B. Jackson		N. Williams	

General Manager

Approved X with Revisions Disapproved Withdrawn

RECOMMENDATIONS

1. Reject all bids received on April 13, 2022, for the Granada Hills Park - Pool and Bathhouse Replacement (PRJ21109) (PRJ21642) (W.O.# E170517F) Project (Project); and,

2. Approve final plans and specifications for the Project substantially in the form on file in the Board of Recreation and Park Commissioners (Board) Office and as set forth in Attachment 1 of this Report; and

3. Approve the Project to be re-bid; and,

4. Approve the date to be advertised for receipt of bids as November 9, 2022 at 2:00 P.M. in the Board Office; and,

5. Authorize Department of Recreation and Parks (RAP) staff to commit from the following fund and work order numbers a maximum of One Million Dollars ($1,000,000) in Park Fees, for the proposed Project:

FUNDING SOURCE	FUND/DEPT./ACCT. NO.	WORK ORDER NO.
Park Fees	302/89/89716H	QT072622

6. Approve the removal of one Western Sycamore tree located on the proposed site of the Project in Granada Hills Park, and installation of replacement trees, as described in the Summary of this Report and in accordance with the RAP Tree Preservation Policy and Urban Forest Program, as may be amended;

7. Determine that the Project is categorically exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to Article III, Section 1, Class 1(2) [Minor alterations of mechanical systems serving existing facilities], Class 2(3) [Reconstruction of existing utility facilities involving negligible or no expansion of capacity], Class 4(3) [New gardening, tree planting and landscaping], and Class 11(6) [Construction or placement of minor structures accessory (appurtenant to) existing commercial, industrial or institutional facilities] of City CEQA Guidelines and Article 19, Sections 15301(b), 15302(c), 15303(e) and 15304(b) of California CEQA Guidelines and direct RAP staff to file a Notice of Exemption (NOE) with the Los Angeles County Clerk; and

8. Authorize RAP's Chief Accounting Employee or designee to prepare a check to the Los Angeles County Clerk in the amount of $75.00 for the purpose of filing a NOE; and,

9. Authorize the Department of Recreation and Parks (RAP) Chief Accounting Employee or Designee to make technical corrections as necessary to carry out the intent of this Report;

SUMMARY

Granada Hills Park is located at 16730 Chatsworth Street in the Granada Hills area of the City. This 17.76-acre facility provides a variety of services and programs to the community, including baseball, basketball, soccer, a gymnasium, a swimming pool, and tennis courts. RAP staff has determined that the age and condition of the 1975 pool and bathhouse facility necessitates replacement of the pool tank and renovation of the bathhouse.

The Project scope provides improvements to the existing pool and bathhouse including:

1. Demolition of the existing 7,200 square-foot (60'x120') swimming pool and pool deck

2. Construction of:
   - New 9,000 square-foot (75'x120') swimming pool
   - New 3,100 square-foot splash pad
   - New 1,400 square-foot pool equipment pump house
   - New pathways in compliance with the Americans with Disabilities Act (ADA) requirements
   - New landscaping & irrigation around the new pool and existing bathhouse

3. Renovation of the existing bathhouse including ADA restrooms, men's and women's showers and changing areas

On March 3, 2022, the Board of Recreation and Park Commissioners (Board) approved the final plans and called for bids for the project (Report No. 22-050). The plans and specifications were prepared by Sparano + Mooney (SMA) Architects, Inc. (SMA), under the supervision of the Department of Public Works, Bureau of Engineering (BOE), Architectural Division. The Project was bid to RAP's As-Needed Pre-qualified General Contractors for Park Facilities Construction – New Facility Construction (PQGC).

On April 13, 2022, the Board received one (1) bid for the Project. Ford E.C. was the sole bidder, and submitted a bid of Thirteen Million, Nine Hundred Seventy Thousand, Six Hundred Dollars ($13,970,600). The City Engineer's estimate of the Project's construction cost was Seven Million, Eight Hundred and Ninety-Eight Thousand Dollars ($7,898,000). Meetings with the sole bidder revealed that the construction market is currently volatile due to the availability of subcontractors, high cost of gas, availability of materials and labor, and material cost escalation.

Ford E.C. was considered the lowest responsive bidder, however, the bid submitted is seventy seven percent (77%) over the City Engineer's estimate. Staff has investigated the causes for the high bid submitted and concluded that over the last year, materials cost escalation has been driven by the increase in demand for construction materials, supply chain challenges, increased cost of petroleum, and as well as the availability of General Contractors and subcontractors. Besides communication with Ford E.C, staff also reached out to other contractors on the PQGC to inquire why they did not submit the bids. From the received communications, various factors contributed to the single bidder for the Project:

a. Some of the contractors do not have experience in building a pool
b. One contractor did not receive the notifications that the Project was released for bid.
c. Lack of resources to bid on the Project due to bidding projects from other agencies.
d. Need additional time to submit the bids.

Given the lack of bidders and the possibility that cost escalations could continue through 2023, RAP and the BOE Project Management team agreed that it would be best to re-bid the Project to the broadest group of possible contractors. Therefore, staff recommends that the Board reject the previous bid for the Project at this time and approve the re-bidding of the Project to the general public in an effort to solicit more competitive bids.

Staff revised the construction cost estimate to address the current market conditions, which resulted in a City Engineer estimate of Twelve Million, Two Hundred Sixty-Three Thousand Dollars ($12,263,000), which accounts for the current market rates for construction costs. The Project scope will remain the same from that previously approved for bid by the Board.

FUNDING

Upon approval of this Report, an additional One Million Dollars ($1,000,000) in Park Fees can be committed to the proposed Project.

The 2021-22 Adopted Budget included Seventy-Five Million Dollars ($75,000,000) in the Unappropriated Balance for RAP to make capital improvements at City parks and facilities (Council File No. 21-0935). In response, RAP developed a capital improvement plan to utilize the $75,000,000.00 in funds to complete various park projects citywide. The Project is one of the park projects that RAP has identified for the use of these funds.

Funds are currently available from the following funds and accounts:

FUNDING SOURCE	FUND/DEPT./ACCT. NO.	AMOUNT
Sunshine Canyon Trust Fund	682/50/50NVBY	$218,233.75
Sunshine Canyon Trust Fund	302/89/89270K-GR	$10,695,260.00
Quimby	302/89/89460K-GR	$3,896,377.21
Park Fees	302/89/89716H	$ 1,000,000.00
Deferred Maintenance	302/89/89727H-GS	$ 1,030,000.00
Total		**$16,839,870.96**

TREES AND SHADE

There are many established trees in the northern half of the Park in proximity to the existing pool and bathhouse. Of the existing sixty-seven (67) trees identified in this portion of the Park, sixteen (16) are to be removed to make room for the new pool and splash pad construction. The proposed tree to be removed are one (1) Aleppo Pine, one (1) Weeping Bottle Brush, five (5) Carob, one (1) Ash, one (1) Western Sycamore, and seven (7) Podocarpus, which are to be removed to make room for the new pool and splash pad construction. Additionally, at the recommendation of RAP arborist, four (4) failing trees (three (3) Mulbery, and one (1) Sweetgum) will also be removed.

The Western Sycamore Tree is listed as a protected tree under Article 6 of the Los Angeles Administrative Code. Per RAP's Tree Preservation Policy, the removal of the Western

Sycamore tree, as a protected tree, would require the replacement of tree with the same species at a 4:1 ratio.

The Western Sycamore Tree to be removed is about 35' in height and has a Diameter at Standard Height (DSH) of 10". The tree has some damage but is in fair condition. As noted above, the tree is located within the construction footprint of the new splash pad and would need to be removed. RAP Forestry Division has reviewed the proposed tree removal and prepared a report on the tree. (Attachment No. 2). RAP Forestry staff concurs with the recommendation to remove the tree.

Based on the DSH of the Western Sycamore tree, RAP's Forestry Division prepared a recommendation on the selection of tree species and their sizes as part of the required tree replacement. RAP is recommending that the removal of the Western Sycamore be replaced by the planting a total of five (5) trees, four (4) of which would need to be Western Sycamore trees. The trees would each be "24" box sized.

A total of thirty-seven (37) new trees will be planted in the Park to mitigate the tree removals required by the Project's construction. The proposed new trees include four (4) Western Sycamore Trees (Platanus racemose), eight (8) Tipu Trees (Tipu tipuana), three (3) Indian Rosewood Trees (Dalbergia sissoo), three (3) Apple Gum Trees (Angophera costata), four (4) Afghan Pines (Pinus elderica), ten (10) Pink Trumpet Trees (Tabebuia impetiginous), four (4) Centennial Spirit Crape Myrtles (Lagerstromemia 'Centennial Spirit'), and one (1) tree of species to be determined by staff

At the time of construction completion, the new trees would provide approximately 1,320 square feet of canopy coverage. At five (5) years after construction completion, it is anticipated that those trees will provide approximately 2,640 square feet of canopy coverage. Upon full maturity, the trees to be planted will have the potential of providing 50,496 square feet of canopy cover.

ENVIRONMENTAL IMPACT

On March 3, 2022, through Report No. 22-050, the Board found that the proposed Project is exempt from the California Environmental Quality Act (CEQA). Since then, new details of the project have emerged, and therefore staff recommends that the Board make a new determination pursuant to the California Environmental Quality Act (CEQA). The currently proposed action consists of minor alterations of systems serving existing facilities; reconstruction of existing utility facilities involving negligible or no expansion of capacity; new tree planting and landscaping and construction of minor structures accessory to institutional facilities. This site is not within a coastal, methane, or historic zone, so there is no reasonable possibility that the project may impact on an environmental resource of hazardous or critical concern. The project site is located in a high wind area. Compliance with applicable structural building design standards of existing codes and applicable specification from the most recent edition of the California Building Code, and Los Angeles Building (LABC) for wind load would reduce effects associated with high winds. No other known projects would involve cumulatively significant impacts, and no future projects would result from the proposed project. As of July 1, 2022, the State Department of Toxic Substances Control (DTSC) (Envirostor at

www.envirostor.dtsc.ca.gov) and the State Water Resources Control Board (SWCB) (Geotracker at https://geotracker.waterboards.ca.gov/) have not listed the Project site or any contaminated sites near the Project area (within 500 feet). According to the Caltrans Scenic Highway Map there is no scenic highway located within the vicinity of the project or within the project site. Furthermore, a cultural resources survey was conducted (Cultural and Paleontological Resources Assessment for the Granada Hills Pool and Bathhouse Replacement, City of Los Angeles, California, SWCA February 2018). Based on the results of this survey, the project site does not contain historical resources. Excavation for the project will occur in already disturbed areas and the project includes measures to manage unforeseen discovery of cultural resources.

Based on this information, staff recommends that the Board determines that it is categorically exempt from the provisions of the CEQA pursuant to Article III, Section 1, Class 1(2), Class 2(3), Class 4(3) and Class 11(6) of City CEQA Guidelines and Article 19, Sections 15301(b), 15302(c), 15303(e) and Class 15304(b) of California CEQA Guidelines. RAP Staff will file a Notice of Exemption with the California Office of the State Clearinghouse and with the Los Angeles County Clerk upon Board's approval.

FISCAL IMPACT

There is no anticipated fiscal impact to RAP's General Fund because the project's constructed costs will be fully funded by the above listed funding sources specifically identified and approved for use of this Project. The assessments of the future operations and maintenance costs have yet to be determined and would be addressed in future budget request.

STRATEGIC PLAN INITIATIVES AND GOALS

Approval of this Board Report advances RAP's Strategic Plan by supporting:

Goal No. 2: Offer Affordable and Equitable Recreational Program
Outcome No. 1: Improved health and social equity for young Angelino's

This Report was prepared by Alex Ngo, Project Manager, BOE Architectural Division; reviewed by Ohaji K. Abdallah, Interim Prop K Program Manager, BOE Architectural Division; Steven Fierce, Principal Architect, BOE Architectural Division; Deborah Weintraub, BOE Chief Deputy City Engineer; Sean Phan, Planning, Construction and Maintenance Branch, and Darryl Ford, Superintendent, Planning, Construction and Maintenance Branch.

SCOPE OF WORK

1. BATHHOUSE BUILDING RENOVATION-PERMIT # 18014-10001-06569

   -DEMOLITION OF EXISTING INTERIOR WALLS, ELECTRICAL DEVICES, FIXTURES, AND JUNCTION BOXES, WITH ASSOCIATED CONDUIT AND CONDUCTORS, PLUMBING FIXTURES WITH ASSOCIATED LINES AND VALVES, CONCRETE FLOOR, AND CEILINGS AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS.

   -DEMOLITION OF EXISTING ROOF DECK AND SHINGLES.

   -NEW CONSTRUCTION AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS.

2. SWIMMING POOL AND DECKING REPLACEMENT

   -DEMOLITION OF EXISTING POOL, CONCRETE DECKING, STORMDRAIN CATCHBASINS AND ASSOCIATED LINES UNDERNEATH INCLUDING ELECTRICAL CONDUIT AND CONDUCTORS UNDERNEATH DECK AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS.

   -NEW SWIMMING POOL AND SPLASH PAD-UNDER SUPPLEMENTAL PERMIT TO # 18014-10001-06569

   -NEW CONSTRUCTION AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS.

3. POOL EQUIPMENT BUILDING REPLACEMENT

   -DEMOLITION OF EXISTING POOL EQUIPMENT BUILDING IN ITS ENTIRETY, INCLUDING FOOTINGS AND FOUNDATIONS.- UNDER SEPARATE PERMIT# 19019-10000-00213.

   -STRUCTURAL BACK FILL FOR NEW CONSTRUCTION AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS

   -NEW CONSTRUCTION- UNDER PERMIT# 18010-10000-05541- AS DESCRIBED WITHIN THE ATTACHED DOCUMENTS.

4. PROVIDE NEW, PROPERLY DRAINING FLOOR FOR POOL DECK AND WITHIN BUILDINGS.
5. NEW SHADE CANOPY STRUCTURES- UNDER PERMIT# 18010-10000-05542
6. MECHANICAL, PLUMBING AND ELECTRICAL UNDER SEPARATE PERMITS.

GENERAL NOTES

1. ALL WORK SHALL CONFORM TO & BE IN FULL & COMPLETE COMPLIANCE WITH CITY OF LOS ANGELES STANDARDS, REGULATIONS, ORDINANCES, AND ADOPTED CODES.
2. THE CONTRACTOR SHALL VERIFY DIMENSIONS AND EXISTING CONDITIONS AT THE PROJECT SITE PRIOR TO BID SUBMITTAL AND START OF CONSTRUCTION. CONTRACTOR SHALL NOTIFY SPARANO + MOONEY ARCHITECTURE OF ANY DISCREPANCIES FOR CLARIFICATIONS.
3. CONTRACTOR IS TO NOTIFY SPARANO + MOONEY ARCHITECTURE IF IT IS DETERMINED THAT THERE ARE CONFLICTS THAT PREVENT THE EXECUTION OF THE CONSTRUCTION DOCUMENTS AS DRAWN.
4. IF CONTRADICTIONS ARE FOUND WITHIN THE DESIGN, THE CONTRACTOR SHALL BID THE MORE EXPENSIVE OPTION AND SUBMIT THIS FINDING TO THE ARCHITECT AS PART OF THE BID FOR REVIEW.
5. THE CONTRACTOR SHALL IDENTIFY CRITICAL DUE DATES FOR OWNER SELECTIONS TO BE PURCHASED AND INSTALLED BY THE CONTRACTOR.
6. CONTRACTOR SHALL PROVIDE PROTECTION DURING CONSTRUCTION INCLUDING WITHOUT LIMITATION IN ACCORDANCE WITH THE CODES & REGLATIONS OF GOVERNING AGENCY.
7. CONTRACTOR SHALL NOT SCALE THE DRAWINGS. DIMENSIONS OF THE FLOOR PLANS ARE SHOWN TO FACE OF STUD AND OUTSIDE OF FOUNDATION SILL UNLESS NOTED OTHERWISE.
8. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS & COMPLY WITH SAMPLE SUBMITTAL REQUIREMENTS AS REQUIRED BY SPECIFICATIONS.
9. CONTRACTORS SHALL BE RESPONSIBLE FOR CORRECTION OF WORK AT THEIR OWN EXPENSE FOR WORK INSTALLED IN CONFLICT WITH THE CONSTRUCTION DOCUMENTS.
10. CONTRACTOR SHALL CHECK & VERIFY SIZE & LOCATION OF DUCT OPENINGS & PLUMBING RUNS WITH MECHANICAL CONTRETE SLAB OR FRAMING SAID OPENINGS. DUCT OPENINGS IN FIRE RATED WALLS SHALL HAVE FIRE DAMPERS. SEAL BETWEEN DUCTS & PARTITION WHERE REQUIRED.
11. CONTRACTOR SHALL PROVIDE AND LOCATE ACCESS PANELS AS REQUIRED AFTER INSTALLATION OF MECHANICAL DUCTS, PLUMBING AND ELECTRICAL WORK. SPARANO + MOONEY ARCHITECTURE SHALL APPROVE LOCATION PRIOR TO INSTALLATION.
12. CONTRACTOR SHALL PROVIDE ALL NECESSARY BLOCKING, STIFFENERS, BRACING, FRAMING, HANGERS, OR OTHER SUPPORT FOR ALL FIXTURES, EQUIPMENT, CABINETRY, FURNISHINGS AN ALL OTHER ITEM REQUIRING THE SAME.
13. CONTRACTOR SHALL COORDINATE THE INSTALLATION OF OWNER PURCHASED APPLIANCES AND EQUIPMENT WITH ADJACENT, ASSOCIATED WORK SUCH AS BUT NOT LIMITED TO CABINETRY, FRAMING, LIGHTING, AND WASTE AND DRAINAGE PIPING.
14. FIRE RESISTANT CONSTRUCTION REQUIREMENTS SHALL BE ADHERED TO. OCCUPANCY SEPARATIONS & OPENINGS IN SEPARATION SHALL CONFORM TO APPLICABLE CODES (SEE COVER SHEET).
15. GLAZED OPENINGS WITHIN 40" OF THE DOOR LOCK WHEN THE DOOR IS IN THE CLOSED POSITION SHALL BE FULLY TEMPERED.
16. GLASS DOORS, ADJACENT PANELS AND ALL GLAZED PANELS WITHIN 18" OF THE FLOOR, SHALL BE TEMPERED GLASS OR OTHER BUILDING CODE ACCEPTED SAFETY GLASS.
17. PROVIDE FLASHING AND COUNTER FLASHING AT ALL EXTERIOR OPENINGS THAT ARE EXPOSED TO THE WEATHER AND ALL VALLEY'S RIDGES, AND JUCITONS BETWEEN EXPOSED HORIZONTAL AND VERTICAL SURFACES.
18. ALL WOOD IN DIRECT CONTACT WITH CONCRETE SHALL BE PRESSURE TREATED WITH AN APPROVED PRESERVATIVE.
19. ALL EXCAVATION AND GRADING WORK SHALL COMPLY WITH THE BUILDING CODE.
20. SWINGING DOORS AND WINDOWS TO THE EXTERIOR OR TO UNCONDITIONED SPACES SHALL BE FULLY WEATHERSTRIPPED, OR OTHERWISE TREATED TO LIMIT AIR INFILTRATION.
21. CONTRACTOR SHALL COORDINATE SIZE AND LOCATION OF LIGHT FIXTURES BEFORE FRAMING CEILINGS.
22. PROVIDE SHOP DRAWINGS AS REQUIRED BY SPECIFICATIONS ON THIS SHEET.
23. CLEAN UP JOBSITE, REMOVE DEBRIS & TRASH ON DAILY BASIS.
24. MAINTAIN AN ORDERLY, CLEAN, SAFE AND EFFICIENT JOBSITE AT ALL TIMES.
25. AT COMPLETION OF JOB, CONTRACTOR SHALL PROVIDE FINAL CLEANING FOR ALL NEW AND ANY EXISTING
26. SECURITY TO BE PROVIDED AND MAINTAINED IN ADDITION TO PROVIDING JOBSITE SECURITY FENCING.

LADBS GENERAL REQUIREMENTS

1. SKYLIGHTS SHALL COMPLY WITH AN APPROVED ICC EVALUATION REPORT OR LOS ANGELES CITY RESEARCH REPORT.
2. UNIT SKYLIGHTS SHALL BE LABELED BY AN LA CITY APPROVED LABELING AGENCY. SUCH LABEL SHALL STATE THE APPROVED LABELING AGENCY NAME, PRODUCT DESIGNATION AND PERFORMANCE GRADE RATING (SESEACRH REPORT NOT REQUIRED) 2405.5
3. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR AND UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR TO THE LOCATION OF THE HOOK-UP. THE CONSTRUCTION SHALL NOT BE WITHIN TEN FEET OF ANY POWER LINES-WETHER OR NOT THE LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS AND/OR ADDITIONAL EXPENSES.
4. AN APPROVED SEISMIC GAS SHUTOFF VALVE WILL BE INSTALLED ON THE FUEL GAS LINE ON THE DOWNSTREAM SIDE OF THE UTILITY METER AND BE RIGIDLY CONNECTED TO THE EXTERIOR OF THE BUILDING OR STRUCTURE CONTAINING THE FUEL GAS PIPING. (PER ORDINANCE 170,158) (INLCLUDES COMMERCIAL ADDITIONS AND TI WORK OVER $10,000) SEPARATE PERMIT IS REQUIRED.
5. PROVIDE ULTRA-LOW FLUSH WATER CLOSETS FOR ALL NEW CONSTRUCTION. EXISTING SHOWER HEADS AND TOILETS MUST BE ADAPTED FOR LOW WATER COMSUMPTION.
6. A COPY OF THE EVALUATION REPORT AND/OR CONDITIONS OF LISTING SHALL BE MADE AVAILABLE ON THE JOB SITE.

LADBS MEANS OF EGREES

1. EXIT SIGNS SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED.
2. EXIT SIGNS ILLUMINATED BY AN EXTERNAL SOURCE SHALL HAVE AN INTENSITY OF NOT LESS THAN 5 FOOT CANDLES (54 LUX).
3. INTERNALLY ILLUMINATED SIGNS SHALL BE LISTED AND LABELED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS AND SECTION 2702.
4. EXIT SIGNS SHALL BE ILLUMINATED AT ALL TIMES.(1013.3)
5. EXIT SIGNS SHALL BE CONNECTED TO AN EMERGENCY POWER SYSTEM THAT WILL PROVIDE ILLUMIATION OF NOT LESS THAN 90 MIN. IN CASE OF PRIMARY POWER LOSS (1013.6.3)
6. EGRES DOORS SHALL BE READILY OPENABLE FROM THE EGRESS SIDE WITHOUT THE USE OF A KEY OR SPECIAL KNOWLEDGE OR EFFORT. SEE 1010.1.9.3 FOR EXCEPTIONS.
7. DOOR HANDLES, LOCK AND OTHER OPERATIONG DEVICES SHALL BE INSTALLED AT MIN. 34" AND A MAX. 48" ABOVE THE FINISHED FLOOR.
8. THIS DOOR TO REMAIN UNLOCKED WHEN BUILDING IS OCCUPIED.
9. ALL EGREES DOOR OPERATION SHALL ALSO COMPLY WITH SECTION 1010.1.9 AND 1010.9.12
10. THE MEANS OF EGREES, INCLUDING THE EXIT DISCHARGE, SHALL BE ILLUMINATED AT ALL TIMES THE BUILDING SPACE SERVED BY THE MEANS OF EGREES IS OCCUPIED.
11. THE MEANS OF EGREES ILLUMINATION LEVEL SHALL NOT BE LESS THAN 1 FOOT-CANDLE AT THE WALKING SURFACE.
12. THE POWER SUPPLY FOR MEANS OF EGREES ILLUMINATION SHALL NORMALLY BE PROVIDED BY THE PREMISESELECTRICAL SUPPLY. IN THE EVENT OF POWER SUPPLY FAILURE, AN EMERGENCY ELECTRICAL SYSTEM SHALL AUTOMATICALLY ILLUMINATE THE FOLLOWING AREAS:
    A. AISLES AND UNENCLOSED EGRESS STAIRWAYS IN ROOMS AND SPACES THAT REQUIRE TWO OR MORE MEANS OF EGREES.
    B. CORRIDORS, EXIT ENCLOSURES AND EXIT PASSAGEWAYS IN BUILDINGS REQUIRED TO HAVE TWO OR MORE EXITS.
    C. EXTERIOR EGREES COMPONENTS AT OTHER THAN THE LEVEL OF EXIT DISCHARGE UNTIL EXIT DISCHARGE IS ACCOMPLISHED FOR BUILDINGS REQUIRED TO HAVE TWO OR MORE EXITS.
    D. INTERIOR EXIT DISCHARGE ELEMENTS, AS PERMITTED IN SECTION 1028.1, IN BUILDINGS RQUIRED TO HAVE TWO OR MORE EXITS.
    E. EXTERIOR LANDINGS, AS REQUIRED BY SECTION 1010.1.6. FOR EXIT DISCHARGE DOORWAYS IN BUILSINGS REQUIRED TO HAVE TWO OR MORE EXITS.
13. THE EMERGENCY POWER SYSTEM SHALL PROVIDE POWER FOR A DURATION OF NOT LESS THAN 90 MINUTES AND SHALL CONSIST OF STORAGE BATTERIES, UNIT EQUIPMENT OR AN ON-SITE GENERATOR. THE INSTALLATION OF THE EMERGENCY POWER SYSTEM SHALL BE IN ACCORDANCE WITH SECTION 2702.
14. EMERGENCY LIGHTING FACILITIES SHALL BE ARRANGED TO PROVIDE INITIAL ILLUMINATION THAT IS AT LEAST AN AVERGAE OF 1 FOOT-CANDLE (11 LUX) AND A MINIMUM AT ANY POINT OF 0.1 FOOT CANDLE (1 LUX) MEASURED ALONG THE PATH OF EGREES AT FLOOR LEVEL. ILLUMINATION LEVELS SHALL BE PERMITTED TO DECLINE TO 0.6 FOOT-CANDLE (6 LUX) AVERAGE AND A MINIMUM AT ANY POINT OF 0.06 FOOT-CANDLE (0.6 LUX) AT THE END OF THE MERGENCY LIGHTING TIME DURATION. A MAXIMUM-TO-MIMIMUM ILLUMINATION UNIFORMITY RATIO OF 40 TO 1 SHALL NOT BE EXCEEDED.

BUILDING NOTES

SWIMMING POOL & POOL DECK

OCCUPANCY CLASSIFICATION:	A-5
GROSS SQUARE FOOTAGE AREA - POOL DECK:	11,804 S.F.
GROSS SQUARE FOOTAGE AREA - RECREATIONAL POOL:	9,110 S.F.
OCCUPANCY CALCULATION (PER TABLE 1004.1.2) :	
POOL DECK -	11,804 S.F. / 15 S.F. = 787 OCCS.
RECREATION POOL -	9,000 S.F. / 50 S.F. = 182 OCCS. TOTAL OCCUPANTS: 969 OCCS.
EXIT WIDTH CALCULATION OF ALTERED SPACE (SEC. 1005.3.2) :	969 OCCS. x 0.2"/OCC. = 194" (193.8") 194" REQUIRED (245" PROVIDED)
NUMBER OF EXITS (PER TABLE 1006.3.1) :	3 EXITS REQUIRED (4 EXITS PROVIDED)

SANITARY FACILITY REQUIREMENTS FOR SWIMMING POOLS
(PER CHAPTER 31B-SECTION 3116B)

POOL USER CALCULATIONS

RECREATION POOL (15 S.F. PER POOL USER) :	9,110 S.F. / 15 S.F. = 607 POOL USERS		
SPLASHPAD (15 S.F. PER SPLASHPAD USER)	1,003 S.F./ 15 S.F. = 7 SPLASHPAD USERS		TOTAL : 674 USERS
TOTAL USERS FOR EACH SEX:	337 MALE ; 337 FEMALE		
REQUIRED SHOWERS (1 FIXTURE / 50 POOL USERS) :	674 P.U. / 50 P.U. = 14 FIXTURES	REQUIRED	14 SHOWERS PROVIDED
WOMEN'S TOILETS (1 FIXTURE / 60 POOL USERS) :	337 P.U. / 60 P.U. = 5 FIXTURES	REQUIRED	6 TOILETS PROVIDED
MEN'S TOILETS (1 FIXTURE / 75 POOL USERS) :	337 P.U. / 75 P.U. = 5 FIXTURES	REQUIRED	5 TOILETS PROVIDED
URINALS (1 FIXTURE / 75 POOL USERS) :	337 P.U. / 75 P.U. = 5 FIXTURES	REQUIRED	5 URINALS PROVIDED
LAVATORIES (1 FIXTURE / 80 POOL USERS) :	674 P.U. / 80 P.U. = 8 FIXTURES	REQUIRED	8 LAVATORIES REQUIRED
DRINKING FOUNTAINS (1FIXTURE FOR FIRST 250 POOL USERS, 1 FXTURE / 200 POOL USERS THEREAFTER) :	1:250 = 1 FIXTURE ; (674 P.U. - 250 P.U.) / 200 P.U. = 3 FIXTURES REQUIRED		3 DRINKING FOUNTAINS PROVIDED

ACCESSIBLE FIXTURE COUNTS (PER SECTION 11B-213.3)

1. ACCESSIBLE SHOWER COMPARTMENT:	1 REQUIRED AT EACH MULTI-FIXTURE	1 REQ. MIN. FOR SINGLE USER / UNISEX RESTROOM
2. WHEELCHAIR ACCESSIBLE COMPARTMENT:	1 REQUIRED AT EACH MULTI-FIXTURE	
3. AMBULATORY ACCESSIBLE COMPARTMENT:	1 REQUIRED AT EACH MULTI-FIXTURE	
4. ACCESSIBLE URINAL:	1 REQUIRED	
5. ACCESSIBLE LAVATORY:	1 REQUIRED AT EACH MULTI-FIXTURE	1 REQ. MIN. FOR SINGLE USER / UNISEX RESTROOM
6. ACCESSIBLE DRINKING FOUNTIAN:	2 REQUIRED	

PARKING REQUIREMENTS

OFF-STREET EXISTING PARKING COUNTS
(PER CHAPTER 31B-SECTION 3116B)
WEST PARKING COUNTS: 93 SPACES TOTAL; 5 ADA SPACES (INCLUSIVE)

SOUTH PARKING LOT: 53 SPACES TOTAL; 2 ADA SPACES (INCLUSIVE)

OFF-STREET PARKING REQUIREMENTS
(PER LAMC 12.23B.8(a) PROVIDE ADDITIONAL PARKING FOR NEW FLOOR AREA)

"ALL CURRENTLY PROVIDED PARKING SPACES SHALL BE CONSIDERED AS THE REQUIRED PARKING FOR AN EXISTING NONCONFORMING USE IF THE PARKING SPACES ARE LESS THAN OR EQUAL TO THE PARKING REQUIRED BY CURRENT REGULATIONS"

EXISTING BATHHOUSE BUILDING: 4,580 NET S.F.
RENOVATED BATHHOUSE BUILDING: 4,801 NET S.F.
NEW SQUARE FOOTAGE: 230 NET S.F.
REQUIRED PARKING (1/100 S.F.) = 1 PARKING STALL

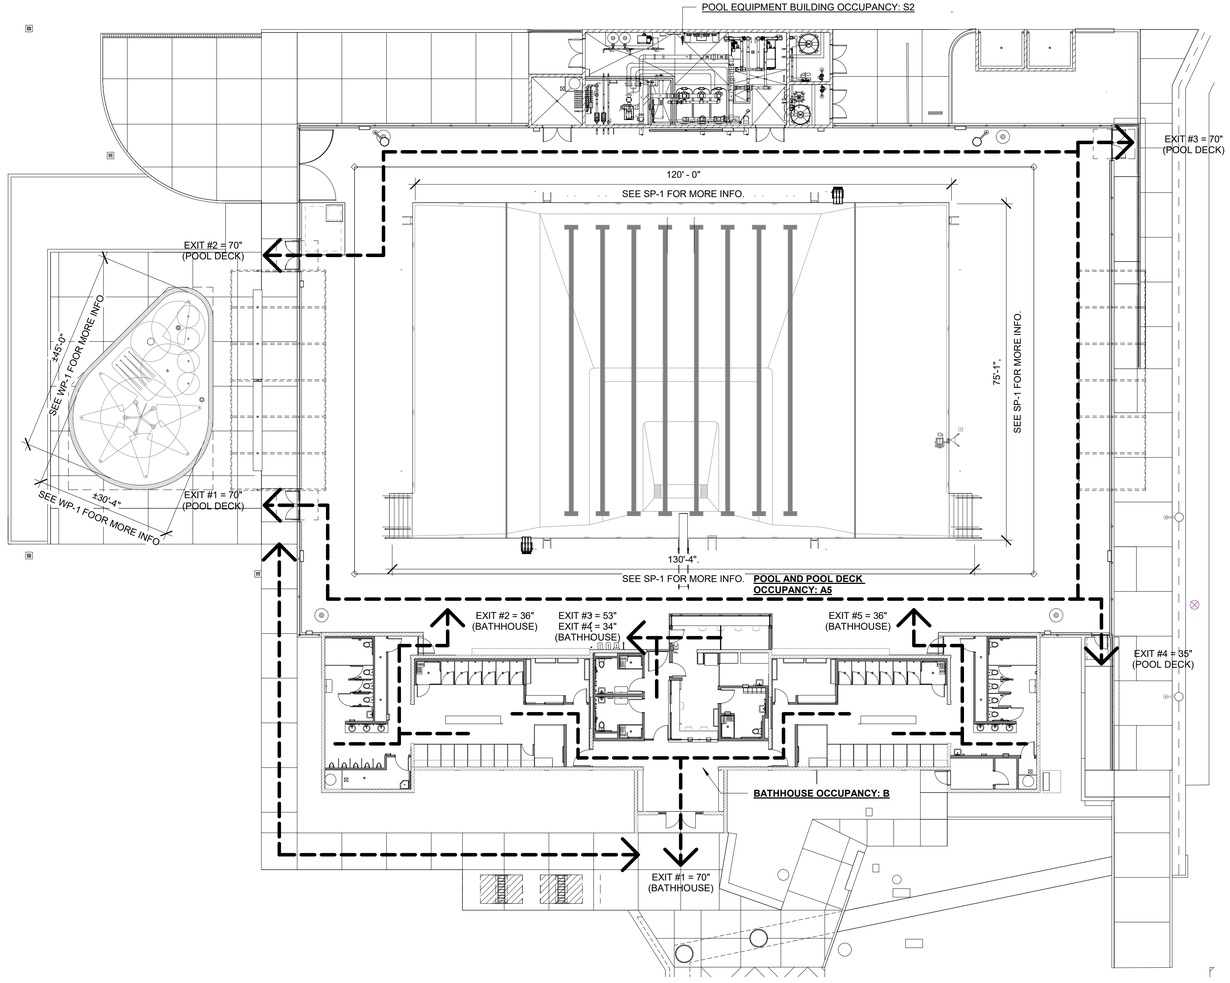
NEW MECHANICAL BUILDING: 1,263 NET S.F.

NEW SQUARE FOOTAGE: 1,263 NET S.F.
REQUIRED PARKING (1/500 S.F.) = 3 PARKING STALLS

TOTAL REQUIRED ADDITIONAL PARKING: 4 PARKING STALLS
1 PARKING STALL PROVIDED PROVIDED AS SHOWN IN SITE PLAN

(PER LAMC 12.21A4 ABILITY TO REPLACE AUTOMOBILE PARKING WITH BICYCLE PARKING SPACES)
"NEW OR EXISTING AUTOMOBILE PARKING SPACES REQUIRED BY THE CODE FOR ALL USES MAY BE REPLACED BY BICYCLE PARKING AT A RATIO OF ONE AUTOMOBILE PARKING SPACE FOR EVERY FOUR BICYCLE PARKING SPACES PROVIDED. NOTWITHSTANDING THE FOREGOING, NO MORE THAN 20 PERCENT OF THE REQUIRED AUTOMOBILE PARKING SPACES FOR NONRESIDENTIAL USES SHALL BE REPLACED AT A SITE. AUTOMOBILE PARKING SPACES FOR NONRESIDENTIAL PROJECTS OR BUILDINGS LOCATED WITHIN 1,500 FEET OF A PORTAL OF A FIXED RAIL TRANSIT STATION, BUS STATION, OR OTHER SIMILAR TRANSIT FACILITY, AS DEFINED BY SECTION 12.24 Y., MAY REPLACE UP TO 30 PERCENT OF THE REQUIRED AUTOMOBILE PARKING SPACES WITH BICYCLE PARKING. FOR BUILDINGS WITH LESS THAN 20 REQUIRED AUTOMOBILE PARKING SPACES, UP TO 4 PARKING SPACES MAY BE REPLACED."

BICYCLE PARKING SPACES: 16 SPACES PROVIDED
IN LIEU OF 4 PARKING STALLS



1 FACILITY FLOOR PLAN-EGRESS
1/16" = 1'-0"

MEANS OF EGRESS NOTES

1. EXIT SIGNS SHALL BE INTERNALLY OR EXTERNALLY ILLUMINATED..
2. EXIT SIGNS ILLUMINATED BY AN EXTERNAL SOURCE SHALL HAVE AN INTENSITY OF NOT LESS THAN 5 FOOT CANDLES (54 lux).
3. INTERNALLY ILLUMINATED SIGNS SHALL BE LISTED AND LABELED AND SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS AND SECTION 2702.
4. EXIT SIGNS SHALL BE ILLUMINATED AT ALL TIMES. (1013.3)
5. EXIT SIGNS SHALL BE CONNECTED TO AN EMERGENCY POWER SYSTEM THAT WILL PROVIDE AN ILLUMINATION OF NOT LESS THAN 90 MIN. IN CASE OF PRIMARY POWER LOSS (1013.6.3)
6. EGRESS DOORS SHALL BE READILY OPENABLE FROM THE EGRESS SIDE WITHOUT THE USE OF A KEY OR SPECIAL KNOWLEDGE OR EFFORT. SEE 1010.1.9.3 FOR EXCEPTIONS.
7. DOOR HANDLES, LOCK AND OTHER OPERATING DEVICES SHALL BE INSTALLED AT A MIN. 34" AND A MAX. 48" ABOVE THE FINISHED FLOOR.
8. THIS DOOR TO REMAIN UNLOCKED WHEN BUILDING IS OCCUPIED.
9. ALL EGRESS DOOR OPERATIONS SHALL ALSO COMPLY WITH SECTION 1010.1.9.9- 1010.1.9.12.
10. THE MEANS OF EGRESS, INCLUDING THE EXIT DISCHARGE, SHALL BE ILLUMINATED AT ALL TIMES THE BUILDING SPACE SERVED BY THE MEANS OF EGRESS IS OCCUPIED.
11. THE MEANS OF EGRESS ILLUMINATION LEVEL SHALL NOT BE LESS THAN 1 FOOT-CANDLE AT THE WALKING SURFACE.
12. THE POWER SUPPLY FOR MEANS OF EGRESS ILLUMINATION SHALL NORMALLY BE PROVIDED BY THE PREMISES' ELECTRICAL SUPPLY. IN THE EVENT OF POWER SUPPLY FAILURE, AN EMERGENCY ELECTRICAL SYSTEM SHALL AUTOMATICALLY ILLUMINATE THE FOLLOWING AREAS:
    A. ISLES AND UNENCLOSED EGRESS STAIRWAYS IN ROOMS AND SPACES THAT REQUIRE TWO OR MORE MEANS OF EGRESS AND SPACES THAT REQUIRE TWO OR MORE MEANS OF EGRESS. B. CORRIDORS, EXIT ENCLOSURES AND EXIT PASSAGEWAYS IN BUILDING REQUIRED TO HAVE TWO OR MORE EXITS; C. EXTERIOR EGRESS COMPONENTS AT OTHER THAN THE LEVEL OF EXIT DISCHARGE UNTIL EXIT DISCHARGE IS ACCOMPLISHED FOR BUILDINGS REQUIRED TO HAVE TWO OR MORE EXITS. D. INTERIOR EXIT DISCHARGE ELEMENTS, AS PERMITTED IN SECTION 1028.1. IN BUILDINGS REQUIRED TO HAVE TWO OR MORE EXITS. E. EXTERIOR LANDINGS, AS REQUIRED BY SECTION 1010.1.6, FOR EXIT DISCHARGE DOORWAYS IN BUILDINGS REQUIRED TO HAVE TWO OR MORE EXITS.
13. THE EMERGENCY POWER SYSTEM SHALL PROVIDE POWER FOR A DURATION OF NOT LESS THAN 90 MINUTES AND SHALL CONSIST OF STORAGE BATTERIES, UNIT EQUIPMENT OR AN ON-SITE GENERATOR. THE INSTALLATION OF THE EMERGENCY POWER SYSTEM SHALL BE IN ACCORDANCE WITH SECTION 2702.
14. EMERGENCY LIGHTING FACILITIES SHALL BE ARRANGED TO PROVIDE INITIAL ILLUMINATION THAT IS AT LEAST AN AVERAGE OF 1 FOOT-CANDLE (11 lux) AND A MINIMUM AT ANY POINT OF 0.1 FOOT CANDLE (1 lux) MEASURED ALONG THE PATH OF EGRESS AT FLOOR LEVEL. ILLUMINATION LEVELS SHALL BE PERMITTED TO DECLINE TO 0.6 FOOT-CANDLE (6 lux) AVERAGE AND A .IMI,U, AT ANY POINT OF 0.6 FOOT-CANDLE (0.6 lux) AT THE END OF THE EMERGENCY LIGHTING TIME DURATION. a MAXIMUM-TO-MINIMUM ILLUMINATION UNIFORMITY RATIO OF 40 TO 1 SHALL NOT BE EXCEEDED.

SOILS REPORT APPROVAL LETTER

November 9, 2017

LOG # 100428
SOILS/GEOLOGY FILE - 2

Department of Recreation and Parks
1149 S. Broadway, 8th floor
Los Angeles, Ca 90015

TRACT: SUBDIVISION NO. 1 OF THE PROPERTY OF THE PORTER LAND AND WATER COMPANY (M R 31-3/6)
LOT(S): 2 SEC 18 T2N R15W
LOCATION: 16730 W CHATSWORTH ST

CURRENT REFERENCE REPORT/LETTER(S)	REPORT No.	DATE(S) OF DOCUMENT	PREPARED BY
Soils Report	17-074	08/22/2017	City of LA-GEO
Laboratory Test Report	A8950-06-12	07/31/2017	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provide) recommendations for the proposed swimming pool and shade structure. The proposed swimming pool is to replace an existing pool.The earth materials at the subsurface exploration locations consist of up to 6 feet of uncertified fill underlain by clay, sandy silt, and silt.

The consultants recommend to support the proposed structure(s) on conventional foundation bearing on a blanket of compacted fill. The shade structure may be supported on conventional foundation and/or drilled-pile foundations bearing on native undisturbed.

Engineering analyses provided by City of LA-GEO is based on field and laboratory testing performed by Geocon West, Inc. City of LA-GEO is accepting responsibility for use of the data in accordance to Code section 91.7008.5 of LABC.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2017 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. The soils engineer shall review and approve the detailed plans prior to issuance of any permit. This approval shall be by signature on the plans that clearly indicates the soils engineer has reviewed the plans prepared by the design engineer and that the plans included the recommendations contained in his report. (7006.1)

2. All recommendations of the report(s) that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

3. An on-site storm water infiltration system at the subject site shall not be implemented, as recommended.

4. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans. Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit. (7006.1)

5. A grading permit shall be obtained for all structural fill and retaining wall backfill. (106.1.2)

6. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density (D1556). Placement of gravel in lieu of compacted fill is allowed only if complying with Section 91.7011.3 of the Code. (7011.3)

7. If import soils are used, no footings shall be poured until the soils engineer has submitted a compaction report containing in-place shear test data and settlement data to the Grading Division of the Department, and obtained approval. (7008.2)

8. Compacted fill shall extend beyond the footings a minimum distance equal to the depth of the fill below the bottom of footings or a minimum of two feet whichever is greater, except at locations where lateral over excavation is not possible (i.e., foundations adjacent to property lines or structures), in which case the foundations may be deepened to bear in native soils, as recommended (7011.3).

9. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill. (1809.2, 7011.3)

10. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction. (7013.12)

11. All loose foundation excavation material shall be removed prior to commencement of framing. Slopes disturbed by construction activities shall be restored. (7005.3)

12. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the State Construction Safety Orders enforced by the State Division of Industrial Safety. (3301.1)

13. Prior to the issuance of the permits, the soils engineer and/or the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.

14. Unsurcharged temporary excavation may be cut vertical up to 5 feet. Excavations over 5 up to 10 feet shall be trimmed back at a uniform gradient not exceeding 1:1 (horizontal to vertical), from top to bottom of excavation, and excavations greater than 10 feet shall be trimmed back at a uniform gradient of 1.5:1, as recommended.

15. Footings supported on approved compacted fill or expansive soil shall be reinforced with a minimum of four (4) ½-inch diameter (#4) deformed reinforcing bars. Two (2) bars shall be placed near the bottom and two (2) bars placed near the top.

16. The foundation/slab design shall satisfy all requirements of the Information Bulletin P/BC 2014-116 "Foundation Design for Expansive Soils" (1803.5.3).

17. Pile caisson and/or isolated foundation ties are required by Code Sections 1809.13 and/or 1810.3.13. Exceptions and modification to this requirement are provided in Information Bulletin P/BC 2014-030.

18. When water is present in drilled pile holes, concrete shall be tremied from the bottom up to ensure minimum segregation of the mix and negligible turbulence of the water (1808.8.3)

19. Existing uncertified fill shall not be used for lateral support of deep foundation. (1810.2.1)

20. Slabs placed on approved compacted fill shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced maximum of 16 inches on center each way.

21. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced maximum of 16 inches on center each way.

22. The seismic design shall be based on a Site Class D as recommended. All other seismic design parameters shall be reviewed by LADBS building plan check.

23. All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted to the street in an acceptable manner and in a non-erosive device. (7013.11)

24. With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soil report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record. (1805.4)

25. Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector. (108.9)

26. Basement walls and floors shall be waterproofed/damp-proofed with an L.A. City approved "Below-grade" waterproofing/damp-proofing material with a research report number. (104.2.6)

27. Prefabricated drainage composites (Miradrain) (Geotextiles) may be only used in addition to traditionally accepted methods of draining retained earth.

28. The pool shall be designed for expansive soil conditions in accordance with Information Bulletin P/BC 2014-014.

29. The proposed swimming pool shall be designed for a freestanding condition. (1808.7.3)

30. Pool deck drainage shall be collected and conducted to an approved location via a non-erosive device. (7013.10)

31. All deck drainage shall be collected and conducted to an approved location in a non-erosive device. (7013.10)

32. All roof and pad drainage shall be conducted to the street in an acceptable manner. (7013.10)

33. All concentrated drainage shall be conducted in an approved device and disposed of in a manner approved by the LADBS. (7013.10)

34. The soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading. (7008 & 1705.6)

35. All friction pile or caisson drilling and installation shall be performed under the inspection and approval of the geologist and soils engineer. The geologist shall indicate the distance that friction piles or caissons penetrate into competent material in a written field memorandum. (1803.5.5, 1704.9)

36. Prior to the pouring of concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. He/She shall post a notice on the job site for the LADBS Building Inspector and the Contractor stating that the work so inspected meets the conditions of the report, but that no concrete shall be poured until the City Building Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)

37. Prior to excavation, an initial inspection shall be called with LADBS Inspector at which time sequence of construction, pile installation, protection fences and dust and traffic control will be scheduled. (108.9.1)

38. Installation of shoring, underpinning, slot cutting excavations and/or pile installation shall be performed under the inspection and approval of the soils engineer and deputy grading inspector. (1705.6)

39. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. He/She shall post a notice on the job site for the City Grading Inspector and the Contractor stating that the soil inspected meets the conditions of the report, but that no fill shall be placed until the LADBS Grading Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included. (7011.3)

40. No footing/slab shall be poured until the compaction report is submitted and approved by the Grading Division of the Department.

SOILS REPORT APPROVAL LETTER

November 14, 2018

LOG # 105775
SOILS/GEOLOGY FILE - 2

Department of Recreation and Parks
1149 S. Broadway, 8th floor
Los Angeles, Ca 90015

TRACT: SUBDIVISION NO. 1 OF THE PROPERTY OF THE PORTER LAND AND WATER COMPANY (M R 31-3/6)
LOT(S): 2 SEC 18 T2N R15W
LOCATION: 16730 W CHATSWORTH ST

CURRENT REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Addendum Report	17-074	10/25/2018	City of LA-GEO

PREVIOUS REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Dept. Approval Letter	100428	11/09/2017	LADBS
Soils Report	17-074	08/22/2017	City of LA-GEO
Laboratory Test Report	A8950-06-12	07/31/2017	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provide recommendations for the proposed pool equipment building, concrete ramp, a lifeguard room addition, PV panels and security light poles. The Department previously conditionally approved the above referenced reports dated 07/31/2017 and 08/22/2017 for the proposed swimming pool and shade structure in a letter dated 11/09/2017, Log #100428. Foundation recommendations are provided on page 2 of the 10/25/2018 report.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2017 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. All conditions of the above referenced Department approval letter(s) shall apply except as specifically modified herein.

2. Controlled Low Strength Material, CLSM (slurry) proposed to be used for backfill shall satisfy the requirements specified in P/BC 2014-121.

3. Prior to the issuance of the permits, the soils engineer and/or the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.

4. Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring or constructed using ABC slot cuts. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)

5. Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).

6. The soils engineer shall review and approve the shoring plans prior to issuance of the permit (3307.3.2).

7. Shoring shall be designed for the lateral earth pressures specified in the section titled "Temporary Shoring" starting on page 2 of the 10/25/2018 report; all surcharge loads shall be included into the design.

8. Shoring shall be designed for a maximum lateral deflection of ½ inches, as recommended.

9. A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.

10. Installation of shoring, slot cutting and/or pile excavations shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).

11. Retaining walls shall be designed for the lateral earth pressures specified in the section titled "Retaining Walls" starting on page 4 of the 10/25/2018 report. Note: All surcharge loads shall be included into the design.

12. Retaining walls higher than 6 feet shall be designed for lateral earth pressure due to earthquake motions as specified on page 10 of the 08/22/2017 report (1803.5.12).

Laboratory Test Report	A8950-06-12	07/31/2017	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provide recommendations for the proposed infiltration system and exterior slab. The Department previously conditionally approved the above referenced reports dated 08/22/2017 and 10/25/2018 for the proposed swimming pool, shade structure, pool equipment building, concrete ramp, a lifeguard room addition, PV panels and security light poles in a letter dated 11/14/2018, Log #105775. Foundation recommendations are provided on page 2 of the 10/25/2018 report.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. All conditions of the above referenced Department approval letter(s) shall apply except as specifically modified herein.

2. Slabs placed on approved compacted fill shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

3. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

4. The infiltration facility design and construction shall comply with the minimum requirements specified in the Information Bulletin P/BC 2014-118.

5. The infiltration system shall be constructed at the location shown on the drawing attached to the current report.

6. The construction of the infiltration system shall be provided under the inspection and approval of the soils engineer.

7. An overflow outlet shall be provided to conduct water to the street in the event that the infiltration system capacity is exceeded. (P/BC 2014-118)

8. Approval for the proposed infiltration system from the Bureau of Sanitation, Department of Public Works shall be secured.

9. A minimum distance of 10 feet (in any direction) shall be provided from adjacent proposed/existing footings to the discharge of the proposed infiltration system. A minimum distance of 10 feet horizontally shall be provided from private property lines to the proposed infiltration system.

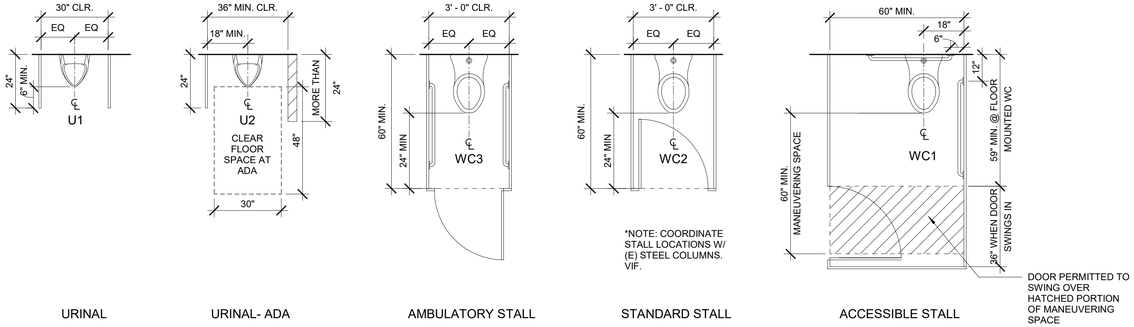
PLUMBING FIXTURE MOUNTING DIAGRAMS
1 3/8" = 1'-0"



NOTES:

ACCESSIBLE STALL DOORS SHALL PROVIDE A CLEAR WIDTH OF 32 INCHES MIN. CLEAR OPENINGS OF DOORWAYS WITH SWINGING DOORS SHALL BE MEASURED BETWEEN THE FACE OF THE DOOR AND THE STOP, WITH THE DOOR OPEN 90 DEGREES. THERE SHALL BE NO PROJECTIONS INTO THE REQUIRED CLEAR OPENING WIDTH LOWER THAN 34 INCHES ABOVE THE WALKING SURFACE. PROJECTIONS INTO THE CLEAR OPENING WIDTH BETWEEN 34 INCHES AND 80 INCHES ABOVE THE WALKING SURFACE SHALL NOT EXCEED 4 INCHES.

