as non-regulated waste. ACMs and ACCMs not abated can be managed in place through an Operations and Maintenance (O & M) plan.

In the event that suspect ACMs that have not been previously sampled are observed during the demolition/renovation activities, these materials should be assumed to contain asbestos, until such time that they can be accessed, sampled and evaluated for asbestos content.

Converse further recommends that asbestos abatement procedures be monitored by an independent Certified Asbestos Consultant knowledgeable in asbestos abatement procedures.

Based on the results of our lead-based paint (LBP) survey, a lead concentration greater than 0.7 mg/cm^2 was detected in the following components:

- Ceramic tile, painted black, at the north and south walls of the pool (lane markers).
- Ceramic sink in the Director's Office of the Bathhouse.
- Tan ceramic wall tile in the Men's Restroom of the Bathhouse.
- Ceramic urinals in the Men's Restroom of the Bathhouse.
- Ceramic toilets in the Men's and Women's Restrooms of the Bathhouse.
- Ceramic sink in the Utility Room (Women's side) of the Bathhouse.

Painted surfaces and ceramic components (tiles and plumbing fixtures) were observed to be generally in good condition.

Abatement/demolition work involving lead-containing materials must be performed by workers that have undergone the necessary lead training and are CDPH certified lead workers and supervisors.

The lead abatement activities will need to be monitored by a CDPH certified Project Monitor knowledgeable in lead stabilization and abatement procedures.

Although other painted surfaces tested did not meet the criteria for LBP, (lead content less than 0.7 mg/cm^2 or 600 ppm), concentrations of lead were detected in these other materials. Title 8 CCR 1532.1 (Lead) requires workers that perform either manual demolition or manual scraping or sanding of lead painted surfaces to undergo medical monitoring and an exposure assessment including air monitoring of the breathing zone if exposed to airborne lead dust above the Cal/OSHA Action Level of 30 micrograms per cubic meter (µg/m^3) of air over an 8-hour time weighted average.

In the event that suspect LBPs are observed during the renovation/demolition activities that were not previously sampled, these materials should be assumed to contain lead in

Copyright 2019 Converse Consultants

concentrations exceeding 0.7 mg/cm^2 or 600 ppm until such time that they can be sampled and evaluated for lead content.

1.0 Purpose and Scope of Services

This report presents the results of the Converse Consultants (Converse) *Asbestos and Lead-Based Paint Survey* completed at the Granada Hills Pool and Bathhouse site located at 16730 Chatsworth Street in Granada Hills, Los Angeles County, California (herein referred to as the Property). The purpose of the survey was to identify suspect asbestos-containing materials (ACMs) and lead-based paints (LBPs) prior to renovation/remodeling of the Property.

The work was completed by environmental professionals and has been performed in accordance with our proposal dated October 25, 2018. Our work consisted of the following tasks:

- Performed a destructive survey of the property structure(s) including the roofs of the Bathhouse, Pool Equipment Building and Spectator Shelter.
- Collected bulk samples of suspect ACMs and submitted samples to the laboratory for analysis.
- Submitted samples of exterior stucco and interior wall plaster for additional laboratory analysis by 1,000-point count procedure.
- Performed testing of suspect LBPs by XRF.
- Collected bulk samples of suspect lead-based paint and submitted samples to the laboratory for analysis.
- Preparation of this report.
- Converse completed the survey on January 9, 2019.

The survey was completed by, and under the supervision, of the following Converse employees:

- George Paler, Cal/OSHA Certified Asbestos Consultant, #93-1136, CDPH Certified Lead Inspector/Assessor, #I-1487
- Rodney Stansfield, Cal/OSHA Certified Asbestos Consultant, #97-2309; CDPH Certified Lead Inspector/Assessor, #I-4364
- Norman Eke, Cal/OSHA Certified Asbestos Consultant, #96-2093

Copies of applicable certifications have been provided in Appendix A.

All bulk asbestos samples were submitted to LA Testing located in the City of South Pasadena, California. Copies of the laboratory certificates are also provided in Appendix A.

Copyright 2019 Converse Consultants

2.0 Sampling Methodology

2.1 Asbestos

Prior to sampling, Converse visually surveyed the interior and exterior of the structures for presumed asbestos-containing materials and homogeneous areas (areas that have uniform color, texture, and appearance) in each building. Suspect materials were divided into friable and non-friable materials and placed in one of the following EPA categories:

- Surfacing Materials (sprayed or troweled-on materials)
- Thermal Systems Insulations (materials generally applied to various mechanical systems)
- Miscellaneous Materials (any materials which do not fit in the above categories)

Our sampling methodology followed the general guidelines for bulk asbestos sampling as presented in Section 40, Part 763 (AHERA) of the Code of Federal Regulations (CFR) and extended to public buildings by ASHARA in 1994. Converse collected bulk samples of the following suspect materials.

- Roofing materials
- Pool skim coat
- Concrete decking
- Exterior stucco
- Window putty
- Interior plaster walls
- Grey skim coat and plaster
- Drywall and associated joint compound
- Ceramic tile grout

The survey was completed using destructive sampling methods.

2.2 LBP

Prior to sampling, Converse visually surveyed the interior and exterior of the structures for painted building and ceramic components. Our sampling methodology generally followed the "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing" published by the Department of Housing and Urban Development (HUD) in 1995.

Copyright 2019 Converse Consultants

Converse used an x-ray fluorescence (XRF) device to measure lead content in painted and ceramic surfaces. The detection level for lead was set at 0.7 mg/cm² as defined by Los Angeles County, Department of Public Health. Converse surveyed the following interior and exterior components:

- Metal fencing
- Traffic paint and signage on exterior concrete
- Diving platform
- Pool walls and floors
- Roof components, fascias, eaves, rafters, and porticos
- Handrails
- Interior and exterior walls
- Ceilings
- Floors
- Baseboards
- Doors and associated components
- Windows and associated components
- Bathroom stalls
- Ceramic components including tiles and plumbing fixtures
- Pipes, tanks, conduit, and electrical panels
- Columns and structural components
- Spectator Shelter seating

Copyright 2019 Converse Consultants

3.0 Discussion of Survey Results

3.1 Asbestos

The bulk asbestos samples were submitted to LA Testing located in South Pasadena, California. The asbestos samples were analyzed for asbestos content by EPA Test Method 600/R-93/116.

Provided in the following table is a summary of the bulk asbestos sample results. The laboratory analytical reports, sample location maps, and chain-of-custody documentation are included in Appendix B.

The buildings were generally in good condition on the day of the survey. No obvious fire or structural damage was observed.

Table 1 – Summary of Asbestos Results & Observations

Sample No.	Building Material	Percent Asbestos	Comments
01-07	Asphaltic roofing material (roofing shingles – Roof Core)	10 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing on the Bathhouse. Approximately 5,800 square feet of roofing material. The asphaltic roofing is a non-friable ACM and was in good condition at the time of the survey. Pipes and penetrations observed on the roof were metal.
08 - 10	Roof penetration mastic	10% Chrysotile	Asbestos was detected on the mastic used at roof penetrations at vents, approximately 25 square feet. The roof penetration mastic is a non-friable ACM and was in good condition at the time of the survey.
11 - 17	Pool skim coat	None Detected	The skim coat is a cementitious material applied as a non-slip surface on the pool floor and walls. The material was in good condition at the time of the survey.
18 - 24	Concrete deck	None Detected	Concrete located on the deck surrounding the pool. The material was in good condition at the time of the survey.

Copyright 2019 Converse Consultants

Table 1 – Summary of Asbestos Results & Observations

Sample No.	Building Material	Percent Asbestos	Comments
25 - 29	Exterior stucco	0.2 – 0.49% Chrysotile (1,000-point count)	Located at the exterior northeast, northwest, southeast and southwest walls and the west entrance to the Bathhouse, approximately 1,100 square feet. The samples were further analyzed by 1,000-point count method. The exterior stucco is an ACCM and was in good condition at the time of the survey.
30 - 32	Window putty	None Detected	Located on the windows at the east side office of the Bathhouse. The putty was in good condition at the time of the survey.
33 - 35	Grey rolled roofing (Roof Core)	10 – 15% Chrysotile	Located on the roof of the Pool Equipment Building. Asbestos detected amongst multiple layers of roofing, approximately 850 square feet. The grey rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
36 - 38	Black roof mastic - patches	None Detected	Present as scattered patches on the grey rolled roofing on the Pool Equipment Building. The mastic was in good condition at the time of the survey.
39 - 41	Grey roof mastic	10% Chrysotile	Located at vent pad corners and roof penetrations on the Pool Equipment Building roof, approximately 10 square feet. The mastic is a non-friable ACM and was in good condition at the time of the survey.
42 - 48	Interior plaster walls	< 0.1 – 0.5% Chrysotile (1,000-point count)	Located on the interior beige, rough-finish plaster walls inside the Bathhouse, approximately 3,500 square feet. Metal pipes inside wall cavities and along the ceiling were observed to be uninsulated. Samples of interior plaster were analyzed further by 1,000-point count method. The beige interior plaster walls are an ACCM and were in good condition at the time of the survey.
49 - 53	Grey skim coat and plaster	None Detected	Located on the stalls in the Women's Dressing Room, and Men's and Women's Restrooms in the Bathhouse. The material was in good condition at the time of the survey.

Copyright 2019 Converse Consultants

Table 1 – Summary of Asbestos Results & Observations

Sample No.	Building Material	Percent Asbestos	Comments
54 - 56	Drywall and associated joint compound	None Detected (Drywall and Joint Compound)	Located at doorway walls to Men's and Women's Restrooms in the Bathhouse. Both the drywall board and the associated joint compound are negative for asbestos. The materials were in good condition at the time of the survey.
57 - 59	Grey rolled roofing (Roof Core)	15 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing at the Spectator Shelter, approximately 600 square feet. The rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
60 - 62	Roof patch mastic	5 – 10% Chrysotile	Located as patches on the roof of the Spectator Shelter, approximately 15 square feet. No roof penetrations were observed. The mastic is a non-friable ACM and was in good condition at the time of the survey.
63 - 65	Ceramic tile grout	None Detected	Ceramic tile was observed in the Men's and Women's Staff Restroom Showers and on the west wall in the Men's Restroom. The ceramic tiles and grout were in good condition at the time of the survey.

Laboratory analysis of the bulk samples of exterior stucco (Samples 25 – 29) and interior plaster walls (samples 42 – 45 and 48) originally detected asbestos concentrations below 1%. Further analysis was required to fully evaluate asbestos concentrations at the low percentage reported by the laboratory. The samples were re-submitted for additional analysis by 1,000-point count method. The additional analyses reported that the asbestos concentrations in the exterior stucco and interior plaster walls was below 1% but above 0.1%. Per 8 CCR 1529 and South Coast Air Quality Management District (SCAQMD) Rule 1403, the exterior stucco and interior plaster walls are categorized as ACCMs. The final 1,000-point count analytical results are presented in the table above.

Sample location maps, analytical reports and chain of custody documentation are provided in Appendix B.

Copyright 2019 Converse Consultants

3.2 LBP

Based on the XRF readings, lead concentrations greater than 0.7 mg/cm^2 were detected in the following material:

Table 2 – Summary of LBPs and Lead-Containing Materials

Building Component	Paint Color	Lead Content (mg/cm^2)	Comments
Ceramic tile	Black	16.9 - 18	Ceramic tile located on the north and south pool walls as lane markers. They have been painted over with black paint. Approximately 14 square feet. The tiles are intact.
Metal window case	Green	0.7	Located on the east side exterior of the Director's Office at the Bathhouse. A bulk sample of the green paint was collected for laboratory analysis (see Sample L-7 in Table 3 below).
Metal portico frame	Green	0.9	Located on the east side exterior of the Director's Office at the Bathhouse. A bulk sample of the green paint was collected for laboratory analysis (see Sample L-8 in Table 3 below).
Ceramic sink	White	33.7	Located on the interior west wall of the Director's Office in the Bathhouse. One (1) sink in intact condition.
Ceramic wall tile	Tan	3.9	Located at the interior lower west wall in the Men's Restroom in the Bathhouse, by the urinals. Approximately 32 square feet. The tile is intact.
Ceramic urinals	White	2.8	Located at the southwest side of the Men's Restroom in the Bathhouse. Three (3) urinals. The urinals are intact. Ceramic sinks in the Men's and Women's Restrooms are negative for lead.
Ceramic toilets	White	2.8 – 3.2	Located in the Men's and Women's Restrooms in the Bathhouse, approximately seven (7) toilets total. The toilets are intact. The toilets and sinks in the Men's and Women's Staff Restrooms are negative for lead.
Ceramic sink	White	8.8	Located in the Utility Room next to the Women's Shower Hall in the Bathhouse. (One) 1 sink in intact condition.

All other tested components contained lead concentrations less than 0.7 mg/cm^2. The XRF logs are provided in Appendix C.

As part of our lead survey, Converse collected eight (8) bulk paint samples for evaluation of damaged paint and for verification purposes. The bulk samples

Copyright 2019 Converse Consultants

were logged on to Sample Logs, Chain-of-Custody documentation and the sample locations plotted on field maps. The samples were submitted to LA Testing for analysis by U.S. EPA Method SW 846 3050B/7000B (Flame Atomic Absorption Spectrometry). The laboratory analytical results are summarized in the table below.

Table 3 – Summary of Bulk Lead Sample Results

Sample No.	Building Component	Paint Color	Lead Content (PPM)	Comments
L-1	Pool floor – west side (concrete)	White	< 80	The paint is intact.
L-2	Pool wall – northeast side (concrete)	White	< 80	The paint is intact.
L-3	Pool wall – west side	Black	< 80	Black paint on pool floor and walls to mark depths and lanes. Also, over ceramic tiles. The paint is in fair condition.
L-4	Pool Equipment Building wood fascia – east side	White	280	The paint is in peeling condition.
L-5	Pool deck wall – east side (concrete)	Grey	< 80	The paint is in peeling condition.
L-6	Spectator Shelter seating – north side (concrete)	Grey	< 80	The paint is in fair condition.
L-7	Bathhouse window casing – east side (metal)	Green	< 80	The paint is intact.
L-8	Bathhouse portico frame – east side (metal)	Green	240	The paint is in fair condition.

The lead concentrations in the bulk samples collected were below the Los Angeles County Department of Health Services (DHS) definition of lead-based paint by bulk sampling of 600 parts per million (PPM). Laboratory analysis of bulk paint samples L-7 and L-8 indicate that the lead concentration as measured by XRF was not in the paint but actually in the metal substrate at the east side metal window case and portico frame at the Bathhouse.

The bulk paint sample logs, chain-of-custody documentation and sample location map are provided in Appendix D.

4.0 Conclusions and Recommendations

4.1 Asbestos

Prior to the renovation/remodeling or demolition activities, the following ACMs and ACCMs will need to be abated:

Table 4 – ACMs and ACCMs to be Abated

Building Material	Percent Asbestos	Comments
Asphaltic roofing material (roofing shingles – Roof Core)	10 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing on the Bathhouse. Approximately 5,800 square feet of roofing material. The asphaltic roofing is a non-friable ACM and was in good condition at the time of the survey. Pipes and penetrations observed on the roof were metal.
Roof penetration mastic	10% Chrysotile	Asbestos was detected on the mastic used at roof penetrations at vents, approximately 25 square feet. The roof penetration mastic is a non-friable ACM and was in good condition at the time of the survey.
Exterior stucco	0.2 – 0.49% Chrysotile (1,000-point count)	Located at the exterior northeast, northwest, southeast and southwest walls and the west entrance to the Bathhouse, approximately 1,100 square feet. The samples were further analyzed by 1,000-point count method. The exterior stucco is an ACCM and was in good condition at the time of the survey.
Grey rolled roofing (Roof Core)	10 – 15% Chrysotile	Located on the roof of the Pool Equipment Building. Asbestos detected amongst multiple layers of roofing, approximately 850 square feet. The grey rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
Grey roof mastic	10% Chrysotile	Located at vent pad corners and roof penetrations on the Pool Equipment Building roof, approximately 10 square feet. The mastic is a non-friable ACM and was in good condition at the time of the survey.
Interior plaster walls	< 0.1 – 0.5% Chrysotile (1,000-point count)	Located on the interior beige, rough-finish plaster walls inside the Bathhouse, approximately 3,500 square feet. Metal pipes inside wall cavities and along the ceiling were observed to be uninsulated. Samples of interior plaster were analyzed further by 1,000-point count method. The beige interior plaster walls are an ACCM and were in good condition at the time of the survey.

Copyright 2019 Converse Consultants

Table 4 – ACMs and ACCMs to be Abated

Building Material	Percent Asbestos	Comments
Grey rolled roofing (Roof Core)	15 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing at the Spectator Shelter, approximately 600 square feet. The rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
Roof patch mastic	5 – 10% Chrysotile	Located as patches on the roof of the Spectator Shelter, approximately 15 square feet. No roof penetrations were observed. The mastic is a non-friable ACM and was in good condition at the time of the survey.

Prior to any renovation and/or demolition activities, the above impacted ACMs will need to be abated. As the ACCM exterior stucco and interior beige rough-finish plaster will be impacted by the planned Bathhouse renovation, the ACCMs must be abated as well. The abatement must be performed by a Cal/OSHA licensed asbestos abatement contractor using currently asbestos trained workers and supervisors and work practices and engineering controls in accordance with Title 8 of California Code of Regulations (CCR) 1529 and South Coast Air Quality Management District Rule 1403. ACCM waste may be disposed of as non-regulated waste. ACMs and ACCMs not abated can be managed in place through an Operations and Maintenance (O & M) plan.

In the event that suspect ACMs that have not been previously sampled are observed during the demolition/renovation activities, these materials should be assumed to contain asbestos, until such time that they can be accessed, sampled and evaluated for asbestos content.

Converse further recommends that asbestos abatement procedures be monitored by an independent Certified Asbestos Consultant knowledgeable in asbestos abatement procedures.

4.2 LBP

A lead concentration greater than 0.7 mg/cm^2 was detected in the following components:

Table 5 – LBPs and Lead-Containing Materials to be Removed

Building Component	Paint Color	Lead Content (mg/cm^2)	Comments
Ceramic tile	Black	16.9 - 18	Ceramic tile located on the north and south pool walls as lane markers. They have been painted over with black paint. Approximately 14 square feet. The tiles are

Copyright 2019 Converse Consultants

Table 5 – LBPs and Lead-Containing Materials to be Removed

Building Component	Paint Color	Lead Content (mg/cm^2)	Comments
			intact.
Ceramic sink	White	33.7	Located on the interior west wall of the Director's Office in the Bathhouse. One (1) sink in intact condition.
Ceramic wall tile	Tan	3.9	Located at the interior lower west wall in the Men's Restroom in the Bathhouse, by the urinals. Approximately 32 square feet. The tile is intact.
Ceramic urinals	White	2.8	Located at the southwest side of the Men's Restroom in the Bathhouse. Three (3) urinals. The urinals are intact. Ceramic sinks in the Men's and Women's Restrooms are negative for lead.
Ceramic toilets	White	2.8 – 3.2	Located in the Men's and Women's Restrooms in the Bathhouse, approximately seven (7) toilets total. The toilets are intact. The toilets and sinks in the Men's and Women's Staff Restrooms are negative for lead.
Ceramic sink	White	8.8	Located in the Utility Room next to the Women's Shower Hall in the Bathhouse. (One) 1 sink in intact condition.

Painted surfaces and ceramic components (tiles and plumbing fixtures) were observed to be generally in good condition.

Abatement/demolition work involving lead-containing materials must be performed by workers that have undergone the necessary lead training and are CDPH certified lead workers and supervisors.

The lead abatement activities will need to be monitored by a CDPH certified Project Monitor knowledgeable in lead stabilization and abatement procedures.

Although other painted surfaces tested did not meet the criteria for LBP, (lead content less than 0.7 mg/cm^2 or 600 ppm), concentrations of lead were detected in these other materials. Title 8 CCR 1532.1 (Lead) requires workers that perform either manual demolition or manual scraping or sanding of lead painted surfaces to undergo medical monitoring and an exposure assessment including air monitoring of the breathing zone if exposed to airborne lead dust above the Cal/OSHA Action Level of 30 micrograms per cubic meter ($\mu g/m^3$) of air over an 8-hour time weighted average.

In the event that suspect LBPs are observed during the renovation/demolition activities that were not previously sampled, these materials should be assumed to

Copyright 2019 Converse Consultants

contain lead in concentrations exceeding 0.7 mg/cm^2 or 600 ppm until such time that they can be sampled and evaluated for lead content.

5.0 Reliance and Limitations

This report is for the sole benefit and exclusive use of Sparano+Mooney Architects in accordance with the terms and conditions attached to our proposal under which these services have been provided. Its preparation has been in accordance with generally accepted environmental practices. No other warranty, either express or implied, is made. The Scope of Services associated with the report was designed solely in accordance with the objectives, schedule, budget, and risk-management preferences of the Sparano+Mooney Architects.

This report should not be regarded as a guarantee that further ACMs or LBPs, beyond that which could be detected within the scope of this project, is present at the Property. It is not possible to absolutely confirm that no hazardous materials and/or substances exist at the Property. If none are identified as part of a limited scope of work, such a conclusion should not be construed as a guaranteed absence of such materials, but merely the results of the evaluation of the property at the time of the survey. Also, events may occur after the Property visit, which may result in contamination of the Property. Additional information, which was not found or available to Converse at the time of report preparation, may result in a modification of the conclusions and recommendations presented.

Any reliance on this report by Third Parties shall be at the Third Party's sole risk. Should the Sparano+Mooney Architects. wish to identify any additional relying parties not previously identified, a completed *Application of Authorization to Use* (see following page of this report) must be submitted to Converse Consultants.

September 24, 2018

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address, fax number or email; of any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Safety Engineer

SCOPE OF ACCREDITATION

LA Testing
520 Mission Street, South Pasadena, CA 91030

Laboratory ID: **102814**
Issue Date: 04/30/2018

The laboratory is approved for those specific field(s) of testing/methods listed in the table below. Clients are urged to verify the laboratory's current accreditation status for the particular field(s) of testing/Methods, since these can change due to proficiency status, suspension and/or withdrawal of accreditation.

The EPA recognizes the AIHA-LAP, LLC ELLAP program as meeting the requirements of the National Lead Laboratory Accreditation Program (NLLAP) established under Title X of the Residential Lead-Based Paint Hazard Reduction Act of 1992 and includes paint, soil and dust wipe analysis. Air and composited wipes analyses are not included as part of the NLLAP.

Environmental Lead Laboratory Accreditation Program (ELLAP)

Initial Accreditation Date: 11/01/2003

Field of Testing (FoT)	Technology sub-type/ Detector	Method	Method Description *(for internal methods only)*
Paint		EPA SW-846 3050B	
		EPA SW-846 7000B	
Soil		EPA SW-846 3050B	
		EPA SW-846 7000B	
Settled Dust by Wipe		EPA SW-846 3050B	
		EPA SW-846 7000B	
Airborne Dust		NIOSH 7082

Test Report: Asbestos Analysis of Bulk Materials via EPA 600/R-93/116 Method using Polarized Light Microscopy

			Non-Asbestos		Asbestos
Sample	**Description**	**Appearance**	**% Fibrous**	**% Non-Fibrous**	**% Type**
57-Roofing-2 *321900561-0057A*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
57-Roofing-3 *321900561-0057B*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
57-Roofing-4 *321900561-0057C*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Non-Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
57-Roofing-5 *321900561-0057D*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
57-Tar *321900561-0057E*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
58-Roofing-1 *321900561-0058*	Spectator shelter-roof N center - Roof core- grey rolled roofing	Gray/Black Fibrous Heterogeneous	15% Cellulose	70% Non-fibrous (Other)	15% Chrysotile
58-Roofing-2 *321900561-0058A*	Spectator shelter-roof N center - Roof core- grey rolled roofing	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
58-Roofing-3 *321900561-0058B*	Spectator shelter-roof N center - Roof core- grey rolled roofing	Black Fibrous Homogeneous	40% Cellulose	60% Non-fibrous (Other)	None Detected
58-Tar *321900561-0058C*	Spectator shelter-roof N center - Roof core- grey rolled roofing	Black Non-Fibrous Homogeneous		100% Non-fibrous (Other)	None Detected
59-Roofing1 *321900561-0059*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Gray/Black Fibrous Homogeneous	10% Cellulose	75% Non-fibrous (Other)	15% Chrysotile
59-Roofing 2 *321900561-0059A*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
59-Roofing 3 *321900561-0059B*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
59-Roofing 4 *321900561-0059C*	Spectator shelter-roof NE side - Roof core- grey rolled roofing	Black Fibrous Homogeneous	20% Cellulose	80% Non-fibrous (Other)	None Detected
60 *321900561-0060*	Spectator shelter-roof NE side - Roof patch mastic	Gray/Black Non-Fibrous Homogeneous		90% Non-fibrous (Other)	10% Chrysotile
61 *321900561-0061*	Spectator shelter-roof NE side - Roof patch mastic	Black Non-Fibrous Homogeneous	10% Cellulose	90% Non-fibrous (Other)	None Detected

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Samples analyzed by LA Testing South Pasadena, CA NVLAP Lab Code 200232-0, CA ELAP 2283

BULK SAMPLE LOG

Project Name: Sparano/Granada Hills Pool Collected By: GJP/RDS

Project No.: 18-41-273-01 Date: 1/8/19

HOMOGENEOUS MATERIAL: Roof Patch Mastic

Sample Number	Location	Area Sq. Ft.	Condition
60	Spectator Shelter Roof NE side	~15	Good
61	NE side		
62	NW side		

Friability:	Friable	(Non-Friable)	
Potential for Contact with Material:	High	Moderate	Low
Influence of Vibration:	High	Moderate	Low
Potential for Air Erosion:	High	Moderate	Low
Damage Assessment:	(Good)	Damaged	Significantly Damaged

COMMENTS: No penetrations

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits.The limit of detection as stated in the method is 0.1%. EMSL Analytical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government . EMSL Analytical Inc. bears no responsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis.The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample.

Art,

We have received authorization from the client. Please proceed with 1,000-point count analyses on the samples highlighted in orange on the attached analytical report. There are 10 samples total. Turnaround time is 48 hours. Call or e-mail me if you have any questions.

Thanks,

George Paler

1 DEMO PLAN
3/32" = 1'-0"

GENERAL NOTES

1. THE DEMOLITION SCOPE OF THE PROJECT SHALL BE AS DESCRIBED BELOW, BUT NOT LESS THAN ANY DEMOLITION REQUIRED TO ACHIEVE THE NEW CONSTRUCTION AS ILLUSTRATED IN THESE DOCUMENTS.
2. THE DEMOLITION PLAN AND ITS ASSOCIATE KEYNOTES ARE PROVIDED TO ILLUSTRATE THE SCALE AND SCOPE OF DEMOLITION. CONTRACTOR SHALL VISIT THE SITE PRIOR TO BID TO VERIFY DEMOLITION SCOPE.
3. DEMOLITION INCLUDES REMOVAL OF (E) UTILITY LINES WHERE (N) UTILITY LINES ARE TO BE PROVIDED.
4. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL EQUIPMENT BUILDING AND ALL ASSOCIATED ELEMENTS.
5. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL, POOL DECK, PERIMETER CURBS AND RETAINING WALLS, FENCING, LIGHTING, AND ALL ASSOCIATED ELEMENTS.
6. BATHHOUSE PARTIAL DEMOLITION INCLUDES ALL PLASTER ON MTL STUD WALLS, ALL ELECTRICAL ELEMENTS, ALL PLUMBING ELEMENTS, ALL MECHANICAL ELEMENTS, AND ENTIRE CONCRETE FLOOR.
7. BATHHOUSE ROOF DECK AND SHINGLES TO BE REMOVED IN THEIR ENTIRETY. FRAMING MEMBERS TO REMAIN AND SHALL BE PROTECTED.
8. BATHHOUSE MASONRY WALLS (UNO), STEEL COLUMNS AND ASSOCIATED FOOTINGS SHALL REMAIN AND BE PROTECTED.
9. LEAVE REBAR THAT TIES INTO (E) MASONRY WALL AND (E) CONCRETE FOOTING IN PLACE AND PROTECT.
10. SEE LANDSCAPE SHEET L-0.10 FOR ADDITIONAL PROPOSED TREE REMOVAL LOCATIONS.
11. SEE SHEET G0.50 FOR ADDITIONAL SITE HARDSCAPE TO BE DEMOLISHED/ HARDSCAPE TO BE PROTECTED INFO. S.C.D FOR SCOPE AND DETAIL.

GRAPHIC LEGEND

(E) WALL/ELEMENT TO REMAIN

(E) MASONRY WALL TO REMAIN

(E) ELEMENT TO BE DEMOLISHED

NOTE: FOR SMALLER ELEMENTS, DEMOLITION DASHES DO NOT SHOW, REF KEYNOTES FOR CLARIFICATION.

KEYNOTE LEGEND

1 POOL AND ASSOCIATED STRUCTURAL FOUNDATION TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
2 POOL EQUIPMENT BUILDING AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
3 POOL DECK AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
4 CHAINLINK GATE,FENCING, POSTS, CURB, AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL.
5 POOL DIVING BOARD AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
6 SPECTATOR SEATING AND ASSOCIATED FOUNDATION AND SUPER STRUCTURE (ROOF AND FRAMING) TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
7 INTERIOR PLASTER WALLS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL. REMOVE ALL ASSOCIATED ELEMENTS, I.E. DOORS, ELECTRICAL, ANCHORS, ETC.
8 CONCRETE COUNTER TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
9 CONCRETE BENCH TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
10 CHANGING PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
11 PLUMBING FIXTURES TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
12 GLAZING AND SUPPORTING STRUCTURE TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. DEMOLISH ROOF BACK TO ADJACENT BRICK WALL AND BEAM.
13 CONCRETE BENCH TO REMAIN AND BE PROTECTED.
14 TOILET/SHOWER PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
15 METAL SCREEN STRUCTURE TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
16 INTERIOR BUILDING SLAB TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. PRESERVE FOUNDATIONS FOR STRUCTURAL ELEMENTS TO REMAIN. REMOVE ASSOCIATED ITEMS I.E. PLUMBING DRAINS, PLUMBING PIPING, ETC.
17 ENTRY DOORS TO BE DEMOLISHED AND REMOVED. ASSOCIATED (E) STEEL FRAME STRUCTURE TO REMAIN, PROTECT.
18 PROTECT (E) STRUCTURAL COLUMN DURING DEMOLITION.
19 CONCRETE RETAINING WALL AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
20 CONCRETE RAMP AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
21 CONCRETE SIDEWALK TO BE DEMOLISHED AND REPLACED. S.C.D. FOR SCOPE AND DETAIL.
22 CONCRETE STAIRS AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
23 CHAIN LINK GATE, ASSOCIATED POSTS AND FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY WITH REMAINDER OF FENCE DEMOLITION.
24 LIGHT POLES AND ASSOCIATED FOOTINGS TO BE DEMOLISHED.
25 PROPOSED TREE REMOVAL PER SHEET L-0.10 PENDING FORESTRY APPROVAL. S.L.D. FOR MORE INFO.
26 (E) TREE TO REMAIN, PROTECT. S.L.D. FOR MORE INFO.
27 CHEMICAL STORAGE TANKS TO BE REMOVED AND ALL ASSOCIATED ELEMENTS (INCLUDING BUT NOT LIMITED TO FOUNDATIONS, SLABS, FENCING, PIPING, AND ELECTRICAL) TO BE DEMOLISHED IN THEIR ENTIRETY.
28 DEMOLISH (E) GATE/DOOR AND ASSOCIATED FOOTING.
29 CONCRETE LOADING DOCK WITH STAIRS AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY
30 BIKE RACK TO BE REMOVED AND REPLACED WITH NEW 16 BIKE CAPACITY BIKE RACK.
31 CONCRETE STORM SWELL TO BE DEMOLISHED IN ITS ENTIRETY AND BE REPLACED WITH NEW. S.C.D. AND S.L.C. FOR MORE INFO.

1 DEMO PLAN
3/32" = 1'-0"

GENERAL NOTES

1. THE DEMOLITION SCOPE OF THE PROJECT SHALL BE AS DESCRIBED BELOW, BUT NOT LESS THAN ANY DEMOLITION REQUIRED TO ACHIEVE THE NEW CONSTRUCTION AS ILLUSTRATED IN THESE DOCUMENTS.
2. THE DEMOLITION PLAN AND ITS ASSOCIATE KEYNOTES ARE PROVIDED TO ILLUSTRATE THE SCALE AND SCOPE OF DEMOLITION. CONTRACTOR SHALL VISIT THE SITE PRIOR TO BID TO VERIFY DEMOLITION SCOPE.
3. DEMOLITION INCLUDES REMOVAL OF (E) UTILITY LINES WHERE (N) UTILITY LINES ARE TO BE PROVIDED.
4. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL EQUIPMENT BUILDING AND ALL ASSOCIATED ELEMENTS.
5. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL, POOL DECK, PERIMETER CURBS AND RETAINING WALLS, FENCING, LIGHTING, AND ALL ASSOCIATED ELEMENTS.
6. BATHHOUSE PARTIAL DEMOLITION INCLUDES ALL PLASTER ON MTL STUD WALLS, ALL ELECTRICAL ELEMENTS, ALL PLUMBING ELEMENTS, ALL MECHANICAL ELEMENTS, AND ENTIRE CONCRETE FLOOR.
7. BATHHOUSE ROOF DECK AND SHINGLES TO BE REMOVED IN THEIR ENTIRETY. FRAMING MEMBERS TO REMAIN AND SHALL BE PROTECTED.
8. BATHHOUSE MASONRY WALLS (UNO), STEEL COLUMNS AND ASSOCIATED FOOTINGS SHALL REMAIN AND BE PROTECTED.
9. LEAVE REBAR THAT TIES INTO (E) MASONRY WALL AND (E) CONCRETE FOOTING IN PLACE AND PROTECT.
10. SEE LANDSCAPE SHEET L-0.10 FOR ADDITIONAL PROPOSED TREE REMOVAL LOCATIONS
11. SEE SHEET G0.50 FOR ADDITIONAL SITE HARDSCAPE TO BE DEMOLISHED/ HARDSCAPE TO BE PROTECTED INFO. S.C.D FOR SCOPE AND DETAIL.

GRAPHIC LEGEND

(E) WALL/ELEMENT TO REMAIN

(E) MASONRY WALL TO REMAIN

(E) ELEMENT TO BE DEMOLISHED

NOTE: FOR SMALLER ELEMENTS, DEMOLITION DASHES DO NOT SHOW, REF KEYNOTES FOR CLARIFCATION.

KEYNOTE LEGEND

1 POOL AND ASSOCIATED STRUCTURAL FOUNDATION TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
2 POOL EQUIPMENT BUILDING AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
3 POOL DECK AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.
4 CHAIN LINK GATE,FENCING, POSTS, CURB, AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL.
5 POOL DIVING BOARD AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
6 SPECTATOR SEATING AND ASSOCIATED FOUNDATION AND SUPER STRUCTURE (ROOF AND FRAMING) TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
7 INTERIOR PLASTER WALLS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL. REMOVE ALL ASSOCIATED ELEMENTS, I.E. DOORS, ELECTRICAL, ANCHORS, ETC.
8 CONCRETE COUNTER TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
9 CONCRETE BENCH TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
10 CHANGING PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
11 PLUMBING FIXTURES TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
12 GLAZING AND SUPPORTING STRUCTURE TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. DEMOLISH ROOF BACK TO ADJACENT BRICK WALL AND BEAM.
13 CONCRETE BENCH TO REMAIN AND BE PROTECTED.
14 TOILET/SHOWER PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
15 METAL SCREEN STRUCTURE TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.
16 INTERIOR BUILDING SLAB TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. PRESERVE FOUNDATIONS FOR STRUCTURAL ELEMENTS TO REMAIN. REMOVE ASSOCIATED ITEMS I.E. PLUMBING DRAINS, PLUMBING PIPING, ETC.
17 ENTRY DOORS TO BE DEMOLISHED AND REMOVED. ASSOCIATED (E) STEEL FRAME STRUCTURE TO REMAIN, PROTECT.
18 PROTECT (E) STRUCTURAL COLUMN DURING DEMOLITION.
19 CONCRETE RETAINING WALL AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
20 CONCRETE RAMP AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
21 CONCRETE SIDEWALK TO BE DEMOLISHED AND REPLACED. S.C.D. FOR SCOPE AND DETAIL.
22 CONCRETE STAIRS AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.
23 CHAIN LINK GATE, ASSOCIATED POSTS AND FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY WITH REMAINDER OF FENCE DEMOLITION.
24 LIGHT POLES AND ASSOCIATED FOOTINGS TO BE DEMOLISHED.
25 PROPOSED TREE REMOVAL PER SHEET L-0.10 PENDING FORESTRY APPROVAL. S.L.D. FOR MORE INFO.
26 (E) TREE TO REMAIN, PROTECT. S.L.D. FOR MORE INFO.
27 CHEMICAL STORAGE TANKS TO BE REMOVED AND ALL ASSOCIATED ELEMENTS (INCLUDING BUT NOT LIMITED TO FOUNDATIONS, SLABS, FENCING, PIPING, AND ELECTRICAL) TO BE DEMOLISHED IN THEIR ENTIRETY.
28 DEMOLISH (E) GATE/DOOR AND ASSOCIATED FOOTING.
29 CONCRETE LOADING DOCK WITH STAIRS AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY
30 BIKE RACK TO BE REMOVED AND REPLACED WITH NEW 16 BIKE CAPACITY BIKE RACK.
31 CONCRETE STORM SWELL TO BE DEMOLISHED IN ITS ENTIRETY AND BE REPLACED WITH NEW. S.C.D. AND S.L.C. FOR MORE INFO.

*Analysis following Lead in Paint by EMSL SOP/Determination of Environmental Lead by FLAA. Reporting limit is 0.010 % wt based on the minimum sample weight per our SOP. Unless noted, results in this report are not blank corrected. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities. Samples received in good condition unless otherwise noted. "<" (less than) result signifies that the analyte was not detected at or above the reporting limit. Measurement of uncertainty is available upon request. The QC data associated with the sample results included in this report meet the recovery and precision requirements unless specifically indicated otherwise. Definitions of modifications are available upon request.

1 DEMO PLAN
3/32" = 1'-0"

GENERAL NOTES

1. THE DEMOLITION SCOPE OF THE PROJECT SHALL BE AS DESCRIBED BELOW, BUT NOT LESS THAN ANY DEMOLITION REQUIRED TO ACHIEVE THE NEW CONSTRUCTION AS ILLUSTRATED IN THESE DOCUMENTS.
2. THE DEMOLITION PLAN AND ITS ASSOCIATE KEYNOTES ARE PROVIDED TO ILLUSTRATE THE SCALE AND SCOPE OF DEMOLITION. CONTRACTOR SHALL VISIT THE SITE PRIOR TO BID TO VERIFY DEMOLITION SCOPE.
3. DEMOLITION INCLUDES REMOVAL OF (E) UTILITY LINES WHERE (N) UTILITY LINES ARE TO BE PROVIDED.
4. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL EQUIPMENT BUILDING AND ALL ASSOCIATED ELEMENTS.
5. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL, POOL DECK, PERIMETER CURBS AND RETAINING WALLS, FENCING, LIGHTING, AND ALL ASSOCIATED ELEMENTS.
6. BATHHOUSE PARTIAL DEMOLITION INCLUDES ALL PLASTER ON MTL STUD WALLS, ALL ELECTRICAL ELEMENTS, ALL PLUMBING ELEMENTS, ALL MECHANICAL ELEMENTS, AND ENTIRE CONCRETE FLOOR.
7. BATHHOUSE ROOF DECK AND SHINGLES TO BE REMOVED IN THEIR ENTIRETY. FRAMING MEMBERS TO REMAIN AND SHALL BE PROTECTED.
8. BATHHOUSE MASONRY WALLS (UNO), STEEL COLUMNS AND ASSOCIATED FOOTINGS SHALL REMAIN AND BE PROTECTED.
9. LEAVE REBAR THAT TIES INTO (E) MASONRY WALL AND (E) CONCRETE FOOTING IN PLACE AND PROTECT.
10. SEE LANDSCAPE SHEET L-0.10 FOR ADDITIONAL PROPOSED TREE REMOVAL LOCATIONS

4.0 Protection of Trees During Construction

Introduction

The objective of this section is to reduce the negative affects of construction on trees to a less than significant level.

Land development is a complex process and is even more challenging when trees are involved. Construction is one of the greatest causes of tree decline and death in urban areas.

The long-term goal of the Forestry Division is urban forest sustainability. This describes the maintenance of social, recreational, ecological and economic functions of trees and their benefits over time. Stewardship of naturally occurring and planted trees is a central element in forest sustainability. Concerns about tree health and structure, preservation during development and redevelopment, species and site selection, quality of planting stock, standards of performance, maintenance practices in our parks, and recycling are integral to a sustainable urban forest.

Tree protection should not begin subsequent to construction. If preservation measures are delayed or ignored until construction begins, the trees may be destined to fail. Because in most cases construction affects to trees cannot be completely eliminated, the goal for our parks planners and designers is to keep injury to trees to a minimum and allow building projects to proceed at the same time.

Successful tree preservation occurs when designers, construction personnel, and project managers are committed to tree preservation. All members of the project team must be familiar with the rudimentary aspects of tree growth and development in order to understand the relationship between tree survival and construction practices. Myths abound how trees grow.

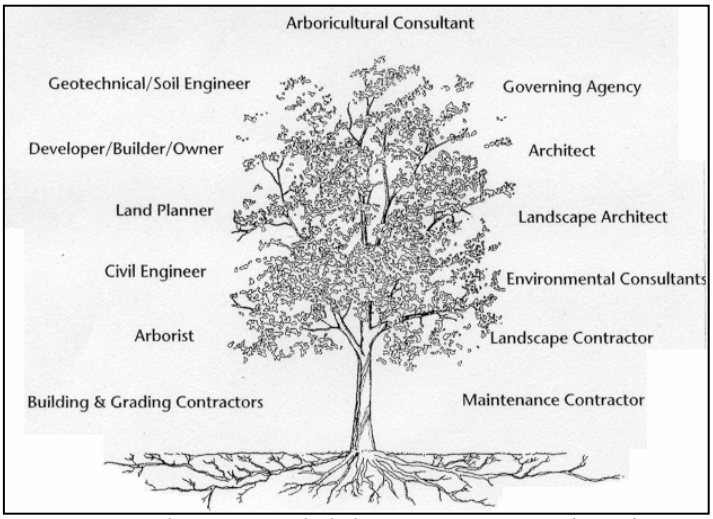
For example, above ground parts of trees is not a “mirror” of what lies below ground. In actuality, typically four to eleven large roots radiate from the base of a tree’s trunk. These “buttress” roots extend from the root crown and sometimes are visible when the trunk flares away from the root crown or collar. These large roots decrease in taper rapidly and branch repeatedly so that at distances of ten feet or more from the trunk they are about ½ inch in diameter or smaller.

These roots grow horizontally through the soil and depending on the tree can extend 40 feet or more beyond the branch tips. These smaller roots are primarily responsible for water and mineral absorption. There can be hundreds of roots in a cubic inch of soil—thus any removal of soil or root severance forces a tree to compromise its physiological processes to sustain the loss.

All trees cannot and should not be preserved. Trees that are structurally unstable, in poor health, or unable to survive effects of construction become a liability to the project and should be removed. A realistic tree preservation program acknowledges that conflicts between trees and development may sometimes result in the removal of some

trees and recognizes the detrimental effect to the project and community when trees die after construction is completed.

Successful tree preservation occurs when construction impacts to trees are minimized or avoided altogether. The challenge is to determine when impacts will be too severe for the tree to survive, not only in the short term, but also in the long term. There are no quantitative methods to calculate this critical level. Determining the optimum tree protection zone provides a guideline, although trees often survive and flourish with smaller protection areas.



Matheny, N.P. and Clark, J.R. 1998. *Trees and Development*

Tree Preservation during development requires the commitment of everyone involved in the project's planning, design, construction, and management.

The following are the three guiding principles for tree preservation:

- The acknowledgement that not all trees are in excellent health or have good structural stability.

- Tree preservation cannot be the responsibility of the Forestry staff alone. Each development participant must understand that his or her activities and decisions influence the success of tree preservation efforts.

- The ability of an arborist to cure construction injury is very limited, so the focus of preservation efforts is the *prevention* of damage.

Following the above principles will increase the chance for success and reduce the possibility that trees will die.

Efforts at preservation must include acknowledgement of the tree and its ecological support system.

4.10 Planning for All Projects

Capital improvement projects, in-house construction projects, sport field renovations, and even the addition of a few sprinkler lines affect trees. Our department considers trees as important assets and requires plotting tree locations on plans for all projects.

4.10.1 Planning and Designing for Capital Improvement Projects

Projects are designed by in-house design staff and by outside design firms. Either design team should be given set of guidelines defining the Department's *Tree Preservation Policy* (Appendix A) and *Tree Protection Guidelines* (Appendix G and Appendix I), to assure that trees are accounted for from project initiation forward.

A) Survey before Planning

The survey must accurately plot the trunk locations within the project site. Include construction staging areas and delivery routes.

B) Plan and Design with Knowledge of Trees

The health and structural confirmation of the surveyed trees must be evaluated in order to anticipate how well they will respond to development. The evaluation must describe the character of trees and their suitability for preservation at a level of detail appropriate for the project and phase of planning. An arboricultural or forestry consultant must be obtained for this evaluation.

C) Plan with a Vision

Disruption of any tree by construction activities may negatively affect its physiological processes, and cause depletion of energy reserves and decline in vigor, often resulting in tree death. Typically this does not manifest until many years after the tree is disrupted. Preservation of mature trees during construction has limitless benefits to the success of a project.

When new trees are planted, consideration should be given to species diversity and appropriateness of location. To prevent destructive clearance pruning in future years, keep in mind the ultimate canopy and root spread.

D) Plan for all Aspects and Entire Duration of Project

Construction projects are multi-level and often require participation of various construction trades and subcontractors. It is important to plan for tree protection with an understanding of construction dynamics. Trees must be protected in the staging area, construction employee parking area, adjacent properties, as well as on the actual construction site.

4.10.2 Managing In-House Construction Projects

The in-house Construction team should be given set of guidelines that define the Department's *Tree Preservation Policy* (Appendix A) and *Tree Protection Guidelines* (Appendix G and Appendix I), and to assure to assure that trees are accounted for from project initiation forward.

A) Survey before Planning

For all in-house projects, contact the Forestry Division for an accurate survey of trees on the job site.

B) Plan and Design with Knowledge of Trees

In order to better understand the condition of the affected trees, the Forestry Division will make available the results of the tree evaluation. This evaluation will provide you with knowledge of the resources and the anticipated construction tolerance of the affected trees.

C) Plan with a Vision

Obtain information about trees and minimize negative impacts on the urban forest. Conduct all projects with tree preservation in mind.

D) Plan for all Aspects and for the Entire Duration of the Project

Trees must be protected in the staging area, construction employee parking area, and during demolition and grading. Arrange with the Sr. Park Maintenance Supervisor for trees to be watered and for the soil to be protected from compaction.

4.20 Pre-Construction Requirements - Tree protection and Preservation Plan

Prior to the commencement of a development project, the R&P Project Manager, and/or City–Wide Construction Supervisor, and/or Regional Head must be assured that if any activity of the project is within the dripline of *Protected Trees,* a site specific tree protection plan is prepared. The following six steps shall be incorporated as part of the Tree Protection and Preservation Plan:

4.20.1 Site Plan

For all projects, site plans must indicate accurately plotted trunk locations and *the dripline* areas of all trees or group of trees to be preserved within the development area. Additionally, for all *Protected Trees* the plans shall accurately show the trunk diameter, dripline and clearly identified *tree protection zones.* The type of protective fencing shall be specified and indicated with a bold dashed line.