SEE SHEET A3.12 FOR MORE INFO.

ACCESSORY SCHEDULE AND MOUNTING DIAGRAMS
4 3/8" = 1'-0"

ACCESSIBILITY NOTES

1. A MIN. 80" HEADROOM IS TO BE PROVIDED FROM ALL WALKWAY SURFACES TO ANY OBSTRUCTIONS.
2. THERE IS TO BE A LEVEL FLOOR OR LANDING AREA ON EACH SIDE OF ALL DOORS. THE FLOOR OR LANDING IS NOT TO BE LOWER THAN 1/2" BELOW DOORWAY THRESHOLD.
3. ALL HAND-ACTIVATED DOOR OPENING HARDWARE MEETS THE FOLLOWING REQUIREMENTS:
   A. IS TO BE CENTERED A MIN. 30" AND MAX. OF 44" A.F.F.
   B. LATCHING OR LOCKING DOORS IN A PATH OF TRAVEL ARE OPERATED W/ A SINGLE EFFORT BY LEVER-TYPE HARDWARE, PANIC NBARS, PUSH-PULL ACTIVATING BARS OR OTHER HARDWARE DESIGNED TO PROVIDE PASSAGE WITHOUT THE REQUIREMENT TO GRASP THE HARDWARE.
4. THE LOWER 10" OF ALL DOORS SHALL BE CONSTRUCTED AS FOLLOWS:
   A. TO BE SMOOTH AND UNINTERRUPTED, TO ALLOW THE DOOR TO BE OPENED BY A WHEELCHAIR FOOTREST WITHOUT CREATING A TRAP OR HAZARDOUS CONDITION.
   B. NARROW FRAME DOORS MAY USE A 10" H. SMOOTH PANEL ON THE PUSH SIDE OF THE DOOR.
5. STANDARD TOILET COMPARTMENT DOORS WILL BE PROVIDED AS FOLLOWS:
   A. MIN. 9" CLEARANCE FOR FOOT RESTS UNDERNEATH.
   B. A SELF-CLOSING DEVICE.
6. WHERE PERMANENT IDENTIFICATION IS PROVIDED FOR ROOMS AND SPACES, NON-GLARE RAISED LETTERS SHALL ALSO BE PROVIDED AND SHALL BE ACCOMPANIED BY BRAILLE.
7. ALL APPLICABLE ACCESSIBILITY REQUIREMENTS FOR SIGNAGE OF CBC SECTION 11B-703 SHALL BE SATISFIED.
8. ALL BUILDING ENTRANCES THAT ARE ACCESSIBLE TO AND USABLE BY PERSONS WITH DISABILITIES AND AT EVERY MAJOR JUNCTION ALONG OR LEADING TO AN ACCESSIBLE ROUTE OF TRAVEL SHALL BE IDENTIFIED WITH A SIGN DISPLAYING THE INTERNATIONAL SYMBOL OF ACCESSIBILITY AND WITH ADDITIONAL DIRECTIONAL SIGNS, AS REQUIRED, TO BE VISIBLE TO PERSONS ALONG APPROACHING PEDESTRIAN WAYS PER CBC SECTION 1117A.2
9. FACILITIES REQUIRED TO BE ACCESSIBLE SHALL COMPLY WITH CBC SECTION 1009.1

ENTRANCES AND EXITS

1. EXIT DOORS SHALLL BE CAPABLE OF OPENING WITHOUT THE USE OF A KEY OR ANY SPECIAL KNOWLEDGE OR EFFORT PER BUILDING CODE 1003.3.1.8.
2. WIDTH AND HEIGHT OF REQUIRED EXIT DOORWAYS TO COMPLY WITH TITLE 24, 1004.6
3. MAX. EFFORT TO OPERATE EXTERIOR AND INTERIOR DOORS SHALL NOT EXCEED 5 LBS. WITH SUCH PULL OR PUSH EFFORT BEING APPLIED AT RIGHT ANGLES TO HINGED DOORS AND AT THE CENTER PLANE OF SLIDING OR FOLDING DOORS PER CBC SECTION 11B-404.2.9

PROTRUDING OBJECTS

1. PROTRUDING OBJECTS SHALL COMPLY WITH CBC SECTION 11B-307
2. OBJECTS WITH LEADING EDGES MORE THAN 27" AND NOT MORE THAN 80" ABOVE FINISH FLOOR OR GROUND SHALL PROTRUDE 4" MAX. HORIZONTALLY INTO THE CIRCULATION PATH PER CBC SECTION 11B-307.2
3. VERTICAL CLEARANCE SHALL BE 80" HIGH MIN.
4. GUARDRAILS OR OTHER BARRIERS SHALL BE PROVIDED WHERE VERTICAL CLEARANCE IS LESS THAN 80" HIGH. THE LANDING EDGE OF SUCH GUARDRAIL OR BARRIER SHALL BE LOCATED 27" MAX. ABOVE THE FINISH FLOOR OR GROUND PER CBC SECTION 11B-307.4
   PROTRUDING OBJECTS SHALL NOT REDUCE THE CLEAR WIDTH REQUIRED FOR ACCESSIBLE ROUTES PER CBC SECTION 11B-307.5

ADA SHOWER STALL

1. 2 FIXED SHOWER HEADS PROVIDED IN EXEMPTION TO SECTION 11B-608J6 IN PUBLIC SHOWERS. EACH SHOWER HEAD SHALL BE INSTALLED SO IT CAN BE OPERATED INDEPENDENTLY OF THE OTHER AND SHALL HAVE SWIVE ANGLE ADJUSTMENTS, BOTH VERTICALLY AND HORIZONTALLY. ONE SHOWER HEAD SHALL BE LOCATED AT HEIGHT OF 48" MAX. ABOVE FINISH FLOOR.
2. WATER CONTROLS SHALL BE OF A SINGLE LEVER DESIGN, OPERABLE WITH ONE HAND, AND SHALL NOT REQUIRE TIGHT GRASPING, PINCHING, OR TWISTING OF THE WRIST. THE CENTERLINE OF THE CONTROLS SHALL BE LOCATED AT 39"-41" ABOVE THE SHOWER FLOOR. THE FORCE REQUIRED TO ACTIVATE CONTROLLS SHALL BE NO GREATER THAN 5 LBS. CONTROLS SHALL COMPLY WITH CBC SECTION 11B-309-A
3. SHOWER PUMBING FIXTURES
   A. SHOWER HEADS TYPE:
      a. FREE-FLOW SHOWER HEAD-SYMMONS MODEL # 4-282F @ 76" A.F.F. AND @ 48" A.F.F. RESPECTIVELY
   B. SHOWER CONTROLS
      a. CONCEALED VOLUME CONTROL VALVE-SYMMONS MODEL #022 @40" +- 1" A.F.F.
      b. LEVELTROL LEVER DIVERTER WITH VOLUME CONTROL-SYMMONS MODEL #4-458 @ 40" +- A.F.F.
4. STAFF SHOWERS TO RECEIVE FLEXIBLE SHOWER SPRAY HOSE- 60" LONG MIN.
5. GRAB BARS TO COMPLY WITH CBC SECTIONS 11B-608.2.3 AND 11B-610
6. SHOWER SEAT TO COMPLY WITH CBC SECTION 11B-610

CONTROLS & OPR. MECHANISMS

1. CONTROLS AND OPERATING MECHANISMS SHALL COMPLY WITH ACCESSIBILITY CODE.
2. THE HIGHEST OPERABLE PART OF ALL CONTROLS, DISPENSERS, RECEPTACLES, AND OTHER OPERABLE EQUIPMENT SHALL BE PLACED WITHIN 48" OF THE FLOOR BIT NOT LOWER THAN 15" IF FORWARD APPROACH AND WITHIN 54" BUT NOT LOWER THAN 9" IF SIDE APPROACHED.
3. CONTROLS AND OPERATING MECHANISMS SHALL BE OPERABLE WITH ONE HAND AND SHALL NOT REQUIRE TIGHT GRASPING, PINCHING, OR TWISTING OF THE WRIST. THE FORCE REQUIRED TO ACTIVATE CONTROLS SHALL BE NO GREATER THAN 5 POUNDS.

ACCESSIBLE ROUTE OF TRAVEL

1. GRADING SHALL BE COMPLETED TO PROVIDE HANDICAP ACCESS IN ACCORDANCE WITH THE 2017 LOS ANGELES CITY BUILDING CODE.
2. WALKS AND SIDEWALKS SHALL HAVE A CONTINUOUS COMMON SURFACE, NOT INTERRUPTED BY STEPS OR ABRUPT CHANGES IN LEVEL EXCEEDING 1/4".
3. WHEN ABRUPT CHANGES IN LEVEL NOT EXCEEDING 1/2" OCCUR, THEY SHALL BE BEVELED WITH A SLOPE NO GREATER THAN 1:2, EXCEPT THAT LEVEL CHANGES NOT ESCEEDING 1/4" MAY BE VERTICAL.
4. WALK AND SIDEWALK SURFACE SLOPES SHALL NOT EXCEED 2%.
5. WALKS SHALL BE PROVIDED WITH A LEVEL AREA NOT LESS THAN 60" BY 60" AT DOOR OR GATE THAT SWINGS TOWARD THE WALK, AND NOT LESS THAN 48" WIDE BY 44" DEEP AT DOOR OR GATE THAT SWINGS AWAY FROM THE WALK.
6. WALK AND SIDEWALK SURFACES SHALL BE SLIP-RESISTANT AS FOLLOWS:
   A. SURFACES WITH A SLOPE OF LESS THAN 6% GRADIENT SHALL BE AT LEAST AS SLIP-RESISTANT AS THAT DESCRIBED AS A MEDIUM FLOOR FINISH.
   B. SURFACES WITH SLOPE OF 6% GRADIENT SHALL BE SLIP-RESISTANT.
   C. (3) DIFFERENT 1'X4' MOCK UPS ITH (3) DIFFERENT CONCRETE FINISGHES WILL BE MADEAT THE BEGINNING OF THE PROJECT FOR CLIENT APPROVAL. MOCK UP TO REMAIN UNTIL COMPLETION OF CONCRETE WORK.
7. RAMPS ON ACCESSIBLE ROUTES SHALL COMPLY WITH CBC SECTION 11B-405.
8. RAMP RUNS SHALL HAVE A RUNNING SLOPE NOT STEEPER THAN 1:12 OR 8.33%
9. CROSS SLOPE OF RAMP RUNS SHALL NOT BE STEEPER THAN 1:48 OR 2%
10. FLOOR OR GROUND SURFACES OF RAMP RUNS SHALL COMPLY WITH CBC SECTION 11B-302. CHANGES IN LEVEL OTHER THAN THE RUNNING SLOPE AND CROSS SLOPE ARE NOT PERMITTED ON RAMP RUNS.
11. THE CLEAR WIDTH OF A RAMP RUN SHALL BE 48 INCHES MINIMUM.
12. THE RISE OF ANY RAMP SHALL BE 30 INCHES MAXIMUM.
13. RAMPS SHALL HAVE LANDINGS AT THE TOP AND BOTTOM OF EACH RAMP RUN. LANDINGS SHALL COMPLY WITH CBC SECTION 11-B-405.7.
14. (SLOPE) LANDINGS SHALL COMPLY WITH CBC SECTION 11B-302/
15. THE LANDING CLEAR WIDTH SHALL BE AT LEAST AS WIDE A STHE WIDEST RAMP RUN LEADING TO THE LANDING.
16. TOP LANDINGS SHALL BE 60" WIDE MIN. AND LANDING CLEAR LENGTH SHALL BE 60" LONG MIN. BOTTOM LANDING SHALL EXTEND 72" MIN. IN THE DIRECTION OF RAMP RUN.
17. RAMPS THAT CHANGE DIRECTION BETWEEN RUNS AT LANDINGS SHALL HAVE A CLEAR LANDING 60" MIN. BY 72" MIN. IN THE DIRECTION OF THE DOWNWARD TRAVEL FROM THE UPPER RAMP RUN.
18. WHERE DOORWAYS ARE LOCATED ADJACENT TO A RAMP LANDING , MANEUVERING CLEARANCES REQUIRED BY SECTIONS 11B-404.2.4 AND 11B-404.3.2 SHALL BE PERMITTED TO OVERLAP THE REQUIRED LANDING AREA.
19. RAMP RUNS SHALL HAVE HANDRAILS COMPLYING WITH SECTION 11B-505.
20. EDGE PROTECTION COMPLYING WITH SECTION 11B-405.9.2 SHALL BE PROVIDED ON EACH SIDE OF RAMP RUN AND AT EACH RAMP LANDINGS.
21. LANDINGS SUBJECT TO WET CONDITIONS SHALL BE DESIGNED TO PREVENT THE ACCUMULATION OF WATER.

ADA LAVATORY NOTES

1. ADA LAVATORIES SHALL COMPLY WITH CBC SECTION 11B-606.
2. A CLEAR FLOOR SPACE 30" WIDE X 48" LONG SHALL BE PROVIDED IN FRONT OF A LAVATORY TO ALLOW FORWARD APPROACH. SUCH CLEAR FLOOR SPACE SHALL ADJOIN OR OVERLAP AN ACCESSIBLE ROUTE AND SHALL EXTEND INTO KNEE AND TOE SPACE UNDERNEATH THE LAVATORY.
3. LAVATORIES SHALL BE MOUNTED WITH A CLEARANCE OF AT LEAST 29" FROM THE FLOOR TO THE BOTTOM OF THE APRON WITH KNEE CLEARANCE UNDER THE FRONT UP EXTENDING A MINIMUM OF 30" IN WIDTH WITH 8" MIN. DEPTH AT THE TOP. TOE CLEARANCE SHALL BE THE SAMEWIDTH AND SHALL BE A MIN. OF 9" HIGH FROM THE FLOOR AND A MIN. OF 17" DEEP FROM THE FRONT OF THE LAVATORY.
4. A PROJECTION OF A LAVATORY BOWL INTO THE 8" CLEAR SPACE, THEREBY REDUCING THE CLEAR HEIGHT BELOWTHE LAVATORY TO NO LESS THAN 27" AT 8" BACK FROM THE APRON, MEETS THE REQUIREMENT FOR PROVIDING KNEE CLEARANCE. A MAX. HEIGHT OF 34" TO THE TOP OF THE LAVATORY IS RECOMMENDED.
5. HOT WATER AND DRAIN PIPES UNDER THE LAVATORIES SHALL BE INSULATED OR OTHERWISE COVERED. THERE SHALL BE NO SHARP OR ABRASIVE SURFACES UNDER LAVATORIES.
   FAUCET CONTROLS AND OPERATING MECHANISMS SHALL BE OPERABLE WITH ONE HAND AND SHALL NOT REQUIRE TIGHT GRASPING, PINCHING, OR TWISTING OF THE WRIST. THE FORCE REQUIRED TO ACTIVATE CONTROLS SHALL BE NO GREATER THAN 5LBS. PER FT LEVER-OPERATED, PUSH-TYPE AND ELECTRONICALLY CONTROLLED MECHANISMS ARE EXAMPLES OF ACCEPTABLE DESIGNS. SELF-CLOSING VALVES ARE ALLOWED IF THE FAUCET REMAINS OPEN FOR AT LEAST 10 SECONDS.

ACCESSIBLE URINAL NOTES

1. ACCESSIBLE URINAL SHALL COMPLY WITH CBC SECTION 11B-605
2. WHERE URINALS ARE PROVIDED, AT LEAST ONE SHALL HAVE A CLEAR SPACE 30" WIDE X 48" LONG IN FRONT OF THE URINAL.
3. WHERE URINALS ARE PROVIDED, AT LEAST ONE WITH A RIM PROJECTING A MIN. OF 14" FROM THE WALL AND A MAX. OF 17" ABOVE THE FLOOR SHALL BE PROVIDED.
4. URINALS SHALL BE WALL HUNG TYPE WITH THE RIM 17"MAX. ABOVE FINISH FLOOR OR GROUND. URINALS SHALL BE 13 1/2" DEEP MIN. MEASURED FROM THE OUTER FACE OF THE URINAL RIM TO THE BACK OF THE FIXTURE PER CBC SECTION 11B-605.2.
   FLUSH CONTROLS SHALL BE OPERABLE WITH ONE HAND AND SHALL NOT REQUIRE TIGHT GRASPING, PINCHING OR TWISTING OF THE WRIST AND SHALL BE MOUNTED NO MORE THAN 44" ABOVE THE FLOOR. THE FORCE REQUIRED TO ACTIVATE CONTROLS SHALL BE NO GREATER THAN 5 LBS.

REVISION DATES (DESIGN STAGE ONLY)

SIGNAGE NOTES:

1. ASI SIGNAGE INNOVATIONS - INFINITY SERIES IS SIGHTED IN THIS DRAWINGS. OBTAIN ALL PRODUCT UNDER SINGLE MANUFACTURER.
2. SIGNS MUST COMPLY WITH THE TITLE 24, DISABLED ACCESS REQUIREMENTS AND LATEST EDITION OF THE LABC.
3. SUBMIT SHOP DRAWINGS OF SIGNAGE AND OBTAIN APPROVAL FROM THE ARCHITECT PRIOR TO ANY FABRICATION.
4. ALL TEXT SHALL BE IN UPPER CASE LETTERS.
5. RESTROOM DOOR SIGNAGE SHALL BE MOUNTED CENTERED TO THE WIDTH OF THE DOOR AND THE MOUNTING HEIGHT MEASURED FROM THE FINISH FLOOR TO THE CENTER OF THE SIGNAGE.
6. RESTROOM WALL SIGNAGE MOUNTING HEIGHT SHALL BE MEASURED FROM THE FINISH FLOOR TO THE CENTER OF THE SIGNAGE.
7. ROOM IDENTIFICATION SIGNAGE MOUNTING HEIGHT SHALL BE MEASURED FROM THE FINISH FLOOR TO THE TOP OF THE SIGNAGE. SIGNS SHALL BE PLACED ON THE STRIKE SIDE OF T HE DOOR.
8. ROOM IDENTIFICATION SIGNAGE ON DOORS SHALL BE CENTERED TO THE WIDTH OF THE DOOR.
9. ALL SIGNAGE SHALL BE ACRYLIC PLASTIC MATERIAL WITH RAISED CHARACTERS AND SYMBOLS, U.N.O.
10. SIGNS WITH RAISED CHARACTERS AND BRAILLE SHALL BE LOCATED 48 INCHES (1220 mm) MINIMUM ABOVE THE FINISH FLOOR OR GROUND SURFACE MEASURED FROM THE BASELINE OF THE LOWEST LINE OF BRAILLE AND 60 INCHES (1525 mm) MAXIMUN ABOVE THE FINISH FLOOR OR GROUND SURFACE, MEASURED FROM THE BASELINE OF THE HIGHEST LINE OF RAISED CHARACTERS. MOUNTING LOCATION SHALL BE DETERMINED SO THAT A PERSON MAY APPROACH WITHIN 3 INCHES (76 mm) OF SIGNAGE WITHOUT ENCOUNTERING PROTRUDING OBJECTS OR STANDING WITHIN THE SWING OF A DOOR.

STORM WATER POLLUTION CONTROL
(2017 Los Angeles Green Building Code)

FORM GRN 1

Storm Water Pollution Control Requirements for Construction Activities
Minimum Water Quality Protection Requirements for All Construction Projects

The following notes shall be incorporated in the approved set of construction/grading plans and represents the minimum standards of good housekeeping which must be implemented on all construction projects.

Construction means constructing, clearing, grading or excavation that result in soil disturbance. Construction includes structure teardown (demolition). It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility; emergency construction activities required to immediately protect public health and safety; interior remodeling with no outside exposure of construction material or construction waste to storm water; mechanical permit work; or sign permit work. (Order No. 01-182, NPDES Permit No. CAS004001 – Part 5: Definitions)

1. Eroded sediments and pollutants shall be retained on site and shall not be transported from the site via sheet flow, swales, area drains, natural drainage or wind.
2. Stockpiles of earth and other construction-related materials shall be covered and/or protected from being transported from the site by wind or water.
3. Fuels, oils, solvents and other toxic materials must be stored in accordance with their listing and shall not contaminate the soil nor the surface waters. All approved toxic storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of properly and shall not be washed into the drainage system.
4. Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained on the project site.
5. Excess or waste concrete may not be washed into the public way or any drainage system. Provisions shall be made to retain concrete waste on-site until it can be appropriately disposed of or recycled.
6. Trash and construction –related solid wastes must be deposited into a covered receptacle to prevent contamination of storm water and dispersal by wind.
7. Sediments and other materials shall not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the street/public ways. Accidental depositions must be swept up immediately and may not be washed down by rain or by any other means.
8. Retention basins of sufficient size shall be provided to retain storm water runoff on-site and shall be properly located to collect all tributary site runoff.
9. Where retention of storm water runoff on-site is not feasible due to site constraints, runoff may be conveyed to the street and the storm drain system provided that an approved filtering system is installed and maintained on-site during the construction duration.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

GREEN CODE NOTES (2017 LAGBC)

WATER EFFICIENCY AND CONSERVATION

1. FOR PROJECTS THAT INCLUDE LANDSCAPE WORK, THE LANDSCAPE CERTIFICATION, FORM GRN 12, SHALL BE COMPLETED PRIOR TO FINAL INSPECTION APPROVAL. (STATE ASSEMBLY BILL NO. 1881,5.304.1).

LANDSCAPE DESIGN PLAN

1. RECIRCULATING WATER SYSTEMS SHALL BE USED FOR WATER FEATURES..
2. A MINIMUM 3-INCH LAYER OF MULCH SHALL BE APPLIED ON ALL EXPOSED SOIL SURFACES OF PLANTING AREAS EXCEPT TURF AREAS, CREEPING OR ROOTING GROUNDCOVERS, OR DIRECT SEEDING APPLICATIONS WHERE MULCH IS CONTRAINDICATED.
3. FOR SOILS LESS THAN 6% ORGANIC MATTER IN THE TOP 6 INCHES OF SOIL, COMPOST AT A RATE OF A MINIMUM OF FOUR CUBIC YARDS PER 1,000 SQUARE FEET OF PERMEABLE AREA SHALL BE INCORPORATED TO A DEPTH OF SIX INCHES INTO THE SOIL.

IRRIGATION DESIGN PLAN

1. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
2. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.

REQUIRED STATEMENTS AND CERTIFICATION

1. A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
2. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
3. AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.

MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

1. CONSTRUCTION WASTE SHALL BE REDUCED BY 65%. CONSTRUCTION WASTE SHALL BE HANDLED BY A CITY OF LOS ANGELES CERTIFIED HAULER.
2. NON-RESIDENTIAL ADDITION AND ALTERATIONS SHALL REQUIRE VERIFICATION THAT CALIFORNIA PROHIBITED UNIVERSAL WASTE MATERIALS ARE DISPOSED OF PROPERLY AND DIVERTED FROM LANDFILLS.

ENVIRONMENTAL QUALITY

1. THE BUILDING IS NOT EXPOSED TO A NOISE LEVEL OF 65dB L_{eq} 1-HR DURING ANY HOUR OF OPERATION.

PLANNING AND DESIGN

1. AT LEAST 25% OF THE TOTAL HARDSCAPE SHALL CONSIST OF UNCOLORED CONCRETE

VOC AND FORMALDEHYDE LIMITS

2017 Los Angeles Green Building Code
(Incorporate this form into the plans)

FORM GRN 11

The tables below are taken from the 2017 Los Angeles Green Building Code
Tables 4.504.1, 4.504.2, 4.504.3, 4.504.5, 5.504.4.1, 5.504.4.2, 5.504.4.3, 5.504.4.5

VOC CONTENT LIMITS FOR ARCHITECTURAL COATINGS[2,3]
Grams of VOC per Liter of Coating, Less Water and Less Exempt Compounds

COATING CATEGORY[4,5]	CURRENT LIMIT
Flat coatings	50
Nonflat coatings	100
Nonflat-high gloss coatings	150
Specialty Coatings	
Aluminum roof coatings	400
Basement specialty coatings	400
Bituminous roof coatings	50
Bituminous roof primers	350
Bond breakers	350
Concrete curing compounds	350
Concrete/masonry sealers	100
Driveway sealers	50
Dry fog coatings	150
Faux finishing coatings	350
Fire resistive coatings	350
Floor coatings	100
Form release compounds	250
Graphic arts coatings (sign paints)	500
High temperature coatings	420
Industrial maintenance coatings	250
Low-solids coatings[1]	120
Magnesite cement coatings	450
Mastic texture coatings	100
Metallic pigmented coatings	500
Multicolor coatings	250
Pretreatment wash primers	420
Primers, sealers, and undercoaters	100
Reactive penetrating sealers	350
Recycled coatings	250
Roof coatings	50
Rust preventative coatings	250
Shellacs	
Clear	730
Opaque	550
Specialty primers, sealers and undercoaters	100
Stains	250
Stone consolidants	450
Swimming pool coatings	340
Traffic marking coatings	100
Tub and tile refinish coatings	420
Waterproofing membranes	250
Wood coatings	275
Wood preservatives	350
Zinc-rich primers	340

[1] Grams of VOC per liter of coating, including water and including exempt compounds.
[2] The specific limits remain in effect unless revised limits are listed in subsequent columns in the table.
[3] Values in this table are derived from those specified by the California Air Resources Board, Architectural Coatings Suggested Control Measure, February 1, 2008. More information is available from the Air Resources Board.

FORMALDEHYDE LIMITS[1]
Maximum Formaldehyde Emissions in Parts per Million.

PRODUCT	CURRENT LIMIT
Hardwood plywood veneer core	0.05
Hardwood plywood composite core	0.05
Particleboard	0.09
Medium density fiberboard	0.11
Thin medium density fiberboard[2]	0.13

[1] Values in this table are derived from those specified by the California Air Resources Board, Airborne Toxic Control Measure for Composite Wood as listed in accordance with ASTME 1333. For additional information, see California Code of Regulations, Title 17, Section 93120 through 93120.12.
[2] Thin medium density fiberboard has a maximum thickness of 5/16 inches (8 mm).

SEALANT VOC LIMIT
Less Water and Less Exempt Compounds in Grams per Liter

SEALANTS	CURRENT VOC LIMIT
Architectural	250
Marine deck	760
Nonmembrane roof	300
Roadway	250
Single-ply roof membrane	450
Other	420
SEALANT PRIMERS	
Architectural	
Nonporous	250
Porous	775
Modified bituminous 500	500
Marine deck	760
Other	750

Note: For additional information regarding the limits listed in the VOC content specified in these tables, see South Coast Air Quality Management District Rule 1168.

ADHESIVE VOC LIMIT[1,2]
Less Water and Less Exempt Compounds in Grams per Liter

ARCHITECTURAL APPLICATIONS	CURRENT VOC LIMIT
Indoor carpet adhesives	50
Carpet pad adhesives	50
Outdoor carpet adhesives	150
Wood flooring adhesive	100
Rubber floor adhesives	60
Subfloor adhesives	50
Ceramic tile adhesives	65
VCT and asphalt tile adhesives	50
Drywall and panel adhesives	50
Cove base adhesives	50
Multipurpose construction adhesives	70
Structural glazing adhesives	100
Single-ply roof membrane adhesives	250
Other adhesives not specifically listed	50
SPECIALTY APPLICATIONS	
PVC welding	510
CPVC welding	490
ABS welding	325
Plastic cement welding	250
Adhesive primer for plastic	550
Contact adhesive	80
Special purpose contact adhesive	250
Structural wood member adhesive	140
Top and trim adhesive	250
SUBSTRATE SPECIFIC APPLICATIONS	
Metal to metal	30
Plastic foams	50
Porous material (except wood)	50
Wood	30
Fiberglass	80

[1] If an adhesive is used to bond dissimilar substrates together, the adhesive with the highest VOC content is used.
[2] For additional information regarding the limits listed in the VOC content specified in this table, see South Coast Air Quality Management District Rule 1168, http://www.arb.ca.gov/DRDB/SC/CURHTML/R1168.PDF.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

GREEN BUILDING CODE PLAN CHECK NOTES

2017 Los Angeles Green Building Code

FORM GRN 15

NON-RESIDENTIAL BUILDINGS

1. State on plans that the outdoor lighting systems shall be designed and installed to comply with all of the following:
   a. The minimum requirements in California Energy Code for Lighting Zones 1-4
   b. Backlight, Uplight and Glare (BUG) ratings as defined in IESNA TM-15-11
   c. Allowable BUG ratings not exceeding those shown in on Table 5.106.8 (5.106.8)
2. Separate submeters shall be installed in any building or new space within a building that is projected to consume more than 1,000 gal/day. (5.303.1.2)
3. New plumbing fixtures and fittings shall not exceed the maximum allowable flow rate specified in Section 5.303.3. (5.303.3)
4. When a shower is served by more than one showerhead, the combined flow rate of all the showerheads and/or other shower outlets controlled by a single valve shall not exceed 2.0 gallons per minute at 80psi, or the shower shall be designed to only allow one showerhead to be in operation at a time. (5.303.3.3)
5. For projects that include landscape work, the *Landscape Certification*, Form GRN 12, shall be completed prior to final inspection approval. (State Assembly Bill No. 1881)
6. Installed automatic irrigation system controllers are weather- or soil-based controllers. (WMELO, § 492.7)
7. Weather-resistant exterior wall and foundation envelope shall be detailed in conformance with Los Angeles Building Code Section 1403.2 and California Energy Code Section 150. (5.407.1)
8. Automatic landscape irrigators shall be installed such that it doesn't spray on the structure. (5.407.2.1)
9. New exterior entries and openings subject to foot traffic shall be protected against water intrusion using features such as overhangs, awnings and/or recesses for a combined depth over the entry of at least 4 feet. (5.407.2.2.1)
10. Nonabsorbent interior floor and wall finishes shall be used within at least two feet around and perpendicular to new exterior entries and/or opening subject to foot traffic. (5.407.2.2.1)
11. Exterior entries shall have flashing integrated with the drainage plane. (5.407.2.2.2)
12. Only a City of Los Angeles certified hauler will be used for hauling of construction waste. (5.408.1)
13. 100% of excavated soil and vegetation resulting from land clearing shall be reused or recycled. (5.408.3)
14. A final report for the testing and adjusting of all new systems shall be completed and provided to the field inspector prior to final approval. This report shall be signed by the individual responsible for performing these services. (5.410.4.4)
15. For all new equipment, an *Operation & Systems Manual* shall be provided to the owner and the field inspector at the time of final inspection. (5.410.4.5)
16. All new gas fireplaces must be direct-vent, sealed combustion type. Wood burning fireplaces are prohibited per AQMD Rule 445. (5.503.1, AQMD Rule 445)
17. If the new HVAC system is used during construction, use return air filters with a MERV of 8. Replace all filters immediately prior to occupancy. (5.504.1.3)
18. All new ducts and other new related air distribution components openings shall be covered with tape, plastic, or sheetmetal until the final startup of the heating, cooling and ventilating equipment. (5.504.3)
19. Architectural paints and coatings, adhesives, caulks and sealants shall comply with the Volatile Organic Compound (VOC) limits listed in Tables 5.504.4.1-5.504.4.3. (5.504.4.1-5.504.4.3)
20. The *VOC Content Verification Checklist*, Form GRN 2, shall be completed and verified prior to final inspection approval. The manufacturer's specifications showing VOC content for all applicable products shall be readily available at the job site and be provided to the field inspector for verification. (5.504.4.3.2)
21. All new carpet installed in the building interior meets the testing and product requirements of one of the following:
    a. Carpet and Rug Institute's Green Label Plus Program
    b. California Department of Public Health's Specification 01350
    c. NSF/ANSI 140 at the Gold level
    d. Scientific Certifications Systems Indoor Advantage™ Gold (5.504.4.4)
22. All new carpet cushion installed in the building interior shall meet the requirements of the Carpet and Rug Institute Green Label program. (5.504.4.4.1)
23. New hardwood plywood, particle board, and medium density fiberboard composite wood products used in the interior or exterior of the building shall meet the formaldehyde limits. (5.504.4.5, 10.504.4.5)
24. The *Formaldehyde Emissions Verification Checklist*, Form GRN 3, shall be completed prior to final inspection approval. The manufacturer's specifications showing formaldehyde content for all applicable wood products shall be readily available at the job site and be provided to the field inspector for verification. (5.504.4.5)
25. 80% of the total area receiving new resilient flooring shall comply with one or more of the following:
    a. VOC emission limits defined in the CHPS High Performance Products Database
    b. Certified under UL GREENGUARD Gold
    c. Certification under the Resilient Floor Covering Institute (RFCI) FloorScore program
    d. Meet the California Department of Public Health's Specification 01350 (5.504.4.6)
26. Mechanically ventilated buildings shall have air filter with a Minimum Efficiency Reporting Value (MERV) of 8 or higher. However, buildings within 1,000 feet of a freeway shall provide regularly occupied areas of the building with a MERV 13 filter. Filters shall be installed prior to occupancy and recommendations for maintenance with filters of the same value shall be included in the operation and maintenance manual. (5.504.5.3)
27. Designated outdoor smoking area shall be at least 25 feet from an outdoor air intake or operable windows. (5.504.7)
28. Ventilated spaces in buildings shall meet the minimum requirements of Section 121 of the California Energy Code and Chapter 4 of the California Code of Regulations, Title 8. (5.505.1)
29. Buildings that use Demand Control Ventilation shall have CO_2 sensors and ventilation controls installed in accordance with the requirements of the current edition of the California Energy Code, CCR, Title 24, Part 6, Section 121(c). (5.506.2)
30. The HVAC, refrigeration, and fire suppression equipment shall not contain CFC or Halons. (5.508.1)
31. Retail food stores of 8,000 sq. ft. or more of conditioned area that have a commercial refrigeration system with a global warming potential (GWP) of 150 or greater shall have leak reduction measures in accordance with LAGBC Section 5.508.2. Separate mechanical plan check is required. (5.508.2)

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

PLUMBING FIXTURE FLOW RATES

Non-Residential Occupancies
2017 Los Angeles Green Building Code
(Incorporate this form into the plans)

FORM GRN 17

SECTION 5.303.2
WATER REDUCTION FIXTURE FLOW RATES

FIXTURE TYPE	MAXIMUM ALLOWABLE FLOW RATE
Showerheads	1.8 gpm @ 80 psi
Lavatory faucets, residential	1.2 gpm @ 60 psi[1,3]
Lavatory Faucets, nonresidential	0.4 gpm @ 60 psi[1,3]
Kitchen faucets	1.5 gpm @ 60 psi[2,4,5]
Wash fountains	1.8 gpm for every 20 in. of rim space @60 psi
Metering faucets	0.2 gallons/cycle
Metering faucets for wash fountains	0.2 gpm for every 20 in. of rim space @ 60 psi
Gravity tank type water closets	1.28 gallons/flush[6]
Flushometer tank water closets	1.28 gallons/flush[6]
Flushometer valve water closets	1.28 gallons/flush[6]
Urinals	0.125 gallons/flush
Clothes Washers	ENERGY-STAR certified
Dishwashers	ENERGY-STAR certified

[1] Lavatory faucets shall not have a flow rate less than 0.8 gpm at 20 psi.
[2] Kitchen faucets may temporarily increase flow above the maximum rate, but not above 2.2gpm @ 60psi and must default to a maximum flow rate of 1.8 gpm @ 60psi.
[3] Where complying faucets are unavailable, aerators or other means may be used to achieve reduction.
[4] Kitchen faucets with a maximum 1.8 gpm flow rate may be installed in buildings that have water closets with a maximum flush rate of 1.06 gallons/flush installed throughout.
[5] This requirement does not apply to faucets in commercial kitchens.
[6] Includes single and dual flush water closets with an effective flush of 1.28 gallons or less.
Single Flush Toilets - The effective flush volume shall not exceed 1.28 gallons (4.8 liters). The effective flush volume is the average flush volume when tested in accordance with ASME A112.19.233.2.
Dual Flush Toilets - The effective flush volume shall not exceed 1.28 gallons (4.8 liters). The effective flush volume is defined as the composite, average flush volume of two reduced flushes and one full flush. Flush volumes will be tested in accordance with ASME A112.19.2 and ASME A112.19.14.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

GREEN CODE NOTES (2017 LAGBC)

WATER EFFICIENCY AND CONSERVATION

1. FOR PROJECTS THAT INCLUDE LANDSCAPE WORK, THE LANDSCAPE CERTIFICATION, FORM GRN 12, SHALL BE COMPLETED PRIOR TO FINAL INSPECTION APPROVAL. (STATE ASSEMBLY BILL NO. 1881,5.304.1).

LANDSCAPE DESIGN PLAN

1. RECIRCULATING WATER SYSTEMS SHALL BE USED FOR WATER FEATURES..
2. A MINIMUM 3-INCH LAYER OF MULCH SHALL BE APPLIED ON ALL EXPOSED SOIL SURFACES OF PLANTING AREAS EXCEPT TURF AREAS, CREEPING OR ROOTING GROUNDCOVERS, OR DIRECT SEEDING APPLICATIONS WHERE MULCH IS CONTRAINDICATED.
3. FOR SOILS LESS THAN 6% ORGANIC MATTER IN THE TOP 6 INCHES OF SOIL, COMPOST AT A RATE OF A MINIMUM OF FOUR CUBIC YARDS PER 1,000 SQUARE FEET OF PERMEABLE AREA SHALL BE INCORPORATED TO A DEPTH OF SIX INCHES INTO THE SOIL.

IRRIGATION DESIGN PLAN

1. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
2. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.

REQUIRED STATEMENTS AND CERTIFICATION

1. A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
2. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
3. AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.

MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

1. CONSTRUCTION WASTE SHALL BE REDUCED BY 65%. CONSTRUCTION WASTE SHALL BE HANDLED BY A CITY OF LOS ANGELES CERTIFIED HAULER.
2. NON-RESIDENTIAL ADDITION AND ALTERATIONS SHALL REQUIRE VERIFICATION THAT CALIFORNIA PROHIBITED UNIVERSAL WASTE MATERIALS ARE DISPOSED OF PROPERLY AND DIVERTED FROM LANDFILLS.

ENVIRONMENTAL QUALITY

1. THE BUILDING IS NOT EXPOSED TO A NOISE LEVEL OF 65dB L_{eq} 1-HR DURING ANY HOUR OF OPERATION.

PLANNING AND DESIGN

1. AT LEAST 25% OF THE TOTAL HARDSCAPE SHALL CONSIST OF UNCOLORED CONCRETE

WATER CONSERVATION ORDINANCE NOTES

2017 Los Angeles Green Building Code

FORM GRN 18N

NON-RESIDENTIAL BUILDINGS

1. For new buildings or additions exceeding 50,000 ft^2, install a separate water meter or sub-meter for the following areas:
   A. For each individual leased, rented, or other tenant space within the building projected to consume more than 100 gpd (380 L/day).
   B. Where potable water is used for industrial/process uses, for water supplied to the following subsystems:
      a. Makeup water for cooling towers where flow through is greater than 500 gpm (30 L/s).
      b. Makeup water for evaporative coolers greater than 6 gpm (0.04 L/s).
      c. Steam and hot-water boilers with energy input more than 500,000 Btu/h (147 kW).
   C. For each building that uses more than 100 gpd on a parcel containing multiple buildings. (5.303.1.1)
2. Provide a 20% reduction in the overall potable water use for each building. The reduction shall be based on the maximum allowable water use per plumbing fixture and fittings as required by the Los Angeles Plumbing Code. New projects having a water supply of 2"or less and additions and alterations projects may use the prescriptive method outlined in this section. (5.303.2)
3. A water budget for landscape irrigation use that conforms to the California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO) is required for new landscape areas of 500 sqft or more. The following methods to reduce potable water use in landscape areas include, but are not limited to, use of captured rainwater, recycled water, graywater, or water treated for irrigation purposes and conveyed by a water district or public entity. (5.304.1, 5.304.2)
4. New buildings on a site with 1,000 square feet or more of cumulative landscape area shall have separate meters or submeters for outdoor water use. (5.304.4)
5. Additions and alterations on a site with 1,000 square feet of cumulative landscape area which require water service upgrade shall have separate meters or submeters for outdoor water use. (5.304.4)
6. Locks shall be installed on all publicly accessible exterior faucets and hose bibs. (5.304.5)
7. Except as provided in this section, for sites with over 500 square feet of landscape area, alternate waste piping shall be installed to permit discharge from the clothes washer, bathtub, showers, and bathroom/restrooms wash basins to be used for a future graywater irrigation system (5.305.1)
8. Except as provided in this section, where City-recycled water is available within 300 feet of the property line, water closets, urinals, floor drains, and process cooling and heating in the building shall be supplied from recycled water and shall be installed in accordance with the Los Angeles Plumbing Code. (5.305.2)
9. Cooling towers shall comply with one of the following:
   A. Shall have a minimum of 6 cycles of concentration (blowdown)
   B. A minimum of 50% of the makeup water supply to the cooling towers shall come from non-potable water sources, including treated backwash. (5.305.3)
10. Develop and construct a system for onsite reuse of the groundwater where groundwater is being extracted and discharged. Alternatively, the groundwater may be discharged to the sewer. (5.305.4)
11. Provide a hot water system complying with one of the following:
    A. The hot water system shall not allow more than 0.6 gallons of water to be delivered to any fixture before hot water arrives.
    B. Where a hot water recirculation or electric resistance heat trace wire system is installed, the branch from the recirculating loop or electric resistance heat trace wire to the fixture shall contain a maximum of 0.6 gallons. (Los Angeles Plumbing Code Section 610.4.1)

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities.

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Our mission is to provide the highest level of safety, and to protect public health and the environment from toxic harm.

Fact Sheet, January 2010

Universal Waste Fact Sheet

California's Universal Waste Rule allows individuals and businesses to transport, handle and recycle certain common hazardous wastes, termed universal wastes, in a manner that differs from the requirements for most hazardous wastes. The more relaxed requirements for managing universal wastes were adopted to ensure that they are managed safely and are not disposed of in the trash.

What are Universal Wastes?

Universal wastes are hazardous wastes that are widely produced by households and many different types of businesses. Universal wastes include televisions, computers and other electronic devices as well as batteries, fluorescent lamps, mercury thermostats, and other mercury containing equipment, among others.

The hazardous waste regulations (Cal. Code Regs, tit. 22, div. 4.5, ch. 11 section 66261.9) identify seven categories of hazardous wastes that can be managed as universal wastes. Any unwanted item that falls within one of these waste streams can be handled, transported and recycled following the simple requirements set forth in the universal waste regulations (UWR) (Cal. Code Regs, tit. 22, div. 4.5, ch. 23)

Universal wastes are:

1. Electronic devices: Includes any electronic device that is a hazardous waste (with or without a Cathode Ray Tube (CRT)), including televisions, computer monitors, cell phones, VCRs, computer CPUs and portable DVD players.
2. Batteries: Most household-type batteries, including rechargeable nickel-cadmium batteries, silver button batteries, mercury batteries, alkaline batteries and other batteries that exhibit a characteristic of a hazardous waste
3. Electric lamps: Fluorescent tubes and bulbs, high intensity discharge lamps, sodium vapor lamps and electric lamps that contain added mercury, as well as any other lamp that exhibits a characteristic of a hazardous waste. (e.g., lead).
4. Mercury-containing equipment: Thermostats, mercury switches, mercury thermometers, pressure or vacuum gauges, dilators and weighted tubing, mercury rubber flooring, mercury gas flow regulators, dental amalgams, counterweights, dampers and mercury added novelties such as jewelry, ornaments and footwear.
5. CRTs: The glass picture tubes removed from devices such as televisions and computer monitors.
6. CRT glass: A cathode ray tube that has been accidently broken or processed for recycling.
7. Non-empty aerosol cans

Universal Wastes may not be disposed of in the trash!

STATE OF CALIFORNIA

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Our mission is to provide the highest level of safety, and to protect public health and the environment from toxic harm.

Regulatory Standards for Universal Waste

The UWR has separate requirements for of each of the three types of regulated entities:

1. Universal waste handlers
2. Universal waste transporters
3. Destination Facilities

Universal Waste Handlers

A universal waste handler is a generator of universal waste or the owner or operator of a facility that receives universal waste from another universal waste handler, accumulates universal waste, and sends universal waste to another universal waste handler, a facility that accepts hazardous waste, or a foreign country.

A universal waste handler may be:

1. A person (e.g., a household or business) who generates universal waste but does not accept universal waste from others
2. A person who accepts and accumulates universal waste generated by others at his or her facility
3. A person who accepts universal waste generated by others and conducts certain treatment and recycling activities allowed by the universal waste handler regulations

Management Requirements for Universal Waste Handlers (Cal. Code Regs, tit. 22, sections 66273.30-66273.39; additional requirements for handlers who conduct authorized treatment, Cal. Code Regs, tit. 22, sections 66273.70-.77)

- Do not dispose of universal waste or treat universal waste except as provided for in the regulations
- Notify DTSC and/or obtain an EPA identification number
- Use proper containment—non-leaking, compatible containers
- Segregate universal waste in distinct areas
- Determine if materials generated when handling/recycling are hazardous wastes
- Comply with applicable requirements for hazardous waste
- If applicable, comply with zoning requirements when storing universal wastes
- Have spill kits readily available to deal with accidental spills (mercury-containing devices)
- Use proper labeling and markings
- Accumulate universal waste no longer than one year

STATE OF CALIFORNIA

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Our mission is to provide the highest level of safety, and to protect public health and the environment from toxic harm.

- Provide personnel training to personnel who manage universal waste, or who supervise personnel who manage universal waste and keep training records
- Respond to releases of universal waste or its contents; determine if spill residuals are hazardous waste
- Track shipments by keeping records of what was received and shipped (name, address, quantities) for three years

Universal Waste Transporters

A universal waste transporter is a person engaged in the offsite transportation of universal waste by air, rail, highway or water. A universal waste transporter may be:

1. Universal waste handler carrying universal waste in his or her own vehicle
2. A package shipping service (e.g., US Postal Service; FedEx, UPS)
3. A commercial carrier (e.g., a trucking company, a hauler specializing in universal waste, or the operator of a destination facility that offers a universal waste pick-up service)
   - If you do not own or operate a facility that accepts, generates, accumulates, or stores universal waste, but you pick up and transport universal waste (e.g., electronic devices from office complexes) to a recycling or collection facility, you are a universal waste transporter. Universal waste transporters do not need to notify DTSC or submit annual reports for their transportation activities.
   - Universal waste transporters may store universal waste at a transfer facility for up to 10 days (depending on local zoning). A universal waste transporter who exceeds this limit is considered a universal waste handler and is subject to the handler requirements summarized above.

Destination Facilities

A destination facility is a fully-regulated hazardous waste facility that treats, disposes of, or recycles a specific type of universal waste. Examples of destination facilities are hazardous waste recycling facilities and hazardous waste landfills. A destination facility shall manage the universal waste in accordance with the requirements and conditions in its hazardous waste facility permit, unless authorized by section 66273.60 of title 22 of the California Code of Regulations to manage it pursuant to the reduced requirements applicable to universal waste handlers. A destination facility is required to follow certain rules for shipping universal wastes off-site and for rejecting shipments that contain universal waste and is required to keep records of all shipments received for three years. A facility that only accepts and accumulates universal waste is not a destination facility. Such a facility is regulated as a universal waste handler.

STATE OF CALIFORNIA

GREEN CODE NOTES (2017 LAGBC)

WATER EFFICIENCY AND CONSERVATION

1. FOR PROJECTS THAT INCLUDE LANDSCAPE WORK, THE LANDSCAPE CERTIFICATION, FORM GRN 12, SHALL BE COMPLETED PRIOR TO FINAL INSPECTION APPROVAL. (STATE ASSEMBLY BILL NO. 1881,5.304.1).

LANDSCAPE DESIGN PLAN

1. RECIRCULATING WATER SYSTEMS SHALL BE USED FOR WATER FEATURES..
2. A MINIMUM 3-INCH LAYER OF MULCH SHALL BE APPLIED ON ALL EXPOSED SOIL SURFACES OF PLANTING AREAS EXCEPT TURF AREAS, CREEPING OR ROOTING GROUNDCOVERS, OR DIRECT SEEDING APPLICATIONS WHERE MULCH IS CONTRAINDICATED.
3. FOR SOILS LESS THAN 6% ORGANIC MATTER IN THE TOP 6 INCHES OF SOIL, COMPOST AT A RATE OF A MINIMUM OF FOUR CUBIC YARDS PER 1,000 SQUARE FEET OF PERMEABLE AREA SHALL BE INCORPORATED TO A DEPTH OF SIX INCHES INTO THE SOIL.

IRRIGATION DESIGN PLAN

1. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
2. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.

REQUIRED STATEMENTS AND CERTIFICATION

1. A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
2. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
3. AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.

MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

1. CONSTRUCTION WASTE SHALL BE REDUCED BY 65%. CONSTRUCTION WASTE SHALL BE HANDLED BY A CITY OF LOS ANGELES CERTIFIED HAULER.
2. NON-RESIDENTIAL ADDITION AND ALTERATIONS SHALL REQUIRE VERIFICATION THAT CALIFORNIA PROHIBITED UNIVERSAL WASTE MATERIALS ARE DISPOSED OF PROPERLY AND DIVERTED FROM LANDFILLS.

ENVIRONMENTAL QUALITY

1. THE BUILDING IS NOT EXPOSED TO A NOISE LEVEL OF 65dB L_{eq}1-HR DURING ANY HOUR OF OPERATION.

PLANNING AND DESIGN

1. AT LEAST 25% OF THE TOTAL HARDSCAPE SHALL CONSIST OF UNCOLORED CONCRETE

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Our mission is to provide the highest level of safety, and to protect public health and the environment from toxic harm.

Households and Conditionally Exempt Small Quantity Universal Waste Generators (CESQUWG)

Two categories of universal waste handlers—households and CESQUWGs—are exempt from most of the requirements of the universal waste regulations provided they comply with certain conditions. Handlers who qualify for these exemptions are not required:

- To obtain an EPA ID number or otherwise notify DTSC;
- To keep records of shipments or provide annual reports to DTSC; or
- To label their universal waste.

A household is defined to include a single detached residence (e.g., a house) or a single unit of a multiple residence unit (e.g., an apartment or condominium). Households that generate hazardous wastes other than universal wastes (e.g., paints and motor oil) can visit DTSC's household hazardous waste Web page (http://www.dtsc.ca.gov/HazardousWaste/UniversalWaste/HHW.cfm) for information on how to properly dispose of them.

A Conditionally Exempt Small Quantity Universal Waste Generator (CESQUWG) is a universal waste generator who produces less than 100 kilograms (220 pounds) of RCRA hazardous waste, including universal waste that is RCRA universal waste and less than 1 kilogram of acutely hazardous waste in a calendar month. (RCRA hazardous waste is hazardous waste that is regulated under the hazardous waste regulations adopted by the U.S. Environmental Protections Agency.)

Pursuant to section 66273.8 of title 22 of the California Code of Regulations, a generator who meets the definition of a household or a CESQUWG is exempt from universal waste handler requirements provided he or she:

1) Does not dispose of universal waste;
2) Relinquishes universal waste only to another universal waste handler, a universal waste transporter, a destination facility, or a curbside household hazardous waste collection program; and
3) Does not conduct treatment of universal waste, except for limited activities enumerated in the regulations (e.g., removing batteries, light bulbs, or mercury switches). This exemption applies only to universal waste generated by the household (e.g. light bulbs, computers, televisions, thermostats, cell phones, etc.), not to universal waste accepted from other people.

Where can I send universal wastes?

A handler may not send universal waste to a municipal solid waste (garbage) landfill or a non-hazardous waste recycling center. All handlers of universal waste must relinquish their universal waste to one of the following:

STATE OF CALIFORNIA

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Our mission is to provide the highest level of safety, and to protect public health and the environment from toxic harm.

1. Another handler (typically a business that specializes in collecting, storing, accumulating and shipping universal wastes). Examples:
   - A household hazardous waste facility
   - A "Take-it-Back Partner" such as a retailer or manufacturer
   - A collection event
2. A universal waste transporter. Examples:
   - A curbside HHW collection program
   - A package service (e.g., postal service, UPS)
   - A destination facility that offers a pick-up service
3. A universal waste destination facility (generally, a facility with a permit to treat, store, or dispose of hazardous waste).