4.20.2 Protective tree fencing for all categories of *Protected Trees*

Fenced enclosures shall be erected around trees to be protected. This will achieve three primary goals, (1) to keep crowns and branching structure clear from contact by equipment, materials, and activities; (2) to preserve roots and soil condition in an intact and non-compacted state and; (3) to identify the *Tree Protection Zone* in which no soil disturbance is permitted and activities are restricted, unless otherwise approved by the DRP Arborist.

All trees to be preserved shall be protected with five to six (5 to 6) foot high chain link fences. Fences are to be mounted on two-inch galvanized iron posts, driven into the ground to a depth of at least two feet and at no more than ten-foot centers. Install a two-foot wide access gate for tree maintenance. Tree fences shall be erected before demolition, grading, or construction begins and remain until final inspection of the

project. The 'Warning" sign shall be prominently displayed on each protective fence. The sign shall be a minimum of 8.5 inches x 11 inches and clearly state the following:

TREE PROTECTION ZONE
This Fence Shall Not be Removed

All work within the *Tree Protection Zone* requires approval of the DRP Arborist.

A) Type I Tree Protection Fence is for trees to be preserved throughout the duration of the project. The fences shall enclose the entire area under the canopy dripline or *Tree Protection Zone,* if specified by the DRP Arborist. If fencing must be located on paving or concrete that will not be demolished, an appropriate grade level concrete base may support the posts.

B) Type II Tree Protection Fence is for trees situated in small planting areas, where only the planting area is enclosed with the required chain link protective fencing. The walkways and traffic areas are left open to the public.

C) Type III Tree Protection Fence is for trees in small tree wells, building site planters or sidewalk planters. Trees shall be wrapped with 2 inches of orange plastic fencing from the ground to the first branch and overlaid with 2-inch thick wooden slats that are bound securely (slats shall not be allowed to dig into the bark). During installation of the plastic fencing, caution shall be used to avoid damaging branches. Major scaffold limbs may also require plastic fencing as directed by the DRP Arborist.

No storage of material, topsoil, vehicles, or equipment shall be permitted within the fenced area throughout the entire duration of the construction project.

4.20.3 Verification of tree protection

The project contractor or construction supervisor shall verify in writing that all pre-construction tree preservation conditions have been met as follows:

A) Tree fencing installed
B) Erosion control secured
C) Tree pruning completed
D) Soil compaction preventive measures installed
E) Tree maintenance schedule established

The Planning and Construction Project Manager, City-wide Construction Supervisor, or Region Head Superintendent and Head of Recreation and Parks Urban Forest must sign this verification.

4.20.4 Pre-construction meeting

The DRP Arborist shall attend all pre-construction meetings to assure that everyone fully understands previously reviewed procedures and tree protective measures concerning the project site, staging areas, hauling routes, watering, contacts, etc.

4.20.5 Tree Protection Zone

Each tree to be retained shall have a designated *Tree Protection Zone* identifying the area sufficiently large enough to protect it and its roots from disturbance. The *Tree Protection Zone* shall be shown on all site plans: Demolition, Grading, Irrigation, Electrical, Landscape, etc. Improvements or activities such as paving, utility and irrigation trenching including other ancillary activities shall occur outside the *Tree Protection Zone,* unless otherwise specified. The protection fence shall serve as the *Tree Protection Zone.*

A) Activities prohibited within the *Tree Protection Zone* include:

- Parking vehicles or equipment, storage of building materials, refuse, or excavated soils, or dumping poisonous material on or around trees and roots. Poisonous materials include, but are not limited to paint, petroleum products, concrete, stucco mix, dirty water or any material that may be harmful to tree health
- The use of tree trunks as a backstop, winch support, anchorage, as a temporary power pole, signpost or other similar function
- Cutting of tree roots by utility trenching, foundation digging, placement of curbs and trenches, or other miscellaneous excavations without prior approval of the DRP Arborist
- Soil disturbance or grade change
- Drainage changes

B) Activities permitted or required within the *Tree Protective Zone* include:

- **Mulch:** During construction, wood chips may be spread within the *Tree Protection Zone* to a four to six inch depth, leaving the trunk clear of mulch. This will aid in inadvertent soil compaction and moisture loss. Mulch shall be 2-inch unpainted, untreated shredded wood or approved material.
- **Root Buffer:** When areas under the tree canopy cannot be fenced, a temporary buffer is required and shall cover the root zone and remain in place at the specified thickness until the final grading stage. The protective buffer shall consist of shredded wood chips spread over the roots at a minimum of 6-inches in depth (keeping the trunk clear of chips), and layered by ¾-inch quarry gravel to stabilize the 3/4–inch plywood sheets laid on top. Steel plates can also be used.
- **Irrigation, Aeration, fertilization, Mycorrhizae** treatments or other beneficial practices that have been specifically approved for use within the *Tree Protection Zone.*

C) Erosion Control:
If a tree is adjacent to or in the immediate proximity to a grade slope of 8% (23 degrees) or more, approved erosion control or silt barriers shall be installed outside the Tree Protection Zone to prevent siltation and/or erosion within the zone.

4.20.6 Tree Pruning and Removal
Prior to construction, various trees may need to be pruned away from structures or proposed construction activity. ***Construction or contractor personnel shall not attempt pruning.*** Only personnel approved by the DRP Arborist can perform pruning operations.

Removal of trees adjacent to trees that are to remain requires a great amount of finesse. Only personnel approved by the DRP Arborist shall engage in tree removal. Removal of trees that extend into branches or roots of protected trees shall not be attempted by the demolition or construction crew, or by grading or other heavy equipment. Before removing tree stumps, the project manager shall determine if roots are entangled with trees that are to remain. If so, these stumps shall have their roots severed before extracting them.

4.30 Activities During Construction and Demolition Near Trees
Soil disturbance or other damaging activities within the Tree Protection Zone is prohibited unless approved by the DRP Arborist and mitigation for specific injuries is implemented. **No encroachment within 10 feet of a trunk will be permitted under any circumstances.**

4.30.1 Soil Compaction
Soil compaction is the largest single factor responsible for the decline of trees on construction sites. The degree of compaction depends on several factors: amount and type of pressure applied, presence and depth of surface organic litter, soil texture and structure, and soil moisture level.

The greatest increase in soil density occurs during the first few equipment passes over the soil, which underscores the importance of implementing protective measures before the project begins and equipment arrives at the site. To dispense traffic weight mulch and temporarily root buffers can be used.

The following techniques can lessen compaction: vertical mulching, soil fracturing, core venting, and radial trenching. Do not compact soil to higher density then needed: to 95% Proctor density (moisture – density) in improved areas for asphalt or concrete pavements, and not to exceed 85% in unimproved open landscape areas that use water jet compaction.

4.30.2 Grading Limitations within the Tree Protection Zone
Lowering the grade around trees can have an immediate and long-term effect on trees. Typically, most roots are within the top 3 feet of soil, and most of the fine roots active in water and nutrient absorption are in the top 12 inches.

A) Grade changes within the *Tree Protection Zone* are not permitted.

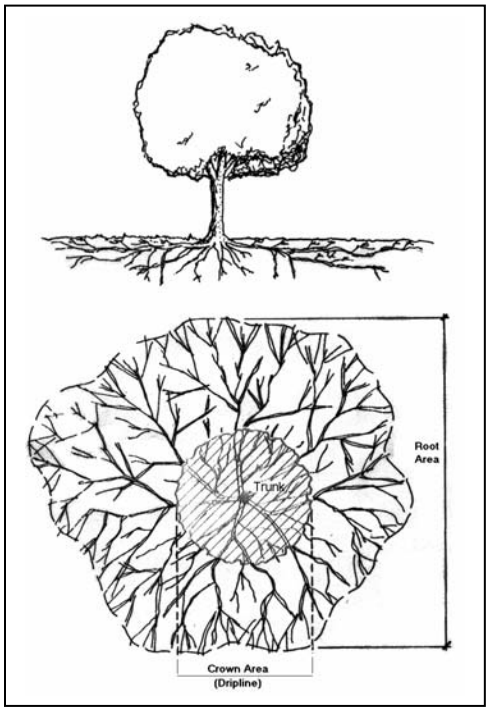
B) Grade changes outside the *Tree Protection Zone* shall not significantly alter drainage.

C) Grade changes under specifically approved circumstances shall not allow more than 6 inches of fill soil or allow more than 4 inches of existing soil to be removed from natural grade, unless mitigated.

D) Grade fills over 6 inches or impervious overlay shall incorporate an approved permanent aeration system, permeable material, or other approved mitigation.

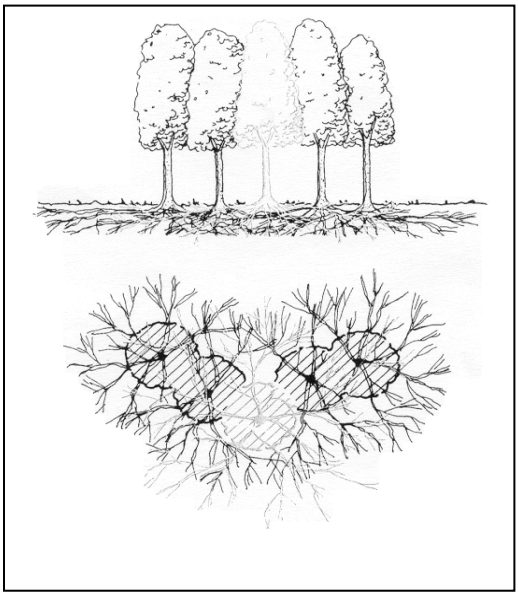
E) Grade cuts exceeding 4 inches shall incorporate retaining walls or an appropriate transition equivalent.

The pictures on the next pages illustrate the pattern of tree root development and areas where encroachments may have an adverse effect on tree health. See Training Leaflets (Appendix P) for a list of information offered by the Forestry Division. The video, Guide for Excavating Near Trees, *Tunneling and Trenching* (International Society of Arboriculture) can be borrowed from the Forestry Office.



Matheny, N.P. and Clark, J.R. 1998. *Trees and Development*

Tree root system of a tree can be described as shallow and widespread, extending far beyond the edge of the canopy.



Matheny, N.P. and Clark, J.R. 1998. *Trees and Development*

In many parks where trees grow closely together, root systems of individual trees overlap and intertwine, forming a dense mat of roots.

4.30.3 Trenching, Excavation and Equipment Use

Trenching, excavation or boring within the *Tree Protection Zone* shall be limited to activities approved by the DRP Arborist. Explore alternatives for trenching outside the root zone. Avoid exposing roots during hot, dry weather. Backfill trenches as soon as possible with soil and soak with water the same day. Small roots can die in 10 to 15 minutes and large roots may not survive an hour of exposure. If the trench must be left open all roots must be kept moist by wrapping them in peat moss and burlap.

If trenching is unavoidable, the following distances should be maintained:

TRUNK DIAMETER (measured at 4.5 feet above natural grade)	DISTANCE FROM BOTH SIDES OF THE TRUNK
Up to 6 inches	Past dripline
6-9 inches	5 feet
10-14 inches	10 feet
15-19 inches	12 feet
over 19 inches	15 feet

A) Root Severance. No roots greater than 2 inches in diameter shall be cut without approval of the DRP Arborist. Tunneling under roots is the approved alternative. Prior to excavation for foundation/footing/walls, or grading or trenching within the *Tree Protection Zone,* roots shall be severed cleanly one-foot outside the *Tree Protection Zone* to the depth of the planned excavation. <u>When roots must be cut, they shall be cut cleanly with a sharp saw to sound wood and flush with the trench site.</u>

B) Excavation. Any approved excavation, demolition, or extraction of material shall be performed with equipment that is placed outside the *Tree Protection Zone*. Hand digging, hydraulic, or pneumatic excavation are permitted methods for excavation within the *Tree Protection Zone.*

C) Heavy Equipment. Use of backhoes, Ditch-Witches, steal tread tractors or other heavy vehicles within the *Tree Protection Zone* is prohibited unless approved by the DRP Arborist. If allowed, a protective root buffer is required.

4.30.4 Tunneling and Directional Drilling

Approved trenching or pipe installation within the *Tree Protection Zone* shall be either cut by hand, air-spade, or by mechanically boring a tunnel under the roots with a horizontal directional drill using hydraulic or pneumatic air excavation technology. In all cases, install the utility pipe immediately, backfill with soil and soak with water within the same day. Tunneling under the root system can greatly reduce both damage to the tree and the cost to repair landscape and other features destroyed in the trenching process. There are times, such as when working in rocky soils and slopes, when tunneling is not a reasonable alternative.

The following recommendations for tunneling depths should be observed:

TRUNK DIAMETER (DBH)	MINIMUM TUNNEL DEPTH
Less than 12 inches	24 inches
12 inches or more	36 inches

4.30.5 Alternative Methods for Hardscape to Prevent Root Cutting

The following remedies should be considered as an alternative to severing tree roots:

A) Grinding a raised walkway or concrete pad
B) Ramping the walkway surface over the roots or lifted slab with pliable paving.
C) Routing the walkway around tree roots
D) Permeable paving materials (e.g., decomposed granite), interlocking pavers, or flagstone walkways on sand foundations

4.30.6 Using Alternative Base Course Materials

Engineered structural soil mix is an alternative material for hardscape areas near trees. More information can be found at www.amereq.com.

4.40 Tree Maintenance During Construction

Providing adequate maintenance can mitigate stressful changes that occur to a tree's environment during construction. To remain vigorous the tree needs to maintain stored carbohydrates and preserve the effectiveness of its growth regulators. It is recommended that large projects provide:

4.40.1 Irrigation

Providing supplemental irrigation for trees under water stress may be the single most important treatment. Irrigation should be designed to wet the soil within the *Tree Protection Zone* to the depth of the root zone and to replace that water once it is depleted. Light, frequent irrigation should be avoided. Create a six-inch berm around trees at the edge of the *Tree Protection Zone* and fill with no more than six inches of mulch. Fill the basin with water. Irrigation should wet the top two to three feet of soil to replicate similar volumes and normal seasonal distribution.

4.40.2 Soil Compaction Mitigation

To prevent negligent encroachment into the *Tree Protection Zone,* trees to be preserved during construction must have the specified type of protection fences in place at all times. Removal of fences, even temporarily, to allow deliveries or equipment access is not allowed unless approved by the DRP Arborist and a root buffer is installed. The root buffer components: mulch, gravel and plywood, must be maintained continually to assure its effectiveness against soil compaction.

4.40.3 Dust Control

During periods of extended drought, wind or grading, trunks, limbs and foliage should be sprayed with water to remove accumulated construction dust.

4.50 Damage to Trees

4.50.1 Reporting Injury to Trees

Any damage or injury to trees shall be reported as soon as possible to the Project Manager or Construction Supervisor, and always to the Park Maintenance Supervisor. The Park Maintenance Supervisor needs to be aware of an injured tree in order to monitor its recovery or progress. Injuries to roots and branches must be repaired immediately.

4.50.2 Contractor Subject to Penalties.

If a tree designated to remain is removed or irreversibly damaged as determined by the Recreation and Parks Arborist, a contractor may be required to install a replacement tree matching in size, quality and variety, using an contractor designated by the Recreation and Parks Arborist. If an acceptable replacement tree is not available, the contractor may be required to pay damages to the City for the value of the damaged tree in accordance with the guidelines set forth in the Guide for Plant Appraisal, 9th Edition, using the Trunk Formula Method.

4.50.3 Employees Subject to Discipline

In the event of damage to above- or below-ground parts of park trees, the Construction Supervisor or Park Maintenance Supervisor shall conduct an investigation to determine the cause of the damage. If it is found that damage was caused due to the error, negligence, or willfulness of a Department employee, then that employee may be subject to appropriate disciplinary action.

4.60 Documents to be Included in all Projects

4.60.1 Model Tree Protection Specifications for Designers and Project Managers (Appendix G)

This document should be distributed to the Planning and Construction Designers, Project Managers, City Inspectors, bidding contractors, and contracted designing firms.

4.60.2 Tree Protection Summary and Instructions on How to Prevent Damage to Trees During Construction (Appendix I)

This document should be distributed to the Construction and Maintenance staff for implementation during all in-house projects.

4.70 Right Of Entry Permits and Documents to be included with every permit

Carnivals and festivals that are celebrated in our parks provide exceptional and enriching opportunities that bring our communities together. These activities can potentially affect the park environment. Filming crews, food concessions, permitted vendors, and special events activities affect the physical properties of our parks and trees.

In order to sustain a healthy urban forest, it is imperative that all Department staff understands the need to protect park trees. Every individual, organization or agency given a Right of Entry, permit or agreement to enter Department property, should be in compliance with Department policies protecting park trees and be given documentation the will help to ensure tree protection during the permitted activity. The document titled Instructions on How to Prevent Damage to Trees During Construction (Appendix I) shall be distributed to every permittee and the permittee shall comply with these instructions.

Sparano + Mooney Architecture
Attn: Jorge Beltran
642 Moulton Ave. Studio W4
Los Angeles, Ca. 90031

PROJECT:	**Bath House for Granada Hills Recreation Center** **16730 Chatsworth Street / Granada Hills, Ca. 91340**
SUBJECT:	**Wood Framing Inspection**
INSPECTION DATE:	**December 15, 2017**
TP INSPECTOR:	**Jeff Reith**
REPORT:	**SER171215**

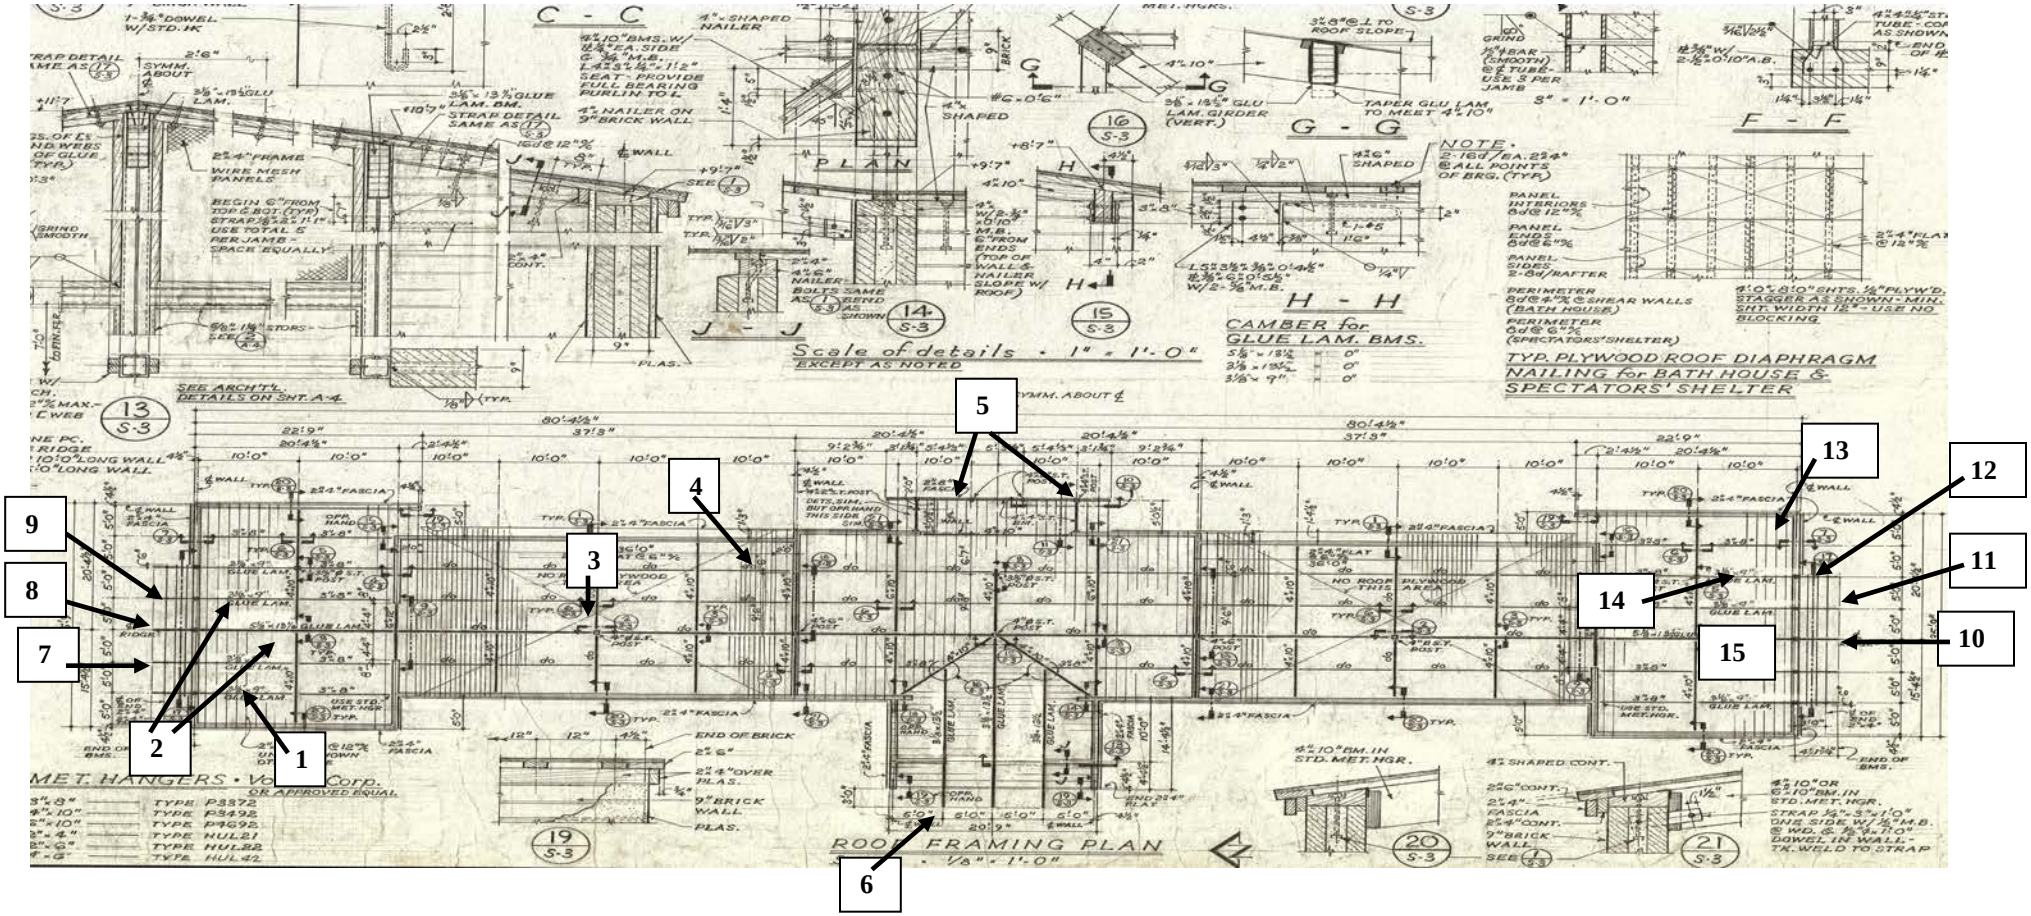
PROCEDURE / SCOPE:

An inspection was conducted to determine the condition of the exposed roof framing. In members showing signs of distress, sounding, drilling, and pick tests were used to determine the presence of deterioration and estimate the amount of any damage occurring in the members.

SUMMARY OF RESULTS:

1. There were three (3) beams found in the interior with decay affecting approx. 25 – 30% of the cross section.
2. Four (4) areas of plywood roof sheathing were found with decay affecting the outer veneer to the entire thickness.
3. Six (6) beams on the exterior of the building show deterioration from termites and / or decay affecting from 25% –75% of the cross section.

FINDING LOCATIONS



SER171212

FINDINGS:

FINDING	ITEM	CONDITION
1	3x7 glulam Mens Restroom	1” deep surface decay on east side of beam, extending 48” L. 2	Plywood Sheathing Mens Restroom 	The plywood roof sheathing shows evidence of breaks and surface deterioration in the outer veneer up to 12’ from the north wall.

FINDINGS:

FINDING	ITEM	CONDITION
3	5 1/8" x 12 ¾" glulam at center column, Mens Changing Area	Localized decay in top of beam affecting 25 – 30% XS, 12" long. Located under an opening in the ridge of the roof.  4	Men's changing area Plywood sheathing	12" x 12" area of roof sheathing decay

FINDINGS:

FINDING	LOCATION	CONDITION
5	Pool Observation Room, Plywood sheathing	The roof sheathing is decayed along the edge 14” for most of the length of this area.
6	3”x 12” glulam on west entrance	Decay in top 3” x 12” long, 75% XS 
FINDINGS:

FINDING	LOCATION	CONDITION
7	3 1/8”x 8 ½” glulam on north entrance	Decay in top 3” x 17” long, 85% XS  XS
8	5 1/8” x 13” glulam on north end	Drywood termite damage in mid – depth at end 21”, 50% XS  XS

FINDINGS:

FINDING	LOCATION	CONDITION
9	3 1/8" x 8 ¼" glulam on north end	Drywood termite damage in mid – depth at end 15", 50% XS  XS
10	5 1/8" x 13" glulam on south end	Drywood termite damage on east side, approx.. 25% XS  XS

FINDINGS:

FINDING	LOCATION	CONDITION
11	3 1/8" x 8 ¼"glulam on south end	Heavy drywood termite damage on end 25", approx.. 75% XS on end and gradually reduces to 25% XS. 12	Plywood sheathing on south end	Sheathing is decayed on end, 24" long x 6" wide

FINDINGS:

FINDING	LOCATION	CONDITION
13	Plywood sheathing on southeast end	Sheathing is decayed on end, 12 - 18” wide at corner of roof.
14	3 1/8” x 8 ¾” glulam Womens Restroom	½” – ¾” deep surface decay scattered on west side of beam, extending 42” L.  XS

FINDINGS:

FINDING	LOCATION	CONDITION
15	Plywood Sheathing Womens Restroom	The plywood roof sheathing shows light evidence of surface deterioration in the outer veneer up to 12' from the south wall.

ALTERNATE BUILDING MATERIALS/PRODUCTS APPROVAL REQUIREMENTS

PURPOSE

This information bulletin clarifies the California Building Code (CBC), California Residential Code (CRC), and the Los Angeles Residential, Building, and Municipal Codes (LARC, LABC, and LAMC) requirements relating to the approval of alternate building products, materials and methods of construction.

All building materials, products and methods of construction shall be recognized for use and as prescribed by the Los Angeles Building Code (LABC).

The Department of Building and Safety (LADBS), hereby referred to as the Department, may grant a general approval for an alternate material, product or method of construction provided that the alternate is at least equivalent to the prescribed device, material or method of construction. Department approval of new or alternate materials and methods of construction may be granted by the Department in accordance with Section 98.0501 of the Los Angeles Municipal Code (LAMC) through the use of product listings, approvals and evaluation reports by approved agencies, or Los Angeles Research Reports (LARR).

DEFINITIONS

Approved - Acceptable to the Superintendent of Building. (LABC 202)

Approved Agency - An established and recognized agency regularly engaged in conducting tests or furnishing inspection services which has been approved. (LABC 202)

Approved Listing Agency Any agency approved by the enforcing agency, unless otherwise provided by law, which is in the business of listing and labeling and which makes available at least an annual published report of such listings in which specific information is included that the product has been tested to recognized standards and found to comply. (LABC 202)

Approved Testing Agency - An agency which is determined by the enforcing agency, except as otherwise provided by law, to have adequate personnel and expertise to carry out the testing of systems, materials types of construction, fixtures or appliances. (LABC 202)

Approved Fabricator - An established and qualified person, firm or corporation approved by the Superintendent of Building, Los Angeles Department of Building and Safety, pursuant to Chapter 17 of this code.(LABC 202)

Approved Source - An independent person, firm or corporation, approved by the Superintendent of Building,

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

who is competent and experienced in the application of engineering principles to materials, methods or systems analyses. (LABC 202)

Authority Having Jurisdiction – An organization, office, or individual responsible (i.e., Los Angeles Department of Building and Safety) for enforcing the requirements of a code or standard, or for approving materials/products.

Label - An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that the representative sample of the product or material has been tested and evaluated by an approved agency (see Section 1703.5, "Manufacturer's designation" and "Mark"). (LABC 202)

Labeled - Equipment, materials or products to which has been affixed a label, seal, symbol or other identifying mark of a nationally recognized testing laboratory, inspection agency or other organization concerned with product evaluation that maintains periodic inspection of the production of the above labeled items and whose labeling indicates either that the equipment, material or product meets identified standards or has been tested and found suitable for a specified purpose. (LABC 202)

Listed - Equipment, materials, products or services included in a list published by an organization acceptable to the Superintendent of Building (Los Angeles Department of Building and Safety) and concerned with evaluation of products or services that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services and whose listing states either that the equipment, material, product or service meets identified standards or has been tested and found suitable for a specified purpose.(LABC 202)

MATERIAL/PRODUCT EVALUATION REPORTS AND RESEARCH REPORTS

The Los Angeles Department of Building and Safety (LADBS) "approves" building materials/products by:

- Accepting product approvals and listings by Department approved listing agencies, or
- Accepting Evaluation Reports (ER) by a Nationally Recognized Model Code Agency, or
- Issuing Los Angeles Research Reports (LARR), or
- Approving one-time use of creative/innovative job specific materials/products.

Note: For alternate products, material and components as part of a building lateral force resisting system (LFRS), an Evaluation Report, by a Nationally Recognized Model Code Agency, shall include a supplement to show compliance with the seismic and wind requirements of the Los Angeles Building and Residential Codes.

Products having an ICC-ES evaluation reports with supplemental approval of Los Angeles Building and Residential Codes requirements can be found at the following link:
https://icc-es.org/evaluation-report-program/la-reports-directory/

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

Products having an IAPMO-ES evaluation reports with supplemental approval of Los Angeles Building and Residential Codes requirements can be found at the following link:
http://www.iapmoes.org/Pages/LACodeReports.aspx

In consideration of approving materials/products, LADBS has categorized the materials/products into three categories as listed below:

Category 1: Non-Structural, Fire Life Safety,
Category 2: Structural Non-Lateral- Force-Resisting System (Non-LFRS) component, and
Category 3: Structural Lateral-Force-Resisting System (LFRS) component.

An LARR is evidence that a manufacturer of a material/product has provided the code-required information to LADBS to approve the material/product. Similarly, an ER, by a Nationally Recognized Model Code Agency, is evidence that a product has met the code requirements/standards. In addition, there are creative materials/products that are not explicitly allowed in the code may be approved as "Alternate Materials" in accordance with LABC Section 104.2.6. LADBS or a Nationally Recognized Model Code Agency approves the Alternate Materials by issuing an LARR or ER respectively. When creative materials/products are used for a specific project, the one-time approval process may be used.

LARRs or ERs for materials/products shall be based on IBC (2015 or 2018 IBC) model codes consistent with the LABC versions applicable for plan submittal dates. For example, building permit applications filed after January 1, 2020, are required to comply with the 2018 IBC as modified by the 2019 CBC and adopted into the 2020 LABC. Likewise, building permit applications filed before January 1, 2020, are required to comply with the 2015 IBC as modified by the 2016 CBC and adopted into the 2017 LABC.

The use of products/material specified on plans submitted after the expiration date of the LARR may be allowed after the application for renewal of the LARR has been accepted by the LADBS Engineering Research Section on a case-by-case basis.

MATERIAL/PRODUCT LISTING AND LABELING

Certain materials/products are required to be "listed" or "labeled" by the codes. These materials/products do not require an LARR nor an ER by a Nationally Recognized Model Code Agency, as long as the manufacturer of these products provides code compliance proof as follows:

- When the codes require the material/product to be "listed", a City of Los Angeles approved listing agency is required to "list" the material/product.

- When the codes require the material/product to be "labeled", a City of Los Angeles approved listing agency is required to "label" the material/product.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

NATIONALLY RECOGNIZED MODEL CODE AGENCY (LAMC Section 98.0501)

In order to be recognized as a Nationally Recognized Model Code Agency, the agency shall comply with the following requirements:

1. The agency shall be a developer and publisher of a code used as a model or standard for building and safety departments throughout the United States.

2. The agency shall file, with LADBS Engineering Research Section, an acceptable Compliance Certificate (attached) certifying the following:
   a. The agency's evaluation reports are available to the public via the internet.
   b. Test data are established in laboratories approved by the model code organization using a system of safeguards against conflict of interest, covering the agency itself, its owners and individual employees. This safeguarding system needs to be equivalent to those used by LADBS in "Information Bulletin P/GI 2020-028 Guidelines for Recognition of Testing Agencies".
   c. The evaluation criteria used to approve the products are published and available for review by the public.

3. The evaluation reports and evaluation criteria are established through a transparent process allowing for input by the public with appeals resolved by an independent expert panel.

   Technical questions from the public about the evaluation reports are to be answered by the model code agency.

FREQUENTLY ASKED QUESTIONS

Below are frequently asked questions and answers related to the Los Angeles Research Report requirements and approval:

1. Do all building materials/products require an LARR and/or ER?

Any materials/products that have code specified capacities/design values do not require an LARR nor Nationally Recognized Model Code Agency reports (i.e. bolts, clevis, cotter pins, and sawn lumber). When materials/products are not specified in the code, the material/product may require an approval in the form of an LARR and/or ER based on the application of the material/product. See Table 1 "Examples of Materials/products that Require an LARR and Do Not Require an LARR," in this bulletin for examples of Categories 1, 2 and 3 materials/products.

2. What are the different LADBS approvals I can obtain for the building materials / products?

LADBS offers two different types of building materials/products approvals as follows:

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

a. **General Approval** – This approval is for mass produced, alternative materials and assemblies not specifically provided for in the LABC and may be used for any project site with this type of approval. This approval is referred to as a "Los Angeles Research Report" (LARR).
b. **One-Time Approval** – A one-time approval is granted to a material/product that will be used only for a single, project specific case and allowed to be used only once.

3. What is the process of obtaining an LARR?

The process to obtain an LARR for alternate products and materials is as follows:

a. Submit the following information to the Los Angeles City Department of Building and Safety Building Research Section: product literature describing how the product is to be used, substantiating data (i.e. test reports by approved third party testing agency, engineering analysis), a completed application form for the new LARR, along with a check in U.S. dollars drawn on a U.S. bank.
b. Once this information is received, the application package will be reviewed for completeness. If any deficiencies are determined, a letter will be sent to the applicant stating the deficiencies requiring correction.
c. After determining the application package is complete, the application will be logged in and assigned a log number and placed in line for review. It takes approximately five weeks for the application to be assigned an LADBS engineer.
d. The substantiating data submitted will be evaluated to determine if it is equivalent to the prescribed device, material, or method of construction specified by the Los Angeles City Building Code in terms of quality, effective time period of fire resistance, strength, effectiveness, durability, and safety.
e. After reviewing the substantiating data, the LADBS engineer assigned to the application will write a letter stating their comments and the information needed to complete the evaluation, if necessary.
f. Upon resolution of all comments, a draft copy of the Los Angeles City Research Report will be written. The draft copy of the Research Report will be e-mailed to the applicant for review and comment.

After all comments from the applicant have been resolved, the Research Report will be submitted to the Chief of the Building Research Section for the final review and approval. A signed copy of the Los Angeles Research Report will be mailed to the applicant and will also be posted on the LADBS web site.

4. How do I obtain an application form for LARR?

An application form for a Los Angeles Research Report is available from the Los Angeles Department of Building and Safety (LADBS) web site (http://ladbs.org/LADBSWeb/building-research-lab.jsf). Click on the link to download the form, "Application for New General Approval or Technical Modification." Instructions to complete the application form may be found at, http://ladbs.org/LADBSWeb/LADBS_Forms/TestLab/LARR_instruction.pdf.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

5. How long does it take to obtain an LARR?

It takes approximately five weeks for an application for an LARR to be assigned to the staff and an additional three to five weeks to complete the evaluation, and issue the final copy of the research report. If the substantiating data is incomplete, such as missing test reports, testing not conducted by an approved testing agency, incomplete or missing engineering calculations, etc., then the time to obtain an LARR may take longer. Expedite report review is available pursuant to LAMC Section 98.0422. The amount of the fee for this service is in addition to the normal review fee and is equal to one-half of the normal review fee. The fee expedite service will reduce the time to assign the application from approximately five weeks to two weeks and will reduce the review period from three to five weeks to three weeks.

6. What is the process of obtaining a one-time approval?

Alternate materials/products may be approved for project specific cases with the following process:

a. Submit the following information to the LADBS Plan Check Supervisor for the specific project: product literature describing how the product is to be used, a completed application form for a new general approval, substantiating data (i.e. test reports by approved third party testing agency, engineering analysis), a completed Modification of Building Ordinances form, along with a check in U.S. dollars drawn on a U.S. bank for associated application fees.
b. The substantiating data submitted will be evaluated to determine if it is the equivalent of the prescribed device, material, or method of construction specified by the Los Angeles Building Code in terms of quality, effective time period of fire resistance, strength, effectiveness, durability, and safety.
c. Requests may be approved once it is determined that the alternative materials/products are code equivalent.

This one-time approval may not be reused for future projects.

7. How long does it take to obtain a one-time approval?

The review and approval for a one-time approval may take a few days to a few weeks, depending on the level of complexity of the requested approval and completeness of the data provided for the material/product approval.

8. Who can apply for approval?

Materials/products manufacturer or distributor (for general or one-time approval) and the end user (engineer or architect) of the material/product can apply for the approval.

9. How long is the approval good for, and where do I find it?

The general approval (LARR) is good for 12 months. The product approval letter indicates the duration and

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

expiration date of the approved product. A copy of the approval letter is posted under "Research Report Index," on the web page at, http://ladbs.org/LADBSWeb/building-research-lab.jsf.

Also, a list of recently approved LARRs is posted under the "Recently Approved/Renewed Research Reports and Laboratory Approval" at,
http://ladbs.org/LADBSWeb/LADBS_Forms/TestLab/Recently_Approved_New_Reports.pdf

10. Can I expedite the review process?

Yes, you can. Pursuant to LAMC Section 98.0422, expedite review process is available for the amount of the fee equal to one-half of the normal review fee.

11. How can an approval be renewed?

Only products that have General Approvals (not one-time approvals) may be renewed. About 60 days before an approval expires, the original applicant needs to take the following actions:

a. Submit a completed renewal application form with original signatures (see http://ladbs.org/LADBSWeb/LADBS_Forms/PlanCheck/PC-STR.App19-Renewal_4GenApprvl.pdf).
b. Submit the application fee as marked on the application form. Make check payable to "Department of Building and Safety, City of Los Angeles."
c. Submit current material/product information along with an explanation of any changes to the material/product from the previous approval.

1. LADBS recognizes ICC or IAPMO evaluation reports with LABC-LARC Supplements for Category 3 products as being compliant with the seismic or wind requirements of the Los Angeles Building Code.
2. Products having an ICC-ES evaluation reports with supplemental approval of Los Angeles Building Code requirements can be found at the following link:
   www.icc-es.org/ladbs directory
3. Products having an IAPMO-ES evaluation reports with supplemental approval of Los Angeles Building Code requirements can be found at the following link:
   http://www.iapmoes.org/Pages/LACodeReports.aspx
4. These materials/products do not require an LARR when code compliance is proven with a valid Nationally Recognized Model Code Agency Evaluation Report.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

NATIONALLY-RECOGNIZED MODEL CODE AGENCY COMPLIANCE CERTIFICATE

Please submit this completed form to the City of Los Angeles, Department of Building and Safety, Engineering Research Section, 201 N. Figueroa St., Rm. 880, Los Angeles, California 90012 (http://ladbs.org/LADBSWeb/engineering-research-lab.jsf)

NOTICE

CITY OF LOS ANGELES, CALIFORNIA
DEPARTMENT OF RECREATION AND PARKS

INSTRUCTION TO BIDDERS, PROPOSAL, AFFIDAVIT AND BOND FOR

GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT RE-BID

16730 Chatsworth Street, Los Angeles, CA 91344

Sunshine Canyon Trust Fund
And
Quimby Fund

W.O. No. E170517F

The Board of Recreation and Park Commissioners Office is located at:
221 NORTH FIGUEROA STREET, SUITE 300, LOS ANGELES, CA 90012

"For the safety of all parties involved during the current COVID-19 Pandemic, bids will be received electronically only. No hard copy bids will be accepted. Bid proposals must be sent as **pdf attachments** via email via Dropbox and received no later than 2:00 p.m. on Wednesday, October 26, 2022."

ATTENTION: The following are updates in the bid documents that must now be downloaded and processed through the City's www.rampla.org:

1. **Equal Benefits Ordinance (EBO) forms (see page 11 for instructions) (REVISED using BCA 6/2016)**
2. **Disclosure Ordinances Affidavit form (see page 20 for instructions)**
3. **The MBE/WBE/OBE Good Faith Effort process is now replaced by the Business Inclusion Program (BIP) to be processed online through www.rampla.org (see pages 15-15T for instructions)**
4. **Effective Friday, February 18, 2022 at 4:30 p.m. the Los Angeles Business Assistance Virtual Network (LABAVN) transitioned to the Regional Alliance Marketplace for Procurement (RAMP). All references to the**

Los Angeles Business Assistance Virtual Network (LABAVN) shall be construed to also refer to the Regional Alliance Marketplace for Procurement (RAMP).

FAILURE TO COMPLY WITH THE CITY'S BIP OUTREACH REQUIREMENTS WILL RENDER THE BID NON-RESPONSIVE.

IMPORTANT: Please note the following new requirements for this project:

1. **Iran Contracting Act of 2010 (see pages 23-23B revised 8/5/2020 version)**
2. **Senate Bill 854**
3. **Fair Chance Initiative for Hiring Ordinance (FCIHO)**
4. **PROJECT LABOR AGREEMENT**

CITY OF LOS ANGELES, CALIFORNIA, DEPARTMENT OF RECREATION AND PARKS

GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT RE-BID

16730 Chatsworth Street, Los Angeles, CA 91344

Sunshine Canyon Trust Fund and Quimby Fund

W.O. No. E170517F

Estimated Cost $12,263,000

BIDS MUST BE RECEIVED BEFORE 2:00 P.M. ON WEDNESDAY, **OCTOBER 26, 2022.** "For the safety of all parties involved during the current COVID-19 Pandemic, bids will be received electronically only. No hard copy bids will be accepted. Bid proposals must be sent as **pdf attachments** via Dropbox and received no later than 2:00 p.m. on Wednesday, October 26, 2022."

MINIMUM LICENSE REQUIREMENT: **"A" or "B"**	**CONTRACT COMPLETION TIME:** **CONSTRUCTION: 499 calendar days** **MAINTENANCE: 49 calendar days** **TOTAL 548 calendar days**
LIQUIDATED DAMAGES **$2,400.00** PER DAY TO BE ASSESSED AS SPECIFIED HEREIN	

IMPORTANT INFORMATION: PRE-BID MEETING

A **Pre-Bid Meeting** for this project will be conducted on **Thursday, September 22, 2022 at 2:00 P.M.** via Google meet at meet.google.com/oaz-cckw-cyc or join by Phone Number (US) + 1 414-439-0212 PIN 462 453 674 #

THE ANTICIPATED LEVEL FOR **MBE** is 18%, **WBE** is 4%, **SBE** is 25%, **EBE** is 8% and **DVBE** is 3%.

The purpose of the meeting is to inform prospective bidders of the submittal requirements through www.rampla.org and the provisions relative to the Department's Business Inclusion Program (BIP), City Affirmative Action Program, Equal Benefits Ordinance (EBO), Disclosure Ordinances Affidavit, Labor Code compliance requirements, and other City bidding and contracting requirements.

QUESTIONS:

- Concerning the BIP, send email to eng.bavn@lacity.org.
- Concerning Affirmative Action Program, EBO, SDO and Labor Code compliance requirements should be directed to the Department of Public Works, Bureau of Contract Administration at (213) 847-1922 or email bca.eeoe@lacity.org..
- ALL technical questions/Requests for Information (RFIs) concerning the plans and specifications, contact the Project Manager in writing via E-mail:(**alex.ngo@lacity.org**)@lacity.org
- Questions regarding the project must be submitted no later than Wednesday, October 5, 2022 by 2:00 p.m. in order to be included and responded in the final addendum.

The Board of Recreation and Park Commissioners may award a contract at any time within 90 days after receipt of bids.

THE BID OF ANY PARTY WHO HAS BEEN DELINQUENT OR UNFAITHFUL IN THE PERFORMANCE OF ANY FORMER CONTRACT WITH THE CITY MAY BE REJECTED.

DETACH BID PACKAGE FROM THE SPECIFICATIONS AND SUBMIT THE BID PACKAGE AS YOUR BID.

PRE-BID JOB WALK: Thursday, September 22, 2022 at 10:00 A.M. at the project site location: 16730 Chatsworth Street, Los Angeles, CA 91344

NOTICE TO BIDDERS: IMPORTANT INFORMATION

INSTRUCTION TO BIDDERS CHECK LIST (PAGES 3 – 3G)

Before submitting your bid, indicate whether you have properly completed, signed and returned the following with your bid. Failure to do so may cause your bid to be declared nonresponsive and rejected.

PLEASE INITIAL EACH ITEM BELOW WHERE EVER A SPACE IS PROVIDED

1. GENERAL INFORMATION

The Secretary of the Board of Recreation and Park Commissioners of the City of Los Angeles, California, will receive for and on behalf of said Board of Recreation and Park Commissioners, at its office at 221 North Figueroa Street, Suite 300, Los Angeles, California, 90012 in said City, at or before the hour of **2** o'clock p.m., of **October 26, 2022,** sealed bids or proposals for **GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT RE-BID (W.O. No. E170517F).**

2. BID PROPOSAL **[Revised as of August 31, 2022]**

For the safety of all parties involved during the current COVID-19 pandemic, bids will be received electronically only. No hard copy bids will be accepted. Bid proposals must be in PDF format and submitted via Dropbox. The maximum file size for Dropbox submission is 2 GB. Dropbox submissions must be received by the deadline stated above and uploaded onto the following link:

https://www.dropbox.com/request/EtEzWbJ84ZCUl90u1ObL

The opening of bids will be conducted virtually through webinar. Those wishing to observe the bid opening may do so by joining the webinar using the following information:

Zoom webinar:
When: Wednesday, October 26, 2022 at 2:00 PM Pacific Time (US and Canada)

Submission of a bid for this project will be considered to include the modifications and notifications above. The bid must further conform to the requirements of these instructions.

The bidder must state in figures the unit price or specific sums or both, as the case may be, for which the bidder proposes to supply all the materials and perform the work required by the plans and specifications.

Blank spaces in the proposal must be properly filled in, and the phraseology thereof must not be changed. Additions must not be made to the items mentioned therein. Any unauthorized conditions, limitations or provisions attached to a proposal may cause its rejection. Alterations by erasure or interlineation must be explained or noted in the proposal over the signature of the bidder. Original hard copy of the bid documents must be hand delivered as specified in these Instructions to Bidders.

No bids received after the time fixed for receiving them will be considered.

If the bid is made by an individual, it must be signed with the full name of the bidder, whose address must be given; if it is made by a co-partnership, it must be signed with the co-partnership name by a member of the firm, and the name and full address of each member must be given; and if it is made by a corporation, it must be signed as follows and the corporate seal must be attached to such signatures:

(a) Two signatures: One by the Chairman of the Board of Directors, President or any vice president and one by the Secretary, assistant secretary, chief financial officer or any assistant treasurer; or

(b) One signature by corporate designated individual together with the properly attested resolution of the Board of Directors authorizing the person to sign.