Search engines available to find locations accepting universal waste in your area: E-Recycle.org; Earth911.org; CalRecyle database; DTSC map; HHW list;

For more information, see DTSC's Universal Waste Web page at: http://www.dtsc.ca.gov/HazardousWaste/UniversalWaste/index.cfm

PLOT PLAN GENERAL NOTES

1. PRIOR TO COMMENCEMENT OF WORK, CONTRACTOR IS TO CONDUCT A FIELD STUDY OF ADA ACCESSIBLE PATH OF TRAVEL. ITEMS TO BE OBSERVED ARE, BUT NOT LIMITED TO THE FOLLOWING:
   A. (E) CONCRETE WALK PATH TO BE UNIFORM. G.C. TO FIX ANY (E) CRACKS, HAZARDS AND UNEVEN PAVEMENT. CONTRACTOR TO FIX ANY CRACKS, UNEVENESS, AND/ OR OBSTRUCTIONS FROM ADA PATH.
   B. CONTRACTOR TO ENSURE UNIFORMITY OF ADA ACCESSIBLE PATH AND VERIFY ALL CROSS SLOPES ARE IN COMPLIANCE WITH APPLICABLE CODES. PATH OF TRAVEL SHALL BE 48" MIN. WIDTH WALKWAY, 5% MAX. SLOPE IN THE DIRECTION OF TRAVEL,2% MAX. CROSS SLOPE 11B-403.3,11B-403.5
   C, IN CASE OF ANY MODIFICATIONTO PATH, CONTRACTOR IS TO COORDINATE MODIFICATION W. (E) IRRIGATION SYSTEMS AND RELOCATE, AND/OR REROUTE ACCORDINGLY.
2. GENERAL CONTRACTOR TO REPAIR ANY DAMAGE CAUSED TO IRRIGATION SYSTEM AND LANDSCAPING DURING CONSTRUCTION
3. FIRE DEPARTMENT VEHICULAR ACCESS ROADS MUST BE MAINTAINED IN A SERVICEABLE MANNER PRIOR TO AND DURING THE TIME OF CONSTRUCTION. CFC 503.4
4. A LOCKABLE KEY BOX SHALL BE PROVIDED AT ALL GATED VEHICULAR ENTRANCES, AND AT FACILITY ENTRANCES AS REQUIRED BY THE FIRE CODE OFFICE IN ACCORDANCE WITH CFC 506.
5. S.L.D. FOR MORE INFO.
6. STAGING AREA LOCATION TO BE PROVIDED BY LA-BOE.
7. FLOOR AND FLOOR GROUND SURFACES SHALL BE STABLE, FIRM, AND SLIP RESISTANT PER CBC SECTION 11B-302.1. ALL NEW CONCRETE SLABS TO BE SEALED. FINISH TO BE MEDIUM BROOM FINISH. CONTRACTOR TO PROVIDE MOCK-UPS OF MEDIUM AND HEAVY FINISH.
8. VERTICAL CHANGES IN LEVEL FOR FLOOR OR GROUND SURFACES MAY BE 1/4 INCH HIGH MAX. AND WITHOUT EDGE TREATMENT. CHAGES IN LEVEL GREATER TAHN 1/4 INCH AND NOT EXCEEDING 1/2" IN HEIGHT SHALL BE BEVELED WITH A SLOPE NOT STEEPER THAN 1:2 PER CBC SECTION 11B-303
9. ABRUPT CHANGES IN LEVEL EXCEEDING 4 INCHES IN A VERTICAL DIMENSION BETWEEN WALKS, SIDEWALKS OR OTHER PEDESTRIAN WAYS AND ADJACENT SURFACES OR FEAUTURES SHALL BE IDENTIFIED BY WARNING CURBS AT LEAST 6 INCHES IN HEIGHT ABOVE THE WALK OR SIDEWALK SURFACE OR BY GUARDS OR HANDRAILS WITH A GUIDE RAILED 2 INCHES MIN. AND 4 INCHES MAX. ABOVE THE SURFACE OF THE WALK OR SIDEWALK. THESE REQUIREMENTS DO NOT APPLY BETWEEN A WALK OR SIDEWALK AND AN ADJACENT STREET OR DRIVEWAY PER CBC SECTION 11B-303.5
10. S.C.D. 3/C5.02 FOR CURB DETAIL WHERE OCCURS.
11. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR AND UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL-BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR TO THE LOCATION OF THE HOOK-UP. THE CONSTRUCTION SHALL NOT BE WITHIN TEN FEET OF ANY POWER LINES-WETHER OR NOT THE LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS AND/ OR ADDITIONAL EXPENSES.
12. AN APPROVED SEISMIC SHUTOFF VALVE WILL BE INSTALLED ON THE FUEL GAS LINE ON THE DOWNSTREAM SIDE OF TH EUTILITY METER AND BE RIGIDLY CONNECTED TO THE EXTERIOR OF THE BUILDING OR STRUCTURE CONTAINING THE FUEL GAS "PIPING" (PER ORDINANCE 170,158) (INCLUDES COMMERCIAL ADDITIONS AND TI WORK OVER $10,000); SEPARATE PLUMBING PERMIT IS REQUIRED.)
13. SUCTION OUTLETS SHALL BE DESIGNED AND INSTALLED IN ACCORDANCE WITH ANSI/APSP-7 (3109.5)
14. PROVIDE THE FOLLOWING REQUIREMENTS FOR THE PUBLIC POOLS:
   A. SHOW THE POOL ENCLOSURE ON THE PLAN. 5' HIGH FENCE WALL AND SELF CLOSING, SELF-LATCHING GATE ARE REQUIRED. (3109.3)
   B. THE LATCH TO BE A MINIMUM 4.5 FT ABOVE THE GROUND (6109 (a))
   C POOLS FOR MORE THAN 3 UNITS ON SITE SHALL BE APPROVAL BY HEALTH DEPARTMENT
   D POOLS SHALL BE IN COMPLIANCE WITH THE REQUIREMENT FOR ACCESS TO THE PUBLIC ACCOMODATIONS BY PHYSICALLY HANDICAPPED PERSONS.
15. GLAZING IN WALLS AND FENCES USED AS THE BARRIER FOR INDOOR AND OUTDOOR SWIMMING POOLS AND SPAS WHEN ALL OF THE FOLLOWING CONDITIONS ARE PRESENT:
   i. THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES (1525 MM) ABOVE THE POOL SIDE OF THE GLAZING.
   ii. THE GLAZING IS WITHIN 5 FEET (1525 MM) OF A SWIMMING POOL OR SPA WATER'S EDGE.
   iii. GLAZING IN WALLS ENCLOSING STAIRWAY LANDINGS OR WITHIN 5 FEET (1525 MM) OF THE BOTTOM AND TOP OF STAIRWAYS WHERE THE BOTTOM EDGE OF THE GLASS IS LESS THAN 60 INCHES (1525 MM) ABOVE WALKING SURFACE.
16. PROVIDE ULTRA-LOW FLUSH WATER CLOSETS FOR ALL NEW CONSTRUCTION. EXISTING SHOWER HEADS AND TOILETS MUST BE ADAPTED FOR LOW WATER CONSUMPTION.
17. A COPY OF THE EVALUATION REPORT AND/OR CONDITIONS OF LISTING SHALL BE MADE AVAILABLE ON TH EJOB SITE.
18. SEE SHEET SP-1 FOR POOL DIMENSIONS.

PLAN FILE NO.
DRAWING NO. 2
SHEET 2 OF SHEETS

PLOTTED:03/03/2020 2:53:10 PM

GENERAL NOTES:

1. ALL WORK PERFORMED IN THIS CONTRACT SHALL CONFORM TO:
   A. THE PROJECT SPECIFICATIONS AND ALL SAFETY REGULATION; CODES AND REQUIREMENTS PERTINENT TO THE PROJECT CONSTRUCTION.
   B. ALL SHALL CONFORM TO THE LATEST EDITION AND SUPPLEMENTS OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) AND AMERICAN PUBLIC WORKS ASSOCIATION (APWA).
   C. CITY OF LOS ANGELES STANDARD PLANS AND SPECIFICATIONS.
   D. PROJECT GEOTECHNICAL REPORT.
2. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO BE KNOWLEDGEABLE TO INTERPRET AND APPLY THE ABOVE CODES AND SPECIFICATIONS.
3. ALL WORK SHALL COMPLY WITH THE REQUIREMENTS OF THE WORK SPECIFIED ON THE DRAWINGS, SPECIFICATIONS AND WITHIN THE VARIOUS NOTES SHOWN HEREIN.
4. THE EXISTING CONDITIONS SHOWN DIAGRAMMATICALLY ON THE PLANS ORIGINATED FROM AS BUILT DRAWINGS AND FIELD SURVEY. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO VISIT THE JOB SITE AND VERIFY THE EXACT EXISTING CONDITIONS BEFORE SUBMITTING HIS/HER BID. ANY DISCREPANCY SHALL BE REPORTED IMMEDIATELY TO THE CITY ENGINEER FOR PROPER ACTION.
5. THE CONTRACTOR SHALL PROTECT ALL EXISTING STRUCTURES IN THE AREA OF WORK WHICH ARE NOT INCLUDED IN THIS CONSTRUCTION. ANY DAMAGE RESULTING FROM THIS WORK SHALL BE REPAIRED AND/OR REPLACED AT NO ADDITIONAL COST TO THE CITY.
6. UNCLOG, CLEAN AND FLUSH THE ENTIRE SITE DRAINAGE SYSTEM AFTER PAVING AND IMMEDIATELY BEFORE A RAIN FORECAST.
7. ALL EXISTING STREET IMPROVEMENTS, UNLESS OTHERWISE INDICATED HEREIN TO BE REMOVED, SHALL BE PROTECT IN PLACE. THESE ITEMS INCLUDE LIGHT POLES, POWER POLES, SIGNAL POLES AND APPURTENANCES.
8. CONTRACTOR SHALL NOTIFY ALL UTILITY OWNERS BOTH IN PRIVATE PROPERTY AND IN PUBLIC RIGHT OF WAY FOR EXISTING LATERALS TO BE REMOVED OR CAPPED.
9. UTILITIES TO BE VERIFIED IN FIELD TO ENSURE EXISTING UTILITY TO REMAIN. CONTRACTOR IS RESPONSIBLE FOR THE RELOCATION IF REQUIRED. ALL EXISTING/RELOCATED UTILTIES PER NEW SITE LAYOUT WILL BE PROTECTED IN PLACE.

UNDERGROUND SERVICE ALERT:

10. BEFORE COMMENCING ANY EXCAVATION ON–SITE AND OFF–SITE, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT INQUIRY I.D. NUMBER BY CALLING 1–800–422–4133. TWO WORKING DAYS SHALL BE ALLOWED AFTER THE I.D. NUMBER IS OBTAINED AND BEFORE THE EXCAVATION WORK IS STARTED THAT UTILITY COMPANIES CAN BE NOTIFIED.

PROTECTION AND RESTORATION OF EXISTING IMPROVEMENTS:

11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF PUBLIC AND PRIVATE PROPERTY ADJACENT TO THE WORK PER SECTION 7–9 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.

REMOVALS:

12. EXISTING STRUCTURES AND SUBSTRUCTURES WHICH ARE INDICATED TO BE REMOVED IN THIS CONSTRUCTION DOCUMENTS SHALL BE TOTALLY REMOVED AND DISPOSED OF OFFSITE, UNLESS OTHERWISE INDICATED. EXISTING FACILITIES WHICH ARE DISCOVERED DURING CONSTRUCTION (INCLUDING WALLS, FOOTINGS, AND FOUNDATIONS) SHALL BE REPORTED TO AND COORDINATED WITH THE GEOTECHNICAL ENGINEER OF RECORD AS TO THEIR REMOVAL.
13. FOLLOWING DEMOLITION, THE CONSTRUCTION AREA SHOULD BE CLEARED OF ANY VEGETATION AND STRIPPED OF MISCELLANEOUS DEBRIS AND OTHER DELETERIOUS MATERIAL. VEGETATION AND ORGANIC MATTER SHOULD NOT BE INCORPORATED INTO THE COMPACTED FILL.
14. ALL SITE PREPARATION AS INDICATED SHALL BE MADE UNDER THE CONTINUOUS INSPECTION OF THE GEOTECHNICAL ENGINEER. SECURE THE REQUIRED PERMITS FROM THE CALIFORNIA DIVISION OF INDUSTRIAL SAFETY FOR THE CONSTRUCTION OF TRENCHES, SHORING OR EXCAVATIONS WHICH ARE 5 FEET OR DEEPER OR WORK THAT MAY JEOPARDIZE THE SAFETY OF WORKERS. SHORING CALCULATIONS SHALL BE PROVIDED BY THE CONTRACTOR AT HIS EXPENSE AS REQUIRED FOR APPROVAL AND PERMITTING.
15. THE CONTRACTOR SHALL KEEP THE CONSTRUCTION AREA SUFFICIENTLY DAMPENED TO CONTROL DUST CAUSED BY WORK ACTIVITIES AS REQUIRED BY THE CITY ENGINEER. THE CONTRACTOR SHALL PROVIDE 6' HIGH TEMPORARY FENCING WITH VISUAL BARRIER AROUND THE PROJECT LIMITS AND A TEMPORARY CONSTRUCTION ACCESS ON–SITE.
16. ALL WORK IN THE PUBLIC RIGHT OF WAY REQUIRES APPROVAL BY THE CITY OF LOS ANGELES DEPARTMENT OF TRANSPORTATION AND PUBLIC WORKS BEFORE CONSTRUCTION BEGINS. CONTRACTOR SHALL SECURE AND PAY FOR ALL PERMITS INCLUDING UTILITY CONNECTIONS REQUIRED PRIOR TO CONSTRUCTION.
17. VOIDS RESULTING FROM REMOVAL OF STRUCTURES SHALL BE FILLED WITH SUITABLE MATERIALS APPROVED BY THE CITY INSPECTOR AND COMPACTED TO 95% MINIMUM DENSITY PER ASTM D–1557 AND THE RECOMMENDATIONS WITHIN THE SOILS ENGINEERING EXPLORATION REPORT.
18. UPON COMPLETION OF PROJECT, CONTRACTOR SHALL REMOVE EXISTING CONSTRUCTION FENCING, APPURTENANCES AND OFFICE TRAILERS FROM THE SITE. PAVEMENT SHALL BE PATCHED AND REPAIRED TO MATCH ADJACENT PAVEMENT AND APPROVED BY THE CITY ENGINEER AS APPLICABLE.
19. ANY ADDITIONAL SURVEYS OR TESTING AS A RESULT OF CONTRACTOR ERROR OR MISINFORMATION WILL BE CHARGED TO THE CONTRACTOR.
20. THE CONSTRUCTION SHALL NOT RESTRICT A FIVE FOOT CLEAR AND UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL–BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR TO THE LOCATION OF THE HOOK UP, THE CONSTRUCTION SHALL NOT BE WITHIN TEN FEET OF ANY POWER LINES WHETHER OR NOT THE LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS AND/OR ADDITIONAL EXPENSES.
21. TRIM TREE ROOTS AS NECESSARY OR GRADED ON AREAS TO BE PAVED. TRIM ROOTS UNDER THE DIRECTION OF A CERTIFIED CITY APPROVED ARBORIST. NOTIFY THE CITY ENGINEER PRIOR TO TRIMMING OF TREES.

GENERAL NOTES:

22. ADJUST TO GRADE EXISTING MANHOLE RIMS, VALVE BOXES AND ELECTRICAL VAULT LIDS TO DESIGN GRADES WITHIN THE IMPROVEMENT AREA, UNLESS NOTED OTHERWISE. CONTRACTOR TO VERIFY LOCATION AND NUMBER OF MANHOLE RIMS, VALVE BOXES AND ELECTRICAL VAULT LIDS IN THE FIELD PRIOR TO BIDDING.
23. IF EXISTING UTILITIES ARE EXPOSED OR DETERMINED TO EXIST UNDER THE ROUGH GRADING SITE, CONTRACTOR SHALL PROVIDE A FLAGGED STAKE THAT INDICATE THEIR LOCATION, TYPE OF UTILITY, SIZE, PIPE MATERIAL, AND DEPTH. STAKES SHALL BE INSTALLED NO LESS THAN 50' ON CENTER ON STRAIGHT LINES AND AT BENDS.
24. SITE BOUNDARIES, EASEMENTS, DRAINAGE DEVICES AND RESTRICTED USE AREAS SHALL BE LOCATED PER CONSTRUCTION STAKING BY A LICENSED SURVEYOR PAID FOR BY THE CONTRACTOR. PRIOR TO GRADING, AS REQUESTED BY THE CITY ENGINEER, ALL PROPERTY LINES, EASEMENTS, AND RESTRICTED USE AREAS SHALL BE STAKED.
25. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE THE CITY ENGINEER WITH A COMPLETE SET OF REPRODUCIBLE & RED MARKED PRINT "AS–BUILT" DRAWINGS OF ALL WORK PERFORMED UNDER THIS CONTRACT, AS SHOWN WITHIN THESE CONSTRUCTION DRAWINGS. ALL FIELD CHANGES SHALL BE SHOWN IN DETAIL ON THE "AS–BUILT" DRAWINGS AND SHALL INCORPORATE AS A MINIMUM, NEW ELEVATIONS, GRADES AND ALIGNMENT OF UNDERGROUND FACILITIES WITH DIMENSIONAL TIES TO BUILDING OR OTHER VISIBLE IMPROVEMENTS.
26. CONTRACTOR IS RESPONSIBLE FOR THE RESTORATION TO THEIR EXISTING CONDITION OF THE FACILITIES WHICH WERE INTENDED TO REMAIN IN PLACE. AND ALL REPAIRS TO ANY DAMAGED MATERIALS OR FACILITIES SHALL BE MADE BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE CITY.
27. CONSTRUCT OFFSITE WORK TO COMPLY WITH THE REQUIREMENTS OF THE LOCAL GOVERNING AGENCY. SECURE AND PAY FOR REQUIRED CONSTRUCTION PERMITS.

GENERAL GEOTECHNICAL NOTES:

1. ALL WORK MUST BE IN COMPLIANCE WITH THE RECOMMENDATIONS INCLUDED IN THE GEOTECHNICAL CONSULTANT'S REPORT(S) AND THE APPROVED GRADING PLANS AND SPECIFICATIONS.
2. SITE GEOTECHNICAL INVESTIGATION WAS PREPARED BY GEOTECHNICAL ENGINEERING DIVISION W.O. #E170517A, GED FILE #17–074 DATED AUGUST 22, 2017, ENTITLED "GEOTECHNICAL ENGINEERING REPORT GRANADA HILLS POOL REPLACEMENT PROJECT WITH ADDRESS 16730 CHATSWORTH STREET TRACT: SUBDIVISION NO.1 OF THE PROPERTY OF THE PORTER LAND AND WATER COMPANY BLOCK: NONE, LOT: 2 SEC 18 T2N R15W LOS ANGELES, CALIFORNIA. RECOMMENDATIONS OF THE SOILS REPORT AND SUPPLEMENTALS / ADDENDUMS ARE PART OF THIS NOTE AND SHALL BE PERFORMED BY THE CONTRACTOR AS APPLICABLE. IF DISCREPANCIES OCCUR THE GEOTECHNICAL REPORT SHALL GOVERN.
3. ALL EARTH WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE GEOTECHNICAL RECOMMENDATIONS IN GEOTECHNICAL REPORT AND THE LADBS GRADING DIVISION REQUIREMENTS. ALL EARTHWORK SHOULD BE PERFORMED UNDER THE OBSERVATION AND TESTING OF A QUALIFIED GEOTECHNICAL ENGINEER.
4. THE SOIL BENEATH NEW PAVEMENTS, POOL DECK, AND SPLASH PAD SHALL BE OVER–EXCAVATED TO A DEPTH OF 24 INCHES BELOW EXISTING GRADING OR 24 INCHES BELOW THE FINISHED GRADE, WHICHEVER IS GREATER AND SHALL RESULT IN 24" OF COMPACTED FILL. THE EXCAVATION SHALL EXTEND LATERALLY AT LEAST 2 FEET BEYOND THE EDGE OF THE PAVEMENT OR TO THE PROPERTY BOUNDARY, WHICHEVER IS LESS.
5. THE SOIL BENEATH THE POOL SHALL BE EXCAVATED TO THE DESIGN SUBGRADE OR TO THE NATIVE SOIL, WHICHEVER IS GREATER. AS ADDITIONAL 12" SHALL BE EXCAVATED SO THAT THE POOL IS UNDERLAIN BY 12" OF FILL.
6. THE SOIL BENEATH SECONDARY (I.E. NON–STRUCTURAL) STRUCTURES SHALL BE OVER–EXCAVATED TO A DEPTH THAT SHALL RESULT IN AT LEAST 24 INCHES OF COMPACTED FILL BENEATH THE FOOTING. THIS 24 INCHES INCLUDES SUBGRADE PREPARATION. THE EXCAVATION SHALL EXTEND LATERALLY AT LEAST 2 FEET BEYOND THE EDGE OF THE FOOTING OR TO THE PROPERLY BOUNDARY, WHICHEVER IS LESS.
7. THE SOIL BENEATH SHALLOW FOUNDATIONS SHALL BE OVER–EXCAVATED TO A DEPTH THAT SHALL RESULT IN AT LEAST 30 INCHES OF COMPACTED FILL BENEATH THE FOOTING. THIS 30 INCHES INCLUDES SUBGRADE PREPARATION. THE EXCAVATION SHALL EXTEND LATERALLY AT LEAST 2 FEET BEYOND THE EDGE OF THE FOOTING OR TO THE PROPERLY BOUNDARY, WHICHEVER IS LESS.
8. ALL EXCAVATION BOTTOMS SHALL BE SCARIFIED TO A DEPTH OF 6 INCHES, MOISTURE CONDITIONED TO WITHIN 3 PERCENT ABOVE THE OPTIMUM MOISTURE CONTENT, AND COMPACTED TO AT LEAST 95 PERCENT RC. ALL EXCAVATION BOTTOMS MUST BE APPROVED BY A REPRESENTATIVE OF GEO AND BY THE LADBS GRADING INSPECTOR PRIOR TO BACK FILL.
9. UNSURCHARGED, TEMPORARY VERTICAL EXCAVATIONS SHALL NOT EXCEED 5 FEET. UNSURCHARGED EXCAVATIONS GREATER THAN 5 FEET AND TO A MAXIMUM OF 10 FEET SHALL BE SLOPED AT A 1.5:1 (H: V) OR FLATTER INCLINATION FROM THE GROUND SURFACE TO THE BOTTOM OF THE EXCAVATION. IF DEEPER EXCAVATIONS ARE PROPOSED, THEY SHALL BE REVIEWED BY GEO AND SUPPLEMENTAL RECOMMENDATION MAY BE REQUIRED.
10. PRIOR TO EXCAVATION, IT IS RECOMMENDED THAT WALLS, STRUCTURES, OR PORTIONS OF STRUCTURES WITHIN A HORIZONTAL DISTANCE OF 1½ TIMES THE DEPTH OF THE EXCAVATION BE INSPECTED TO DETERMINE THEIR PRESENT CONDITION.
11. PHOTOGRAPHS SHOULD BE TAKEN OF PRECONSTRUCTION CONDITIONS AND LEVEL SURVEYS SHOULD BE PERFORMED.
12. THE CONTRACTOR SHALL NOT POUR FOOTINGS UNTIL AN APPROVAL LETTER IS ISSUED BY THE DEPARTMENT OF BUILDING AND SAFETY, GRADING DIVISION FOR THE COMPACTION CERTIFICATION. THE CONTRACTOR MAY EXCAVATE IN COMPACTED FILL FOR FOUNDATION ELEMENTS BEFORE THE FILL CERTIFICATION APPROVAL LETTER IS ISSUED, BUT DOES SO AT HIS/HER OWN RISK.
13. THE GEOTECHNICAL ENGINEER IS TO APPROVE THE KEY OR BOTTOM OF EXCAVATION AND LEAVE A CERTIFICATE ON THE SITE FOR THE CITY INSPECTOR. THE CITY INSPECTOR IS TO BE NOTIFIED BEFORE ANY GRADING BEGINS AND FOR BOTTOM INSPECTION BEFORE FILL IS PLACED. FILL MAY NOT BE PLACED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
14. THE GEOTECHNICAL ENGINEER SHALL PROVIDE SUFFICIENT INSPECTIONS DURING THE PREPARATION OF THE NATURAL GROUND AND THE PLACEMENT AND COMPACTION OF THE FILL TO BE SATISFIED THAT THE WORK IS BEING PERFORMED IN ACCORDANCE WITH THE PLAN AND APPLICABLE CODE REQUIREMENTS.
15. FOUNDATION AND WALL EXCAVATIONS MUST BE INSPECTED AND APPROVED BY THE GEOTECHNICAL ENGINEER, PRIOR TO THE PLACING OF STEEL OR CONCRETE.
16. WHERE FOUNDATIONS ARE DESIGNED TO DERIVE SUPPORT IN ENGINEERED FILL, AS A MINIMUM, FOOTINGS SHALL BE FOUNDED ON AT LEAST 30 INCHES OF PROPERLY COMPACTED FILL MATERIAL AND SHALL BE FOUNDED AT LEAST 24 INCHES BELOW THE LOWEST ADJACENT GRADE.
17. TRENCH EXCAVATIONS FOR UTILITY PIPES MAY BE BACKFILLED WITH ONSITE SOILS UNDER THE OBSERVATION OF A REPRESENTATIVE OF GEO. AFTER UTILITY PIPES HAVE BEEN LAID, PROPERLY BEDDED, AND COVERED PER THE PROJECT SPECIFICATIONS, THEY SHALL BE BACK FILLED TO THE GROUND SURFACE OR DESIGN SUBGRADE WITH CONTROLLED BACKFILL. CONTROLLED BACKFILL SHALL BE MOISTURE CONDITIONED, PLACED AND COMPACTED IN ACCORDANCE WITH THE RECOMMENDATIONS PRESENTED ABOVE. DENSIFICATION BY FLOODING OR JETTING IS NOT ALLOWED.
18. FOR ON–SITE PAVEMENT ADAPTED PER GEOTECHNICAL REPORT AND SUPPLEMENTAL REPORT, REFER TO SHEET C5.00 AND C5.01 PAVEMENT DETAILS FOR PAVEMENT THICKNESSES, COMPACTION REQUIREMENTS, AND OTHER CONDITIONS.

FILL NOTES:

1. FILL SHALL NOT BE PLACED UNTIL STRIPPING OF VEGETATION, REMOVAL OF UNSUITABLE SOILS, AND INSTALLATION OF SUBDRAIN (IF ANY) HAVE BEEN INSPECTED AND APPROVED BY THE SOIL ENGINEER. THE CITY ENGINEER MAY REQUIRE A "STANDARD TEST METHOD FOR MOISTURE, ASH, ORGANIC MATTER, PEAT OR OTHER ORGANIC SOILS" ASTM D–2974–87 ON ANY SUSPECT MATERIAL. DETRIMENTAL AMOUNTS OF ORGANIC MATERIAL SHALL NOT BE PERMITTED IN FILLS. SOIL CONTAINING SMALL AMOUNTS OF ROOTS MAY BE ALLOWED PROVIDED THAT THE ROOTS ARE IN A QUANTITY AND DISTRIBUTED IN A MANNER THAT WILL NOT BE DETRIMENTAL TO THE FUTURE USE OF THE SITE AND THE GEOTECHNICAL ENGINEER APPROVED THE USE OF SUCH MATERIAL.
2. NO FILL TO BE PLACED, UNTIL THE GEOTECHNICAL ENGINEER OR CITY ENGINEER HAS INSPECTED AND APPROVED THE BOTTOM OF EXCAVATION. FILL MATERIAL INCLUDING BASE MATERIAL SHALL BE OBTAINED FROM A DESIGNATED ON–SITE STOCKPILE AREAS, AS DIRECTED BY THE OAR. ANY ADDITIONAL IMPORT FILL MATERIAL SHALL HAVE AN EXPANSION INDEX OF LESS THAN "20". IN NO CASE SHALL ON–SITE CLAY SOILS BE PLACED IN THE UPPER 24 INCHES BENEATH CONCRETE SLABS AND WALKS AND BEHIND RETAINING WALLS AS DIRECTED IN THE GEOTECHNICAL INVESTIGATION REPORT.
3. FOR ONSITE OR NATIVE SOILS; THE GEOTECHNICAL ENGINEER SHOULD BE PRESENT TO REVIEW THE TYPES OF MATERIALS ENCOUNTERED IN THE EXCAVATIONS IN ORDER TO CONFIRM THEIR RE–USABILITY.
4. THE EXISTING PEA GRAVEL FILL BY ITSELF IS NOT ACCEPTABLE FOR REUSE AS BACK FILL, BUT IT MAY BE BLENDED WITH THE NATIVE SOIL. FILL MATERIALS SHALL CONSIST OF THE NATIVE SOIL OR APPROVED IMPORT SOIL. IMPORT SOIL AND ONSITE BLENDED NATIVE SOIL/PEA GRAVEL SHALL BE PREDOMINANTLY GRANULAR (MINIMUM 80% PASSING THE NO. 4 SIEVE AND BETWEEN 10% AND 35% PASSING THE NO. 200 SIEVE, NON–EXPENSIVE (EI LESS THAN 20). ALL FILL SHALL BE FREE OF ORGANIC OR INORGANIC DEBRIS, CONTAMINATION AND MATERIALS WITH ANY DIMENSION LARGER THAN 3 INCHES. PROPOSED IMPORT SOIL SHALL BE REVIEWED BY GEO FOR APPROVAL PRIOR TO DELIVERY TO THE JOB SITE. GEO SHALL BE NOTIFIED A MINIMUM OF THREE WORKING DAYS PRIOR TO SCHEDULED DELIVER TO THE SITE.
5. FILL MATERIAL SHALL BE PLACED IN LOOSE LIFTS NOT EXCEEDING 8 INCHES IN THICKNESS, MOISTURE–CONDITIONED TO WITHIN 3 PERCENT ABOVE THE OPTIMUM MOISTURE CONTENT AND MECHANICALLY COMPACTED. CLAYEY SOILS (I.E. THOSE WITH 15% OR MORE FINER THAN 0.005 MM SIEVE) ARE NOT ANTICIPATED AT THIS TIME. PRIMARY STRUCTURAL FILL AND THE UPPER 1–FOOT OF SUBGRADE BENEATH PAVEMENTS SHALL BE COMPACTED TO A MINIMUM OF 95 PERCENT RC. ANY AGGREGATE BASE SHOULD BE MOISTURE CONDITIONED TO WITHIN 3 PERCENT ABOVE OPTIMUM AND COMPACTED TO A MINIMUM OF 95 PERCENT RC.
6. FILL PLACEMENT AND COMPACTION SHALL BE OBSERVED AND TESTED BY A CERTIFIED COMPACTION TESTING AGENCY WORKING UNDER THE DIRECT SUPERVISION OF GEO. COMPACTED FILL SOILS SHALL BE KEEP MOIST, (AT OR SLIGHTLY ABOVE THE SPECIFIED MOISTURE CONTENT AT THE TIME OF COMPACTION) BUT NOT FLOODED, UNTIL COVERED WITH SUBSEQUENT CONSTRUCTION. IF COMPACTED FILL SOILS BECOME SOFTENED OR DISTURBED, THEY SHALL BE REPLACED OR RECOMPACTED AT THE DIRECTION OF GEOTECHNICAL ENGINEER BEFORE ADDITIONAL FILL OR CONSTRUCTION IS PLACED. CERTIFICATION AND INSPECTION APPROVALS FOR COMPROMISED SOILS ARE VOID AND INVALID.

UTILITY NOTES:

WATER UTILITY NOTES:

1. ALL FITTINGS SUBJECT TO AN UNBALANCED HYDROSTATIC FORCE SHALL BE RESTRAINED WITH 2000 PSI CONCRETE THRUST BLOCKS BEARING AGAINST UNDISTURBED SOIL. IN ADDITION, ALL FLEXIBLE JOINTS SHALL BE RESTRAINED WITH ANCHOR BOXES.
2. THE CONTRACTOR SHALL FURNISH, INSTALL AND TEST ALL PIPING FOR WATER INSIDE THE DEVELOPMENT, INCLUDING FIRE SERVICE AND HYDRANTS, AND THE DOMESTIC WATER SYSTEM. THE CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR ALL THE WATER APPURTENANCES, VALVES WATER METERS (SUB-METERS), FITTINGS, THRUST BLOCKS OR RESTRAINT SYSTEM, AND FINAL CHLORINATION/ DISINFECTION OF THE WHOLE WATER DISTRIBUTION SYSTEM OF THE PROJECT IN ACCORDANCE WITH THE WATER DISTRIBUTION SPEC 02510 REQUIREMENTS.
3. PIPING SHALL BE "LISTED" FOR FIRE PROTECTION SERVICE AND COMPLY WITH AWWA STANDARDS, WHERE APPLICABLE. FITTINGS SHALL BE OF AN "APPROVED" TYPE.
4. ALL CONTROL VALVES SHALL BE "LISTED" INDICATING TYPE UNLESS A NON-INDICATING VALVE, SUCH AS AN UNDERGROUND GATE VALVE WITH APPROVED ROADWAY BOX COMPLETE WITH T-WRENCH, IS ACCEPTABLE TO THE AUTHORITY HAVING JURISDICTION (AHJ).
5. DOMESTIC WATER LINE PIPE SIZE 2-1/2" AND SMALLER USE COPPER TUBING, TYPE L HARD. PROVIDE PIPE CORROSION PROTECTION.
6. ALL TEES, PLUGS, CAPS, BENDS, AND HYDRANT BRANCHES ON PIPE INSTALLED UNDERGROUND SHALL BE RESTRAINED (PIPE CLAMPS AND TIE-RODS, THRUST BLOCKS, LOCKED MECHANICAL OR PUSH-ON JOINTS, MECHANICAL JOINTS UTILIZING SET SCREW RETAINER GLANDS, OR OTHER APPROVED METHODS) AGAINST MOVEMENT.

STORM DRAINAGE UTILITY NOTES:

1. ALL CATCH BASINS AND DRAINAGE INLETS SHALL BE STENCILED WITH "NO DUMPING, DRAINS TO OCEAN" LOGO. PER DETAIL 1 ON SHEET C5.02.
2. CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL REPORT ANY DISCREPANCIES TO THE CITY ENGINEER PRIOR TO THE COMMENCEMENT OF ANY WORK.
3. TRENCH EXCAVATION AND BACKFILLING SHALL BE IN ACCORDANCE WITH APPLICABLE STANDARDS. THE CONTRACTORS SHALL COMPLY WITH ALL APPLICABLE DIVISION OF INDUSTRIAL REGULATIONS (CAL-OSHA) SAFETY STANDARDS.
4. COORDINATE WITH PLUMBING PLAN TO VERFIY EXACT LOCATION OF POINT OF CONNECTION BETWEEN PLUMBING AND CIVIL. ADJUST LINE AS REQUIRED.
5. MINIMUM STORM DRAIN LINE PIPE SLOPE AT 0.50%.
6. DIRECT ROOF DOWNSPOUT TO PLANTER BOX OR CONNECT TO ONSITE STORM DRAINAGE LINE TOWARDS THE BIO-FILTRATION AREAS AS INDICATED ON UTILITY PLAN.

SEWER UTILITY NOTES:

1. CONTRACTOR TO COORDINATE WITH CITY OF LOS ANGELES FOR SADDLE CONNECTION TO STREET PER CITY OF LOS ANGELES STANDARD PLAN 27983.
2. CONTRACTOR TO FIELD VERIFY EXISTING SEWER LINE CONNECTION, CONDUCT CCTV TO VERIFY PIPE SIZE, INVERT ELEVATION, AND IDENTIFY IF THE EXISTING PIPE IS DAMAGED. IF DAMAGED EXISTING PIPE NEEDS TO BE REPLACED BASED ON THE FINDINGS NEW SEWER 6"ø LATERALS SHALL BE INSTALLED WITH A 1% MINIMUM SLOPE.
3. CONTRACTOR TO COORDINATE WITH THE OFF-SITE WORKS DURING INSTALLATION, ADJUST SEWER LINE CONNECTION AS REQUIRED.
4. CONTRACTOR TO VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL REPORT ANY DISCREPANCIES TO THE ENGINEER PRIOR TO THE COMMENCEMENT OF ANY WORK.
5. TRENCH EXCAVATION AND BACKFILLING SHALL BE IN ACCORDANCE WITH APPLICABLE STANDARD. THE CONTRACTORS SHALL COMPLY WITH ALL APPLICABLE DIVISION OF INDUSTRIAL REGULATIONS (CAL-OSHA) SAFETY STANDARDS.
6. FOR TOP OF RIM, CLEAN OUT COVER ELEVATION, AND MANHOLE COVER ELEVATION, COORDINATE UTILITY PLAN WITH GRADING PLANS; REPORT ANY DISCREPANCIES TO THE CITY ENGINEER PRIOR TO THE COMMENCEMENT OF ANY WORK.
7. TEST SHALL BE CONDUCTED IN ACCORDANCE WITH SECTION 306 – UNDERGROUND CONDUIT CONSTRUCTION OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
8. CONTRACTOR TO VERIFY POINT OF CONNECTION BETWEEN SEWER LATERAL AND BUILDING PLUMBING SEWER LAYOUT AND SHALL REPORT ANY DISCREPANCIES TO THE ENGINEER PRIOR TO THE COMMENCEMENT OF ANY WORK.

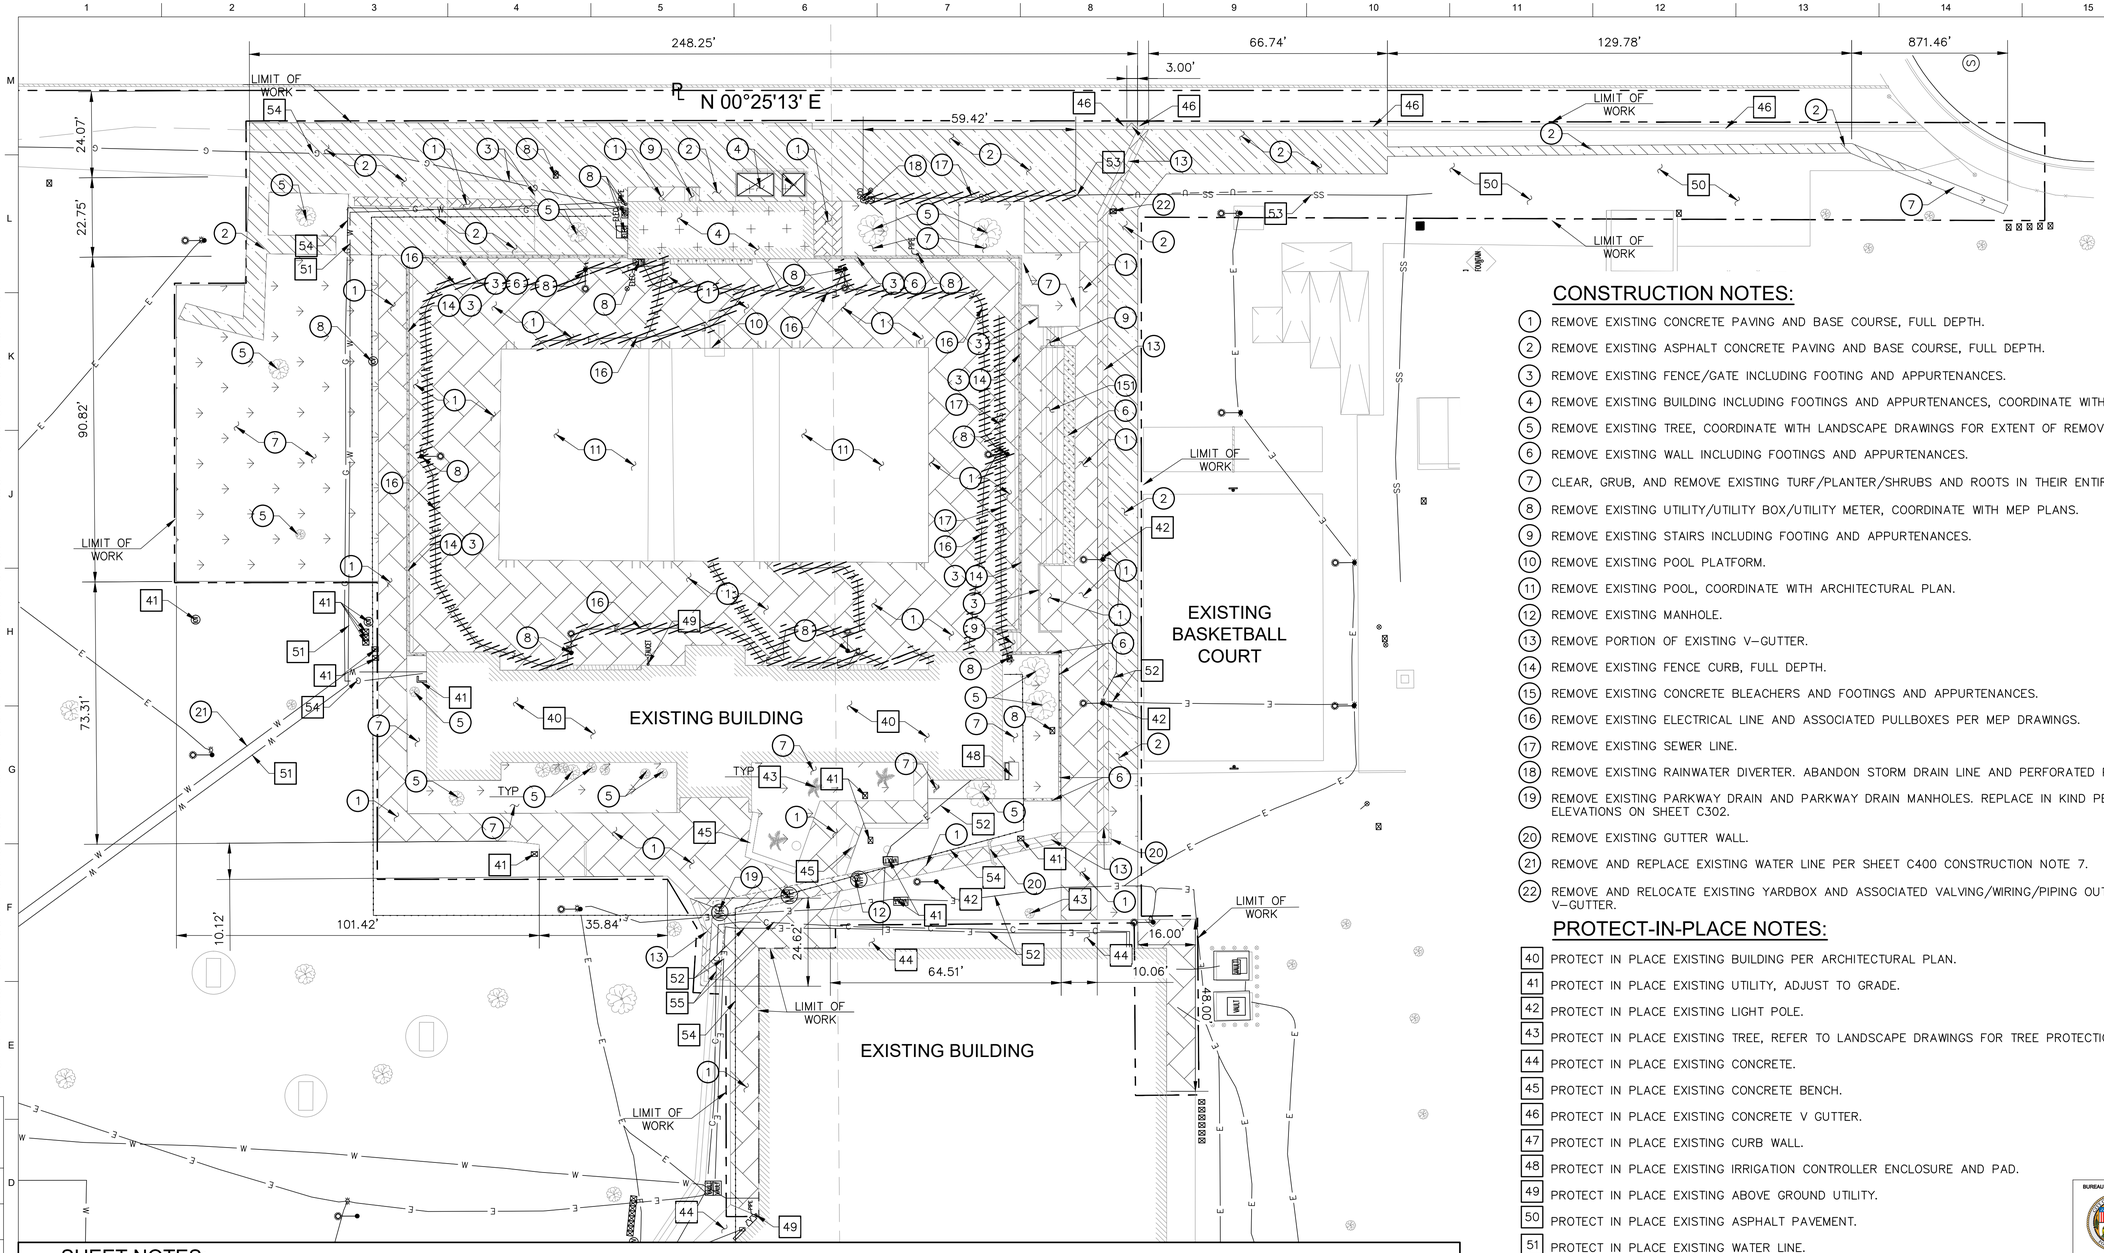
SHEET 2 OF SHEETS 19

PLOTTED:09/18/2019 1:00:00 PM



CONSTRUCTION NOTES:

1. REMOVE EXISTING CONCRETE PAVING AND BASE COURSE, FULL DEPTH.
2. REMOVE EXISTING ASPHALT CONCRETE PAVING AND BASE COURSE, FULL DEPTH.
3. REMOVE EXISTING FENCE/GATE INCLUDING FOOTING AND APPURTENANCES.
4. REMOVE EXISTING BUILDING INCLUDING FOOTINGS AND APPURTENANCES, COORDINATE WITH ARCHITECTURAL PLAN.
5. REMOVE EXISTING TREE, COORDINATE WITH LANDSCAPE DRAWINGS FOR EXTENT OF REMOVAL.
6. REMOVE EXISTING WALL INCLUDING FOOTINGS AND APPURTENANCES.
7. CLEAR, GRUB, AND REMOVE EXISTING TURF/PLANTER/SHRUBS AND ROOTS IN THEIR ENTIRETY.
8. REMOVE EXISTING UTILITY/UTILITY BOX/UTILITY METER, COORDINATE WITH MEP PLANS.
9. REMOVE EXISTING STAIRS INCLUDING FOOTING AND APPURTENANCES.
10. REMOVE EXISTING POOL PLATFORM.
11. REMOVE EXISTING POOL, COORDINATE WITH ARCHITECTURAL PLAN.
12. REMOVE EXISTING MANHOLE.
13. REMOVE PORTION OF EXISTING V–GUTTER.
14. REMOVE EXISTING FENCE CURB, FULL DEPTH.
15. REMOVE EXISTING CONCRETE BLEACHERS AND FOOTINGS AND APPURTENANCES.
16. REMOVE EXISTING ELECTRICAL LINE AND ASSOCIATED PULLBOXES PER MEP DRAWINGS.
17. REMOVE EXISTING SEWER LINE.
18. REMOVE EXISTING RAINWATER DIVERTER. ABANDON STORM DRAIN LINE AND PERFORATED PIPE IN PLACE.
19. REMOVE EXISTING PARKWAY DRAIN AND PARKWAY DRAIN MANHOLES. REPLACE IN KIND PER NEW PAVEMENT ELEVATIONS ON SHEET C302.
20. REMOVE EXISTING GUTTER WALL.
21. REMOVE AND REPLACE EXISTING WATER LINE PER SHEET C400 CONSTRUCTION NOTE 7.
22. REMOVE AND RELOCATE EXISTING YARDBOX AND ASSOCIATED VALVING/WIRING/PIPING OUTSIDE OF NEW V–GUTTER.

PROTECT-IN-PLACE NOTES:

40. PROTECT IN PLACE EXISTING BUILDING PER ARCHITECTURAL PLAN.
41. PROTECT IN PLACE EXISTING UTILITY, ADJUST TO GRADE.
42. PROTECT IN PLACE EXISTING LIGHT POLE.
43. PROTECT IN PLACE EXISTING TREE, REFER TO LANDSCAPE DRAWINGS FOR TREE PROTECTION REQUIREMENTS.
44. PROTECT IN PLACE EXISTING CONCRETE.
45. PROTECT IN PLACE EXISTING CONCRETE BENCH.
46. PROTECT IN PLACE EXISTING CONCRETE V GUTTER.
47. PROTECT IN PLACE EXISTING CURB WALL.
48. PROTECT IN PLACE EXISTING IRRIGATION CONTROLLER ENCLOSURE AND PAD.
49. PROTECT IN PLACE EXISTING ABOVE GROUND UTILITY.
50. PROTECT IN PLACE EXISTING ASPHALT PAVEMENT.
51. PROTECT IN PLACE EXISTING WATER LINE.
52. PROTECT IN PLACE EXISTING ELECTRICAL LINE.
53. PROTECT IN PLACE EXISTING SEWER LINE.
54. PROTECT IN PLACE EXISTING GAS LINE.
55. PROTECT IN PLACE EXISTING COMMUNICATION LINE.

LEGEND:

- REMOVE EXISTING CONCRETE PAVING
- REMOVE EXISTING ASPHALT PAVING
- REMOVE EXISTING STRUCTURE
- CLEAR, GRUB, AND REMOVE EXISTING TURF/PLANTER/SHRUBS AND ROOTS IN THEIR ENTIRETY.
- UTILITY LINE REMOVAL
- EXISTING CONCRETE

SHEET NOTES:

1. ALL EXISTING STREET IMPROVEMENTS, UNLESS OTHERWISE INDICATED HEREIN TO BE REMOVED, SHALL BE PROTECTED IN PLACE. THESE ITEMS INCLUDE SIDEWALK, DRIVEWAYS, CURB AND GUTTER, LIGHT POLES, POWER POLES, SIGNAL POLES AND APPURTENANCES.
2. CONTRACTOR SHALL NOTIFY ALL UTILITY OWNERS BOTH IN PRIVATE PROPERTY AND IN PUBLIC RIGHT OF WAY FOR EXISTING LATERALS TO BE REMOVED OR CAPPED.
3. VERIFY IN FIELD AND POTHOLE TO REMOVE ALL EXISTING ON–SITE SEWER LINES, CLEANOUTS, MANHOLES, UNLESS OTHERWISE INDICATED. CUT PIPE AND CAP PIPE ENDS. COORDINATE WITH PLUMBING DRAWINGS. IN CASE OF CONFLICT, PLUMBING WILL GOVERN.
4. VERIFY IN FIELD AND POTHOLE TO REMOVE EXISTING ON–SITE WATER LINES, UNLESS OTHERWISE INDICATED. TURN OFF WATER AT SOURCE, CUT AND CAP PIPE AT LIMIT OF WORK LINE. REMOVE WATER LINE WITHIN WORK LIMITS. COORDINATE WITH PLUMBING DRAWINGS. IN CASE OF CONFLICT, PLUMBING WILL GOVERN.
5. VERIFY IN FIELD AND POTHOLE TO REMOVE EXISTING ON–SITE STORM DRAIN LINES, CLEANOUTS, MANHOLES, UNLESS OTHERWISE INDICATED. CUT PIPE AND CAP PIPE ENDS. COORDINATE WITH PLUMBING. IN CASE OF CONFLICT, PLUMBING WILL GOVERN.
6. ABANDON IN PLACE UNNEEDED EXISTING ON–SITE IRRIGATION LINES. COORDINATE WITH LANDSCAPE DRAWINGS. IN CASE OF CONFLICT, LANDSCAPE WILL GOVERN.
7. VERIFY IN FIELD AND POTHOLE TO REMOVE ALL EXISTING ELECTRICAL, POWER, TELEPHONE, AND COMMUNICATIONS SYSTEMS ON SITE, UNLESS OTHERWISE INDICATED ON ELECTRICAL DRAWINGS. COORDINATE WITH UTILITY OWNERS FOR REQUIREMENTS.
8. VERIFY IN FIELD AND POTHOLE TO REMOVE ALL EXISTING ON–SITE GAS SYSTEM, UNLESS OTHERWISE INDICATED ON PLUMBING/MECHANICAL DRAWINGS. COORDINATE WITH GAS COMPANY FOR REQUIREMENTS.
9. COORDINATE WITH LANDSCAPING FOR TREE REMOVAL. IN CASE OF CONFLICT, LANDSCAPE WILL GOVERN.
10. CONTRACTOR SHOULD VISUALLY VERIFY IN FIELD ALL EXISTING FEATURE TO BE REMOVED WITHIN LIMIT OF WORK BEFORE BIDDING. ALL SURFACE AND UNDERGROUND FEATURES WITH LIMIT OF WORK ARE A PART OF DEMOLITION PLAN UNLESS OTHERWISE INDICATED TO PROTECT.
11. REMOVE EXISTING ABANDONED UTILITIES FOUND WITHIN THE EXCAVATION FOR THE POOL AND POOL DECK.

BID SET
PROJECT ISSUE DATE: 06/22/21

WORK ORDER NO. #E170517
PLAN FILE NO. #308
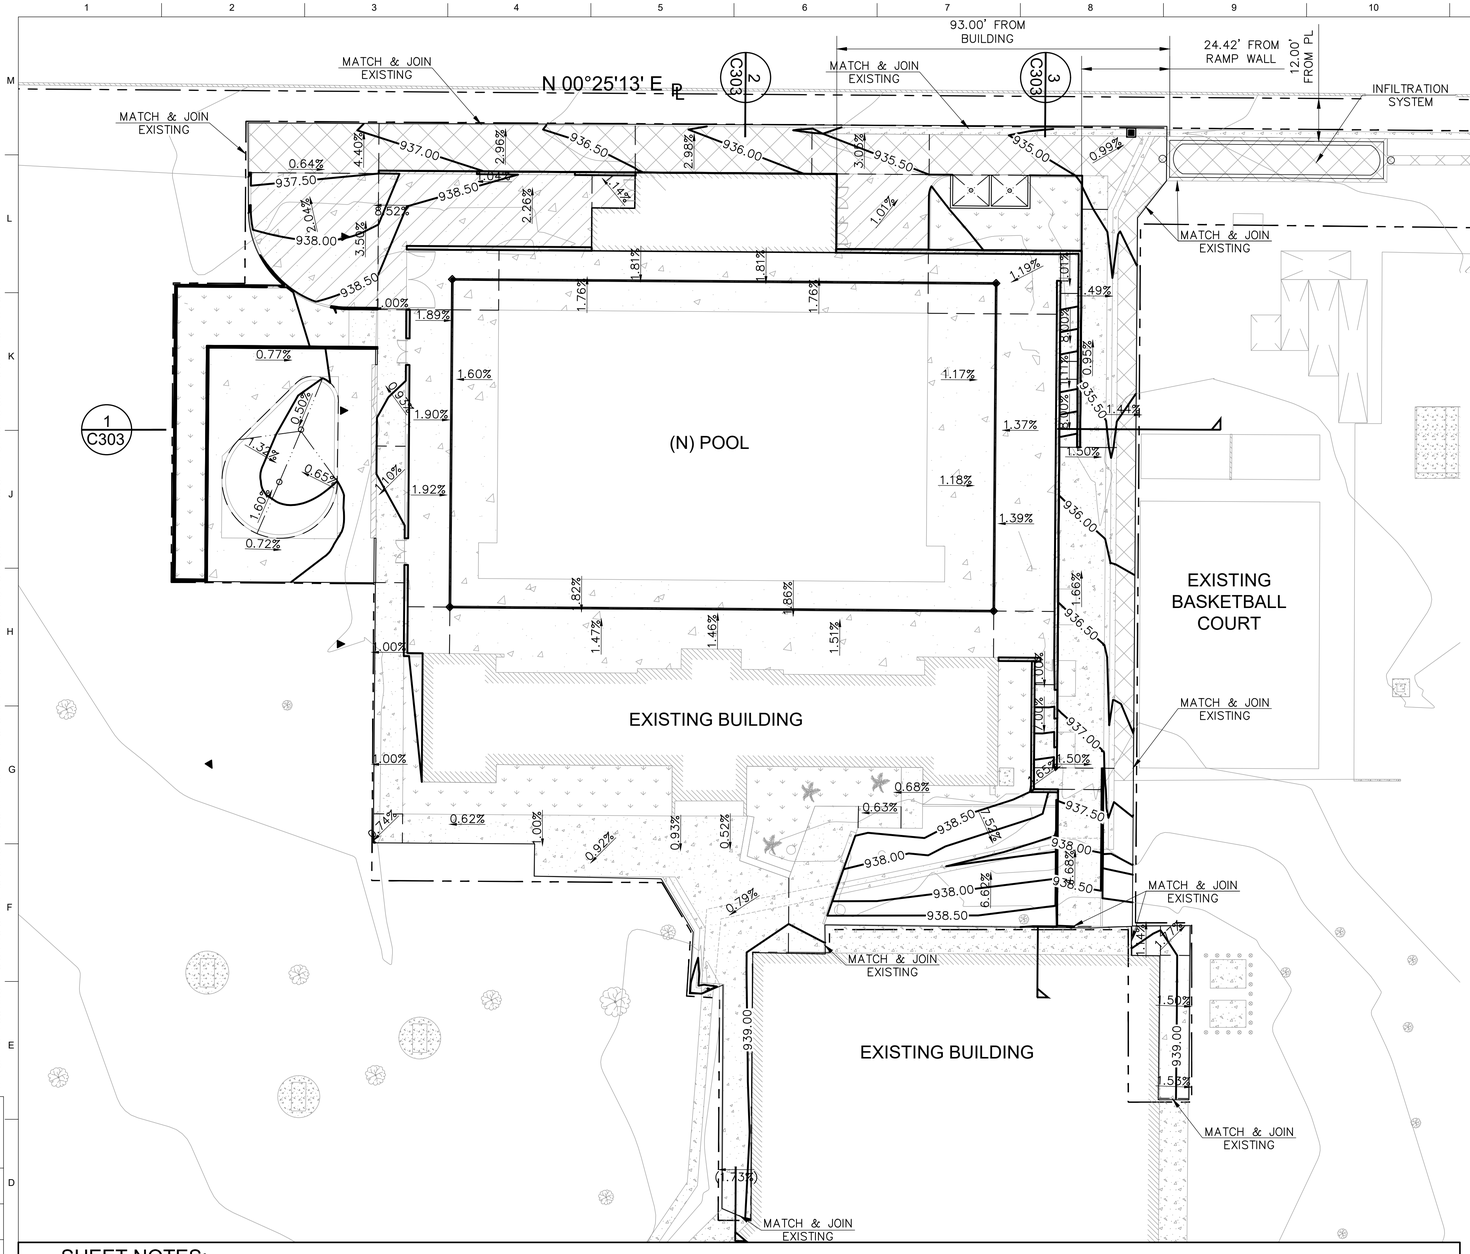
DRAWING NO. C200
SHEET 4 OF SHEETS 19

PLOTTED:09/18/2019 1:00:00 PM



SHEET NOTES:

1. FOR GENERAL NOTES, LEGEND AND ABBREVIATIONS, SEE SHEETS C1.00 AND C1.01.
2. SEE ARCHITECTURAL AND LANDSCAPE DRAWINGS FOR OTHER SITE RELATIVE DIMENSIONS NOT SHOWN ON THIS DRAWING.
3. FOR FINAL GRADING PLAN NOTES, SEE THIS SHEET.
4. FOR ELEVATION SHOWN ON THIS PLAN SUCH AS TOP OF GRATE, CLEAN OUT, MANHOLE COVER, TOP OF DRAINAGE GRATES, TOP OF RIM CONTRACTOR TO COORDINATE ELEVATION SHOWN ON UTILITY PLANS. REPORT/NOTIFY ENGINEER FOR ANY CONFLICT/DISCREPANCY IN ELEVATION PRIOR TO COMMENCEMENT OF WORK.
5. CONTRACTOR SHALL VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL REPORT ANY DISCREPANCIES TO THE CPM OR IOR PRIOR TO THE COMMENCEMENT OF ANY WORK.
6. CONTRACTOR SHALL VERIFY JOINING OF NEW IMPROVEMENT TO ADJACENT FEATURES, EXISTING/ MATCH TO EXISTING FEATURES WITH SURVEY INFORMATION, CURRENT SITE CONDITION AND WITH THE DESIGN GRADE & ELEVATIONS AND SHALL REPORT ANY DISCREPANCIES TO THE CPM OR IOR PRIOR TO THE COMMENCEMENT OF WORK.

FINAL GRADING NOTES

1. ALL GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE CITY INSPECTOR AND/OR GEOTECHNICAL ENGINEER.
2. FOR EXCAVATION, FILL, BACKFILL, AND COMPACTION, THE CONTRACTOR SHALL FOLLOW THE RECOMMENDATIONS AS INDICATED WITHIN THE GEOTECHNICAL REPORT.
3. NO GRADING WORK SHALL BE PERFORMED AT ANY TIME WITHOUT AN EROSION CONTROL SYSTEM APPROVED BY THE DISTRICT ENGINEER AND JURISDICTIONAL AGENCY. ANY GRADING WORK SHALL BE PERFORMED WITH AN EROSION CONTROL SYSTEM APPROVED BY THE DISTRICT ENGINEER AND THE JURISDICTIONAL AGENCIES. EROSION CONTROL PLAN SHALL BE PROVIDED BY THE CONTRACTOR.
4. CONTRACTOR SHALL PROVIDE A STORM WATER POLLUTION PREVENTION PLAN (SWPPP) AND EROSION AND SEDIMENTATION CONTROL FOR REVIEW AND APPROVAL BY THE JURISDICTIONAL AGENCIES. USE RECOMMENDATIONS BY THE BEST MANAGEMENT PRACTICES (BMP'S) TO IMPLEMENT CONTROL. USE MINIMUM OF TWO STACKED SANDBAGS AROUND THE PERIPHERY OF THE WORK LIMITS TO AUGMENT THE SYSTEM REQUIRED BY THE AGENCIES HAVING JURISDICTION OVER THE PROJECT.
5. CONSTRUCT DESIGN GRADES SHOWN ON PLAN. CONSTRUCT STRAIGHT GRADES BETWEEN INDICATED ELEVATIONS UNLESS INTERRUPTED BY A GRADE CHANGE LINE.
6. THE CONTRACTOR SHALL NOT BEGIN THE PAVING OPERATION UNTIL THE SUBGRADE HAS BEEN APPROVED BY THE GRADING INSPECTOR AND SOIL ENGINEER.
7. THE CONTRACTOR IS ADVISED THAT THE APPROVAL OF THIS PLAN DOES NOT WAIVE THE REQUIREMENTS FOR EXCAVATIONS CONTAINED IN THE STATE CONSTRUCTION SAFETY ORDERS ENFORCED BY THE STATE DIVISION OF INDUSTRIAL SAFETY.
8. NO FILL TO BE PLACED, UNTIL THE GEOTECHNICAL ENGINEER AND INSPECTOR HAVE INSPECTED AND APPROVED THE BOTTOM OF EXCAVATION.
9. ALL FILL OR BACK FILL SHALL BE COMPACTED IN 6" TO 8" LOOSE LAYERS BY MECHANICAL MEANS TO A MINIMUM 90% RELATIVE COMPACTION AS DETERMINED BY THE ASTM D-1557. THE TOP 12" OF FILL OR BACKFILL SHALL BE COMPACTED TO A MINIMUM 95% RELATIVE COMPACTION.
10. ALL IMPORTED FILL SHALL BE APPROVED AT THE SOURCE PRIOR TO DELIVERY TO THE SITE.
11. SEE ARCHITECTURAL PLAN FOR TOP OF WALL ELEVATION AND SECTION.

ESTIMATED EARTHWORK QUANTITY

ESTIMATED CUT	=	1200 CY
ESTIMATED FILL	=	50 CY
NET EXPORT	=	1150 CY
POOL OVEREXCAVATION& RECOMPACTION	=	375 CY

NOTES

1. THE ESTIMATED QUANTITIES PROVIDED ABOVE ARE FOR REFERENCE ONLY TO BE USED FOR JURISDICTIONAL PLAN CHECKING AND PERMITTING PURPOSES ONLY.
2. ESTIMATED EARTHWORK ABOVE IS BASED ON DESIGN FINISH GRADES TO EXISTING GRADES IN SURVEY. THE ESTIMATED EARTHWORK DOES NOT CONSIDER THE THICKNESS OF EACH PAVEMENT MATERIAL, FOUNDATION AND SLAB ON GRADE VOLUMES, THE REMOVAL OF ANY UNSUITABLE MATERIAL, AND THE REMOVAL OF EXISTING BASEMENTS, PITS, VAULTS, TOP SOIL OR VEGETATION.
3. THE ESTIMATED EARTHWORK QUANTITIES DO NOT INCLUDE SHRINKAGE FACTORS DUE TO COMPACTION OR ANY OVER EXCAVATION QUANTITIES.
4. THE CONTRACTOR SHALL CALCULATE HIS OWN EARTHWORK QUANTITIES NECESSARY FOR HIS BID AND WORK. VCA IS NOT RESPONSIBLE AND LIABLE FOR THE CONTRACTOR'S EARTHWORK CALCULATIONS.
5. ESTIMATED EARTHWORK QUANTITIES ABOVE ASSUME THAT ALL ON-SITE MATERIALS ARE SUITABLE FOR BACKFILLING. HOWEVER, ACTUAL EXISTING ON-SITE MATERIALS AND IMPORTED MATERIALS MUST FIRST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO INSTALLATION, REMOVAL, OR REPLACEMENT.
6. THE ESTIMATED QUANTITIES WERE CALCULATED AND LIMITED ON ON-SITE AREA ONLY.

REVISION DATES (DESIGN STAGE ONLY)

CONSTRUCTION NOTES:

WATER NOTES:

1. CONNECT TO EXISTING 4" DOMESTIC WATER LINE. PROVIDE THRUST BLOCKS PER DETAIL 2 ON SHEET C505.
2. CONNECT TO NEW BUILDING. PROVIDE REDUCED FITTINGS IF REQUIRED. COORDINATE WITH MEP PLANS AND PROVIDE REDUCER FITTINGS IF NECISSARY.
3. INSTALL HOSE BIBB AND HOSE BIBB CONNECTION PER MEP DRAWINGS.
4. INSTALL ¾"ø DOMESTIC WATER LINE COPPER TUBING TYPE L HARD.BEDDING PER DETAIL 1 ON SHEET C503.
5. INSTALL 3"ø PVC DOMESTIC WATER LINE, AWWA C900 PRESSURE CLASS 200(DR14). BEDDING PER DETAIL 1 ON SHEET C503. PROVIDE THRUST BLOCKS PER DETAIL 2 ON SHEET C505.
6. PROVIDE SHUT OFF VALVE WITH YARD BOX. PROVIDE CONCRETE TRAFFIC RATED BOX FOR VALVES IN DRIVEWAYS AND DRIVE AISLES.
7. REPLACE EXISTING 2"ø DOMESTIC WATER LINE WITH 3"ø PVC DOMESTIC WATER PIPE, AWWA C900 PRESSURE CLASS 200(DR14). PROVIDE BEDDING PER DETAIL 1 ON SHEET C503 AND THRUST BLOCKS PER DETAIL 2 ON SHEET C505. REPLACE PIPE LINE UP TO BACKFLOW PREVENTER (APX 190 LF). VERIFY LOCATION IN FIELD.
8. REPLACE EXISTING BACKFLOW PREVENTER WITH 3" WATTS PVS-1000 RP BACKFLOW AND PRESSURE REGULATOR VALVE STATION OR APPROVED EQUAL. COORDINATE WITH FOR APPROVED DEVICE WATER PURVEYOR PRIOR TO ORDERING.
9. EXISTING 3" WATER LINE CONNECTION TO POOL MECHANICAL ROOM.

SANITARY SEWER NOTES:

20. EXISTING 6" ø SANITARY SEWER LINE, VERIFY IN FIELD.
21. CONNECT TO BUILDING, COORDINATE WITH PLUMBING PLANS AND PROVIDE REDUCER FITTINGS AS REQUIRED.
22. INSTALL SPLASH PAD DRAINS AND CONNECTION TO POOL SYSTEM PER AQUATIC DRAWINGS.
23. INSTALL CLEANOUT PER DETAIL 2 ON SHEET C501.
24. INSTALL 6" SEWER LINE PVC SCH 80. USE CAST IRON FOR PIPE WHERE COVER IS LESS THAN ONE FOOT. BEDDING PER DETAIL 1 ON SHEET C504.
25. INSTALL FLOOR DRAIN, ZURN Z507 MEDIUM DUTY OR EQUAL.
26. CONNECT TO EXISTING SEWER LINE.

STORM DRAIN NOTES:

40. CONCRETE V GUTTER PER DETAIL 4 ON SHEET C502.
41. CONCRETE PARKWAY DRAIN PER APWA 151-2.
42. INSTALL STORM DRAIN LINE PVC SCH 80, SIZE PER PLAN. USE CAST IRON FOR PIPE WHERE COVER IS LESS THAN ONE FOOT. BEDDING PER DETAIL 1 ON SHEET C503.
43. INSTALL SLOT DRAIN PER DETAILS 1 & 2 ON SHEET C500.
44. INSTALL CLEANOUT PER DETAIL 2 ON SHEET C5.01.
45. INSTALL BUBBLER CATCH BASIN PER DETAIL 5 ON SHEET C502. PROVIDE "NO DUMPING" STENCIL PER DETAIL 3 ON SHEET C502.
46. CONNECT TO BUILDING DOWNSPOUT. PROVIDE REDUCER FITTINGS AS REQUIRED.
47. ADS STORMTECH INFILTRATION SYSTEM PER DETAILS ON SHEETS C504 AND C505.
48. INSTALL CATCH BASIN PER DETAIL 5 ON SHEET C502. PROVIDE "NO DUMPING" STENCIL PER DETAIL 3 ON SHEET C502.

MISCELLANEOUS UTILITY NOTES:

60. GAS LINE AND CONNECTIONS PER MEP DRAWINGS.
61. ELECTRICAL LINE AND CONNECTIONS PER MEP DRAWINGS.

SHEET NOTES:

1. FOR GENERAL NOTES, LEGEND AND ABBREVIATIONS, SEE SHEET C100.
2. FOR UTILITY NOTES, SEE SHEET C101.
3. SEE ARCHITECTURAL DRAWINGS FOR OTHER SITE RELATIVE DIMENSIONS NOT SHOWN ON THIS DRAWING.
4. FOR TOP OF GRATE, CLEAN OUT, MANHOLE COVER, TOP OF DRAINAGE GRATES, TOP OF RIM COORDINATE WITH GRADING PLANS. CONTRACTOR TO REPORT/NOTIFY THE CITY ENGINEER FOR ANY CONFLICT IN ELEVATION AND LOCATION PRIOR TO COMMENCEMENT OF WORK.
5. PRIOR TO START OF CONSTRUCTION, CONTRACTOR SHALL VERIFY IN FIELD INVERT ELEVATIONS AND UTILITY CROSSINGS AND REPORT UNKNOWN CONDITIONS, FEATURES TO THE CITY ENGINEER.
7. CONTRACTOR TO VERIFY POINT OF CONNECTION BETWEEN SEWER LATERAL AND BUILDING PLUMBING SEWER LAYOUT.
8. CONTRACTOR SHALL FIELD VERIFY EXISTING SEWER LINE CONNECTION, SHALL USE AND PAY FOR CCTV TO VERIFY PIPE SIZE, INVERT ELEVATION AND IDENTIFY IF THE EXISTING PIPE IS DAMAGED. IF DAMAGED THE EXISTING PIPE SHALL BE REPLACED BASED ON THE FINDINGS. IF NEW LATERAL IS REQUIRED, CONTRACTOR TO INSTALL 6"ø SEWER LATERAL AT 1% MINIMUM SLOPE.

STORMWATER OBSERVATION REPORT FORM

(Residential ≥ 5 units & All other Development)

LOW IMPACT DEVELOPMENT

IN THE EVENT THAT THE APPROVED STORMWATER BMP CANNOT BE BUILT PER PLANS (OR ANY MODIFICATION), CONSULT WITH BUREAU OF SANITATION STAFF PRIOR TO ANY PLAN MODIFICATIONS. FAILURE TO DO SO MAY DELAY OBTAINING A FINAL APPROVAL AND CERTIFICATE OF OCCUPANCY (C OF O).

***STORMWATER OBSERVATION** means the visual observation of the stormwater related Best Management Practices (BMPs) for conformance with the approved LID Plan at significant construction stages and at completion of the project. Stormwater observation does not include or waive the responsibility for the inspections required by Section 108 or other sections of the City of Los Angeles Building Code.*

STORMWATER OBSERVATION** must be performed by the engineer or architect responsible for the approved LID Plan or designated staff in their employment. **As part of the observation, provide photos of the BMPs taken during various construction phases.

STORMWATER OBSERVATION REPORT** must be signed and stamped (see below) by the engineer or architect responsible for the approved LID Plan and submitted to the city prior to the issuance to the certificate of occupancy. **PRIOR TO CERTIFICATE OF OCCUPANCY (C of O), SOR FORM, PRINTED PHOTOS OF THE BMPS TAKEN DURING VARIOUS CONSTRUCTION PHASES AND APPROVED STAMPED PLANS BY THE BUREAU OF SANITATION MUST BE SUBMITTED TO THE PUBLIC COUNTER FOR STAFF APPROVAL.

Project Address: 16730 CHATSWORTH STREET GRANADA HILLS. CA 91344	Building Permit No.:
Name of Engineer/Architect responsible for the approved LID Plan: Virgil Aoanan	Phone Number: 323-729-6098

List all BMPs installed as part of the project: Coordinates of the most significant (or typical) BMPs:

BMP Type: ADS STORMTECH # of units: 1 Lat: 34.2642 ; Long: -118.4962	BMP Type:_____ # of units: ___ Lat: _____ ; Long:_____
BMP Type:_____ # of units: ____ Lat: _____ ; Long:_____	BMP Type:_____ # of units: ____ Lat: _____ ; Long:_____

I DECLARE THAT THE FOLLOWING STATEMENTS ARE TRUE TO THE BEST OF MY KNOWLEDGE:

1. I am the engineer or architect responsible for the approved LID Plan, and;
2. I, or designated staff under my responsible charge, has preformed the required site visits at each significant construction stage and at the completion to verify that the Best Management Practices (BMPs) as shown on approved plans have been constructed and installed in accordance with the approved LID Plan.

6"	4	4	4	3
8"	5	7	4	3
10"	9	12	6	4
12"	12	16	9	6

BASED ON 150 PSI W.W.R. PRESSURE & SOIL BEARING LOADS OF 2000 PSF THE RATIO OF WIDTH TO HEIGHT SHALL NOT EXCEED 1 1/2 TO 1

TEES,PLUGS,CAPS & HYDRANTS.

NOTES:

1. ALL ANCHOR AND THRUST BLOCKS SHALL BEAR AGAINST UNDISTURBED SOIL.
2. MINIMUM ALLOWABLE WATER PRESSURE FOR DESIGN OF THRUST BLOCKS IS 150 PSI. BEARING AREA INCREASE IN PRESSURE.
3. ALL CONCRETE USED IN THRUST BLOCKS SHALL ATTAIN 2000 PSI STRENGTH.
4. ALL ANCHOR RODS SHALL BE REINFORCING STEEL AND A MINIMUM OF 1/2–INCH IN DIAMETER.
5. USE ANCHOR BLOCKS AT VERTICAL BENDS WHEN PIPE IS ABOVE OR BELOW GROUND. SIZE OF BLOCK AND ROD SHALL BE AS SHOWN ON THE PLANS OR AS DETERMINED BY THE ENGINEER IN THE FIELD.
6. USE 30 POUND FELT TO INSURE COLD JOINT.
7. CONCRETE SHALL NOT COME INTO DIRECT WITH ASBESTOS CEMENT PIPE.
8. FOR PIPE 14" IN DIAMETER OR LARGER ENGINEER IS TO SUBMIT CALCULATIONS.

TABLE II

SOIL TYPE	MAX. ALLOWABLE SOIL BEARING VALUES	FACTORS FOR INCREASING AREAS IN TABLE 1
LOOSE SAND	500 PSF	4
SOFT SANDY CLAY	1000 PSF	2
ADOBE	1000 PSF	2
COMPACT FINE SAND	2000 PSF	1
COMPACT COARSE SAND	2000 PSF	1
MEDIUM STIFF CLAY	2000 PSF	1

THE CONTRACTOR SHALL FOLLOW THE RECOMMENDATIONS OF GEOTECHNICAL REPORT FOR DETERMINING THE SAFE SOIL BEARING VALUES AND SIZE OF BEARING AREAS.
BASED ON 2 FEET MINIMUM DEPTH OF COVER OVER THE PIPE.

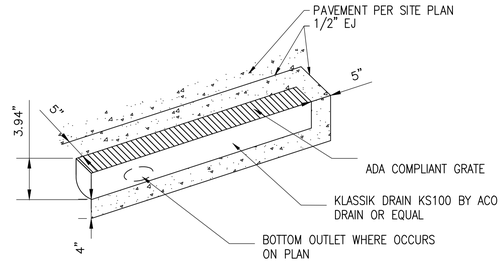
CROSS SECTION

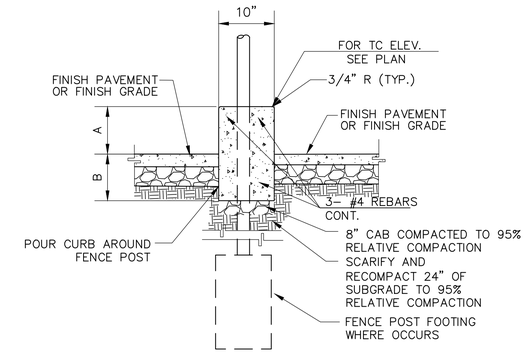


LONGITUDINAL SECTION

NOTES:

1. GRATE MUST COMPLY WITH ADA REQUIREMENTS, HEEL PROOF, WHEELCHAIR PROOF, AND BIKE PROOF.
2. TOP OF GRATE SHALL BE 1/8" BELOW THE FINISH LEVEL OF THE ADJACENT CONCRETE.
3. REFER TO ACO'S LATEST INSTALLATION INSTRUCTION FOR COMPLETE DETAILS.
4. INSTALLATION OF THE SYSTEM PER MANUFACTURER RECOMMENDATION AND IINSTRUCTION.
5. A MINIMUM CONCRETE STRENGTH OF 25 MPA IS RECOMMENDED. THE CONCRETE SHOULD BE VIBRATED TO ELIMINATE AIR POCKETS.

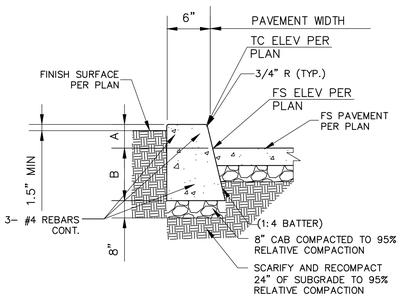
1 TRENCH DRAIN
SCALE: NOT TO SCALE



NOTES:

1. PROVIDE 1/4" EXPANSION JOINT WITH PREFORMED JOINT FILLER AT ALL ANGLE POINTS AND THE BEGINNING AND END OF ALL CURVES.
2. CONCRETE, fc'=3,500 psi @ 28 DAYS. REBARS, fy=60,000 psi ASTM A615.
3. PROVIDE CONTRACTION JOINTS CONSISTING OF ONE INCH DEEP CUT SCORES AT 10' O.C. MAX.
4. WHERE A WALK IS ADJACENT TO THE CURB, THE JOINTS SHALL LINE WITH JOINTS IN THE WALK.
5. TERMINATE REBARS 1/2" FROM EXPANSION JOINT.
6. a. WHEN "A" IS LESS THAN 6", B=6"
   b. WHEN "A" IS GREATER THAN 6" AND LESS THAN 12", A=B.
   c. WHEN "A" IS GREATER THAN 12" AND LESS THAN 18", B=18".
7. WHEN THE SUM OF "A" PLUS "B" IS GREATER THAN 18" PLYWOOD FORM IS REQUIRED.

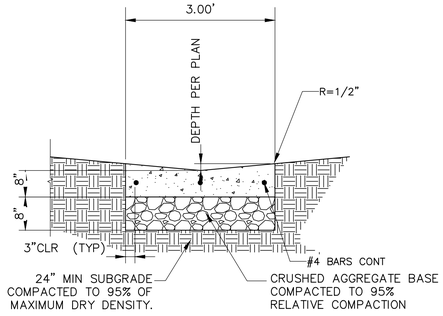
2 FENCE POST IN CURB DETAL
SCALE: NOT TO SCALE



NOTES:

1. PROVIDE 1/4" EXPANSION JOINT WITH PREFORMED JOINT FILLER AT ALL ANGLE POINTS AND THE BEGINNING AND END OF ALL CURVES.
2. CONCRETE, fc'=3,500 psi @ 28 DAYS. REBARS, fy=60,000 psi ASTM A615.
3. PROVIDE CONTRACTION JOINTS CONSISTING OF ONE INCH DEEP CUT SCORES AT 10' O.C. MAX.
4. WHERE A WALK IS ADJACENT TO THE CURB, THE JOINTS SHALL LINE WITH JOINTS IN THE WALK.
5. TERMINATE REBARS 1/2" FROM EXPANSION JOINT.
6. a. WHEN "A" IS ≤ 6", B=6"
   b. WHEN "A" IS 6" < OR ≥ 12", A=B.
   c. WHEN "A" IS 12" < OR ≥ 18", B=18".
7. WHEN THE SUM OF "A" PLUS "B" IS GREATER THAN 18" PLYWOOD FORM IS REQUIRED.

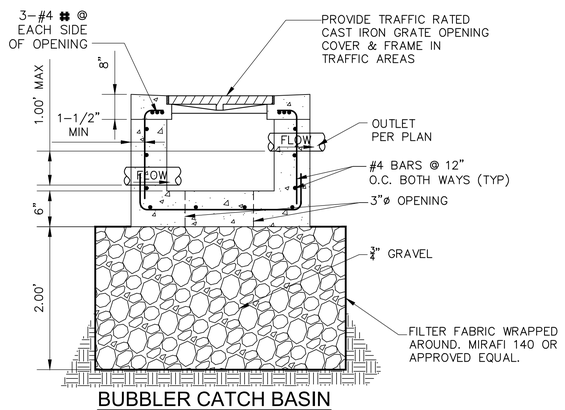
3 CONCRETE CURB DETAIL
SCALE: NOT TO SCALE



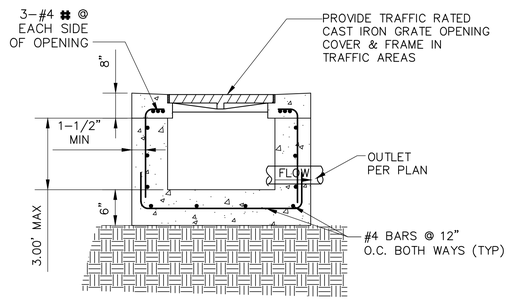
NOTES:

1. PROVIDE 1–1/2" SAW CUT JOINTS AT 10' O.C. MAX.
2. WHERE A GUTTER IS ADJACENT TO THE CURB, THE JOINTS SHALL LINE WITH JOINTS IN THE WALK.
3. CONCRETE, fc'=3,500 psi @ 28 DAYS. REBARS, fy=60,000 psi ASTM A615.

4 V GUTTER DETAIL
SCALE: NOT TO SCALE



BUBBLER CATCH BASIN



CATCH BASIN

NOTES:

1. USE 3/4" DIA. PIPE BAR SPACERS ASSEMBLED ON (2) 1/2" DIA. RODS WITH THREADS AND NUTS AT BOTH ENDS.
2. ALL METAL PARTS SHALL BE GALVANIZED AFTER FABRICATION AND WELDING, AND BEFORE ASSEMBLING.
3. FRAME AND GRATE SHALL BE SIMILAR TO ALHAMBRA FOUNDRY CO. LTD. SERIES MODEL NO. 1583 OR BROOKS PRODUCTS, INC. OR APPROVED EQUAL. GRATES MUST COMPLY WITH ALL A.D.A. REQUIREMENTS.
4. GRATES SHALL BE OF VANDAL–RESISTANT CONSTRUCTION WITH ½" MAX OPENINGS.
5. FRAME AND GRATE SHALL BE TRAFFIC–RATED WHEN INSTALLED IN PAVED (ASPHALT OR CONCRETE) AREAS.
6. GRATE MUST COMPLY WITH A.D.A. REQUIREMENTS.
7. PROVIDE 1/2" MAX GRID/OPENINGS IN GRATING IN THE DIRECTION OF TRAFFIC FLOW.
8. PROVIDE LABEL "WITH NO DUMPING – DRAINS TO OCEAN" AT ALL DRAINAGE INLETS (I.E. CATCH BASINS, TRENCH DRAINS). NO DUMPING STENCIL PER DETAIL 3 ON THIS SHEET C5.02.

NOMINALPIPE DIAMETER (INCHES)	NARROW TRENCH WIDTH MIN. (INCHES)
3	18
4	18
6	18
8	24
10	30
12	36
15	39
18	42
21	45
24	48

NOTES:

1. PAVEMENT FINISH SURFACE SHALL BE A SMOOTH CONTINUATION OF ADJOINING PAVED SURFACE.
2. PIPELINE BEDDING MATERIAL, TRENCH BACKFILL MATERIAL, AND COMPACTION SHALL COMPLY WITH THE SOIL REPORT.
3. BEDDING MATERIALS CONSISTING OF SAND, GRAVEL, OR CMB SHOULD BE USED TO BACKFILL AROUND UTILITY PIPES TO APPROXIMATELY ONE FOOT ABOVE THE TOP OF THE PIPE. ONSITE SOILS WHICH HAVE A SAND EQUIVALENT (SE) OF 30 OR GREATER CAN ALSO BE USED AS BEDDING MATERIAL. NO MORE THAN 30% OF BACKFILL VOLUME SHOULD BE LARGER THAN ¾". PRIOR TO PLACING THE PIPES, THE PIPE TRENCH SUBGRADE SHOULD BE OBSERVED BY A REPRESENTATIVE OF THE PROJECT GEOTECHNICAL ENGINEER. IN THE LARGEST DIMENSION. IMPORTED BACKFILL SHOULD BE APPROVED BY PROJECT GEOTECHNICAL CONSULTANT PRIOR TO DELIVERY AT THE SITE.
4. IT IS RECOMMENDED THAT UTILITY TRENCHES ARE NOT BE OR PLACED PARALLED TO AND BELOW A 1½:1 PLANE PROJECTED DOWN FROM THE BASE OF THE OUTER EDGE OF A CONVENTIONAL FOUNDATION.
5. IF THE EXPOSED SUBGRADE IS LOOSE OR UNSTABLE, THE UNSUITABLE SUBGRADE SOIL MUST BE EXCAVATED AND REPLACED WITH BEDDING MATERIAL. BEDDING MUST BE PLACED UNIFORMLY ON EACH SIDE OF THE PIPE AND MECHANICALLY COMPACTED.
6. FLOODING OR JETTING TO DENSIFY THE BEDDING MATERIALS IS NOT ALLOWED DUE TO THE CLAYEY NATURE OF ONSITE SOILS.
7. THE BACKFILL FOR THE REMAINING PORTION OF THE TRENCH ABOVE THE PIPES SHOULD BE PLACED IN LOOSE LIFTS NOT TO EXCEED 8 INCHES, MOISTURE-CONDITIONED WITHIN OPTIMUM AND 2 PERCENT ABOVE OPTIMUM MOISTURE CONTENT, AND MECHANICALLY COMPACTED TO AT LEAST 95 PERCENT RELATIVE COMPACTION IN ACCORDANCE WITH ASTM D1557. THINNER LIFTS MAY BE NECESSARY TO ACHIEVE THE RECOMMENDED LEVEL OF COMPACTION OF THE BACKFILL DUE TO EQUIPMENT LIMITATIONS.
8. THE HIGHER COMPACTION IS REQUIRED FOR FILL MATERIAL THAT HAS LESS THAN FIFTEEN PERCENT (15%) OF THE MATERIAL FINER THAN 0.005MM.
9. TRENCHES IN PAVEMENT AREAS SHOULD BE CAPPED WITH AT LEAST 12 INCHES OF COMPACTED, ON-SITE SOIL SIMILAR TO THAT OF THE ADJOINING SUBGRADE. THE UPPER 12 INCHES OF TRENCH BACKFILL IN AREAS TO BE
10. PAVED SHOULD BE COMPACTED TO AT LEAST 95 PERCENT RELATIVE COMPACTION. SPECIAL CARE SHOULD BETAKEN IN THE CONTROL OF UTILITY TRENCH BACKFILLING IN THE PAVEMENT AREAS.
11. PIPELINE BEDDING MAY BE LEAN CONCRETE CONSISTING OF TWO SACKS OF PORTLAND CEMENT PER CUBIC YARD OF SLURRY IN LEIU OF SAND AS LONG AS SLURRY IS VIBRATED IN PLACE.
12. MINIMUM COVERAGE OF UTILITIES IS 36-INCHES. IF THIS CANNOT BE ATTAINED, CAP WITH 1-SACK CONCRETE SLURRY. IN PAVING AREAS, BACKFILL TRENCHES WITH SLURRY UP TO BOTTOM OF PAVING. IN LANDSCAPE AREAS, SLURRY IS ALLOWED UP TO TWO-FEET BELOW GRADE.
13. PROVIDE METALLIC WARNING TAPE 12-INCHES BELOW GRADE ABOVE UTILITIES.

GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT

LOS ANGELES, CA

MC-4500 STORMTECH CHAMBER SPECIFICATIONS

1. CHAMBERS SHALL BE STORMTECH MC-4500.
2. CHAMBERS SHALL BE ARCH-SHAPED AND SHALL BE MANUFACTURED FROM VIRGIN, IMPACT-MODIFIED POLYPROPYLENE COPOLYMERS.
3. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418-16a, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 60x101.
4. CHAMBER ROWS SHALL PROVIDE CONTINUOUS, UNOBSTRUCTED INTERNAL SPACE WITH NO INTERNAL SUPPORTS THAT WOULD IMPEDE FLOW OR LIMIT ACCESS FOR INSPECTION.
5. THE STRUCTURAL DESIGN OF THE CHAMBERS, THE STRUCTURAL BACKFILL, AND THE INSTALLATION REQUIREMENTS SHALL ENSURE THAT THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, SECTION 12.12, ARE MET FOR: 1) LONG-DURATION DEAD LOADS AND 2) SHORT-DURATION LIVE LOADS, BASED ON THE AASHTO DESIGN TRUCK WITH CONSIDERATION FOR IMPACT AND MULTIPLE VEHICLE PRESENCES.
6. CHAMBERS SHALL BE DESIGNED, TESTED AND ALLOWABLE LOAD CONFIGURATIONS DETERMINED IN ACCORDANCE WITH ASTM F2787, "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS". LOAD CONFIGURATIONS SHALL INCLUDE: 1) INSTANTANEOUS (<1 MIN) AASHTO DESIGN TRUCK LIVE LOAD ON MINIMUM COVER 2) MAXIMUM PERMANENT (75-YR) COVER LOAD AND 3) ALLOWABLE COVER WITH PARKED (1-WEEK) AASHTO DESIGN TRUCK.
7. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/IN/IN, AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.
8. ONLY CHAMBERS THAT ARE APPROVED BY THE SITE DESIGN ENGINEER WILL BE ALLOWED. UPON REQUEST BY THE SITE DESIGN ENGINEER OR OWNER, THE CHAMBER MANUFACTURER SHALL SUBMIT A STRUCTURAL EVALUATION FOR APPROVAL BEFORE DELIVERING CHAMBERS TO THE PROJECT SITE AS FOLLOWS:
   - THE STRUCTURAL EVALUATION SHALL BE SEALED BY A REGISTERED PROFESSIONAL ENGINEER.
   - THE STRUCTURAL EVALUATION SHALL DEMONSTRATE THAT THE SAFETY FACTORS ARE GREATER THAN OR EQUAL TO 1.95 FOR DEAD LOAD AND 1.75 FOR LIVE LOAD, THE MINIMUM REQUIRED BY ASTM F2787 AND BY SECTIONS 3 AND 12.12 OF THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS FOR THERMOPLASTIC PIPE.
   - THE TEST DERIVED CREEP MODULUS AS SPECIFIED IN ASTM F2418 SHALL BE USED FOR PERMANENT DEAD LOAD DESIGN EXCEPT THAT IT SHALL BE THE 75-YEAR MODULUS USED FOR DESIGN.
9. CHAMBERS AND END CAPS SHALL BE PRODUCED AT AN ISO 9001 CERTIFIED MANUFACTURING FACILITY.

IMPORTANT - NOTES FOR THE BIDDING AND INSTALLATION OF MC-4500 CHAMBER SYSTEM

1. STORMTECH MC-4500 CHAMBERS SHALL NOT BE INSTALLED UNTIL THE MANUFACTURER'S REPRESENTATIVE HAS COMPLETED A PRE-CONSTRUCTION MEETING WITH THE INSTALLERS.
2. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. CHAMBERS ARE NOT TO BE BACKFILLED WITH A DOZER OR EXCAVATOR SITUATED OVER THE CHAMBERS. STORMTECH RECOMMENDS 3 BACKFILL METHODS:
   - STONESHOOTER LOCATED OFF THE CHAMBER BED.
   - BACKFILL AS ROWS ARE BUILT USING AN EXCAVATOR ON THE FOUNDATION STONE OR SUBGRADE.
   - BACKFILL FROM OUTSIDE THE EXCAVATION USING A LONG BOOM HOE OR EXCAVATOR.
4. THE FOUNDATION STONE SHALL BE LEVELED AND COMPACTED PRIOR TO PLACING CHAMBERS.
5. JOINTS BETWEEN CHAMBERS SHALL BE PROPERLY SEATED PRIOR TO PLACING STONE.
6. MAINTAIN MINIMUM 9" (230 mm) SPACING BETWEEN THE CHAMBER ROWS.
7. INLET AND OUTLET MANIFOLDS MUST BE INSERTED A MINIMUM OF 12" (300 mm) INTO CHAMBER END CAPS.
8. EMBEDMENT STONE SURROUNDING CHAMBERS MUST BE A CLEAN, CRUSHED, ANGULAR STONE MEETING THE AASHTO M43 DESIGNATION OF #3 OR #4.
9. STONE SHALL BE BROUGHT UP EVENLY AROUND CHAMBERS SO AS NOT TO DISTORT THE CHAMBER SHAPE. STONE DEPTHS SHOULD NEVER DIFFER BY MORE THAN 12" (300 mm) BETWEEN ADJACENT CHAMBER ROWS.
10. STONE MUST BE PLACED ON THE TOP CENTER OF THE CHAMBER TO ANCHOR THE CHAMBERS IN PLACE AND PRESERVE ROW SPACING.
11. THE CONTRACTOR MUST REPORT ANY DISCREPANCIES WITH CHAMBER FOUNDATION MATERIAL BEARING CAPACITIES TO THE SITE DESIGN ENGINEER.
12. ADS RECOMMENDS THE USE OF "FLEXSTORM CATCH IT" INSERTS DURING CONSTRUCTION FOR ALL INLETS TO PROTECT THE SUBSURFACE STORMWATER MANAGEMENT SYSTEM FROM CONSTRUCTION SITE RUNOFF.

NOTES FOR CONSTRUCTION EQUIPMENT

1. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
2. THE USE OF EQUIPMENT OVER MC-4500 CHAMBERS IS LIMITED:
   - NO EQUIPMENT IS ALLOWED ON BARE CHAMBERS.
   - NO RUBBER TIRED LOADER, DUMP TRUCK, OR EXCAVATORS ARE ALLOWED UNTIL PROPER FILL DEPTHS ARE REACHED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
   - WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT CAN BE FOUND IN THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. FULL 36" (900 mm) OF STABILIZED COVER MATERIALS OVER THE CHAMBERS IS REQUIRED FOR DUMP TRUCK TRAVEL OR DUMPING.

USE OF A DOZER TO PUSH EMBEDMENT STONE BETWEEN THE ROWS OF CHAMBERS MAY CAUSE DAMAGE TO CHAMBERS AND IS NOT AN ACCEPTABLE BACKFILL METHOD. ANY CHAMBERS DAMAGED BY USING THE "DUMP AND PUSH" METHOD ARE NOT COVERED UNDER THE STORMTECH STANDARD WARRANTY.

CONTACT STORMTECH AT 1-888-892-2694 WITH ANY QUESTIONS ON INSTALLATION REQUIREMENTS OR WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT.

©2017 ADS, INC.

PROPOSED LAYOUT

13	STORMTECH MC-4500 CHAMBERS
2	STORMTECH MC-4500 END CAPS

926.25	BOTTOM OF MC-4500 CHAMBER
925.50	BOTTOM OF STONE

NOTES

- MANIFOLD SIZE TO BE DETERMINED BY SITE DESIGN ENGINEER. SEE TECHNICAL NOTE 6.32 FOR MANIFOLD SIZING GUIDANCE.
- DUE TO THE ADAPTATION OF THIS CHAMBER SYSTEM TO SPECIFIC SITE AND DESIGN CONSTRAINTS, IT MAY BE NECESSARY TO CUT AND COUPLE ADDITIONAL PIPE TO STANDARD MANIFOLD COMPONENTS IN THE FIELD.
- THE SITE DESIGN ENGINEER MUST REVIEW ELEVATIONS AND IF NECESSARY ADJUST GRADING TO ENSURE THE CHAMBER COVER REQUIREMENTS ARE MET.
- THIS CHAMBER SYSTEM WAS DESIGNED WITHOUT SITE-SPECIFIC INFORMATION ON SOIL CONDITIONS OR BEARING CAPACITY. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR DETERMINING THE SUITABILITY OF THE SOIL AND PROVIDING THE BEARING CAPACITY OF THE INSITU SOILS. THE BASE STONE DEPTH MAY BE INCREASED OR DECREASED ONCE THIS INFORMATION IS PROVIDED.

THIS DRAWING HAS BEEN PREPARED BASED ON STORMTECH PRODUCTS AND INFORMATION PROVIDED BY STORMTECH. IT IS INTENDED TO BE USED PURSUANT TO A CONTRACT WITH STORMTECH OR ITS REPRESENTATIVE FOR THE SPECIFIC PROJECT AND SITE DESIGNED BY STORMTECH OR ITS REPRESENTATIVE. IT CANNOT BE USED FOR ANY OTHER PURPOSE OR ON ANY OTHER SITE WITHOUT THE EXPRESS WRITTEN VERIFICATION AND APPROVAL OF STORMTECH. THE CONTENT OF THIS DRAWING MAY NOT BE COPIED OR REPRODUCED WITHOUT THE EXPRESS WRITTEN CONSENT OF STORMTECH.

SHEET 2 OF 6

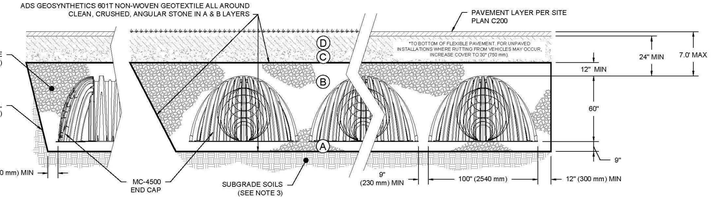
GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT
LOS ANGELES, CA
DATE: 02/04/20 | DRAWN: AVM | CHECKED: VCM | PROJECT #: S167523

NO.	DATE	DRWN	CHKD	DESCRIPTION
1	03/03/20	AVM	VCM	PER CITY COMMENTS

ACCEPTABLE FILL MATERIALS: STORMTECH MC-4500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DESITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145[4] A-1, A-2-4, A-3 OR AASHTO M43[4] 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[4] 3, 4	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[4] 3, 4	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.



NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418-16a, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 60x101
2. MC-4500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/IN/IN. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

MC-4500 ISOLATOR ROW DETAIL
NTS

INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.

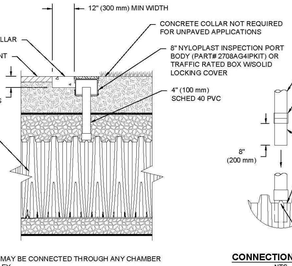
STEP 2) CLEAN OUT ISOLATOR ROW USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45° (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.

STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.
2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.



NOTES:
1. INSPECTION PORTS MAY BE CONNECTED THROUGH ANY CHAMBER CORRUGATION VALLEY.
2. ALL SCHEDULE 40 FITTINGS TO BE SOLVENT CEMENTED (4" PVC NOT PROVIDED BY ADS).

Re: Potential Stormwater Infiltration Project
Proposed Public Property Redevelopment
16730 Chatsworth Street
Granada Hills, California 91344

Dear Ms. Waggoner:

Provided herein is a brief discussion of the information and reports that you have provided our office regarding your plans for the possible infiltration of stormwater that is to be collected and incorporated into the Low Impact Development (LID) improvements for the proposed public property redevelopment project, located within the City of Los Angeles (City), at the address 16730 Chatsworth Street, in the Granada Hills area of the San Fernando Valley. We understand the project, which has an area of ±29,000 square feet, is situated at the southeastern corner of the intersection of Petit Avenue and Chatsworth Street. As such, this redevelopment overlies a portion of the San Fernando Groundwater Basin, the largest of the four groundwater basins in the Superior Court-adjudicated Upper Los Angeles River Area (ULARA). Also provided herein, as ULARA Watermaster, is my opinion regarding the potential impact to local groundwater quality that might result from the proposed infiltration of stormwater that is to be captured by the Low Impact Development (LID) improvements that you have recommended for your project.

In regard to stormwater infiltration, the California Regional Water Quality Control Board – Los Angeles Region (LARWQCB) promulgated its National Pollutant Discharge Elimination System (NPDES) permit process in 1990 to help minimize the impacts of stormwater and urban runoff on the receiving water bodies in its sphere of influence (i.e., the Los Angeles River and the Pacific Ocean). The goal of their NPDES process was to minimize the impacts on the river, and ultimately to the ocean, by reducing the volume and improving the quality of surface water runoff from storm events. Because your proposed redevelopment is located within the ULARA

watershed boundary, all local rainfall and surface water runoff from this site would normally drain into the Los Angeles River and eventually to the ocean.

Several years after the implementation of the NPDES process, the City of Los Angeles, Department of Public Works, Bureau of Sanitation – Watershed Protection Division (LAWPD), promulgated a series of guidelines intended to increase the capture and onsite infiltration of stormwater at all proposed developments and redevelopments throughout the City. These guidelines established the requirements and limitations for utilizing onsite stormwater infiltration and also specified an order of preference (via a set of Best Management Practices—BMPs) for providing LID improvements at each development and/or redevelopment site in the City.

The specific order of the BMP preference list was established by the LAWPD to collect and provide basic "treatment" of onsite stormwater runoff, and to help increase the amount of infiltration (i.e., deep percolation) from the initial ¾-inch of rainfall from each storm event at all new development and redevelopment sites in the City. The end result is intended to reduce the volumes of contaminated stormwater runoff that enter the storm drain system (from each new storm event) and simultaneously help reduce the volume and enhance the quality of the runoff that enters the Los Angeles River and ultimately the Pacific Ocean. Turbidity and potential urban-derived contaminants in the captured runoff could be reduced by the "treatment" effects of the various stormwater infiltration systems proposed via the BMPs. From a hydrogeologic perspective, and in the opinion of this Watermaster, whenever and wherever (with certain exceptions) deep percolation (infiltration) of stormwater can be appropriately enhanced, then recharge to the underlying groundwater reservoir (in this case, the San Fernando Groundwater Basin) can be beneficially increased.

For this proposed redevelopment, you sent the following for Watermaster review:

a. An email, received by the Watermaster's office on February 20, 2020, in response to the Watermaster's Data Request Memorandum. Your email and attachments provided responses to most of the items identified in the Watermaster's Memorandum. Note that a copy of that Data Request Memorandum is being routinely provided by LAWPD personnel to LID applicants upon their initial visit to the LAWPD office in downtown Los Angeles.

b. A set of CAD-type drawings, prepared by VCA Engineers, Inc. (VCA), which contained: a site plan; a grading plan; and a LID plan. The LID plan shows the proposed locations of a couple of catch basins, several slot drains, and an infiltration basin within the boundaries of the project. We understand that these proposed facilities are to be components of your stormwater infiltration system.

c. A soils report, *Geotechnical Engineering Report: Granada Hills Pool Replacement Project*, prepared by the City of Los Angeles, Department of Public Works, Bureau of Engineering, Geotechnical Engineering Group (LAGEO) and dated August 22, 2017. In addition, two supplemental soils reports were also provided, *Supplemental Geotechnical Report: Granada Hills Pool Replacement Project*, and *Supplemental Geotechnical Report No. 2: Granada Hills Pool Replacement Project*. Both of these were prepared by LAGEO and are dated October 25, 2018 and February 18, 2020, respectively. The reports described the earth materials encountered beneath the subject site in six soil borings that were drilled and sampled to a maximum depth of approximately 31.5 feet below ground surface (bgs). It should be noted that groundwater was not encountered during the drilling of these soil borings in June 2017. Infiltration rates for the onsite earth materials were tested to a depth of approximately 10.5 feet bgs in the soil borings drilled for the infiltration test.

Please note that no one from my office conducted a site visit to the subject LID property and that the information presented in this review was provided by the applicant and/or obtained from a cursory review of a few regulatory agency websites and basic sources of referenced information. Among the key items noted during our review of the available documents are the following:

1. The subject property development is situated at the southeastern corner of the intersection of Petit Avenue and Chatsworth Street. A Google Earth Pro® satellite image dated November 19, 2018 shows the subject property was developed with a public park and recreational facilities at that time.
2. The subject property is bordered by residential properties to the east and south, by Petit Avenue to the west, and by Chatsworth Street to the north.
3. A check of the online Geotracker database maintained by the California State Water Resources Control Board (SWRCB) shows that within 1,000 feet of the subject LID project, there are: no "open" leaking underground storage tank (LUST) sites; no "open" California Department of Toxic Substances Control (DTSC) sites; no "open" military cleanup sites, or; no "open" cleanup program sites.
4. As shown in the CAD-type drawings provided by VCA, stormwater will be collected from rainfall that flows as sheet flow across non-permeable paved areas at the property, and from rain that falls directly onto the roof of the proposed redevelopments. The collected stormwater is to be directed to one of several slot drains and/or the catch basins, and thereafter, it will be directed to the infiltration basin (i.e., the infiltration system). Stormwater directed to the infiltration system would reportedly be able to infiltrate into the subsurface (i.e., made available for deep percolation). The proposed infiltration system is to be constructed in the eastern portion of the proposed redevelopment.

It should be noted that the purpose of this LID stormwater infiltration review letter from the Watermaster's office is not in any way to evaluate and/or opine on the technical feasibility of the infiltration of stormwater at the site, but rather only to assess the concept of infiltration (and recharge) at the site strictly in regard to its potential impact on local groundwater quality. Thus, the Watermaster has no opinion regarding the potential for, or the technical feasibility of, the collected stormwater to be infiltrated into the earth materials beneath the subject property.