Bidders are invited to be present at the opening of proposals.

The bidder shall affix to its proposal the number of its license procured under the provisions of Article 5, Chapter 9, Division III of the Business and Professions Code of the State of California.

The said work must be done in strict conformity with specifications and/or plans therefore.

Bidders are advised that the Board of Recreation and Parks Commissioners has not authorized any other agency, internet service, or plan room distributor other than the City of Los Angeles Regional Alliance Marketplace for Procurement (www.rampla.org) to distribute or sell bid documents for this project. Bidders are therefore further advised that submission of a bid on documents other than those obtained from the City of Los Angeles Regional Alliance Marketplace for Procurement may cause the bid to be deemed non-responsive.

(a) Have you submitted a bid on all items of the proposal?..... _____ Initial

(b) Is proposal completed in ink or typewritten only? ..... _____ Initial

(c) Does your bid include sales tax? ..... _____ Initial

(d) Is the proposal properly signed as noted on the bottom of Proposal (page 5) and dated?..... _____ Initial

(e) Have you double-checked your prices, addition, bid amount and any deductive alternatives? ..... _____ Initial

3. RIGHT TO REJECT BIDS

The Board of Recreation and Park Commissioners reserves the right to reject any and all bids and to waive any informality therein

4. EXAMINATION OF SITE AND PROPOSED WORK

Bidders must examine and judge for themselves the location, physical condition and surroundings of the proposed work, the nature of the excavation to be made, if any, and the work to be done.

The plans for the work will show conditions as they are supposed or believed by the Engineer to exist, but it is not intended or to be inferred that the conditions as shown thereon constitute a representation or warranty, express or implied by the City, or its officers, that such conditions are actually existent, nor shall the City or any of its officers be liable for any loss sustained by the Contractor as a result of any variance between conditions as shown on the plans and the actual conditions revealed during progress of the work, or otherwise.

5. RELEASE FROM BID

No bidder will be released on account of errors in judgment, carelessness or lack of familiarity with the plans, specifications or site. A bidder may be released on account of clerical errors if he gives the Board of Recreation and Park Commissioners written notice of the error within five days of the bid opening and satisfies the Board of Recreation and Park Commissioners that the mistake was made in filling out the bid, not in judgment.

6. AFFIDAVIT OF NON-COLLUSION (Page 6)

Each proposal must have thereon or attached thereto the notarized affidavit of the bidder that such proposal is genuine, and not sham or collusive, or made in the interest or in behalf of any person not therein named, and that the bidder has not directly, or indirectly, induced or solicited any other bidder to put in a sham bid, or any other person, firm or corporation to refrain from bidding, and that the bidder has not in any manner sought by collusion to secure for himself an advantage over any other bidder. Any bid not accompanied by, or which is made without such affidavit, or in violation thereof, will not be considered. If the bidder is a corporation, said affidavit shall be signed by a duly authorized officer of the corporation. Any bidder making a false affidavit may be excluded from future bidding.

(a) Is Affidavit (page 6) properly filled in and signed? ..... _____ Initial

(b) Is Affidavit notarized including certificate of the notary and notary seal? ..... _____ Initial

7. BID BOND OR CHECK ACCOMPANYING BID (Page 7)

Each bidder must submit with its proposal either a check certified by a responsible bank in the City of Los Angeles or a cashier's check issued by a responsible bank, payable to the order of the City of Los Angeles, for an amount not less than 10 percent of the aggregate sum of the bid; or a corporate surety bond of a satisfactory surety company for said amount, and so payable as a guarantee that the bidder will enter into the proposed contract if it is awarded to it. If the successful bidder fails to enter into the contract awarded to it, and to supply the necessary faithful performance and labor and material bonds, as well as proof of the insurance coverage detailed in the notice of award, within ten days of receipt from the City of the contract and the proper bid forms, then the sum posted by certified or cashier's check or guaranteed by the bid bond is forfeited to the City. Such forfeiture shall not preclude recovery of any sum or costs over and above the amount posted or guaranteed which the City sustains by reason of such default or failure to contract.

NOTE:	BID BOND SUBMITTED ON A FORM OTHER THAN PAGE 7 IS NOT ACCEPTABLE AND BID WILL BE RULED NON-RESPONSIVE AND DISQUALIFIED.

If the successful bidder executes the contract and the accompanying faithful performance and labor and material bonds, and submits proof of insurance coverage within ten days of receipt of the contract and bond forms, the check for bond accompanying the successful bid will be returned. All checks accompanying rejected bids will be returned upon rejection. Bid Bonds cannot be returned, as they are part of the file; however, the Bond automatically expires 90 days from the date of the bid opening.

No bid will be considered unless it is accompanied by such certified or cashier's check or bond.

(a) Have you included a certified or cashier's check for an amount not less than ten percent (10%) of the total sum of the bid in accordance with item 7 above?; or ..... _____ Initial

(b) Have you included a corporate surety bond (bid bond) for an amount not less than ten percent (10%) of the total sum of the bid in the Bid Bond form provided in this package (Page 7)? ..... _____ Initial

(c) If corporate surety bond (bid bond), is it properly filled out, signed by surety with seal, signed by bidder, and on form provided in this bid package? ..... _____ Initial

(d) Have you thoroughly reviewed the instructions, information, award procedures and forms provided, and completed, signed all of the Business Inclusion Program (BIP) Forms thru the City of Los Angeles RAMP website; www.rampla.org (Pages 15 -15T) with your bid?. ..... _____ Initial

(e) Have you listed on Schedule "A" all subcontractors, suppliers, and your firm regardless of the amount of money involved and have you indicated which of those firms listed qualify as a MBE, WBE, SBE, EBE or DVBE? ..... _____ Initial

(f) Have you completed the participation section at the lower left corner of Schedule "A" and included your firm (if MBE/WBE/SBE/EBE/DVBE qualified) and all MBE/WBE/SBE/EBE/DVBE qualified subcontractors and/or suppliers in your calculation? ..... _____ Initial

8. BONDS FOR FAITHFUL PERFORMANCE AND FOR PAYMENT OF LABOR, MATERIAL AND SUPPLIES

The amount of the bond to be given to secure the faithful performance of the contract for said work shall be 100 percent of the contract thereof, computed as hereinafter provided.

The Surety executing the bonds MUST appear in the Federal Register, a publication of the U. S. Department of the Treasury, and MAY NOT underwrite the bonds for more than the Treasury limitation expressly outlined in said Register.

The amount of the bond to be given to secure payment for labor, material, equipment and supplies furnished for the performance of the work to be done under the contract and for any work or labor of any kind done in connection therewith shall be equal to 100 percent of the contract price for the work. The contract price shall be computed from the quantities given in Schedule of Quantities herein and the prices bid in the proposal. The forms of bonds required for the faithful performance of the contract and to secure payment for material, labor and supplies will be such that the City may proceed against the Contractor and its sureties on the bonds immediately upon any default in the performance of the contract, or in payments for labor, material and supplies,

without waiting for the completion of the work and the accumulation of damages.

The forms of bonds required may be examined at the office of the Board of Recreation and Park Commissioners, or copies will be furnished if desired, to those proposing to bid.

9. ADDITIONAL SURETIES

If at any time during the continuance of the contract, the sureties, or any of them, shall, in the opinion of the Board of Recreation and Park Commissioners, become irresponsible, the said Board of Recreation and Park Commissioners shall have the right to require additional and sufficient sureties, which the Contractor shall furnish to the satisfaction of the Said Board of Recreation and Park Commissioners within ten days after notice, and in default thereof the contract may be suspended by the said Board of Recreation and Park Commissioners and the work completed as provided in Section 45 of the General Conditions.

10. CONTRACTOR GOVERNMENTAL PROJECT REFERENCE SHEET (Pages 8-8A)

If your firm has not been awarded a project with the Department of Recreation and Parks within the last three (3) years, have you completed and submitted the above required pages with your bid? ..... _____ Initial

11. NOTICE TO PROSPECTIVE CONTRACTORS PERTAINING TO NONDISCRIMINATION IN EMPLOYMENT (Pages 9-9A)

Has Bidder reviewed the requirements pertaining to discrimination in employment on page 9A and completed and signed at the bottom? ..... _____ Initial

12. PREVAILING WAGE RATES (Pages 9 - 9A)

Has Bidder reviewed the requirements pertaining to the payment of prevailing wage rate on page 9A ..... _____ Initial

13. EQUAL BENEFITS ORDINANCE

Has Bidder reviewed and complied with the Equal Benefits Ordinance through www.rampla.org? (Pages 10 – 11) .... _____ Initial

14. NON DISCRIMINATION, EQUAL EMPLOYMENT PRACTICES AND AFFIRMATIVE ACTION PROGRAM (CONSTRUCTION) (Pages 12 – 13)

(a) Has Bidder reviewed and complied with Nondiscrimination, Equal Employment Practices and Affirmative Action Program (Construction) pages 12 – 13? ..... _____ Initial

(b) Has Bidder completed the ANTICIPATED EMPLOYMENT UTILIZATION REPORT (Page 13) and submitted report with your bid? ..... _____ Initial

15. APPRENTICE UTILIZATION ON PUBLIC WORKS (Pages 14-14B)

Has Bidder reviewed the requirements pertaining to apprentice employment and training on Public Works projects, (pages 14 - 14B) and signed and submitted page 14B with your bid? ..... _____ Initial

16. BUSINESS INCLUSION PROGRAM (BIP) AFFIDAVIT FORMS

Performance of a BIP outreach to Minority Business Enterprises (MBE), Women Business Enterprises (WBE), Small Business Enterprises (SBE), Emerging Business Enterprises (EBE), Disabled Veteran Business Enterprises (DVBE), and Other Business Enterprises (OBE) subcontractors must be completed on the Regional Alliance Marketplace for Procurement (RAMP), www.rampla.org.
All BIP outreach documentation must be submitted on RAMP by 4:00 p.m. on the calendar day following the date bids are received by the Board.

Has Bidder reviewed and complied with the requirements of the BIP through www.rampla.org (Pages 15–15T) ..... _____ Initial

17. SCHEDULE "A" – SUBCONTRACTORS AND SUPPLIERS INFORMATION FORM (Page 16, *et seq.*)

Bidders must submit with their bid the SUBCONTRACTORS AND SUPPLIERS INFORMATION FORM provided in the Bidding Documents as Schedule "A" (Page 16, et seq.). The Bidder must list itself and all subcontractors and/or suppliers regardless of the amount of money involved. Bidders must indicate if they and any of the other firms listed qualify as MBEs, WBEs, SBEs, EBEs, or DVBEs.

MBE/WBE/SBE/EBE/DVBE qualifications are defined and outlined in the accompanying BIP packet (pages 15-15R). Regardless of amount, the Bidder must list on Schedule "A" the names and addresses of all firms to be used with a complete description of work or supplies to be provided by each and the dollar value of such transaction. In the case of joint ventures who bid as primes, any one of two or more entities which comprise the joint venture may be listed as a MBE, WBE, SBE, EBE or DVBE subcontractor if the entity is otherwise qualified as such.

18. Has Bidder reviewed and complied with the Pledge of Compliance with Contractor Responsibility Ordinance and Contractor Responsibility Questionnaire and submitted required Documentation with your bid? (Pages 17-18K) …….._____ Initial

19. Has Bidder reviewed and complied with the Disclosure Ordinances Affidavit through www.rampla.org? (Page 20)….._____ Initial

20. Has the bidder reviewed the revised Municipal Lobbying Ordinance and submitted the new CEC Form 50 with your bid? (Pages 21- 21W and Page 22). ***ALERT: Failure to submit page 22 - CEC Form 50 - with the bid will result in the bid being NON-RESPONSIVE***……....._____Initial

21. DIVISION I - GENERAL CONDITIONS AND GENERAL REQUIREMENTS.
It is recommended that all bidders, including those who have bid or have been awarded Department of Recreation and Parks' jobs previously, familiarize themselves with any updated revisions of the Instructions to Bidders herein and revised General Conditions and General Requirements. …… _____ Initial

22. **SUPPLEMENTARY GENERAL REQUIREMENTS?** ***ALERT: Failure to submit forms GR-S3 through GR-S7 with the bid may result in the bid being deemed NON-RESPONSIVE)*****……..……..…….** _____ Initial

23. CONTRACTORS LICENSE AND CLASSIFICATION

"JOINT VENTURE LICENSE REQUIREMENT NOTICE" - The State Contractors' License Board has informed the Department of Recreation and Parks that a "Joint Venture Contractors License" on this project (if applicable), is available and issued over the counter at the locations listed below:

Rosemead Regional Office
8855 Valley Blvd., Suite 221
Rosemead, California 91770
(213) 620-4180

Santa Ana Southern Office
28 Civic Center Plaza, Room 690
Santa Ana, California 92701
(714) 558-4086

(a) Are your contractor's license number, expiration date, and classifications listed on Item 31? ....._____ Initial

(b) Are you using the correct contractor's license for the firm bidding?.....____ Initial

(c) Do you have the proper current and approved license classification as specified on the front of the bid specifications at the time you submit your bid? ....._____ Initial

(d) If a "joint venture", do you have a current joint venture license? ..... ____ Initial

24. **BID PROTEST PROCEDURES** - The purpose of these procedures is to provide a method for resolving, prior to award, protests regarding the award of construction contracts by the City, by and through its Board of Recreation and Park Commissioners (Board). These procedures are for the benefit of the City and are not intended to establish an administrative requirement which must be exhausted by the protesting bidder prior to pursuing any legal remedy which may be available. For this reason, no bidder shall have any right to due process, should the City fail to follow these procedures for any reason within its discretion. However, failure by a bidder to follow the protest procedures as discussed below will create the presumption that any subsequent legal action in a court of competent jurisdiction is of no merit. These procedures will enable the Board of Recreation and Park Commissioners to ascertain all of the facts necessary to make an informed decision regarding the award of the contract.

a. A protest relative to a particular bid must be submitted in detail and in writing and postmarked within 14 calendar days after the receipt of bids. The day of the bid receipt shall be considered as day one.

b. All protests must be addressed to: Board of Recreation and Park Commissioners, 221 N. Figueroa St., Ste. 300, Los Angeles, CA 90012.

c. Advance, officially signed and dated, copies of protests will be accepted if sent via fax within the protest period to the Board at fax #(213) 202-2610 and provided that approval of submittal by fax is obtained from Board staff prior to sending the fax, by calling them at (213) 202-2640.

d. Prime Contractors are requested to advise their potential Subcontractors of this protest period policy. Furthermore, protests against a Prime Contractor by a Subcontractor with a direct financial interest which may be adversely affected by the determination of the protest may be considered by the Board beyond the protest period.

e. The Board will only consider protests against any bidder(s) who appears to have a substantial and reasonable prospect of receiving an award if the protest is denied or sustained.

f. Protests from agencies concerned with contract compliance matters may be considered by the Board beyond the protest period. These protests will receive due consideration if the agency submits the protest in a timely period and such protest affects a bidder who appears to have a substantial and reasonable prospect of receiving an award if the protest is denied or accepted.

g. Protests meeting the above criteria will be analyzed and reported upon in a written report to the Board. Protesting parties will be notified of the time and date that the written report will be discussed in a public session of the Board. Protesting parties will be given the opportunity to present their arguments at the public session. ……..……_____ Initial

25. Has Bidder reviewed and complied with the Iran Contracting Act of 2010 (Pages 23-23A)? ***ALERT: Failure to submit the Iran Contracting Act of 2010 Compliance Affidavit (page 23A) with the bid will result in the bid being NON-RESPONSIVE*** ……..…..…_____ Initial

26. Has Bidder reviewed and complied with the California State Senate Bill 854? ***(Failure to comply with the requirements of this Senate Bill will result in the bid being deemed NON-RESPONSIVE)***......_____ Initial

27. Has Bidder reviewed and complied with the **Fair Chance Initiative Hiring Ordinance** requirements? ......_____ Initial

28. Has Bidder reviewed and complied with the **PROJECT LABOR AGREEMENT** requirements?....._____ Initial

29. CONTRACT

The bidder to whom the award is made will be required to execute a written contract with the City, furnish good and approved bonds as herein specified, and furnish proof of adequate insurance coverage within ten days after the contract and bid forms are delivered to him.

The following documents are essential parts of the complete contract: The Notice Inviting Bids, Instructions to Bidders, Proposal and Specifications, and, if any, the plans for the work, all of which documents are on file in the office of the Board of Recreation and Park Commissioners.

30. ELECTRONIC SIGNATURE POLICY
(Types of Documents Permitted for Electronic and Scanned Signature)

This Policy is intended to broadly support the use of electronic signatures. Departments are encouraged to consult with the City Attorney's Office if Departments are uncertain if the electronic/scanned signature is acceptable for a document. However, below are examples of the types of documents where electronic/scanned signatures are allowed:

1. Memos, forms, board letters and other correspondence	Electronic/Scanned
2. Contracts	Electronic/Scanned
3. Certificates and Permits	Electronic/Scanned
4. Notarized Document	Scanned

Please note that Ethics Form 50 and 55 must be signed via a software that is accepted by the Ethics Commission (i.e. DocuSign, Adobe). (Issued March 19, 2020)

N O T I C E

NOTICE TO PROSPECTIVE CONTRACTORS PERTAINING TO NON- DISCRIMINATION IN EMPLOYMENT AND PREVAILING WAGE RATES

The California Labor Code requires that prevailing wages must be paid on all City of Los Angeles public works projects. All personnel employed in actual construction on this project must be paid at least the prevailing wage for the craft they are working in. Current prevailing wage rates may be obtained by contacting the Office of Contract Compliance at (213) 847-1922. Information on prevailing wages can also be obtained from the California Department of Industrial Relation's website at http://www.dir.ca.gov/DLSR/PWD

NOTICE TO PROSPECTIVE CONTRACTORS PERTAINING TO
NON-DISCRIMINATION IN EMPLOYMENT AND PREVAILING WAGE RATES

A. In contractual proceedings where a notice inviting proposals for the work, services, information, or property required to be furnished or supplied to the City or to be sold to the City is published either in accordance with Sections 371 of the Charter of said City or is otherwise published, such notice shall specify that the provisions of Los Angeles Administrative Code Section 10.8 through 10.8.6 hereof applicable to any such notice will be part of any contract awarded by the City pursuant to such notice.

B. In contractual proceedings where a notice is not published as provided in subsection A, the contractor or contractors will be advised at the outset of negotiations that the provisions of subsection 10.8 through 10.8.6 hereof will be a part of any contract entered into by the City as a result of such negotiations.

NONDISCRIMINATION CLAUSE -- Required in All Contracts

The contractor agrees and obligates itself not to discriminate during the performance of this contract against any employee or applicant for employment because of the employee's or applicant's race, religion, national origin, ancestry, sex, sexual orientation, age, disability, marital status, domestic partner status, or medical condition. All subcontracts awarded under this contract shall contain a like nondiscrimination clause.

PREVAILING WAGE RATES

The California Labor Code requires that prevailing wages must be paid on all City of Los Angeles public works projects. All personnel employed in actual construction on this project must be paid at least the prevailing wage for the craft they are working in. Current prevailing wage rates may be obtained by contacting the City of Los Angeles Office of Contract Compliance at (213) 847-1922, (213) 847-2777 (fax). Information on prevailing wages can also be obtained from the California Department of Industrial Relation's website at http://www.dir.ca.gov/DLSR/PWD.

Pursuant to the provisions of the Labor Code of the State of California the general prevailing rate of wages for each craft, classification or type of workman needed in the execution of contracts under the jurisdiction of the Board of Recreation and Park Commissioners, shall be those rates as determined by the Director of the Department of Industrial Relations of the State of California. Copies of the applicable Determinations by the said Director are on file in the said office of the said Board and are hereby incorporated and made a part hereof the same as though fully set forth herein. Copies of the said Determination may be obtained at or by request to the said office of said Board.

In the event that the wage determination decision of the Director of Industrial Relations has been superseded by any subsequent wage determination decision(s) published up to and including 10 days prior to bid opening, the most recent applicable wage decisions shall be incorporated by reference, and the successful bidder agrees to be bound by it regardless of what is contained in the specifications.

Ordinance No. 175115

An ordinance amending Section 10.8.2.1 of the Los Angeles Administrative Cod in it's entirely to clarify the requirement that City Contractors shall not discriminate in the provision of employee benefits between employees with spouses and employees with domestic partners.

THE PEOPLE OF THE CITY OF LOS ANGELES
DO ORDAIN AS FOLLOWS:

Section 1, Section 10.8.2.1 of the Los Angeles Administrative Code is amended to read:

Sec. 10.8.2.1. Equal Benefits Ordinance

(A) Legislative Findings.

The City awards many contracts to private firms to provide services to the public and to City Government. Many City contractors and subcontractors perform services that affect the proprietary interests of City government in that their performance impacts the success of City operations. The City holds a proprietary interest in the work performed by many employees employed by City contractors and subcontractors. In a very real sense, the success or failure of City operations may turn on the success or failure of these enterprises, for the City has a genuine stake in how the public perceives the services rendered for them by such businesses.

Discrimination in the provision of employee benefits between employees with domestic partners and employees with spouses results in unequal pay for equal work. Los Angeles law prohibits discrimination based on marital status and/or sexual orientation. The City's departments and contracting agents are required to place in all City contracts a provision that the company choosing to do business with the City agrees to comply with the City's nondiscrimination laws.

It is the City's intent, through the contracting practices outlined in this Ordinance, to assure that those companies choosing to do business with the City will equalize the total compensation between similarly situated employees with spouses and with domestic partners. The provisions of this Ordinance are designed to insure that the City's contractors will maintain a competitive advantage in recruiting and retaining capable employees, thereby improving the quality of the goods and services the City and its people receive, and insuring protection of the City's property.

(B) Definitions. For purposes of Equal Benefits Ordinance only, the following shall apply.

1. Awarding Authority means any Board or Commission of the City, or any employee or officer of the City, that is authorized to award or enter into any Contract, as defined in this ordinance, on behalf of the City, and shall include departments having control of their own funds and which adopt policies consonant with the provisions of the Equal Benefits Ordinance.
2. Benefits means any plan, program or policy provided or offered by a Contractor to its employees as part of the employer's total compensation package. This includes but is not limited to the following types of benefits: bereavement leave, family medical leave, health benefits, membership or membership discounts, moving expenses, pension and retirement benefits, and travel benefits
3. Cash Equivalent means the amount of money paid to an employee with a Domestic Partner (or spouse, if applicable) in lieu of providing Benefits to the employee's Domestic Partner (or spouse, if applicable). The Cash Equivalent is equal to the direct expense to the employer of providing Benefits to an employee for his or her Domestic Partner (or spouse, if applicable) or the direct expense to the employer of providing Benefits for the dependents and family member of an employee with a Domestic Partner (or spouse, if applicable).
4 City means City of Los Angeles
5. Contract means an agreement the value of which exceeds $5,000.00. It includes agreements for work or services to or for the City, for public works or improvements to be performed, agreements for the purchase of goods, equipment, materials, or supplies, or grants to be provided, at the expense of the City or to be paid out of monies under the control of the City. The term also includes a Lease or License, as defined in the Equal Benefits Ordinance.
6. Contractor means any person or persons, firm, partnership, corporation, joint venture, or any combination of these, or any governmental entity acting in its proprietary capacity that enters into a Contract with any Awarding Authority of the City. The term does not include Subcontractors.
7. Designated Administrative Agency (DAA) means the Office of Contract Compliance.

8. Domestic Partner means any two adults, of the same or different sex, who have registered as domestic partners with a governmental entity pursuant to state or local law authorizing this registration or with an internal registry maintained by the employer of at least one of the domestic partners.
9. Equal Benefits Ordinance means Los Angeles Administrative Code 10.8.2.1 et seq., as amended from time to time.
10. Equal Benefits means the equality of benefits between employees with spouses and employees with Domestic Partners, between spouses of employee and Domestic Partners of employees, and between dependents and family members of spouses and dependents and family members of Domestic Partners.
11. Lease or License means any agreement allowing others to use property owned or controlled by the City, any agreement allowing others the use of City property owned or controlled by the City, any agreement allowing others the use of City property in order to provide services to or for the City, such as for concession agreements and any agreement allowing the Cit to use property owned or controlled by others
12. Subcontractor means any person or person, firm, Partnership Corporation, joint venture, or any combination of these, and any governmental entity, that assists the Contractor in performing or fulfilling their terms of the Contract. Subcontractors are not subject to the requirements of the Equal Benefits Ordinance unless they otherwise have a Contract directly with the City.

(C) Equal Benefits Retirements.

1. No awarding authority of the City, shall execute or amend any contract with any contractor that discriminates in the provision of Benefits between employees with spouses and employees with Domestic Partners, between spouses of employees and Domestic Partners of employees, and between dependents and family members of spouses and dependents and family members of Domestic Partners.
2. Contractor must permit access to, and upon request, must provide certified copies of all of its records pertaining to its Benefits policies and its employment policies and practices to the DAA, for the purpose of investigation or to ascertain compliance with the Equal Benefits Ordinance.
3. A Contractor must post a copy of the following statement in conspicuous places at its place of business available to employees and applicants for employment: "During the performance of a Contract with the City of Los Angeles, the Contractor will provide equal benefits to its employees with spouses and its employees with domestic partners." The posted statement must also include a City contact telephone number which will be provided each Contractor when the Contract is executed.
4. A Contractor must not set up or use its contracting entity for the purpose of evading the requirements imposed by the Equal Benefits Ordinance.

(D) Other options for compliance. Provided that the Contractor does not discriminate in the provision of Benefits, a Contractor may also comply with the Equal Benefits Ordinance in the following ways:

1. A Contractor may provide an employee with the Cash Equivalent only if the DAA determines that either:
    a. The Contractor has made a reasonable, yet unsuccessful effort to provide Equal Benefits; or
    b. Under the circumstances, it would be unreasonable to require the Contractor to provide Benefits to the Domestic Partner (or spouse, if applicable).
2. Allow each employee to designate a legally domiciled member of the employee's household a being eligible for spousal equivalent Benefits.
3. Provide Benefits neither to employees' spouses nor to employees' Domestic Partners.

(E) Applicability.

1. Unless otherwise exempt, a Contractor is subject to and shall comply with all applicable provisions of the Equal Benefits Ordinance.
2. The requirements for the Equal Benefits Ordinance shall apply to a Contractor's operations as follows:
    a. A Contractor's operations located within the City limits, regardless of whether there are employees at those locations performing work in the Contract.
    b. A Contractor's operations on real property located outside of the City limits if the property is owned by the City has a right to occupy the property, and if the Contractor's presence at or on the property is connected to a Contract with the City.

c. The Contractor's employees located elsewhere in the United States but outside of the City limits if those employees are performing work on the City Contract.

3. The requirements of the Equal Benefits Ordinance do not apply to collective bargaining agreements ("CBA") in effect prior to January 1, 2000. The Contractor must agree to propose to its union that the requirements of the Equal Benefit Ordinance be incorporated into its CBA upon amendment, extension, or other modification of a CBA occurring after January 1, 2000.

(F) Mandatory Contract Provisions Pertaining to Equal Benefits. Unless otherwise exempted, every Contract shall contain language that obligates the Contractor to comply with the applicable provisions of the Equal Benefits Ordinance. The language shall include provisions for the following:

1. During the performance of the Contract, the Contractor certifies and represents that the Contractor will comply with the Equal Benefits Ordinance.
2. The failure of the Contractor comply with the Equal Benefits Ordinance will be deemed to be a material breach of the Contract by the Awarding Authority.
3. If the Contractor fails to comply with the Equal Benefits Ordinance the Awarding Authority may cancel, terminate or suspend the Contract, in whole or in part, and all monies due or to become due under the Contract may be retained by the City. The City may also pursue any and all other remedies at law or in equity for any breach.
4. Failure to comply with the Equal Benefits Ordinance may be used as evidence against the Contractor in actions taken pursuant to the provisions of Los Angeles Administrative Code Section 10.40, et seq., Contractor Responsibility Ordinance.
5. If the DAA determines that a Contractor has set up or used its Contracting entity for the purpose of evading the intent of the Equal Benefits Ordinance, the Awarding Authority may terminate the Contract on behalf of the City. Violation of this provision may be used as evidence against the Contractor in actions taken pursuant to the provisions of Los Angeles Administrative Code Section 10.40, et seq., Contractor Responsibility Ordinance.

(G) Administration

1. The DAA is responsible for the enforcement of the Equal Benefits Ordinance for all City Contracts. Each Awarding authority shall cooperate to the fullest extent with the DAA in its enforcement activities.
2. In enforcing the requirements of the Equal Benefits Ordinance, the DAA may monitor, inspect, and investigate to insure that the Contractor is acting in compliance with the Equal Benefits Ordinance.
3. The DAA shall promulgate rules and regulations and forms for the implementation of the Equal Benefits Ordinance. No other rules, regulations or forms may be used by an Awarding Authority of the City to accomplish this contract compliance program.

(H) Enforcement

1. If the contractor fails to comply with the Equal Benefits Ordinance:
   a. The failure to comply may be deemed to be a material breach of the contract by the Awarding Authority; or
   b. The Awarding Authority may cancel, terminate or suspend, in whole or in part, the contract; or
   c. Monies due or to become due under the Contract may be retained by the City until compliance is achieved;
   d. The City may also pursue any and all other remedies at law or in equity for any breach.
   e. The City may use failure to comply with the Equal Benefits Ordinance as evidence against the Contractor in actions taken pursuant to the provisions of Los Angeles Administrative Code Section 10.40, et seq., Contractor Responsibility Ordinance.

(I.) Non-applicability, exceptions and Waivers.

1. Upon request of the Awarding Authority, the DAA may waive compliance with the Equal Benefits Ordinance under the following circumstances:
   a. The Contract is for the use of City property, and there is only one prospective Contractor willing to enter in the Contract; or
   b. The Contract is for needed goods, services, construction of a public work or improvement, or interest in or right to use real property that is available only from a single prospective Contractor, and that prospective contractor is otherwise qualified and acceptable to the City; or

c. The Contract is necessary to respond to an emergency that endangers the public health or safety, and no entity which complies with the requirements of the Equal Benefits Ordinance capable of responding tot he emergency is immediately available; or

d. The City Attorney certifies in writing that the Contract involves specialized litigation requirements such that it would be in the best interests of the City to waive the requirements of the Equal Benefits Ordinance; or

e. The Contract is (i) with a public entity; (ii) for goods, services construction of a public work or improvement, or interest in or right to use real property; and (iii) that is either not available from another source, or is necessary to service a substantial public interest. A Contract for interest in or the right to use real property shall not be considered as not being available from another source unless there is no other site of comparable quality or accessibility available from another source; or

f. The requirements of the Equal Benefits Ordinance will violate or are inconsistent with the terms or conditions of a grant, subvention or agreement with a public agency or the instructions of an authorized representative of the agency with respect to the grant, subvention or agreement, provided that the Awarding Authority has made a good faith attempt to change the terms or conditions of the grant, subvention or agreement to authorize application of the Equal Benefits Ordinance; or

g. The contract is for goods, a service or a project that is essential to the City or city residents and there are no qualified responsive bidders or prospective Contractors who could be certified as being in compliance with the requirements of the Equal Benefits Ordinance; or

h. The contract involves bulk purchasing arrangements through City, Federal, State, or Regional entities that actually reduce the City's purchasing costs and would be in the best interests of the city.

2. The Equal Benefit Ordinance does not apply to contracts which involve:

a. The investment of trust monies, bond proceed or agreements relating to the management of these funds, indentures, security enhancement agreements (including, but not limited to, liquidity agreements, letters of credit, bond insurance) for City tax-exempt and taxable financing, deposits of City's surplus funds in financial institutions, the investment of City monies in competitively bid investment agreements, the investment of City monies in securities permitted under the California State government Code and/or the City's investment policy, investment agreements, repurchase agreements, City monies invested in U.S. government securities or pre-existing investment agreements;

b. Contracts involving City monies in which the Treasurer or the City Administrative Officer finds that either:

(i) No person, entity or financial institution doing business in the City, which is in compliance with the Equal Benefits Ordinance, is capable of performing the desired transaction(s); or

(ii) The City will incur a financial loss or forego a financial benefit which in the opinion of the Treasure or City Administrative Officer would violate his or her fiduciary duties.

3. The Equal Benefits Ordinance does not apply to contracts for gifts to the City.

4. Nothing in this subsection shall limit the right of the City to waive the provisions of the Equal Benefits Ordinance.

5. The provisions of this Subsection shall apply to the Equal Benefits Ordinance only. The Equal Benefits Ordinance is not subject to the exemptions provided in Section 10.9 of this Code.

(J.) Consistency with Federal or State Law. The provisions of the Equal Benefits Ordinance do not apply where the applications of these provisions would violate or be inconsistent with the laws. Rules or regulations federal or state law, or where the application word violate or be inconsistent with the terms or conditions of a grant or contract with the United State of America, the State of California, or the instruction of an authorized representative of any of these agencies with respect to any grant or contract.

(K) Severability. If any provision of the Equal Benefits Ordinance is declared legally invalid by any court of competent jurisdiction, the remaining provisions shall remain in full force and effect.

(L.) Timing of Application

1. The requirements of the Equal Benefits Ordinance shall not apply to Contracts executed or amended prior to January 1, 2000, or to bid packages advertised and made available to the public, or any bids received by the City, prior to January 1, 2000 and would otherwise be subject to the Equal Benefits Ordinance.

2. The requirements of the Equal Benefits Ordinance shall apply to competitively bid Contracts that are amended after April 1, 2003, and to competitively bid Contracts that result from bid packages advertised and made available to the public after May 1, 2003.

3. Unless otherwise exempt, the Equal Benefits Ordinance applies to any agreement executed or amended after January 1, 2000, that meets the definition of a Contract as defined within Subsection 10.8.2.1(b).

"Domestic Partners" means, for the purposes of this Article, any two adults, of the same or different sex, who have registered with a governmental entity pursuant to state or local law authorizing this registration or with a internal registry maintained by an employer of at least one of the domestic partners.

Sec. 3, The City Clerk shall certify to the passage of this ordinance and have it published in accordance with Council policy, either in a daily newspaper circulated in the City of Los Angeles or by posting for ten days in three public places in the City of Los Angeles: one copy on the bulletin board located in the Main Street lobby to the City Hall; one copy on the bulletin board located at the ground level at the Los Angeles Street entrance to the Los Angeles Police Department; and one copy on the bulletin board located at the Temple Street entrance to the Los Angeles County Hall of Records.

I hereby certify that this ordinance was passed by the Council of the City of Los Angeles, at its meeting of FEB 12, 2003

Equal Benefits Ordinance (EBO) / First Source Hiring Ordinance (FSHO)

If a contract is subject to the Equal Benefits Ordinance (EBO) and/or the First Source Hiring Ordinance (FSHO), Bidders/Proposers are required to complete a streamlined Equal Benefits Ordinance/First Source Ordinance Compliance Affidavit web form that is located on the City of Los Angeles' Regional Alliance Marketplace for Procurement (RAMP) at www.rampla.org. Bidders/Proposers are responsible for creating a RAMP profile and completing and submitting the affidavit. See below for additional details about the EBO and the FSHO.

Equal Benefits Ordinance (EBO):

Bidders/Proposers are advised that any contract awarded pursuant to this procurement process shall be subject to the applicable provisions of Los Angeles Administrative Code Section 10.8.2.1, Equal Benefits Ordinance (EBO).

All Bidders/Proposers shall complete and submit the Equal Benefits Ordinance/First Source Ordinance Compliance Affidavit, available on the City of Los Angeles' Regional Alliance Marketplace for Procurement (RAMP) at www.rampla.org, prior to award of a City contract that exceeds $25,000. The affidavit shall be valid for a period of three years from the date it is first submitted on the City's RAMP. Bidders/Proposers do not need to submit supporting documentation with their bids or proposals. However, the City may request supporting documentation to verify that the benefits are provided equally as specified on the EBO/FSHO Affidavit.

Bidders/Proposers seeking additional information regarding the requirements of the Equal Benefits Ordinance may visit the Bureau of Contract Administration's website at http://bca.lacity.org.

First Source Hiring Ordinance (FSHO)

Unless approved for an exemption, contractors under contracts primarily for the furnishing of services to or for the City, the value of which exceeds $25,000 with a term of at least three (3) months, and certain recipients of City Loans or Grants, shall comply with the provisions of Los Angeles Administrative Code Sections 10.44 et seq., First Source Hiring Ordinance (FSHO).

All Bidders/Proposers shall complete and electronically sign the Equal Benefits Ordinance/First Source Ordinance Compliance Affidavit available on the City of Los Angeles' Regional Alliance Marketplace for Procurement (RAMP) at www.rampla.org, prior to award of a City contract. The affidavit shall be valid for a period of three years from the date it is first submitted on the City's RAMP.

Bidders/Proposers seeking additional information regarding the requirements of the First Source Hiring Ordinance may visit the Bureau of Contract Administration's website at http://bca.lacity.org.

Nondiscrimination, Equal Employment Practices and Affirmative Action Program (Non-Construction and Construction)

Bidders/Proposers are advised that any contract awarded pursuant to this procurement process shall be subject to the applicable provisions of Los Angeles Administrative Code Section 10.8.2., Non-discrimination Clause.

All contracts (both construction and non-construction) for which the consideration is $1,000 or more shall comply with the provisions of Los Angeles Administrative Code Sections 10.8.3., Equal Employment Practices Provisions. By affixing its signature on a contract that is subject to the Equal Employment Practices Provisions, the Contractor shall agree to adhere to the provisions in the Equal Employment Practices Provisions for the duration of the contract.

All contracts (both construction and non-construction) for which the consideration is $25,000 or more shall comply with the provisions of Los Angeles Administrative Code Sections 10.8.4., Affirmative Action Program Provisions. By affixing its signature on a contract that is subject to the Affirmative Action Program Provisions, the Contractor shall agree to adhere to the provisions in the Affirmative Action Program Provisions for the duration of the contract.

Furthermore, contractors shall include similar provisions in all subcontracts awarded for work to be performed under the contract with the City and shall impose the same obligations. The contract with the subcontractor that contends similar language shall be made available to the Office of Contract Compliance upon request.

Bidders/Proposers seeking additional information regarding the requirements of the City's Non-Discrimination Clause, Equal Employment Practices and Affirmative Action Program may visit the Bureau of Contract Administration's web site at http://bca.lacity.org.

EXCERPTS FROM THE CALIFORNIA LABOR CODE
RELATING TO APPRENTICES ON PUBLIC WORKS
Chapter 4 of Division 3
THE SHELLY-MALONEY APPRENTICE LABOR STANDARDS ACT OF 1939
(Note: Boldface type denotes key points)

3098. An awarding agency whose public works contract falls within the jurisdiction of Section 1777.5 shall, within five days of the award, send a copy of the award to the Division of Apprenticeship Standards. When specifically requested by a local joint apprenticeship committee, the division shall notify the local joint apprenticeship committee regarding all such awards applicable to the joint apprenticeship committee making the request. Within five days of a finding of any discrepancy regarding the ratio of apprentices to journeymen, pursuant to the certificated fixed number of apprentices to journeymen, the awarding agency shall notify the Division of Apprenticeship Standards.

(Amended by Stats. 1974, Ch. 1095.)

Chapter 1 of Division 2
APPRENTICES ON PUBLIC WORKS

1776. Each contractor and subcontractor shall keep an accurate payroll record, showing the name, address, social security number, work classification, straight time and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice or worker employed by him in connection with the public work. The contractor's and subcontractor's payroll records shall be available for inspection at all reasonable hours, and a copy shall be made available to the employee or its authorized representative, the Division of Labor Standards Enforcement, and the division of Apprenticeship Standards. The body awarding the contract may charge a reasonable fee for copying such records. The body awarding the contract shall be required to retain the records filed pursuant to this section for 90 days after completion of the contract. After a complaint has been filed with the awarding body or the Division of Labor Standards Enforcement alleging that a contractor or subcontractor has paid less than the prevailing wage on a public works project, the contractor or subcontractor has paid less than the prevailing wage on a public works project, the contractor or subcontractor shall upon written notice from either the awarding body or the Division of Labor Standards Enforcement within 10 days file with the body awarding the contract a certified copy of the payroll records.
(Amended by Stats. 1976, Ch. 599.)

1777.5 Nothing in this chapter shall prevent the employment of property registered apprentices upon public works.

Every such apprentice shall be paid the standard wage paid to apprentices under the regulations of the craft or trade at which he is employed, and shall be employed only at the work of the craft or trade to which he is registered.

Only apprentices, as defined in Section 3077, who are in training under apprenticeship standards and written apprentice agreements under Chapter 4 (commencing at Section 3070), Division 3, of the Labor Code, are eligible to be employed on public works. The employment and training of each apprentice shall be in accordance with the provisions of the apprenticeship standards and apprentice agreements under which he is training.

When the contractor to whom the contract is awarded by the state or any political subdivision, or any subcontractor under him, in performing any of the work under the contract or subcontract, employs workmen in any apprenticeable craft or trade, the contractor and subcontractor shall apply to the joint apprenticeship committee administering the apprenticeship standards of the craft or trade in the area of the site of the public work for a certificate approving the contractor or subcontractor under the apprenticeship standards for the employment and training of apprentices in the area or industry affected; provided, however, that the approval as established by the joint apprenticeship committee or committees shall be subject to the approval of the Administrator of Apprenticeship. The joint apprenticeship committee or committees, subsequent to approving the subject contractor or subcontractor, shall arrange for the dispatch of apprentices to the contractor or subcontractor in order to comply with this section. There shall be an affirmative duty upon the joint apprenticeship committee or committees administering the apprenticeship standards of the craft or trade in the area of the site of the public work to ensure equal employment and affirmative action in apprenticeship committees provided they are already covered by the local apprenticeship standards. The ratio of apprentices to journeymen who shall be employed in the craft or trade on the public work may be the ratio stipulated in the apprenticeship standards under which the joint apprenticeship committee operates but in no case shall the ratio be less than one apprentice for each five journeymen, except as otherwise provided in this section.

The contractor or subcontractor, if he is covered by this section, upon the issuance of the approval certificate, or if he has been previously approved in such craft or trade, shall employ the number of apprentices or the ratio of apprentices to journeymen stipulated in the apprenticeship standards. Upon proper showing by the contractor that he employs apprentices in such craft or trade in the state on all of its contracts on an annual average of not less than one apprentice to each five journeymen, the Division of Apprenticeship Standards may grant a certificate exempting the contractor from the 1-to-5 ratio as set forth in this section. This section shall not apply to contracts of general contractors involving less than thirty thousand dollars ($30,000) or 20 working days or to contracts of specialty contractors not bidding for work through a general or prime contractor, involving less than two thousand dollars ($2,000) or fewer than five working days.

"Apprenticeable craft or trade," as used in this section, shall mean a craft or trade determined as an apprenticeable occupation in accordance with rules and regulations prescribed by the Apprenticeship Council. The joint apprenticeship committee shall have discretion to grant a certificate, which shall be subject to the approval of the Administrator of Apprenticeship, exempting a contractor from the 1-to-5 ratio set forth in this section when it finds that any one of the following conditions is met:

(a) In the event unemployment for the previous three-month period in such area exceeds an average of 15 percent, or
(b) In the event the number of apprentices in training in such area exceeds a ratio of 1 to 5, or
(c) If there is a showing that the apprenticeable craft or trade is replacing at least one-thirtieth of its journey annually through apprenticeship training, either (1) on a statewide basis, or (2) on a local basis.
(d) If assignment of an apprentice to any work performed under a public works contract would create a condition which would jeopardize its life or the life, safety, or property of fellow employees or the public at large or if the specific task to which the apprentice is to be assigned is of such a nature that training cannot be provided by a journeyman.

When such exemptions are granted to an organization which represents contractors in a specific trade from the 1-to-5 ratio on a local or statewide basis the member contractors will not be required to submit individual applications for approval to local joint apprenticeship committees, provided they are already covered by the local apprenticeship standards.

A contractor to whom the contract is awarded, or any subcontractor under him, who, in performing any of the work under the contract, employs journeymen or apprentices in any apprenticeable craft or trade and who is not contributing to a fund or funds to administer and conduct the apprenticeship program in any such craft or trade in the area of the site of the public work, to which fund or funds other contractors in the area of the site of the public work are contributing, shall contribute to the fund and funds in each craft or trade in which he employs journeymen or apprentices on the public work in the same manner as the other contractors do, but where the trust fund administrators are unable to accept such funds, contractors not signatory to the trust agreement shall pay a like amount to the California Apprenticeship Council. The contractor or subcontractor may add the amount of such contributions in computing its bid for the contract. The Division of Labor Standards Enforcement is authorized to enforce the payment of such contributions to the funds as set forth in Section 227.

The body awarding the contract shall cause to be inserted in the contract stipulations to effectuate this section. Such stipulations shall fix the responsibility of compliance with this section for all apprenticeable occupations with the prime contractor.

All decisions of the joint apprenticeship committee under this section are subject to the provisions of Section 3081.
(Amended by Stats. 1976, Ch. 1179.)

1777.6 It shall be unlawful for an employer or a labor union to refuse to accept otherwise qualified employees as registered apprentices on any public works, on the ground of the race, religious creed, color, national origin, ancestry, sex, or age, except as provided in Section 3077, of such employee.
(Amended by Stats, Ch. 1179.)

1777.7 In the event a licensed contractor' willfully fails to comply with the provisions of Section 1777.5, such licensee shall be denied the right to bid on any public works contract for a period of one year from the date the determination of non-compliance is made by the Administrator of Apprenticeship and, notwithstanding the provisions of Section 1727, upon receipt of such a determination the awarding body shall withhold from contract progress payments then due or to become due the sum of five thousand dollars ($5,000). Any determination shall be issued after a full investigation, a fair and impartial hearing, and reasonable notice thereof in accordance with reasonable rules and procedures prescribed by the California Apprenticeship Council. Any funds withheld by the awarding body pursuant to this section shall be released to the contractor upon issuance of an order to that effect by the administrator, or upon completion of the contract.

The interpretation and enforcement of Sections 1777.5 and 1777.7 shall be in accordance with the rules and procedures of the California Apprenticeship Council. (Amended by Stats. 1976, Ch. 538.)

APPRENTICE UTILIZATION

Any contract awarded hereunder will require the contractor to comply with the provision of Labor Code, State of California, Section 1777.5, relating to apprentice employment and training; and that the prime contractor will assume full responsibility for compliance to said section for all apprenticeable occupations on the project period. Compliance with said Section 1777.5 of Labor Code is not required for public works contracts involving less than $30,000 or twenty working days.

CITY OF LOS ANGELES BUSINESS INCLUSION PROGRAM (BIP) FOR A REQUEST FOR BIDS (RFB)

On 2/15/12 the Board of Recreation and Park Commissioners (hereinafter referred to as the "Board" or the "Awarding Authority") adopted the City of Los Angeles Business Inclusion Program (BIP) for Department requests for bids or proposals as follows.

Performance of a BIP outreach to Minority Business Enterprises (MBE), Women Business Enterprises (WBE), Small Business Enterprises (SBE), Emerging Business Enterprises (EBE), Disabled Veteran Business Enterprises (DVBE), and Other Business Enterprises (OBE) subcontractors must be completed on the Regional Alliance Marketplace for Procurement Los Angeles (RAMPLA), www.rampla.org.

All BIP outreach documentation must be submitted on the RAMPLA by 4:30 p.m. on the calendar day following the date bids are received by the Board.

Failure to submit the required documentation by 4:30 p.m. on the calendar day following the date bids are received by the Awarding Authority will render the bid non-responsive.