Further, your eventual LID permit from the LAWPD will require the property owner (and all successors) to provide for ongoing operation and maintenance in perpetuity for all of the onsite LID facilities. The Watermaster considers this issue of ongoing maintenance of your proposed LID facilities to be critical to the long-term protection of the groundwater quality in the San Fernando Basin.

Based on our review of your documents, and assuming that the final stormwater collection system and infiltration systems are constructed as proposed and properly maintained in the future, then the Watermaster has no objection to the infiltration component of your current LID, in relation to the local groundwater quality. If the project and/or your LID and/or your infiltration system is revised in the future and differs from that which has been generally characterized herein, the Watermaster would then need to review those revised plans.

Respectfully submitted,

Richard C. Slade

Laboratory Test Report	A8950-06-12	07/31/2017	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provide recommendations for the proposed infiltration system and exterior slab. The Department previously conditionally approved the above referenced reports dated 08/22/2017 and 10/25/2018 for the proposed swimming pool, shade structure, pool equipment building, concrete ramp, a lifeguard room addition, PV panels and security light poles in a letter dated 11/14/2018, Log #105775. Foundation recommendations are provided on page 2 of the 10/25/2018 report.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. All conditions of the above referenced Department approval letter(s) shall apply except as specifically modified herein.
2. Slabs placed on approved compacted fill shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

3. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.
4. The infiltration facility design and construction shall comply with the minimum requirements specified in the Information Bulletin P/BC 2014-118.
5. The infiltration system shall be constructed at the location shown on the drawing attached to the current report.
6. The construction of the infiltration system shall be provided under the inspection and approval of the soils engineer.
7. An overflow outlet shall be provided to conduct water to the street in the event that the infiltration system capacity is exceeded. (P/BC 2014-118)
8. Approval for the proposed infiltration system from the Bureau of Sanitation, Department of Public Works shall be secured.
9. A minimum distance of 10 feet (in any direction) shall be provided from adjacent proposed/existing footings to the discharge of the proposed infiltration system. A minimum distance of 10 feet horizontally shall be provided from private property lines to the proposed infiltration system.

5. PROPOSED AREA FOR LOADING. CONTRACTOR TO VERIFY EXACT LOCATION AND COORDINATE WITH THE CITY ENGINEER.
6. PROPOSED AREA FOR PORTABLE TOILETS. CONTRACTOR TO VERIFY EXACT LOCATION AND COORDINATE WITH THE CITY ENGINEER.

OWNER STATEMENT OF UNDERSTANDING:

AS THE ENGINEER/QSD OF RECORD, I HAVE SELECTED APPROPRIATE BMPs TO EFFECTIVELY MINIMIZE THE NEGATIVE IMPACTS OF THIS PROJECT'S CONSTRUCTION ACTIVITIES ON STORM WATER QUALITY. THE PROJECT OWNER AND CONTRACTOR ARE AWARE THAT THE SELECTED BMPs MUST BE INSTALLED, MONITORED, AND MAINTAINED TO ENSURE THEIR EFFECTIVENESS.

_____ _____
CIVIL ENGINEER/QSD SIGNATURE DATE

AS THE PROJECT OWNER OR AUTHORIZED AGENT OF THE OWNER, "I CERTIFY THAT THIS DOCUMENT AND ALL ATTACHMENTS WERE PREPARED UNDER MY DIRECTION OR SUPERVISION IN ACCORDANCE WITH THE SYSTEM DESIGNED TO ENSURE THAT A QUALIFIED PERSONNEL PROPERLY GATHER AND EVALUATE THE INFORMATION SUBMITTED. BASED ON MY INQUIRY OF THE PERSON OR PERSONS WHO MANAGE THE SYSTEM OR THOSE PERSONS DIRECTLY RESPONSIBLE FOR GATHERING THE INFORMATION, TO THE BEST OF MY KNOWLEDGE AND BELIEF, THE INFORMATION SUBMITTED IS TRUE, ACCURATE, AND COMPLETE. I AM AWARE THAT SUBMITTING FALSE AND/ OR INACCURATE INFORMATION, FAILING TO UPDATE THE ESCP TO REFLECT THE CURRENT CONDITIONS, OR FAILING TO PROPERLY AND/OR ADEQUATELY IMPLEMENT THE ESCP MAY RESULT IN REVOCATION OF GRADING AND/OR OTHER PERMITS OR OTHER SANCTIONS PROVIDED BY LAW."

_____ _____
OWNER OR AUTHORIZED REPRESENTATIVE (PERMITEE) DATE

EROSION CONTROL NOTES:

1. IN CASE OF EMERGENCY, CALL 911.
2. TOTAL DISTURBED AREA _____ WDID# _____

   RISK LEVEL 1 2 3 (CIRCLE ONE AS DETERMINED BY STATE GENERAL PERMIT FOR SITES GREATER THAN 1 ACRE)
3. A STAND–BY CREW FOR EMERGENCY WORK SHALL BE AVAILABLE AT ALL TIMES DURING THE RAINY SEASON (OCTOBER 15 TO APRIL 15). NECESSARY MATERIALS SHALL BE AVAILABLE ON–SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF EMERGENCY DEVICES WHEN RAIN IS IMMINENT.
4. EROSION CONTROL DEVICES SHOWN ON THIS PLAN MAY BE REMOVED WHEN APPROVED BY THE BUILDING OFFICIAL IF THE GRADING OPERATION HAS PROGRESSED TO THE POINT WHERE THEY ARE NO LONGER REQUIRED.
5. GRADED AREAS ADJACENT TO FILL SLOPES LOCATED AT THE SITE PERIMETER MUST DRAIN AWAY FROM THE TOP OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY. ALL LOOSE SOILS AND DEBRIS THAT MAY CREATE A POTENTIAL HAZARD TO OFF–SITE PROPERTY SHALL BE STABILIZED OR REMOVED FROM THE SITE ON A DAILY BASIS.
6. ALL SILT AND DEBRIS SHALL BE REMOVED FROM ALL DEVICES WITHIN 24 HOURS AFTER EACH RAINSTORM AND BE DISPOSED OF PROPERLY.
7. A GUARD SHALL BE POSTED ON SITE WHEREVER THE DEPTH OF WATER IN ANY DEVICE EXCEEDS TWO FEET. THE DEVICE SHALL BE DRAINED OR PUMPED DRY WITHIN 24 HOURS AFTER EACH RAINSTORM. PUMPING AND DRAINING OF ALL BASINS AND DRAINAGE DEVICES MUST COMPLY WITH THE APPROPRIATE BMP FOR DEWATERING OPERATIONS.
8. THE PLACEMENT OF ADDITIONAL DEVICES TO REDUCE EROSION DAMAGE AND CONTAIN POLLUTANTS WITHIN THE SITE IS LEFT TO THE DISCRETION OF THE FIELD ENGINEER. ADDITIONAL DEVICES AS NEEDED SHALL BE INSTALLED TO RETAIN SEDIMENTS AND OTHER POLLUTANTS ON SITE.
9. DESILTING BASINS MAY NOT BE REMOVED OR MADE INOPERABLE BETWEEN OCTOBER 15 AND APRIL 15 OF THE FOLLOWING YEAR WITHOUT THE APPROVAL OF THE BUILDING OFFICIAL.
10. STORM WATER POLLUTION AND EROSION CONTROL DEVICES ARE TO BE MODIFIED, AS NEEDED, AS THE PROJECT PROGRESSES, THE DESIGN AND PLACEMENT OF THESE DEVICES IS THE RESPONSIBILITY OF THE FIELD ENGINEER. PLANS REPRESENTING CHANGES MUST BE SUBMITTED FOR APPROVAL IF REQUESTED BY THE BUILDING OFFICIAL.
11. EVERY EFFORT MUST BE MADE TO ELIMINATE THE DISCHARGE OF NON–STORM WATER FROM THE PROJECT SITES AT ALL TIMES.
13. ALL DEPOSITS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR OTHER MEANS.
15. ANY SLOPES WITH DISTURBED SOILS OR DENUDED OF VEGETATION MUST BE STABILIZED SO AS TO INHIBIT EROSION BY WIND AND WATER.
16. ERODED SEDIMENTS AND POLLUTANTS SHALL BE RETAINED ON SITE AND SHALL NOT BE TRANSPORTED FROM THE SITE VIA SHEET FLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE OR WIND.
17. STOCKPILES OF EARTH AND OTHER CONSTRUCTION–RELATED MATERIALS SHALL BE COVERED AND/OR PROTECTED FROM BEING TRANSPORTED FROM THE SITE BY WIND OR WATER.
18. FUELS, OILS, SOLVENTS AND OTHER TOXIC MATERIALS MUST BE STORED IN ACCORDANCE WITH THEIR LISTING AND SHALL NOT CONTAMINATE THE SOIL NOR THE SURFACE WATERS. ALL APPROVED TOXIC STORAGE CONTAINERS ARE TO BE PROTECTED FROM THE WEATHER. SPILLS MUST BE CLEANED UP IMMEDIATELY AND DISPOSED OF PROPERLY AND SHALL NOT BE WASHED INTO THE DRAINAGE SYSTEM.
19. NON–STORM WATER RUNOFF FROM EQUIPMENT AND VEHICLE WASHING AND ANY OTHER ACTIVITY SHALL BE CONTAINED ON THE PROJECT SITE.
20. EXCESS OR WASTE CONCRETE MAY NOT BE WASHED INTO THE PUBLIC WAY OR ANY DRAINAGE SYSTEM. PROVISIONS SHALL BE MADE TO RETAIN CONCRETE WASTE ON–SITE UNTIL IT CAN BE APPROPRIATELY DISPOSED OF OR RECYCLED.
21. TRASH AND CONSTRUCTION – RELATED SOLID WASTES MUST BE DEPOSITED INTO A COVERED RECEPTACLE TO PREVENT CONTAMINATION OF STORM WATER AND DISPERSAL BY WIND.
22. SEDIMENTS AND OTHER MATERIALS SHALL NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONSTRUCTION ENTRANCE ROADWAYS MUST BE STABILIZED SO AS TO INHIBIT SEDIMENTS FROM BEING DEPOSITED INTO THE STREET/PUBLIC WAYS. ACCIDENTAL DEPOSITIONS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR BY ANY OTHER MEANS.
23. RETENTION BASINS OF SUFFICIENT SIZE SHALL BE PROVIDED TO RETAIN STORM WATER RUNOFF ON–SITE AND SHALL BE PROPERLY LOCATED TO COLLECT ALL TRIBUTARY SITE RUNOFF.
24. WHERE RETENTION OF STORM WATER RUNOFF ON–SITE IS NOT FEASIBLE DUE TO SITE CONSTRAINTS, RUNOFF MAY BE CONVEYED TO THE STREET AND THE STORM DRAIN SYSTEM PROVIDED THAT AN APPROVED FILTERING SYSTEM IS INSTALLED AND MAINTAINED ON–SITE DURING THE CONSTRUCTION DURATION.
25. DEVELOPERS/CONTRACTORS ARE RESPONSIBLE TO INSPECT ALL EROSION CONTROL DEVICES AND BMP's TO ENSURE THEY ARE INSTALLED AND FUNCTIONING PROPERLY IF THERE IS A 50% OR GREATER PROBABILITY OF PREDICTED PRECIPITATION, AND AFTER ACTUAL PRECIPITATION. A CONSTRUCTION SITE INSPECTION CHECKLIST AND INSPECTION LOG SHALL BE MAINTAINED AT THE PROJECT SITE AT ALL TIMES AND AVAILABLE FOR REVIEW BY THE BUILDING OFFICIAL (COPIES OF SELF–INSPECTION CHECKLIST AND INSPECTION LOGS ARE AVAILABLE UPON REQUEST).

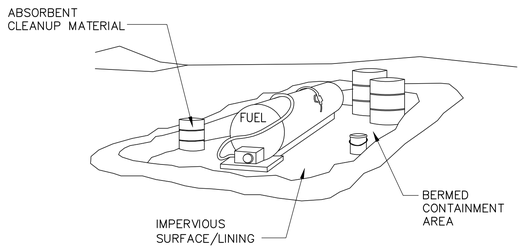
TTLB TEMPLATE REVISION DATE: 02/2013
SHEET ISSUE DATE: 01 January, 2000
FILE PATH:

REVISION DATES (DESIGN STAGE ONLY)

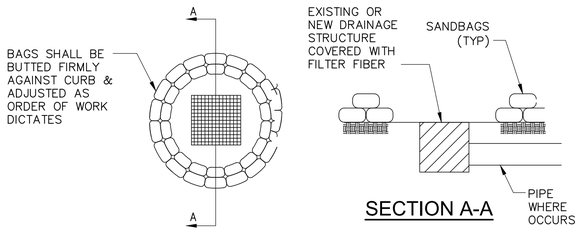


NOTE:

FUELING SHALL BE PERFORMED IN A DESIGNATED AREA, AWAY FROM COURSES. ABSORBENT CLEANUP MATERIAL SHALL BE ON SITE AND USED IMMEDIATELY IN THE EVENT OF A SPILL.

1 VEHICLE / EQUIPMENT FUELING

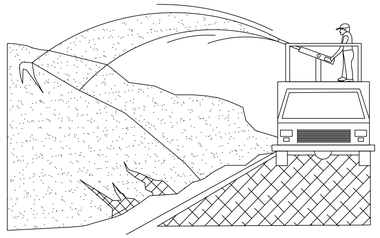
SCALE: NOT TO SCALE



SECTION A-A

2 GRAVEL BAG CHECKDAM

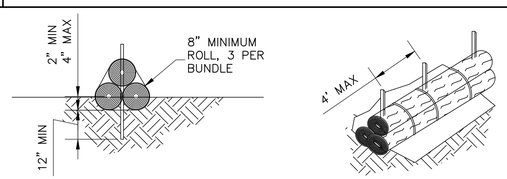
SCALE: NOT TO SCALE



NOTES:

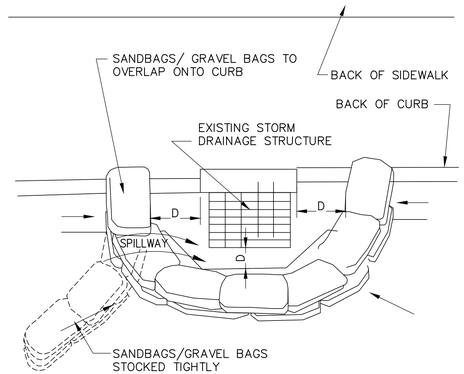
1. SOIL/SLOPE STABILIZATION PRACTICES SHALL BE DESIGNED TO PRESERVE EXISTING VEGETATION WHERE FEASIBLE AND TO REVEGETATE OPEN AREAS AS SOON AS FEASIBLE AFTER GRADING. THESE CONTROL PRACTICES SHALL INCLUDE TEMPORARY SEEDING, PERMANENT SEEDING, MULCHING, SOD STABILIZATION, VEGETATIVE BUFFER STRIPS, PROTECTION OF TREES, OR OTHER SOIL STABILIZATION PRACTICES.
2. SOIL STABILIZATION SHALL BE IMPLEMENTED ON ALL INACTIVE DISTURBED AREAS FROM NOVEMBER 1 THRU APRIL 15 AND ON ALL DISTURBED AREAS DURING A RAIN EVENT OR POTENTIAL RAIN.
3. STABILIZATION PRACTICES SHALL CONTROL/PREVENT EROSION FROM THE FORCES OF WIND AND WATER.
4. STABILIZATION PRACTICES SHALL BE IMPLEMENTED IN CONJUNCTION WITH SEDIMENT TRAPPING/FILTERING PRACTICES AND PRACTICES TO REDUCE THE TRACKING OF SEDIMENT ONTO PAVED ROADS.
5. WHEN USING STRAW MULCHING, THE MINIMUM APPLICATION SHALL BE 2 TONS/ACRE. MULCH MUST BE ANCHORED IMMEDIATELY TO MINIMIZE LOSS BY WIND OR WATER.
6. WHEN USING HYDROSEEDING/MULCHING, THE MINIMUM APPLICATION OF WOOD FIBER SHALL BE 1,500 LBS/ACRE, THAT DOES NOT CONTAIN MORE THAN 50 PERCENT NEWSPRINT.
7. FOR SEEDING RECOMMENDATIONS, USDA, NATURAL RESOURCES CONSERVATION SERVICE.

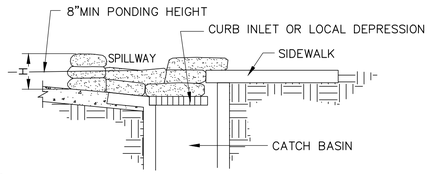
3 EROSION CONTROL



4 FIBER ROLL DETAIL

SCALE: NOT TO SCALE



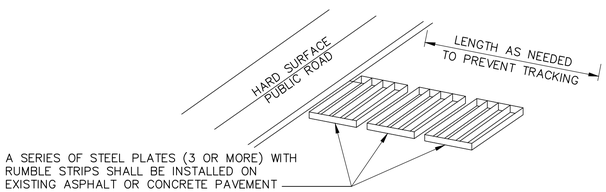


NOTES:

1. INLET PROTECTION IS REQUIRED ALONG WITH OTHER POLLUTION PREVENTION MEASURES SUCH AS: EROSION CONTROL, SOIL STABILIZATION, AND MEASURES TO PREVENT TRACKING ONTO PAVED SURFACES.
2. MODIFY INLET PROTECTION AS NEEDED TO AVOID CREATING TRAFFIC HAZARDS.
3. INCLUDE INLET PROTECTION MEASURES AT HILLSIDE V–DITCHES AND MISCELLANEOUS DRAINAGE SWALES.
4. INLET PROTECTION SHALL BE PROTECTED AND ACCUMULATED SEDIMENTS REMOVED. SEDIMENT SHALL BE DISPOSED OF PROPERTY AND IN A MANNER THAT ASSURES THAT THE SEDIMENT DOES NOT ENTER THE STORM DRAIN SYSTEM.
5. DAMAGED BAGS SHALL BE REPLACED IMMEDIATELY.
6. ADDITIONAL SANDBAG SEDIMENT TRAPS SHALL BE PLACED AT INTERVALS AS INDICATED ON SITE PLANT.

5 CATCH BASIN/INLET PROTECTION

SCALE: NOT TO SCALE



NOTES:

1. SEDIMENTS AND OTHER MATERIALS SHALL NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONSTRUCTION ENTRANCE ROADWAYS SHALL BE STABILIZED SO AS TO PREVENT SEDIMENTS FROM BEING DEPOSITED INTO THE PUBLIC ROADS. DEPOSITIONS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR OTHER MEANS INTO THE STORM DRAIN SYSTEM.
2. STABILIZED CONSTRUCTION ENTRANCE SHALL BE:

   A. LOCATED AT ANY POINT WHERE TRAFFIC WILL BE ENTERING OR LEAVING A CONSTRUCTION SITE RD OR FROM A PUBLIC RIGHT OF WAY, STREET, ALLEY, AND SIDEWALK OR PARKING AREA.

   B. A SERIES OF STEEL PLATES WITH "RUMBLE STRIPS", AND/OR MIN 4" COARSE AGGREGATE WITH LENGTH, WIDTH & THICKNESS AS NEEDED TO ADEQUATELY PREVENT ANY TRACKING ONTO PAVED SURFACES.

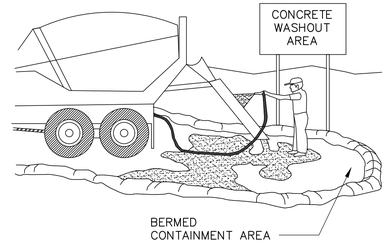
3. ADDING A WASH RACK WITH A SEDIMENT TRAP LARGE ENOUGH TO COLLECT ALL WASH WATER CAN GREATLY IMPROVE EFFICIENCY.
4. ALL VEHICLES ACCESSING THE CONSTRUCTION SITE SHALL UTILIZE THE STABILIZED CONSTRUCTION ENTRANCE SITES.

STREET MAINTENANCE

1. REMOVE ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS IMMEDIATELY.
2. SWEEP PAVED AREAS THAT RECEIVE CONSTRUCTION TRAFFIC WHENEVER SEDIMENT BECOMES VISIBLE.
3. PAVEMENT WASHING WITH WATER IS PROHIBITED IF IT RESULTS IN A DISCHARGE TO THE STORM DRAIN SYSTEM.

6 STABILIZED CONSTRUCTION ENTRANCE / EXIT

NOT TO SCALE

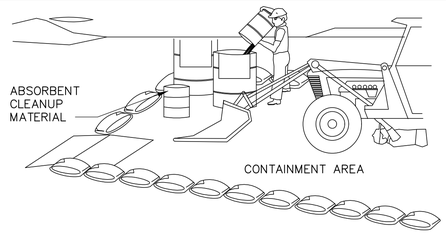


NOTES:

1. EXCESS AND WASTE CONCRETE SHALL NOT BE WASHED INTO STREET OR A DRAINAGE SYSTEM
2. FOR WASHOUT OF CONCRETE AND MORTAR PRODUCTS, A DESIGNATED CONTAINMENT FACILITY OF SUFFICIENT CAPACITY TO RETAIN LIQUID AND SOLID WASTE SHALL PROVIDED ON SITE.
3. SLURRY FROM CONCRETE AND ASPHALT SAW CUTTING SHALL BE VACUUMED OR CONTAINED,DRIED, PICKED UP AND DISPOSED OFF PROPERTY.

7 CONCRETE WASTE MANAGEMENT

SCALE: NOT TO SCALE

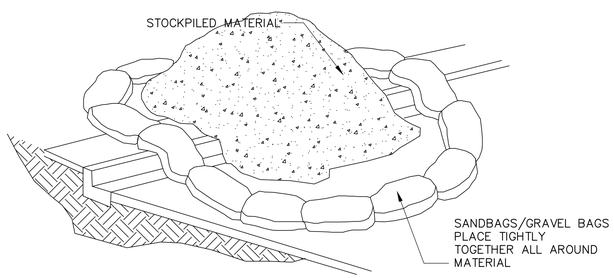


NOTES:

1. LEAKING VEHICLES AND EQUIPMENT SHALL NOT BE ALLOWED ON–SITE. EQUIPMENT AND VEHICLES SHALL BE INSPECTED FREQUENTLY FOR LEAKS AND SHALL BE REPAIRED IMMEDIATELY. CLEAN UP SPILLS AND LEAKS PROMPTLY WITH ABSORBENT; DO NOT FLUSH WITH WATER.
2. VEHICLES AND EQUIPMENT SHALL BE MAINTAINED AND REPAIRED ON–SITE ONLY IN DESIGNATED AREAS. PREVENT RUN–ON AND RUN–OFF FROM DESIGNATED AREAS. CONTAINMENT DEVICES SHALL BE PROVIDED AND AREAS SHALL BE COVERED IF NECESSARY.
3. DESIGNATE ON–SITE VEHICLE AND EQUIPMENT MAINTENANCE AREAS, WAY FROM STORM DRAIN INLETS AND WATERCOURSES.
4. ALWAYS USE SECONDARY CONTAINMENT, SUCH AS A DRAIN PAN OR DROP CLOTH, TO CATCH SPILLS AND LEAKS WHEN REMOVING OR CHANGING FLUIDS.
5. LEGALLY DISPOSE OF USED OILS, FLUIDS, AND LUBRICANTS.
6. PROVIDE SPILL CONTAINMENT DIKES OR SECONDARY CONTAINMENT AROUND STORED OIL, FUEL, AND CHEMICAL DRUMS.
7. MAINTAIN ON ADEQUATE SUPPLY OF ABSORBENT SPILL CLEANUP MATERIALS IN DESIGNATED AREA.

8 EQUIPMENT REPAIR/MAINTENANCE

SCALE: NOT TO SCALE



NOTES:

1. DIRT AND OTHER CONSTRUCTION RELATED MATERIALS PLACED IN THE STREET OR ON OTHER IMPERVIOUS SURFACES MUST BE CONTAINED WITH SANDBAGS OR OTHER MEASURES TO PREVENT TRANSPORT TO THE STORMDRAIN SYSTEM.
2. ANY CONSTRUCTION MATERIAL STORED OR STOCKPILED ON–SITE SHALL BE PROTECTED FROM BEING TRANSPORTED BY THE FORCE OF WIND OR WATER.

9 MATERIAL STORAGE

WATER EFFICIENT LANDSCAPE WORKSHEETS:

REFERENCE EVAPOTRANSPIRATION (ETo): 52.0 (MWELO, JULY 2015, SAN FERNANDO)

HYDROZONE # / PLANTING DESC.	VALVE(S)	PLANT FACTOR	IRRIGATION METHOD	IE	ETAF (PF/IE)	IRRIGATED AREA (SF)	ETAF x AREA	ETWU
REGULAR LANDSCAPE AREAS:								
A (LW) LOW WATER USE TREES	NEW_3, 5, 6	.3	TREE BUBBLERS	.81	.37	1,207	447	14,411
B (LW) LOW WATER USE PLANTINGS	NEW_2, 7, 8 / B6, B7, B10, B20	.3	SHRUB BUBBLERS	.81	.37	4,360	1,613	52,003
					TOTALS:	(A) 5,567	(B) 2,060	66,414
SPECIAL LANDSCAPE AREAS - EXISTING IRRIGATED TURF NOT INCLUDED								
C SWIMMING POOL - ACTIVE PLAY AREA					1.0	9,110	9,110	293,706
D SPLASH PAD - ACTIVE PLAY AREA					1.0	1,003	1,003	32,336
					TOTALS:	(C) 10,113	(D) 10,113	326,043
							ETWU TOTAL:	392,457
							MAXIMUM ALLOWED WATER ALLOWANCE (MAWA):	406,809
							TOTAL IRRIGATED LANDSCAPE AREA FOR PROJECT:	15,680

ETWU = Estimated Total Water Use Per Year (gpy required)
ETWU = ETo x 0.62 x ETAF x AREA

MAWA = Maximum Applied Water Allowance (gpy allowed)
MAWA = (ETo) (0.62) [(ETAF x LA) + ((1-ETAF) x SLA)]
LA = Total Landscape Area in SF
SLA = Total Special Landscape Area in SF
ETAF = For Regular Landscapes
Must be 0.55 or below for residential areas or
0.45 or below for non-residential areas.

ETAF CALCULATIONS:

REGULAR LANDSCAPE AREAS:		ALL LANDSCAPE AREAS:	
TOTAL ETAF x AREA: (B):	2,060	TOTAL ETAF x AREA:(B + D):	12,173
TOTAL AREA: (A):	5,567	TOTAL AREA: (A + C):	15,680
AVERAGE ETAF (B / A):	0.37	AVERAGE ETAF (B + D)/(A + C):	0.77

LANDSCAPE AND IRRIGATION MAINTENANCE SCHEDULE:

1. Landscapes shall be maintained to ensure water use efficiency.
2. A regular maintenance schedule shall be submitted with the Certificate of Completion.
3. Regular maintenance schedule shall include:Routine inspection, adjustment & repair of the irrigation system and its components, aerating and dethatching turf areas, replenishing mulch, fertilizing, pruning, weeding in all landscape areas, and removing and obstruction to emission devices.
4. Operation of system is allowed for auditing and system maintenance.
5. Repair of all irrigation equipment shall be done with the originally installed components or their equivalents.
6. The project applicant/owner is encouraged to implement sustainable or environmentally-friendly practices for overall landscape maintenance.
7. Mulch shall be replaced, at a minimum, on an annual basis or more frequently as-needed.
8. Flush dripline annually, or as needed after maintenance operations.

IRRIGATION AUDIT/ IRRIGATION WATER USE ANALYSIS:

1. All landscape irrigation audits SHALL be conducted by a certified landscape irrigation auditor.
2. For new construction & rehabilitated landscape projects installed after Jan. 1, 2010, project applicant shall submit an irrigation audit report with the Certificate of Completion to the local agency that may include: inspection, system tune-up, system test with distribution uniformity, reporting overspray or run off that causes overland flow, and preparation of an irrigation schedule.
3. Local agency shall administer programs to include irrigation water use analysis, irrigation audits, and irrigation surveys or compliance with MAWA.

IRRIGATION NOTES:

1. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ANY AND ALL PERMITS AND ALL INSPECTIONS
2. THE MANUFACTURER'S DIRECTIONS AND DETAILED DRAWINGS SHALL BE FOLLOWED IN ALL CASES WHERE THE MANUFACTURERS OF ARTICLES USED IN THIS INSTALLATION FURNISHES DIRECTIONS CONCERNING POINTS NOT SHOWN IN THE DRAWINGS AND SPECIFICATIONS.
3. THIS IRRIGATION SYSTEM CONNECTS TO EXISTING INFRASTRUCTURE (VALVES, BACK FLOW, METER, CONTROLLER). COORDINATE WITH CITY STAFF AS NEEDED FOR ALL EXISTING EQUIPMENT.
4. THIS DESIGN IS DIAGRAMMATIC. ALL PIPING, VALVES, ETC. SHOWN WITHIN PAVED AREAS ARE FOR DESIGN CLARIFICATION ONLY AND SHALL BE INSTALLED IN PLANTING AREAS WHEREVER POSSIBLE.
5. PROTECT EXISTING INFRASTRUCTURE AND EQUIPMENT IN PLACE.
6. ALL IRRIGATION EQUIPMENT SHALL BE INSTALLED PER CITY STANDARDS.
7. PIPE SIZES SHALL CONFORM TO THOSE SHOWN ON THE DRAWINGS. NO SUBSTITUTIONS OF SMALLER PIPE SIZES SHALL BE PERMITTED, BUT SUBSTITUTIONS OF LARGER SIZES MAY BE APPROVED. ALL DAMAGED AND REJECTED PIPE SHALL BE REMOVED FROM THE SITE AT THE TIME OF THE SAID REJECTION.
8. IT IS THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO BECOME FAMILIAR WITH THE GRADE DIFFERENCES, LOCATION OF WALLS, OBSTACLES, AND UTILITIES. THE IRRIGATION CONTRACTOR SHALL REPAIR OR REPLACE ALL ITEMS DAMAGED BY HIS WORK. CONTRACTOR SHALL COORDINATE THEIR WORK WITH OTHER CONTRACTORS FOR THE LOCATION AND INSTALLATION OF PIPE SLEEVES AND LATERALS UNDER ROADWAYS AND PAVING, ETC.
9. BEFORE COMMENCING ANY EXCAVATION, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT I.D. NUMBER BY CALLING 1-800-422-4133. TWO (2) WORKING DAYS SHALL BE ALLOWED AFTER THE I.D.NUMBER IS OBTAINED AND BEFORE THE EXCAVATION WORK IS STARTED SO THAT UTILITY OWNERS CAN BE NOTIFIED.
13. THE IRRIGATION SYSTEM SHALL BE FLUSHED PRIOR TO INSTALLATION OF THE IRRIGATION HEADS.
14. THE SPRINKLER SYSTEM DESIGN IS BASED ON A SYSTEM DESIGN PRESSURE OF **91** P.S.I. AND A MAXIMUM FLOW DEMAND OF **21** G.P.M. THE CONTRACTOR SHALL VERIFY WATER PRESSURES PRIOR TO CONSTRUCTION. REPORT ANY DIFFERENCE BETWEEN WATER PRESSURE INDICATED ON THE DRAWINGS AND THE ACTUAL PRESSURE READING AT THE IRRIGATION POINT OF CONNECTION TO THE LANDSCAPE ARCHITECT.
15. DO NOT WILLFULLY INSTALL THE SPRINKLER SYSTEM AS SHOWN ON THE DRAWINGS WHEN IT IS OBVIOUS IN THE FIELD THAT THERE ARE UNKNOWN OBSTRUCTIONS OR GRADE DIFFERENCES IN THE AREA. DIMENSIONS EXIST THAT MIGHT NOT HAVE BEEN CONSIDERED IN THE ENGINEERING. SUCH OBSTRUCTIONS OR DIFFERENCES SHOULD BE BROUGHT TO THE ATTENTION OF THE LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY FOR ANY NECESSARY REVISIONS.
16. THE INTENT OF THE DESIGN IS TO PROVIDE ADEQUATE IRRIGATION TO ALL PLANTINGS. AS PART OF THE SCOPE OF WORK, PROVIDE ANY ADDITIONAL HEADS, SPECIAL NOZZLES, OR PATTERNS TO ACHIEVE PROPER COVERAGE WITH ZERO OVER SPRAY (RESULTING IN RUNOFF) AT NO ADDITIONAL COST TO THE OWNER.
17. PROVIDE SLEEVES WHERE REQUIRED. USE MIN. 4" DIAMETER SCH. 80 P.V.C., SEE DETAIL FOR DEPTH.
18. LOCATE "AS-BUILT" VALVE CHART IN EACH CONTROLLER - REDUCE AND ENCASE IN PLASTIC.
19. FIELD QUALITY CONTROL BY THE FOLLOWING ADJUSTMENTS TO THE SYSTEM:
    • THE CONTRACTOR SHALL FLUSH AND ADJUST ALL IRRIGATION EMISSION DEVISES FOR OPTIMUM PERFORMANCE AND TO PREVENT ZERO OVER SPRAY ONTO WALKS, ROADWAYS, AND BUILDINGS.
    • IF IT IS DETERMINED THAT MINOR ADJUSTMENTS IN THE IRRIGATION EQUIPMENT WILL PROVIDE PROPER AND MORE ADEQUATE COVERAGE, THE CONTRACTOR SHALL MAKE SUCH ADJUSTMENTS PRIOR TO PLANTING. ADJUSTMENTS MAY ALSO INCLUDE CHANGES IN SIZES AND DEGREES OF ARC AS REQUIRED. ANY ALTERATION TO THE HYDRAULICS OF THE IRRIGATION SYSTEM MSUT BE APPROVED BY THE LANDSCAPE ARCHITECT OF RECORD AND APPROVED BY THE CITY BEFORE ANY CHANGES ARE MADE. MINOR SPRINKLER ADJUSTMENT IS NOT THE SAME AS ALTERING THE HYDRAULICS BY ADDING SPRINKLERS, OR ELIMINATING OR ADDING VALVES.
    • LOWERING RAISED SPRINKLER HEADS BY THE CONTRACTOR SHALL BE ACCOMPLISHED WITHIN 10 DAYS AFTER NOTIFICATION BY THE CITY THROUGH A WRITTEN NOTICE PROVIDED BY THE PUBLIC WORKS INSPECTOR.
    • ALL SPRINKLER HEADS AND EMITTERS SHALL BE SET PERPENDICULAR TO THE FINISHED GRADES UNLESS OTHERWISE DESIGNATED ON THE PLANS.
    • ALL PVC PIPE AND FITTINGS WILL BE HANDLED WITH CARE TO PREVENT CRACKING OR SPLITTING, AND SHALL NOT BE STORED IN THE SUN. NOSUN-DAMAGED PIPE IS TO BE USED. ALL SUN-DAMAGED PIPE WILL BE REMOVED AND REPLACED IMMEDIATELY WHEN THE PUBLIC WORKS INSPECTOR PROVIDES WRITTEN NOTICE.
20. THE CONTRACTOR SHALL GUARANTEE THE INSTALLED IRRIGATION SYSTEM FOR A PERIOD OF ONE (1) YEAR FROM THE DATE OF ACCEPTANCE OF THE WORK. SHOULD ANY TROUBLE DEVELOP WITHIN THE TIME SPECIFIED DUE TO INFERIOR OR FAULTY MATERIAL OR WORKMANSHIP, THE TROUBLE SHALL BE CORRECTED BY THE CONTRACTOR WITHOUT EXPENSE TO THE OWNER.
21. REFER TO GENERAL NOTES FOR ADDITIONAL INFORMATION REGARDING THIS SECTION OF WORK.
22. WHEN INSTALLATION OF THE IRRIGATION SYSTEM IS COMPLETED, PERFORM A COVERAGE TEST IN THE PRESENCE OF OWNER'S REPRESENTATIVE AND LANDSCAPE ARCHITECT TO DETERMINE THAT COVERAGE FOR PLANTING AND TURF AREAS IS COMPLETE AND ADEQUATE. WHERE INADEQUATE COVERAGE OCCURS, THE IRRIGATION CONTRACTOR SHALL PROVIDE NECESSARY MATERIAL AND PERFORM WORK TO CORRECT ALL INADEQUACIES WITHOUT ADDITIONAL COST.

    THESE TESTS AND CORRECTIONS SHALL BE ACCOMPLISHED BEFORE ANY MATERIALS ARE PLANTED.
23. CONTRACTOR IS RESPONSIBLE FOR ADDING CHECK VALVES AS NECESSARY TO PREVENT LOW HEAD DRAINAGE.
24. SUMMER PEAK WATER AMOUNTS SHALL BE APPLIED BETWEEN THE HOURS OF 9PM AND 6AM. DAYTIME WATERING SHALL BE LIMITED TO SEED GERMINATION, PLANT ESTABLISHMENT, TURF RENOVATION, AND MAINTENANCE.

THIS LANDSCAPE DOCUMENTATION PACKAGE COMPLIES WITH CCR TITLE 23, DIV. 2, CH. 2.7: MODEL WATER EFFICIENT LANDSCAPE ORDINANCE. THE LANDSCAPE DOCUMENTATION PACKAGE SHALL CONTAIN:

(1) PROJECT INFORMATION
(2) WATER EFFICIENT LANDSCAPE WORKSHEETS
(3) SOIL MANAGEMENT REPORT (GEO-TECHNICAL REPORT)
(4) LANDSCAPE DESIGN PLAN
(5) IRRIGATION DESIGN PLAN
(6) GRADING (DRAINAGE) DESIGN PLAN (BY OTHERS)

PROJECT INFORMATION:

DATE: 3 MAR 2020 (100% SUBMITTAL)
PROJECT NAME: GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT PROJECT
PROJECT APPLICANT: CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
PROJECT ADDRESS: 16730 CHATSWORTH ST. GRANADA HILLS, CA, 91344
PARCEL NUMBER (S): APN 2684-002-901

TOTAL PROJECT AREA: 56,143 sf (POOL CONSTRUCTION AREA ONLY)
TOTAL IRRIGATED LANDSCAPE AREA: 5,567 sf
TURF AREA: 0 sf (REPAIRED AFTER CONSTRUCTION, NOT INCLUDED)
TOTAL NON-IRRIGATED AREA: 50,576 sf

WATER SUPPLY TYPE: POTABLE WATER

PROJECT TYPE: POOL RENOVATION / PUBLIC PARK
APPLICANT: ALEXANDER D. NGO, PROJECT MANAGER
CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS, ARCHITECTURAL DIVISION

GREEN BUILDING CODE - WATER EFFICIENCY AND CONSERVATION

FOR PROJECTS THAT INCLUDE LANDSCAPE WORK, THE LANDSCAPE CERTIFICATION, FORM GRN 12, SHALL BE COMPLETED PRIOR TO FINAL INSPECTION APPROVAL. (STATE ASSEMBLY BILL NO. 1881,5.304.1)

"I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIEDD THEM FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE DESIGN PLANS

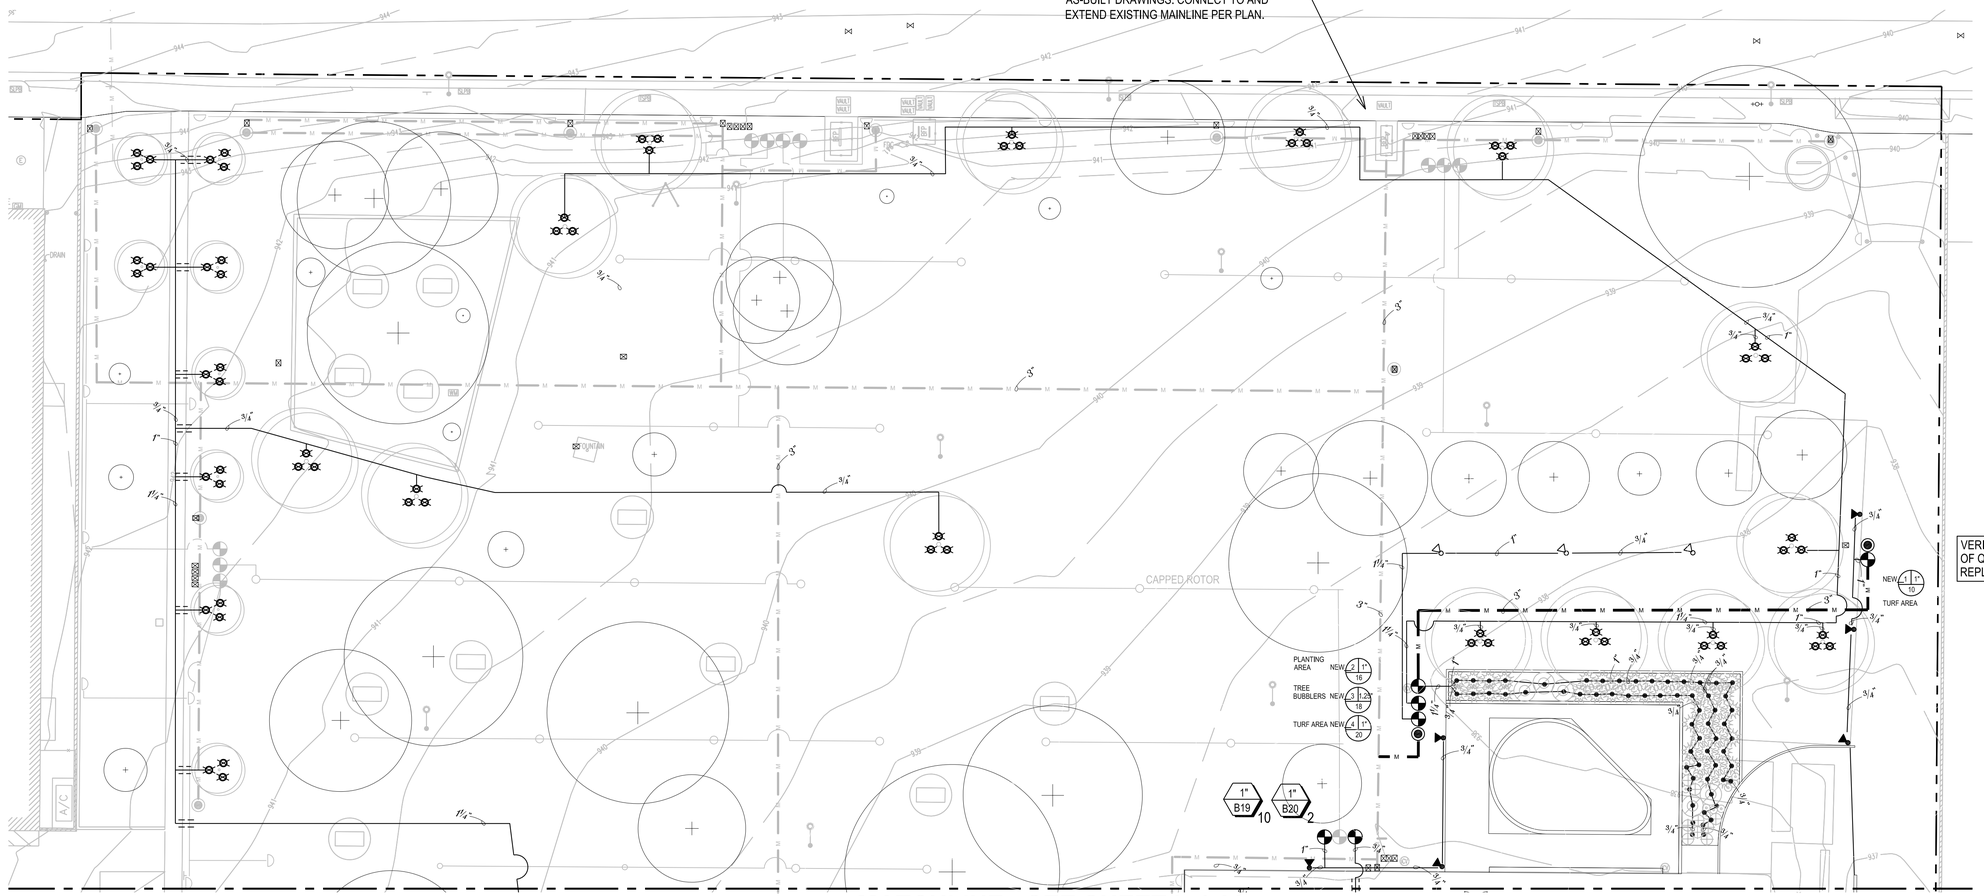
POC (EX.)
CONTRACTOR TO VERIFY LOCATION OF MAINLINE IN FIELD. LOCATE ON AS-BUILT DRAWINGS. CONNECT TO AND EXTEND EXISTING MAINLINE PER PLAN.



VERIFY EXISTING CONDITION OF QUICK COUPLER IN FIELD. REPLACE AS NECESSARY.

MATCHLINE - SEE SHEET L-1.02

POINT-OF-CONNECTION (EX.)

METER SIZE AND ELEVATION: Verify in field.
MAX FLOW: 21 GPM (New portion of system only)
Existing system High GPM not known.
STATIC PRESSURE (HIGH/LOW): 104/68
TOTAL SYSTEM NEEDS: 91 PSI (New portion of system only).
EXISTING SYSTEM PRESSURE: UNKNOWN
SOURCE AT LADWP: Water Distribution Engineering, (213) 367-0973
DATE INFO OBTAINED: 12 December 2018
THIS SYSTEM CONNECTS TO A POTABLE SOURCE.

NOTE TO CONTRACTOR:
THE NEW PORTIONS SHOWN IN THIS IRRIGATION PLAN CONNECT TO AN EXISTING IRRIGATION SYSTEM. MODIFICATIONS HAVE BEEN MADE TO THE 1986 AS-BUILT DRAWINGS. INFORMATION ABOUT THE EXISTING SYSTEM IS LIMITED. CONTRACTOR TO VERIFY ALL INFORMATION IN FIELD PRIOR TO & DURING CONSTRUCTION AND MAKE NOTATIONS ON THE AS-BUILTS (PER R.A.P. STANDARDS) FOR FUTURE REFERENCE.

CONTRACTOR IS RESPONSIBLE FOR ENSURING THE PROPER WORKING CONDITION OF ALL EXISTING IRRIGATION SYSTEMS BEING PROTECTED THROUGHOUT THE DURATION OF CONSTRUCTION ACTIVITIES. ANY LANDSCAPE (PLANTING) FAILURES THAT OCCUR AS A RESULT OF CONSTRUCTION ACTIVITES SHALL BE REPLACED IN-KIND AT NO ADDITIONAL COST TO THE CITY. CONTRACTOR TO PROVIDE TEMPORARY IRRIGATION TO PLANTING AREAS IF NECESSARY TO MAINTAIN THE HEALTH OF EXISTING PLANTS.

CONTROLLERS:
SEE SHEET L-1.02 FOR EXISTING CONTROLLER LOCATION. ALL NEW AND REUSED VALVES ARE TO BE CONNECTED TO EXISTING CALSENSE ET-1 CONTROLLER "A." VERIFY IN FIELD WITH PARK MAINTENANCE STAFF.

IRRIGATION MAINLINE NOTE:
MAINLINE IS SHOWN OUTSIDE OF LANDSCAPE AREAS FOR GRAPHIC CLARITY ONLY. MAINLINE SHALL BE INSTALLED WITHIN LANDSCAPE AREAS WHEREVER POSSIBLE. WHERE MAINLINE MUST RUN UNDER HARDSCAPE, INSTALL IN SLEEVING PER R.A.P. STANDARDS - REFER TO SPECIFICATIONS. SLEEVES SHALL BE TWICE THE DIAMETER OF THE MAINLINE PIPE MIN.

SEE SHEET L-1.50 FOR IRRIGATION NOTES

GENERAL VALVE/QUICK COUPLER NOTE:
CONTRACTOR SHALL NOT INSTALL ANY VALVES OR QUICK COUPLERS IN HARDSCAPE AREAS. CONTRACTOR SHALL INSTALL THESE ITEMS IN PLANTER AREAS ONLY.

SLEEVING NOTE:
CONTRACTOR TO TERMINATE ALL SLEEVES 3' BEYOND HARDSCAPE INTO PLANTER AREA (PER R.A.P. STANDARDS). NO SLEEVES TO BE TERMINATED UNDER HARDSCAPE. CONTRACTOR WILL BE RESPONSIBLE FOR VERIFYING LIMITS OF HARDSCAPE PRIOR TO INSTALLING SLEEVES.

NOTE:
CONTRACTOR IS RESPONSIBLE FOR MAINTAINING AN OPERATING IRRIGATION SYSTEM TO ALL EXISTING PLANTING AREAS FOR THE DURATION OF CONSTRUCTION. ANY PLANTS / LANDSCAPE THAT FAIL AS A RESULT OF LACK OF IRRIGATION SHALL BE REPLACED IN-KIND AT NO ADDITIONAL COST TO THE CITY.

PRESSURE REGULATOR:
PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.

A DIAGRAM OF THE IRRIGATIONS PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.

NOTICE TO CONTRACTOR:
THE EXISTING IRRIGATION SYSTEM SHOWN IS A RECONSTRUCTION FROM "AS-BUILT" DRAWINGS DATED 1986 AND FIELD RESEARCH. CONTRACTOR TO VERIFY ALL IRRIGATION EQUIPMENT IN THE FIELD BEFORE THE START OF CONSTRUCTION. CONFIRM ALL VALVE NUMBERS AND PROTECT EXISTING WIRE FOR REUSE WHEN VALVE NUMBER IS REASSIGNED FOR A NEW INSTALLATION. WHEN AN IRRIGATION LINE IS COMPLETELY REMOVED DUE TO NEW CONSTRUCTION OR NEW HEADS ARE TO BE INSTALLED, THE EXISTING VALVE, VALVE BOX ARE TO BE REPLACED.

COORDINATE WITH CITY MAINTENANCE STAFF AS REQUIRED. ALL REMOVED IRRIGATION EQUIPMENT SHALL BE RETURNED TO THE CITY.

NOTE:
CONTRACTOR SHALL RUN ALL EXISTING IRRIGATION PRIOR TO COMMENCEMENT OF WORK AND MAKE NOTATIONS TO A CLEAN SET OF PLANS OF THE OPERATION AND SCHEMATICS OF THE EXISTING SYSTEM.

NOTE:
FOR PROJECTS THAT INCLUDE LANDSCAPE WORK, THE LANDSCAPE CERTIFICATION, FORM GRN 12, SHALL BE COMPLETED PRIOR TO FINAL INSPECTION APPROVAL.

NOTE:
AUTOMATIC LANDSCAPE IRRIGATORS SHALL BE INSTALLED IN SUCH A WAY THAT SPRAY DOES NOT IMPACT THE BUILDING.

CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.

AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.

A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.