The Department of Recreation and Parks anticipated levels of

MBE Participation:	**18 %**
WBE Participation:	**4 %**
SBE Participation:	**25 %**
EBE Participation:	**8 %**
DVBE Participation:	**3 %**

NOTE: BIP outreach information and/or assistance may be obtained through Department of Public Works, BIP phone line at (213) 847-0618. Technical assistance in using the RAMPLA may be obtained through the e-mail link on the RAMPLA's website.

CITY OF LOS ANGELES BUSINESS INCLUSION PROGRAM (BIP) FOR USE ON CITY-FUNDED REQUEST FOR BIDS CONTRACTS

A. General

This project is subject to the City of Los Angeles, BIP outreach requirements which are to be followed by bidders on advertised Request for Bids. The City is committed to ensuring full and equitable participation by minority, women, small, emerging, disabled veteran, and other sub-bid or subcontracting businesses in the provision of all goods and services to the City on a contractual basis. The BIP is set forth herein. Bidders shall be fully informed concerning the requirements of this Program. Bidders are encouraged to use MBE/WBE/SBE/EBE/DVBE/OBE firms whenever there is a need to subcontract portions of the work. **Failure to comply with the City's BIP Outreach requirements will render the bid non-responsive.**

B. MBE/WBE/SBE/EBE/DVBE/OBE Participation

The BIP outreach policy requires the bidder to make an outreach in order to include sub-bid participation by MBEs, WBEs, SBEs, EBEs, DVBEs, and OBEs which is anticipated by the City to produce levels of participation **as stated on Page 15.**

C. Definitions

1. Minority or Women Business Enterprise (MBE or WBE): For the purpose of this program, means a business enterprise that meets both of the following criteria:

   a. A business that is at least 51 percent owned by one or more minority persons or women, in the case of any business whose stock is held, at least 51 percent of the stock is owned by one or more minority persons or women; and

   b. A business whose management and daily business operations are controlled by one or more minority persons or women.

2. Small Business Enterprise (SBE): For the purpose of this program, Small Business Enterprise shall mean a business enterprise that meets the following criteria:

   a. A business (personal or professional services, manufacturer, supplier, vendor) whose three (3) year average annual gross revenues does not exceed $7 million.

   b. A business (construction contractors) whose three (3) year average annual gross revenues does not exceed $15 million.

3. Emerging Business Enterprise (EBE): For the purpose of this program, Emerging Business Enterprise shall mean a business enterprise whose three (3) year average annual gross revenues do not exceed $5 million.

4. Disabled Veteran Business Enterprise (DVBE): For the purpose of this program, Disabled Veteran Business Enterprise shall mean a business enterprise that meets the following criteria:

   a. A business that is at least 51 percent owned by one or more disabled veterans.

   b. A business whose daily business operations must be managed and controlled by one or more disabled veterans.

5. Other Business Enterprise (OBE): For the purpose of this program, means any business which does not otherwise qualify or has not been certified as a Minority, Women, Small, Emerging, and/or Disabled Veteran Business Enterprise.

6. Minority person: For the purposes of this program, the term "Minority person" means African Americans; Hispanic Americans; Native Americans (including American Indians, Eskimos, Aleuts, and Native Hawaiians); Asian Pacific Americans (including persons whose origins are from Japan, China, Taiwan, Korea, Vietnam, Laos, Cambodia, the Philippines, Samoa, Guam, the U.S. Trust Territories of the Pacific, and the Northern Marianas); and Subcontinent Asian Americans (including persons whose origins are from India, Pakistan and Bangladesh).

7. Disabled Veteran: For the purpose of this program, the term "Disabled Veteran" shall mean a veteran of the U.S. military, naval, or air services; the veteran must have a service-connected disability of at least 10% or more, and the veteran must reside in California.

8. Certifications must be current **on the date bids for the project are opened** if recognition is to be given towards MBE/WBE participation on this project.

   a. Certification as a Minority or Women Business Enterprise: An MBE/WBE must be certified by 1) City of Los Angeles, Bureau of Contract Administration; 2) State of California Department of Transportation (CalTrans); 3) Any certifying agency that is a part of the State of California, Unified Certification Program (CUCP) so long as the certification meets all of the City of Los Angeles' MBE/WBE certification requirements; 4) Southern California Minority Business Development Council, Inc. (SCMBDC) for MBE certifications only; 5) Women's Business Enterprise Council- West (WBEC- West); or 6) California Public Utilities Commission's Supplier Clearinghouse (CPUC).

      Applications for certification and directories of MBE/WBE certified firms are available at the following locations:

      1. City of Los Angeles
         Bureau of Contract Administration, Office of Contract Compliance
         1149 S. Broadway, Suite 300, Los Angeles, CA 90015
         Telephone: (213) 847-2684
         E-mail address : bca.certifications@lacity.org
         Internet address: https://bca.lacity.org/certifications-printable-forms

      2. California Department of Transportation, Office of Business and Economic Opportunity
         1823 14th Street, Sacramento, CA 95814
         Telephone: (916) 324-1700
         Internet address:
         www.dot.ca.gov/programs/business-and-economic-opportunity

      3. Southern California Minority Supplier Development Council (for a fee)
         800 W. 6th Street, Suite 850, Los Angeles, CA 90017
         Telephone: (213) 689-6960
         Fax: (213) 689-1707
         Internet address: www.scmsdc.org

4. Women's Business Enterprise Council – West (WBEC-West)
   400 Corporate Pointe, Suite 300
   Culver City, CA 90230
   Telephone: (310) 461-4361
   E-mail: office@wbec-west.org
   Internet address: www.wbec-west.com

5. California Public Utilities Commission's Supplier Clearinghouse (CPUC)
   10100 Pioneer Boulevard, Suite 103,
   Santa Fe Springs, CA 90670
   Telephone: (562) 325-8685
   Fax: (562) 278-0153
   Internet address: http://www.thesupplierclearinghouse.com/

b. Certification as a Small or Emerging Business Enterprise: An SBE must be certified by either: 1) City of Los Angeles, Bureau of Contract Administration as a Local Small Business Enterprise; or 2) State of California, Office of Small Business & Disabled Veteran Business Enterprise Services as long as the certification meets all of the City of Los Angeles' SBE and/or EBE certification criteria.

Note: The City of Los Angeles, Bureau of Contract Administration does not offer EBE certifications. However, if a company holds a City of Los Angeles certification as a Local Small Business Enterprise, they can request an SBE and EBE designation on their RAMPLA company profile. The State of California does not offer EBE certifications. For the purposes of this program, the State's Microbusiness certification will be considered synonymous with the City's EBE certification.

Applications for certification and directories of SBE/EBE certified firms are available at the following locations

1. City of Los Angeles
   Bureau of Contract Administration, Office of Contract Compliance
   1149 S. Broadway, Suite 300, Los Angeles, CA 90015
   Telephone: (213) 847-2684
   E-mail: bca.certifications@lacity.org
   Internet address: https://bca.lacity.org/certification

2. Office of Small Business & Disabled Veteran Business Enterprises (OSDS) Resources
   707 3rd Street, West Sacramento, CA 95605
   Telephone: (916) 375-4940
   E-mail: OSDSHelp@dgs.ca.gov
   Internet address: https://caleprocure.ca.gov/pages/sbdvbe-index.aspx

c. Certification as a Disabled Veteran Business Enterprise: A DVBE must be certified by either 1) State of California, Office of Small Business & Disabled Veteran Business Enterprise Services; or 2) Department of Veterans Affairs, Office of Small and Disadvantaged Business Utilization, Center for Verification and Evaluations as Service-Disabled Veteran-Owned Small Business (SDVOSB) and be headquartered in California.

Applications for certification and directories of DVBE certified firms are available at the following locations:

1. Office of Small Business & Disabled Veteran Business Enterprises Services (OSDS)
   707 3rd Street, West Sacramento, CA 95605
   Telephone: (916) 375-4940
   E-mail: OSDSHelp@dgs.ca.gov
   Internet address: https://caleprocure.ca.gov/pages/sbdvbe-index.aspx

2. Department of Veterans Affairs, Office of Small and Disadvantaged Business Utilization (OSDBU)
   Internet address: https://www.va.gov/osdbu/

9. Business Inclusion Program Outreach Documentation: The bidder must take affirmative steps prior to bid opening to ensure that a maximum effort is made to recruit sub-bidder/subcontractors. Minority, women, small, emerging, disabled veteran owned and controlled businesses must be considered along with other business enterprises whenever possible as sources of supplies, construction and other services. The required affirmative steps for BIP Outreach documentation are outlined in Paragraph D herein. The BIP Outreach documentation must be submitted as described in Paragraph D herein. Failure to submit the BIP Outreach documentation as described will render the response non-responsive.

10. Subcontract: For the purpose of this program, the term "Subcontract" denotes an agreement between the prime Contractor and an individual, firm or corporation for the performance of a particular portion(s) of the work which the prime Contractor has obligated itself.

11. Subcontractor: An individual, firm, or corporation having a direct contract with the contractor for the performance of a part of the work which is proposed to be constructed or done under the contract or permit, including the furnishing of all labor, materials, or equipment.

12. Vendor and/or supplier: A firm that owns operates or maintains a store, warehouse, or other establishment in which the materials or supplies required for the performance of the contract are bought, kept in stock, and regularly sold to the public in the usual course of business. The firm must engage in, as its principal business, and its own name, the purchase and sale of the products in question. A vendor and/or supplier of bulk items such as steel, cement, stone and petroleum products need not keep such products in stock, if it owns or operates distribution equipment.

13. Manufacturer: A firm that operates or maintains a factory or establishment that produces on the premises the materials or supplies obtained by the contractor.

14. Broker: A firm that charges for providing a bona fide service, such as professional, technical, consultant or managerial services and assistance in the procurement of essential personnel, facilities, equipment, insurance or bonds, materials or supplies required for performance of the contract. The fee or commission is to be reasonable and not excessive as compared with fees customarily allowed for similar services.

15. Participation Recognition: This applies to recognition as an MBE, WBE, SBE, EBE, DVBE, and OBE.

    a. All listed MBE, WBE, SBE, EBE, and/or DVBE firms must be certified as defined under Paragraph C, Definitions, Item 8, on the date bids for the project are opened before credit may be allowed toward the respective MBE, WBE, SBE, EBE, and/or

DVBE participation level.

b. Work performed by a MBE, WBE, SBE, EBE, and/or DVBE prime contractor will not be a consideration when determining a prime contractor's BIP Outreach. The prime contractor will be required to make a BIP Outreach to obtain certified MBEs, WBEs, SBEs, EBEs, and DVBEs through subcontracting or materials and supplies acquisition to reach anticipated participation levels.

c. A listed MBE, WBE, SBE, EBE, DVBE, and/or OBE firm must perform a commercially useful function, i.e., must be responsible for the execution of a distinct element of the work and must carry out its responsibility by actually performing, managing and supervising the work.

d. Recognition for materials and/or supplies is limited to 60 percent of the amount to be paid to the vendor for such materials/supplies in computing the levels of MBE, WBE, SBE, EBE, DVBE, and OBE participation, unless the vendor manufactures or substantially alters the materials/supplies.

e. MBE and/or WBE credit shall not be given to a Joint Venture partner listed as a subcontractor by a Joint Venture bidder.

f. MBE, WBE, SBE, EBE, DVBE, and/or OBE credit for brokers required for performance of the contract is limited to the reasonable fee or commission charged, as not considered excessive, as compared with fees customarily allowed for similar services.

g. A firm which qualifies as both a MBE and a WBE will be credited as either MBE participation or as WBE participation, but will not be credited for both. However, a MBE and/or WBE firm may also receive SBE, EBE and/or DVBE credit if so qualified.

h. A SBE, EBE, DVBE prime contractor shall receive pledged participation credit for the work performed by its own workforce.

i. A bid-listed subcontractor, vendor, supplier, manufacturer, or broker that becomes a certified MBE, WBE, SBE, EBE, and/ or DVBE after contract award will be credited towards the achieved participation levels for any work performed after the certification date. Additionally, if the MBE, WBE, SBE, EBE, and/ or DVBE has a status change in any of its certifications during the performance of work under the contract, the firm will not receive certification credit for work performed after the certification status change.

D. BIP Outreach Documentation

It is the policy of the City of Los Angeles to provide Minority Business Enterprises (MBEs), Woman Business Enterprises (WBEs), Small Business Enterprises (SBEs), Emerging Business Enterprises (EBEs), Disabled Veteran Business Enterprises (DVBEs), and Other Business Enterprises (OBEs) an equal opportunity to participate in the performance of City contracts. In order to maximize this participation while minimizing the administrative impact on city staff and bidders alike, the Mayor's Office has developed a Business Inclusion Program (BIP). The BIP requires City departments to set anticipated participation levels based on the opportunities presented in their advertised contracts and the department's achievement of its annual goals. A bidder's BIP Outreach to MBEs, WBEs, SBEs, EBEs, DVBEs, and OBEs shall be determined by their compliance with the following BIP Outreach process which will be performed on the City's Regional Alliance Marketplace for Procurement Los Angeles (RAMPLA). The RAMPLA can be accessed at www.rampla.org or by going to the City's Webpage (www.lacity.org) and linking onto "Bids, RFPs & Grants." Failure to meet the anticipated MBE, WBE, SBE, EBE, and/or DVBE participation levels will not by itself be the basis for disqualification or determination of noncompliance with this policy. **However, failure to comply with the BIP Outreach documentation requirements as described in this section will render the bid non-responsive and will result in its rejection.** *Compliance with the BIP Outreach requirements is required even if the bidder has achieved the anticipated MBE, WBE, SBE, EBE, and DVBE participation levels*. Adequacy of a bidder's BIP Outreach will be determined by the Board after consideration of the indicators of BIP Outreach as set forth below.

Any technical difficulties while utilizing the RAMPLA should be reported immediately using the following steps:

1. Email RAMPLA Support at support@rampla.org.
2. Email Department of Public Works, Bureau of Engineering, Project Award & Control (PAC) Division, BIP Coordinator at eng.bavn@lacity.org.
3. If you are not contacted within 15 minutes during normal City working hours (7:00 a.m. to 4:30 p.m. Monday-Friday), call Department of Public Works, Bureau of Engineering, PAC at (213) 847-0618.

If the above procedures are not followed as stipulated, incomplete outreach and/or incomplete documentation may not be accepted.

Each indicator (2-7) is evaluated on a pass/fail basis. All indicators (2-7) must be passed to be deemed responsive. Only BIP Outreach documentation submitted under the respondent's name will be evaluated. Therefore, submission by a third party will result in the respondent being deemed non-responsive. BIP Outreach may be completed by any Joint Venture member on behalf of the Joint Venture or under the name of the Joint Venture.

1	LEVEL OF ANTICIPATED MBE, WBE, SBE, EBE, and DVBE PARTICIPATION

The bidder has performed a BIP Outreach in an attempt to obtain sub-bid/subcontract participation by MBEs, WBEs, SBEs, EBEs, DVBEs and OBEs which could be expected by the Awarding Authority to produce a reasonable level of participation by interested business enterprises, including the MBE, WBE, SBE, EBE and DVBE anticipated percentages set forth on Page 1 herein and to have the bidder meet the subcontracting expectations for the project.

Required Documentation: No documentation is required from the bidder.

2	ATTENDED PRE-BID MEETING

The bidder attended the pre-bid meeting scheduled by the Project Manager to inform all bidders of the requirements for the project for which the contract will be awarded. This requirement may be waived if the bidder certified it is informed as to those project requirements and has participated in a City-sponsored or City-approved matchmaking event in the prior 12 months.

Required Documentation: An employee of the bidder's company must attend the pre-bid meeting scheduled for this project. Credit may not be given if the employee arrives late or fails to sign the pre-bid meeting attendance roster. This requirement may be waived if the bidder certifies in writing that it is informed as to the BIP Outreach requirements for the project and has participated in a City-sponsored or City-approved matchmaking event in the prior 12 months as is evidenced by the event attendance documents.

Note: If the RFB states that the pre-bid meeting is mandatory, then attendance at the pre-bid meeting is the only way to pass this indicator.

3	SUFFICIENT WORK IDENTIFIED FOR SUBCONTRACTORS

The bidder has identified the minimum number, as determined by the Awarding Authority, of specific items of work that will be performed by sub-bidders/subcontractors. This will ensure an opportunity for subcontractor participation among MBEs, WBEs, SBEs, EBEs, DVBEs and OBEs.

Required Documentation: Outreach via e-mail in the selected work areas. This outreach must be performed using the RAMPLA's BIP Outreach system. The outreach must be to potential MBE, WBE, SBE, EBE, DVBE, and OBE sub-bidders/subcontractors that are currently registered on the RAMPLA. Failure of the bidder to outreach in all of the work areas selected by the City as potential subcontracting work areas may result in the bid being deemed non-responsive.

Note: City staff will access the RAMPLA and verify compliance with this indicator after the BIP

Outreach submission deadline.

4	WRITTEN NOTICES TO SUBCONTRACTORS

All notifications must be provided utilizing RAMPLA, and made not less than **fifteen (15) calendar days** prior to the date the Prime Bid/Proposal is required to be submitted to the Awarding Authority. In all instances, bidders must document that invitations for subcontracting bids were sent to available MBEs, WBEs, SBEs, EBEs, DVBEs and OBEs for each item of work to be performed.

***Required Documentation*:** E-mail notification in each of the selected work areas to available MBEs, WBEs, SBEs, EBEs, DVBEs and OBEs for each anticipated work area to be performed. The notification must be performed using the RAMPLA's BIP Outreach system. The notification must be to potential sub-bidders/subcontractors currently registered on the RAMPLA. If the bidder is aware of a potential subcontractor that is not currently registered on the RAMPLA, it is the bidder's responsibility to encourage the potential subcontractor to become registered so that the bidder can include them as part of their BIP Outreach. Notifications must contain areas of work selected to be subcontracted, City of Los Angeles project name, name of the bidder, and contact person's name, address, and telephone number. Bidders are required to send notifications to a sufficient number of MBE, WBE, SBE, EBE, DVBE and OBE firms in each work area chosen, as determined by the City. What is considered sufficient will be determined by the total number of subcontractors registered on the RAMPLA in each specific work area.

The City will determine each work area by the North American Industry Classification System (NAICS) code. The following table shows the sufficient number of MBE, WBE, SBE, EBE, DVBE and OBE subcontractors that need to be notified for each work area.

# of Subcontractors in NAICS Code	% Prime Must Notify	Number Prime Must Notify
1-10	100%	1-10
11-20	80%	9-16
21-50	60%	13-30
51-100	40%	21-40
101-200	25%	26-50
>200	10%	20+

A bidder's failure to utilize this notification function will result in their bid being deemed non-responsive.

Note: Bidders will not be able to utilize the RAMPLA's BIP Outreach notification function if there are less than fifteen (15) calendar days prior to the RFP response submittal deadline. In utilizing the RAMPLA's notification function, proposers will receive a message if they have failed to outreach to a sufficient number of firms when they go to view their summary sheet. By "double clicking" on a red box containing "0*" the bidder will be taken to a list of firm(s) that will allow them to meet this requirement, as long as the notification deadline has not passed. If a bidder is not finding firms of a certain type of certification status when performing their notification search under the six (6) digit

NAICS code, the bidder will need to expand their search to the five (5) digit code (i.e.: If none are listed under 236210 – Industrial Building Construction, then search under 23621 – Industrial Building Construction.) Bidders will be given an opportunity to include their own customized statements when utilizing the notification function. However, the City will take into consideration the wording and may deem a bidder non-responsive if the wording is perceived to seriously limit potential subcontractor responses. City staff will access the RAMPLA and verify compliance with this indicator after the RFP submission deadline. Bidders are encouraged to print their BIP Outreach summary sheet prior to logging out as documented proof of their progress. In case of technical error, please follow the process for reporting these errors as outlined in Section D.

5	PLANS, SPECIFICATIONS AND REQUIREMENTS

The bidder provided interested sub-bid enterprises/subcontractors with information about the plans, specifications and requirements for the selected sub-bid/subcontracting work.

***Required Documentation*:** Include in Indicator No. 4, information detailing how, where and when the bidder will make the required information available to interested subcontractors. The notification must be performed using the RAMPLA's BIP Outreach system.

Note: At the time a bidder utilizes the RAMPLA's BIP Outreach notification function, the required information will automatically be included in the notification. Bidders will not be able to utilize the RAMPLA's BIP Outreach notification function if there are less than fifteen (15) calendar days prior to the bid submittal deadline. City staff will access the RAMPLA and verify compliance with this indicator after the bid submittal deadline.

6	NEGOTIATE IN GOOD FAITH

The bidder has responded to every unsolicited offer sent by a Registered Subcontractor using RAMPLA and has evaluated in good faith bids or quotes submitted by interested MBEs, WBEs, SBEs, EBEs, DVBEs, and OBEs. Bidders must not unjustifiably reject as unsatisfactory a bid or quote offered by a Registered Subcontractor, as determined by the Awarding Authority. The bidder must submit a list of all subcontractors for each item of work, including dollar amounts of potential work for MBEs, WBEs, SBEs, EBEs, DVBEs, and OBEs, and a copy of any and all bids or quotes received. This list must include an explanation of the evaluation that lead to the bid or quote being rejected and the explanation must have been communicated to the subcontractor using RAMPLA.

Required Documentation:

a) An online Summary Sheet organized by work area, listing the following:

- the bids and/or quotes received;
- the name of the subcontractor who submitted the bid/quote;
- the dollar amount of the bid/quote;
- a brief reason given for selection/non-selection as a subcontractor;
- the subcontractor selected for that work area.

b) Copies of all MBE/WBE/SBE/EBE/DVBE/OBE bids or quotes received must be submitted through the RAMPLA to the "BIP Supporting Documents" section of the Summary tab prior to the proposer being awarded the contract by the City.

The bidder will be given a choice of responses to indicate 1) No Response received; 2) Response received; but no subcontractor bid submitted; or 3) Submit Bid and include bid amount.

The bidder will be able to choose a preselected reason for selection/non-selection but may also need to include further explanation in the Notes Section of the online Summary Sheet. If the bidder elects to perform a work area with its own forces and they received a sub-bid/response, they must include a bid/response that shows their own costs for the work. Also, if the bidder is not a Local Business Enterprise (LBE), but wants to participate in the Local Business Preference Program (LBPP) by utilizing Local Business Enterprise subcontractor as prescribed in the LBPP requirements of the RFP documents, a subcontractor's LBE status can be considered a reason for selection over a non-LBE subcontractor. **All bids/responses received, regardless of whether or not the bidder outreached to the subcontractor, must be submitted and included on the on-line Summary Sheet.** To that extent, the City expects the bidder to submit a bid/response from each subcontractor listed on the online Summary Sheet. **All potential subcontractor with whom the bidder has had contact outside of the RAMPLA must be documented on the online Summary Sheet.**

The Summary Sheet must be performed using the RAMPLA's BIP Outreach system and must be submitted by 4:30 p.m. on the calendar day following the day of the RFB response submittal deadline. If a bid/response is submitted by a firm that is not registered with the RAMPLA, the bidder is required to add that firm to their Summary Sheet. A bidder's failure to utilize the RAMPLA's Summary Sheet function will result in their RFB response being deemed non-responsive.

Note: City staff may request copies of all of the bids received from sub-bidders/subcontractors as part of the BIP Outreach evaluation process. Bidders will not be able to edit their Summary Sheet on the RAMPLA's BIP Outreach Summary Sheet function after 4:30 p.m. on the first calendar day following the day of the bid submittal deadline. City staff will access the RAMPLA and verify compliance with the summary sheet provision of this indicator after the bid submittal deadline. Contractors are required to have each one of their bid-listed subcontractors registered on the RAMPLA prior to the bidder being awarded the contract. In case of technical error, bidders must follow the process for reporting these errors as outlined in Section D.

7	**BOND, LINES OF CREDIT, AND INSURANCE ASSISTANCE**

Each notification by the bidder shall also include an offer of assistance to interested potential MBEs, WBEs, SBEs, EBEs, DVBEs, and OBEs in obtaining bonds, lines of credit, and insurance required by the Awarding Authority or bidder.

Required Documentation: Include in Indicator No. 7, information about the bidder's efforts to assist with bonds, lines of credit and insurance. The notification must be performed using the RAMPLA's BIP Outreach notification system.

Note: At the time a bidder utilizes the RAMPLA's BIP Outreach notification function, the required information will automatically be included in the notification. Bidders will not be able to utilize the

RAMPLA's BIP Outreach notification function if there are less than fifteen (15) calendar days prior to the bid submittal deadline. Bidders will be given an opportunity to include their own customized statements when utilizing the notification function. However, the City will take into consideration the wording and may deem a bidder non-responsive if the wording is perceived to seriously limit subcontractor responses or is deemed contrary to the intent of this indicator. City staff will access the RAMPLA and verify compliance with this indicator after the bid submittal deadline.

The bidders shall submit completed BIP Outreach documentation either via the RAMPLA's BIP Outreach system or prior to being awarded the contract, as specified for each indicator**.** The Awarding Authority in its review of the BIP Outreach documentation may request additional information to validate and/or clarify that the BIP Outreach submission was adequate. Any additional information submitted after the specified deadline will be treated at a higher level of scrutiny and may require third party documentation in order to substantiate. Such information shall be submitted promptly upon request by the Awarding Authority.

E. Award of Contract

The Awarding Authority reserves the right to reject any and all bids. The award of a contract will be to the lowest responsive, responsible bidder whose proposal complies with all requirements prescribed herein. This includes compliance with the required BIP Outreach requirements. A positive and adequate demonstration to the satisfaction of the Awarding Authority that a BIP Outreach to include MBE, WBE, SBE, EBE, DVBE and OBE subcontractors' participation was made is a condition for eligibility for award of the contract. Contractors are required to have each one of their subcontractors register on the RAMPLA prior to the award of the contract.

In the event that the Awarding Authority considers awarding away from the apparent low bidder because of the bidder's failure to supply adequate BIP Outreach documentation, the Awarding Authority shall afford the bidder an opportunity to present further evidence to the Awarding Authority prior to a public hearing of the bidder's BIP Outreach.

F. Subcontractors

In addition to the requirements set forth in the provisions pertaining to the listing of subcontractors, the following shall apply for the purpose of this project:

1. All Subcontractors who will be working on the Project shall be approved in writing by the Awarding Authority or its designee prior to any work being performed by said subcontractor, regardless of the dollar amount of work to be performed, and whether or not they were listed in the original bid.

    A. No other entity, including, but not limited to, the Project Engineer, Program Manager, or Construction Manager, is authorized to grant either initial approval of Subcontractor(s) or Subcontractor substitution(s), unless so designated by the Awarding Authority.

2. Any reduction, increase, or other change to any Subcontract amount without prior approval of the Awarding Authority or its designee is considered an Unauthorized Subcontractor Substitution and is subject to a penalty of ten (10) percent of the Subcontract amount, whether bid-listed or not. A subcontract dollar value increased or reduced as the result of a Change

Order issued by the Engineer to add or delete from the original scope of work shall not be subject to a penalty for an Unauthorized Subcontractor Substitution.

A. A penalty in the amount of ten (10) percent of the subcontract amount will be assessed for each subcontractor when it is found the Contractor did not pay the entire Bid-listed and/or approved dollar amount of the respective subcontractor and there has been no approval by the Awarding Authority or its designee for a reduction in the subcontract dollar amount.

B. In the event it is found that the Contractor did not pay any of the Bid-listed and/or approved dollar amount of a subcontract without a change in scope of the original Contract, which resulted in a deletion of the subcontract work, a Change Order to the contract shall be issued deleting the unpaid dollar amount of the subcontract. In addition, the Contractor shall be penalized ten (10) percent of the subcontract amount and the City may impose sanctions as a result of such action.

3. If the contractor fails to specify a Subcontractor, or if the Contractor specifies more than one Subcontractor for the same portion of Work to be performed under the contract in excess of one-half or 1 percent of the Contractor's total original bid or $10,000.00, whichever is greater, the Contractor agrees that it is fully qualified to perform that portion of work itself, and that it shall perform that portion itself.

4. Subletting or subcontracting of any portion of the Work with a total value of more than ½ of 1 percent of the Contractor's total original bid, or $10,000.00, whichever is greater, for which no Subcontractor was designated in the original Bid will be permitted only in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the Awarding Authority or its designee setting forth the facts constituting the emergency or necessity.

5. All requests for approval of Subcontractors must contain the following information:

   A. Project Name
   B. Project Work Order Number
   C. Subcontractor's Name
   D. Subcontractor's Business Address
   E. Subcontractor's Business Phone Number
   F. Subcontractor's Status (MBE, WBE, SBE, EBE, DVBE, OBE)
   G. Subcontractor's State of California Contractor License Number
   H. Subcontractor's City of Los Angeles Business Tax Receipt Certificate Number
   I. Dollar Amount of Work to be performed
   J. Description of Work to be performed

6. No Bid-listed Subcontractor will be approved for a dollar amount of work less than that specified in the original Bid.

7. Failure to obtain approval of the Awarding Authority or its designee in writing prior to each Subcontractor performing work on the project may result in suspension of work by that subcontractor, removal of work performed by the unapproved subcontractor, a penalty of ten (10) percent of the unapproved subcontract amount, and possible sanctions against the

contractor.

8. The contractor shall set forth in its bid the following: The name, location of the place of business, telephone number, California State Contractor's License Number, and dollar amount of each Subcontractor who will perform work, labor, service, and/or supply specifically fabricated materials or equipment in an amount in excess of one-half of 1 percent of the contractor's total bid, or $10,000.00, whichever is greater, for all subcontractors listed.

9. It shall be considered an Illegal Subcontractor Substitution for anyone other than the bid-listed or approved subcontractor(s), including the prime contractor, to perform any portion of the work designated to be performed by said subcontractor without prior approval of the Awarding Authority or its designee. An Illegal Subcontractor Substitution is subject to a penalty of ten (10) percent of the subcontract amount, whether bid listed or not.

10. Failure of the Contractor to request and obtain approval from the Awarding Authority or its designee for a reduction in either a Bid-listed Subcontract amount or the Subcontract amount of a Subcontractor added after the date of the original Bid will result in a penalty of ten (10) percent of the Subcontract amount and possible sanctions against the Contractor.

11. Additional Subcontractors may be added after the time of the original Bid. The dollar value of Work to be performed by any additional subcontractor(s) may not be greater than ½ of 1 percent of the Contractor's original total Bid, or $10,000.00, whichever is greater, unless the Subcontractor will be performing Work added by Change Order causing changes or deviations from the original Contract.

    A. No approval(s) for additional Subcontractor(s) will be granted which will result in the Prime Participation Level falling below that required by the original Contract.

G. Subcontractor Substitution

In addition to the requirements for obtaining approval of all subcontractors prior to their working on the project, the following shall apply regarding substitution of any subcontractor, whether Bid-listed or not, during construction:

It is considered a substitution if anyone other than the Bid-listed and/or approved Subcontractor(s), including the Contractor, performs any portion of the work designated to be performed by said Subcontractor, or if the contractor reduces the dollar amount of any subcontractor without written approval of the Inspector.

All substitutions of Subcontractors, whether bid-listed or approved after the date of the original Bid opening, shall be approved in writing by the Awarding Authority or its designee prior to any Work being performed by the substituting Subcontractor.

Failure to obtain approval for any Subcontractor substitution, regardless of the dollar amount of the work performed, may result in rejection of the affected work, a penalty of ten (10) percent of the subcontract amount, and possible sanctions against the contractor.

There shall be no decrease in dollar value of Work to be performed by Subcontractor(s) approved

as a substitute for any Subcontractor, whether Bid-listed or approved after the original date of Bid opening, without a change in scope of the Work to be performed by the originally Bid-listed or approved Subcontractor. Written evidence of a change of scope must be provided by the Engineer prior to approval of a change in dollar value of a Subcontractor either Bid-listed or approved after the original date of Bid opening.

1. A Contractor whose Bid is accepted may not:

   A. Reduce the dollar amount of any subcontractor without the written approval of the Awarding Authority or its designee.

   B. Substitute any person as Subcontractor in place of a subcontractor listed in the original bid or approved to work on the project after award, except that the Awarding Authority or its designee may consent to the substitution of another subcontractor for one of the following situations:

      a. When the subcontractor listed in the original bid or proposal or approved after award after having had a reasonable opportunity to do so fails or refuses to execute a written contract, when that written contract, based on the general terms, conditions, plans and specifications for the project involved or the terms of that subcontractor's written bid, is presented to the subcontractor by the contractor.

      b. When the subcontractor becomes bankrupt or insolvent.

      c. When the subcontractor fails or refuses to perform its subcontract.

      d. When the subcontractor fails or refuses to meet the bond requirements of the contractor.

      e. When the contractor demonstrates to the Awarding Authority or its designee's satisfaction that the name of the subcontractor was listed as the result of an inadvertent clerical error.

      f. When the subcontractor is not licensed pursuant to the State of California Contractor's License Law to perform the work designated.

      g. When the subcontractor refuses to obtain a City of Los Angeles Business Tax Receipt Certificate (BTRC).

      h. When the Awarding Authority or its designee concurs with the contractor that the work being performed by the subcontractor is unsatisfactory and not in substantial accordance with the Contract Documents, or the subcontractor is delaying or disrupting progress of the work.

      i. When the subcontractor fails to submit an Affirmative Action Plan acceptable to the Awarding Authority.

      j. When the Awarding Authority determines the subcontractor is not a responsible

contractor.

C. Permit a subcontract to be voluntarily assigned or transferred, or allow it to be performed by anyone other than the original subcontractor listed in the original bid or approved to perform that portion of work after award, without the consent of the Awarding Authority or its designee.

D. Other than in the performance of Change Orders causing changes or deviations from the original contract, sublet or subcontract any portion of the work in excess of 1 half of 1 percent of the contractor's total original bid as to which its original bid did not designate a subcontractor.

2. A request for substitution of any Subcontractor, whether Bid-listed or not, must be made in writing to the Awarding Authority or its designee, and must include letter(s) of explanation as to the reason for the requested substitution.

3. The Contractor shall conduct a BIP Outreach prior to requesting any Subcontractor substitution, regardless of the status (MBE, WBE, SBE, EBE, DVBE, OBE) of the Subcontractor being substituted for.

   A. The Contractor shall contact some of each of the following: certified MBE, certified WBE, certified SBE, certified EBE, certified DVBE, and OBE sub-bid prospects from each trade for which sub-bid/subcontracting work is available, and document the following for submittal to the Awarding Authority or its designee along with all other required documentation:

      a. The name of the company contacted, the contact person, telephone number, date and time of contact.

      b. Response for each item of work that was solicited, including dollar amount(s).

      c. Reason for selection or rejection of each sub-bid prospect.

      d. In the event the Contractor is unable to find certified MBE, certified WBE, certified SBE, certified EBE, certified DVBE and/or OBE sub-bid prospects (first from the BIP Outreach Summary Sheet, then from other outreach methods) for each trade, the Contractor is advised to contact the Awarding Authority or its designee for assistance prior to certifying under penalty of perjury that it was unable to fully meet this requirement.

   B. In the event that a subcontract is reduced due to a project change that will not be specified in a Change Order, the Contractor shall request approval for reducing the Subcontract by submitting the following:

      a. The name of the company for which the reduction in the Subcontract amount is requested and the dollar amount of the requested reduction.

      b. The reason for the reduction. Specific details of the reason for the requested reduction

are required in order for the request to be considered.

C. All documentation shall be submitted to the Awarding Authority or its designee.

a. Failure to provide all required information will result in rejection of the Substitution request until such time as all information is submitted.

D. The information required for requesting substitution of any Subcontractor, whether Bid-listed or approved after the original date of Bid opening is:

a. Project Name
b. Project Work Order Number
c. Original Subcontractor's Name
d. Original Subcontractor's Business Address
e. Original Subcontractor's Business Phone Number
f. Original Subcontractor's Status (MBE, WBE, SBE, EBE, DVBE, OBE)
g. Letter of withdrawal from original Subcontractor (when applicable)
h. Letter of explanation from the Prime Contractor stating reason(s) for request
i. Substituting Subcontractor's Name
j. Substituting Subcontractor's Business Address
k. Substituting Subcontractor's Business Phone Number
l. Substituting Subcontractor's State of California Contractor's License Number
m. Substituting Subcontractor's Status (MBE, WBE, SBE, EBE, DVBE, OBE)
n. Substituting Subcontractor's City of Los Angeles Business Tax Receipt Certificate Number (BTRC)
o. Dollar amount of Work to be performed by substituting Subcontractor
p. Description of Work to be performed by substituting Subcontractor
q. BIP Outreach Documentation

4. Penalties:

A Contractor violating any provision(s) of this subsection shall be deemed in violation of the Contract, and the Awarding Authority at its discretion may:

A. Cancel the Contract.

B. Assess the Contractor a penalty of not more than ten (10) percent of the amount of the Subcontract(s) involved.

5. Potential Penalties:

At the end of each construction project, before calculation of any actual final subcontracting penalties, the City may withhold as disputed funds 15% of all subcontract(s) that appear to be in violation of any subcontracting provision of the project, and 15% of all subcontract(s) which performed work on the project without, or prior to, approval by the Awarding Authority or its designee.

H. Submittal Documents

1. List of Subcontractors: Bidders will submit with their Bid the List of Subcontractors. The Bidder shall list the name, business address, business telephone, contact person and a description of work or supplies to be provided by each of the firms which will perform more than ½ of 1 percent, or $10,000, whichever is greater, of the original Bid amount on the project. This list is considered the bidder's list of subcontractors that will be utilized on the project, and bidders are expected to use the firms, for the total dollar amounts, listed on the List of Subcontractors.

2. Subcontractors/Subcontractor Substitutions: Bidders will be required to submit this form prior to contract award. The bidder shall complete, sign, and submit this form to the Awarding Authority or its designee. A request for this form by City staff should not be construed as a recommendation for award. This form is a summary of the requirements listed under Section F. Subcontractors, and Section G. Subcontractor Substitutions, and does not supersede any of the procedures or requirements listed in those sections.

I. Sub-agreement Falsification

Falsification or misrepresentation of a sub-agreement as to company name, contract amount and/or actual work to be done by the sub-bidder/subcontractor will result in sanctions set forth in provisions pertaining to listing of subcontractors.

J. Final Subcontracting Report Submittal

The Contractor must submit the Final Subcontracting Report, attached as page 15T, to the Awarding Authority or its designee, within **fifteen (15) calendar days** after the issuance of the Statement of Completion or a request for the report by the Awarding Authority, whichever comes first. Failure to comply may result in the assessment of liquidated damages in the amount of **$100.00** per day by the Awarding Authority.

Contractor _____

Acceptance by the City of Los Angeles of this Contractor's Bid does not indicate automatic approval of the subcontractor(s) listed in the Bid-proposal.

By acknowledging with the signature of an authorized representative below, the Contractor understands that it must obtain approval for **all** Subcontractors, at all levels, whether Bid-Listed or not, from the Awarding Authority or its designee prior to the Subcontractor(s) performing any work on this project.

The Contractor understands that no entity other than the Awarding Authority or its designee has the authority to approve either an original request for approval or request for substitution of any subcontractor(s).

The Contractor further understands that Subcontractors approved for work on any other project for the City of Los Angeles does not constitute approval to work on this project also, and that there are no "blanket approvals" of Subcontractors for this, or any other, project.

The Contractor also understands that it may not substitute any Subcontractor, at any level, whether Bid-listed or not, without the approval of the Awarding Authority or its designee.

The Contractor understands and acknowledges that there may be a penalty assessed of no more than ten (10) percent of the subcontract amount of each Subcontractor for any of the following:

1. Failure to obtain approval for any Subcontractor(s), at any level, whether Bid-listed or not, from the Awarding Authority or its designee prior to the subcontractor(s) beginning work on the project.
2. Performing the work of any subcontractor(s) at any level, whether Bid-listed or not, without the approval of the Awarding Authority or its designee.
3. Reducing the Bid-listed and/or approved dollar amount of work to be performed by any Subcontractor(s), at any level, whether Bid-listed or not, for any reason, without the approval of the Awarding Authority or its designee.
4. Substituting for any Subcontractor(s), at any level, whether Bid-listed or not, without the approval of the Awarding Authority or its designee.
5. Assigning the work of any Subcontractor(s), at any level, whether Bid-listed or not, to anyone other than said Subcontractor, without the approval of the Awarding Authority or its designee.

CITY OF LOS ANGELES
PLEDGE OF COMPLIANCE WITH CONTRACTOR RESPONSIBILITY ORDINANCE

Los Angeles Administrative Code (LAAC) Section 10.40 et seq. (Contractor Responsibility Ordinance) provides that, unless specifically exempt, City contractors working under service contracts of at least $25,000 and three months, contracts for services and for purchasing goods and products that involve a value in excess of twenty-five thousand dollars ($25,000) and a term in excess of three months are covered by this Article; and construction contracts of any amount; public lessees; public licensees; and certain recipients of City financial assistance or City grant funds, shall comply with all applicable provisions of the Ordinance. Upon award of a City contract, public lease, public license, financial assistance or grant, the contractor, public lessee, public licensee, City financial assistance recipient, or grant recipient, and any its subcontractor(s), shall submit this Pledge of Compliance to the awarding authority.

The contractor agrees to comply with the Contractor Responsibility Ordinance and the following provisions:

(a) To comply with all federal, state, and local laws in the performance of the contract, including but not limited to laws regarding health and safety, labor and employment, wage and hours, and licensing laws, which affect employees.
(b) To notify the awarding authority within 30 calendar days after receiving notification that any governmental agency has initiated an investigation which may result in a finding that the contractor did not comply with any federal, state, or local law in the performance of the contract, including but not limited to laws regarding health and safety, labor and employment, wage and hours, and licensing laws, which affect employees.
(c) To notify the awarding authority within 30 calendar days of all findings by a governmental agency or court of competent jurisdiction that the contractor has violated any federal, state, or local law in the performance of the contract, including but not limited to laws regarding health and safety, labor and employment, wage and hours, and licensing laws which affect employees.
(d) If applicable, to provide the awarding authority, within 30 calendar days, updated responses to the Responsibility Questionnaire if any change occurs which would change any response contained within the Responsibility Questionnaire and such change would affect the contractor's fitness and ability to continue the contract.
(e) To ensure that subcontractors working on the City agreement (including contractors or subcontractors of a public lessee, licensee, sublessee, or sublicensee that perform or assist in performing services on the leased or licensed premises) shall comply with all federal, state, and local laws in the performance of the contract, including but not limited to laws regarding health and safety, labor and employment, wage and hours, and licensing laws, which affect employees.
(f) To ensure that subcontractors working on the City agreement (including contractors or subcontractors of a public lessee, licensee, sublessee, sublicensee that perform or assist in performing services on the leased or licensed premises) submit a Pledge of Compliance.
(g) To ensure that subcontractors working on the City agreement (including contractors or subcontractors of a public lessee, licensee, sublessee, or sublicensee that perform or assist in performing services on the leased or licensed premises) shall comply with paragraphs (b) and (c).

Failure to complete and submit this form to the Awarding Authority may result in withholding of payments by the City Controller, or contract termination.

CITY OF LOS ANGELES
CONTRACTOR RESPONSIBILITY ORDINANCE (CRO) QUESTIONNAIRE

Unless otherwise exempt from the Contractor Responsibility Ordinance (Los Angeles Administrative Code Section 10.40, et. seq.), a Company/Firm bidding with the City of Los Angeles must complete this Questionnaire. If no bid is required, the prospective contractor still must submit a Questionnaire.

The signatory for this Questionnaire must be authorized to respond to these questions on behalf of the Company/Firm. **Any false or misleading statement(s), the failure to answer any of the required questions, or the failure to submit the completed Questionnaire with its bid may render the bid/proposal non-responsive.** If a response does not fit in the space provided, then you may submit an attachment with your questionnaire.

The Company is responsible for keeping the Questionnaire responses current. If any changes have occurred that would render any of the responses inaccurate in any way, this document must be updated within thirty (30) days of the change(s).

A. BIDDER / PROPOSER / PROSPECTIVE CONTRACTOR CONTACT INFORMATION

Business Name _____ Contractor's License Number _____

Street Address _____ City _____ State _____ Zip _____

Contact Person, Title _____ Phone _____ Fax _____

TYPE OF SUBMISSION:

The Questionnaire being submitted is:

☐ An initial submission of a completed Questionnaire.

☐ An update of a prior Questionnaire dated _____/_____/_____.

☐ No change. I certify under penalty of perjury under the laws of the State of California that there has been no change to any of the responses since the last Questionnaire dated ____/_____/____ was submitted by the firm.

B. BUSINESS ORGANIZATION / STRUCTURE

Indicate the organizational structure of your firm. "Firm" includes a sole proprietorship, corporation, joint venture, consortium, association, or any combination thereof.

☐ **Corporation**: Date incorporated: _____/_____/_____ State of incorporation: _____

List the corporation's current officers.

President: _____

Vice President: _____

Secretary: _____

Treasurer: _____

List all the stock owners who own 5% or more of the corporation's stock. Publicly traded corporations do not need to list its stock owners.

(Use this space. If you need additional space, you can attach a document)

☐ **Partnership:** Date formed: _____/_____/_____ State of formation: _____

List all partners in your firm.

(Use this space. If you need additional space, you can attach a document)

☐ **Sole Proprietorship:** Date started: _____/_____/_____

List any firm(s) that you have been associated with as an owner, partner, or officer for the last five years. Do not include ownership of stock in a publicly traded company in your response to this question.

(Use this space. If you need additional space, you can attach a document)

☐ **Joint Venture:** Date formed: _____/_____/_____

(1) List each firm that is a member of the joint venture and (2) List the percentage of ownership the firm will have in the joint venture. **NOTE: Each member of the Joint Venture must complete a separate Questionnaire for the Joint Venture's submission to be considered a responsive bid.**

(Use this space. If you need additional space, you can attach a document)

C. OWNERSHIP AND NAME CHANGES

1. Is your firm a subsidiary, parent, holding company, or affiliate of another firm?

   ☐ **Yes** ☐ **No**

   If **Yes**, explain the relationship between your firm and the associated firm(s). Include information about an affiliated firm only if one firm owns 50% or more of another firm, or if an owner, partner or officer of your firm holds a similar position in another firm.

(Use this space. If you need additional space, you can attach a document)

2. Have any of your firm's owners, partners, or officers operated a similar business in the past five years?

☐ **Yes** ☐ **No**

If **Yes**, list the names and addresses of all such businesses, and the person who operated the business. Include information about a similar business only if an owner, partner or officer of your firm holds a similar position in another firm.

(Use this space. If you need additional space, you can attach a document)

3. Has your firm changed names in the past five years?

☐ **Yes** ☐ **No**

If **Yes**, list all prior names, addresses, and the dates they were used. Explain the reason for each name change in the last five years.

(Use this space. If you need additional space, you can attach a document)

4. Are any of your firm's contractor licenses held in the name of a corporation or partnership?

☐ **Yes** ☐ **No**

If **Yes**, list the name of the corporation or partnership that actually holds the license.

(Use this space. If you need additional space, you can attach a document)

D. FINANCIAL RESOURCES AND RESPONSIBILITY

5. In the past five years, has your firm ever been denied construction bonding?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

6. Is your firm now, or has it been at any time in the last five years, the debtor in a bankruptcy case?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

7. Is your firm in the process of, or in negotiations toward, being sold or dissolved?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances.

(Use this space. If you need additional space, you can attach a document)

E. INSURANCE

8. In the past five years, has any bonding company made any payments to satisfy any claims made against a bond issued on your firm's behalf?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

9. Indicate the status of your firm's current workers' compensation insurance policy (check one):

☐ **Workers' Compensation Insurance Policy Currently in Effect**

☐ **Legally Self-Insured**

☐ **No Workers' Compensation Policy Currently in Effect***

*If you do not have a worker's compensation insurance policy currently in effect, and you are not legally self-insured, provide an explanation.