BID SET
PROJECT ISSUE DATE: 06/22/21

WORK ORDER NO. #E170517
PLAN FILE NO. #308
DRAWING NO. L-1.02
SHEET OF SHEETS

PLOTTED: 6/26/2018 2:53:10 PM

1. THIS DESIGN IS DIAGRAMMATIC. ALL PIPING, VALVES, ETC. SHOWN WITHIN PAVED AREAS ARE FOR DESIGN CLARIFICATION ONLY AND SHALL BE INSTALLED IN PLANTING AREAS WHEREVER POSSIBLE.
2. SET ALL VALVES NEXT TO WALKS OR PAVED SURFACES - WHERE POSSIBLE, BUT SCREEN FROM VIEW. FINAL LOCATION TO BE APPROVED BY LANDSCAPE ARCHITECT & PROJECT MANAGER.
3. ALL TURF SPRINKLER HEADS ARE TO HAVE TRIPLE SWING JOINTS. ALL OTHER SHALL HAVE DOUBLE SWING JOINTS. PIPE SIZES SHALL CONFORM TO THOSE SHOWN ON THE DRAWINGS. NO SUBSTITUTIONS OF SMALLER PIPE SIZES SHALL BE PERMITTED, BUT SUBSTITUTIONS OF LARGER SIZES MAY BE APPROVED. ALL DAMAGED AND REJECTED PIPE SHALL BE REMOVED FROM THE SITE AT THE TIME OF THE SAID REJECTION.
4. FINAL LOCATION OF THE AUTOMATIC CONTROLLERS SHALL BE DETERMINED ON SITE WITH PROJECT MANAGER / OWNER'S REPRESENTATIVE. POWER TO CONTROLLER SHALL BE COORDINATED.
5. BEFORE COMMENCING ANY EXCAVATION, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT I.D. NUMBER BY CALLING 1-800-422-4133. TWO (2) WORKING DAYS SHALL BE ALLOWED AFTER THE I.D.NUMBER IS OBTAINED AND BEFORE THE EXCAVATION WORK IS STARTED SO THAT UTILITY OWNERS CAN BE NOTIFIED.
6. ALL SPRINKLER HEADS SHALL BE SET PERPENDICULAR TO FINISH GRADE UNLESS OTHERWISE SPECIFIED.
7. THE CONTRACTOR SHALL FLUSH AND ADJUST ALL VALVES, SPRINKLER HEADS AND OTHER EMISSION DEVICES FOR OPTIMUM COVERAGE WITH ZERO OVER SPRAY ONTO IMPERVIOUS MATERIALS (WALKS, STREETS, ETC).
8. IT IS THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO FAMILIARIZE HIMSELF WITH THE GRADE DIFFERENCES, LOCATION OF WALLS, OBSTACLES, AND UTILITIES. THE IRRIGATION CONTRACTOR SHALL REPAIR OR REPLACE ALL ITEMS DAMAGED BY HIS WORK. CONTRACTOR SHALL COORDINATE THEIR WORK WITH OTHER CONTRACTORS FOR THE LOCATION AND INSTALLATION OF PIPE SLEEVES AND LATERALS UNDER ROADWAYS AND PAVING, ETC.
9. THE NEW PORTION OF THE SPRINKLER SYSTEM DESIGN (THE CURRENT SCOPE OF WORK) IS BASED ON A SYSTEM DESIGN PRESSURE OF (TBD) P.S.I. AND A MAXIMUM FLOW DEMAND OF 16 G.P.M. THE CONTRACTOR SHALL VERIFY WATER PRESSURES PRIOR TO CONSTRUCTION. REPORT ANY DIFFERENCE BETWEEN WATER PRESSURE INDICATED ON THE DRAWINGS AND THE ACTUAL PRESSURE READING AT THE IRRIGATION POINT OF CONNECTION TO THE LANDSCAPE ARCHITECT.
10. DO NOT WILLFULLY INSTALL THE SPRINKLER SYSTEM AS SHOWN ON THE DRAWINGS WHEN IT IS OBVIOUS IN THE FIELD THAT THERE ARE UNKNOWN OBSTRUCTIONS OR GRADE DIFFERENCES IN THE AREA. DIMENSIONS EXIST THAT MIGHT NOT HAVE BEEN CONSIDERED IN THE ENGINEERING. SUCH OBSTRUCTIONS OR DIFFERENCES SHOULD BE BROUGHT TO THE ATTENTION OF THE LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY FOR ANY NECESSARY REVISIONS.
11. ALL SPRINKLER EQUIPMENT NOT OTHERWISE DETAILED OR SPECIFIED SHALL BE INSTALLED AS PER MANUFACTURER'S RECOMMENDATIONS AND SPECIFICATIONS.
12. THE INTENT OF THE DESIGN IS TO PROVIDE FULL COVERAGE TO PLANTING AREAS. HEADS SHALL BE PLACED TO PROVIDE 120% COVERAGE, MIN. AS PART OF THE SCOPE OF WORK, PROVIDE ANY ADDITIONAL HEADS, SPECIAL NOZZLES, OR PATTERNS TO ACHIEVE PROPER COVERAGE WITH ZERO OVER SPRAY (RESULTING IN RUNOFF) AT NO ADDITIONAL COST TO THE OWNER.
13. INSTALLATION FOR THE CONTROL WIRES SHALL FOLLOW MAINLINE ROUTING. NEW WIRING SHALL BE PLACED IN CONDUIT.
14. PROVIDE SLEEVES WHERE REQUIRED. USE MIN. 4" DIAMETER SCH. 80 P.V.C., SEE DETAIL FOR DEPTH.
15. LOCATE "AS-BUILT" VALVE CHART IN EACH CONTROLLER - REDUCE AND ENCASE IN PLASTIC.
16. THE CONTRACTOR SHALL GUARANTEE THE INSTALLED IRRIGATION SYSTEM FOR A PERIOD OF ONE (1) YEAR FROM THE DATE OF ACCEPTANCE OF THE WORK. SHOULD ANY TROUBLE DEVELOP WITHIN THE TIME SPECIFIED DUE TO INFERIOR OR FAULTY MATERIAL OR WORKMANSHIP, THE TROUBLE SHALL BE CORRECTED BY THE CONTRACTOR WITHOUT EXPENSE TO THE OWNER.
17. REFER TO GENERAL NOTES FOR ADDITIONAL INFORMATION REGARDING THIS SECTION OF WORK.
18. WHEN INSTALLATION OF THE IRRIGATION SYSTEM IS COMPLETED, PERFORM A COVERAGE TEST IN THE PRESENCE OF OWNER'S REPRESENTATIVE AND LANDSCAPE ARCHITECT TO DETERMINE THAT COVERAGE FOR PLANTING AND TURF AREAS IS COMPLETE AND ADEQUATE. WHERE INADEQUATE COVERAGE OCCURS, THE IRRIGATION CONTRACTOR SHALL PROVIDE NECESSARY MATERIAL AND PERFORM WORK TO CORRECT ALL INADEQUACIES WITHOUT ADDITIONAL COST. THESE TESTS AND CORRECTIONS SHALL BE ACCOMPLISHED BEFORE ANY SHRUBS, GROUND COVER OR TURF IS PLANTED.
19. CONTRACTOR IS RESPONSIBLE FOR ADDING CHECK VALVES AS NECESSARY TO PREVENT LOW HEAD DRAINAGE.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

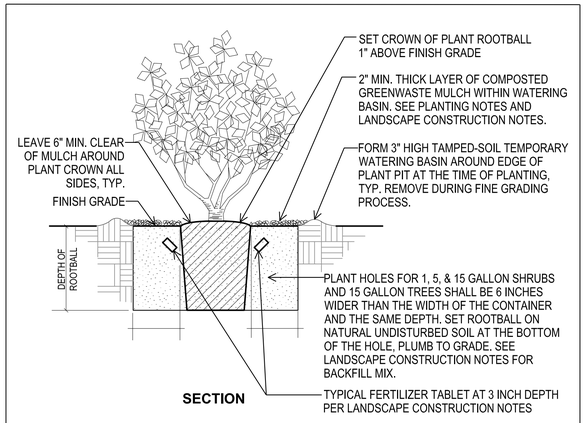
FILE PATH: BIM 360:///Granada Hills Pool Renovation/A_Granada-Hills_2017.rvt

SHEET ISSUE DATE: 01/04/18

REVISION DATES (DESIGN STAGE ONLY)

1. THE PLAN(S) ARE DIAGRAMMATIC. THE CONTRACTOR SHALL VERIFY EXISTING CONDITIONS AND NOTIFY THE PROJECT ENGINEER/LANDSCAPE ARCHITECT OF ANY DISCREPANCIES PRIOR TO THE START OF WORK.
2. CLEARING AND GRUBBING:
THE CONTRACTOR SHALL CLEAR AND GRUB ALL IMPROVEMENT AREAS PRIOR TO THE INSTALLATION OF THE IRRIGATION SYSTEM. SEE SPECIFICATIONS.
3. TOPSOIL/SOILS REPORT:
THE CONTRACTOR SHALL OBTAIN AN AGRICULTURAL SUITABILITY REPORT FOR THE ON-SITE SOIL. TAKE A MINIMUM OF 3 TEST SAMPLES AS DIRECTED BY THE CITY LANDSCAPE ARCHITECT, PRIOR TO THE INSTALLATION OF IRRIGATION AND PLANTING. THE RECOMMENDATIONS FOR SOIL AMENDMENTS FROM THE REPORT SHALL BE FOLLOWED IF THEY DIFFER FROM THE ONES GIVEN IN THESE PLANTING NOTES. IF IMPORTED SOIL IS REQUIRED, IT SHALL BE CLASS 'A' SOIL OBTAINED FROM A SOURCE DESIGNATED BY THE CONTRACTOR AND APPROVED BY THE CITY LANDSCAPE ARCHITECT. CONTRACTOR SHALL GUARANTEE THE QUALITY OF THE TOPSOIL WITH AN APPROVED AGRICULTURAL SUITABILITY EVALUATION REPORT. SUBMIT THE EVALUATION REPORT TO THE CITY LANDSCAPE ARCHITECT FOR APPROVAL 30 DAYS PRIOR TO ANY SOIL PLACEMENT.
4. PROTECTION OF EXISTING TREES:
THE CONTRACTOR SHALL PROTECT IN PLACE ALL EXISTING TREES AS NOTED ON THE PLANS OR AS DIRECTED BY THE CITY ENGINEER/LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL NOT STORE ANY CONSTRUCTION MATERIALS INCLUDING EQUIPMENT OR EXCAVATED SOILS NOR OPERATE ANY MACHINERY THAT MIGHT COMPACT THE EXISTING SOIL WITHIN THE DRIP LINE OF THE TREE'S CANOPY. THE CONTRACTOR SHALL PROVIDE IRRIGATION AND MAINTENANCE TO ALL PLANT MATERIALS THAT ARE TO REMAIN UNDISTURBED. THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLACE IN SIZE, KIND, AND TO THE SATISFACTION OF THE CITY ENGINEER/LANDSCAPE ARCHITECT ANY EXISTING PLANT MATERIAL THAT IS TO BE PROTECTED AND IS DAMAGED DURING THE CONSTRUCTION PERIOD.
5. WEED ABATEMENT:
THE CONTRACTOR SHALL SUBMIT A WEED ABATEMENT PROGRAM TO THE CITY ENGINEER/LANDSCAPE ARCHITECT FOR APPROVAL 30 DAYS PRIOR TO THE START OF PLANTING OPERATIONS. NO PLANTING OPERATIONS WILL BE ALLOWED UNTIL ALL PLANTING AREAS ARE CLEARED OF WEEDS IN ACCORDANCE WITH THE WEED ABATEMENT PROGRAM AND TO THE SATISFACTION OF THE CITY ENGINEER/ LANDSCAPE ARCHITECT. MAINTAIN ALL PLANTING AREAS FREE OF WEEDS FOR THE DURATION OF THE CONTRACT.
6. PLANT LAYOUT:
THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER 48 HOURS PRIOR TO PLANTING OPERATIONS TO CONFIRM THE LOCATION OF PLANT MATERIALS. LOCATIONS AND QUANTITIES OF PLANT MATERIALS ON THE PLANS ARE APPROXIMATE AND ARE PROVIDED TO SHOW GENERAL INTENT. PLANT LOCATION ADJUSTMENTS SHALL BE PERFORMED BY THE CONTRACTOR AS DIRECTED BY THE CITY ENGINEER/LANDSCAPE ARCHITECT AT NO ADDITIONAL COST TO THE CITY.
7. SOIL CONDITIONING:
ALL PLANTING AREAS SHALL HAVE THE FOLLOWING AMENDMENTS TILLED INTO THE TOP 6" OF THE SOIL PER 1000 SQUARE FEET:
   A. THREE (3) CUBIC YARDS OF NITROGEN FORTIFIED WOOD COMPOST (TYPE 1 ORGANIC SOIL AMENDMENT).
   B. TWO (2) CUBIC YARDS OF ORGANIC FERTILIZER (TYPE 2 ORGANIC SOIL AMENDMENT)
   C. 100 POUNDS OF AGRICULTURAL GYPSUM
   D. 20 POUNDS OF 12-12-12 QUICK RELEASE COMMERCIAL FERTILIZER THESE QUANTITIES ARE FOR BID BASIS ONLY. REFER TO SOILS REPORTS FOR FINAL QUANTITIES (SEE SPECIFICATIONS).
8. BACKFILL MIX:
ALL PLANTING HOLES, EXCLUDING PLANTING HOLES SMALLER THAN 1 GALLON SHALL HAVE THE FOLLOWING BACKFILL MIXTURE:
   - 70% EXISTING TOPSOIL
   - 30% NITROGEN FORTIFIED WOOD COMPOST (TYPE 1 ORGANIC SOIL AMENDMENT) (FOR AZALEAS, SUBSTITUTE 30% PEAT MOSS)
   - 2 POUNDS PER CUBIC YARD OF IRON SULFATE AND THE FOLLOWING AMOUNT OF PLANTING TABLETS:
     15 GAL. PLANT = FIVE (5)TABLETS
     5 GAL. PLANT = THREE (3) TABLETS
     1 GAL. PLANT = ONE (1) TABLET
     ONE(1) TABLET PER 4" BOX SIZE
9. MULCH:
APPLY 3" OF TYPE 5 MULCH IN ALL PLANTING AREAS.
10. FERTILIZER:
THE CONTRACTOR SHALL APPLY AN 8-8-4 COMMERCIAL SLOW RELEASE FERTILIZER TO ALL PLANTING AREAS AT A RATE OF 20 POUNDS PER 1000 SQUARE FEET UPON COMPLETION OF THE GROUND COVER PLANTING AND AT THIRTY DAY INTERVALS THEREAFTER UNTIL THE END OF THE PLANT ESTABLISHMENT PERIOD. THOROUGHLY WATER ALL PLANTING AREAS FOLLOWING THE APPLICATION OF THE FERTILIZER. ALL FERTILIZER APPLICATIONS SHALL BE PERFORMED UNDER INSPECTION BY A REPRESENTATIVE FROM THE BUREAU OF CONTRACT ADMINISTRATION.
11. PLANT REPLACEMENT:
THE CONTRACTOR SHALL REPLACE AS SOON AS POSSIBLE, ANY PLANT THAT SHOWS SIGNS OF FAILURE TO GROW AT ANY TIME DURING THE CONTRACT PERIOD OR THOSE PLANTS THAT ARE INJURED OR SO DAMAGED AS TO RENDER THEM UNSUITABLE FOR THE PURPOSE INTENDED. PROVIDE REPLACEMENT PLANTS OF THE SAME TYPE AND SIZE, AND INSTALL THEM PER THE PLANTING SPECIFICATION.
12. PLANT ESTABLISHMENT PERIOD
THE CONTRACTOR SHALL PROVIDE A PLANT ESTABLISHMENT PERIOD FOR A LENGTH OF 180 CALENDAR DAYS. ARRANGE FOR A PRE-MAINTENANCE FINAL INSPECTION TO START THE PLANT ESTABLISHMENT PERIOD BY CONTACTING THE BUREAU OF CONTRACT ADMINISTRATION, FINAL INSPECTION SECTION AT:
METR0 AREA-(213) 580-1394.
13. RESTORATION OF DAMAGED AREAS:
THE CONTRACTOR SHALL RESTORE ALL LANDSCAPED AREAS TO THEIR ORIGINAL CONDITION THAT ARE NOT SPECIFICALLY PROVIDED FOR BY THESE PLANS, BUT HAVE BEEN IMPACTED BY CONSTRUCTION. PROVIDE ALL NECESSARY MATERIAL, INCLUDING IRRIGATION EQUIPMENT, SOIL, SOIL AMENDMENTS, PLANTS OF THE SAME SPECIES, KINDS, AND SIZED, ETC. TO THE SATISFACTION OF THE CITY ENGINEER AND THE CITY LANDSCAPE ARCHITECT AT NO ADDITIONAL COST TO THE CITY.
14. GUARANTEES:
THE CONTRACTOR SHALL WARRANT ALL TREES 15 GALLON SIZED AND LARGER FOR ONE YEAR AND ALL SHRUBS SHALL BE WARRANTED FOR A PERIOD OF SIX MONTHS. THE WARRANTY PERIOD SHALL BEGIN UPON THE DATE OF THE FINAL POST MAINTENANCE ACCEPTANCE. THIS WARRANTY DOES NOT INCLUDE ITEMS DAMAGED DUE TO THE CITY'S NEGLECT AND/OR TO ACTS OF GOD.
15. INSPECTIONS:
ALL WORK AND MATERIALS ARE SUBJECT TO INSPECTION AND APPROVAL IN ADDITION TO INSPECTIONS REQUIRED BY THE STANDARD PLANS SPECIFICATIONS. THE FOLLOWING INSPECTIONS ARE REQUIRED:
   - IRRIGATION SYSTEM PRESSURE TESTING
   - IRRIGATION COVERAGE TEST
   - IRRIGATION SYSTEM OPERATIONS TEST
   - TAGGING OF PLANT MATERIAL 15 GALLON AND LARGER AT THEIR SOURCE.
   - APPROVAL OF ALL PLANT MATERIAL AT THE SITE PRIOR TO PLANTING OPERATIONS.
   - CONFIRMATION AND APPROVAL OF PLANT MATERIAL LOCATION AND SPACING PRIOR TO PLANTING.
   - PRE-MAINTENANCE FINAL LANDSCAPE INSPECTION.
   - POST-MAINTENANCE FINAL LANDSCAPE INSPECTION.
16. RECYCLING:
THE CONTRACTOR SHALL RECYCLE ON-OR OFF-SITE ALL VEGETATIVE WASTE (PER SECTION 12.43 OF LAMC).

3 PLANTING NOTES



NOTE: DELETE FERTILIZER TABLETS AND MULCH ON TOP OF SHRUB ROOTBALL FOR CALIF. NATIVE PLANTS UNLESS NOTED OTHERWISE.

GENERAL NOTES

1. THE PLUMBING CONTRACTOR SHALL VERIFY THE EXACT DEPTH, LOCATION AND SIZE OF ALL EXISTING LINES, LATERALS AND WYES BEFORE STARTING AND SHALL NOTIFY THE ARCHITECT IF SAID CONNECTIONS ARE NOT IN THE LOCATION SHOWN OR ARE NOT OF SUFFICIENT SIZE, OR DEPTH TO MAKE THE CONNECTION IN COMPLIANCE WITH PLANS & SPECIFICATIONS.
2. THE PLUMBING CONTRACTOR IS TO FURNISH ALL MATERIALS FOR AND MAKE ALL CONNECTION TO ALL EQUIPMENT NOT IN PLUMBING SECTION, TO MAKE A COMPLETE WORKABLE INSTALLATION.
3. INSTALL ALL PLUMBING TO AVOID INTERFERENCE WITH MECHANICAL, ELECTRICAL AND OTHER EQUIPMENT, WHERE REQUIRED OFFSET PIPING AND/OR VENTS THRU ROOF TO CLEAR BEAMS ETC.
4. FOR EXACT LOCATION OF FIXTURES AND EQUIPMENT SEE ARCHITECT. DRAWINGS.
5. (3) INDICATES INFORMATION RELATIVE TO DEDUCTIVE ALTERNATE NUMBER 3

EXISTING ELECTRICAL EQUIPMENT TO BE REMOVED

(N.T.S.)

NOTES:

1. PROVIDE 18"W x 6'L CONCRETE PAD, WITH FLUSH PULL BOX 12" X 24". COORDINATE EXACT LOCATION WITH ARCHITECT AND OWNER.
2. RELOCATE EXIST. PANEL 'C' WITH RELAY SECTION TO 18"W CONCRETE PAD WITH RELAY SECTION OVER PULL BOX.
3. EXTEND ALL EXISTING CIRCUITS FROM (E) J-BOX AND (E) PANEL 'C' TO NEW 12" X 24" PULLBOX.
4. EXTEND FEEDER (MATCH EXISTING) TO NEW TEMPORARY LOCATION OF (E) PANEL 'C'.
5. AFTER NEW MAIN SERVICE SWB'D 'MS' AND NEW PANEL 'C' WITH RELAY SECTION ARE ENERGIZED IN NEW MAIN ELECTRICAL ROOM, EXTEND WIRING FROM PANEL 'C' IN ELECT. ROOM TO 12" X 24" PULLBOX AND TRANSFER CIRCUITS. THEN REMOVE EXIST. PANEL 'C' WITH RELAY SECTION AND PROVIDE FLUSH COVER ON 12" X 24" PULLBOX.
6. REMOVE ALL (E) ELEC. EQUIPMENT IN ROOM TO BE DEMOLISHED, AFTER WORK UNDER NOTE #5 IS COMPLETED.

GENERAL NOTES:

1. CONTRACTOR SHALL RELOCATE ALL UNDERGROUND ELECTRICAL UTILITIES TO CLEAR PAD FOR NEW BUILDING. CONTRACTOR TO VERIFY ALL EXISTING UTILITIES ON SITE AND RE-ROUTE AS REQUIRED.
2. CONTRACTOR TO PROVIDE THE EXTENSION OF POWER AND TELEPHONE SERVICES, INCLUDING ALL MODIFICATIONS REQUIRED TO THE EXISTING EQUIPMENT, TO THE NEW BUILDING, IN COMPLIANCE WITH LA DWP AND PAC. BELL.
3. PROVIDE SITE LIGHTING FIXTURES AS DIRECTED BY ARCHITECT AND OWNER, FULLY INSTALLED.
4. CONTRACTOR TO VISIT PROJECT LOCATION AND REVIEW ALL EXISTING CONDITIONS PERTAINING TO THE PROJECT, (OBTAIN EXISTING ELECTRICAL DRAWINGS FROM OWNER) AND INCLUDE FOR SAME IN BID.
5. PROVIDE EQUIPMENT GROUND CONDUCTOR (SAME SIZE AS PHASE CONDUCTORS) IN EACH UNDERGROUND CONDUIT.
6. CONTRACTOR SHALL PROVIDE ALL FACILITIES AND EQUIPMENT AS NECESSARY TO MAINTAIN IN OPERATION EXISTING POWER AND SIGNAL SYSTEM IN EXISTING BUILDING ON SITE.
7. MAINTAIN (E) U.G. PULLBOX V.L. AND ALL DOWNSTREAM BRANCH WIRING IN PLACE.
8. INTERCEPT AND EXTEND EXISTING FEEDER CONDUIT, SEE SINGLE LINE DIAGRAM SHEET # E3.1 FOR ADDITIONAL REQUIREMENTS.
9. INTERCEPT EXISTING TELE SERVICE CONDUIT, PROVIDE FLUSH IN GRADE CONCRETE PULLBOX AND EXTEND 2"C.O. TO NEW TELE BACKB'D IN BUILDING. PROVIDE 3' CONCRETE ENVELOPE AROUND CONDUIT. COORDINATE AND PROVIDE ALL REQUIREMENTS OF TELE CO.
10. 3 1/2"C.-16#6, 8#6 GRD., PLUS 6#6, 3#6 GRD. (x5 SPARES) AND 6#6 FOR CONTROLS OF SOFTBALL FIELD PANEL AT RUBIO ST. PROVIDE 3' CONCRETE ENCASEMENT.
11. PROVIDE 12"CLEAR SEPARATION (MINIMUM) BETWEEN EACH CONDUIT CONCRETE ENCASEMENT.
12. PROVIDE ALL FACILITIES MATERIALS AND INSTALLATION AS REQUIRED BY LOS ANGELES DEPT. OF WATER AND POWER AND PAC. BELL.
13. EXTEND 1"C.-6#10 & 1#10 GRD. TO CONTROL SWITCHES IN DIRECTOR'S ROOM VIA J-BOX ADJACENT TO PANEL 'C' IN MAIN ELECTRICAL ROOM. SEE SOFTBALL CONTROL DIAGRAM AND "ELCC" CONTROL CABINET DETAILS ON SHEET # E4.1.

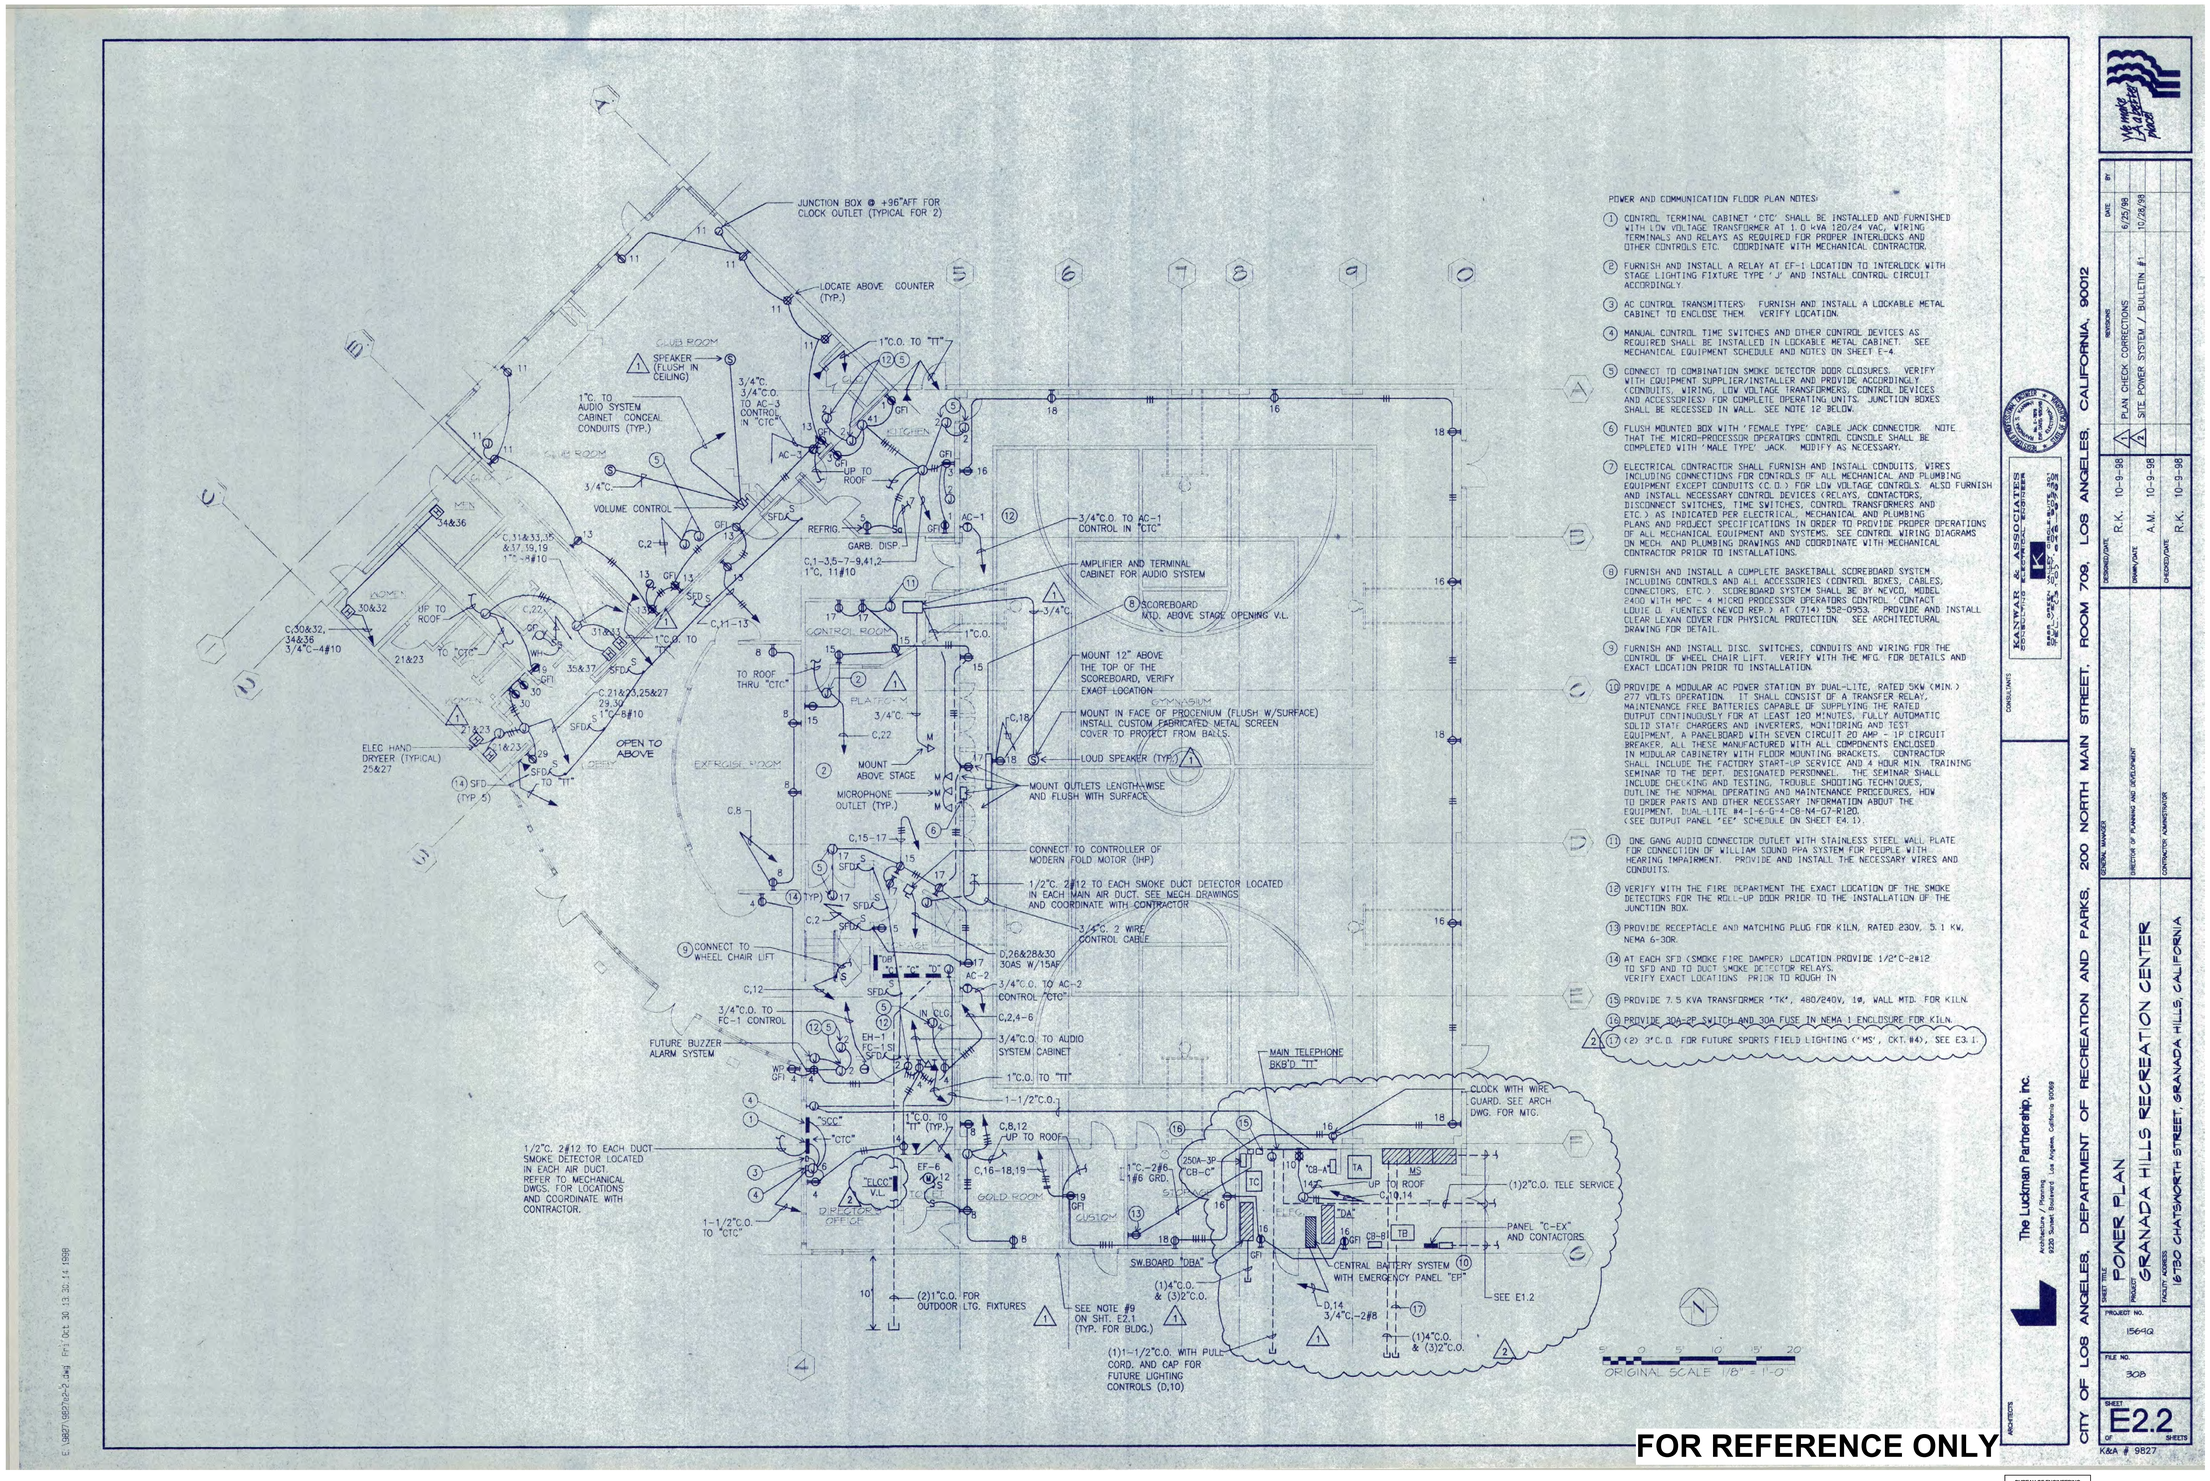
REVISION DATES (DESIGN STAGE ONLY)



POWER AND COMMUNICATION FLOOR PLAN NOTES:

1. CONTROL TERMINAL CABINET 'CTC' SHALL BE INSTALLED AND FURNISHED WITH LOW VOLTAGE TRANSFORMER AT 1.0 kVA 120/24 VAC, WIRING TERMINALS AND RELAYS AS REQUIRED FOR PROPER INTERLOCKS AND OTHER CONTROLS ETC. COORDINATE WITH MECHANICAL CONTRACTOR.
2. FURNISH AND INSTALL A RELAY AT EF-1 LOCATION TO INTERLOCK WITH STAGE LIGHTING FIXTURE TYPE 'J' AND INSTALL CONTROL CIRCUIT ACCORDINGLY.
3. AC CONTROL TRANSMITTERS: FURNISH AND INSTALL A LOCKABLE METAL CABINET TO ENCLOSE THEM. VERIFY LOCATION.
4. MANUAL CONTROL TIME SWITCHES AND OTHER CONTROL DEVICES AS REQUIRED SHALL BE INSTALLED IN LOCKABLE METAL CABINET. SEE MECHANICAL EQUIPMENT SCHEDULE AND NOTES ON SHEET E-4.
5. CONNECT TO COMBINATION SMOKE DETECTOR DOOR CLOSURES. VERIFY WITH EQUIPMENT SUPPLIER/INSTALLER AND PROVIDE ACCORDINGLY. (CONDUITS, WIRING, LOW VOLTAGE TRANSFORMERS, CONTROL DEVICES AND ACCESSORIES) FOR COMPLETE OPERATING UNITS. JUNCTION BOXES SHALL BE RECESSED IN WALL. SEE NOTE 12 BELOW.
6. FLUSH MOUNTED BOX WITH 'FEMALE TYPE' CABLE JACK CONNECTOR. NOTE THAT THE MICRO-PROCESSOR OPERATORS CONTROL CONSOLE SHALL BE COMPLETED WITH 'MALE TYPE' JACK. MODIFY AS NECESSARY.
7. ELECTRICAL CONTRACTOR SHALL FURNISH AND INSTALL CONDUITS, WIRES INCLUDING CONNECTIONS FOR CONTROLS OF ALL MECHANICAL AND PLUMBING EQUIPMENT EXCEPT CONDUITS (C.O.) FOR LOW VOLTAGE CONTROLS. ALSO FURNISH AND INSTALL NECESSARY CONTROL DEVICES (RELAYS, CONTACTORS, DISCONNECT SWITCHES, TIME SWITCHES, CONTROL TRANSFORMERS AND ETC.) AS INDICATED PER ELECTRICAL, MECHANICAL AND PLUMBING PLANS AND PROJECT SPECIFICATIONS IN ORDER TO PROVIDE PROPER OPERATIONS OF ALL MECHANICAL EQUIPMENT AND SYSTEMS. SEE CONTROL WIRING DIAGRAMS ON MECH. AND PLUMBING DRAWINGS AND COORDINATE WITH MECHANICAL CONTRACTOR PRIOR TO INSTALLATIONS.
8. FURNISH AND INSTALL A COMPLETE BASKETBALL SCOREBOARD SYSTEM INCLUDING CONTROLS AND ALL ACCESSORIES (CONTROL BOXES, CABLES, CONNECTORS, ETC.) SCOREBOARD SYSTEM SHALL BE BY NEVCO, MODEL 2400 WITH MPC - 4 MICRO PROCESSOR OPERATORS CONTROL. CONTACT LOUIE D. FUENTES (NEVCO REP.) AT (714) 552-0953. PROVIDE AND INSTALL CLEAR LEXAN COVER FOR PHYSICAL PROTECTION. SEE ARCHITECTURAL DRAWING FOR DETAIL.
9. FURNISH AND INSTALL DISC. SWITCHES, CONDUITS AND WIRING FOR THE CONTROL OF WHEEL CHAIR LIFT. VERIFY WITH THE MFG. FOR DETAILS AND EXACT LOCATION PRIOR TO INSTALLATION.
10. PROVIDE A MODULAR AC POWER STATION BY DUAL-LITE, RATED 5KW (MIN.) 277 VOLTS OPERATION. IT SHALL CONSIST OF A TRANSFER RELAY, MAINTENANCE FREE BATTERIES CAPABLE OF SUPPLYING THE RATED OUTPUT CONTINUOUSLY FOR AT LEAST 120 MINUTES. FULLY AUTOMATIC SOLID STATE CHARGERS AND INVERTERS, MONITORING AND TEST EQUIPMENT, A PANELBOARD WITH SEVEN CIRCUIT 20 AMP - 1P CIRCUIT BREAKER. ALL THESE MANUFACTURED WITH ALL COMPONENTS ENCLOSED IN MODULAR CABINETRY WITH FLOOR MOUNTING BRACKETS. CONTRACTOR SHALL INCLUDE THE FACTORY START-UP SERVICE AND 4 HOUR MIN. TRAINING SEMINAR TO THE DEPT. DESIGNATED PERSONNEL. THE SEMINAR SHALL INCLUDE CHECKING AND TESTING, TROUBLE SHOOTING TECHNIQUES, OUTLINE THE NORMAL OPERATING AND MAINTENANCE PROCEDURES, HOW TO ORDER PARTS AND OTHER NECESSARY INFORMATION ABOUT THE EQUIPMENT. DUAL-LITE #4-1-6-G-4-C8-N4-G7-R120. (SEE OUTPUT PANEL "EE" SCHEDULE ON SHEET E4.1).
11. ONE GANG AUDIO CONNECTOR OUTLET WITH STAINLESS STEEL WALL PLATE FOR CONNECTION OF WILLIAM SOUND PPA SYSTEM FOR PEOPLE WITH HEARING IMPAIRMENT. PROVIDE AND INSTALL THE NECESSARY WIRES AND CONDUITS.
12. VERIFY WITH THE FIRE DEPARTMENT THE EXACT LOCATION OF THE SMOKE DETECTORS FOR THE ROLL-UP DOOR PRIOR TO THE INSTALLATION OF THE JUNCTION BOX.
13. PROVIDE RECEPTACLE AND MATCHING PLUG FOR KILN, RATED 230V, 5.1 KW, NEMA 6-30R.
14. AT EACH SFD (SMOKE FIRE DAMPER) LOCATION PROVIDE 1/2"C-2#12 TO SFD AND TO DUCT SMOKE DETECTOR RELAYS. VERIFY EXACT LOCATIONS PRIOR TO ROUGH IN
15. PROVIDE 7.5 KVA TRANSFORMER 'TK', 480/240V, 1Ø, WALL MTD. FOR KILN.
16. PROVIDE 30A-2P SWITCH AND 30A FUSE IN NEMA 1 ENCLOSURE FOR KILN.
2 17. (2) 3"C.O. FOR FUTURE SPORTS FIELD LIGHTING ('MS', CKT. #4), SEE E3.1.

1 FACILITY SITE PLAN
3/32" = 1'-0"

SITE PLAN GENERAL NOTES

1. GENERAL CONTRACTOR SHALL ARRANGE A MEETING WITH PARKS GROUND MAINTENANCE BEFORE ANY WORK IS PERFORMED TO VERIFY EXISTING IRRIGATION SYSTEM. GENERAL CONTRACTOR TO REPAIR ANY DAMAGE CAUSED TO IRRIGATION SYSTEM AND LANDSCAPING DURING CONSTRUCTION.
2. S.C.D. FOR GRADE, UTILITY INFO FOR DETAILS.
3. S.L.D. FOR IRRIGATION, LANDSCAPE INFO AND DETAILS.
4. SEE ELEVATION 4/A411 FOR WALL MOUNTED SCOREBOARD LOCATION. S.AQ.D. FOR MORE INFO.
5. FOR PIPING PENETRATION THROUGH RATED WALLS SEE DETAIL 12/A7.50.
6. BUILDING ADDRESS NUMBERS SHALL BE PROVIDED AND MAINTAINED SO AS TO BE PLAINLY VISIBLE AND LEGIBLE . THE NUMBERS HSALL BE A MINIMUM OF 3 INCHES HIGH, 1 INCH WIDE WITH A 3/8 INCH STROKE. FO RBUILDINGS SET BACK MOR ETHAN 150 FEET FROM STREET, THEN NUMBERS SHALL BE A MINIMUM OF 5 INCHES HIGH, 2 INCHES WIDE WITH A 1/2 INCH STROKE PER FIRE CODE.
7. A LOCKABLE BOX SHALL BE PROVIDED AT ALL GATED VEHICULAR ENTRANCES , AND AT FACILITY ENTRANCES AS REQUIRED BY THE FIRE CODE OFFICE IN ACCORDANCE WITH FIRE CODE.
8. FIRE DEPARTMENT VEHICULAR ACCESS MUST BE MAINTAINED IN A SERVICEABLE MANNER PRIOR TO AND DURING THE TIME OF CONSTRUCTION PER FIRE CODE.
9. POTABLE FIRE EXTINGUISHER REQUIREMENTS SHALL BE DETERMINED BY THE FIRE DEPARTMENT FIELD INSPECTOR IN ACCORDANCE WITH FIRE CODE.
10. THE MEANS OF EGRESS TRAVEL SHALL BE ILLUMINATED AT ANY TIME THE BUILDING IS OCCUPIED WITH A LIGHT INTENSITY OF NOT LESS THAN 1 FOOT-CANDLE AT THE FLOOR LEVEL PER BUILDING CODE. S.E.D. FOR MORE INFO.
11. THE POWER SUPPLY FOR THE MEANS OF EGRESS EXIT ILLUMINATION SHALL BE SUPPLIED FROM SEPARATE SOURCES IN ACCORDANCE WITH BUILDING CODE. S.E.D. FOR MORE INFO.
12. PROVIDE ANTI-GRAFFITI FINISH AT THE FIRST 9 FEET, MEASURED FROM GRADE, AT EXTERIOR WALLS AND DOORS. LAMC 91.6306
13. SEE SHEET A2.12 FOR ADDITIONAL POOL DECK INFORMATION.
14. AT LEAST 25%OF THE TOTAL SITE HARDSCAPE SHALL CONSIST OF UNCOLORED CONCRETE.

GENERAL SITE LIGHTING NOTES

THE OUTDOOR LIGHTING SYSTEMS SHALL BE DESIGNED AND INSTALLED TO COMPLY WITH ALL OF THE FOLLOWING:

A. THE MINIMUM REQUIREMENTS IN THE CALIFORNIA ENERGY CODE FOR LIGHTING ZONES 1-4
B. BACKLIGHT, UPLIGHT AND GLARE (BUG) RATING AS DEFINED IN IESNA TM-15-11
C. ALLOWABLE BUG RATING NOT EXCEEDING THOSE SHOWN IN ON TABLE 5.106.8

PLAN FILE NO. #308
DRAWING NO. A1.10
SHEET 0 OF SHEETS

PLOTTED:8/18/2020 1:19:29 PM

ABATEMENT GENERAL NOTES

1. PRIOR TO RENOVATION/ REMODELNG ACTIVITIES , THE FOLLOWING **ASBESTOS-CONTAINING MATERIAL (ACM)** WILL NEED TO BE ABATED IF IMPACTED BY THE PLANNED PROJECT:
   - A. ASPHALTIC ROOFING MATERIALS (ROOF CORE) - BATHHOUSE (ACM)
   - B. ROOF PENETRATION MASTIC- BATHHOUSE (ACM)
   - C. GREY ROLLED ROOFING- POOL EQUIPMENT BUILDING (ACM)
   - D. GREY ROOF MASTIC- POOL EQUIPMENT BUILDING- (ACM)
   - E. GREY ROLL ROOFING- SPECTATOR SHELTER (ACM)
   - F. ROOF PATCH MASTIC- SPECTATOR SHELTER (ACM)
   - G. EXTERIOR STUCCO- BATHHOUSE (ACCM)
   - H. INTERIOR PLASTER WALLS- BATHHOUSE (ACCM)

PRIOR TO ANY RENOVATION AND /OR DEMOLITION ACTIVITIES, THE ABOVE IMPACTED (ACMs) WILL NEED TO BE ABATED. AS THE ACCM EXTERIOR STUCCO AND INTERIOR BEIGE ROUGH-FINISH PLASTER WILL BE IMPACTED BY THE PLANED BATHHOUSE RENOVATION, THE ACCMs MUST BE ABATED AS WELL. THE ABATEMENT MUST BE PERFORMED BY A CAL/OSHA LICENSED ASBESTOS ABATEMENT CONTRACTOR USING CURRENTLY ASBESTOS TRAINED WORKERS AND SUPERVISORS AND WORK PRACTICES AND ENGINEERING CONTROLS IN ACCORDANCE WITH TITLE 8 OF CALIFORNIA CODE OF REGULATIONS (ccr) 1529 AND SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT RULE 1403. ACCM WASTE MAY BE DISPOSED OF AS NON-REGULATED WASTE. ACMS AND ACCMS NOT ABATED CAN BE MANAGED IN PLACE THROUGH AN OPERATIONS AND MAINTENANCE (O & M) PLAN.
IN THE EVENT THAT SUSPECT ACMS THAT HAVE NOT BEEN PREVIOUSLY SAMPLED ARE OBSERVED DURING THE DEMOLITION/ RENOVATION ACTIVITIES, THESE MATERIALS SHOULD BE ASSUMED TO CONTAIN ASBESTOS UNTIL SUCH TIME THAT THEY CAN BE ACCESSED SAMPLED AND EVALUATED FOR ASBESTOS CONTENT. IT IS THE FURTHER RECOMMENDED THAT ASBESTOS ABATEMENT PROCEDURES BE MONITORED BY AN INDEPENDENDT CERTIFIED ASBESTOS CONSULTANT KNOWLEDGEABLE IN ASBESTOS ABATEMENT PROCEDURES.

2. BASED ON RESULTS OF **LEAD-BASED PAINT (LBP)** SURVEY, A LEAD CONCENTRATION GREATER THAN 0.7 MG/CM² WAS DETECTED IN THE FOLLOWING CONPONENTS:
   - A. CERAMIC TILE, PAINTED BLACK, AT THE NORTH AND SOUTH WALLS OF THE POOL (LANE MARKERS)
   - B. CERAMICS SINK IN THE DIRECTOR'S OFFICE OF THE BATHHOUSE
   - C. TAN CERAMIC WALL TILE IN THE MEN'S RESTROOM OF THE BATHHOUSE
   - D. CERAMIC URINALS IN THE MEN'S RESTROOM OF THE BATHHOUSE
   - E. CERAMIC TOILETS IN THE MEN'S AND WOMEN'S RESTROOMS OF THE BATHHOUSE
   - F. CERAMIC SINK IN THE UTILITY ROOM (WOMEN' SIDE) OF THE BATHHOUSE

PAINTED SURFACES AND CERAMIC COMPONENTS (TILES AND PLUMBING FIXTURES) WERE OBSERVED TO BE GENERALLY IN GOOD CONDITION
ABATEMENT/DEMOLITION WORK INVOLVING LEAD-CONTAINING MATERIALS MUST BE PERFORMED BY WORKERS THAT HAVE UNDERGONE THE NECCESSARY LEAD TRAINING AND ARE CDPH CERTIFIED LEAD WORKERS AND SUPERVISORS.
THE LEAD ABATEMENT ACTIVITIES WILL NEED TO BE MONITORED BY A CDPH CERTIFIED PROJECT MONOTOR KNOWLEDGEABLE IN LEAD STABILIZATION AND ABATEMENT PROOCEDURES.
TITLE 8 CCR 15321 (LEAD) REQUIRES WORKERS THAT PERFORM EITHER MANUAL DEMOLITION OR MANUAL SCRAPING OR SANDING OF LEAD PAINTED SURFACES TO UNDERGO MEDICAL MONITORING AND AN EXPOSURE ASSESSMENT INCLUDING AIR MONITORING OF THE BREATHING ZONE IF EXPOSED TO AIRBORNE LED DUST ABOVE THE CAL/OSHA ACTION LEVEL OF 30 MICROGRAMS PER CUBIC METER OF AIR OVER AN 8-HOUR TIME WEIGHTED AVERAGE.
IN THE EVENT THAT SUSPECT LBPs ARE OBSERVED DURING THE RENOVATIONN/DEMOLITION ACTIVITIES THAT WERE NOT PREVICUSLY SAMPLED, THESE MATERIASL SHOULD BE ASSUMED TO CONTAIN CONCENTRATIONS EXCEEDING 0.7 MG/CM² OR 600 PPM UNTIL SUCH TIME THAT THEY CAN BE SAMPLED AN DEVALUATED FOR LEAD CONTENT

SEE ASBESTOS AND LEAD-BASE PAINT SURVEY REPORT BY CONVERSE CONSULTANTS PROJECT No: 15-41-273-01 FOR MORE DETAILED INFORMATION.

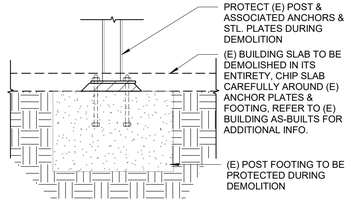
(E) WALL/ELEMENT TO REMAIN

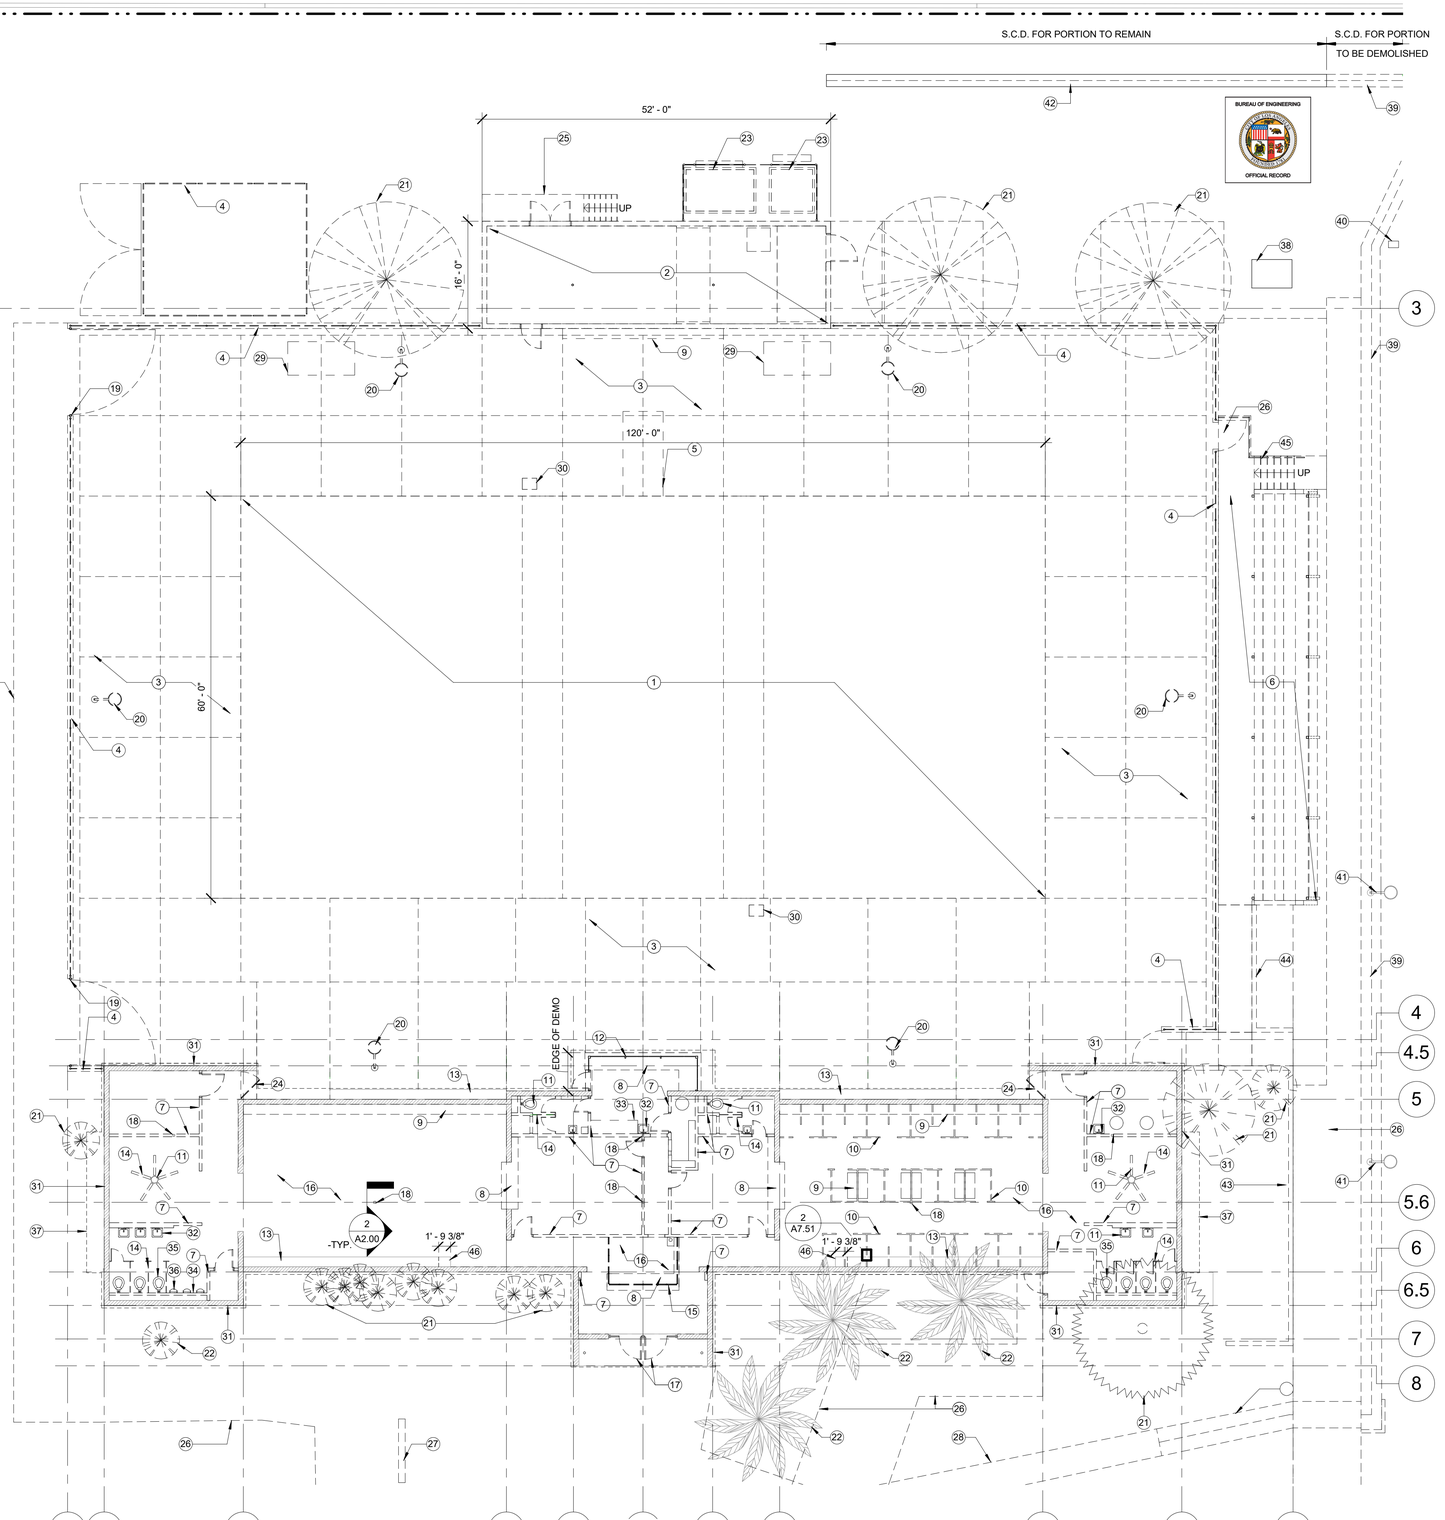
(E) MASONRY WALL TO REMAIN

(E) ELEMENT TO BE DEMOLISHED

NOTE: FOR SMALLER ELEMENTS, DEMOLITION DASHES DO NOT SHOW, REF KEYNOTES FOR CLARIFCATION.