(Use this space. If you need additional space, you can attach a document)

10. List the Experience Modification Rate (EMR) issued to your firm annually by your workers' compensation insurance carrier for the last three years. Begin with the most recent year (YR 1) that an EMR rate was issued (EMR -1). If any of the rates for the three years is or was 1.00 or higher, provide an explanation below.

    YR. 1: ____ EMR-1: ____ YR 2: ____ EMR-2: ____ YR. 3: ____ EMR-3:

(Use this space. If you need additional space, you can attach a document)

11. Within the past five years, has your firm employed workers that were not covered under workers' compensation insurance or state approved self-insurance?

    ☐ **Yes** ☐ **No**

    If **Yes**, explain each instance. If No, attach a statement from your workers' compensation insurance provider that you have been continuously insured for the past five years.

(Use this space. If you need additional space, you can attach a document)

F. PERFORMANCE HISTORY

12. How many years has your firm been in operation? _____ Years.

13. Has your firm ever entered into any contract with the City of Los Angeles or any of its departments?

    ☐ Yes ☐ No

    If, **Yes**, list all contracts your firm has had with the City of Los Angeles for the last five (5) years. If your firm has had more than 10 contracts with the City of Los Angeles, then use the 10 most recent (and most similar) contracts. For each contract listed in response to this question, include: (a) entity name; (b) name of a contact and phone number; (c) purpose of contract; (d) total cost; (e) starting date; and (f) ending date.

(Use this space. If you need additional space, you can attach a document)

14. List all contracts that require similar work as the current bid/proposal in which your firm has had with any private or governmental entity (other than the City of Los Angeles) over the last five years. If your firm has had more than 10 contracts with similar work with any private or other governmental entities, then use the 10 more recent (and most similar) contracts. For each contract listed in response to this question,

include: (a) entity name; (b) name of a contact and phone number; (c) purpose of contract; (d) total cost; (e) starting date; and (f) ending date.

(Use this space. If you need additional space, you can attach a document)

15. In the past five years, has a governmental or private entity or individual terminated your firm's contract prior to its completion?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

16. In the past five years, has your firm previously hired a debarred subcontractor to perform work on a government contract?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

17A. In the past five years, has your firm been debarred or determined to be a non-responsible bidder or contractor?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

17B.. Has your firm ever received a Notice of Unsatisfactory Performance by the Bureau of Contract Administration pursuant to the City Contractor's Performance Evaluation Ordinance (LAAC Section 10.39)?

☐ **Yes** ☐ **No**

If **Yes**, please enter the date of the Notice(s).

G. DISPUTES

18A. In the past five years, has your firm been a defendant in a court case or other legal proceeding on a matter related to any of the following issues? For parts (a) and (b) below, check **Yes** even if the matter only proceeded to arbitration, mediation or other dispute resolution process. For part (c), check **Yes** only if the matter proceeded to court litigation, even if the case was later settled or dismissed.

(a) Payment to subcontractors?

☐ **Yes** ☐ **No**

(b) Work performance on a contract?

☐ **Yes** ☐ **No**

(c) Employment-related litigation brought by an employee?

☐ **Yes** ☐ **No**

18B. If you answer **Yes** to any of the questions below, explain the circumstances surrounding each instance. For each instance, you must include the following in your response: the name of the plaintiff(s), the specific cause(s) of action or claim(s), the original date of filing; and the disposition/current status.

(Use this space. If you need additional space, you can attach a document)

19. Does your firm have any outstanding judgments pending against it?

☐ **Yes** ☐ **No**

If **Yes,** explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

20. In the past five years, has your firm been assessed liquidated damages on a contract?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance and identify all the projects for which liquidated damages were assessed, the amount of liquidated damages assessed and paid, and the name and address of the project owner.

(Use this space. If you need additional space, you can attach a document)

H. COMPLIANCE

For the following questions, the term "owners" does not include stock owners in your firm if your firm is a publicly traded corporation.

21A. In the past five years, has your firm or any of its owners, partners or officers, ever been investigated, cited, assessed any penalties, or been found to have violated any laws, rules, or regulations enforced or administered, by any of the governmental entities listed on page 12:

☐ **Yes** ☐ **No**

21B. If **Yes**, explain the circumstances surrounding each instance, including the governmental entity or entities that were involved, the dates of such instances, and the outcome.

(Use this space. If you need additional space, you can attach a document)

22. Within the past five years, has your firm, or any person employed by your firm, been investigated, found to have violated, cited, assessed any penalty, or been subject to any disciplinary action by a licensing agency for violation of any licensing law, rule or regulation?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance in the last five years.

(Use this space. If you need additional space, you can attach a document)

23. In the past five years, has your firm, any of its owners, partners, or officers, been penalized or given a letter of warning by the City of Los Angeles for failing to obtain authorization from the City for the substitution of a Minority-owned (MBE), Women-owned (WBE), or Other (OBE) business enterprise?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance in the last five years.

(Use this space. If you need additional space, you can attach a document)

24A. Provide the name(s), address(s) and telephone number(s) of the apprenticeship program sponsor(s) approved by the California Division of Apprenticeship Standards that will provide apprentices to your company for use on any public works projects that you are awarded by the City of Los Angeles.

(Use this space. If you need additional space, you can attach a document)

24B. Provide the name(s), address(s) and telephone number(s) of the apprenticeship program sponsor(s) approved by the California Division of Apprenticeship Standards that have provided apprentices to your company on any public works project on which your firm has participated within the last 3 years.

(Use this space. If you need additional space, you can attach a document)

I. BUSINESS INTEGRITY

For the following questions, the term "firm" includes any owner, partner, or officer in the firm. If your firm is a publicly traded corporation, the term "owner(s)" does not include its stock owners.

25A. For questions (a), (b), and (c) below, check **Yes** if the situation applies to your firm.

(a) Is a governmental entity or public utility currently investigating your firm for making a false claim or material misrepresentation?

☐ **Yes** ☐ **No**

(b) In the past five years, has a governmental entity or public utility alleged or determined that your firm made a false claim or material misrepresentation?

☐ **Yes** ☐ **No**

(c) In the past five years, has your firm been convicted of, or found liable in a civil suit for, making a false claim or material misrepresentation to any governmental entity or public utility?

☐ **Yes** ☐ **No**

25B. If you check **Yes** to any of the three questions above, explain the circumstances surrounding each instance of a false claim or material misrepresentation.

(Use this space. If you need additional space, you can attach a document)

26. In the past five years, has your firm or any of its owners or officers been convicted of a crime involving the

bidding of a government contract, the awarding of a government contract, the performance of a government contract, or the crime of theft, fraud, embezzlement, perjury, or bribery?

☐ **Yes** ☐ **No**

If **Yes**, explain the circumstances surrounding each instance.

(Use this space. If you need additional space, you can attach a document)

TERMS OF ACCEPTANCE AND SIGNATURE:

I certify under penalty of perjury under the laws of the State of California that I read and understand the questions contained in this questionnaire and the responses contained herein and on all Attachments. I further certify that I have provided full and complete answers to each question, and that all information provided in response to this Questionnaire is true and accurate to the best of my knowledge and belief.

Electronic Signature:

_____ _____

Signature *Date*

☐ I understand that checking this box constitutes a legal signature confirming that I acknowledge and agree to the above Terms of Acceptance.

Execution of document by E-signature. By clicking on the check box, it indicates an electronic signature. This is considered to be the legal equivalent of a manual or "wet" signature. Once signed electronically, this document is considered original and legally binding.

ATTACHMENT A: GOVERNMENTAL ENTITIES FOR QUESTION NO. 21A

Check **Yes** in response to Question No. 21A if your firm or any of its owners, partners or officers, have ever been investigated, cited, assessed any penalties, or found to have violated any laws, rules, or regulations enforced or administered, by any of the governmental entities listed below (or any of its subdivisions), including but not limited to those examples specified below. The term "owner" does not include owners of stock in your firm if your firm is a publicly traded corporation. If you answered **Yes**, provide an explanation of the circumstances surrounding each instance, including the entity involved, the dates of such instances, and the outcome.

FEDERAL ENTITIES

Federal Department of Labor
- American with Disabilities Act
- Immigration Reform and Control Act
- Family Medical Leave Act
- Fair Labor Standards Act
- Davis-Bacon and laws covering wage requirements for federal government contract workers
- Migrant and Seasonal Agricultural Workers Protection Act
- Immigration and Naturalization Act
- Occupational Safety and Health Act
- anti-discrimination provisions applicable to government contractors and subcontractors
- whistleblower protection laws

Federal Department of Justice
- Civil Rights Act
- American with Disabilities Act
- Immigration Reform and Control Act of 1986
- bankruptcy fraud and abuse

Federal Department of Housing and Urban Development (HUD)
- anti-discrimination provisions in federally subsidized/assisted/sponsored housing programs
- prevailing wage requirements applicable to HUD related programs

Federal Environmental Protection Agency
- Environmental Protection Act

National Labor Relations Board
- National Labor Relations Act

Federal Equal Employment Opportunity Commission
- Civil Rights Act
- Equal Pay Act
- Age Discrimination in Employment Act
- Rehabilitation Act
- Americans with Disabilities Act

STATE ENTITIES

California's Department of Industrial Relations
- wage and labor standards, and licensing and registration
- occupational safety and health standards
- workers' compensation self insurance plans
- Workers' Compensation Act
- wage, hour, and working standards for apprentices
- any provision of the California Labor Code

California's Department of Fair Employment and Housing
- California Fair Employment and Housing Act
- Unruh Civil Rights Act
- Ralph Civil Rights Act

California Department of Consumer Affairs
- licensing, registration, and certification requirements
- occupational licensing requirements administered and/or enforced by any of the Department's boards, including the Contractor's State Licensing Board

California's Department of Justice

LOCAL ENTITIES

City of Los Angeles or any of its subdivisions for violations of any law, ordinance, code, rule, or regulation administered and/or enforced by the City, including any letters of warning or sanctions issued by the City of Los Angeles for an unauthorized substitution of subcontractors, or unauthorized reductions in dollar amounts subcontracted.

OTHERS

Any other federal, state, local governmental entity for violation of any other federal, state, or local law or regulation relating to wages, labor, or other terms and conditions of employment.

SECURITY GUARD SERVICES

In the event the successful contractor elects to provide a security guard at the project site, the contractor will guarantee that the security personnel are properly trained, qualified, and certified, and meet the minimum requirements and qualifications, and have the following licenses and permits in the files:

1. All current and required licenses, certificates and/or permits, permanent “Guard Card” and permanent “Gun Card” (when the site or assignment requires the security officer to be armed, otherwise a permanent “Gun Card” is not required).
2. Permits and/or licenses to carry and use pepper spray, handcuffs, solid PR-24 baton, firearms/weapons.
3. Certificate of Knowledge and Powers of Arrest for private persons.
4. Special Officer permits from the LAPD. (L.A.M.C. Sect. 52.34, LAPD Special Officer’s Permit).
5. Valid Class C California Driver’s License and/or California I.D.
6. Authorization for release of all Security Officer and Field Supervisor file information to the Contract Administrator.

In Addition, security officers/guards who have been involved in any of the following will not be accepted for assignment to City owned project sites:

1. Any Felony Conviction.
2. Any high-grade misdemeanor.
3. Any Sex Crime Conviction.
4. Any military conduct that involved dishonorable discharge, bad conduct, or an undesirable discharge.

Verification for above violations, military conduct, and crime will be done through California Dept. of Justice, DMV, and/or FBI.

Presentation of Documents:

All Contract Security Officers and Field Supervisors shall present all required identification, certificates, permits, etc. upon demand of Contract Administrator or authorized designee/officer. Failure of any Security Officer and/or Field Supervisor to comply will result in immediate removal from all City Facilities

Disclosure Ordinances Affidavit

Unless otherwise exempt by the provisions of the Slavery Disclosure Ordinance (SDO) and Disclosure of Border Wall Contracting Ordinance (DBWCO), any contract awarded under this RFP will be subject to the SDO, Section 10.41 of the Los Angeles Administrative Code, and the DBWCO, Section 10.50 of the Los Angeles Administrative Code. Bidders/Proposers are required to complete a streamlined Disclosure Ordinances Compliance Affidavit web form that is located on the City of Los Angeles' Regional Alliance Marketplace for Procurement (RAMP) at www.rampla.org

Bidders/Proposers are responsible for creating a RAMP profile and completing and submitting the Disclosure Ordinances Compliance Affidavit. The affidavit can be found by navigating to the "My Business Profile" page and clicking on the "Compliance Documents" link. The affidavit should be completed and submitted by the time of RFP submission.

The affidavit will be verified by the Bureau of Contract Administration (BCA) only if your company is the successful Proposer/Bidder selected for contract award. Proposers/Bidders seeking additional information regarding the requirements of the SDO and the DBWCO may visit the Bureau of Contract Administration's website at http://bca.lacity.org.

Municipal Lobbying Ordinance

Los Angeles Municipal Code Chapter IV, Article 8
Repealed and Re-added by Ordinance No. 169916, effective 8/10/94.

SEC. 48.01. Title and Findings

A. **Title.** This Article shall be known and may be cited as the Los Angeles Municipal Lobbying Ordinance.

B. **Findings.** The following findings are adopted in conjunction with the enactment of this Article:

1. City Government functions to serve the needs of all citizens.

2. The citizens of the City of Los Angeles have a right to know the identity of interests which attempt to influence decisions of City government, as well as the means employed by those interests.

3. All persons engaged in compensated lobbying activities aimed at influencing decisions by City government must, when so engaged, be subject to the same regulations, restrictions and requirements, regardless of their background, training or other professional qualifications or license.

4. Complete public disclosure of the full range of activities by and financing of lobbyists and those who employ their services is essential to the maintenance of citizen confidence in the integrity of local government.

5. It is in the public interest to ensure that lobbyists do not misrepresent facts, their positions, or attempt to deceive officials through false communications, do not place City officials under personal obligation to themselves or their clients, and do not represent that they can control the actions of City officials.

6. It is in the public interest to adopt these amendments to the City's regulations of lobbyists to ensure adequate and effective disclosure of information about efforts to lobby City government.

History:
Amended by Ord. No. 169916, effective 8/10/94.

SEC. 48.02. Definitions

The following terms used in this Article shall have the meanings set forth below. Other terms used in this Article shall have the meanings set forth in the California Political Reform Act of 1974, as amended, and in the regulations of the California Fair Political Practices Commission, as amended, if defined therein.

"Activity expense" means any payment, including any gift, made to or directly benefiting any City official or member of his or her immediate family, made by a lobbyist, lobbying firm, or lobbyist employer.

"Agency" means the City of Los Angeles or any department, bureau, office, board, commission, other agency of the City, or any other government agency, required to adopt a conflict of interest code subject

to City Council approval, and includes the City's Community Redevelopment Agency and the Los Angeles City Housing Authority.

"At the behest" means under the control of, at the direction of, in cooperation, consultation, coordination, or concert with, at the request or suggestion of, or with the express prior consent of any elective City officer or candidate for elective City office. A donation to a religious, charitable, or other nonprofit organization is not made at the behest of an elective City officer or candidate if the donation is solicited through a newspaper publication, through radio, television, or other mass media, or through a suggestion made to the entire audience at a public gathering. A donation to a religious, charitable, or other nonprofit organization is not made at the behest of an elective City officer or candidate solely because the name of the officer or candidate is listed with other names on written materials used to request donations or the officer or candidate makes a speech to the entire audience or is honored and given an award at an event sponsored by the organization.

"Attempting to influence" means promoting, supporting, opposing or seeking to modify or delay any action on municipal legislation by any means, including but not limited to providing or using persuasion, information, statistics, analyses or studies. A person attempts to influence municipal legislation when he or she engages in lobbying activities for the purpose of influencing a decision.

"City official" means any elective or appointed City officer, member, employee or consultant (who qualifies as a public official within the meaning of the Political Reform Act) of any agency, who, as part of his or her official duties, participates in the consideration of any municipal legislation other than in a purely clerical, secretarial or ministerial capacity.

"Client" means both

(1) the person who compensates a lobbyist or lobbying firm for the purpose of attempting to influence municipal legislation and

(2) the person on whose behalf a lobbyist or lobbying firm attempts to influence such municipal legislation, even if the lobbyist or lobbying firm is compensated by another person for such representation.

However, if a lobbyist or lobbying firm represents a membership organization and individual members of that organization, an individual member is not a client solely because the member is individually represented by the lobbyist or lobbying firm unless the member makes a payment for such representation in addition to usual membership fees.

"Compensated services" means services for which compensation was paid during a reporting period or for which the lobbyist or lobbying firm became entitled to compensation during that period.

"Controlled committee" means any committee controlled by an elective City officer or candidate for any elective City office, including any campaign, officeholder, legal defense fund, or ballot measure committee.

"Direct communication" means appearing as a witness before, talking to (either by telephone or in person),

corresponding with, or answering questions or inquiries from, any City official or employee, either personally or through an agent who acts under one's direct supervision, control or direction.

"Donation" means a payment for which full and adequate consideration is not received.

"Elective city officer" means the Mayor, City Attorney, Controller and Member of the City Council.

"Elective officer" means any person who is a City Council Member, City Attorney, Controller or Mayor, whether appointed or elected.

"Fundraiser" means an individual who receives compensation to engage in fundraising activity as defined in this section.

"Fundraising activity" means soliciting a contribution or hosting or sponsoring a fundraising event or hiring a fundraiser or contractor to conduct any event designed primarily for political fundraising at which contributions for an elective City officer, candidate for elective City office, or any of his or her controlled committees are solicited, delivered or made.

"Host or sponsor" means to provide the use of a home or business to hold a political fundraising event without charging market value for the use of that location; to ask more than 25 persons to attend the event; to pay for at least a majority of the costs of the event; or to provide the candidate, campaign, committee and/or fundraiser more than 25 names to be used for invitations to the event.

"Lobbying activities" includes the following and similar compensated conduct when that conduct is related to a direct communication to influence any municipal legislation:

(1) engaging in, either personally or through an agent, written or oral direct communication with a City official;

(2) drafting ordinances, resolutions or regulations;

(3) providing advice or recommending strategy to a client or others;

(4) research, investigation and information gathering;

(5) seeking to influence the position of a third party on municipal legislation or an issue related to municipal legislation by any means, including but not limited to engaging in community, public or press relations activities; and

(6) attending or monitoring City meetings, hearings or other events.

"Lobbying entity" means a lobbyist, lobbying firm or lobbyist employer, as defined in this article.

"Lobbying firm" means any entity, including an individual lobbyist, which receives or becomes entitled to receive $1,000 or more in monetary or in-kind compensation for engaging in lobbying activities (either personally or through its agents) during any consecutive three-month period, for the purpose of attempting to influence municipal legislation on behalf of any other person, provided any partner, owner,

shareholder, officer or employee of the entity qualifies as a lobbyist. Compensation does not include reimbursement of or payment for reasonable travel expenses. An entity receives compensation within the meaning of this definition whether or not the compensation is received solely for activities regulated by this article or is received for other activities as well; however, only that portion of compensation received for the lobbying activities shall count toward the qualification threshold. An entity "**becomes entitled to receive compensation**" when the entity agrees to provide services regulated by this Article, or performs those services, whether or not payment is contingent on the accomplishment of the client's purposes.

"Lobbyist" means any individual who is compensated to spend 30 or more hours in any consecutive three-month period engaged in lobbying activities which include at least one direct communication with a City official or employee, conducted either personally or through agents, for the purpose of attempting to influence municipal legislation on behalf of any other person.

Compensation does not include reimbursement of or payment for reasonable travel expenses. A person receives compensation within the meaning of this definition whether or not the compensation is received solely for activities regulated by this Article or is received for both lobbying activities and other activities as well. However, only the compensation for the lobbying activities shall be calculated to determine whether an individual qualifies as a lobbyist. An individual "**becomes entitled to receive compensation**" when the individual or the entity in which the individual is an employee, partner, owner, shareholder or officer, agrees to provide services regulated by this Article, or performs those services, regardless of whether payment is contingent on the accomplishment of the client's purposes. A lobbyist includes a person who owns an investment in a business entity if that person attempts to influence municipal legislation on behalf of the business entity and if the person acquires the investment as compensation for his or her lobbying services or in contemplation of performing those services.

“Lobbyist employer" means an entity, other than a lobbying firm, that employs a lobbyist in-house to lobby on its behalf.

"Major filer" means any person who makes payments or incurs expenditures totaling $5,000 or more during any calendar quarter for public relations, media relations, advertising, public outreach, research, investigation, reports, analyses, studies, or similar activities, for the purpose of attempting to influence action on any proposed or pending matter of municipal legislation, if these payments or expenditures are not required to be reported on a lobbyist or lobbying firm quarterly report. A "**major filer**" does not include a lobbyist, lobbyist employer, or lobbying firm. Expenditures and payments for regularly published newsletters or other routine communications between an organization and its members shall not be counted for the purpose of this definition.

"Municipal legislation" means any legislative or administrative matter proposed or pending before any agency (as defined in this Article), including but

not limited to those involving the granting, denial, revocation, restriction or modification of a license, permit or entitlement for use (including all land use permits) if the Mayor, the City Council, any of its committees, any agency board, commission, committee, or general manager, or any agency officer or employee charged by law with holding a hearing and making a decision, is charged by law with making a final decision on the matter. However, "**municipal legislation**" does not include any of the following:

(1) A request for advice or for an interpretation of laws, regulations, City approvals or policies, or a direct response to an enforcement proceeding with the City Ethics Commission.

(2) Any ministerial action. An action is ministerial if it does not require the City official or employees involved to exercise discretion concerning any outcome or course of action.

(3) Any action relating to the establishment, amendment, administration, implementation or interpretation of a collective bargaining agreement or memorandum of understanding between an agency and a recognized employee organization, or a proceeding before the Civil Service Commission or the Employee Relations Board. Further, it does not include management decisions as to the working conditions of represented employees that clearly relate to the terms of such collective bargaining agreement or memorandum of understanding. Nevertheless, "**municipal legislation**" does include any action relating to collective bargaining taken by the City Council, any of its committees or members (including the staffs of such members), or by the Mayor or his or her office.

(4) Preparation or compilation of any radius map, vicinity map, plot plan, site plan, property owners or tenants list, abutting property owners list, photographs of property, proof of ownership or copy of lease, or neighbor signatures required to be submitted to the City Planning Department.

"Person" means any individual, business entity, trust corporation association, committee, or any other organization or group of persons acting in concert.

"Solicit" means to ask, personally or through an agent, that another person make a contribution to an elective City officer or candidate for City office, or to his or her controlled committee, including allowing one's signature to be used on a written request for funds. For purposes of this article, a lobbying entity solicits a contribution only when the lobbying entity does so

(1) at the behest of the elective City officer or candidate for elective City office, or his or her campaign treasurer, campaign manager, or member of his or her fundraising committee, or
(2) if the lobbying entity has informed the candidate or officer that the person is soliciting the contributions.

A person does not solicit, however, by making a request for funds publicly to at least a majority of persons who attend

any public gathering, or by making a request that appears published in a newspaper, on radio or television.

History:
Amended by Ord. No. 169916, effective 8/10/94.
Amended by Ord. No. 172479, effective 4/10/99.
Amended by Ord. No. 175432, effective 9/28/03.
Amended by Ord. No. 178064, effective 1/15/07.
Amended by Ord. No. 178356, effective 3/12/07.

SEC. 48.03. Exemptions

The following persons are exempt from the requirements of this Article:

A. Any public official acting in his or her official capacity, and any government employee acting within the scope of his or her employment.

B. A newspaper or other regularly published periodical, radio or television station or network, including any individual who owns, publishes or is employed by such newspaper, periodical or station or network, when, in the ordinary course of its business, it publishes or broadcasts news, editorials or other comments, or paid advertising, which directly or indirectly attempts to influence action on municipal legislation. This exemption does not apply to any other action by any such newspaper, periodical, station or network, or by any such person, to attempt to influence municipal legislation, if such activity otherwise regulated by this Article.

C. A person acting without any compensation or consideration other than reimbursement or payment of reasonable travel expenses.

D. Any person whose only activity is submitting a bid on a competitively bid contract, submitting a written response to or participating in an oral interview for a request for proposals or qualifications, or negotiating the terms of a written agreement with any City agency if selected pursuant to that bid or request for proposals or qualifications. Except with regard to persons covered by subsections E and F, this exemption shall not apply to any person who attempts to influence the action of the Mayor or Mayor's staff, any member of the City Council or their staffs, or any board or commission member with regard to any such contract.

E. Any organization exempt from federal taxation pursuant to Section 501(c)(3) of the Internal Revenue Code, which receives funding from any federal, state or local government agency for the purpose of representing the interests of indigent persons and whose primary purpose is to provide direct services to those persons, if the individual or individuals represented by the organization before any City agency provide no payment to the organization for that representation. This exemption shall not apply to direct contracts with a City official in other than a publicly noticed meeting, for the purpose of attempting to influence a City decision with regard to any City funding which the organization is seeking.

F. Any person employed by an organization described in Subsection E with respect to his or her activities as an employee of the organization.

History:
Amended by Ord. No. 169916, effective 8/10/94.

SEC. 48.04 Prohibitions

No lobbyist or lobbying firm subject to the requirements of this Article shall:

A. Do any act with the purpose and intent of placing any City official under personal obligation to the lobbyist, the lobbying firm, or to the lobbyist's or firm's employer or client.

B. Fraudulently deceive or attempt to deceive any City official with regard to any material fact pertinent to any pending or proposed municipal legislation.

C. Cause or influence the introduction of any municipal legislation for the purpose of thereafter being employed or retained to secure its passage or defeat.

D. Cause any communication to be sent to any City official in the name of any nonexistent person or in the name of any existing person without the consent of such person.

E. Make or arrange for any payment to a City official, or act as an agent or intermediary in making any such payment by any other person, if the arrangement or the payment would violate any provision of the City's Governmental Ethics Ordinance (Los Angeles Municipal Code Section 49.5.1, et seq.)

History:
Amended by Ord. No. 169916, effective 8/10/94.

SEC. 48.05. Record Keeping Responsibilities

A. Lobbying entities and major filers shall prepare and retain detailed records (including all books, papers and other documents) needed to comply with the requirements of this Article. Treasurers and fundraisers for elective City officeholders and City candidates, or for any elective City officer's or City candidate's controlled committees shall prepare and retain detailed contribution activity records for any contributions received as a result of fundraising activity engaged in by a lobbyist, lobbying firm or lobbyist employer, as defined by this article. These records shall be retained for not less than four years.

B. If a lobbying entity engages in fundraising activities as defined in Section 48.02 of this Code at the behest of a candidate or officeholder running for elective City office, the lobbying entity shall maintain records detailing any contributions that they know or have reason to know resulted from the fundraising activities.

C. If an officeholder or a candidate running for elective City office contracts with a lobbying entity to engage in fundraising activity as described in Section 48.02 of this Code, the committee treasurer and fundraiser shall maintain records detailing any contributions that they know or have reason to know resulted from the fundraising activities. The treasurer and fundraiser shall make the records available to the lobbying entity upon request of the lobbying entity.

D. If a lobbying entity delivers or sends written communications to a certified neighborhood council in an attempt to influence municipal legislation as described in Section 48.08.8 of this Article, the lobbying entity shall prepare and maintain detailed records of these written communications for not less than four years.

History:
Amended by Ord. No. 175432, effective 9/28/03.

SEC. 48.06. Filing Methods

A. All registrations, reports, and other filings required by this Article must be submitted under penalty of perjury by the person who is required to file and must be filed in a format prescribed by the Ethics Commission. The Ethics Commission must provide public access to all filings.

B. Lobbying entities and persons who qualify as lobbying entities must file registrations, quarterly reports, terminations and amendments to those filings electronically.

C. If an electronic filing is required, the Ethics Commission must provide a unique identifier to the person who is required to file, to be used in place of a physical signature for submitting and verifying data under penalty of perjury. All electronic filings are presumed to be filed under penalty of perjury by the person required to file.

D. If a paper filing is required, it must contain the physical signature of the person who is required to file. A document is considered filed on the earlier of the date of receipt by the Ethics Commission or the date of the postmark if it is mailed and bears the correct address and postage.

History:
Amended by Ord. No. 177105, effective 12/18/05.
Amended by Ord. No. 182360, effective 1/30/13.

SEC. 48.07. Registration

A. **Requirement.** An individual who qualifies as a lobbyist shall register with the City Ethics Commission within 10 days after the end of the calendar month in which the individual qualifies as a lobbyist. A person, including an individual lobbyist, shall register with the City Ethics Commission as a lobbying firm within 10 days after the end of the calendar month in which a partner, owner, shareholder, officer or employee qualifies as a lobbyist. If a person is not registered as a lobbyist or lobbying firm, but is performing acts which would require that person to so register, that person may continue to act as a lobbyist or lobbying firm so long as the person registers with the City Ethics Commission within 10 days after the person knew or should have known of the obligation to register. A lobbyist or lobbying firm shall register each client on whose behalf or from which the lobbyist or lobbying firm receives or becomes entitled to receive $250 or more in a calendar quarter for engaging in lobbying activities related to attempting to influence municipal legislation.

B. **Duration of Status.** A person who registers as a lobbyist or lobbying firm shall retain that status through December 31 of that year unless and until that person terminates the status as set forth below.

C. **Registration Fees.** Every lobbyist shall pay an annual registration fee of $450 plus $75 for each client on whose behalf or from which the lobbyist receives or becomes entitled to receive $250 or more in a calendar quarter. Persons who initially register during the last quarter of a calendar year (October through December) shall pay prorated registration fees of $337 for each lobbyist plus $56 for each client.

D. **Contents of Registration Statements — Lobbyists.** Registration statements of lobbyists shall contain the following:

1. The lobbyist's name, business address, business email, and business telephone number.

2. The lobbying firm, if any, of which the lobbyist is an employee, partner, officer or owner.

3. If the lobbyist is not an employee, partner, officer or owner of a lobbying firm, the name, address and telephone number of the lobbyist's employer.

4. Each City agency that the lobbyist has the authority to attempt to influence on behalf of any client or employer.

5. A statement that the lobbyist has reviewed and understands the requirements of this Article.

6. Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provisions of this Article.

E. **Contents of Registration Statements — Lobbying Firms** Registration statements of lobbying firms (including individual contract lobbyists) shall contain the following:

1. The name, address, email, and telephone number of the firm.

2. The name of each lobbyist who is a partner, owner, shareholder, officer or employee of the firm.

3. For each client on whose behalf or from which the firm received or became entitled to receive $250 in compensation during the calendar quarter for engaging in lobbying activities related to attempting to influence municipal legislation within the meaning of this Article:

(a) The client's name, business or residence address, and business or residence telephone number.

(b) The period during which the representation will occur.

(c) The item or items of municipal legislation for which the firm was retained to represent the client, or, if no specific items of municipal legislation for which the firm was retained to represent the client can be identified, a description of the types of municipal legislation for which the firm was retained to represent the client.

(d) Each City agency that the lobbying firm has the authority to attempt to influence on behalf of the client.

(e) In the case of a lobbyist who is an individual contract lobbyist, a

statement that he or she has reviewed and understands the requirements of this Article.

(f) The name, address, email, and telephone number of the person responsible for preparing the statement.

(g) Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provisions of this Article.

F. **Amendments to Registrations.** Lobbyists and lobbying firms shall file amendments to their registration statements within 10 days of any change in information required to be set forth on the registration statement.

G. **Termination.** Any person registered under this Article shall file a termination statement with the City Ethics Commission within 20 days after ceasing all activity governed by this Article.

H. **Education Requirement.** Every individual who is required to register as a lobbyist shall attend a City lobbying information session conducted by the City Ethics Commission no less than once every two calendar years, according to the following schedule:

(1) An individual who has not registered as a lobbyist in the immediately preceding two calendar years shall attend a City lobbying information session within six months of his or her registration date as a lobbyist.

(2) A registered lobbyist who did not attend a City lobbying information session during the previous calendar year shall attend a City lobbying session by the end of the current calendar year.

(3) A registered lobbyist who attends a City lobbying information session during the current calendar year is not required to attend a City lobbying information session during the following calendar year.

SEC. 48.08. Disclosure Reports

A. **Reporting Requirement.** Every lobbyist, lobbying firm, lobbyist employer and major filer shall file the quarterly disclosure reports required by this Section on or before the last day of the month following each calendar quarter.

1. All lobbyists and lobbying firms shall file quarterly reports for every calendar quarter during which they retain that status. An individual who qualifies both as a lobbyist and lobbying firm shall file only a lobbying firm quarterly report. Lobbyist employers shall file quarterly reports for every calendar quarter during which any individual employed by that employer retains the status as lobbyist. Information required to be disclosed concerning compensation received or expenditures made for lobbying shall be disclosed either by the lobbyist or by his or her lobbying firm or employer.

2. Major filers shall file quarterly reports for every calendar quarter

during which they made qualifying payments or incurred qualifying expenditures totaling $5,000 or more.

3. Quarterly reports shall disclose all required information for the calendar quarter immediately prior to the month in which the report is required to be filed.

B. **Quarterly Reports by Lobbyists — Contents.** Quarterly reports by lobbyists shall contain the following information:

1. The lobbyist's name, business address and business telephone number.

2. The lobbying firm, if any, of which the lobbyist is a partner, owner, shareholder, officer or employee.

3. If the lobbyist is not a partner, officer or owner of a lobbying firm, the name, address and telephone number of the lobbyist's employer.

4. The date, amount and description of each activity expense of $25 or more made by the lobbyist during the reporting period, the name and title of the City official benefiting from the expense, the name and address of the payee, and the client, if any, on whose behalf the expense was made. An activity expense shall be considered to be made on behalf of a client if the client requested or authorized the expense or if the expense was made in connection with an event at which the lobbyist attempted to influence the official on behalf of the client.

5. The total amount of activity expenses made by the lobbyist during the reporting period, whether or not itemized.

6. The name of any elective City officer, candidate for elective City office, or any controlled committee of the officer or candidate to which the lobbyist made contributions of $100 or more, or which were delivered by the lobbyist, or in connection with which the lobbyist acted as an intermediary during the reporting period, and the date and amount of the contribution.

7. The name of any elective City officer, candidate for elective City office, or any City controlled committee of the officer or candidate for which the lobbyist engaged in any fundraising activity during the reporting period, the date(s) of the activity and the amount of funds the lobbyist knows or has reason to know were raised as a result of the activity.

8. The date and amount of one or more contributions aggregating more than $1,000 made by the lobbyist at the behest of an elective City officer or candidate for elective City office during the reporting period to any and all controlled committees of any other elective City officer or candidate for elective City office, the name and address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

9. The date, amount and description of one or more donations aggregating

$1,000 or more made by the lobbyist at the behest of an elective City officer or candidate for elective City office during the reporting period to any religious, charitable or other nonprofit organization, the name and address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

10. If, during the quarterly reporting period, the lobbyist provided compensated services, including consulting services, to the campaign of any candidate for elective City office, or to a campaign for or against any City ballot measure, the name of the candidate, the elective City office sought by the candidate, the ballot number or letter of the ballot measure, the date of the election, the amount of compensation earned for the compensated services, and a description of the nature of the services provided. Such information shall be reported if the lobbyist personally provided the services, or if the services were provided by a business entity in which the lobbyist owns at least a 10% investment, whether the compensation was provided directly to the lobbyist or to such business entity.

11. If, during the quarterly reporting period, the lobbyist provided compensated services under contract with the City or with any City agency, including consulting services, the amount of compensation received, the agency for which the services were provided, a description or other identification of the contract and the nature of the services provided. Such information shall be reported if the lobbyist personally provided the services, or if the services were provided by a business entity in which the lobbyist owns at least a 10% investment, whether the compensation was provided directly to the lobbyist or to such business entity.

12. Each City agency that the lobbyist attempted to influence.

13. Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provisions of this Article.

C. **Quarterly Reports by Lobbying Firms — Contents.** Quarterly reports by lobbying firms, including individual contract lobbyists, shall contain the following information:

1. The name, address, email, and telephone number of the firm.

2. The name of each lobbyist who is a partner, owner, shareholder, officer or employee of the firm.

3. The name, address and telephone number of each client that is required to be registered and was represented by the firm during the reporting period; a description of each item of municipal legislation for which the firm or its lobbyists represented the client during the reporting period; the total amount of payments received by the firm from each client (including all fees, reimbursements for expenses and

other payments) during the reporting period for such representation.

4. The total payments received from clients required to be registered by the firm during the reporting period in connection with the firm's representation of clients on municipal legislation.

5. The date, amount and description of each activity expense of $25 or more made by the lobbying firm during the reporting period, the name and title of the City official benefiting from the expense, the name and address of the payee, and the client, if any, on whose behalf the expense was made. An activity expense shall be considered to be made on behalf of a client if the client requested or authorized the expense or if the expense was made in connection with an event at which the lobbying firm attempted to influence the official on behalf of the client.

6. The total amount of activity expenses made by the lobbying firm during the reporting period, whether or not itemized.

7. The total amount of expenses incurred in connection with attempts by the firm to influence municipal legislation. These expenses shall include:

   (a) total payments to lobbyists employed by the firm;

   (b) total payments to employees of the firm, other than lobbyists, who engaged in attempts to influence municipal legislation during the reporting period; and

   (c) all expenses attributable to attempts to influence municipal legislation, other than overhead, and other expenses that would not be incurred but for the attempts to influence. Each such expense of $5,000 or more shall be itemized and described.

8. The name of any elective City officer, candidate for elective City office, or any controlled committee of the officer or candidate to which the lobbying firm made contributions of $100 or more, or which were delivered by the lobbying firm, or in connection with which the lobbying firm acted as an intermediary during the reporting period, and the date and amount of the contribution.

9. The name of any elective City officer, candidate for elective City office, or any City controlled committee of the officer or candidate for which the lobbying firm engaged in any fundraising activity during the reporting period, the date(s) of the activity and the amount of funds the lobbying firm knows or has reason to know were raised as a result of the activity.

10. The date and amount of one or more contributions aggregating more than $1,000 made by the lobbying firm at the behest of an elective City officer or candidate for elective City office during the reporting period to any and all controlled committees of any other elective City officer or candidate for elective City office, the name and

address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

11. The date, amount and description of one or more donations aggregating $1,000 or more made by the lobbying firm at the behest of an elective City officer or candidate for elective City office during the reporting period to any religious, charitable or other nonprofit organization, the name and address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

12. If, during the quarterly reporting period, the lobbying firm provided compensated services, including consulting services, to the campaign of any candidate for elective City office, or to a campaign for or against any City ballot measure, the name of the candidate, the elective City office sought by the candidate, the ballot number or letter of the ballot measure, the date of the election, the amount of compensation earned for the compensated services and a description of the services provided.

13. If, during the quarterly reporting period, the lobbying firm provided compensated services under contract with the City or with any agency, including consulting services, the amount of compensation received, the agency for which the services were provided, a description or other identification of the contract and the nature of the services provided. For an individual contract lobbyist who qualifies as a lobbying firm, such information shall be reported if the lobbyist personally provided the services, or if the services were provided by a business entity in which the lobbyist owns at least a 10% investment, regardless of whether the compensation was provided directly to the lobbyist or to such business entity.

14. For an individual contract lobbyist who qualifies as a lobbying firm, each City agency that the lobbyist attempted to influence.

15. The name, address, email, and telephone number of the person responsible for preparing the report.

16. Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provisions of this Article.

D. **Quarterly Reports by Lobbyist Employers — Contents.** Quarterly reports by lobbyist employers shall contain the following information.

1. The name, address, email, and telephone number of the entity filing the report.

2. The name of each lobbyist who is employed by the entity.

3. Total payments during the reporting period to lobbyists employed by the entity. Such payments shall include solely payments for compensation and reimbursement of expenses relating to the lobbyists' attempts to influence municipal legislation.

4. Total payments to employees of the entity, other than lobbyists, who engaged in attempts to influence municipal legislation during the reporting period. Such payments shall include payments for compensation and reimbursement of expenses relating to such persons' attempts to influence municipal legislation.

5. Total payments for expenses incurred in connection with attempts by the entity during the reporting period to influence municipal legislation. These expenses shall include all expenses attributable to attempts to influence municipal legislation, other than overhead, and other expenses that would not be incurred but for the attempts to influence. Each such expense of $5,000 or more shall be itemized and described.

6. A description of each item of municipal legislation which the entity attempted to influence during the reporting period.

7. The date, amount and description of each activity expense of $25 or more made by the lobbyist employer during the reporting period, the name and title of the City official benefiting from the expense, and the name and address of the payee.

8. The total amount of activity expenses made by the lobbyist employer during the reporting period, whether or not itemized.

9. The name of any elective City officer, candidate for elective City office, or any controlled committee of the officer or candidate to which the lobbyist employer made contributions of $100 or more, or which were delivered by the lobbyist employer, or in connection with which the lobbyist employer acted as an intermediary during the reporting period, and the date and amount of the contribution.

10. The name of any elective City officer, candidate for elective City office, or any City controlled committee of the officer or candidate for which the lobbyist employer engaged in any fundraising activity during the reporting period, the date(s) of the activity and the amount of funds the lobbyist employer knows or has reason to know were raised as a result of the activity.

11. The date and amount of one or more contributions aggregating more than $1,000 made by the lobbyist employer at the behest of an elective City officer or candidate for elective City office during the reporting period to any and all controlled committees of any other elective City officer or candidate for elective City office, the name and address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

12. The date, amount and description of one or more donations aggregating $1,000 or more made by the lobbyist employer at the behest of an elective City officer or candidate for elective City office during the reporting period to any religious, charitable or other nonprofit

organization, the name and address of the payee, the name of the elective City officer or candidate for elective City office who made the behest and the date of the behest.

13. The name, address, email, and telephone number of the person responsible for preparing the report.

14. Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provisions of this Article.

E. **Quarterly Reports by Major Filers — Contents.** Quarterly reports by major filers shall contain the following information:

1. The name, address and telephone number of the person filing the report.

2. A description of each item of municipal legislation which the entity attempted to influence during the reporting period.

3. The total payments made during the reporting period for the purpose of attempting to influence action on each proposed or pending matter of municipal legislation.

4. The name, address and telephone number of the person responsible for preparing the report.

5. Any other information required by regulation of the City Ethics Commission, consistent with the purposes and provision of this Article.

History:
Amended by Ord. No. 175432 effective 9/28/03.
Renumbered by Ord. No.175432 effective 9/28/03.
Amended by Ord. No. 182360, effective 1/30/13.

SEC. 48.08.5. Copies of Solicitations

Each lobbying entity that produces, pays for, mails or distributes more than 50 substantially similar copies of a written political fundraising solicitation for any controlled committee of an elective City officer or candidate relating to seeking or holding City elective office or supporting or opposing a City ballot measure shall send a copy of the solicitation to the City Ethics Commission for public access, at the time the solicitation is sent or otherwise distributed, and shall report on its next quarterly report the date(s) on which it is mailed or distributed and a general description of the content of the solicitation, the number of pieces mailed or distributed, and name of the elective City officer, or candidate or City ballot measure committee for which the funds were solicited.

History:
Added by Ord. No. 175432, effective 9/28/03.

SEC. 48.08.6. Lobbying Disclosure — Political Contributions

A. Each lobbying entity, which makes one or more contributions to an elective City officer and/or to any or all of his or her controlled committees, shall file a notice with the City Ethics Commission each time the making of a contribution results in the lobbying entity having made contributions aggregating more than $7,000 to the officer and/or his or her controlled committees within the past 12 months. The notice shall be filed on a form prescribed by the Commission

within one business day after making a contribution that triggers the filing requirement. The notice shall contain the following information:

1. The name, address and telephone number of the filer, the name of the elective City officer, and/or any or all of his or her controlled committees, to which the lobbying entity made contributions aggregating more than $7,000 during the past twelve months, and the date and amount of each contribution.

2. For purposes of this section, a "controlled committee" does not include any committee controlled by an elective City officer that is

   (a) formed to support or oppose a ballot measure or

   (b) formed to support the election of that officer to other than elective City office.

B. The original notice shall be filed with the City Ethics Commission, and copies shall be filed with the City Clerk and the elective City officer involved. Each notice may only include information relative to one elective officer.

C. The form shall be considered filed on the date of the postmark or on the date of delivery to the City Ethics Commission, whichever is earlier.

D. The form shall be verified under penalty of perjury by the individual filing it or by an officer of the entity authorized to file it.

E. The City Ethics Commission shall post the information in the notice on its website within one business day of its receipt of the notice. The City Clerk shall make the notice available for inspection within one business day of its receipt.

History:
Added by Ord. No. 175432, effective 9/28/03.

SEC. 48.08.7. Lobbying Disclosure — Fundraising Activity

A. Every lobbying entity who within any 12 month period (i) engaged in fundraising activities on behalf of an elective City officer and/or any and all of his or her controlled committees, and which knows or has reason to know that the fundraising activities resulted in contributions, and/or (ii) delivered or acted as an intermediary for one or more contributions to the elective City officer and/or any and all of his or her controlled committees, shall file a notice with the City Ethics Commission any time the activities identified in (i) and/or (ii) aggregate more than $15,000 in the case of a member of the City Council, or more than $35,000 in the case of the Mayor, City Attorney, or Controller. The notice shall be filed on a form prescribed by the City Ethics Commission within one business day after any of these thresholds is exceeded. The notice shall contain the following information:

1. The name, address and telephone number of the filer, the name of the elective City officer, and/or any or all of his or her controlled committees, on whose behalf the lobbying entity engaged in fundraising activities, or

delivered or acted as intermediary for one or more contributions to the elective City officer and/or any and all of his or her controlled committees, the date of the fundraising activity, and the amount of contributions raised, delivered or in connection with which the lobbying entity acted as an intermediary.

2. For purposes of this section, a "controlled committee" does not include any committee controlled by an elective City officer that is

   (a) formed to support or oppose a ballot measure or

   (b) formed to support the election of that officer to other than elective City office.

3. For purposes of this notification, if a fundraising event is sponsored or hosted by more than one person, the amount of contributions received at or as a result of the event shall be attributed to each lobbying entity who hosted or sponsored the event according to the amount of the contributions that resulted from that lobbying entity's fundraising activities. If a contribution results from the fundraising of more than one person and/or lobbying entity, that contribution shall be apportioned equally to each of the persons and/or lobbying entity that engaged in the fundraising activity.

B. The original notice shall be filed with the City Ethics Commission, and copies shall be filed with the City Clerk and the elective City officer involved. Each notice may only include information relative to one elective officer.

C. The form shall be considered filed on the date of the postmark or on the date of delivery to the City Ethics Commission, whichever is earlier.

D. The form shall be verified under penalty of perjury by the individual filing it or by an officer of the entity authorized to file it.

E. The City Ethics Commission shall post the information in the notice on its website within one business day of its receipt of the notice. The City Clerk shall make the notice available for inspection within one business day of its receipt.

History:
Added by Ord. No. 175432, effective 9/28/03.

Sec. 48.08.8. Lobbying Disclosure — Written Communications to Neighborhood Councils

(a) No lobbying entity registered with the City of Los Angeles shall deliver or send to a certified neighborhood council a written communication on behalf of a client, including, but not limited to, letters, faxes, electronic messages, and flyers, without a disclosure indicating that the communication was delivered or sent by that lobbying entity.

(b) For purposes of subsection (a), the required disclosure shall be printed clearly and legibly in no less than 8-point type in a color or print that contrasts with the background so as to be legible and shall be presented in a clear and conspicuous manner in

the written communication. The disclosure shall include all of the following information applicable to the written communication:

(1) The name of the lobbyist(s) that prepares, delivers or sends the written communication;

(2) The name of the registered lobbying firm(s) or lobbyist employer(s) who employs the lobbyist(s) that prepares, delivers or sends the written communication; and,

(3) The name of the client or clients on whose behalf the lobbying entity prepares, delivers, or sends the written communication in an attempt to influence municipal legislation.