2 TYP. (E) INTERIOR FOOTING DETAIL
3/4" = 1'-0"



1 DEMO PLAN
3/32" = 1'-0"

GENERAL NOTES

1. THE DEMOLITION SCOPE OF THE PROJECT SHALL BE AS DESCRIBED BELOW, BUT NOT LESS THAN ANY DEMOLITION REQUIRED TO ACHIEVE THE NEW CONSTRUCTION AS ILLUSTRATED IN THESE DOCUMENTS.
2. THE DEMOLITION PLAN AND ITS ASSOCIATE KEYNOTES ARE PROVIDED TO ILLUSTRATE THE SCALE AND SCOPE OF DEMOLITION. CONTRACTOR SHALL VISIT THE SITE PRIOR TO BID TO VERIFY DEMOLITION SCOPE.
3. DEMOLITION INCLUDES REMOVAL OF (E) UTILITY LINES WHERE (N) UTILITY LINES ARE TO BE PROVIDED.
4. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL EQUIPMENT BUILDING AND ALL ASSOCIATED ELEMENTS. SEE ASBESTOS AND LEAD-BASED PAINT SURVEY REPORT FOR MORE INFO.
5. DEMOLITION INCLUDES COMPLETE REMOVAL OF POOL, POOL DECK, PERIMETER CURBS AND RETAINING WALLS, FENCING, LIGHTING, AND ALL ASSOCIATED ELEMENTS. SEE ASBESTOS AND LEAD-BASED PAINT SURVEY REPORT FOR MORE INFO.
6. BATHHOUSE PARTIAL DEMOLITION INCLUDES ALL PLASTER ON MTL STUD WALLS, ALL ELECTRICAL ELEMENTS, ALL PLUMBING ELEMENTS, ALL MECHANICAL ELEMENTS, AND ENTIRE CONCRETE FLOOR. SEE ASBESTOS AND LEAD-BASED PAINT SURVEY REPORT FOR MORE INFO.
7. BATHHOUSE ROOF DECK AND SHINGLES TO BE REMOVED IN THEIR ENTIRETY. FRAMING MEMBERS TO REMAIN AND SHALL BE PROTECTED. SEE ASBESTOS AND LEAD -BASED PAINT SURVEY FOR MORE INFO.
8. BATHHOUSE MASONRY WALLS (UNO), STEEL COLUMNS AND ASSOCIATED FOOTINGS SHALL REMAIN AND BE PROTECTED.
9. LEAVE REBAR THAT TIES INTO (E) MASONRY WALL AND (E) CONCRETE FOOTING IN PLACE AND PROTECT.
10. SEE LANDSCAPE SHEET L-0.10 FOR ADDITIONAL PROPOSED TREE REMOVAL LOCATIONS
11. SEE SHEET G0.50 FOR ADDITIONAL SITE HARDSCAPE TO BE DEMOLISHED/ HARDSCAPE TO BE PROTECTED INFO. S.C.D FOR SCOPE AND DETAIL.
12. PROVIDE A CONSTRUCTION FENCE AROUND THE PROJECT SCOPE BOUNDARY AS SHOWN ON SHEET G0.50 FOR THE TOTAL EXTENT CONSTRUCTION AND AS APPROVED BY THE OAR.
13. PROVIDE SEWER CAP PER UTILITY OWNERS REQUIREMENTS, S.C.D. FOR MORE INFORMATION.
14. SEE SHEET A0.02 "AS-BUILT A-2" SHEET FOR MORE INFO.
15. SEE CIVIL SHEET CD101 FOR MORE ADDITIONAL DEMOLITION INFO.
16. NON-RESIDENTIAL ADDITIONS AND ALTERATIONS SHALL REQUIRE VERIFICATION THAT CALIFORNIA PROHIBITED UNIVERSAL WASTE MATERIAL ARE DISPOSED OF PROPERLY AND DIVERTED FROM LANDFILLS.

KEYNOTE LEGEND

1 POOL AND ASSOCIATED STRUCTURAL FOUNDATION TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.POOL CERAMIC TILES CONTAIN LEAD-ASBESTOS PAINT. SEE ASBESTOS AND LEAD-PAINT SURVEY REPORT FOR MORE INFO. SEE SEE GEOTECHNICAL REPORT FOR MORE INFO.

2 POOL EQUIPMENT BUILDING AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. GREY ROLLED ROOFING AND GREY ROOF MASTIC TO BE ABATED. SEE ASBESTOS AND LEAD-PAINT SURVEY REPORT FOR MORE INFO. SEE GEOTECHNICAL REPORT FOR MORE INFO.

3 POOL DECK AND ASSOCIATED PITS, FOOTINGS, AND FOUNDATION TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE GEOTECHNICAL REPORT FOR MORE INFO.

4 CHAINLINK GATE,FENCING, POSTS, CURB, AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL.

5 POOL DIVING BOARD AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.

6 SPECTATOR SEATING AND ASSOCIATED FOUNDATION AND SUPER STRUCTURE (ROOF AND FRAMING) TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.GREY ROLLED ROOFING AND ROOF PATCH MASTIC ARE TO BE ABATED. SEE ASBESTOS AND LEAD-PAINT SURVEY FOR MORE INFO.

7 INTERIOR PLASTER WALLS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY, TYPICAL. SEE ASBESTOS AND LED-BASED PAINT SURVEY REPORT FOR MORE INFO.REMOVE ALL ASSOCIATED ELEMENTS, I.E. DOORS, ELECTRICAL, ANCHORS, ETC.

8 CONCRETE COUNTER TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

9 CONCRETE BENCH TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

10 CHANGING PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

11 PLUMBING FIXTURES TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.

12 DEMOLISH & REMOVE GLAZING & SUPPORTING STRUCT. IN ITS ENTIRETY, DEMOLISH (E) ROOF BACK TO ADJACENT BRICK WALL & BEAM.

13 CONCRETE BENCH TO REMAIN AND BE PROTECTED.

14 TOILET/SHOWER PARTITIONS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

15 MTL. SCREEN STRUCT. TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

16 INTERIOR BUILDING SLAB TO BE DEMOLISHED & REMOVED IN ITS ENTIRETY. PRESERVE FOUNDATIONS FOR STRUCTURAL ELEMENTS TO REMAIN. REMOVE ASSOCD ITEMS I.E. PLUMBING DRAINS, PLUMBING PIPING, ETC.

17 ENTRY DOORS TO BE DEMOLISHED AND REMOVED. ASSOCIATED (E) STEEL FRAME STRUCTURE TO REMAIN, PROTECT.

18 PROTECT (E) STRUCT. COLUMN DURING DEMOLITION. SEE DETAIL 2/A2.00 FOR MORE INFO.

19 CHAIN LINK GATE, ASSOCIATED POSTS AND FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY WITH REMAINDER OF FENCE DEMOLITION.

20 LIGHT POLES AND ASSOCD FTG'S, CONDUITS & WIRES TO BE DEMOLISHED.

21 PROPOSED TREE REMOVAL PER SHEET L-0.10 PENDING FORESTRY APPROVAL S.L.D. FOR MORE INFO.

22 (E) TREE TO REMAIN, PROTECT. S.L.D. FOR MORE INFO.

23 CHEMICAL STORAGE TANKS TO BE REMOVED AND ALL ASSOCIATED ELEMENTS (INCLUDING BUT NOT LIMITED TO FOUNDATIONS, SLABS, FENCING, PIPING, AND ELECTRICAL) TO BE DEMOLISHED IN THEIR ENTIRETY.

24 DEMOLISH (E) GATE/DOOR AND ASSOCIATED FOOTING.

25 CONC. LOADING DOCK W/ STAIRS AND ASSOCD WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED & REMOVED IN THEIR ENTIRETY.

26 CONCRETE SIDEWALK TO BE DEMOLISHED AND REPLACED. S.C.D. FOR SCOPE AND DETAIL.

27 BIKE RACK TO BE REMOVED & REPLACED W/ NEW 16 CAPACITY BIKE RACK.

28 CONCRETE STORM SWELL TO BE DEMOLISHED IN ITS ENTIRETY AND BE REPLACED WITH NEW. S.C.D. AND S.L.C. FOR MORE INFO.

29 (E) METAL BLEACHERS TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

30 (E) LIFEGUARD CHAIR TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

31 ALL (E) BATHHOUSE EXTERIOR AND INTERIOR STUCCO TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY AND REPLACED WITH NEW TO MATCH (E). TO BE PTD. PT-02. SEE ASBESTOS & LEAD-PAINT SURVEY REPORT FOR MORE INFO. EXPOSED BRICK WALLS TO BE CLEANED OF ALL DIRT & STAINED RESIDUE.

32 (E) CERAMIC SINK TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE ASBESTOS AND LEAD-PAINT SURVEY REPORT FOR MORE INFO.

33 (E) COUNTER TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY.

34 (E) TAN CERAMIC WALL TILE TO BE DEMOLISHED & REMOVED IN ITS ENTIRETY. SEE ASBESTOS & LEAD-PAINT SURVEY REPORT FOR MORE INFO.

35 (E) CERAMIC TOILET TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE ASBESTOS AND LEAD-PAINT SURVEY REPORT FOR MORE INFO.

36 (E) CERAMIC URINAL TO BE DEMOLISHED AND REMOVED IN ITS ENTIRETY. SEE ASBESTOS AND LEAD-PAINT SURVEY REPORT FOR MORE INFO.

37 (E) BATHHOUSE ROOF DECK AND SHINGLES TO BE REMOVED IN THEIR ENTIRETY. FRAMING MEMBERS TO REMAIN AND SHALL BE PROTECTED. ASPHALTIC ROOFING MATERIALS (ROOF CORE) AND ROOF PENETRATION MASTIC ARE ASBESTOS-CONTAINING MATERIALS. SEE ASBESTOS AND LEAD-BASED PAINT SURVEY FOR MORE INFO.

38 LOCATION OF UNIVERSAL WASTE BIN. SEE GENERAL NOTE 16/A2.00 (THIS SHEET) FOR MORE INFO.

39 (E) CONC. V-GUTTER TO BE DEMOLISHED & REPLACED W/ (N). S.C.D. FOR MORE INFO.

40 (E) YARD BOX, ASSOCD VALVING, CONTROL WIRES & PIPING TO BE RELOCATED OUTSIDE OF (N) V-GUTTER.

41 (E) LIGHT POLE TO BE PROTECTED IN PLACE DURING CONSTRUCTION, PROVIDE A NEW CONC. FIN. BASE & METAL BASE COVER FROM IMPERIAL POLES L.A.

42 (E) CONC. V-GUTTER TO REMAIN & BE PROTECTED,S.C.D. FOR MORE INFO.

43 CONCRETE RETAINING WALL AND ASSOCIATED FOUNDATIONS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.

44 CONCRETE RAMP AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.

45 CONCRETE STAIRS AND ASSOCIATED WALLS, FOUNDATIONS, AND RAILINGS TO BE DEMOLISHED AND REMOVED IN THEIR ENTIRETY.

46 (E) CONC. BENCH TO BE SAW CUT AND DEMO 1'-9 3/8" FROM EDGE. SEE ENLARGED PLANS FOR MORE INFO.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

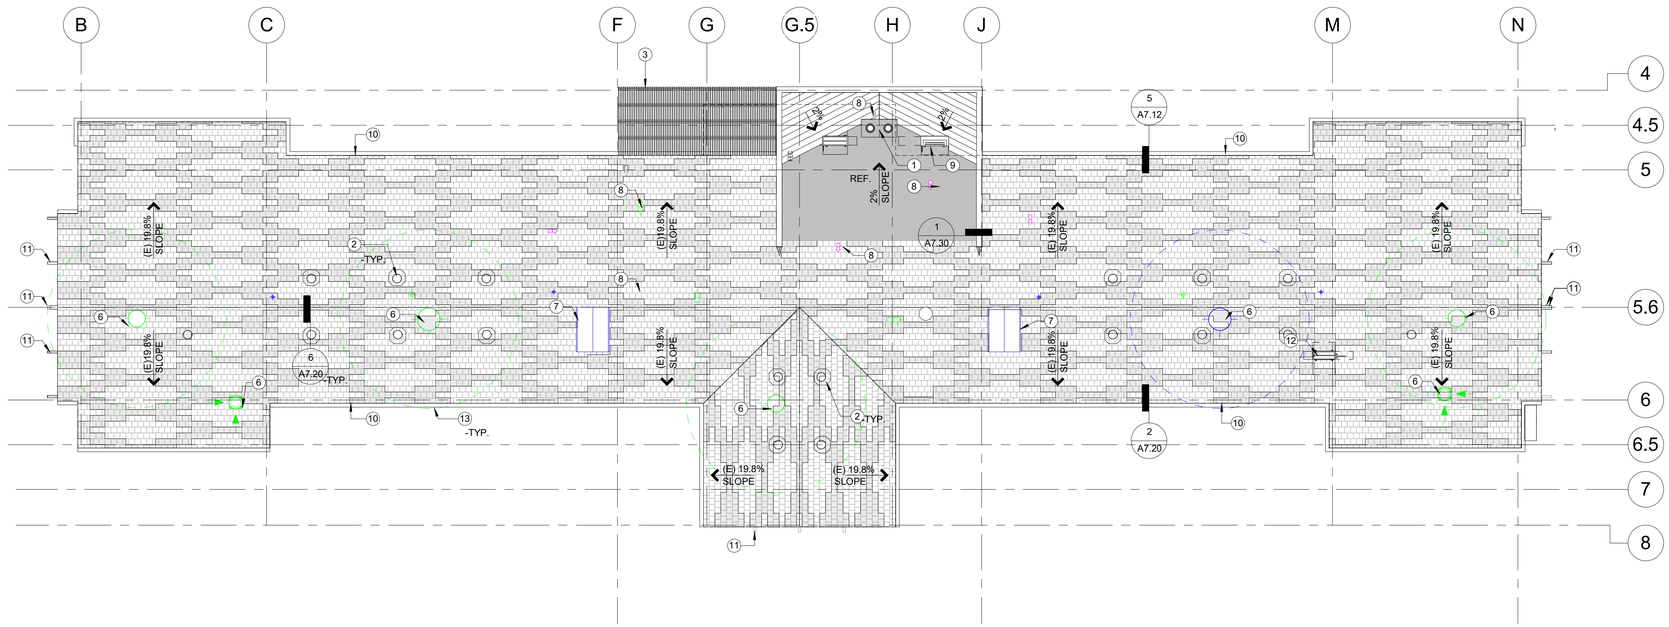
2 POOL EQUIP BLDG ROOF PLAN
1/8" = 1'-0"



1 BATHHOUSE ROOF PLAN
1/8" = 1'-0"

GENERAL NOTES

1. ROOF TYPES ARE AS FOLLOWS:
   - ROOF TYPE 1: SINGLE-PLY SYSTEM "CLASS-A" TPO UL--790
   - ROOF TYPE 2: ASPHALT SHINGLE SYSTEM "CLASS-A" ASTM E108/UL 790
2. ALL SINGLE-PLY ROOFING TO SLOPE 1/4" VERTICAL PER 1'-0" HORIZONTAL MINIMUM UNLESS NOTED OTHERWISE.
3. TOP OF INSULATION HEIGHTS, HIGH POINTS AND LOW POINT, ARE INDICATED AS THE TOP OF ROOF SURFACE ABOVE ROOF DRAIN(S).
4. REFER TO SHEET A7.20 FOR TYPICAL ROOF DETAILS.
5. ALL ROOF TOP MECHANICAL, ELECTRICAL, AND/OR PLUMBING EQUIPMENT SHOWN FOR INFORMATION ONLY. REFERENCE MECHANICAL, ELECTRICAL, AND PLUMBING DOCUMENTS AND SPECIFICATIONS FOR SPECIFIC DESIGN INFORMATION. REFERENCE ROOF DETAILS FOR ROOF PENETRATIONS DETAILS AND OTHER SYSTEMS INFORMATION.
6. PROVIDE WALKWAY PROTECTION TO MAJOR MECHANICAL, ELECTRICAL AND PLUMBING EQUIPMENT AS REQUIRED TO PROVIDE SERVICE ACCESS. WALKWAY PROTECTION IS INDICATED AS A GENERAL LAYOUT AND MAY NOT SHOW ALL FINAL LOCATIONS OF ALL EQUIPMENT.
7. FOR PIPING PENETRATION THROUGH RATED WALLS SEE DETAIL 10/A7.50.
8. S.P.D. FOR VENT THRU ROOF PIPING INFORMATION.
9. ALL NEW ROOF TO BE CLASS A.
10. UNIT SKYLIGHTS SHALL BE LABELED BY AN LA CITY APPROVED LABELING AGENCY. SUCH LABEL SHALL STATE THE APPROVED LABELING AGENCY NAME, PRODUCT DESIGNATION AND PERFORMANCE GRADE RATING (RESEARCH REPORT NOT REQUIRED) 2405.5

GRAPHIC LEGEND

6 (N) 36"x24"x16"H CONC. EQUIPMENT PAD. S.S.D. AND S.AQ.D. FOR MORE INFO. VERIFY LOCATION IN FIELD.
7 (N) 8"THK. CONC. CONTAINMENT WALL W/ EPOXY PAINT SEALER FIN., S.AQ.D.

CONCRETE CURB SCHEDULE

FLOOR PLAN TAG	CURB WIDTH	MIN. CURB HEIGHT
W4	4"	6"
W5	5"	6"
W7	7"	6"
W8	8"	6"

CURB TYPE GENERAL NOTES

1. CURBS ARE TAGGED ON SLAB & CURB FLOOR PLANS. REFER TO FLOOR PLANS FOR CURB TYPE IDENTIFICATION.
2. CURB TYPE TAGS ARE USED TO IDENTIFY CONTIGUOUS PARTITION SEGMENTS. IF A CONTIGUOUS CURB SEGMENT IS TAGGED WITH MORE THAN ONE TAG, G.C. TO IDENTIFY TRANSITION POINT AND SUBMIT FOR APPROVAL.
3. PARTITION TAGS USE A TWO-PART, ALPHA-NUMERIC DESIGNATION: THE FIRST CHARACTER IS A LETTER INDICATING THE CURB TYPE. THE SECOND CHARACTER IS A NUMBER INIDCATING THE WIDTH OF THE CURB.
4. REFERENCE STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION FOR CURB REINFORCEMENT AND SLAB CONNECTION.
5. COORDINATE CURB WITH PLUMBING FIXTURE CARRIERS AND SUPPORTS PRIOR TO CONSTRUCTION

PROJECT: GRANADA HILLS POOL AND BATHHOUSE REPLACEMENT PROJECT
ADDRESS: 16730 CHATSWORTH STREET GRANADA HILLS, CA 91344

BID SET
PROJECT ISSUE DATE: 06/22/21

WORK ORDER NO. #E170517
PLAN FILE NO. #308
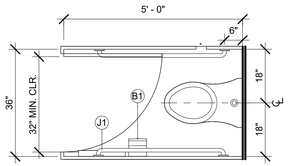
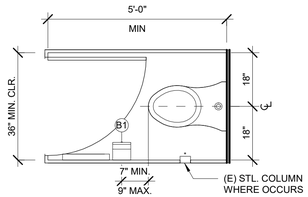
DRAWING NO. A3.11
SHEET O F SHEETS

PLOTTED:8/18/2020 1:20:30 PM



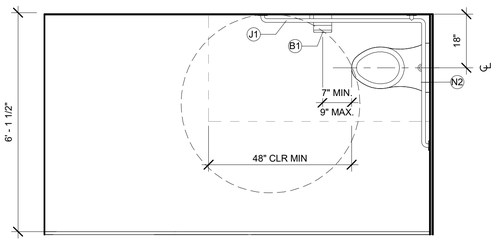
*NOTE: COORDINATE STALL LOCATIONS W/ (E) STEEL COLUMNS. VIF.

AMBULATORY STALL
PLAN DESIGNATION WC3
3 1/2" = 1'-0"



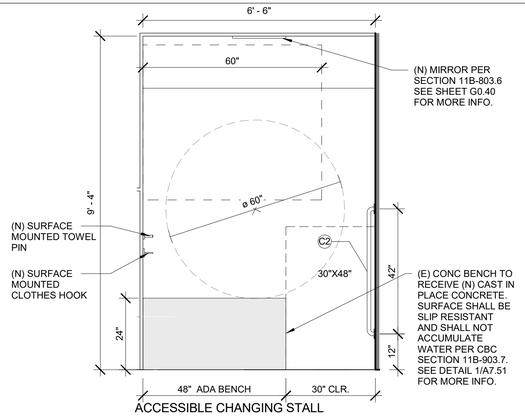
*NOTE: COORDINATE STALL LOCATIONS W/ (E) STEEL COLUMNS. VIF.

TYPICAL STALL
PLAN DESIGNATION WC2
2 1/2" = 1'-0"

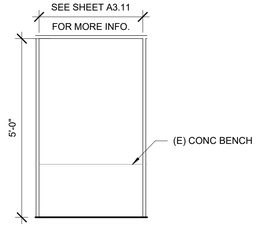


NOTE: SEE DETAIL 1/G0.40 "WC-1" FOR MORE INFO.

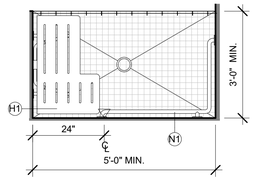
ACCESSIBLE STALL
PLAN DESIGNATION WC1
1 1/2" = 1'-0"



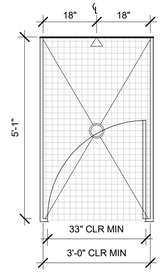
ACCESSIBLE CHANGING STALL
PLAN DESIGNATION CH1
8 1/2" = 1'-0"



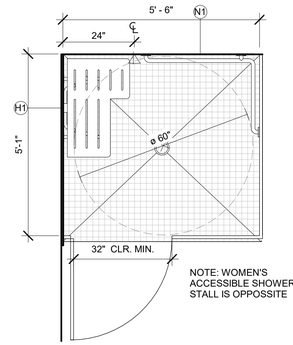
STANDARD CHANGING STALL
PLAN DESIGNATION CH2
7 1/2" = 1'-0"



ACCESSIBLE SHOWER PLAN
DESIGNATION SH3
6 1/2" = 1'-0"

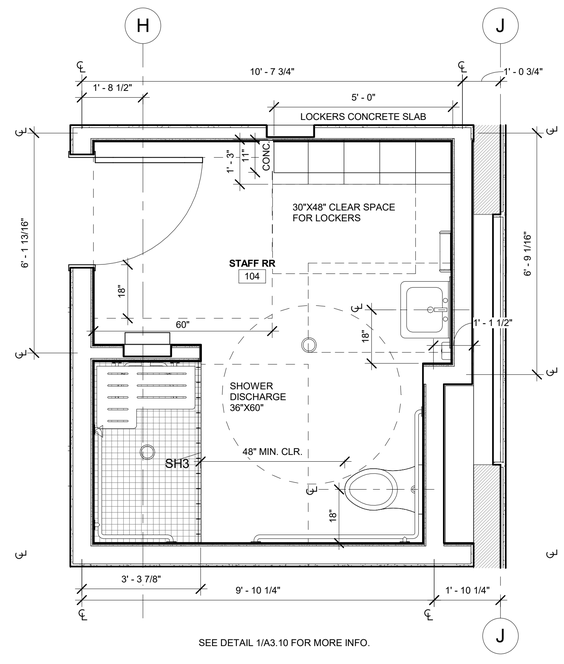


STANDARD SHOWER STALL PLAN
DESIGNATION SH2
5 1/2" = 1'-0"



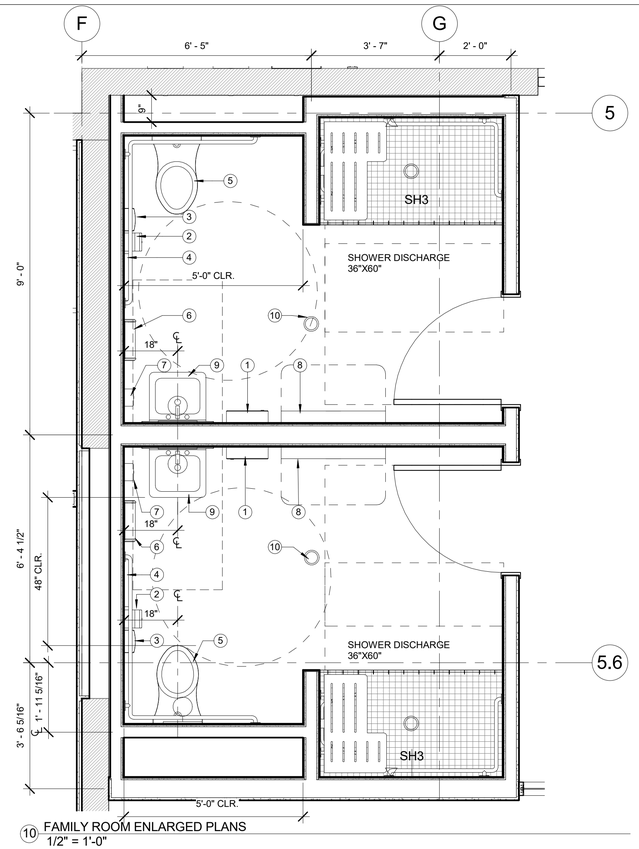
NOTE: WOMEN'S ACCESSIBLE SHOWER STALL IS OPPOSSITE

ACCESSIBLE SHOWER STALL
PLAN DESIGNATION SH1
4 1/2" = 1'-0"



SEE DETAIL 1/A3.10 FOR MORE INFO.

STAFF RESTROOM ENLARGED PLAN
11 1/2" = 1'-0"



FAMILY ROOM ENLARGED PLANS
10 1/2" = 1'-0"

GENERAL NOTES

1. ALL DIMENSIONS TO BE VERIFIED IN FIELD.
2. SEE SHEET G0.40 FOR ACCESSORY SCHEDULE AND MOUNTING DIAGRAMS.
3. SEE SHEETS G0.40 AND G0.41 FOR ACCCESSIBILITY NOTES AND DIAGRAMS.
4. SEE ACCESSORY KEYNOTES ON INTERIOR ELEVATIONS SHEETS FOR MORE INFO.
5. SEE ENLLARGED FLOOR PLANS FOR TYPICAL AND ACCESSIBLE STALL DESIGNATIONS.
6. SEE ENLARGED FLOOR PLANS FOR STANDARD AND ACCESSIBLE SHOWER STALL PLAN DESIGNATIONS.
7. SEE ENLARGED FLOOR PLANS FOR TYPICAL AND ACCESSIBLE CHANGING STALL PLAN DESIGNATIONS.
8. ALL ACESSORIES TO BE "BOBRICK" (FINISHES TO BE SATIN-FINISH STAINLESS STEEL).
9. TOILET AND SHOWER PARTITION ASSEMBLY PILASTER REQUIRES STAINLESS STEEL SHOE.

TOILET ACCESSORY SCHEDULE

MARK	ACCESSORY TYPE	BASIS OF DESIGN MFR	MODEL
B1	SURFACE MOUNTED MULTI-ROLL TOILET TISSUE DISPENSER	BOBRICK	B-2888
C2	GRAB BAR	BOBRICK	B6806 x 42
D1	RECESSED CONVERTIBLE COMBINATION TOWEL AND WASTE UNIT	BOBRICK	B-3944
G1	SURFACE MOUNTED SANITARY NAPKIN DISPOSAL	BOBRICK	B-270
H1	REVERSIBLE SOLID PHENOLIC FOLDING SHOWER SEAT	BOBRICK	B-5193
J2	RECESSED SOAP DISPENSER	BOBRICK	B-306
N1	GRAB BAR	BOBRICK	B-6868
N2	GRAB BAR	BOBRICK	B-5897
J1	TOILET SEAT COVER DISPENSER	BOBRICK	B-4221

KEYNOTE LEGEND

1 (N) SURFACE MOUNTED S.S. COMBINATION PAPER TOWEL DISPENSER/ WASTE RECEPTACLE.
2 (N) SURFACE MOUNTED S.S. TOILET PAPER DISPENSER. ONE PER WATER CLOSET SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.
3 (N) SANITARY NAPKIN DISPOSAL. SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.
4 (N) SURFACE MOUNTED S.S. SEAT COVER DISPENSER. ONE PER WATER CLOSET. SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.
5 (N) WATER CLOSET. S.P.D. AND SHEET G0.40 FOR MORE INFO.
6 (N) SURFACE MOUNTED ELECTRICAL HAND DRYER.S.E.D. FOR MORE INFO.
7 (N) SOAP DISPENSER PER ACCESSORY SCHEDULE.SEE SHEET G0.40 FOR MORE INFO.
8 (N) WALL MOUNTED HORIZONTAL CHANGING BABY STATION.
9 (N) LAVATORY W/ "TRUBO LAVSHIELD" PROTECTIVE ENCLOSURE. HOT WATER AND DRAIN PIPES UNDER ACCESSIBLE LAVATORIES SHALL BE INSULATED OR OTHERWISE COVERED, THERE SHALL BE NO SHARP OR ABRASIVE SURFACES UBDER LAVATORIES. S.P.D. AND SHEET G0.40 FOR MORE INFO.
10 (N) FLOOR DRAIN, TYP.SEE SHEET A2.13 FOR SLOPE DIRECTION. S.P.D.

KEYNOTE LEGEND

1 (E) BRICK WALL TO REMAIN EXPOSED. CLEAN TO REMOVE EFFLORESCENCE AND SEAL PER SPECIFICATIONS.
2 (E) WOOD BEAM TO REMAIN, PROTECT. PAINT PER FINISH SCHEDULE TYP, UNO.
3 (N) CONC. CURB BASE, SEE SLAB CONTROL PLAN SHEET A2.16 FOR MORE INFO.
4 (N) FLOOR BRACED SOLID PHENOLIC CHANGING STALL PARTITION.
5 (N) FLOOR BRACED SOLID PHENOLIC SHOWER PARTITION
6 (E) CONCRETE BENCH TO REMAIN, PROTECT.
7 (N) DOOR, SEE DOOR SCHEDULE SHEET A8.10 FOR MORE INFO.
8 (N) 34" HIGH S.S. COUNTER TOP, SEE DETAIL 5/A7.50 FOR MORE INFO.
9 (N) 2-TIER SOLID PHENOLIC LOCKERS ON 6" HEIGHT EQUIPMENT PAD. AT LEAST 5% OF LOCKERS TO FOLLOW REACH RANGES 15"TO 48" REACH AND 30"X48" CLEAR SPACE.
10 (N) 6" CONC. EQUIPMENT PAD. S.S.D. AND SEE SLAB CONTROL PLAN SHEET A2.16 FOR MORE INFO.
11 (N) PLUMBING FIXTURE. S.P.D.
12 (N) GLAZED ALUM. FRAMED STOREFONT SYSTEM, SEE SHEET A8.12 FOR MORE INFO.
13 (N) WALL MOUNTED GARMENT CHECK BAG RACK.
14 (N) MECHANICAL CHASE. TO BE PTD. PT-002.
15 (N) LIGHT FIXTURE. S.E.D.
16 MECH EQUIPMENT, S.M.D.
17 (N) EXIT SIGN. S.E.D. FOR MORE INFO.
18 (N) SURFACE MOUNTED ELECTRICAL HAND DRYER.S.E.D. FOR MORE INFO.
19 (N) SOAP DISPENSER PER ACCESSORY SCHEDULE.SEE SHEET G0.40 FOR MORE INFO.
20 (N) MIRROR PER ACCESSORY SCHEDULE. SEE SHEET G0.40 FOR MORE INFO.
21 (N) SURFACE MOUNTED S.S. COMBINATION PAPER TOWEL DISPENSER/ WASTE RECEPTACLE.
22 (N) SOLID PHENOLIC DRAWER W/ S.S. MOUNTING & HARDWARE -TYP.
23 (N) CUSTOM S.S. CORBEL W/ 1/4" THICK PLATES @ 24" MAX. SPACING. -TYP.
24 (N) GYP. BRD. SOFFIT. SEE REFELCETD CEILING PLAN FOR MORE INFO.
25 (N) SHOWER LEVEL TROL LEVER DIVERTER WITH VOLUME CONTROL. SEE ADA SHOWER NOTES ON SHEET G0.40 FOR MORE INFO.
26 (N) SHOWER CONCEALED VOLUME CONTROL VALVE. SEE ADA SHOWER NOTES ON SHEET G0.40 FOR MORE INFO.
27 (N) FREE-FLOW SHOWER HEAD @ 76" A.F.F. AND 48" A.F.F. RESPECTIVELY. SEE ADA SHOWER NOTES ON SHEET G0.40 FOR MORE INFO.
28 (N) REVERSIBLE SOLID PHENOLIC ADA FOING SHOWER SEAT.
29 (N) 1 1/2" DIAM. H.C. GRAB BAR W/ CONCEALED MOUNTING. SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.
30 (N) SHOWER HEAD.
31 (N) SHOWER CONTROL AREA/ DISH SOAP.
32 (E) STEEL COLUMN TO REMAIN, PROTECT. PAINT PER SCHEDULE
33 (N) CAST-IN PLACE CONCRETE BENCH.S.S.D. FOR REINF.
34 (N) TUBE STEEL COLUMN. S.S.D. PAINT PER SCHEDULE.
35 (N) HORIZONTAL WALL MOUNTED BABY CHANGING STATION.SEE SHEET G0.30 FOR MORE INFO.
36 (N) LAVATORY W/ "TRUBO LAVSHIELD" PROTECTIVE ENCLOSURE. HOT WATER AND DRAIN PIPES UNDER ACCESSIBLE LAVATORIES SHALL BE INSULATED OR OTHERWISE COVERED, THERE SHALL BE NO SHARP OR ABRASIVE SURFACES UBDER LAVATORIES. S.P.D. AND SHEET G0.40 FOR MORE INFO.
37 (N) HEAVY DUTY VINYL SHOWER CURTAIN. SEE SHEET G0.40 FOR CURTAIN,HOOKS AND CURTAIN ROD INFO.
38 (N) WALL MOUNTED SANITARY NAPKIN DISPOSAL.
39 (N) WATER CLOSET. S.P.D. AND SHEET G0.40 FOR MORE INFO.
40 (N) SURFACE MOUNTED S.S. SEAT COVER DISPENSER. ONE PER WATER CLOSET. SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.
41 (N) SURFACE MOUNTED S.S. TOILET PAPER DISPENSER. ONE PER WATER CLOSET SEE ACCESSORY MOUNTING AND SCHEDULE ON SHEET SHEET G0.40 FOR MORE INFO.

KEYNOTE LEGEND (CONTINUED)

GENERAL NOTES

1. ALL DIMENSIONS TO BE VERIFIED IN FIELD.
2. SEE SHEET A3.12 FOR TOILET STALLS AND ACCESSORIES INFORMATION.
3. SEE SHEET G0.40 FOR ACCESSORY SCHEDULE AND MOUNTING DIAGRAMS.
4. SEE SHEETS G0.40 AND G0.41 FOR ACCESSIBILITY NOTES AND DIAGRAMS.
5. SEE SHEET A7.00 FOR WALL TYPE INFO.
6. S.S.D. FOR ADDITIONAL NEW WALL INFO.
7. ALL NEW CONCRETE SLABS TO BE MEDIUM BROOM FINISH.
8. SEE SHEET A2.13 FOR SLAB , CURB CONTROL PLAN, FLOOR DRAIN AND SLOPE DIRECTION.
9. SEE SHEET A2.13 FOR DEPRESS FLOOR AREAS FOR TILE INSTALLATION.
10. SEE SHEET A8.50 FOR TILE INFORMATION.
11. SEE SHEET A8.50 FOR FINISH LEGEND INFORMATION.
12. ALL TOILET PARTITIONS TO HAVE OVERHEAD BRACING.
13. TOWEL PIN TO BE SURFACE MOUNTED (1) PER SHOWER STALL DOOR.
14. ALL CHANGING STALLS TO RECEIVE (1) SURFACE MOUNTED TOWEL AND (1) SURFACE MOUNTED CLOTHES HOOK PER CHANGING STALL.

PARTITION TYPE GENERAL NOTES

1. PARTITIONS ARE TAGGED ON FLOOR PLANS. REFER TO FLOOR PLANS FOR PARTITION TYPE IDENTIFICATION.
2. PARTITION TYPE TAGS ARE USED TO IDENTIFY CONTIGUOUS PARTITION SEGMENTS. IF A CONTIGUOUS PARTITION SEGMENT IS NOT TAGGED, PARTITION TYPE "A3" SHALL BE ASSUMED.
3. THE PARTITION TAG TYPE INDICATES WHETHER SOUND ATTENUATION IS REQUIRED.

   X# WALL TAG (NO SOUND ATTENUATION)

   X# WALL TAG (**WITH** SOUND ATTENUATION)

4. PARTITION TAGS USE A TWO-PART, ALPHA-NUMERIC DESIGNATION: THE FIRST CHARACTER IS A LETTER INDICATING THE PARTITION TYPE. THE SECOND CHARACTER IS A NUMBER INIDCATING THE WIDTH OF THE STUD OR CMU BLOCK.
5. SEALANT:
   1. USE OF SEALANT FOR FIRE RESISTANCE RATED PARTITIONS SHALL COMPLY WITH REQUIREMENTS OF THE FIRE STOPPING SYSTEM MANUFACTURER AND SHALL BE UL LISTED OR APPROVED IN THE PARTITION UL LISTING.
   2. NON-RATED PARTITIONS SHALL USE ACOUSTICAL SEALANT.
6. INSULATION AS REQUIRED BY UL LISTING OR PARTITION TAG:
   1. USE OF INSULATION FOR FIRE RESISTANCE RATED PARTITIONS SHALL COMPLY WITH THE PARTITION UL LISTING. INSULATION TYPE SHALL BE MINERAL WOOL.
   2. INSULATION TYPE FOR NON-RATED PARTITIONS SHALL BE SOUND ATTENUATION BLANKETS.
   3. PROVIDE FULL THICKNESS INSULATION INSIDE ALL STUD BOX BEAMS AND HEADERS WITHIN PARTITIONS REQUIRING SOUND ATTENUATION.
7. REFER TO METAL STUD MANUFACTURER'S DATA FOR MINIMUM STUD THICKNESS, MAXIMUM SPACING AND ALLOWABLE LIMITING HEIGHTS DEFLECTION CRITERIA FOR GYPSUM BOARD ASSEMBLIES. CONFIRM SEISMIC REQUIREMENTS WITH MANUFACTURER.
8. IF METAL STUD MANUFACTURER DOES NOT PROVIDE LOAD TABLES FOR APPLICATIONS SHOWN IN THESE DOCUMENTS, THE APPLICATION SHALL BE DESIGNED BY DELEGATED ENGINEERS AND SUBMITTED FOR REVIEW.
9. CONSULT WITH OWNER ON REQUIREMENTS FOR LABELING FIRE AND SMOKE RESISTANT RATED PARTITIONS.
10. REFERENCE STRUCTURAL DRAWINGS FOR ADDITIONAL INFORMATION FOR CMU PARTITIONS.
11. GRAPHIC DESIGNATION FOR FIRE RESISTANCE RATED PARTITIONS

    1 HR FIRE BARRIER/SHAFT WALL
    1 HR FIRE BARRIER
    2 HR FIRE BARRIER/SHAFT WALL
    2 HR FIRE BARRIER
    3 HR FIRE BARRIER

12. CEMENT, FIBER-CEMENT OR GLASS MAT GYPSUM BACKERS IN COMPLIANCE WITH ASTM C1178, C1288 OR C1325 SHALL BE USED AS A BASE FOR WALL TILE IN TUB AND SHOWER AREAS AND WALL AND CEILING PANELS IN SHOWER AREAS, WATER-RESISTANCE GYPSUM BACKING BOARD SHALL BE USED AS A BASE FOR TILE IN WATER CLOSET COMPARTMENT WALLS WHEN INSTALLED IN ACCORDANCE WITH GA-216 OR ASTM C840. REGULAR GYPSUM WALLBOARD IS PERMITTED UNDER TILE OR WALL PANELSIN OTHER WALL AND CEILING AREAS WHEN INSTALLED IN ACCORDANCE WITH GA-216 OR ASTM C840. WATER RESISTANCE GYPSUM BOARD SHALL NOT BE USED IN THE FOLLOWING LOCATIONS: SECTION 2506.1:
    A. OVER A VAPOR RETARDER
    B. IN AREAS SUBJECT TO CONTINUOUS HIGH HUMIDITY, SUCH AS SAUNAS, STEAM ROOMS OR GANG SHOWER ROOMS.
    C. ON CEILINGS WHERE FRAME SPACING IS 12" O.C. FOR 1/2" THICK AND MORE THAN 16" O.C. FOR 5/8" THICK.

THE CITY OF LOS ANGELES OR IT'S OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

1. G.C. SHALL PROVIDE SHOP DRAWINGS FOR REVIEW AND APPROVAL PRIOR TO FABRICATION AND INSTALLATION.
2. ALL METAL WORK SHALL COMPLY WITH THE SSPWC "GREENBOOK" & ALL PAINTING AND WELDING SHALL FOLLOW REQUIREMENTS OF BCA FOR SHOP AND FIELD INSPECTION.
3. ALL CONNECTIONS SHALL BE FULLY WELDED & ALL WELDS SHALL BE A MIN. OF 1/8" THICK W/ COMPLETE PENETRATION TENSILE STRENGTH IN CONFORMANCE WITH SSPWC SECTION 304-1.9
4. GRIND ALL WELDS SMOOTH & REMOVE ALL LOOSE MILL, SCALE, RUST, OIL, & GREASE PRIOR TO PAINTING.
5. ALL METAL COMPONENTS SHALL BE SHOP PRIMED WITH ONE 2 MIL. COAT ALKYD CORROSION INHIBITING PRIMER AND TWO 1.5 MIL. COATS OF SEMI-GLOSS ACRYLIC LATEX ENAMEL; COLOR TO BE CHOSEN BY ARCHITECT.
6. ANY PAINTED SURFACE DAMAGED DURING DELIVERY OR INSTALLATION SHALL BE SANDED SMOOTH, PRIMED & REPAINTED WITH TWO COATS OF THE SPECIFIED ACRYLIC LATEX ENAMEL.
7. FOR ADDITIONAL DETAILS SEE STRUCTURAL DRAWINGS.

NOTE:

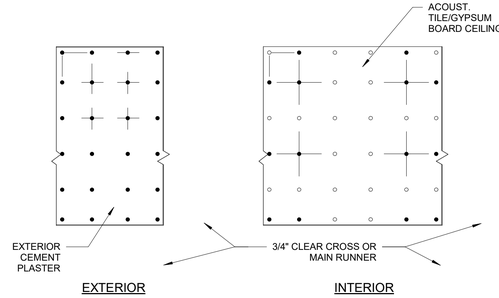
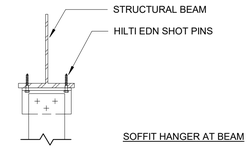
1. TEST 1 OUT OF 2 DRILL-IN EXP. ANCHOR FOR 440 OUNDS IN TENSON



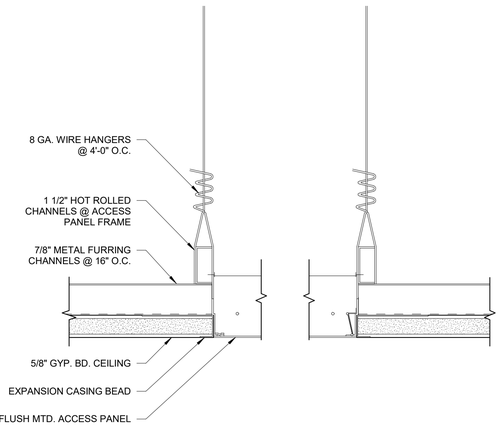
REFLECTED CEILING PLANS

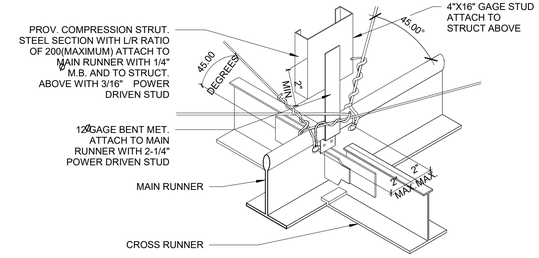
NOTES:

1. TIE TWO ADJACENT WALLS TO CEILING MAIN AND CROSS RUNNER.
2. INSTALL CEILING GRID USING NO. 12 GA. SPLAY WIRE HANGERS AT 45 DEG., 90 DEG. TO EACH OTHER (4 WIRES) BEGINNING 4'-0" FROM STARTING POINT OF GRID AND TILE LAYOUT AND IN ONE DIECTIONS AT 12 FEET O.C. & 8'-0" O.C. OTHER DIRECTION THEREAFTER.
3. CEILING THAT EXCEEDS 25 FEET ON BOTH DIRECTIONS MUST HAVE A MINIMUM WALL ANGLE SIZE OF AT LEAST A 2" HORIZONTAL LEG SHALL BE USED AT PERIMETER WALLS AND INTERIOR FULL HEIGHT PARTITIONS. THE FIRST CEILING TILE SHALL MAINTAIN 3/4" CLEAR FROM THE FINISH WALL SURFACE. AN EQUIVALENT ALTERNATIVE DETAIL THAT WILL PROVIDE SUFFICIENT MOVEMENT DUE TO THE ANTICIPATED LATERAL BUILDING DISPLACEMENT MAY BE USED IN LIEU OF THE LONG LEG ANGLE SUBJECT TO THE APPROVAL OF THE SUPPERINTENDENT OF BUILDING.
4. CEILING SUSPENSION SYSTEMS SHALL BE CONNECTED AND BRACED DIRECTLY TO THE STRUCTURE AT THE MEANS OF EGRESS SERVING AN OCCUPANT LOAD OF 30 OR MORE AND AT LOBBIES ACCESSORY TO GROUP OCCUPANCIES. SPACING OF VERTICAL HANGERS SHALL NOT EXCEED 2 FEET ON CENTER ALONG THE ENTIRE LENGTH OF THE MEANS OF EGRESS OR LOBBY. THESE PROVISIONS SHALL ONLY BE REQUIRED WHEN THE DISTANCE BETWEEN THE STRUCTURAL DECK AND THE SUSPENDED CEILING EXCEEDS 4 FEET.



SOFFIT HANGER AT BEAM





NOTES:

1. #12 GAGE SPLAY WIRE BRACING IN PLANE OF EACH RUNNER VERTICAL ANGLE -45 AT EVERY 44 SQ.FT. OF SUSPENDED ACOUSTICAL CEILING. PERIMETER END BRACING STARTS 4'-0" FROM WALL AND 12'-0" ON CENTER TO ROOMS.
2. PROVIDE UNISTRUT HORIZONTAL MEMBERS TO SUPPORT SPLAY WIRES WHENEVER THERE IS A CONFLICT WITH DUCT LOCATION AND/OR FLEXIBLE PIPING.
3. AT PLASTER SOFFIT @ ROOF PROVIDE THE FLOOWING:
   a) COMPRESSION STRUTS @ 4'-0" X 4'-0"
   b) P1001 UNISTRUT CEILING MAIN RUNNERS @ 4'-0" ON CENTER
   c) 12 GAGE WIRE BRACINGS (4'-0" X 4'-0" MODULE)

NOTES

1. **ALL SECURITY OPENINGS SHALL COMPLY WITH DIVISION 67 OF THE LOS ANGELES CURRENT BUILDING CODE INCLUDING THE FOLLOWING**
   - A. ALL PIN TYPE HINGES WHICH ARE ACCESSIBLE FROM OUTSIDE THE SECURED AREA WHEN THE DOOR IS CLOSED SHALL HAVE NON-REMOVABLE HINGE PINS.
   - B. DEADBOLTS SHALL CONTAIN HARDENED INSERTS.
   - C. STRAIGHT DEADBOLTS SHALL HAVE A MINUMUM THROW OF 1" AND AN EMBEDMENT OF 1/4".
   - D. A HOOK SHAPED OR AN EXPANDING LUG DEADBOLT SHALL HAVE A MINUMUM THROW OF 1/4".
   - E. CYLINDER GUARDS SHALL BE INSTALLED IN ALL CYLINDER LOCKS WHENEVER THE CYLINDER PROJECTS BEYOND THE FACE OF THE DOOR OR IS OTHERWISE ACCESSIBLE TO GRIPPING TOOLS.
   - F. ALL GLASS DOORS SHALL HAVE FULLY TEMPERED GLASS.
   - G. PROVIDE DEADLOCKING LATCH KEY OPERATED LOCKS ON EXTERIOR.
   - H. ALL GLAZING WITHIN 40" OF DOOR LOCK SHALL BE TEMPERED GLASS.
   - J. DOOR STOPS OF IN-SWINGING EXTERIOR DOORS SHALL BE ONE PIECE CONSTRUCTION.