History:
Added by Ord. No. 176034, effective 7/26/04.

SEC. 48.09 Compliance Measures and Enforcement

A. **Audits.** The City Ethics Commission shall have the authority to conduct audits of reports and statements filed pursuant to this Article. Such audits may be conducted on a random basis or when the City Ethics Commission staff has reason to believe that a report or statement may be inaccurate or has not been filed.

B. **Criminal Penalties.**

1. Any person who knowingly or willfully violates any provision of this Article is guilty of a misdemeanor. Any person who knowingly or willfully causes any other person to violate any provision of this article, or who knowingly or willfully aides and abets any other person in violation of any provision of this article, is guilty of a misdemeanor.

2. Prosecution for violation of any provision of this article must be commenced within one year after the date on which the violation occurred.

3. No person convicted of a violation of this Article may act as a lobbyist or otherwise attempt to influence municipal legislation for compensation for one year after such conviction.

C. **Civil Enforcement.**

1. Any person who knowingly violates any provision of Section 48.04 shall be liable in a civil action brought by the City Attorney. Any person who intentionally or negligently violates any other provisions of this Article shall be liable in a civil action brought by the City Attorney. Failure to properly report any receipt or expenditure may result in civil penalties not to exceed the amount not properly reported, or $2,000, whichever is greater. Any other violation may result in civil penalties no greater than $2,000. If the court determines that a violation was intentional, the court may order that the defendant be prohibited from acting as a lobbyist or otherwise attempting to influence municipal legislation for one year.

2. In determining the amount of liability pursuant to this subsection, the court shall take into account the seriousness of the violation and the

degree of culpability of the defendant.

3. If two or more persons are responsible for any violation, they shall be jointly and severally liable.

4. No civil action alleging a violation of this Article shall be filed more than four years after the date the violation occurred.

D. **Injunction.** The City Attorney on behalf of the people of the City of Los Angeles may seek injunctive relief to enjoin violations of or to compel compliance with the provisions of this article.

E. **Administrative Penalties.** The City Ethics Commission may impose penalties and issue orders for violation of this Article pursuant to its authority under Charter Section 706(c).

F. **Late Filing Penalties.** In addition to any other penalty or remedy available, if any person fails to file any report or statement required by this Article, after any deadline imposed by this Article, such person shall be liable to the City Ethics Commission in the amount of twenty-five dollars ($25) per day after the deadline until the statement or report is filed, up to a maximum amount of $500. Liability need not be enforced by the Commission if its Executive Officer determines that the late filing was not willful and that enforcement of the penalty would not further the purposes of this Article. No liability shall be waived if a statement or report is not filed within 10 days after the Commission has sent specific written notice to the filer of the filing requirement.

G. **Restriction on Person Who Violates Certain Laws.**

1. No person shall act or continue to act as a registered lobbyist or lobbying firm if, within the prior four years, that person has been found by the City Ethics Commission, in a proceeding pursuant to Charter Section 706, to have violated City Charter Section 470(k) on any occasion. That determination shall be based either on a finding of the City Ethics Commission made after an administrative hearing or on a stipulation by the lobbyist or lobbying firm entered into with the City Ethics Commission within the previous four years.

2. If the City Ethics Commission makes a finding that the person has either

(1) accepted responsibility for the violation in the form of having entered into a stipulation with the City Ethics Commission in which the party admits the violation, or otherwise exhibits evidence of having accepted such responsibility, or

(2) mitigated the wrongdoing by taking prompt remedial or corrective action, then the City Ethics Commission may reduce the time period during which the above prohibition would apply to a period of not less than one year.

H. **Contract Bidder Certification of Compliance With Lobbying Laws.**

1. Any bidder for a contract, as those terms are defined in Los Angeles Administrative Code Section 10.40.1, shall submit with its bid a certification, on a form prescribed by the City Ethics Commission, that the bidder acknowledges and agrees to comply with the disclosure requirements and prohibitions established in the Los Angeles Municipal Lobbying Ordinance if the bidder qualifies as a lobbying entity under Section 48.02 of this article. The exemptions contained in Section 48.03 of this article and Los Angeles Administrative Code Section 10.40.4 shall not apply to this subsection.

2. Each agency shall include the Municipal Lobbying Ordinance in each invitation for bids, request for proposals, request for qualifications, or other solicitation related to entering into a contract with the City. The ordinance must be provided in at least 10-point font and may be provided on paper, in an electronic format, or through a link to an online version of the ordinance. The ordinance is not required to be printed in a newspaper notice of the solicitation.

3. This subsection does not apply to the renewal, extension, or amendment of an existing contract, as long as the solicitation for the original contact met the requirements in Paragraphs 1 and 2 above and the renewal, extension, or amendment does not involve a new solicitation.

4. For purposes of this subsection, "agency" does not include a state agency operating solely within the City such as the Community Redevelopment Agency or Los Angeles City Housing Authority.

History:
Amended by Ord. No. 169916, effective 8/10/94.
Amended by Ord. No. 171142, effective 8/3/96.
Amended by Ord. No. 172942, effective 1/21/00.
Amended by Ord. No. 178064, effective 1/15/07.
Amended by Ord. No. 179934, effective 7/21/08.

SEC. 48.10. Ethics Commission Reports

As soon as practicable after the close of each quarterly reporting period, the City Ethics Commission shall prepare a report to the Mayor and City Council of lobbying activity which occurred during the reporting period. Such report shall be in a form which, in the opinion of the Commission, best describes the activities, receipts and expenditures of persons subject to the requirements of this article.

History:
Added by Ord. No. 169916, effective 8/10/94.

SEC. 48.11. Severability

If any provision of this article, or its application to any person or circumstance, is held invalid by any court, the remainder of this article and its application to other persons and circumstances, other than that which has been held invalid, shall not be affected by such invalidity, and to that extent the provisions of this article are declared to be severable.

History:
Added by Ord. No. 169916, effective 8/10/94.

Certification

I certify the following on my own behalf or on behalf of the entity named above, which I am authorized to represent:

A. I am applying for one of the following types of contracts with the City of Los Angeles:

1. A goods or services contract with a value of more than $25,000 and a term of at least three months;
2. A construction contract with any value and duration;
3. A financial assistance contract, as defined in Los Angeles Administrative Code § 10.40.1(h), with a value of at least $100,000 and a term of any duration; or
4. A public lease or license, as defined in Los Angeles Administrative Code § 10.40.1(i), with any value and duration.

B. I acknowledge and agree to comply with the disclosure requirements and prohibitions established in the Los Angeles Municipal Lobbying Ordinance if I qualify as a lobbying entity under Los Angeles Municipal Code § 48.02.

I certify under penalty of perjury under the laws of the City of Los Angeles and the state of California that the information in this form is true and complete.

Iran Contracting Act of 2010 - Implementation and Processing Procedures

Overview:

The Iran Contracting Act of 2010 prohibits bidders engaged in investment activities in Iran, from bidding, submitting proposal for, entering into or renewing contracts with the City for goods and services of $1,000,000 or more.

A bidder or proposer who engages in investment activities in Iran is defined as either:

1. A bidder or proposer providing goods or services of $20,000,000 or more in the energy sector of Iran, including provision of oil or liquefied natural gas tankers, or products used to construct or maintain pipelines used to transport oil or liquefied natural gas, for the energy sector or Iran; OR

2. A bidder that is a financial institution that extends twenty million dollars $20,000,000 or more in credit to another person, for 45 days or more, if that person will use the credit to provide goods or services in the energy sector in Iran and is identified on the list created by the State of California, Department of General Services (DGS) as a person engaging in the investment activities in Iran.

All bidders or proposers for department contracts of $1,000,000 or more shall certify that they are not identified on the DGS list of ineligible businesses or persons, and that they are **not** engaged in investment activities in Iran by signing and submitting the *Iran Contracting Act of 2010 Compliance Affidavit.*

Implementation & Processing:

- All bidders or proposers for a Department contract valued at $1,000,000 or more must sign and submit the *Iran Contracting Act of 2010 Compliance Affidavit* with their bid or proposal.

- Upon receiving the bid or proposal, the awarding authority contract administrator must review the submitted affidavit for completion and signature and check the DGS list of businesses that are prohibited from contracting with public entities in California. The link for the DGS list is: https://www.dgs.ca.gov/PD/Resources/Page-Content/Procurement-Division-Resources-List-Folder/List-of-Ineligible-Businesses?search=iran%20contracting
    - Once the review is complete, the contract administrator will place the affidavit in the awarding authority's official file associated with the proposal, or such other place as is designated by the awarding authority's general manager for safe recordkeeping.

- In the event that the awarding authority intends to award a contract valued at $1,000,000 or more, outside of the competitive process, the awarding authority must complete the evaluation process described above prior to executing the contract.

Any questions regarding the Iran Contracting Act of 2010 may be directed to the State of California, Department of General Services, Office of Policies, Procedures, and Legislation (OPPL) at PPO@dgs.ca.gov. For more information, the webpage for the OPPL is located at www.dgs.ca.gov/pd/Resources/PDLegislation.aspx.

IRAN CONTRACTING ACT OF 2010 COMPLIANCE AFFIDAVIT

(California Public Contract Code Sections 2200-2208)

The California Legislature adopted the Iran Contracting Act of 2010 to respond to policies of Iran in a uniform fashion (PCC § 2201(q)). The Iran Contracting Act prohibits bidders engaged in investment activities in Iran from bidding on, submitting proposals for, or entering into or renewing contracts with public entities for goods and services of one million dollars ($1,000,000) or more (PCC § 2203(a)). A bidder who "engages in investment activities in Iran" is defined as either:

1. A bidder providing goods or services of twenty million dollars ($20,000,000) or more in the energy sector of Iran, including provision of oil or liquefied natural gas tankers, or products used to construct or maintain pipelines used to transport oil or liquefied natural gas, for the energy sector of Iran; **or**
2. A bidder that is a financial institution (as that term is defined in 50 U.S.C. § 1701) that extends twenty million dollars ($20,000,000) or more in credit to another person, for 45 days or more, if that person will use the credit to provide goods or services in the energy sector in Iran and is identified on a list created by the California Department of General Services (DGS) pursuant to PCC § 2203(b) as a person engaging in the investment activities in Iran.

The bidder shall certify that at the time of submitting a bid for new contract or renewal of an existing contract, the bidder is **not** identified on the DGS list of ineligible businesses or persons and that the bidder is **not** engaged in investment activities in Iran in violation of the Iran Contracting Act of 2010.

California law establishes penalties for providing false certifications, including civil penalties equal to the greater of $250,000 or twice the amount of the contract for which the false certification was made; contract termination; and three-year ineligibility to bid on contracts (PCC § 2205).

To comply with the Iran Contracting Act of 2010, the bidder shall provide its vendor or financial institution name, and City Business Tax Registration Certificate (BRTC) if available, in completing **ONE** of the options shown below.

OPTION #1: CERTIFICATION

I, the official named below, certify that I am duly authorized to execute this certification on behalf of the bidder or financial institution identified below, and that the bidder or financial institution identified below is **not** on the current DGS list of persons engaged in investment activities in Iran and is **not** a financial institution extending twenty million dollars ($20,000,000) or more in credit to another person or vendor, for 45 days or more, if that other person or vendor will use the credit to provide goods or services in the energy sector in Iran and is identified on the current DSG list of persons engaged in investment activities in Iran.

Vendor Name/Financial Institution (printed)		***BTRC (or n/a)***
By (Authorized Signature)		
Print Name and Title of Person Signing		
Date Executed	***City Approval (Signature)***	***(Print Name)***

OPTION #2: EXEMPTION

Pursuant to PCC § 2203(c) and (d), a public entity may permit a bidder or financial institution engaged in investment activities in Iran, on a case-by-case basis, to be eligible for, or to bid on, submit a proposal for, or enter into, or renew, a contract for goods and services. If the bidder or financial institution identified below has obtained an exemption from the certification requirement under the Iran Contracting Act of 2010, the bidder or financial institution shall complete and sign below and attach documentation demonstrating the exemption approval.

Vendor Name/Financial Institution (printed)		***BTRC (or n/a)***

CALIFORNIA STATE SENATE BILL 854

Contractors are advised of the following changes made by California State Senate Bill 854 to the State of California Department of Industrial Relations:

1. No contractor or subcontractor may be listed on a bid proposal for a public works project (submitted on or after March 1, 2015) unless registered with the California Department of Industrial Relations (DIR) pursuant to Labor Code section 1725.5 [with limited exceptions from this requirement for bid purposes only under Labor Code section 1771.1(a)].

2. No contractor or subcontractor may be awarded a contract for public work on a public works project (awarded on or after April 1, 2015) unless registered with the DIR pursuant to Labor Code section 1725.5.

3. DIR maintains a current list of registered contractors. https://efiling.dir.ca.gov/PWCR/Search.action

The Contractor must comply with the requirements of THE California State Senate Bill 854. Please read the following attachment for more information.

Senate Bill 854

1. All contractors and subcontractors who bid, or work on a public works project must register with the state and pay an annual fee of $300.00 to the Department of Industrial Relations (DIR). In order to register, contractors must have valid workers compensation insurance; they must not have any outstanding assessments owed to either the state or any other warding body, or to any workers; and they cannot be debarred on any list (either federal, state, or local).

2. No contractor or subcontractor may be listed on a bid proposal (submitted on or after March 1, 2015) for a public works project unless they are registered with the DIR pursuant to Labor Code Section 1725.5.

3. No contractor or subcontractor may be awarded a contract on a public works project (awarded on or after April 1, 2015) unless they are registered with the DIR pursuant to Labor Code Section 1725.5.

4. No contractor or subcontractor may work on a contract on a public works project (bid on or after March 1, 2015, or awarded on or after April 1, 2015) unless they are registered with the DIR.

5. An awarding body may not accept a bid or enter into a contract for public works with an unregistered contractor.

6. The DIR maintains a current list of registered contractors at: https://efiling.dir.ca.gov/PWCR/Search.action.

7. While the new law does require that all contractors and subcontractors must furnish electronic certified payroll records (ECPR) directly to the Labor Commissioner's Office, contractors and subcontractors working on City of Los Angeles public works projects (as well as those working for three other select awarding bodies, and projects covered by qualifying project labor agreements) are exempt from this requirement. (Note: Any contractor working on a project for a City department or agency which does not utilize the Bureau of Contract Administration's services ***must*** submit their payrolls through the state's ECPR system to the Labor Commissioner's Office ***and*** submit the project to the state for monitoring and enforcement. The new law will apply to any project awarded by a City department for constriction, alteration, installation, demolition, maintenance, or repair.

8. Violation of the requirements mandated by SB 854 will result in any public works contract entered into with any contractor or subcontractor who has not registered being subject to cancellation.

9. A contractor who fails to pay the renewal fee on or before the expiration of the prior period of registration shall be prohibited from bidding on or engaging in the performance of any contract for the public work until they are once again registered. If the failure to pay the renewal fee was inadvertent, the contractor may renew its registration retroactively by paying an additional penalty renewal fee equal to the amount of the renewal fee within 90 days of the due date of the renewal fee. (If the original renewal fee was $300.00, the total amount for renewal including the penalty renewal fee would be $600.00.)

10. If the renewal fee is paid subsequent to 90 days, the contractor will be eligible to bid on public works projects again only if they pay an additional nonrefundable penalty registration fee of $2,000.00 in addition to the annual registration fee (if the original renewal fee was $300, the total amount for renewal including the penalty renewal fee would be $2,300.00).

Form Gen. 146 (Rev. 9/06)

Required Insurance and Minimum Limits

Name: Granada Hills Pool and Bathhouse Replacement (Re-Bid) Date: 8/5/2022

Agreement/Reference: W.O.E.170517F

Evidence of coverages checked below, with the specified minimum limits, must be submitted and approved prior to occupancy/start of operations. Amounts shown are Combined Single Limits ("CSLs"). For Automobile Liability, split limits may be substituted for a CSL if the total per occurrence equals or exceeds the CSL amount.

Contractors' Use of Criminal History for Consideration of Employment Applications Ordinance

Any contract awarded pursuant to this RFB/RFP/RFQ will be subject to the Contractors' Use of Criminal History for Consideration of Employment Applications Ordinance, Section 10.48 of the Los Angeles Administrative Code. The Ordinance provides, among other things, that contractors/subcontractors with at least 10 employees are: prohibited from seeking a job applicant's criminal history information until after a job offer is made; must post Contractors' Use of Criminal History for Consideration of Employment Applications Ordinance information in conspicuous places at worksites; and cannot withdraw a job offer based on an applicant's criminal history unless a link has effectively been made between the applicant's criminal history and the duties of the job position.

Bidders/Proposers seeking additional information regarding the requirements of the Contractors' Use of Criminal History for Consideration of Employment Applications Ordinance may visit the Bureau of Contract Administration's web site at http://bca.lacity.org.

Contractor Evaluation Program

At the end of this contract, the City will conduct an evaluation of the Contractor's performance. The City may also conduct evaluations of the Contractor's performance during the term of the contract. As required by Section 10.39.2 of the Los Angeles Administrative Code, evaluations will be based on a number of criteria, including the quality of the work product or service performed, the timeliness of performance, financial issues, and the expertise of personnel that the Contractor assigns to the contract. A Contractor who receives a “Marginal” or “Unsatisfactory” rating will be provided with a copy of the final City evaluation and allowed 14 calendar days to respond. The City will use the final City evaluation, and any response from the Contractor, to evaluate proposals and to conduct reference checks when awarding other personal services contracts.

PROJECT LABOR AGREEMENT
CITY OF LOS ANGELES

DEPARTMENT OF PUBLIC WORKS

INTRODUCTION AND FINDINGS

The purpose of this Project Labor Agreement ("Agreement") is to promote efficiency of construction operations during the construction of various projects within the Public Works' Capital Improvement Program (CIP) and provide for the orderly settlement of labor disputes and grievances without strikes or lockouts, thereby promoting the public interest in assuring timely and economical completion of these Projects.

WHEREAS, the Department of Public Works (DPW) is responsible for construction, renovation, maintenance and operation of City of Los Angeles (City) facilities and infrastructure, including capital improvement projects for major public facilities and systems throughout the City; and

WHEREAS, the safe, timely and successful completion of these projects with a trained workforce is of utmost importance to the DPW and the general public in the City; and

WHEREAS, the work to be done will require maximum cooperation from the many Parties who will be involved; and

WHEREAS, it is recognized that projects of a certain magnitude with multiple contractors and bargaining units on the job site at the same time over an extended period of time create the potential for work disruption without there being an overriding commitment to maintain continuity of work; and

WHEREAS, the interests of the general public, the City, the Unions, contractors, subcontractors, employers and workers would be best served if the construction work

proceeded in an orderly manner free of disruption because of strikes, sympathy strikes, work stoppages, picketing, lockout, slowdowns or other interferences with work; and

WHEREAS, large numbers of workers of various skills will be required in the performance of the construction work, including those to be represented by the Unions affiliated with the Los Angeles/Orange Counties Building and Construction Trades Council and any other craft labor organization which are signatory to this Agreement, employed by contractors and subcontractors who are signatory to agreements with said labor organizations; and

WHEREAS, the Contractor/Subcontractor/Employer(s) (C/S/E) and the Unions desire to mutually establish and stabilize wages, hours and working conditions for the workers employed on these Projects by the C/S/Es, and further, to encourage close cooperation among the C/S/Es, and the Unions to the end that a satisfactory, continuous and harmonious relationship will exist among the Parties to this Agreement; and

WHEREAS, this Agreement is not intended to replace, interfere with, abrogate, diminish, or modify existing local or national collective bargaining agreements in effect during the duration of this Agreement, insofar as a legally binding agreement exists between the C/S/Es and the affected Unions, except to the extent that the provisions of this Agreement are inconsistent with said collective bargaining agreements, in which event, the provisions of this Agreement shall prevail; and further, it is understood that C/S/Es are bound and shall remain bound, for the duration of this Agreement by the terms of this Agreement and applicable local and national collective bargaining agreements for the craft work performed, established between the signatory Unions and C/S/Es, in effect and covering the area of these Projects; and

WHEREAS, this Agreement is not intended to have an adverse impact on the policy of the City to maximize business opportunities for minority, women and other business enterprises in City contracts; and

WHEREAS, increasing access to employment opportunities with prevailing wages is one way for the City to directly combat poverty and stimulate economic reinvestment; and

WHEREAS, the City has adopted the City Contractor's Use of Criminal History for Consideration of Employment Applications Ordinance to help ensure a discrimination-free, diverse and equitable hiring environment; and

WHEREAS, the DPW has adopted a departmental Agreement which will provide construction employment and training opportunities in ways calculated to mitigate the harms caused by poverty, unemployment and underemployment; and

WHEREAS, this Agreement reflects the City's adoption of policy to promote diversity, inclusion and racial equity in and around all working environments of City business and operations, including, but not limited to recruitment, hiring, retention, training and contracting; and

WHEREAS, this Agreement reflects a commitment by all parties to the diversity in the workforce hiring that reflect levels of minority, women and other worker utilization at levels which are representative of the relevant workforce of these groups in the Greater Los Angeles Area as determined by the U.S. Census Bureau; and

WHEREAS, the contracts for the construction of Projects will be awarded in accordance with the applicable provisions of the DPW's Administrative Policies and Procedures; and

WHEREAS, the Parties signatory to this Agreement pledge to work towards a mutually satisfactory completion of Projects;

NOW, THEREFORE, IT IS AGREED BETWEEN AND AMONG THE PARTIES HERETO, AS FOLLOWS:

ARTICLE I

DEFINITIONS

1.1 "Agreement" is defined as this Department of Public Works Project Labor Agreement and its applicability to all Projects.

1.2 "Apprentice" is defined as any worker who is indentured in a bona fide Labor/Management construction apprenticeship program, registered and approved by the State of California Department of Industrial Relations (DIR) Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, indentured in a bona fide Labor/Management construction apprenticeship program, approved by the US Department of Labor (DOL) and California DAS.

1.3 "Apprenticeship Program" is defined as any Labor/Management construction apprenticeship program certified and approved by the California Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, approved by the US DOL and California DAS.

1.4 "Awarding Authority" is defined as any board or commission of the City, or any employee or officer of the City, that is authorized to award or enter into any contract on behalf of the City.

1.5 "Board" is defined as the City of Los Angeles Board of Public Works.

1.6 "Bureau of Contract Administration" (BCA) is defined as the designated bureau

within the City's DPW responsible for administering this Agreement.

1.7 "City" is defined as the City of Los Angeles, a municipal corporation, and all City awarding authorities.

1.8 "Construction contract" is defined as a City contract which has been certified by the City Controller, awarded by the Board, and is necessary to complete the DPW Project.

1.9 "Contractor/Subcontractor/Employer(s)" (C/S/E) is defined as any individual firm, partnership, owner operator, or corporation, or combination thereof, including joint ventures, which is an independent business enterprise, and which is properly licensed for the work intended, and has entered into a contract covered under this Agreement or any of its contractors or subcontractors/owner operators of any tier, with respect to the construction of any part of the Project(s) under contract terms and conditions approved by the Board and incorporated within this Agreement.

1.10 "Core Worker" is defined as a verifiable member of a C/S/E's core workforce for the purpose of this Agreement if the worker's name appears on the C/S/E's active payroll for 60 of 100 working days immediately prior to the award of the construction contract; who has worked at least two-thousand (2,000) hours in the construction craft in which they are employed, during the prior four (4) years; and meets all standards required by applicable local, state or federal law or regulation.

1.11 "Covered Project(s)" or "Project" is defined as a project or projects which have been included within the Public Infrastructure Program Series List ("PIPS") and covered by this Agreement or so designated by the Board of Public Works. The Board may identify additional projects that are appropriate for coverage by the

Agreement for inclusion under the PIPS and include such projects by Board Resolution. The Board shall request an annual review of the DPW Capital Improvement Program to identify any new projects appropriate for inclusion within the PIPS.

1.12 "Employment Hiring Plan" (EHP) is defined as a C/S/E's detailed hiring plan as described in BCA's Targeted Hiring Guidelines for Contractors and the Policy.

1.13 "Engineer" is defined as the City Engineer or his/her authorized representative.

1.14 "FHWA Project" is defined as a DPW Project that is funded in whole or in part by the Federal Highway Administration (FHWA).

1.15 "Jobs Coordinator" is defined as the Prime Contractor's designated person, agent or agency that will coordinate a covered project's local hire referral process with the C/S/E, Unions and other referral organization, such as those listed in BCA's Targeted Hiring Guidelines for Contractors. The Jobs Coordinator will be responsible for documenting the hiring process of all workers on a covered project, and must be able to demonstrate or document to the BCA that it has the requisite qualification and/or experience to fulfill the duties and responsibilities as outlined in the Policy.

1.16 "Joint Administrative Committee" (JAC) is defined as described in Article XII of this Agreement.

1/.17 "LA/OCBTC" (Trades Council) is defined as the Los Angeles/Orange Counties Building and Construction Trades Council.

1.18 "Letter of Assent" is defined as the document that each C/S/E (of any tier) must sign and submit to the City's Inspector of Public Works, which formally binds them

to adherence to all the forms, requirements and conditions of this Agreement and Policy.

1.19 "Local Resident" is defined as either an individual whose primary residence is within Tier 1 or 2 zip code areas, or an individual whose primary place of residence is within the City of Los Angeles and has been identified as a Transitional Worker.

1.20 "Long-Term Unemployment" is defined as being jobless for 27 weeks or more, or as otherwise defined by the Bureau of Labor Statistics.

1.21 "Master Labor Agreement" is defined as the local area collective bargaining agreements negotiated and executed from time to time by (i) the applicable employer associations and (ii) Local Unions having jurisdiction over Covered Projects.

1.22 "Plan" is defined as the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry as referenced in Article XIV of this Agreement.

1.23 "Policy" is defined as the DPW Public Works Infrastructure Stabilization Policy.

1.24 "Public Infrastructure Program Series List" (PIPS) is defined as all projects contained in the adopted PIPS (Attachment "E") that are covered under this Agreement.

1.25 "Subscription Agreement" is defined as the contract between a C/S/E and a Union's Labor/Management Trust Fund(s) that allows the C/S/E to make the appropriate fringe benefit contributions in accordance with the contract terms.

1.26 "Targeted Hiring Guidelines for Contractors" is defined as the document provided by the BCA to assist C/S/E's in implementing the targeted hiring procedures.

1.27 "Tier 1" is defined as zip codes within the City, identified in Article 7.4 of this

Agreement, having at least 2 census tracts (or portion thereof) in which the median household income is less than 50% of the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 200% of the County of Los Angeles' unemployment rate as reported by the most recent available U.S Census Bureau data.

1.28 "Tier 2" is defined as zip codes within the City, identified in Article 7.5 of this Agreement, having at least 2 census tracts (or portion thereof) in which the median household income is less than the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 100% of the County of Los Angeles' unemployment rate as reported by the most recent Census Bureau data.

1.29 "Transitional Worker" is defined as an individual whose primary place of residence is within the City of Los Angeles and who prior to commencing work on a Project has been certified as satisfying at least one of the following Criteria: (1) having Veteran status; having a documented history of involvement with the criminal justice system; or being homeless. If the Jobs Coordinator or Employer is not able to identify anyone using Criteria (1), then Criteria (2) may be used. Criteria (2) is an individual that is either a graduate of an LA/OCBTC approved MC3 pre-apprenticeship program or facing two of the following barriers to employment: having a household income less than 50% of the Los Angeles County's median annual household income, receiving public assistance, lacking a GED or high school diploma, being a custodial single parent, suffering from long-term unemployment, being emancipated from the foster care system, or being an

apprentice with less than 15% of the apprenticeship hours required to graduate to journey level in a program as described in Section 1.3 above.

1.30 "Union(s)" or "Signatory Unions" is defined as the Los Angeles/Orange Counties Building and Construction Trades Council affiliated with the Building & Construction Trades Department (AFL/CIO) Craft International Unions or any other craft labor organization signatory to this Agreement, acting in their own behalf and on behalf of their respective affiliates and member organizations whose names are subscribed hereto and who have through their officers executed this Agreement.

ARTICLE II

SCOPE OF AGREEMENT

2.1 Parties: The Agreement shall apply and is limited to all C/S/Es performing construction on a DPW Project, the Board, and the Unions.

2.2 Project Description: The Agreement shall apply to all PIPS construction contracts awarded by either the Board or the Awarding Authority. The Board has the absolute right to combine, consolidate or cancel contracts or portions of contracts identified as part of the Project. Should the Board remove any contract from the Project and thereafter authorize that construction work be commenced on the contract, the contract may, at the discretion of the Board, be performed under the terms of the Agreement. After the fourth (4^{th}) year of this Agreement, the parties shall meet and discuss additional and newer projects to be listed on a revised Attachment E, which projects shall be covered under this Agreement. Additionally, it is understood by the Parties that the Board may at any time, and at its sole

discretion, add additional projects under this Agreement not otherwise described in this Section 2.2.

2.3 Project Labor Disputes: The provisions of this Agreement, including the Master Labor Agreements ("MLA"), (which are the local collective bargaining agreements of the signatory Unions having jurisdiction over the work on the Project, as such may be changed from time-to-time and which are incorporated herein by reference) shall apply to the work covered by this Agreement. It is understood that this is a self-contained, stand alone Agreement and that by virtue of having become bound to this Project Labor Agreement, neither the Prime Contractor, Employer, nor the Subcontractor (of any tier) or owner-operator will be obligated to sign any other local, area, or national agreement, except as may be provided in Section 8.2, below. It is further agreed that, where there is conflict, the terms and conditions of this Agreement shall supersede and override terms and conditions of any MLA and all other national, area, or local collective bargaining agreements except for all work performed under the NTL Articles of Agreement, the National Stack/Chimney Agreement, the National Cooling Tower Agreement, all instrument calibration work and loop checking shall be performed under the terms of the UA/IBEW Joint National Agreement for Instrument and control systems Technicians, and the National Agreement of the International Union of Elevator Constructors, with the exception of Article IV (Work Stoppages, Strikes, Sympathy Strikes and Lockouts), Article XIII (Grievance and Arbitration Procedure) and Article XIV (Jurisdictional Disputes) of this Agreement, which shall apply to such work. All disputes relating to the interpretation or application of this Agreement

shall be subject to resolution by the grievance arbitration procedure set forth in Article XIII of this Agreement, except for those disputes exempted from the grievance procedure pursuant to Section 13.1. Where a subject is covered by a provision in an MLA and not covered by this Agreement, the provision of the MLA shall prevail. Any dispute as to the applicable source between this Agreement and any MLA for determining the wages, hours or working conditions of employees on a Project shall be resolved under the grievance procedures established in this Agreement.

2.4 Exclusions:

(1) The Agreement shall be limited to construction work on a Project which is approved by the Board, and is not intended to, and shall not apply to any construction work performed at any time prior to the effective date, or after the expiration or termination of the Agreement, or on other City projects.

(2) The Agreement is not intended to, and shall not, affect or govern the award of contracts by the Board, which are outside the approved scope of the Project.

(3) The Agreement is not intended to, and shall not, affect the operation or maintenance of any facilities whether related or not to Projects.

(4) The Agreement shall not apply to a C/S/E's executives, managerial employees, engineering employees, supervisors (except those covered by the MLAs), office and clerical employees, or any other employee not performing construction craftwork.

(5) Notwithstanding the foregoing, it is understood and agreed that

Building/Construction Inspector and Field Soils and Material Testers (inspectors) are a covered craft under this Agreement. This inclusion applies to the scope of work defined in the State of California Wage Determination for that Craft. This shall not cover quality assurance work performed by or on behalf of the DPW. Every Inspector performing under the wage classification of Building/Construction Inspector and Field Soils and Material Tester under a professional services agreement or a construction contract shall be bound to all applicable requirements of this Agreement. Notwithstanding the provisions of this sub-section, the DPW may engage consultants for limited periods of time in the event of an urgent need for specialized inspection services. The DPW must provide prior notice to the Trades Council that despite good faith efforts, it is unable to obtain qualified inspector(s) under the provisions of this Agreement. Such engagement shall be only to meet immediate and limited needs until such qualified inspectors working under this Agreement are available.

(6) This Agreement shall not apply to material suppliers or delivery by any means of material, supplies, or equipment required to any point of delivery, except that the hauling/delivery of soil, sand, gravel, aggregate, rocks, concrete, asphalt, excavation materials, fill material and construction debris shall be covered by this Agreement.

(7) This Agreement shall not apply to City employees.

(8) This Agreement shall not apply to the work of persons, firms and other entities that perform consulting, planning, scheduling, management or other

supervisory services on the Project, provided such entities do not perform craft employee construction work on the Project with their own employees or to customer service work performed post completion by an entity other than the C/S/E that performed the original construction work.

(9) This Agreement shall not apply to DPW construction contracts or Projects, if such Project has federal funding and the federal funding source has established provisions or rules that forbid the inclusion of a Project Labor Agreement.

(10) For FHWA Projects, this Agreement shall apply to the covered project, in accord with the policies and conditions under which the FHWA funds are received from the U.S. Department of Transportation.

(11) Out-of-State Workers: Hours worked by residents of states other than California shall not be included in calculation of total hours of Project work for purposes of the percentage requirements set forth by the Agreement.

(12) Notwithstanding the foregoing, demolition and asbestos abatement shall constitute work covered by the Project Labor Agreement when such work is part of a Covered Project.

2.5 The DPW and/or the C/S/Es, as appropriate, have the absolute right to award contracts or subcontracts on this Project to any C/S/E notwithstanding the existence or non-existence of any agreements between such C/S/E and any Union parties, provided only that such C/S/E is ready, willing and able to execute and comply with this Agreement should such C/S/E be awarded work covered by this Agreement.

ARTICLE III

EFFECT OF AGREEMENT

3.1 By executing the Agreement, the Unions and the Board agree to be bound by each and all of the provisions of the Agreement.

3.2 By accepting the award of a construction contract for a Project, each C/S/E agrees to be bound by each and every provision of the Agreement.

3.3 At the time that any C/S/E enters into a subcontract with any subcontractor of any tier providing for the performance of construction for a Covered Project, the C/S/E shall provide a copy of this Agreement to said subcontractor and shall require the subcontractor as a part of accepting the award of a construction subcontract to agree in writing in the form of a Letter of Assent to be bound by each and every provision of this Agreement prior to the commencement of work. See Attachment "A" for a sample Letter of Assent. Approval of any C/S/E to perform work on the Project will be contingent upon the submittal of its Letter of Assent and its Employment Hiring Plan.

3.4 This Agreement shall only be binding on the signatory C/S/Es hereto and shall not apply to the parents, affiliates, subsidiaries, or other ventures of any construction contract prior to the execution of this Agreement.

ARTICLE IV

WORK STOPPAGES, STRIKES, SYMPATHY STRIKES AND LOCKOUTS

4.1 The Unions, Board and C/S/Es agree:

(1) During the existence of this Agreement, there shall be no strike, sympathy strike, picketing, hand billing, slowdown, withholding of work, refusal to work, lockout, sick-out, walk-off, sit-down, stand-in, wobble, boycott, or other work stoppage, disruption, advising the public that a labor dispute exists, or other impairment of any kind for any reason by the Unions or employees employed on the Project, at the job site of the Project, or at any other facility of the City because of a dispute on this Project.

(2) As to employees employed on the Project, there shall be no lockout of any kind by any C/S/E(s) covered by the Agreement. The C/S/E(s) may lay off employees for lack of work or delay of work on the Project.

(3) The Unions agree that they shall not sanction in any way any picket line or other impairment of the work on the Project and will affirmatively take all measures necessary to effectively induce their respective members to cross any and all picket lines and report for work as scheduled and that responsible representatives of the Unions who are employed on the Covered Project will also do so themselves.

(4) The Unions agree that they shall not sanction, aid, abet, encourage or continue any work stoppage, strike, picketing or other disruptive activity at the Project site or C/S/E's business site that will economically and/or materially affect the completion of the Project. Any such costs that

economically and/or materially harm the City shall be borne by the affected Union and made payable to the City.

(5) Notwithstanding any provision of this Agreement to the contrary, it shall not be a violation of this Agreement for any Union to withhold the services of its members (but not the right to picket) from a particular C/S/E who:

(i) fails to timely pay its weekly payroll; or

(ii) fails to make timely payments to the Union's Labor/Management Trust Funds in accordance with the provisions of the applicable MLA. Prior to withholding its members services for the C/S/E's failure to make timely payments to the Union's Labor/Management Trust Funds, the Union shall give at least ten (10) days (unless a lesser period of time is provided in the Union's MLA, but in no event less than forty-eight (48) hours) written notice of such failure to pay by registered or certified mail, return receipt requested, and by either email or facsimile transmission to the involved contractor, the prime contractor, and the BCA. Union will meet within the ten (10) day period to attempt to resolve the dispute.

(iii) Upon the payment of the delinquent C/S/E of all monies due and then owing for wages and/or fringe benefit contributions, the Union shall direct its members to return to work; the C/S/E shall return all such members back to work.

4.2 Expiration of Local Agreements: If the MLA, or any local, regional, and other applicable collective bargaining agreements expire during the term of the Covered

Project, the Union(s) agree that there shall be no work disruption of any kind as described in Section 4.1 above as a result of the expiration of any such agreement(s) having application on this Covered Project and/or failure of the involved Parties to that agreement to reach a new contract. For C/S/Es which are not independently signatory to an MLA, terms and conditions of employment established and set for purposes of prevailing wage requirements under this Agreement at the time of bid shall remain established and set. Otherwise to the extent that such agreement does expire and the Parties to that agreement have failed to reach concurrence on a new contract, work will continue on the Covered Project on one of the following two (2) options, both of which will be offered by the Unions involved to the C/S/Es affected:

(1) Each of the Unions with a contract expiring must offer to continue working on the Covered Project under interim agreements that retain all the terms of the expiring contract, except that the Unions involved in such expiring contract may each propose wage rates and employer contribution rates to employee benefit funds under the prior contract different from what those wage rates and employer contributions rates were under the expiring contracts. The terms of the Union's interim agreement offered to C/S/Es will be no less favorable than the terms offered by the Union to any other employer or group of employers covering the same type of construction work in Los Angeles County.

(2) Each of the Unions with a contract expiring must offer to continue working on the Project under all the terms of the expiring contract, including the

wage rates and employer contribution rates to the employee benefit funds, if the C/S/E affected by that expiring contract agrees to the following retroactive provisions: if a new MLA, local, regional or other applicable labor agreement for the industry having application at the Covered Project is ratified and signed during the term of this Agreement and if such new labor agreement provides for retroactive wage increases, then each affected C/S/E shall pay to its employees who performed work covered by this Agreement at the Project during the hiatus between the effective dates of such expired and new labor agreements, an amount equal to any such retroactive wage increase established by such new labor agreement, retroactive to whatever date is provided by the new labor agreement for such increase to go into effect, for each employee's hours worked on the Project during the retroactive period. All Parties agree that such affected C/S/Es shall be solely responsible for any retroactive payment to its employees and that neither the Project, nor the Board, nor the Board's designee, nor any other C/S/E has any obligation, responsibility or liability whatsoever for any such retroactive payments or collection of any such retroactive payments, from any such C/S/E.

(3) Some C/S/Es may elect to continue to work on the Project under the terms of the interim agreement option offered under paragraph (1) above and other C/S/Es may elect to continue to work on the Project under the retroactivity option offered under paragraph (2) above. To decide between the two options, C/S/Es will be given one week after the particular labor

agreement has expired or one week after the Union has personally delivered to the C/S/Es in writing its specific offer of terms of the interim agreement pursuant to paragraph (1) above, whichever date is later. If the C/S/E fails to timely select one of the above options, the C/S/E will be deemed to have selected paragraph (2), above.

4.3 Expedited Arbitration will be utilized for all work stoppages and lockouts. In lieu of or in addition to any other action at law or equity, any party may institute the following procedure when a breach or violation of Section 4.1 is alleged to have occurred:

(1) The party invoking this procedure shall notify the permanent arbitrator next in sequence from the following list:

1. Christopher David Ruiz Cameron
2. Michael Rappaport
3. Walter Daugherty
4. Paul Greenberg
5. Lou Zigman

The DPW and the Unions agree these shall be the five permanent Arbitrators under this procedure. In the event that none of the five permanent Arbitrators are available for a hearing within 24 hours, the party invoking the procedure shall have the option of delaying until one of the five permanent Arbitrators is available or of asking the permanent Arbitrator that would normally hear the matter to designate an arbitrator to sit as a substitute Arbitrator for this dispute. If any of the permanent Arbitrators ask

to be relieved from their status as a permanent Arbitrator, the DPW and the Unions shall mutually select a new permanent Arbitrator from the following list of arbitrators:

1. John Kagel
2. Fred Horowitz
3. Wayne Estes

The selection of a new permanent Arbitrator shall be made by each party alternately striking from the foregoing list until one name remains who shall be the replacement permanent Arbitrator. Expenses incurred in arbitration shall be borne equally by the Union and the Contractor involved and the decision of the Arbitrator shall be final and binding on both Parties, provided, however, that the Arbitrator shall not have the authority to alter or amend or add to or delete from the provisions of this Agreement in any way. Notice to the Arbitrator shall be by the most expeditious means available, including by telephone and by facsimile or email to the party alleged to be in violation and to the Trades Council and involved local Union if a Union is alleged to be in violation.

(2) Upon receipt of said notice, the Arbitrator shall convene a hearing within twenty-four (24) hours if it is contended that the violation still exists.

(3) The Arbitrator shall notify the Parties to the Arbitration by telephone and by facsimile or email of the place and time for the hearing. Notice shall be given to the individual Unions alleged to be involved. Said hearing shall be completed in one session, which, with appropriate recesses at the

Arbitrator's discretion, shall not exceed twenty-four (24) hours unless otherwise agreed upon by all Parties. A failure of any party to attend said hearings shall not delay the hearing of evidence or the issuance of any decision by the Arbitrator.

(4) The sole issue at the hearing shall be whether or not a violation of Sections 4.1 or 4.2 of this Article IV has in fact occurred. The Arbitrator shall have no authority to consider any matter of justification, explanation or mitigation of such violation or to award damages, which issue is reserved for court proceedings, if any. The decision shall be issued in writing within three (3) hours after the close of the hearing, and may be issued without a written opinion. If any party desires a written opinion, one shall be issued within fifteen (15) days, but its issuance shall not delay compliance with or enforcement of the decision. The Arbitrator may order cessation of the violation of this Article and other appropriate relief and such decision shall be served on all Parties by hand or registered mail upon issuance.

(5) Such decision may be enforced by any Court of competent jurisdiction upon the filing of this Agreement and all other relevant documents referred to above in the following manner. Written notice of the filing of such enforcement proceedings shall be given to the other party. In the proceeding to obtain a temporary order enforcing the Arbitrator's decision as issued under Section 4.3(3) of this Article, all Parties waive the right to a hearing and agree that such proceedings may be ex parte. Such agreement does not waive any party's right to participate in a hearing for a final order

of enforcement. The Court's order or orders enforcing the Arbitrator's decision shall be served on all Parties by hand or delivered by registered mail.

(6) Any rights created by statute or law governing arbitration proceedings inconsistent with the above procedure or which interfere with compliance therewith are hereby waived by the Parties to whom they accrue.

(7) The fees and expenses incurred in arbitration shall be divided equally by the parties (the applicable Union and Contractor) to the arbitration.

4.4 The procedures contained in Section 4.3 shall be applicable to alleged violations of Article IV to the extent any conduct described in Sections 4.1 or 4.2 occurs on the Project. Disputes alleging violation of any other provision of this Agreement's other provisions, including any underlying disputes alleged to be in justification, explanation, or mitigation of any violation of Sections 4.1 or 4.2 shall be resolved under the applicable grievance adjudication procedures for these other Articles.

ARTICLE V

NO DISCRIMINATION

5.1 The C/S/Es and Unions agree not to engage in any form of discrimination, including in the hiring and dispatching of workers, on the grounds of, or because of, race, religion, national origin, ancestry, sex, sexual orientation, age, physical handicap, domestic partner status, medical condition, political affiliation, membership in a labor organization, being a party to a collective bargaining agreement, color or disability.

ARTICLE VI

UNION SECURITY

6.1 The C/S/Es recognize the Unions as the respective sole bargaining representatives for all craft employees working within the scope of this Agreement.

6.2 Employees are not required to become or remain union members or pay dues or fees as a condition of performing Covered Work under this Agreement. Employers shall make and transmit all deductions for union dues, fees, and assessments that have been voluntarily authorized by employees in writing in accordance with the applicable Master Labor Agreement. Nothing in this Section 6.2 is intended to supersede independent requirements of applicable Master Labor Agreements as to those Employers otherwise signatory to such Master Labor Agreements and as to the employees of those Employers who are performing Covered Work.

ARTICLE VII

REFERRAL

7.1 The Union(s) shall be the primary source of all craft labor employed on the Project(s) and will exert their best efforts to recruit and identify individuals, particularly residents of the City residing in the Tier 1 or Tier 2 zip code areas, as well as those referred by the Jobs Coordinator, for entrance into joining labor/management apprenticeship programs, and to assist individuals in qualifying and becoming eligible for such programs. In the event that the C/S/E has it's own Core Worker(s), and wishes to employ such workers to perform covered work, the C/S/E shall employ such workers in accord with the provisions of this Article VII.

The following process shall govern the employment of workers at the Project:

(1) A worker shall be considered a member of a C/S/E's core workforce for the purposes of this Article if the worker meets the required definition stated in Section 1.10 of this Agreement. The C/S/E shall identify Core Workers in their Employment Hiring Plan and shall provide payroll records evidencing the worker's qualification as a Core Worker upon request by the City. Prior to each C/S/E, which utilizes any core employees, performing any work on Covered Project(s), each such C/S/E shall provide a list of its core employees to the BCA and the Trades Council. Failure to do so will prohibit the C/S/E from using any core employees. The number of Core Workers on this Project shall be governed by the following procedure: one Core Worker shall be selected and one worker from the hiring hall of the affected trade or craft and this process shall repeat until such C/S/E's requirements are met or until such C/S/E has hired five (5) such Core Workers for that craft, whichever occurs first. Thereafter, all additional employees in the affected trade or craft shall first be requisitioned from the hiring hall in accordance with other provisions in Article VII.

(2) In the event of a reduction-in-force or layoff, such will take place in a manner to assure that the number of Core Workers in the affected craft does not exceed, at any time, the number of others working in that craft who were employed pursuant to other procedures available to the C/S/E under this Agreement. This provision applies only to C/S/Es which are not independently signatory to a current MLA for the craft workers under their

employ and is not intended to limit the transfer provisions of the MLAs of any Union.

7.2 C/S/Es shall be bound by and utilize the registration facilities and referral systems established or authorized by the signatory Unions for all job site craft employee(s) before such employee(s) begin work, when such procedures are not in violation of Federal or State law or in conflict with provisions set forth in this Agreement.

7.3 In the event that the referral facilities maintained by the Unions are unable to fill the requisition of a C/S/E for Local Residents and/or Transitional Workers within a forty-eight (48) hour period after such requisition is made by the C/S/E (Saturdays, Sundays and holidays excepted), the C/S/E shall be free to obtain Local Residents and/or Transitional Workers from any source. However, for all other requisitions by a C/S/E for non-Local Residents or non-Transitional Workers, only after a forty-eight (48) hour period (Saturdays, Sundays and holidays excepted) after such requisition is made by the C/S/E, shall the C/S/E be free to obtain work persons from any source if the Unions are unable to fill the requisition. However, the C/S/E is still responsible for complying with conditions and requirements of the Targeted Hiring Guidelines for Contractors and the Policy.

(1) The C/S/E's must document, from the applicable Tiers, all efforts made to comply with the targeted hiring process to locate and hire Local Residents and/or Transitional Workers. The C/S/E may employ Local Residents and/or Transitional Workers referred by the Jobs Coordinator. However, in the event the Jobs Coordinator is unable to fill the requisition of a C/S/E for Local Residents and/or Transitional Workers, the C/S/E may utilize any

organization, such as those listed in the Targeted Hiring Guidelines for Contractors, to assist them in satisfying the requirements of the Targeted Hiring Guidelines for Contractors and the Policy.

(2) The C/S/E shall inform the Unions, Job Coordinator and the BCA of the name, address, worker craft classification and social security number of any worker hired from other sources upon their employment on the Project(s).

(3) No Local Resident and/or Transitional Worker, having been pre-screened and/or pre-qualified by the Jobs Coordinator, and employed by the C/S/E to work on the Project, shall be required to participate in any Joint Labor/Management "boot camp" or pre-apprentice program that will unnecessarily delay the Local Resident and/or Transitional Worker's start of work or cause said worker's termination due to having to participate in such "boot camps" or pre-apprentice programs.

(4) Any work person hired under this Section 7.3, as well as all other workers hired under this Article VII, shall be obligated to register with the appropriate Union hiring hall, prior to their first day of employment on the Project.

7.4 The Unions will exert their best efforts to refer/recruit sufficient numbers of skilled craft Local Residents and Transitional Workers to fulfill the requirements of the C/S/E(s). In recognition of the fact that the communities within the boundaries of the City will be impacted by the construction of the Project(s), the Parties agree to support the development and graduation of Transitional construction apprentices and workers from residents within Tier 1 or Tier 2 zip code areas. Towards that end, the Unions agree to encourage and provide referrals and utilization of

qualified workers residing preferably within the Tier 1 zip code areas identified in the following:

Tier 1 Zip Codes

90001	90013	90028	90044	90068	91402
90002	90014	90029	90046	90077	
90003	90015	90031	90047	90089	
90005	90016	90032	90049	90248	
90006	90017	90033	90056	90731	
90007	90018	90037	90057	90744	
90008	90020	90038	90058	90810	
90010	90021	90039	90059	90813	
90011	90023	90042	90063	91205	
90012	90024	90043	90065	91331	

7.5 Wherein the Unions cannot provide the C/S/Es, having documented their efforts in the attainment of Local Residents and/or Transitional Workers within the Tier 1 zip code areas as listed in Section 7.4 above, the Unions will exert their best efforts to recruit and identify Local Residents and/or Transitional Workers within Tier 2 zip code areas identified in the following and Transitional Workers in the remaining zip code areas of the City:

Tier 2 Zip Codes

90004	90048	90265	90710	91304	91342	91405	91605
90019	90061	90272	90717	91306	91343	91406	91606
90025	90062	90290	90732	91307	91344	91411	91607
90026	90064	90291	90745	91311	91345	91423	
90027	90066	90292	91040	91316	91352	91504	
90034	90067	90305	91042	91324	91356	91505	
90035	90095	90402	91201	91325	91364	91506	
90036	90230	90405	91206	91330	91367	91601	
90041	90232	90501	91302	91335	91401	91602	
90045	90247	90502	91303	91340	91403	91604	

The Unions will exert their best efforts to recruit and identify Local Residents and/or Transitional Workers of the City and assist individuals in qualifying and becoming eligible for such apprenticeship programs.

7.6 The Prime Contractor is responsible for ensuring compliance with the targeted hiring process for the Project(s) to achieve the following anticipated levels of participation:

(1) The following percentages shall be the targeted hiring for the Project:

(a) At least 30% of total work hours shall be performed by Local Residents residing within Tier 1 described in Article 7.4. If the 30% local hire is not attained utilizing the Tier 1, the outreach shall expand to the Tier 2 as described in Article 7.5 of this Agreement.

(b) At least 10% of total work hours shall be performed by Transitional Workers residing within Tier 1 or Tier 2 zip code areas described in Articles 7.4 and 7.5 respectively and the remaining zip code areas within the City of Los Angeles. These hours shall be applied towards the 30% Local Resident targeted hiring.

(c) Apprentices must be employed on each project in accordance with the requirements mandated by Section 1777.5 of the California Labor Code. The Parties agree that City residents in the Tier 1 or Tier 2 zip code areas, as well as Transitional Workers, will perform 50% of all apprenticeship hours worked on the Project.

An apprentice who begins his/her period of apprenticeship as a City resident in the Tier 1 or Tier 2 zip code areas, or an apprentice

Transitional Worker, will retain that status for the entire apprenticeship, regardless of any changes in the apprentice's residence provided the Unions submit to BCA the necessary identifying information to enable the tracking of such apprentices, if requested by BCA.

(d) The C/S/Es shall coordinate with their designated Jobs Coordinator to document their compliance efforts through the utilization of the Craft Request Form, hiring hall procedures, the resources of organizations listed in BCA's Targeted Hiring Guidelines for Contractors, or any other organization/agency that can assist the C/S/E in meeting this requirement. The provisions to address the non-attainment of the targeted hiring participation and/or apprenticeship hiring participation levels on a Project are addressed in the Policy.

(2) The employer retains authority in making individual hiring decisions.

(3) Hours worked by residents of states other than California shall not be included in calculation of total hours of Project work for purposes of the percentage requirements set forth above.

(4) The above referenced targeted hiring shall apply to FHWA projects in accord with the policies and conditions under which the FHWA funds are received from the U.S. Department of Transportation.

7.7 The Transitional Workers may be referred to the Unions from the Jobs Coordinator or Employer. The Jobs Coordinator or Employer shall pre-screen and/or pre-

qualify any applicant prior to referral to the Unions. Drug screening will be a prerequisite to employment. The following criteria will be used to identify the Transitional Worker, with first priority given to Group 1:

(1) Satisfies one of the following criteria:

a. Being a veteran;

b. Having a documented history of involvement with the justice system;

c. Being homeless; or

(2) Is an LA/OCBTC approved MC3 pre-apprenticeship program graduate

OR

Faces at least two of the following barriers to employment:

a. Having a household income below 50% of the Los Angeles County's median annual household income;

b. Emancipated from the foster care system;

c. Receiving public assistance;

d. Lacking a GED or high school diploma;

e. Being an apprentice with less than 15% of the apprentice hours required to graduate to journey level in a program as described in Section 1.3;

f. Being a custodial single parent;

g. Suffering from long-term unemployment, as described in Section 1.20;

To qualify under this section, the Jobs Coordinator shall verify and certify that the individual's primary place of residence is within the City and that such individual

satisfies the criteria set forth above.

7.8 The C/S/Es and the Unions recognize a desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The C/S/Es and Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (hereinafter "Center") and the Center's "Helmets to Hardhats" program to serve as a resource for preliminary orientation, assessment of construction aptitude, referral to apprenticeship programs or hiring halls, counseling and mentoring, support network, employment opportunities and other needs as identified by the Parties.

7.9 The Unions and C/S/Es agree to coordinate with the Center to create and maintain an integrated database of veterans interested in working on a Project and of apprenticeship and employment opportunities for a Project. To the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

7.10 The C/S/Es shall use the Craft Request Form (See Attachment C) and the procedures written therein to request any and all workers from Unions with a concurrent transmittal of such request to the Jobs Coordinator, including workers qualified as Local Residents, Transitional Workers, and/or general dispatch.

(1) When Local Residents and/or Transitional Workers are requested by the C/S/Es, the Unions will refer such workers regardless of their place in the Unions' hiring halls' list and normal referral procedures.

(2) In the event that a C/S/E, having not achieved its targeted hiring participation levels, requests a Local Resident and/or Transitional Worker from the Union hiring facility, and is referred a worker who is not a Local Resident and/or Transitional Worker, the C/S/E is under no obligation to hire the referred worker for the Project work and shall notify the Union hiring facility and the Jobs Coordinator.

(3) The C/S/Es, Unions and Jobs Coordinator agree to maintain copies of all Craft Request Forms used on the Project submitted or received including transmission verification reports that are date/time imprinted. All Craft Request Forms and transmission verification reports shall be available for inspection and copies provided, upon request by the City representative as described in Article XI of this Agreement.

7.11 Apprentices

(1) The Parties recognize the need to maintain continuing support of the programs designed to develop adequate numbers of competent workers in the construction industry, the obligation to capitalize on the availability of the City's local work force, and the opportunities to provide continuing work for Projects covered by this Agreement. To these ends, the Parties shall facilitate, encourage, and assist Local Residents and/or Transitional Workers to commence and progress in Labor/Management apprenticeship and/or training programs in the construction industry leading to participation in such apprenticeship programs. The City, Jobs Coordinator, Work Source Centers, other non-profit entities, organizations and the Unions, will work

cooperatively to identify, or establish and maintain effective programs and procedures for persons interested in entering the construction industry and which will help prepare them for the formal joint Labor/Management apprenticeship programs maintained by the signatory unions.

(2) Unions shall track retention of Apprentices hired through this program for so long as those Apprentices participate in a joint labor/management apprenticeship program. The DPW shall provide a list of all Apprentices who have worked on City of Los Angeles PLA projects to the apprenticeship coordinators of the signatory unions on a quarterly basis. In turn, the signatory unions shall collect and compile information on the retention of these Apprentices and submit this information to the DPW on a quarterly basis. The DPW will use the information provided to generate a quarterly report on retention of Apprentices on the City's PLA projects.

(3) All apprentices shall work under the direct supervision of a journeyman from the trade in which the apprentice is indentured. A journeyman shall be defined as set forth in the California Code of Regulations, Title 8 [apprenticeship] section 205, which defines a journeyman as a person who has either completed an accredited apprenticeship in his or her craft, or has completed the equivalent of an apprenticeship in length and content of work experience and all other requirements in the craft which has workers classified as journeyman in the apprenticeable occupation. Should a question arise as to a journeyman's qualification under this subsection, the

C/S/E shall provide adequate proof evidencing the worker's qualification as a journeyman.

ARTICLE VIII

WAGES AND BENEFITS

8.1 Wages.

All employees covered by this Agreement shall be classified in accordance with work performed and paid the hourly wage rates for those classifications in compliance with the applicable prevailing wage rate determination established pursuant to the California Labor Code by the Department of Industrial Relations or as established by the US DOL if applicable. If a prevailing rate increases during the term of this Agreement under State law or Federal law, the Contractor shall pay the rate as of its effective date under the applicable law. The C/S/Es directly signatory to one or more of the MLAs are required to pay all wages set forth in those MLAs without reference to the forgoing. If the prevailing wage laws are repealed during the term of this Agreement, the contractor shall pay the wage rates established under the MLAs, except as otherwise provided in this Agreement.

8.2 Benefits.

(1) All C/S/Es not signatory to the established Labor/Management Trust Fund agreements, as specified in the MLAs for the craft workers in their employ, shall sign a "Subscription Agreement" with the appropriate Labor/Management Trust Fund covering the work performed under this agreement.

(2) All C/S/Es shall pay contributions to the established employee benefit funds on behalf of all employees performing Project work under this Agreement in the amounts designated in the appropriate MLA and make all employee-authorized deductions in the amounts designated in the appropriate MLA; provided, however, that such contributions shall not exceed the contribution amounts set forth in the applicable prevailing wage determination. The C/S/Es directly Signatory to one or more of the MLAs are required to make all contributions set forth in those MLAs without reference to the forgoing. Bona fide jointly-trusteed benefit plans or authorized employee deductions programs established or negotiated under the applicable MLA or by the Parties to this Agreement during the life of this Agreement may be added, provided that the contributions do not exceed the amounts set forth in the applicable prevailing wage determination.

(3) The C/S/E adopts and agrees to be bound by the written terms of the applicable, legally established, trust agreement(s) specifying the detailed basis on which payments are to be made into, and benefits paid out of, such trust funds for its employees. The C/S/E authorizes the Parties to such trust funds to appoint trustees and successors' trustees to administer the trust funds and hereby ratifies and accepts the trustees so appointed as if made by the C/S/E.

ARTICLE IX

EMPLOYEE GRIEVANCE PROCEDURE

9.1 Should a grievance arise regarding the imposition of discipline of an employee, or the dismissal of an employee, working on Project work, all such grievance(s) shall be processed, exclusively, under the grievance procedure contained in the applicable MLA for the craft Union representing such employee(s) and not under the provisions of the Grievance Arbitration provisions of Article XIII.

9.2 The C/S/Es shall not discipline or dismiss its employees except for good cause.

ARTICLE X

DEPARTMENT POLICIES AND PROCEDURES

10.1 All construction contracts identified by the DPW as part of the Projects shall include the following provisions. Such provisions include, but are not limited to:

(1) All persons who perform labor in the execution of a construction contract shall be paid the prevailing rate of wages applicable to the classification as provided in Article III, Section 377 of the Los Angeles City Charter.

(2) All C/S/Es shall provide information concerning their experience, financial qualifications, including proof of a current State Contractor's License, Business Tax Registration Certificate, and ability to perform said contract or subcontract.

10.2 In addition to the above requirements, the C/S/Es and Unions understand and agree that all construction contracts shall be awarded in accordance with other applicable provisions of the Los Angeles City Charter ("Charter") (effective July 1,

2000), and the Los Angeles Administrative Code ("Administrative Code") (and any future amendments applicable thereto), including, but not limited to:

(1) Los Angeles City Charter Article III, Section 371 (award of construction contracts to the lowest responsible bidder);

(2) Administrative Code Sections, 10.8-1 0.13 (prohibition of discrimination); and Mayor's Executive Directive No. 2001-26 (City of Los Angeles Minority, Women, and Other Business Enterprise Program).

ARTICLE XI

COMPLIANCE

11.1 It shall be the responsibility of the C/S/Es and Unions to investigate and monitor compliance with the provisions of the Agreement contained in Article VIII (Wages and Benefits). The Board shall appoint the BCA or its designee to investigate and monitor compliance with Article VIII, the applicable provisions of the Charter and the Administrative Code, including, but not limited to, the prevailing wage requirements of the Charter, Local Residents, and Transitional Worker hiring compliance and the Policy, and the affirmative action provisions of the Administrative Code, and to recommend to the Board or designee enforcement measures to ensure the C/S/E's compliance with the general conditions of a construction contract and the Policy. At the conclusion of any six-month period, the Parties to the Agreement shall report to the Board with a status update on the Agreement with regard to that Project, including a description of any obstacles or barriers faced. The provisions of this Article shall not substitute for or preclude any

employee or Union from filing a grievance for any violation of Article VIII under the provisions of the Grievance Arbitration Procedure provisions of Article XIII.

11.2 Each C/S/E shall cooperate fully and promptly with any inquiry or investigation the City or its designated representatives deems necessary in order to monitor compliance with the provisions in this Agreement and the Policy.

ARTICLE XII

JOINT ADMINISTRATIVE COMMITTEE

12.1 The Parties to this Agreement may establish an eight (8) person Joint Administrative Committee (JAC). This JAC shall be comprised of one (1) representative selected by the Board; one (1) representative of the City Inspector of Public Works; one (1) representative of the City Engineer; one (1) representative of the prime contractor, and four (4) representatives of the signatory Unions to be appointed by the Trades Council, to be chaired jointly by a representative of the City Inspector of Public Works and the Council. Each representative shall designate an alternate who shall serve in his or her absence.

12.2 The JAC shall meet at the call of either of the joint chairs to discuss the implementation and administration of this Agreement, the progress of the Project, general labor management problems that may arise, and any other matters consistent with this Agreement. A unanimous decision of the JAC shall be final and binding upon all Parties. However, the JAC shall have no authority to make determinations upon or to decide grievances arising under this Agreement.

12.3 A quorum will consist of at least two (2) City and two (2) signatory union

representatives. For voting purposes, only an equal number of City and signatory union representatives present may constitute a voting quorum.

ARTICLE XIII

GRIEVANCE ARBITRATION PROCEDURE

13.1 The Parties hereby agree that all grievances and disputes that may arise concerning the meaning, application or the interpretation of the terms of this Agreement, other than disputes arising from conduct described in Sections 4.1 and 4.2, Article IX (Employee Grievance Procedure) and Sections 14.1, 14.2, 14.3 and 14.4 shall be settled in accordance with the following procedures set out herein. Grieving parties are encouraged to meet as soon as possible and try to resolve the dispute. However, if a resolution cannot be reached, the following procedure shall be used.

13.2 Grievances and disputes shall be settled according to the following procedures:

Step 1: The business representative of the local Union involved shall first attempt to settle the matter by oral discussion with the particular C/S/E's representative no later than five (5) working days after the Union submitting the grievance first became aware of, or by the use of reasonable diligence should have been aware of, the occurrence first giving rise to the dispute or grievance. If the matter is not resolved with the C/S/E's representative within five (5) working days after the oral discussion with said C/S/E's representative, the dispute or grievance shall be reduced to writing by the grieving Union.

Step 2: In the event that the representatives (C/S/E and Union) are unable to resolve

the grievance after its referral to Step 1, either involved party may submit the grievance, within five (5) business days of the Step 1 meeting of the parties to the grievance, to the Joint Administrative Committee (JAC), which shall meet within five (5) business days after such referral (or such longer time as is mutually agreed upon by all representatives of the JAC), to confer in an attempt to resolve the grievance. If the grievance is not resolved by the parties to the grievance within five (5) business days after its referral (or such longer time as is mutually agreed on by all representatives of the JAC) to the JAC, it may be referred within five (5) business days by either party to Step 3 by written notice of the submittal of the grievance to arbitration in accordance with the provisions set forth below.

Step 3: After notice by any party of intent to submit a grievance to arbitration, the Parties shall have five (5) working days to attempt, by mutual agreement, to select as the Arbitrator to hear the dispute, one of the Arbitrators listed under the Expedited Arbitration provisions of Article IV, Section 4.3 of this Agreement. If the Parties are unable to reach such agreement, the first arbitrator from the list, on a rotational basis, shall be the arbitrator to hear the dispute. The decision of the Arbitrator shall not have the authority to alter, amend, add to or delete from the provisions of this Agreement in any way. A failure of any party to attend said hearing shall not delay the hearing of evidence or the issuance of any decision by the Arbitrator. The fees and expenses incurred in arbitration shall be divided equally by the parties (the applicable Union and Contractor) to the arbitration. Should any party seek

confirmation of the Award made by the Arbitrator, the prevailing party shall be entitled to receive its reasonable attorney fees and costs.

13.3 The time limits specified in any step of the Grievance Arbitration Procedure set forth in Section 13.2 may be extended by mutual agreement of the Parties. However, failure to process a grievance, or failure to respond in writing within the time limits provided above, without a request for an extension of time, shall be deemed a waiver of such grievance without prejudice, or without precedent to the processing and/or resolution of like or similar grievances.

13.4 Grievances which are settled directly by the Parties to such grievance shall not be precedent setting.

13.5 The City or its designated representative shall be given advance notification of all proceedings of all actions at Steps 2 and 3 and may observe such proceedings upon request.

ARTICLE XIV

JURISDICTIONAL DISPUTES / PRE-JOB CONFERENCE

14.1 The assignment of work will be solely the responsibility of the C/S/E performing the work involved; and such work assignments will be in accordance with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry (the "Plan") or any successor plan.

14.2 All jurisdictional disputes on this Project, between or among Building and Construction Trades Unions and employers shall be settled and adjusted according to the present Plan established by the Building and Construction Trades

Department or any other plan or method of procedure that may be adopted in the future by the Building and Construction Trades Department. Decisions rendered shall be final, binding and conclusive on the C/S/Es and Unions. A decision shall not award back pay or any other damages for a misassignment of work, nor may any party bring an independent action for back pay or any other damages based upon a decision.

14.3 If a dispute arising under this Article involves the Southwest Regional Council of Carpenters or any of its subordinate bodies, an Arbitrator shall be chosen by the procedures specified in Article V, Section 5, of the Plan from a list composed of John Kagel, Thomas Angelo, Robert Hirsch and Thomas Pagan. The Arbitrator's hearing on the dispute shall be held at the offices of the Council within fourteen (14) days of the selection of the Arbitrator. All other procedures shall be as specified in the Plan.

14.4 No Work Disruption Over Jurisdiction. All jurisdictional disputes shall be resolved without the occurrence of any strike, work stoppage, disruption, or slowdown of any nature and the C/S/E's assignments shall be adhered to until the dispute is resolved. Individuals violating this section shall be subject to immediate discharge.

14.5 Pre-Job Conference. A pre-job conference shall be held with all parties prior to the start of work by the prime contractor for the Covered Project covered by this Agreement. The purpose of the conference will be to, among other things, determine craft manpower needs, schedule of work for the contract and project work rules/owner rules. The subcontractors/owner operators of any tier will be advised in advance of all such conferences and shall participate. The Trades

Council and the BCA's Office of Contract Compliance shall be advised in advance of all such conferences and may participate if they wish. All work assignments shall be disclosed by the C/S/E at a pre-job conference. Any formal jurisdictional dispute raised under Article XIV must be raised at the pre-job conference upon disclosure of the work assignments. If the C/S/E intends to change the work assignment after the pre-job conference or to make an assignment of work not previously known, the C/S/E must notify the appropriate affected craft union(s) prior to the commencement of work. The C/S/E performing all project work that was not previously assigned at the pre-job conference will conduct a separate pre-job conference for such newly assigned work prior to commencing such work.

ARTICLE XV

MANAGEMENT RIGHTS

15.1 The C/S/Es shall retain full and exclusive authority for the management of their operations, as set forth in this Article, unless expressly limited or required by the other Articles of this Agreement on an MLA. This includes, but is not limited to, the right to direct their working force and to establish coordinated working hours and starting times.

15.2 There shall be no limit on production by workers or restrictions on the full use of tools or equipment. Craftsmen using tools shall perform any of the work of the trades and shall work under the direction of the craft foremen. There shall be no restrictions on efficient use of manpower other than as may be required by safety regulations. The C/S/Es may utilize the most efficient methods or techniques of

construction, tools or other labor-saving devices to accomplish the work. Restrictive practices not a part of the terms and conditions of this Agreement will not be recognized.

15.3 The C/S/Es shall be the sole judge of the number and classifications of employees required to perform work subject to this Agreement. The C/S/Es shall have the absolute right to hire, promote, suspend, discharge or lay off employees at their discretion and to reject any applicant for employment, subject to the provisions of the respective craft collective bargaining agreement between the particular C/S/E and Union and pursuant to this Agreement.

15.4 Nothing in this Agreement shall be construed to limit the right of any of the C/S/Es to select the lowest bidder they deem qualified for the award of contracts or subcontracts or material, supplies, or equipment purchase orders on the Covered Project. The right of ultimate selection remains solely with the C/S/E in accordance with the construction contract.

15.5 It is recognized that certain materials, equipment and systems of a highly technical and specialized nature will have to be installed at the Covered Project. The nature of the materials or the nature of the equipment and systems, together with requirements of manufacturer's warranty, may dictate that it will be pre-fabricated, pre-piped, pre-wired and/or installed under the supervision and direction of the DPW, City and/or manufacturer's personnel. The Unions agree that such materials, equipment and systems shall be installed without the occurrence of any conduct described in Sections 4.1 or 4.2.

ARTICLE XVI

SAFETY, PROTECTION OF PERSON AND PROPERTY

16.1 It shall be the responsibility of each C/S/E to ensure safe working conditions and employee compliance with any safety rules contained herein or established by the DPW, City, the state and the C/S/E. It is understood that the employees have an individual obligation to use diligent care to perform their work in safe manner and to protect themselves and the property of the C/S/E, the City and the DPW.

16.2 Employees shall be bound by the safety, security and visitor rules established by the C/S/E and the DPW. These rules will be published and posted in conspicuous places throughout the work site. An employee's failure to satisfy his or her obligations under this Section will subject him or her to discipline, including discharge.

16.3 The Parties acknowledge that the City and the C/S/E have a policy, which prohibits the use, sale, transfer, purchase and/or possession of a controlled substance, alcohol and/or firearms while on the City's premises. Additionally, the C/S/E has a "drug free" work place policy, which prohibits those working on the City's premises from having a level of alcohol in their system, which could indicate impairment, and/or any level of controlled substances (i.e., illegal drugs) in their system.

16.4 To that end, the Parties agree to adopt the Los Angeles/Orange Counties Building and Construction Trades Council Approved Drug and Alcohol Testing Policy, a copy of which is attached hereto as Attachment B which shall be the policy and procedure utilized under this Agreement.

ARTICLE XVII

SAVINGS CLAUSE

17.1 The Parties agree that in the event any article, provision, clause, sentence or work of the Agreement is determined to be illegal or void as being in contravention of any applicable law, by a court of competent jurisdiction, the remainder of this Agreement shall remain in full force and effect. The Parties further agree that if any article, provision, clause, sentence or word of this Agreement is determined to be illegal or void, by a court of competent jurisdiction, the Parties shall substitute, by mutual agreement, in its place and stead, an article, provision, sentence or word which will meet the objections to its validity and which will be in accordance with the intent and purpose of the article, provision, clause, sentence or word in question.

17.2 The Parties also agree that in the event that a decision of a court of competent jurisdiction materially alters the terms of this Agreement such that the intent of the Parties is defeated, then the entire Agreement shall be null and void.

17.3 If a court of competent jurisdiction determines that all or part of the Agreement is invalid and/or enjoins the City or DPW from complying with all or part of its provisions and the Board accordingly determines that the Agreement will not be required as part of an award to a C/S/E, the Unions will no longer be bound by the provisions of Article IV to the extent that such C/S/E is no longer bound. The Unions and their members shall remain bound to Article IV with respect to all other C/S/Es who remain bound to this Agreement, and no action taken by the Unions or their members shall disrupt the work of such C/S/Es.

17.4 The provisions of this Agreement shall not be applicable where prohibited by Presidential Executive Order, Federal or State law, or where the application would be inconsistent with terms and conditions of a grant or a contract with the agency of the United States, State of California, or the instruction of an authorized representative of any of these agencies with respect to any grant or contract.

ARTICLE XVIII

STEWARD

18.1 Each Union shall have the right to designate a working craft employee as steward for each C/S/E employing such craft on the Project. Such designated steward shall be a qualified workman assigned to a crew and shall perform the work of the craft. The steward shall not perform supervisory duties. Under no circumstances shall there be nonworking stewards. Stewards shall be permitted a reasonable amount of time during working hours to perform applicable Union duties related to the work being performed by the craft employees of his/her C/S/E and not to the work being performed by other C/S/Es or their employees.

18.2 Authorized representatives of the Union(s) shall have access to the Covered Project, provided that such representatives fully comply with posted visitor, security, and safety rules and the environmental compliance requirements of the Covered Project, provided that they do not unnecessarily interfere with the employees or cause them to neglect their work. The Contractor recognizes the right of access set forth in this Section and such access will not be unreasonably withheld from an authorized representative of the Union.

ARTICLE XIX

TERM

19.1 This Agreement shall commence upon execution by all Parties (the City of Los Angeles Department of Public Works and the Los Angeles/Orange Counties Building and Construction Trades Council and the Craft Unions signatory to this Agreement) and shall continue in full force and effect from the date of execution by all Parties for a period of ten years. During the term of this Agreement, upon request by either Party or by mutual consent, the Parties will meet to discuss the application of, and their experience with, this Agreement. As a result of any such meeting, the Parties may, but shall not be obligated to, mutually agree to amendments or modification of this Agreement.

19.2 The Agreement shall continue in full force and effect for each covered Project until project acceptance by the Board. Either party desiring to renew, extend or to negotiate changes to this Agreement upon expiration, shall make such intention known to the other party by written notice thereof not less than six (6) months prior to the expiration of this Agreement.

19.3 Any covered Project awarded during the term of this Agreement shall continue to be covered hereunder, until completion of the Project, notwithstanding the expiration date of this Agreement.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement on the day and year written below. THE UNION OFFICIALS signing this Agreement warrant and represent that they are authorized to collectively bargain on behalf of the organizations whom they represent and the members of such organizations.

COMPANY LETTERHEAD

Date: _____

Mr. John L. Reamer, Jr., Inspector of Public Works
City of Los Angeles
Bureau of Contract Administration
1149 S. Broadway, Suite 300
Los Angeles, CA 90015

PROJECT NAME: _____

Dear Mr. Reamer:

This is to certify that the undersigned Contractor/Subcontractor/Employer (C/S/E) has read and understood the Project Labor Agreement (PLA) entered into by and between the City of Los Angeles Department of Public Works (DPW) and the Los Angeles/Orange Counties Building and Construction Trades Councils and Unions dated _____ and the DPW Public Works Infrastructure Stabilization Policy (Policy). The undersigned C/S/E hereby agrees to comply with all of the terms and conditions of the aforementioned duly signed PLA and DPW Policy.

The undersigned C/S/E acknowledges that compliance with the provisions relating to Local Hire and Transitional Workers (Articles 7.3, 7.6, 7.7 & 7.10), Workforce Referral and Development (Articles 7.1, 7.4, 7.5, 7.8 & 7.10), and Apprenticeship Participation (Article 7.7 & 7.11) is of particular importance.

It is understood that the signing of the Letter of Assent shall be as binding on the undersigned C/S/E as though the C/S/E had signed the DPW PLA and shall require all its subcontractors, of whatever tier, to become similarly bound for all work within the scope of this PLA and the DPW Policy.

This further certifies (per Articles 3, 11.2 & the Policy) that the undersigned C/S/E understands that submission of this Letter of Assent and employment hiring plan will be required prior to the commencement of any work in relation to this contract. Non-submittal of this letter and all required hiring plan documentation may preclude the C/S/E from being approved to work on this project.

This Letter of Assent shall become effective and binding upon the undersigned C/S/E the _____ day of _____, _____, and shall remain in full force and effect until the completion of the above stated project.

Sincerely,
(Name of Construction Company)

By: _____
(Name and Title of Authorized Executive)

BUILDING AND CONSTRUCTION TRADES COUNCIL

APPROVED

DRUG AND ALCOHOL TESTING POLICY

(rev. December 2019)

The Parties recognize the problems which drug and alcohol abuse have created in the construction industry and the need to develop drug and alcohol abuse prevention programs. Accordingly, the Parties agree that in order to enhance the safety of the workplace and to maintain a drug and alcohol-free work environment, individual Employers may require applicants or employees to undergo drug and alcohol testing.

1. It is understood that the use, possession, transfer or sale of illegal drugs, narcotics, or other unlawful substances, as well as being under the influence of alcohol and the possession or consuming alcohol is absolutely prohibited while employees are on the Employer's job premises or while working on any jobsite in connection with work performed under the Project Labor Agreement ("PLA").

2. No Employer may implement a drug testing program which does not conform in all respects to the provisions of this Policy.

3. No Employer may implement drug testing at any jobsite unless written notice is given to the Union setting forth the location of the jobsite, a description of the project under construction, and the name and telephone number of the Project Supervisor. Said notice shall be addressed to the office of each Union signing the CWA. Said notice shall be sent by email or by registered mail before the implementation of drug testing. Failure to give such notice shall make any drug testing engaged in by the Employer a violation of the CWA, and the Employer may not implement any form of drug testing at such jobsite for the following six months.

4. An Employer who elects to implement drug testing pursuant to this Agreement shall require all employees on the Project to be tested. With respect to individuals who become employed on the Project subsequent to the proper implementation of a valid drug testing program, such test shall be administered upon the commencement of employment on the project, whether by referral from a Union Dispatch Office, transfer from another project, or another method. Individuals who were employed on the project prior to the proper implementation of a valid drug testing program may only be subjected to testing for the reasons set forth in paragraphs 5(g)(l) through 5(g)(3) and paragraphs 6(a) through 6(e) of this Policy. Refusal to undergo such testing shall be considered sufficient grounds to deny employment on the project.

5. The following procedure shall apply to all drug testing:

a. The Employer may request urine samples only. The applicant or employee shall not be observed when the urine specimen is given. An applicant or employee, at his or her sole option, shall, upon request, receive a blood test in lieu of a urine test. No employee of the Employer shall draw blood from a bargaining unit employee, touch or handle urine specimens, or in any way become involved in the chain of custody of urine or blood specimens. A Union Business Representative, subject to the approval of the individual applicant or employee, shall be permitted to accompany the applicant or employee to the collection facility to observe the collection, bottling, and sealing of the specimen.

b. An employer may request an applicant to perform an alcohol breathalyzer test, at a certified laboratory only and cutoff levels shall be those mandated by applicable state or federal law.

c. The testing shall be done by a laboratory approved by the Substance Abuse & Mental Health Services Administration (SAMHSA), which is chosen by the Employer and the Union.

d. An initial test shall be performed using the Enzyme Multiplied Immunoassay Technique (EMIT). In the event a question or positive result arises from the initial test, a confirmation test must be utilized before action can be taken against the applicant or employee. The confirmation test will be by Gas Chromatography/Mass Spectrometry (GC/MS). Cutoff levels for both the initial test and confirmation test will be those established by SAMHSA. Should these SAMHSA levels be changed during the course of this Agreement or new testing procedures are approved, then these new regulations will be deemed as part of this existing Agreement. Confirmed positive samples will be retained by the testing laboratory in secured long-term frozen storage for a minimum of one year. Handling and transportation of each sample must be documented through strict chain of custody procedures.

e. In the event of a confirmed positive test result the applicant or employee may request, within forty-eight (48) hours, a sample of his/her specimen from the testing laboratory for purposes of a second test to be performed at a second laboratory, designated by the Union and approved by SAMHSA. The retest must be performed within ten (10) days of the request. Chain of custody for this sample shall be maintained by the Employer between the original testing laboratory and the Union's designated laboratory. Retesting shall be performed at the applicant's or employee's expense. In the event of conflicting test results the Employer may require a third test.

f. If, as a result of the above testing procedure, it is determined that an applicant or employee has tested positive, this shall be considered sufficient grounds to

deny the applicant or employee his/her employment on the project.

g. No individual who tests negative for drugs pursuant to the above procedure and becomes employed on the project shall again be subjected to drug testing with the following exceptions:

1. Employees who are involved in industrial accidents resulting in damage to plant, property or equipment or injury to him/her or others may be tested for drug or alcohol pursuant to the procedures stated hereinabove.

2. The Employer may test employees following thirty (30) days advance written notice to the employee(s) to be tested and to the applicable Union. Notice to the applicable Union shall be as set forth in paragraph 3 above and such testing shall be pursuant to the procedures stated hereinabove.

3. The Employer may test an employee where the Employer has reasonable cause to believe that the employee is impaired from performing his/her job. Reasonable cause shall be defined as being aberrant or unusual behavior, the type of which is a recognized and accepted symptom of impairment (i.e., slurred speech, unusual lack of muscular coordination, etc.). Such behavior must be actually observed by at least two persons, one of whom shall be a supervisor who has been trained to recognize the symptoms of drug abuse or impairment and the other of whom shall be the Job Steward. If the Job Steward is unavailable or there is no Job Steward on the project the other person shall be a member of the applicable Union's bargaining unit. Testing shall be pursuant to the procedures stated hereinabove. Employees who are tested pursuant to the exceptions set forth in this paragraph and who test positive will be removed from the Employer's payroll.

h. Applicants or employees who do not test positive shall be paid for all time lost while undergoing drug testing. Payment shall be at the applicable wage and benefit rates set forth in the applicable Union's Master Labor Agreement. Applicants who have been dispatched from the Union and who are not put to work pending the results of a test will be paid waiting time until such time as they are put to work. It is understood that an applicant must pass the test as a condition of employment. Applicants who are put to work pending the results of a test will be considered probationary employees.

6. The Employers will be allowed to conduct periodic jobsite drug testing on the Project under the following conditions:

a. The entire jobsite must be tested, including any employee or subcontractor's employee who worked on that project three (3) working days before or after the date of the test;

b. Jobsite testing cannot commence sooner than fifteen (15) days after start of the work on the project;

c. Prior to start of periodic testing, a Business Representative will be allowed to conduct an educational period on company time to explain periodic jobsite testing program to affected employees;

d. Testing shall be conducted by a SAMHSA certified laboratory, pursuant to the provisions set forth in paragraph 5 hereinabove.

e. Only two (2) periodic tests may be performed in a twelve (12) month period.

7. It is understood that the unsafe use of prescribed medication, or where the use of prescribed medication impairs the employee's ability to perform work, is a basis for the Employer to remove the employee from the jobsite.

8. Any grievance or dispute which may arise out of the application of this Agreement shall be subject to the grievance and arbitration procedures set forth in the CWA.

9. The establishment or operation of this Policy shall not curtail any right of any employee found in any law, rule or regulation. Should any part of this Agreement be found unlawful by a court of competent jurisdiction or a public agency having jurisdiction over the parties, the remaining portions of the Agreement shall be unaffected, and the parties shall enter negotiations to replace the affected provision.

10. Present employees, if tested positive, shall have the prerogative for rehabilitation program at the employee's expense. When such program has been successfully completed the Employer shall not discriminate in any way against the employee. If work for which the employee is qualified exists, he/she shall be reinstated.

11. The Employer agrees that results of urine and blood tests performed hereunder will be considered medical records held confidential to the extent permitted or required by law. Such records shall not be released to any persons or entities other than designated Employer representatives and the applicable Union. Such release to the applicable Union shall only be allowed upon the signing of a written release and the information contained therein shall not be used to discourage the employment of the individual applicant or employee on any subsequent occasion.

12. The Employer shall indemnify and hold the Union harmless against any and all claims, demands, suits, or liabilities that may arise out of the application of this Agreement and/or any program permitted hereunder.

13. Employees who seek voluntary assistance for substance abuse may not be disciplined for seeking such assistance. Requests from employees for such assistance shall remain confidential and shall not be revealed to other employees or management personnel without the employee's consent. Employees enrolled in substance abuse programs will be subject to all Employer rules, regulations and job performance standards with the understanding that an employee enrolled in such a program is receiving

treatment for an illness.

14. The parties agree to develop and implement a drug abuse prevention and testing program for all apprentices entering the industry.

15. This Memorandum of Understanding shall constitute the only Agreement in effect between the parties concerning drug and alcohol abuse, prevention and testing. Any modifications thereto must be accomplished pursuant to collective bargaining negotiations between the parties.

APPENDIX A: SPECIMEN REPORTING CRITERIA

Initial Test Analyte	Initial Test Cutoff [1]	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Marijuana metabolites (THCA)[2]	50 ng/ml [3]	THCA	15 ng/ml
Cocaine metabolite (Benzoylecgonine)	150 ng/ml [3]	Benzoylecgonine	100 ng/ml
Codeine/ Morphine	2000 ng/ml	Codeine Morphine	2000 ng/ml 2000 ng/ml
Hydrocodone/ Hydromorphone	300 ng/ml	Hydrocodone Hydromorphone	100 ng/ml 100 ng/ml
Alcohol	0.02%	Ethanol	0.02%
Oxycodone/ Oxymorphone	100 ng/ml	Oxycodone Oxymorphone	100 ng/ml 100 ng/ml
6-Acetylmorphine	10 ng/ml	6-Acetylmorphine	10 ng/ml
Phencyclidine	25 ng/ml	Phencyclidine	25 ng/ml
Amphetamine/ Methamphetamine	500 ng/ml	Amphetamine Methamphetamine	250 ng/ml 250 ng/ml

[1] For grouped analytes (i.e., two or more analytes that are in the same drug class and have the same initial test cutoff):

Immunoassay: The test must be calibrated with one analyte from the group identified as the target analyte. The cross-reactivity of the immunoassay to the other analyte(s) within the group must be 80 percent or greater; if not, separate immunoassays must be used for the analytes within the group.

Alternate technology: Either one analyte or all analytes from the group must be used for calibration, depending on the technology. At least one analyte within the group must have a concentration equal to or greater than the initial test cutoff or, alternatively, the sum of the analytes present (i.e., equal to or greater than the laboratory's validated limit of quantification) must be equal to or greater than the initial test cutoff.

[2] An immunoassay must be calibrated with the target analyte, 9-tetrahydrocannabinoJ-9- carboxylic acid (THCA).

[3] **Alternate technology (THCA and benzoylecgonine):** The confirmatory test cutoff must be used for an alternate technology initial test that is specific for the target analyte (i.e., 15 ng/ml for THCA, 100 ng/ ml for benzoylecgonine).

MDMA[4]/MDA[5]	500 ng/ml	MDMA MDA	250 ng/ml 250 ng/ml
Initial Test Analyte	Initial Test Cutoff	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Barbiturates	300 ng/ml	Barbiturates	200 ng/ml
Benzodiazepines	300 ng/ml	Benzodiazepines	300 ng/ml
Methadone	300 ng/ml	Methadone	100 ng/ml
Methaqualone	300 ng/ml	Methaqualone	300 ng/ml
Propoxyphene	300 ng/ml	Propoxyphene	100 ng/ml

[4] Methylenedioxymethamphetamine (MDMA)
[5] Methylenedioxyamphetamine (MDA)

SIDE LETTER OF AGREEMENT
TESTING POLICY FOR DRUG ABUSE

It is hereby agreed between the parties hereto that an Employer who has otherwise properly implemented drug testing, as set forth in the Testing Policy for Drug Abuse, shall have the right to offer an applicant or employee a "quick" drug screening test. This “quick” screen test shall consist either of the “ICUP” urine screen or similar test or an oral screen test. The applicant or employee shall have the absolute right to select either of the two “quick” screen tests, or to reject both and request a full drug test.

An applicant or employee who selects one of the "quick" screen tests, and who passes the test, shall be put to work immediately. An applicant or employee who fails the "quick" screen test, or who rejects the "quick" screen tests, shall be tested pursuant to the procedures set forth in the Testing Policy for Drug Abuse. The sample used for the "quick" screen test shall be discarded immediately upon conclusion of the test. An applicant or employee shall not be deprived of any rights granted to them by the Testing Policy for Drug Abuse as a result of any occurrence related to the “quick” screen test.

CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
BUREAU OF CONTRACT ADMINISTRATION
REQUEST/VERIFICATION FOR CRAFT EMPLOYEES
(*Project:* _____)

INSTRUCTIONS

To the Contractor:

Please complete and fax this form to the applicable union to request craft workers that fulfill all hiring requirements for the City of Los Angeles project. After faxing your request, call the Local to verify receipt and substantiate their capacity to furnish local, transitional or general dispatch as requested. Contact information for Locals is listed on back of form. Please print your Fax Transmission Verification Report and keep a copy of this request for your records.

To the Union:

Please complete the "Union Use Only" section and fax form back to the requesting contractor. Retain form for your records.

To:	Local	Fax# ( )	Date:
From – Company Name			
Person Sending:		Contact Phone: ( )	

Please provide me with union craft workers per the City of Los Angeles Department of Public Works PLA that fulfills the requirements for this project as defined below:

30% Local Requirement (Union craft employees, including apprentices, who reside in the local metropolitan area zip codes listed below. If unavailable, can be dispatched from any one of the zip codes listed in Attachment).

SEE ATTACHED TIER 1 AND TIER 2 ZIP CODES

10% "Transitional Worker" Requirement (Union craft employees, including apprentices, who live in one of the zip codes listed in Attachment, and are certified to fulfill the "Transitional worker" hiring requirement).

General Dispatch (Union craft employees dispatched per normal dispatch procedures, not including the 30% Local or 10% Transitional Worker requirements)

Employee Name	Address	Zip Code

Craft Employees Requested						
Job/Craft Description	Journeyman / Apprenticeship Level	Number(s) Requested			Report Date	Report Time
		30% Local	10% Transitional	General Dispatch		

Total Workers Requested_____

Please have worker(s) report to the following address indicated below:

Site Address: _____ **Report to (On-Site Contact):** _____

On-Site Tel.#: ( ) **Fax: ( )** _____

Comments or special requirements:

Union Use Only

(Fax the Completed Form Back to Contractor)

Department of Public Works

Public Works Infrastructure Stabilization Policy

Project Labor Agreement

2020 - 2030

Department of Public Works

RESOLUTION NO. _____

RESOLUTION ADOPTING A POLICY REGARDING PUBLIC WORKS INFRASTRUCTURE STABLIZATION

WHEREAS, the Department of Public Works continues to lead the way to advance, achieve and maintain the City's vital infrastructure facilities, resources and services through its Capital Improvement Program (CIP) that serve over four million residents covering a geographic area of 465 square miles; and

WHEREAS, the Department of Public Works is responsible for the engineering, design and construction of municipal facilities affecting the public right of way and public properties as well as the maintenance and repair of the City's streets, street lighting systems, medians, embankments, roadways and bridges that provide safety for pedestrians, vehicles and the safe flow of goods and services throughout the City; and

WHEREAS, the Department of Public Works is responsible for the collection, treatment, disposal and recycling of sewage, urban runoff, refuse and household hazardous waste; and

WHEREAS, the Department of Public Works protects the City and public interest by ensuring that all public works projects are constructed and administered in accordance with the plans, specifications, contract provisions, and necessary safety provisions in the project sites; and

WHEREAS, the successful completion of covered projects is also of utmost importance to the Department of Public Works and the general public in the City and as such the Project Labor Agreement will facilitate the prompt, safe and on-time delivery of projects within the Department of Public Works' CIP; and

WHEREAS, the work to be done will require maximum cooperation from the many parties who will be involved to mitigate the negative impact to the public right of way, minimize the disruptions to City residents that affect quality of life and ensure timely completion of public work projects; and

WHEREAS, it is recognized that projects of a certain magnitude with multiple contractors and bargaining units on the job site at the same time over an extended period of time create the potential for work disruption without an overriding commitment to maintain continuity of work; and

WHEREAS, the interests of the general public, the City, the unions, contractors, subcontractors, employers and workers will be best served when construction work proceeds in an orderly manner free of disruption caused by strikes, sympathy strikes, work stoppages, picketing, lockouts, slowdowns or other interferences; and

WHEREAS, the PLA will provide a pool of skilled craft workers to help ensure the delivery of quality and safe projects; and

WHEREAS, the Department of Public Works (DPW) has adopted a departmental Project Labor Agreement (PLA) which will provide construction employment and training opportunities in ways calculated to mitigate the harms caused by geographically concentrated poverty, unemployment and underemployment in concentrated poverty neighborhoods; and

WHEREAS, employment of City residents in high unemployment and/or Concentrated Poverty Neighborhood areas affects the City as a whole and positively impacts the social wellbeing of residents and to that end, the City has taken action to promote City residents receiving employment opportunities at City public work projects; and

WHEREAS, increasing access to employment opportunities with prevailing wages is one way for the City to directly combat poverty and stimulate economic reinvestment; and

WHEREAS, the DPW-PLA is not intended to have an adverse impact on the policy of the City to maximize business opportunities for minority, women and other business enterprises in City contracts; and

WHEREAS, the DPW-PLA reflects a commitment by all parties to the diversity in the workforce hiring that reflect levels of minority, women and other worker utilization at levels which are representative of the relevant workforce of these groups in the Greater Los Angeles Area as determined by the U.S. Census Bureau; and

WHEREAS, the DPW-PLA is in accordance with City policies to ensure discrimination-free, diverse and equitable workforce hiring practices; and

WHEREAS, the DPW-PLA will help advance the skills of the local labor pool, especially the youth, by maximizing opportunities to be indentured into federal- and/or state-certified joint labor/management apprenticeship programs; and

WHEREAS, the Department of Public Works through the PLA, seeks to create career opportunities through apprenticeship participation, retention, and graduation; and

WHEREAS, the Board of Public Works wishes to adopt a policy to promote the above objectives and protect the proprietary interests described above.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES, CALIFORNIA,

AS FOLLOWS:

The Department of Public Works (DPW) adopts the following Public Works Infrastructure Stabilization Policy:

SECTION I. DEFINITIONS

1. "Apprentice" means any worker who is indentured in a bona fide Labor/Management construction apprenticeship program, registered and approved by the State of California Department of Industrial Relations, Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, indentured in a bona fide Labor/Management apprenticeship program approved by the US Department of Labor (DOL) and California DAS.

2. "Apprenticeship Program" means any Labor/Management construction apprenticeship program certified and approved by the California DAS or in the case of Projects with federal funding, approved by the US Department of Labor (DOL) and California DAS.

3. "Awarding Authority" means any board or commission of the City, or any employee or officer of the City that is authorized to award or enter into any contract on behalf of the City.

4. "Board" means the City of Los Angeles Board of Public Works.

5. "Bureau of Contract Administration (BCA)" means the designated bureau within the City's DPW responsible for administering this Agreement.

6. "City" means the City of Los Angeles, a municipal corporation, and all City Awarding Authorities.

7. "Construction Contract" means a City contract which has been certified by the City Controller, awarded by the Board, and is necessary to complete the DPW Project.

8. "Contractor/Subcontractor/Employer (C/S/E)" means any individual firm, partnership, owner operator, or corporation, or combination thereof, including joint ventures, which is an independent business enterprise and which has entered into a contract with the DPW or any of its contractors or subcontractors/owner operators of any tier, with respect to the construction of any part of a Covered Project.

9. "Core Worker" means a verifiable member of a C/S/E's core workforce for the purpose of the DPW-PLA and this Policy if the worker's name appears on the C/S/E's active payroll for 60 of 100 working days immediately prior to award of the construction contract and meets all standards required by applicable local, state or federal law or regulation.

10. "Covered Project(s) or Project" means a project or projects which have been included within the Public Infrastructure Program Series (PIPS) and covered by the DPW-PLA or so designated by the Board of Public Works. The Board may identify additional projects that are appropriate for coverage by the DPW-PLA and the Policy by Board resolution.

11. "Craft Request Form" means the document through which a C/S/E shall request workers from the Union and/or Jobs Coordinator, in the form set forth in the DPW-PLA and/or Policy.

12. "Transitional Worker" means an individual whose primary place of residence is within the City of Los Angeles and who prior to commencing work on a Project has been certified as

satisfying at least one of the following criteria: (1) having Veteran status; having a documented history of involvement with the criminal justice system; or being homeless. If the Jobs Coordinator or Employer is not able to identify anyone using criteria (1), criteria (2) may be used. Criteria (2) is an individual that is either a graduate of an LA/OCBTC approved MC3 pre-apprenticeship program or facing two of the following barriers to employment: having a household income less than 50% of the Los Angeles County's median annual household income, receiving public assistance, lacking a GED or high school diploma, being a custodial single parent, suffering from long-term unemployment, being emancipated from the foster care system, or being an apprentice with less than 15% of the apprenticeship hours required to graduate to journey level in a program.

13. "DPW-PLA" means the Project Labor Agreement entered into between the Department of Public Works and Unions, applicable to Covered Projects.

14. "Employment Hiring Plan" (EHP) means a C/S/E's detailed hiring plan in achieving the targeted hiring percentages as described in Article 7 of the DPW-PLA and Policy.

15. "Engineer" means the City Engineer or his/her authorized representative.

16. "FHWA Project" means a DPW Project that is funded in whole or in part by the Federal Highway Administration (FHWA).

17. "Public Infrastructure Program Series List (PIPS) means all projects contained in the adopted PIPS (Attachment E of the DPW-PLA), along with any other projects, as approved by the Board of Public Works, that will operate under the DPW-PLA.

18. "Jobs Coordinator" means the Prime Contractor's designated person, agent or agency that will facilitate the local hire referral process with the C/S/E, Unions and other referral organizations.

19. "LA/OCBTC" (Trades Council) means the Los Angeles /Orange Counties Building and Construction Trades Council.

20. "Letter of Assent" means the document that each C/S/E (of any tier) must sign and submit to the City's Inspector of Public Works, which formally binds them to adherence to all the forms, requirements and conditions of the DPW-PLA and Policy.

21. "Liquidated Damages" means disputed funds withheld from the Prime Contractor until they are found to be in compliance, the contract is terminated, or the Covered Project is completed.

22. "Local Resident" means an individual whose primary residence is within Tier 1 or 2 zip code areas. The following are acceptable forms of proof of residency: (i) Copy of a current residential lease with the eligible household member's name listed on it; or (ii) Valid driver's license or State ID card with a City of Los Angeles address; or (iii) Medical card with current address; or (iv) Utility bill with eligible household member's name on it; or (v) Voter's registration card; or (vi) Other proof of residence address deemed acceptable by BCA.

23. “Long-Term Unemployment” as defined by the Bureau of Labor Statistics means being jobless for 27 weeks or more, or as defined.

24. “Policy” means the DPW Public Works Infrastructure Stabilization Policy.

25. “Project Work” means construction work performed as part of a Covered Project.

26. “Prime Contractor” means any individual firm, partnership, owner-operator, or corporation, or combination thereof, including joint-ventures, that is an independent business enterprise and that has entered into a Construction Contract.

27. “Reporting Period” means the BCA’s indicated reporting period for measuring the targeted hiring efforts of the C/S/E(s). These reporting periods shall be at the BCA’s determination of 10%, 30%, 50%, 70% and 90% construction completion phases.

28. “Tier 1” means the zip codes within the City, identified in Article 7.4 of the DPW-PLA, having at least 2 census tracts (or portion thereof) in which the median household income is less than 50% of the County of Los Angeles’ median annual household income, and/or where the unemployment rate exceeds 200% of the County of Los Angeles’ unemployment rate as reported by the most recent available U.S. Census Bureau data.

29. “Tier 2” means zip codes within the City, identified in Article 7.5 of the DPW-PLA, having at least 2 census tracts (or portion thereof) in which the median household income is less than the County of Los Angeles’ median annual household income, and/or where the unemployment rate exceeds 100% of the County of Los Angeles’ unemployment rate as reported by the most recent U.S. Census Bureau data.

30. “Underemployment” means a situation in which a worker (i) is employed only part-time when one needs and desires full-time employment, and/or (ii) is inadequately employed at a low-paying job that requires less skill or training than one possesses.

31. “Unemployment” means, in accordance with the Bureau of Labor Statistics definition, a situation in which a person does not have a job, has actively looked for work in the prior 4 weeks, and is currently available for work and chronic Unemployment means unemployment lasting 27 weeks or longer.

32. “Union(s)” or “Signatory Unions” means the Los Angeles/Orange Counties Building and Construction Trades Council affiliated with the Building & Construction Trades Department (AFL/CIO) Craft International Unions or any other craft labor organization signatory to the DPW-PLA, acting in their own behalf and on behalf of their respective affiliates and member organizations whose names are subscribed in the DPW-PLA and who have through their officers executed the DPW-PLA.

SECTION II. COVERAGE OF PROJECTS

1. Covered Projects: Except as provided otherwise herein, this Policy applies to all projects contained in the Public Infrastructure Programs Series List, awarded by the Board, and covered by the DPW-PLA. The Board may designate additional projects for coverage under the Policy and DPW-PLA based on specific findings that coverage will advance the City's legitimate proprietary and policy interests and promote the public interest in assuring completion of the project in question in a safe and cost-effective manner while minimizing or negating any adverse impact to the public welfare.

2. FHWA Projects: In the event that DPW determines that a project to which this Policy applies is an FHWA project, DPW shall modify or not enforce any aspect of the Policy or DPW-PLA in accordance with a valid and binding instruction from the U.S. Department of Transportation.

SECTION III. IMPLEMENTATION

Prior to bid, DPW staff shall review each Covered Project's bid specifications to ensure the following provisions are incorporated:

1. That the Request for Bid Package Authorization from the Board specifies that the Covered Project contains the DPW-PLA and Policy;

2. That the Bid specifications require all contractors submitting bids or proposals agree to the terms of the DPW-PLA and Policy;

3. That a provision exists in the prime contract obligating the Prime Contractor and all its C/S/Es (of any tier) to comply with the terms of the DPW-PLA and Policy and/or require compliance with the DPW-PLA and Policy terms through a Letter of Assent or any other form or legally enforceable obligation to the City.

4. That the Construction Contract shall include provisions establishing liquidated damages amounts as described in Section VIII of this Policy.

SECTION IV. EXCLUSIONS AND/OR MODIFICATIONS

1. Funding Source: this Policy shall not apply to DPW construction contracts or projects, if the funding source has established provisions or rules that forbid the inclusion of a PLA and/or Local Hire provision. If the project is listed as part of the PIPS, DPW staff must present the reason(s) to the Board prior to final determination to exclude the Covered Project.

2. This Policy shall not apply to work performed by a C/S/E's executives, managerial employees, engineering employees, supervisors (except those covered by State or Federal Prevailing Wage rates and/or Schedule A collective bargaining agreements), office and clerical employees, or any other employee not performing construction craftwork.

3. Out-of-State Workers: hours worked by residents of states other than California shall not be included in calculation of total hours of project work for purposes of determining compliance with the Section 5 below.

SECTION V. TARGETED HIRING

1. Requirements for Covered Projects:

   The Prime Contractor shall ensure that the following targeted hiring requirements are met for each Covered Project:

   a) At least 30% of total hours worked on each project shall be performed by Local Residents. For any hour of Project Work for which a C/S/E seeks to meet this 30% requirement, the C/S/E, Unions and the Jobs Coordinator must first refer individuals whose primary place of residence is within a Tier 1 zip code. After Unions, C/S/Es and the Jobs Coordinator have exhausted the available pool of Local Residents whose primary place of residence is within a Tier 1 zip code, they may refer Local Residents whose primary place of residence is within a Tier 2 zip code.

   b) Apprentices must be employed on each project in accordance with the requirements mandated by Section 1777.5 of the California Labor Code. The hours performed by apprentices in each individual craft shall not exceed the ratio to journeyperson established by the applicable craft union's State DAS approved apprenticeship standards. A minimum of 50% of all apprentice hours shall be performed by Local Residents.

   c) At least 10% of total hours worked on each project shall be performed by Transitional Workers residing within Tier 1 or Tier 2 zip code areas described in Articles 7.4 and 7.5 of the DPW-PLA respectively and the remaining zip codes within the City of Los Angeles. Hours of project work performed by Transitional Workers may be applied towards the 30% requirement of the DPW-PLA and/or this Policy. Additionally, apprentice work hours performed by Transitional Workers may be applied towards the 50% local apprentice requirement of the DPW-PLA.

SECTION VI. RESPONSIBILITIES OF BCA, C/S/Es, UNIONS, and JOBS COORDINATOR

1. BCA Responsibilities:

   a) Monitor and enforce the targeted hiring measures of the DPW-PLA and Policy and issue Notices of Non-Compliance where appropriate.

   b) Review, approve or disapprove submitted Employment Hiring Plans prior to a C/S/E(s)' estimated start of work. Approval of a C/S/E to work on a Covered Project is contingent on the C/S/E(s)' submittal of an approved EHP plan.

c) Ensure, prior to a C/S/E's approval to work on a Covered Project, its submittal of a duly signed Letter of Assent.

d) Ensure targeted hiring dashboards for Covered Projects on the BCA website (http://bca.lacity.org/pla_documents) are accurate and reflective of the most recent data received from C/S/E(s) and Jobs Coordinators.

e) Conduct timely Reporting Period Meetings for Covered Projects with C/S/E(s) and Jobs Coordinators.

f) Report to the Board on a quarterly basis the status of all Covered Projects, or as otherwise directed by the Board.

g) Determine the withhold amount from payment(s) as disputed funds and make recommendation(s) for assessment of Liquidated Damages.

2. Prime Contractor and C/S/Es:

a) Employment Hiring Plan (EHP): Prime Contractor shall ensure that its C/S/Es (of any tier), at least 20 business days prior to starting their work on the Covered Project, shall submit their plan(s) to the BCA for approval by the BCA Director or his/her designee. Each C/S/E shall also complete an EHP Acknowledgement that describes how it will meet the targeted hiring requirements set forth in the DPW-PLA and Policy. No C/S/E (of any tier) shall be approved to work on a Covered Project without an approved EHP.

b) PLA and Policy: Prime Contractor shall ensure that its C/S/Es (of any tier), prior to start of work, (i) read and understand the requirements of the DPW-PLA and Policy; (ii) submit their Employment Hiring Plans at least 20 business days prior to their subcontractors' start of work and (iii) sign and submit their Letters of Assent prior to start of work. No C/S/E (of any tier) shall be approved to work on a Covered Project without having submitted a signed Letter of Assent.

c) Prior to start of work on the project, the Prime Contractor shall:

- Recommend a Jobs Coordinator for approval by the BCA.
- Upon BCA's approval of its Jobs Coordinator, notify its subcontractors (of any tier) who the Jobs Coordinator is.
- Provide within 10-calendar days upon request by the BCA or its designated representative, documentation of their Jobs Coordinator's qualifications.

d) The Prime Contractor and its C/S/Es (of any tier) shall coordinate with the Jobs Coordinator for services to support their efforts in meeting the targeted hiring percentages as described in Article 7 of the DPW-PLA and the Policy.

e) Pre-Job Conference: The Prime Contractor and its C/S/Es (of any tier), prior to start of work, shall hold a pre-job conference. The purpose of the pre-job conference is to determine craft personnel needs, schedule of work for the contract and all other matters as described in the DPW-PLA and the Policy. All work assignments shall be disclosed by the Prime Contractor and/or C/S/Es (of any tier) at the pre-job

conference. Any formal jurisdictional dispute(s) raised under Article 14 of the DPW-PLA must be raised at the pre-job conference upon disclosure of the work assignments. If the Prime Contractor and/or C/S/Es intend to change the work assignment after the pre-job conference or to make an assignment of work not previously known, the Prime Contractor and/or C/S/Es must notify the appropriate affected craft union(s) prior to the commencement of work.

f) Craft Request Form: The Prime Contractor and its C/S/Es (of any tier) shall only use the Craft Request Form (Attachment "C" of the DPW-PLA) and the procedures written therein to request workers from the affected Union(s). All C/S/Es must transmit a concurrent Craft Request transmittal of such request to the Jobs Coordinator.

g) The Prime Contractor and its C/S/Es (of any tier) must satisfactorily document their contact with the Jobs Coordinator when the Unions have not been able to refer a Local Resident and/or Transitional Worker within the 48-hour window of referral.

h) The Prime Contractor and its C/S/Es (of any tier) shall maintain proof of transmittal of the Craft Request forms to the Union hiring halls and Jobs Coordinator. Upon request by the BCA or its designated representative, copies shall be provided within 10-calendar days of request.

i) The Prime Contractor and its C/S/Es (of any tier) shall make available to the BCA or its designated representatives records and information that are deemed relevant to monitoring and enforcement of the provisions of the DPW-PLA and the Policy.

j) The Prime Contractor and its C/S/Es (of any tier) shall cooperate fully and promptly with any inquiry or investigation the BCA or its designated representatives deem necessary in order to monitor compliance with the provisions of the DPW-PLA and the Policy.

k) The Prime Contractor and its C/S/Es (of any tier), within 60 calendar days after concluding work on the Covered Project, shall submit to the BCA a verified statement of the number of journeypersons and apprentices who worked on the project, their classifications and the hours worked. (Per California Labor Code 1777.5(e).)

Upon request of the BCA or its designated representatives, the Prime Contractor and its C/S/Es (of any tier) must provide documentation of their Local Resident, Apprentice and Transitional Workers targeted hiring participation level efforts within 10-calendar days of the request for documentation.

3. Union Responsibilities:

a) Ensure that its dispatchers properly adhere to the use of the Craft Request Form and the procedures written therein.

b) Refer Local Residents and/or Transitional Workers requested through the Craft Request Form, regardless of their place on the hiring hall list and normal referral procedures.

c) Exert their best efforts to recruit and identify Local Residents residing in Tier 1, and then Tier 2 zip code areas, as well as those referred by the Jobs Coordinator for entrance, indentureship into a union apprenticeship program, and assisting such individuals in graduating into eligible journeypersons.

d) Upon receiving a request from a C/S/E for a Local Resident, exhaust the available list of individuals residing the Tier 1 zip codes before referring an individual residing in the Tier 2 zip codes.

e) Track retention of Local Residents and/or Transitional Worker apprentices participating in joint Labor/Management apprenticeship programs and provide BCA with the necessary information as requested.

4. Jobs Coordinator:

a) Criteria for Selecting a Jobs Coordinator: The Jobs Coordinator plays an integral part in the success of its partners in obtaining the targeted hiring percentages. It is the responsibility of the Prime Contractor to designate a Jobs Coordinator possessing, but not limited to, the following demonstrable experience and qualifications:

i. Developing, creating, designing and marketing specific programs targeting Local Residents and/or Transitional Workers for construction opportunities at the Covered Project (e.g. handouts and fliers for "walk-ins" demonstrating program entrance procedures).

ii. Coordinating services for contractors to assist in their local worker, transitional worker and apprentice utilization.

iii. Educating and assisting contractors on incentives provided by State or federal programs for On-the-Job Training and employer tax credits.

iv. Conducting orientations, job fairs and community outreach meetings to the local community.

v. Providing supportive services such as skills training, child care, transportation, education remediation, assistance with union fees and tools.

vi. Screening and certifying the transitional (formerly known as disadvantaged) status of workers.

vii. Establishing a referral and retention tracking mechanism for placed local and/or transitional workers and apprentices.

viii. Networking with the various Work Source Centers, community and faith based organizations and other non-profit entities that provide qualified local workers and/or transitional workers.

ix. Liaising with the various building trades crafts for referral and placement of local hire and/or transitional workers.

b) Jobs Coordinator Affirmation. While not mandatory, it is strongly suggested that each covered project employ a Jobs Coordinator.

i. The BCA will affirm the Jobs Coordinator on an individual project basis, utilizing its existing Jobs Coordinator review process.

ii. The review process consists of BCA reviewing the Jobs Coordinator's requisite experience and qualifications to assist the DPW-PLA's covered project to meet, if not exceed the targeted hiring requirements.

c) Jobs Coordinator Responsibilities. On each covered project in which they are employed, the Jobs Coordinator shall:

i. Coordinate the covered project's local hire referral process with the C/S/Es, Unions, City Work Source Centers, Faith and Community Based Organizations, and other organizations that can provide qualified local hire referrals.

ii. Coordinate the covered project's overall hiring process with all C/S/Es to help ensure that no PLA hiring and referral violations occur and the targeted hiring requirement percentages remain in compliance.

iii. Certify any Transitional Worker's status and maintain written proof of that certification for the duration of the covered project.

iv. Maintain a database of pre-qualified local residents for referral to work on a Covered Project and/or indentureship into a bona fide Labor/Management apprenticeship program.

v. Facilitate relationships among approved MC3 pre-apprenticeship and apprenticeship programs and the C/S/Es' to enable prompt referral.

vi. Be the point of contact to provide information about available job opportunities.

vii. Educate and provide financial incentives information to the C/S/Es' who hire eligible workers under Work Opportunity Tax Credit (WOTC) and On-the-Job Training (OJT) and other benefits for which a C/S/E may be eligible based on their implementation of the Local Hire requirements.

viii. Coordinate the C/S/Es' local hire effort documentations and other reports as it relates to their Local Resident and/or Transitional Worker targeted hiring requirements.

ix. Work closely with BCA staff, the building trades and C/S/Es in achieving the targeted hiring.

x. Attend all mandatory DPW-PLA related meetings, including, but not limited to Pre-Bid Conferences, Quarterly Jobs Coordinator meetings and Reporting Period Meetings. Jobs Coordinators will be individually notified when any scheduled meeting has been designated as mandatory.

Parties with responsibilities under the DPW-PLA and/or Policy, shall maintain those responsibilities regardless of the performance of the Jobs Coordinator at the tasks described in the DPW-PLA and the Policy.

SECTION VII. COMPLIANCE

The BCA or its authorized representatives shall determine whether a Prime Contractor and its C/S/Es have complied with the requirements of the DPW-PLA and the Policy. The Prime Contractor is ultimately responsible for it and its C/S/Es (of any tier) compliance with the DPW-PLA and Policy requirements.

1. If, after taking into account all hours of project work performed up to that point in time of the Reporting Period, the targeted hiring requirements of the DPW-PLA and Policy have been satisfied for a Covered Project, then the Prime Contractor and its subcontractors (of any tier) working on that Covered Project shall be deemed to be in compliance.

2. If the targeted hiring requirements of the DPW-PLA and the Policy have not been satisfied for a Covered Project, the Prime Contractor nonetheless may be deemed to be in compliance if it demonstrates both (a) that it and each of its C/S/Es (of any tier) have complied with all other requirements of the DPW-PLA and the Policy, and (b) that it and each C/S/E (of any tier) have either (i) satisfied the targeted hiring requirements of the DPW-PLA and this Policy with regard to the project work that it has performed or (ii) satisfactorily demonstrated the following:

    a) Adherence to procedures contained in its Employment Hiring Plan as approved by the BCA.

    b) Requests to Unions, through Craft Request Forms, of sufficient numbers of Local Residents and Transitional Workers.

    c) Documented contact with the Jobs Coordinator in each instance when the relevant Union did not refer qualified Local Residents or Transitional Workers within the 48 hours following the C/S/E's request and the C/S/E's fair consideration of any Local Resident or Transitional Worker subsequently referred by the Jobs Coordinator.

    d) Accurate records documenting the C/S/E's compliance efforts that include (but not limited to):
        i. A listing by name and address of all local recruitment sources contacted by the C/S/E;

        ii. The date of the local recruitment contact and the identity of the person contacted, the trade and classification and number of hire referrals requested;

iii. The number of Local Residents and/or Transitional Workers hires made as a result of the contact;

iv. The identity and address of the worker(s) hired pursuant to the contact;

v. Documentation when a referral was not hired (reason for non-hire) and/or premature termination.

3. Any Covered Project that fully satisfies the terms and conditions of this section will be deemed to have complied with the PLA's Targeted Hiring Requirements and will not be subject to Liquidated Damages. Furthermore, the employed Jobs Coordinator's Affirmation status will not be affected.

SECTION VIII. ENFORCEMENT

The Prime Contractor for every Covered Project agrees:

1. To be liable to the City for Liquidated Damages as provided in this section;

2. That the Prime Contractor and its C/S/Es (of any tier) commitment to comply with the targeted hiring requirements of DPW-PLA and Policy is a material element of the Covered Project;

3. That the failure of the Prime Contractor and its C/S/Es (of any tier) to comply with the targeted hiring requirements will cause harm to the City and the public which is significant and substantial but extremely difficult to quantify. The harm to the City includes the difficult-to-quantify harm that the community and its families suffer as a result of high unemployment and concentrated poverty;

4. Liquidated Damages: Due to the difficulty of estimation of damages for violation(s) of requirements of this Policy, Construction Contracts shall have provisions establishing liquidated damage to be assessed as follows:

   a) The Prime Contractor shall pay liquidated damages equal to the average journeyperson project wage for each hour the Covered Project fell short of the targeted hiring, or $500 per day, whichever is greater.

   b) If the Covered Project's targeted hiring requirements are out of compliance during any Reporting Period, the Prime Contractor shall meet with the BCA to develop a plan for compliance. The Prime Contractor has until the next Reporting Period to effectuate compliance or Liquidated Damages shall be withheld.

   c) Before Liquidated Damages are sought, the Prime Contractor shall be notified of the proposed Liquidated Damages and served with a summary of the information upon which the Liquidated Damages are based.

   d) Liquidated Damages shall be withheld from all subsequent monthly progress payment request(s) as disputed funds until such time as Prime Contractor is found

to be in compliance, the Covered Project contract is terminated, or the Covered Project is completed.

e) Should the Covered Project be terminated or completed before the Prime Contractor is found to be in compliance, recommendation shall be made to the Board to assess Liquidated Damages and the amount of the Liquidated Damages shall be returned to the fund from whence they came.

5. Liquidated Damages Appeal:

   a) The Prime Contractor may appeal the assessment of Liquidated Damages before the Board. Prior to the Board hearing to address assessment of Liquidated Damages, the Prime Contractor shall be provided a summary of the information upon which the recommendation assessment is based.

   b) The Prime Contractor must request an appeal in writing within 10-calendar days of receipt of the Liquidated Damages assessment summary. At the Board hearing to determine assessment of Liquidated Damages, the Prime Contractor will be allowed to provide evidence that it has made all of the showings required under Section VII of the Policy. Failure to submit a written request for an appeal within the time frame stipulated in this Section will be deemed a waiver of the right to appeal and the recommendation for assessment of Liquidated Damages will be implemented.

6. Termination of Contract(s): Consistent, substantial violations of the DPW-PLA and/or Policy by any Prime Contractor and/or C/S/E may result in a recommendation to the Board that the contract of the offending Prime Contractor and/or C/S/E be terminated per Section 00405 of the Master General Conditions.

SECTION IX. APPLICABLE LAW AND SEVERABILITY

The provisions of this Policy shall not be applicable where prohibited by federal or state law, or where the application would violate or be inconsistent with the terms and conditions of a grant or a contract with an agency of the United States or the State of California, or the valid instructions of an authorized representative of any of these agencies with respect to any grant or contract. If enforcement of any provision of this Policy is enjoined by a court of competent jurisdiction, the remaining provisions shall remain in full force and effect.

Granada Hills Park – Pool and Bathhouse Replacement

Summary

As part of a capital improvement project at Granada Hills Park, I inspected a western sycamore tree (*Platanus racemose*) that is going to be impacted by the construction of the splash pad portion of the project. On July 1, 2022, a site visit was conducted to inspect the tree in question. The tree was assessed by its location, size, current condition and overall health. The inspection took place at ~7:15am with clear visibility and morning sunlight.

The subject tree has good structure, is ~35' in height, Diameter at Standard Height (DSH) 10" with medium density foliage with anthracnose and some small dead twigs throughout the canopy. There is mechanical damage wounding on trunk at ~3'-4' in height with one wound having good wound wood development and the other having moderate wound wood development. The tree is in overall fair condition.

The tree is located within the construction footprint of the new splash pad and will need to be removed as per current design.

Background

Granada Hills Park is located at 16730 Chatsworth Street in the Granada Hills area of the City. This 17.76-acre facility provides a variety of services and programs to the community, including baseball, basketball, soccer, a gymnasium, a swimming pool, and tennis courts. RAP staff has determined that the age and condition of the 1975 pool and bathhouse facility at the Park necessitates replacement of the pool tank and renovation of the bathhouse.
The Project scope provides improvements to the existing pool and bathhouse including:

1. Demolition of the existing 7,200 square-foot (60'x120') swimming pool and pool deck
2. Construction of:

- New 9,000 square-foot (75'x120') swimming pool
- New 3,100 square-foot splash pad
- New 1,400 square-foot pool equipment pump house
- New pathways in compliance with the Americans with Disabilities Act (ADA) requirements
- New landscaping & irrigation around the new pool and existing bathhouse

3. Renovation of the existing bathhouse including ADA restrooms, men's and women's showers and changing areas

Assignment

The assignment consisted of evaluating the impact of a pool renovation capital improvement project on a western sycamore tree (*Platanus racemosa*) which is protected as a native species.

Limits of Assignment

Many factors can limit specific and accurate data when performing evaluations of trees, their conditions, and potential for failure or response to site disturbances. No soil or tissue testing was performed. All observations were made from the ground on July 1st, 2022, and no soil excavation to expose roots was performed. The most recent development plan that were provided were used to assist in determining potential construction impacts. Only one (1) tree was inspected. The determinations and recommendations presented here are based on current data and conditions that existed at the time of the evaluation and cannot be a predictor of the ultimate outcome for the evaluated trees in the future.

Tree Observations

The subject tree has good structure, is ~35' in height, Diameter at Standard Height (DSH) 10" with medium density foliage, smaller than average foliage with anthracnose and there are some small dead twigs throughout the canopy. There is mechanical damage wounding on trunk at ~3'-4' in height with one wound having good wound wood development and the other having moderate wound wood development. The tree is in overall fair condition.

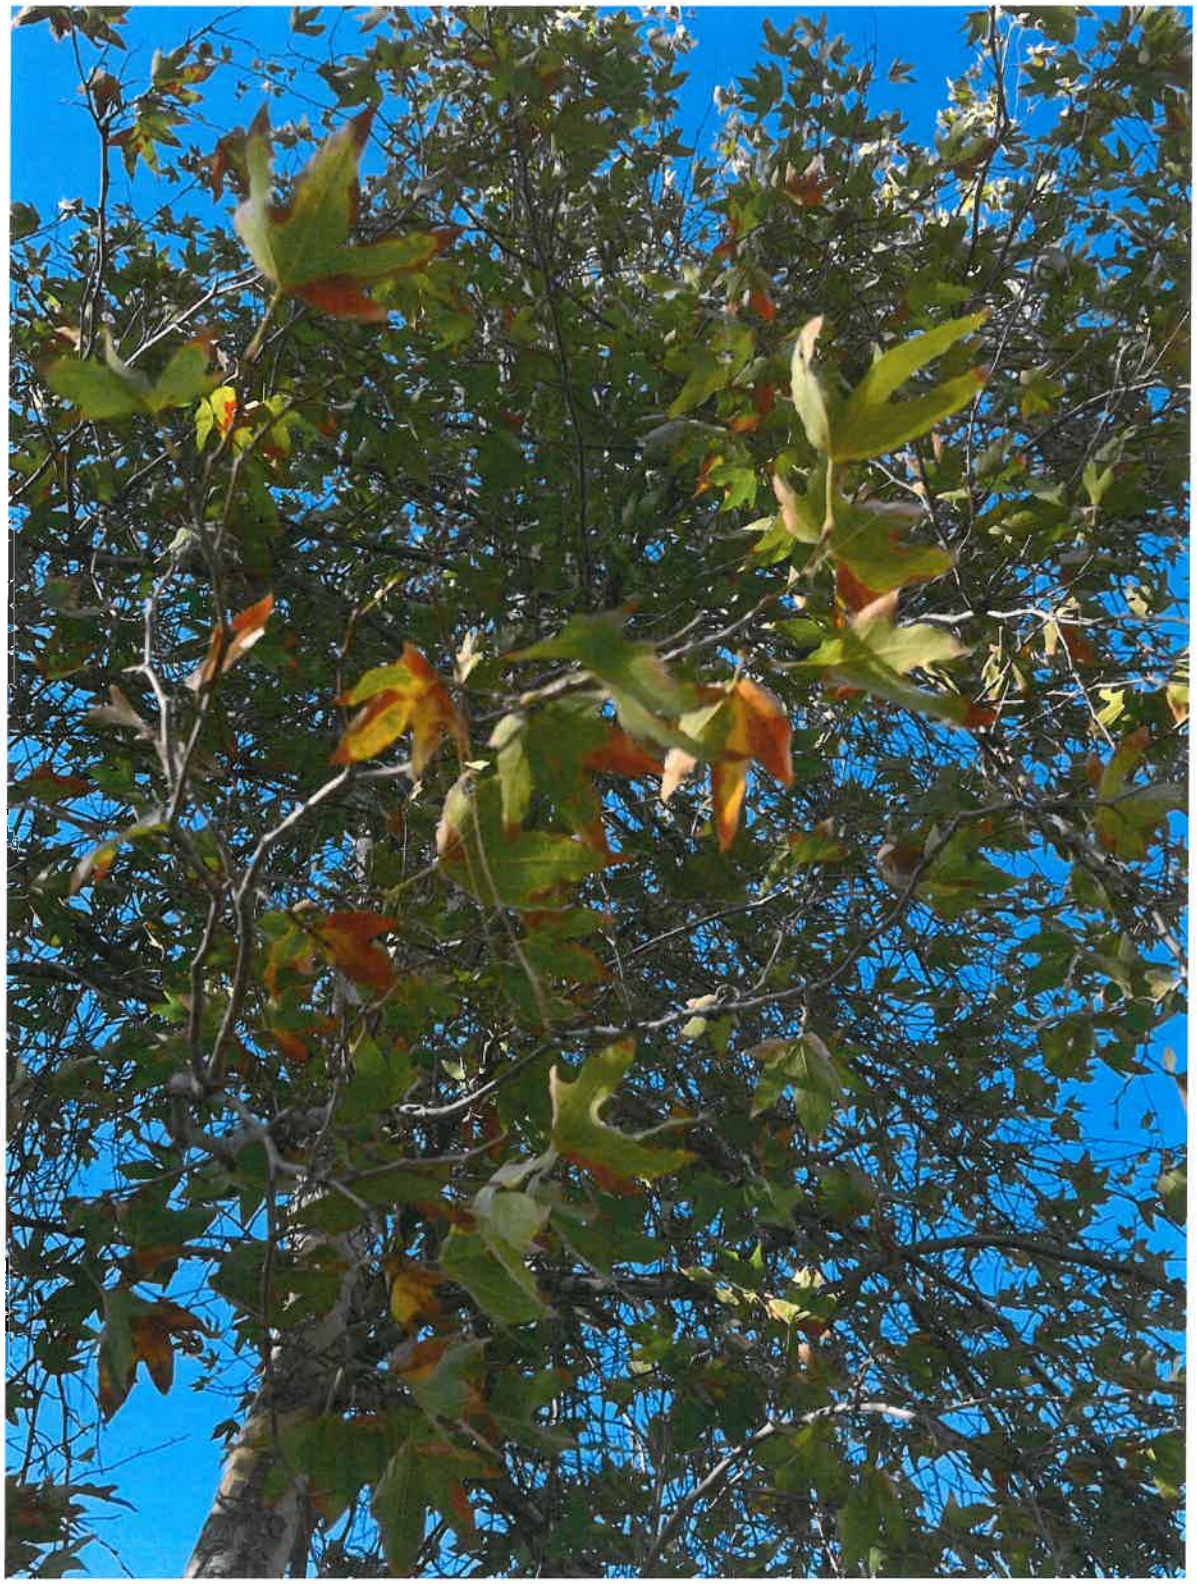
Analysis

The location of the subject tree is in the footprint of the new splash pad as currently designed. For the splash pad to be built, the tree needs to be removed.

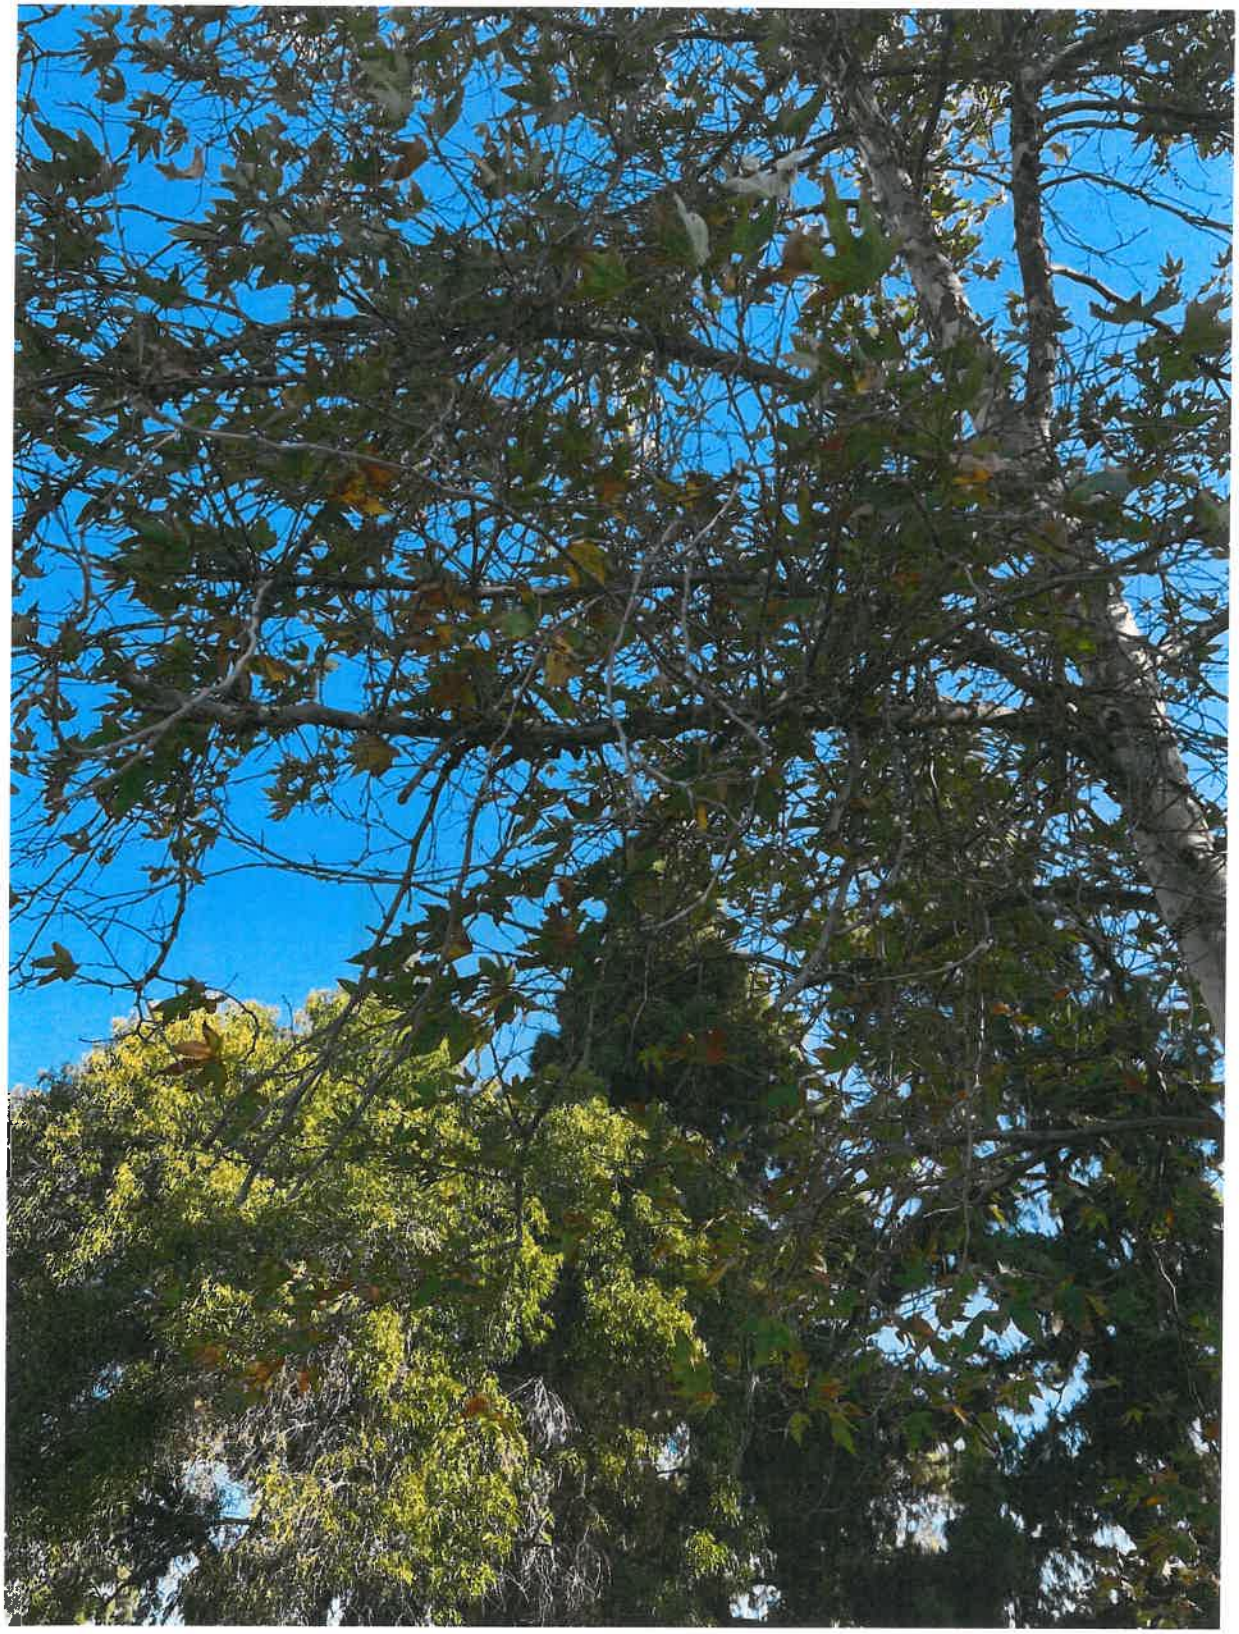
Conclusion and Recommendations

This report is pretty straight forward: the subject tree is in conflict with the construction of the splash pad and will need to be removed. Given that tree is 10" in diameter, it will need to be mitigated with 5 - 24" box trees. Being protected, at least 4 of the 5 replacement trees will need to be western sycamores.

Location of the subject tree in fair condition with good structure.



Anthracnose on the leaves.



Small dead twigs in the canopy.

Wounding on the trunk from mechanical damage.

Wounding on the trunk from mechanical damage.

Wounding on the trunk from mechanical damage.

PLOT PLAN GENERAL NOTES

1. PRIOR TO COMMENCEMENT OF WORK, CONTRACTOR IS TO CONDUCT A FIELD STUDY OF ADA ACCESSIBLE PATH OF TRAVEL. ITEMS TO BE OBSERVED ARE, BUT NOT LIMITED TO THE FOLLOWING:
   A. (E) CONCRETE WALK PATH TO BE UNIFORM, G.C. TO FIX ANY (E) CRACKS, HAZARDS AND UNEVEN PAVEMENT. CONTRACTOR TO FIX ANY CRACKS, UNEVENESS, AND/ OR OBSTRUCTIONS FROM ADA PATH.
   B. CONTRACTOR TO ENSURE UNIFORMITY OF ADA ACCESSIBLE PATH AND VERIFY ALL CROSS-SLOPES ARE IN COMPLIANCE WITH APPLICABLE CODES. PATH OF TRAVEL SHALL BE 48" MIN. WIDTH WALKWAY, 5% MAX. SLOPE IN THE DIRECTION OF TRAVEL, 2% MAX. CROSS SLOPE 118.403.3 | 1B.403.5
   C. IN CASE OF ANY MODIFICATIONTO PATH, CONTRACTOR IS TO COORDINATE MODIFICATION W. (E) IRRIGATION SYSTEMS AND RELOCATE, AND/OR REROUTE ACCORDINGLY.
2. GENERAL CONTRACTOR TO REPAIR ANY DAMAGE CAUSED TO IRRIGATION SYSTEM AND LANDSCAPING DURING CONSTRUCTION
3. FIRE DEPARTMENT VEHICULAR ACCESS ROADS MUST BE MAINTAINED IN A SERVICEABLE MANNER PRIOR TO AND DURING THE TIME OF CONSTRUCTION. CFC 503.4
4. A LOCKABLE KEY BOX SHALL BE PROVIDED AT ALL GATED VEHICULAR ENTRANCES, AND AT FACILITY ENTRANCES AS REQUIRED BY THE FIRE CODE OFFICE IN ACCORDANCE WITH CFC 506.
5. S.L.D. FOR MORE INFO.
6. STAGING AREA LOCATION TO BE PROVIDED BY LA-BOE.
7. FLOOR AND FLOOR GROUND SURFACES SHALL BE STABLE, FIRM, AND SLIP RESISTANT PER CBC SECTION 113-302.1. ALL NEW CONCRETE SLABS TO BE SCALED, FINISH TO BE MEDIUM BROOM FINISH. CONTRACTOR TO PROVIDE MOCK-UPS OF MEDIUM AND HEAVY FINISH.
8. VERTICAL CHANGES IN LEVEL FOR FLOOR OR GROUND SURFACES MAY BE 1/4 INCH HIGH MAX. AND WITHOUT EDGE TREATMENT. CHAGES IN LEVEL GREATER THAN 1/4 INCH AND NOT EXCEEDING 1/2" IN HEIGHT SHALL BE BEVELED WITH A SLOPE NOT STEEPER THAN 1:2 PER CBC SECTION 113-302
9. ABRUPT CHANGES IN LEVEL EXCEEDING 4 INCHES IN A VERTICAL DIMENSION BETWEEN WALKS, SIDEWALKS OR OTHER PEDESTRIAN WAYS AND ADJACENT SURFACES OR FEAMTURES SHALL BE IDENTIFIED BY WARNING CURBS AT LEAST 6 INCHES IN HEIGHT ABOVE THE WALK OR SIDEWALK SURFACE OR BY GUARDS OR HANDRAILS WITH A GUIDE RAILED 2 INCHES MIN. AND 4 INCHES MAX. ABOVE THE SURFACE OF THE WALK OR SIDEWALK. THESE REQUIREMENTS DO NOT APPLY BETWEEN A WALK OR SIDEWALK AND AN ADJACENT STREET OR DRIVEWAY PER CBC SECTION 113-303.5
10. S.C.D. 3C5.00 FOR CURB DETAIL WHERE OCCURS.
11. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR AND UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL-BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR TO THE LOCATION OF THE HOOK-UP. THE CONSTRUCTION SHALL NOT BE WITHIN TEN FEET OF ANY POWER LINES-WETHER OR NOT THE LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS AND/ OR ADDITIONAL EXPENSES.
12. AN APPROVED SEISMIC SHUTOFF VALVE WILL BE INSTALLED ON THE FUEL GAS LINE ON THE DOWNSTREAM SIDE OF TH EUTILITY METER AND BE RIGIDLY CONNECTED TO THE EXTERIOR OF THE BUILDING OR STRUCTURE CONTAINING THE FUEL GAS "PIPING" (PER ORDINANCE 170,199) (INCLUDES COMMERCIAL ADDITIONS AND TI WORK OVER $10,000.) SEPARATE PLUMBING PERMIT IS REQUIRED.)
13. SUCTION OUTLETS SHALL BE DESIGNED AND INSTALLED IN ACCORDANCE WITH ANSI/APSP-7 (3109.5)
14. PROVIDE THE FOLLOWING REQUIREMENTS FOR THE PUBLIC POOLS:
   A. SHOW THE POOL ENCLOSURE ON THE PLAN, 5' HIGH FENCE WALL AND SELF CLOSING, SELF-LATCHING GATE ARE REQUIRED. (3109.3)
   B. THE LATCH TO BE A MINIMUM 4.5 FT ABOVE THE GROUND (6109 (a))
   C. POOLS FOR MORE THAN 3 UNITS ON SITE SHALL BE APPROVAL BY HEALTH DEPARTMENT
   D. POOLS SHALL BE IN COMPLIANCE WITH THE REQUIREMENT FOR ACCESS TO THE PUBLIC ACCOMODATIONS BY PHYSICALLY HANDICAPPED PERSONS.
15. GLAZING IN WALLS AND FENCES USED AS THE BARRIER FOR INDOOR AND OUTDOOR SWIMMING POOLS AND SPAS WHEN ALL OF THE FOLLOWING CONDITIONS ARE PRESENT:
   i. THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES (1525 MM) ABOVE THE POOL SIDE OF THE GLAZING.
   ii. THE GLAZING IS WITHIN 5 FEET (1525 MM) OF A SWIMMING POOL OR SPA WATER'S EDGE.
   iii. GLAZING IN WALLS ENCLOSING STAIRWAY LANDINGS OR WITHIN 5 FEET (1525 MM) OF THE BOTTOM AND TOP OF STAIRWAYS WHERE THE BOTTOM EDGE OF THE GLASS IS LESS THAN 60 INCHES (1525 MM) ABOVE WALKING SURFACE.
16. PROVIDE ULTRA-LOW FLUSH WATER CLOSETS FOR ALL NEW CONSTRUCTION. EXISTING SHOWER HEADS AND TOILETS MUST BE ADAPTED FOR LOW WATER CONSUMPTION.
17. A COPY OF THE EVALUATION REPORT AND/OR CONDITIONS OF LISTING SHALL BE MADE AVAILABLE ON THE JOB SITE.
18. SEE SHEET SP-1 FOR POOL DIMENSIONS.