BUREAU OF ENGINEERING OFFICIAL RECORD

DOOR SCHEDULE GENERAL NOTES

1. EXIT DOORS SHALL BE CAPABLE OF OPENING WITHOUT THE USE OF A KEY OR ANY SPECIAL KNOWLEDGE OR EFFORT PER BUILDING CODE 1010.1.9
   NOTE: THIS REQUIREMENT INCLUDES LATCHING HARDWARE ON ALL GATES IN THE EXIT DISCHARGE TO THE PUBLIC WAY.
2. WIDTH AND HEIGHT OF REQUIRED EXIT DOORWAYS TO COMPLY WITH TITLE 24, 1004.6
3. MAX/ EFFORT TO OPERATE EXTERIOR AND INTERIOR DOORS SHALL NOT EXCEED 5 LBS. WITH SUCH PULL OR PUSH EFFORT BEING APPLIED AT RIGHT ANGLES TO HINGED DOORS AND AT THE CENTER PLANE OF SLIDING DOORS. PER CBC SECTION 11B-404.2.9
4. SEE DETAIL 4/G0.40 FOR DOOR CLEAR FLOOR SPACE DIAGRAMS.
5. DOORS, DOORWAYS, AND GATES PROVIDING USER PASSAGE SHALL BE PROVIDED IN ACCORDANCE WITH SECTION 11B-206.5 DOORS, DOORWAYS, AND GATES.
6. DOORS, DOORWAYS AND GATES THAT ARE PART OF AN ACCESSIBLE ROUTE SHALL COMPLY WITH SECTION 11B-404 DOOR, DOORWAYS, AND GATES.
7. DOOR OPENINGS SHALL PROVIDE A CLEAR WIDTH OF 32" MIN. CLEAR OPENINGS OF DOORWAYS AND SWINGING DOORS SHALL BE MEASURED BETWEEN THE FACE OF THE DOOR AND THE STOP, WITH THE DOOR OPEN 90 DEGREES. PROJECTIONS INTO THE CLEAR OPENING WIDTH BETWEEN 34" AND 80" ABOVE THE FINISH FLOOR OR GROUND SHALL NOT EXCEED 4" PER SECTION 11B-404.2.3
8. SWINGING DOORS AND GATES SHALL HAVE MANEUVERING CLEARANCES COMPLYING WITH TABLE 11B-404.2.4.1
9. MANEUVERING CLEARANCES FOR FORWARD APPROACH SHALL BE PROVIDED WHEN ANY OBSTRUCTION WITHIN 18" OF THE LATCH SIDE INTERIOR DOORWAY, OR WITHIN 24" OF THE LATCH SIDE OF AN EXTERIOR DOORWAY, PROJECTS MORE THAN 8" BEYOND THE FACE OF THE DOOR, MEASURED PERPENDICULAR TO THE FACE OF THE DOOR OR GATE PER SECTION 11B-4.4.2.4.3
10. THRESHOLDS, IF PROVIDED AT DOORWAYS , SHALL BE 1/2" HIGH MAX. RAISED THRESHOLDS AND CHANGES IN LEVEL AT DOORWAYS SHALL COMPLY WITH SECTION 11B-302 FLOOR OR GROUND SURFACES AND SECTION 11B-303 CHANGES IN LEVEL PER SECTION 11B-404.2.5.
11. HANDLES, PULLS, LATCHES, LOCKS AND OTHER OPERABLE PARTS ON DOORS AND GATES SHALL COMPLY WITH SECTION 11B-309.4 OPERATION. OPERABLE PARTS OF SUCH HARDWARE SHALL BE 34" MIN. AND 44" MAX. ABOVE THE FINISH FLOOR OR GROUND. PER SECTION 11B-404.2.7
    EXCEPTION: ACCESS GATES IN BARRIER WALLS AND FENCES PROTECTING POOLS, SPAS, AND HOT TUBS SHALL BE PERMITTED TO HAVE OPERABLE PARTS OF THE RELEASE OF LATCH ON SELF-LATCHING DEVICES AT 54 INCHES MAXIMUM ABOVE THE FINISH FLOOR OR GROUND PROVIDED THE SELF LATCHING DEVICES ARE NOT ALSO SELF-LATCHING DEVICES ARE NOT ALSO SELF-LOCKING DEVICES AND OPERATED BY MEANS OF A KEY, ELECTRONIC OPENER, OR INTEGRAL COMBINATION LOCK.
12. THE FORCE FOR PUSHING OR PULLING OPEN A DOOR OR GATE OTHER THAN FIRE DOORS SHAL BE 8 POUNDS MAX. FOR INTERIOR AND EXTERIOR HINGED DOORS AND GATES PER SECTION 11B-404.2.9
13. SWINGING DOOR AND GATE SURFACES WITHIN 10" OF THE FINISH FLOOR OR GROUND MEASURED VERTICALLY SHALL HAVE A SMOOTH SURFACE ON THE PUSH SIDE EXTENDING THE FULL WIDTH OF THE DOOR OR GATE. PARTS CREATING HORIZONTAL OR VERTICAL JOINTS SHALL IN THESE SURFACES SHALL BE WITHIN 1/16" OF THE SAME PLANE AS THE OTHER AND BE FREE OF SHARP OR ABRASIVE EDGES. CAVITIES CREATED BY ADDED KICKPLATES SHALL BE CAPPED PER SECTION 11B-404.2.10\
14. LATCHING AND UNLOCKING DOORS THAT ARE HAND ACTIVATED AND WHICH ARE IN A PATH OF TRAVEL, SHALL BE OPERABLE WITH A SINGLE EFFORT BY THE ABILITY TO GRASP THE OPENING HARDWARE PER BUILDING CODE.
15 HAND ACTIVATED DOOR OPENING HARDWARE SHALL BE CENTERED BETWEEN 42" AND 44" ABOVE FLOOR PER BUILDING CODE.

DOOR SIGNAGE GENERAL NOTES

SIGNS RELATED TO TOILETS AND BATHING FACILITIES (CONTINUED FROM SHEET G0.41):

1. ENTRANCES LEADING TO TOILET ROOMS AND BATHING ROOMS COMPLYING WITH 11B-603 TOILET AND BATHING ROOMS SHALL BE IDENTIFIED BY A GEOMETRIC SYMBOL COMPLYING WITH 11B-703.7.2.6
2. PICTOGRAMS SHALL COMPLY WITH THE FOLLOWING::
   - A. PICTOGRAMS SHALL HAVE A FIELD HEIGHT OF 6" MIN. CHARACTERS AND BRAILLE SHALL BE LOCATED IN THE PICTOGRAM FIELD. 11B-703.6.1
   - B. PICTOGRAMS AND THEIR FIELD SHALL HAVE A NON-GLARE FINISH. PICTOGRAMS SHALL CONTRAST WITH THEIR FIELD WITH EITHER A LIGHT PICTOGRAM ON A DARK FIELD OR A DARK PICTOGRAM ON A LIGHT FIELD 11B-703.6.2
   - C. PICTOGRAMS SHALL HAVE TEXT DESCRIPTORS LOCATED DIRECTLY BELOW THE PICTOGRAM FIELD. TEXT DESCRIPTORS SHALLL COMPLY WITH 11B-703.2 RASISED CHARACTERS, 11B-703.3.3 BRAILLE AND 11B-703.4 INSTALLATION HEIGHT AND LOCATION. 11B-703.3.6.3
   - D. THE INSTALLATION HEIGHT AND LOCATION OF PICTOGRAM SIGNS SHALL BE PER 11B-703.4.1
3. SYMBOLS SHALL COMPLY WITH THE FOLLOWING:
   - A. DOORWAYS LEADING TO TOILET ROOMS AND BATHING ROOMS SHALL BE IDENTIFIED BY A GEOMETRIC SYMBOL COMPLYING WITH 11B-703.7.2.6 TOILET AND BATHING FACILITIES GEOMETRIC SYMBOLS. THE SYMBOL SHALL BE MOUNTED AT 58" MIN. AND 60" MAX. ABOVE THE FINISH FLOOR OR GROUND SURFACE MEASURED FROM THE CENTERLINE OF THE SYMBOL. WHERE A DOOR IS PROVIDED THE SYMBOL SHALL BE MOUNTED WITHIN 1" OF THE VERTICAL CENTERLINE OF THE DOOR 11B-703.7.2.6 (SEE EXCEPTION)
   - B. MEN'S TOILET AND BATHING FACILITIES SHALL BE IDENTIFIED BY AN EQUILATERAL TRIANGLE, 1/4" THICK WITH EDGES 12" LONG AND VERTEX POINTING UPWARD. THE TRIANGLE SYMBOL SHALL CONTRAST WITH THE DOOR, EITHER LIGHT ON DARK BACKGROUND OR DARK ON A LIGHT BACKGROUND. 11B-703.7.2.1.6.1
   - C. WOMEN'S TOILET AND BATHING FACILITIES SHALL BE IDENTIFIED BY A CIRCLE, 1/4" THICK AND 12" IN DIAMETER. THE CIRCLE SYMBOL SHALL CONTRAST WITH THE DOOR, EITHER LIGHT ON DARK BACKGROUND OR DARK ON A LIGHT BACKGROUND 11B-703.7.2.6.2
   - D. UNISEX TOILET AND BATHING FACILITIES SHALL BE IDENTIFIED BY A CIRCLE, 1/4" THICK AND 12" IN DIAMETER WITH A 1/4" THICK TRIANGLE WITH A VERTEX PONTING UPWARD SUPERIMPOSED ON THE CIRCLE AND WITHIN THE 12" DIAMETER. THE TRIANGLE SYMBOL SHALL CONTRAST WITH THE CIRCLE SYMBOL, EITHER LIGHT ON DARK BACKGROUNS OR DARK ON LIGHT BACKGROUND. THE CIRCLE SYMBOL SHALL CONTRAST WITH THE DOOR, EITHER LIGHT ON DARK BACKGROUND OR DARK ON LIGHT BACKGROUND 11B-703..2.6.3

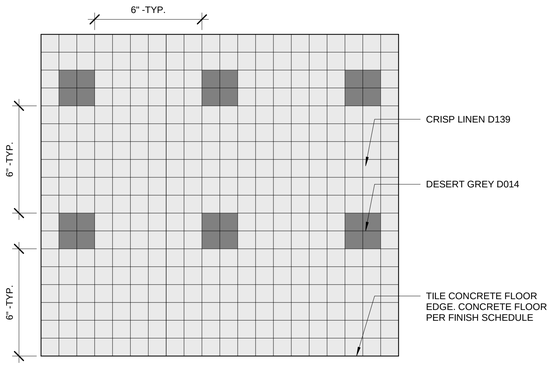
ROOM FINISH GENERAL NOTES

1. THE CONTRACTOR SHALL SUBMIT ALL FINISH COLOR SAMPLES FOR REVIEW AND APPROVAL BY THE ARCHITECT PRIOR TO INSTALLATION.
2. PAINT ALL EXPOSED STRUCTURAL BEAMS, DECKS, A/C DUCTS, PIPES, ELECTRICAL CONDUITS AND COMPONENTS ETCETERA WITH COLOR __, PAINT ALL EXPOSED STRUCTURAL COLUMNS AND BRACES WITH COLOR __ UNLESS NOTED OTHERWISE, AND PAINT ALL AIR DIFFUSERS AND CEILING ACCESS DOORS TO MATCH WITH ADJACENT SURFACES, TYPICAL FOR ALL INTERIOR OF THE BUILDING.
3. ALL INTERIOR FINISH MATERIALS APPLIED TO WALLS AND CEILINGS SHALL BE TESTED AS SPECIFIED IN SECTION 802 OF THE LOS ANGELES BUILDING CODE, FOR EXITWAYS, HALLWAYS AND CORRIDORS MUST HAVE MAXIMUM FLAME SPREAD OF CLASS-II, ALL OTHER ROOMS MUST HAVE MAXIMUM FLAME SPREAD OF CLASS-III.
4. EXTEND PLYWOOD SHEETING TO THE ENTIRE WALL WHERE SHEAR WALL PLYWOOD EXISTS IN ORDER TO HAVE AN EVEN WALL SURFACE.
5. REFERENCE POINT FOR WALL AND FLOOR TILE INSTALLATION SHALL START FROM THE CENTER OF THE FLOOR OR WALL SURFACE.
6. PROVIDE RECESSED VALVE OUTLETS FOR REFRIGERATOR AND UTILITY LINES.
7. ALL BUILDING SURFACES ARE TO BE FREED OF ANY (E) GRAFFITI AND PREPPED TO RECEIVE (N) FINISH.
8. ALL (E) BRICK WALLS ARE TO BE FREED OF ALL (E) CALCIFICATION AND PREPPED TO RECEIVE (N) FINISH.
9. ALLL (E) WALLS AND CEILING TO REMAIN ARE TO BE SANDBLASTED AND SEALED, SEE SPECS.
10. NEW FLOOR SLAB TO RECEIVE ACRYLIC COLOR SEALERR U.N.O. COLORS TO BE CHOSEN BY OWNER.
11. ALL FLOOR AND WALL TILES IN SHOWERS AND RESTROOMS MUST BE NON-GLAZED.
12. ALL FLOOR AND WALL SURFACES IN SHOWERS AND RESTROOMS MUST HAVE A COEFFICIENT OF FRICTION OF .6 OR GREATER.
13. ALL RESTROOM FLOORS TO BE HARD, NON-ABSORBENT, SLIP RESISTANT, COVED AT LEAST 5" AND SLOPED ONE-QUARTER INCHES PER FOOT TO FLOOR DRAINS.



FLOOR TILE PATTERN

NOTE:
ALL DOORS, TRIMS, GATES, PERIMETER FENCING, TRELLIS, AND STRUCTURE FOR FUTURE PHOTOVOLTAICPANELS TO BE PTD. PT-03

DRAWING NO. A8.50
SHEET OF SHEETS

PLOTTED:7/29/2021 4:31:14 PM

GENERAL NOTES:

1. DETAILS OF CONSTRUCTION NOT SHOWN SHALL BE OF SAME NATURE AS THOSE SHOWN FOR SIMILAR CONDITIONS. REFER TO THE TYPICAL DETAIL SHEETS FOR TYPICAL DETAILS OF CONSTRUCTION. TYPICAL DETAILS APPLY TO ALL CONSTRUCTION UNLESS SPECIFICALLY NOTED OR SHOWN OTHERWISE. WHERE CONDITIONS RE□UIRE MODIFICATIONS OF A TYPICAL DETAIL, THE CONTRACTOR SHALL SUBMIT MODIFIED DETAIL FOR APPROVAL BY THE ENGINEER OF RECORD PRIOR TO FABRICATION AND INSTALLATION. DETAILS OF CONSTRUCTION NOT SHOWN SHALL BE OF SAME NATURE AS THOSE SHOWN FOR SIMILAR CONSTRUCTION.

2. CONTRACTOR SHALL CONSIDER THE PROJECT SPECIFICATIONS A PART OF THE CONTRACT DOCUMENTS. WHERE INFORMATION IS CONFLICTING, SPECIFIC DETAILS SHALL GOVERN OVER TYPICAL DETAILS WHICH SHALL GOVERN OVER THESE NOTES WHICH SHALL GOVERN OVER SPECIFICATIONS.

3. ALL DIMENSIONS ON STRUCTURAL DRAWINGS SHALL BE CHECKED AGAINST ARCHITECTURAL DIMENSIONS. DO NOT SCALE DRAWINGS. IF DIMENSIONS ARE OMITTED OR NOT CLEAR, CONTACT THE ARCHITECT (ARCH) OR STRUCTURAL ENGINEER OF RECORD (SEOR). ALL DIMENSIONS RELATED TO EXISTING CONDITIONS SHALL BE FIELD VERIFIED BY THE CONTRACTOR. DIMENSIONS ARE TO THE FACE OF STUDS, AND TO CENTERLINE OF COLUMNS UNO.

4. IT IS THE CONTRACTOR'S RESPONSIBILITY TO IMMEDIATELY NOTIFY THE SEOR OF ANY CONFLICTS BETWEEN THE STRUCTURAL DRAWINGS AND OTHER DRAWINGS□OR EXISTING CONDITIONS NOT SHOWN OR DIFFERENT FROM THOSE SHOWN ON DRAWINGS PRIOR TO COMMENCEMENT OF WORK. THE CONTRACTOR IS NOT TO ORDER MATERIAL OR CONSTRUCT ANY PORTION OF THE BUILDING THAT IS IN CONFLICT UNTIL THE CONFLICT IS RESOLVED WITH THE AFFECTED PARTIES.

5. THE STRUCTURAL DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE. UNLESS OTHERWISE SHOWN THEY DO NOT INDICATE METHOD OF CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE ALL MEASURES NECESSARY TO PROTECT THE CONSTRUCTION AND ALL ADJACENT PROPERTIES DURING CONSTRUCTION. SUCH MEASURES SHALL INCLUDE BUT ARE NOT LIMITED TO BRACING, SHORING OF LOADS DUE TO CONSTRUCTION E□UIPMENT, ETC. OBSERVATION VISITS TO THE SITE BY THE ARCHITECT OR SEOR SHALL NOT INCLUDE OBSERVATION OF THE ABOVE ITEMS.

6. SUBSTITUTION RE□UESTS FOR MATERIALS SPECIFIED ON THE STRUCTURAL DRAWINGS MAY BE CONSIDERED WITH MATERIALS HAVING E□UIVALENT OR GREATER CAPACITY AND PERFORMANCE. CURRENT EVALUATION REPORTS AND PRODUCT INFORMATION SHALL BE PROVIDED TO THE STRUCTURAL ENGINEER DEMONSTRATING THE RE□UIRED CAPACITY AND PERFORMANCE OF THE MATERIAL TO BE SUBSTITUTED. WRITTEN APPROVAL FROM THE SEOR SHALL BE OBTAINED PRIOR TO THE SUBSTITUTION OF ANY MATERIAL SPECIFIED ON THE STRUCTURAL DOCUMENTS.

7. IT IS THE CONTRACTOR'S RESPONSIBILITY TO COMPLY WITH THE PERTINENT SECTIONS OF THE "CONSTRUCTION SAFETY ORDERS" ISSUED BY THE STATE OF CALIFORNIA, LATEST EDITION, AND ALL OSHA RE□UIREMENTS AS THEY APPLY TO THIS PROJECT. THE ARCHITECT, SEOR, AND THE OWNER DO NOT ACCEPT ANY RESPONSIBILITY FOR THE CONTRACTOR'S FAILURE TO COMPLY WITH THESE RE□UIREMENTS.

8. ALL WORK IS NEW (N) UNLESS INDICATED AS EXISTING (E).

9. CONSTRUCTION MATERIALS SHALL BE DISTRIBUTED WHEN PLACED ON THE STRUCTURE SUCH THAT LOADS DO NOT EXCEED DESIGN LIVE LOADS OR RESULT IN AN UNBALANCED CONDITION.

10. REFER TO THE PROJECT SPECIFICATIONS FOR SHOP DRAWING RE□UIREMENTS AND SUBMITTALS.

11. CORE DRILLS RE□UIRED SHALL NOT CUT ANY REINFORCING. THE CONTRACTOR IS TO COORDINATE WORK OF ALL TRADES TO ENSURE COMPLIANCE. ALL CORE DRILLS ARE TO BE PRESENTED TO THE IOR FOR VERIFICATION. THE IOR IS TO DOCUMENT CORES EXAMINED INDICATING AN ABSENCE OF REINFORCING.

STRUCTURAL DESIGN CRITERIA:

1. CODES:
   ALL WORK SHALL BE IN CONFORMANCE WITH THE CALIFORNIA BUILDING CODE (CBC) 2016 EDITION, INCLUDING ALL AMENDMENTS. ALL STANDARDS USED SHALL BE THE LATEST VERSION APPROVED BY THE CODE ENFORCEMENT AGENCY ON THE DATE OF THE PERMIT ISSUANCE UNLESS SPECIFICALLY NOTED OTHERWISE.

2. DESIGN LIVE LOADS:

DEAD LOADS (UNREDUCIBLE, UNO):		
	a. ROOF	
	BUILDING ROOF	20 PSF
	CANOPY	15 PSF
LIVE LOADS (UNREDUCIBLE, UNO):		
	a. ROOF	
	BUILDING ROOF	20 PSF
	CANOPY	20 PSF

3. WIND DESIGN INFORMATION:

FOUNDATION AND SLAB ON GRADE NOTES:

1. SEE SOIL REPORT BY: GEOTECHNICAL ENGINEERING GROUP, CITY OF LOS ANGELES
   JOB NO.: 17-074 DATED: AUGUST 22, 2017
   ADDENDUM: NOVEMBER 9, 2017
   SUPPLEMENT: OCTOBER 25, 2018

2. FOR CONTINUOUS AND PAD FOUNDATIONS,
   ALLOWABLE VERTICAL BEARING PRESSURE: 2500 PSF
   (UNDERLAIN BY AT LEAST 30 INCHES OF COMPACTED SOIL)
   ALLOWABLE VERTICAL BEARING PRESSURE □ SHORT TERM: 2500□1.33 □ 3333 PSF
   (UNDERLAIN BY AT LEAST 30 INCHES OF COMPACTED SOIL)
   ALLOWABLE LATERAL BEARING PRESSURE: 275 PSF PER FT OF DEPTH
   DESIGN COEFFICIENT OF FRICTION FOR SLIDING: 0.35

3. THE BEARING VALUE SHOWN ABOVE IS FOR THE TOTAL OF DEAD AND FRE□UENTLY APPLIED LIVE LOADS AND MAY BE INCREASED BY ON THIRD FOR SHORT DURATION LOADING. ADD RECOMMENDATION FOR POLE FOOTING ON SUPPLIED SOILS REPORT.

4. THE CONTRACTOR SHALL CONFORM TO ALL RECOMMENDATIONS AND CONDITIONS INDICATED IN THE SOIL REPORT. THE GEOTECHNICAL ENGINEER SHALL OBSERVE ALL FOOTING EXCAVATIONS PRIOR TO PLACING CONCRETE.

5. SUBSURFACE SOIL PREPARATION:
   A. ALL EXISTING UNDOCUMENTED FILL SHALL BE REMOVED AND RECOMPACTED. ALL TOPSOILS SHALL BE REMOVED AS RE□UIRED BY THE GEOTECHNICAL ENGINEER.
   B. GEOTECHNICAL ENGINEER SHALL BE RETAINED DURING THE OVEREXCAVATION PROCESS. THE ACTUAL DEPTH OF REMOVAL WILL BE DETERMINED DURING GRADING OPERATIONS.
   C. OFFSITE FILL MATERIAL SHALL BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO PLACEMENT.

6. SPREAD FOOTINGS ARE CENTERED UNDER WALLS AND COLUMNS, UNO.

7. FOOTING ELEVATIONS ARE NOTED ON THE PLANS AND DETAILS AND SHALL BE USED FOR BIDDING. IN ANY CASE, FOOTINGS SHALL BEAR ON FIRM UNDISTURBED SOIL OR ENGINEERED FILL, IN ACCORDANCE WITH THE SOIL REPORT AND DETAILS SHOWN.

8. CONTRACTOR SHALL PROTECT ALL UTILITY LINES, ETC. ENCOUNTERED DURING EXCAVATION AND BACKFILLING.

9. FOOTING BACKFILL AND UTILITY TRENCH BACKFILL WITHIN BUILDING AREA SHALL BE MECHANICALLY COMPACTED IN LAYERS WITH THE APPROVAL OF THE GEOTECHNICAL ENGINEER. FLOODING IS NOT PERMITTED.

10. ALL TRENCHES SHALL COMPLY WITH APPLICABLE OSHA RE□UIREMENTS.

11. ALL EXCAVATIONS SHALL BE PROPERLY BACKFILLED BUT NOT BEHIND RETAINING WALLS BEFORE CONCRETE OR MASONRY ATTAINS ITS FULL DESIGN STRENGTH.

12. THE DESIGN OF ALL RETAINING WALLS AND SUBTERRANEAN BUILDING WALLS INDICATED ON THESE DRAWINGS IS BASED ON DRAINED SOILS.

13. CONSTRUCTION JOINTS (CJ) AND SAWCUT (SC) JOINTS IN SLABS SHALL OCCUR WHERE LOCATED ON PLANS AND DETAILS. CJS SHALL HAVE FORMED POUR STOPS. CONSTRUCTION JOINTS IN WALLS AND FOOTINGS NEED NOT OCCUR AT THE SAME LOCATION, UNO.

14. SEE ARCHITECT'S PLANS FOR LOCATIONS OF SLAB SLOPES, DEPRESSIONS, CURBS, DRAINS, NON-STRUCTURAL PARTITIONS AND OTHER EMBEDDED ITEMS NOT SHOWN ON THE STRUCTURAL PLANS.

15. ALL GRADING, FOUNDATION FOOTINGS, AND DRAINAGE PLANS SHALL BE REVIEWED BY THE GEOTECHNICAL ENGINEER UPON SUBMITTAL. A CERTIFIED LETTER BY THE GEOTECHNICAL ENGINEER IS RE□UESTED STATING THAT THE RECOMMENDATIONS CONTAINED WITHIN THE SOILS REPORT HAVE BEEN INCORPORATED INTO THE PROJECT PLANS AND SPECIFICATIONS PRIOR TO CONSTRUCTION.

16. PRIOR TO THE CONTRACTOR RE□UESTING A BUILDING DEPARTMENT FOUNDATION INSPECTION, THE SOILS ENGINEER SHALL ADVISE THE BUILDING OFFICIAL IN WRITING THAT:
   A. THE BUILDING PAD WAS PREPARED IN ACCORDANCE WITH THE SOILS REPORT.
   B. THE UTILITY TRENCHES HAVE BEEN PROPERLY BACKFILLED AND COMPACTED.
   C. THE FOUNDATION EXCAVATIONS COMPLY WITH THE INTENT OF THE SOILS REPORT.

   SOIL ENGINEERS APPROVAL ON FOUNDATION PLAN IS RE□UIRED PRIOR TO ISSUANCE OF PERMIT.

EXISTING CONDITIONS NOTES:

1. FIELD VERIFY ALL CONDITIONS & DIMENSIONS PRIOR TO SHOP DRAWING PRODUCTION AND FABRICATION OF STRUCTURAL ELEMENTS.

2. WHERE ALL OTHER EXISTING CONDITIONS VARY SIGNIFICANTLY FROM THOSE SHOWN ON THESE DRAWINGS, THE STRUCTURAL ENGINEER SHALL BE NOTIFIED PRIOR TO CONTINUED CONSTRUCTION RELATED TO SUBJECT CONDITIONS.

3. SHORE ALL EXISTING CONSTRUCTION AS RE□UIRED.

4. ALL EXISTING (E) CONNECTIONS AT ELEMENTS TO BE REPLACED SHALL BE REPLACED OR RE-ATTACHED TO MATCH EXISTING CONDITIONS.

5. VERIFY LOCATION OF EXISTING (E) REBAR BEFORE FABRICATION USING NON-DESTRUCTIVE TESTING.

6. SPECIAL INSPECTION IS RE□UIRED FOR ALL WORK.

7. SEE "AS BUILT" DRAWINGS FOR EXISTING BUILDING DESIGN FOR ITEMS NOT SHOWN OR NOTED.

8. ALL EXISTING (E) WOOD ELEMENTS TO REMAIN SHALL BE FIELD INSPECTED DURING CONSTRUCTION AND TREATED FOR DRYROT REMOVAL / CONTROL WHERE EXISTING GLB'S TO REMAIN ARE FOUND TO HAVE EXTENSIVE DRYROT DEEPER THAN THE TOP TWO LAMINATIONS (3"), THE STRUCTURAL ENGINEER SHALL BE NOTIFIED PRIOR TO CONTINUED CONSTRUCTION RELATED TO SUBJECT GLB'S.

EXISTING UNDERGROUND UTILITY NOTES:

1. THE ARCHITECT AND ENGINEERS ARE NOT RESPONSIBLE FOR THE LOCATIONS OF EXISTING UNDERGROUND UTILITIES WHETHER OR NOT SHOWN ON THE DRAWINGS. THE LOCATION OF ANY EXISTING UNDERGROUND UTILITIES SHOWN ON THE DRAWINGS ARE APPROXIMATE. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE OWNER SHOULD ANY SUCH UNIDENTIFIED CONDITIONS BE DISCOVERED.

2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGES WHICH MAY RESULT FROM HIS FAILURE TO EXACTLY LOCATE AND PRESERVE ALL EXISTING UNDERGROUND UTILITIES.

3. BEFORE COMMENCING ANY EXCAVATION, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT IN□UIRY I.D. NUMBER BY CALLING 1-800-422-4133. TWO WORKING DAYS SHALL BE ALLOWED AFTER THE I.D. NUMBER IS OBTAINED AND BEFORE THE EXCAVATION WORK IS STARTED THAT UTILITY OWNERS CAN BE NOTIFIED.

REINFORCING STEEL NOTES:

1. REINFORCING GRADES FOR CONCRETE OR MASONRY:
   A. ALL BARS EXCEPT THOSE TO BE WELDED..... ASTM A615, GRADE 60
   B. TIES AND STIRRUPS ..... ASTM A615, GRADE 60
   C. WELDED WIRE FABRIC ..... ASTM A185
   D. ALL BARS TO BE WELDED ..... ASTM A706, GRADE 60
   E. ALL BARS IN THE CONCRETE SHEARWALL INDICATED ON WALL ELEVATION AS "SW" SHOULD BE A706, GRADE 60.

2. MAINTAIN MINIMUM CONCRETE COVER FROM FACE OF CONCRETE TO EDGE OF ALL REINFORCEMENT AS FOLLOWS (UNO): (SEE PLAN/ SECTION FOR CONCRETE W/ FIRE RATING.)

CONDITION	COVER
CONCRETE POURED AGAINST EARTH	3"
CONCRETE POURED IN FORMS AND EXPOSED TO WEATHER OR EARTH	
- #6 BARS AND LARGER	2"
- #5 BARS AND SMALLER	1 1/2"
INTERIOR COLUMNS AND BEAMS	1 1/2"
INTERIOR WALL FACES AND RAISED SLABS	1 1/2"
STRUCTURAL SLABS ON GRADE	
- FROM BOTTOM OF SLAB	2"
- FROM TOP OF SLAB	1 1/2"
OTHER CONCRETE NOT EXPOSED TO WEATHER OR EARTH FOR #11 BARS AND SMALLER	1"

   PROVIDE THE LARGEST COVER RE□UIRED FOR ALL APPLICABLE CONDITIONS. WHERE #3 STIRRUPS OR TIES ARE USED, ENSURE THAT THE COVER FOR LONGITUDINAL BARS IS ADE□UATE.

3. REINFORCEMENT SHALL BE PLACED IN ACCORDANCE WITH THE CONCRETE REINFORCING STEEL INSTITUTE (CRSI) "MANUAL OF STANDARD PRACTICE". EACH REINFORCING BAR SHALL BE WIRED TO A CROSS BAR AT A MAXIMUM SPACING OF 24" OC. PROVIDE ALL ACCESSORIES NECESSARY TO SUPPORT REINFORCING IN POSITIONS SHOWN ON THE PLANS.

4. SPLICES IN CONTINUOUS REINFORCEMENT AS USED IN WALLS, WALL FOOTINGS, ETC., SHALL HAVE A CLASS "B" LAP (1□6" MIN) AND THE SPLICES IN ADJACENT BARS SHALL BE NOT LESS THAN 5□0" APART. VERTICAL WALL BARS SHALL BE SPLICED AT OR NEAR FLOOR LINES. BARS MAY BE WIRED TOGETHER AT SPLICES OR LAPS EXCEPT FOR TOP REINFORCING OF BEAMS AND SLABS OR WHERE SPECIFICALLY DETAILED TO BE SEPARATED. WELDED WIRE FABRIC SHALL BE LAPPED 12" MINIMUM.

5. ALL DOWELS, ANCHOR BOLTS AND OTHER HARDWARE TO BE SET IN CONCRETE SHALL BE TIED IN PLACE PRIOR TO PLACEMENT OF CONCRETE. NO WET SETTING, STABBING, RODDING OR OTHER MOVEMENT OF EMBEDDED ITEMS SHALL BE PERFORMED DURING PLACEMENT OF CONCRETE.

6. BEND REINFORCING BARS COLD.

7. STEEL SHALL BE KEPT CLEAN AND FREE OF RUST.

8. DOWELS BETWEEN FOOTING AND WALLS OR COLUMNS SHALL BE THE SAME GRADE, SIZE AND SPACING AS THE MAIN REINFORCING UNO.

9. ALL BARS SHALL BE MARKED SO THEIR IDENTIFICATION CAN BE MADE WHEN THE FINAL IN PLACE INSPECTION IS MADE.

10. CHAIRS OR SPACERS FOR REINFORCING SHALL BE NON-FERROUS OR PLASTIC COATED WHEN RESTING ON EXPOSED SURFACES.

STRUCTURAL STEEL NOTES:

1. DESIGN, FABRICATION AND ERECTION OF STRUCTURAL STEEL SHALL CONFORM TO THE SPECIFICATIONS AND STANDARD OF THE AMERICAN INSTITUTE OF STEEL CONSTRUCTION (AISC), AS CONTAINED IN THE LATEST EDITION OF "AISC MANUAL OF STEEL CONSTRUCTION".

2. ALL STRUCTURAL STEEL SHALL BE ERECTED PLUMB AND TRUE TO LINE. TEMPORARY BRACING SHALL BE INSTALLED AND SHALL BE LEFT IN PLACE UNTIL OTHER MEANS IS PROVIDED TO ADE□UATELY BRACE THE STRUCTURE.

3. PROVIDE THE FOLLOWING MATERIALS FOR STRUCTURAL STEEL UNO:

STRUCTURAL STEEL GRADES:		
A.	ALL WIDE FLANGE SECTIONS	ASTM A992
B.	S□UARE OR RECTANGULAR HOLLOW STRUCTURAL SECTIONS (HSS)	ASTM A500, GRADE B (F□46 KSI)
C.	ROUND HOLLOW STRUCTURAL SECTIONS (HSS)	ASTM A500, GRADE B (F□42 KSI)
D.	PIPES	ASTM A53 TYPE E OR S, GRADE B, (F□35 KSI)
E.	PLATES, ANGLES, CHANNELS & TEES	ASTM A36
F.	MACHINE BOLTS (MB)	ASTM A307
G.	HIGH STRENGTH BOLTS (HSB)	ASTM A325 TYPE N
H.	WELDED HEADED STUDS	ASTM A108
I.	THREADED RODS FOR ANCHOR BOLTS	ASTM F1554, GRADE 36

4. EXCEPT AS OTHERWISE NOTED, ALL BOLTS SHALL BE HIGH STRENGTH BOLTS.

5. ALL CONNECTIONS NOT SHOWN SHALL CONFORM TO THE "AISC MANUAL OF STEEL CONSTRUCTION" AND SHALL BE SUBMITTED ON SHOP DRAWINGS FOR REVIEW BY SEOR PRIOR TO FABRICATION.

6. ALL WELDED HEADED STUDS, THREADED STUDS, AND DEFORMED BARS SHALL BE NELSON, OR E□UIVALENT, AND WELDED (IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS BY CERTIFIED WELDERS) SO AS TO FULLY DEVELOP THE TENSILE CAPACITY OF THE CONNECTOR.

7. HIGH STRENGTH BOLTS SHALL BE INSTALLED IN ACCORDANCE WITH THE CURRENT EDITION OF THE "AISC SPECIFICATION FOR STRUCTURAL JOINTS USING ASTM A325 OR A490 BOLTS". SLIP CRITICAL BOLTS (SC) SHALL BE USED FOR ALL "LATERAL FORCE RESISTING SYSTEM" (LFRS) MEMBER STEEL-TO-STEEL CONNECTIONS. TIGHTEN SLIP CRITICAL BOLTS USING ONE OF THE FOLLOWING: TWIST-OFF BOLTS, TENSION CONTROL CALIBRATED WRENCH OR DIRECT TENSION INDICATORS. HIGH STRENGTH BOLTS NOT IN THE LFRS MAY BE INSTALLED HAND TIGHT.

8. BOLTS WITH UPSET THREADS ARE NOT ALLOWED. USE THE APPROPRIATE NUT AND WASHER TYPE FOR THE SPECIFIED BOLT.

9. ALL STEEL FABRICATION SHALL BE PERFORMED BY A LICENSED FABRICATOR.

10. ALL STRUCTURAL STEEL AND MISCELLANEOUS STEEL PERMANENTLY EXPOSED TO THE ELEMENTS SHALL BE HOT DIP GALVANIZED AFTER FABRICATION UNLESS A WEATHER PROOF COATING IS SPECIFIED BY THE ARCHITECT UNO. STAINLESS AND WEATHERING STEELS ARE EXCEPTED WHERE SPECIFIED.

11. SEE ARCHITECTURAL DRAWINGS FOR NAILER HOLES, WELDED STUDS OR OTHER ITEMS NOT SHOWN IN THESE DRAWINGS. WHERE STEEL IS EMBEDDED IN CONCRETE OR MASONRY, PROVIDE HOLES AS RE□UIRED FOR PASSAGE OF CONTINUOUS REINFORCING BARS WHERE INDICATED ON DRAWINGS. DO NOT CUT HOLES IN STRUCTURAL STEEL WITHOUT PRIOR APPROVAL OF SEOR.

12. ALL ARCHITECTURALLY EXPOSED STRUCTURAL STEEL (AESS) SHALL COMPLY WITH AISC CODE OF STANDARD PRACTICE, SECTION 10.

13. PLACE NON-SHRINK OR DRYPACK GROUT UNDER ALL BASE PLATES AND ALLOW TO CURE BEFORE APPLYING LOADS.

STRUCTURAL CONCRETE NOTES:

1. CONCRETE SHALL BE MIXED, PLACED AND CURED IN ACCORDANCE WITH ACI 318, LATEST EDITION, AND PROJECT SPECIFICATIONS.

2. CONCRETE SHALL NOT BE DROPPED THROUGH REINFORCING STEEL (AS IN WALLS) SO AS TO CAUSE SEGREGATION OF AGGREGATES. IN SUCH CASES, HOPPERS AND VERTICAL CHUTES OR TRUNKS SHALL BE USED. CHUTES OR TRUNKS SHALL BE OF VARIABLE LENGTHS SO THAT FREE UNCONFINED FALL OF CONCRETE SHALL NOT EXCEED SIX FEET. A SUFFICIENT NUMBER OF CHUTES OR TRUNKS SHALL BE USED TO ENSURE THE CONCRETE IS KEPT LEVEL AT ALL TIMES.

3. CONSTRUCTION JOINTS SHALL BE CLEANED AND ROUGHENED BY REMOVING THE ENTIRE SURFACE TO EXPOSE CLEAN AGGREGATE SOLIDLY EMBEDDED IN THE MORTAR MATRIX. SLUSH WITH A COAT OF NEAT CEMENT BEFORE PLACING CONCRETE. SEE PLANS AND DETAILS FOR LOCATION AND TYPE OF CONSTRUCTION JOINT. LOCATIONS OF ADDITIONAL CONSTRUCTION JOINTS NOT SHOWN ON THESE PLANS SHALL BE SUBMITTED FOR APPROVAL BY THE EOR PRIOR TO PLACING ANY CONCRETE.

4. STRUCTURAL CONCRETE SHALL MEET THE FOLLOWING DESIGN CRITERIA:

LOCATION	MIN 28-DAY COMP STRENGTH	CONC TYPE[a]	MAX AGGR. SIZE	MAX W/C RATIO	MAX SLUMP[b]
FOUNDATION	4000 PSI	NWC	1"	0.45	4"
SURGE PIT	4000 PSI	NWC	1"	0.45	4"
SLAB ON GRADE	3000 PSI	NWC	1"	0.45	4"
ALL OTHER STRUCTURAL CONCRETE NOT NOTED ABOVE	3000 PSI	NWC	1"	0.45	6"
CONC WALL / RET. WALL	4000 PSI	NWC	1"	0.45	4"

   a. MAXIMUM DRY WEIGHT OF LIGHTWEIGHT CONCRETE SHALL BE 115 PCF, UNLESS APPROVED BY SEOR.
   □. SLUMP MEASURED PRIOR TO SUPERPLASTICIZER, WHERE OCCURS.

5. CONCRETE MIX DESIGN AND TESTING SHALL MEET THE RE□UIREMENTS OF THE BUILDING CODE, AND SPECIFICATIONS. ALL CONCRETE MIXES SHALL BE DESIGNED BY A RECOGNIZED TESTING LAB STAMPED AND SEALED BY A LICENSED CALIFORNIA CIVIL ENGINEER AND SUBMITTED TO THE SEOR FOR REVIEW PRIOR TO CONCRETE PLACEMENT. STRUCTURAL CONCRETE MIXES SHALL CONSIST OF 5 SACK MINIMUM UNO.

6. AGGREGATES IN NORMAL WEIGHT CONCRETE SHALL CONFORM TO ASTM C-33 (HARDROCK). AGGREGATES IN LIGHT WEIGHT CONCRETE SHALL CONFORM TO ASTM C-330.

7. COMPRESSIVE STRENGTH TEST REPORTS SHALL BE SUBMITTED TO THE BUILDING DEPARTMENT AND THE SEOR.

8. PORTLAND CEMENT SHALL BE TYPE II FOR ALL CONCRETE CONFORMING TO ASTM C150, LOW ALKALI. MILL TESTS WITH CERTIFICATES OF COMPLIANCE SHALL BE SUBMITTED.

9. FLY ASH OR OTHER POZZOLANS CONFORMING TO ASTM C618 CLASS N OR F MAY BE USED AS A PARTIAL SUBSTITUTION FOR PORTLAND CEMENT UP TO A MAXIMUM OF 25□ TOTAL CEMENTITIOUS MATERIALS BY WEIGHT IF THE MIX DESIGN IS PROPORTIONED PER ACI318,SECTION 5.3.

10. CONCRETE MIXING OPERATIONS, ETC. SHALL CONFORM TO ASTM C94.

11. LEAN CONCRETE, WHERE SPECIFICALLY INDICATED, SHALL CONTAIN 2 SACKS OF CEMENT PER CUBIC YARD OF CONCRETE.

12. DRYPACK OR NONSHRINK GROUT SHALL HAVE A MINIMUM 28 DAY COMPRESSIVE STRENGTH OF 5000 PSI, AND CONSIST OF MASTERFLOW 713, FIVE STAR GROUT, SIKA GROUT 212, EMBECO 636, OR APPROVED E□UAL. FOR THICK GROUT LAYERS FOLLOW MANUFACTURER'S GUIDELINES TO ATTAIN THE RE□UIRED STRENGTH, WHICH MAY INCLUDE THE ADDITION OF PEA GRAVEL.

13. DO NOT USE ANY CONCRETE OR GROUT CONTAINING CHLORIDES. WATER USED IN MIX SHALL BE CLEAN AND POTABLE.

14. PRIOR TO ERECTING ANY ELEMENTS THAT LOAD THE FOUNDATION, CONCRETE MUST REACH AN UNCONFINED COMPRESSION STRENGTH OF 2000 PSI MINIMUM AS DETERMINED BY TESTING OR PREVIOUSLY DOCUMENTED DATA FOR THE MIX DESIGN USED UNDER SIMILAR CONDITIONS, AND MUST BE ALLOWED TO CURE FOR A MINIMUM OF 3 DAYS.

15. FOR INTERIOR SLABS-ON-GRADE AND ALL OTHER SLABS RECEIVING ADHERED FLOORING FINISHES (I.E., GLUED, ETC.), THE MAXIMUM W/C RATIO SHALL NOT EXCEED 0.45. CURING COMPOUNDS USED ON CONCRETE THAT IS TO RECIEVE FINISHES SHALL BE COMPATIBLE WITH TILE AND ADHESIVES OR GROUTS IN ACCORDANCE WITH MANUFACTURER'S DATA AND BE APPROVED BEFORE USE.

16. MAINTAIN CONCRETE ABOVE 50 DEGREES FAHRENHEIT AND IN A MOIST CONDITION FOR A MINIMUM OF 7 DAYS AFTER PLACEMENT UNLESS OTHERWISE ACCEPTED BY SEOR.

17. SEE ARCHITECTURAL DRAWINGS FOR WALL OPENINGS, WALL OFFSETS, CHAMFERS, KERFS, DRIPS AND FOR EXTENT OF DEPRESSIONS, RAMPS, ETC. PROVIDE SLEEVES FOR ALL PIPES THROUGH CONCRETE WALLS AND FOOTINGS WHERE SHOWN ON THESE DRAWINGS. CORING IS NOT PERMITTED WITHOUT PRIOR APPROVAL BY THE SEOR.

18. EXPOSED CORNERS OF SLABS, BEAMS, WALLS, COLUMNS, ETC. SHALL BE FORMED WITH 3/4" CHAMFER, UNO.

WELDING NOTES:

1. WELDING PROCEDURES, ELECTRODES AND WELDER □UALIFICATIONS SHALL CONFORM TO THE "CODE FOR WELDING IN BUILDING CONSTRUCTION", AMERICAN WELDING SOCIETY (AWS), D1.1 AND THE AISC "SPECIFICATIONS FOR THE DESIGN, FABRICATION AND ERECTION OF STRUCTURAL STEEL FOR BUILDINGS".

2. ALL WELDERS SHALL HAVE EVIDENCE OF PASSING THE AWS STANDARD □UALIFICATION TESTS, AND SHALL BE CERTIFIED FOR THE WORK THEY ARE PERFORMING.

3. PROJECT WELDING SHALL BE PERFORMED ONLY IN ACCORDANCE WITH WELDING PROCEDURE SPECIFICATIONS (WPS) SUBMITTED BY THE CONTRACTOR AND REVIEWED BY THE SEOR AND PROJECT WELDING INSPECTOR. THE WPS SHALL BE IN ACCORDANCE WITH AWS D1.1-D1.4 CURRENT EDITION.

4. WELDING OF STRUCTURAL STEEL SHALL BE PERFORMED PER AWS D1.1 USING E70XX ELECTRODES UNLESS OTHERWISED NOTED.

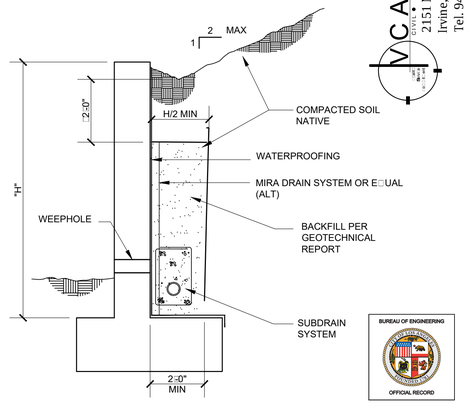
5. WELDING OF REINFORCING BARS SHALL BE PERFORMED PER AWS D1.4 USING E90XX ELECTRODES.

6. ALL FULL PENETRATION WELDS SHALL BE ULTRA-SONIC TESTED PER AWS D1.1.

7. ALL GROOVE OR BUTT WELDS SHALL BE COMPLETE PENETRATION WELDS. ALL EXPOSED BUTT WELDS SHALL BE GROUND SMOOTH.

8. ALL EXPOSED WELDS ON ARCHITECTURALLY EXPOSED STRUCTURAL STEEL (AESS) SHALL COMPLY WITH AISC CODE OF STANDARD PRACTICE, SECTION 10.

9. FIELD WELDS HAVE BEEN INDICATED WHERE THEY ARE EXPECTED TO OCCUR. THE CONTRACTOR SHALL DETERMINE THE ACTUAL FIELD WELDING NECESSARY TO COMPLETE THE PROJECT AND INCLUDE ALL ASSOCIATED COSTS WITHIN THE BASE BID.



METAL DECK NOTES AND SCHEDULE (FILLED & UNFILLED):

1. MATERIAL FOR METAL DECK SHALL HAVE A MIN YIELD STRENGTH OF 38 KSI AND CONFORM TO ASTM A653-SS GRADE 33 WITH GALVANIZED G60 COATING COMPLYING WITH ASTM A525.

2. SEE TYPICAL DETAILS FOR REINFORCING OF DECK AROUND OPENINGS. CONTRACTOR SHALL COORDINATE SIZE AND LOCATIONS OF OPENINGS WITH THE VARIOUS TRADES. NO LOADS SHALL BE HUNG FROM DECK WITHOUT APPROVAL OF SEOR.

3. FLOOR AND ROOF DECK IS DESIGNED FOR UNSHORED CONSTRUCTION, UNO. MAINTAIN 3 SPAN CONDITION WHEREVER POSSIBLE (2 SPAN MIN) EXCEPT AT STAIR LANDING AND WHERE NOTED OTHERWISE ON PLANS.

4. PROVIDE 2" MINIMUM BEARING AT ALL SUPPORTS. END LAPS OF METAL DECK SHALL BE A MINIMUM OF 2" AND SHALL OCCUR ONLY OVER SUPPORTS. DECK SHALL BE LAID OUT SO THAT A LOW FLUTE FALLS ON EACH PARALLEL SUPPORT.

5. INSTALL DECK BY WELDING. USE 3/4" DIAMETER PUDDLE WELDS OR WELDED STUDS TO SUPPORTS SPACED AS SHOWN ON CONSTRUCTION DRAWINGS. SPACING FOR TOP SEAM, SIDE SEAM, BUTTON PUNCH, OR PUNCHLOK CONNECTION SHALL BE IN ACCORDANCE WITH DRAWINGS. SEE TYPICAL METAL DECK DETAILS..

6. SUBMIT SHOP DRAWINGS FOR METAL DECK TO THE SEOR FOR REVIEW PRIOR TO FABRICATION. SHOP DRAWINGS SHALL SHOW TYPE OF DECK, LAYOUT OF DECK, THE SIZE AND LOCATION OF ANY OPENINGS OF WIDTH GREATER THAN 1□0", AND ATTACHMENT METHOD.

7. ALTERNATES TO TYPE OF DECK AND FASTENING MAY BE USED WITH THE APPROVAL OF THE SEOR AND DSA. DECK PROPERTIES SHALL BE E□UAL TO OR GREATER THAN THOSE SHOWN ON THE PLANS. ANY DECK OR METHOD OF F

ROUGH CARPENTRY / WOOD NOTES:

1. ALL GRADES SPECIFIED ARE MINIMUM GRADES RE□UIRED.
2. DOUGLAS FIR (DF) SHALL BE GRADED BY THE WESTERN WOOD PRODUCTS ASSOCIATION GRADING RULES, AND ASTM D245.
3. REDWOOD SHALL BE GRADED BY THE CALIFORNIA REDWOOD ASSOCIATION, REDWOOD INSPECTION SERVICE.
4. SILL PLATES SHALL BE PRESSURE-TREATED (PT) DOUGLAS FIR #2. REDWOOD IS PERMITTED WITH SEOR APPROVAL.
5. NON-LOAD BEARING STUDS, TOP PLATES, BLOCKING, FURRING AND BRACING SHALL BE.....DF #2
   JOISTS, RAFTERS, PURLINS, BEAMS & POSTS SHALL BE .....DF #1 (UNO)
   LOAD BEARING STUDS SHALL BE: (UNO ON PLAN)
   STUDS 0-15□.....DF #2
   STUDS □15□.....DF #1
   BLOCKING □ I-JOIST SHALL BE 1 ¾" THK PARALLAM PSL BY WEYERHOUSER OR E□. (1.55E GRADE) ICC-ESR-1387
6. MOISTURE CONTENT OF SAWN LUMBER SHALL NOT EXCEED 19□ WHEN FRAMING STARTS OR SHEATHING IS APPLIED. ANY NONCOMPLIANT WORK SHALL BE REJECTED AND REFRAMED WITH ACCEPTABLE LUMBER.
7. TIMBERS 4" NOMINAL IN THE LEAST DIMENSION SHALL NOT CONTAIN BOXED HEART.
8. SILL PLATES SHALL BE PRESSURE-TREATED AND SHALL BE BOLTED TO CONCRETE WITH 5/8" DIAMETER ANCHOR BOLTS AT 32" OC MAX, UNO WITH A BOLT BETWEEN 6" TO 9" FROM THE END OF EACH PIECE OF SILL (2 BOLTS MIN EACH PIECE). PIECE OF SILL SHALL BE CONSIDERED ENDED WHERE PLATE IS CUT OUT OVER ONE-THIRD OF CROSS-SECTION.
9. ANCHOR BOLTS FOR NON-STRUCTURAL WALLS SUPPORTED ON SLABS SHALL HAVE 3 1/2" EMBEDMENT (UNO) MEASURED FROM TOP OF SLAB.
10. ANCHOR BOLTS FOR STRUCTURAL WALLS SHALL HAVE 12" EMBEDMENT (UNO) MEASURED FROM TOP OF SLAB.
11. STUD BEARING WALLS AND PARTITIONS SHALL HAVE DOUBLE TOP PLATES LAPPED AT WALL AND PARTITION INTERSECTIONS. JOINTS IN UPPER AND LOWER MEMBERS OF DOUBLE TOP PLATES SHALL BE STAGGERED AT LEAST 4□0".
12. HOLES IN WOOD AND STEEL MEMBERS FOR BOLTS SHALL BE THE NOMINAL BOLT DIAMETER PLUS 1/16".
13. ALL BOLTS IN WOOD SHALL BE ASTM A307 STANDARD BOLTS, UNO. BOLTS AND SCREWS SHALL BE TIGHTENED AT TIME OF ERECTION AND RETIGHTENED BEFORE CLOSING IN OR AT THE COMPLETION OF THE JOB.
14. HOLES IN WOOD FOR LAG SCREW SHANK SHALL BE BORED TO THE SAME DIAMETER AND DEPTH AS THE SHANK, AND FOR THE THREADED PORTION BORED WITH A BIT NOT LARGER THAN THE BASE OF THREADS.
15. LAG SCREWS AND SCREWS SHALL BE SCREWED AND NOT DRIVEN INTO PLACE.
16. STEEL WASHERS SHALL BE PROVIDED UNDER HEADS AND NUTS OF ALL BOLTS AND LAG SCREWS WHICH BEAR ON WOOD. STANDARD CUT WASHERS MAY BE USED IN ALL CASES EXCEPT SILL PLATES AND WOOD LEDGERS AGAINST CONCRETE OR MASONRY, WHICH SHALL BE ONE OF THE FOLLOWING SIZES:

BOLT & LAG SCREW DIAMETER	STEEL PLATE WASHER SIZE	MALLEABLE IRON WASHER SIZE
1/2"	2" S□ □1/4"	2 1/2"Ø x 1/4"
5/8"	2 1/2" S□ □1/4"	2 3/4Ø x 5/16"
3/4"	3" S□ □5/16"	3"Ø x 7/16"
7/8"	3 1/2" S□ □3/8"	3 1/2"Ø x 7/16"
1"	3 3/4" S□ □3/8"	4"Ø x 1/2"

NOTE: WASHERS UNDER CARRIAGE BOLT HEADS SHALL BE LARGE ENOUGH TO ALLOW FOR S□UARE SHOULDERS.

17. INSTALL WINDOWS AND DOORS IN STUD WALLS AFTER DEAD LOADS ARE APPLIED, AND PROVIDE A 1/2" SHIM SPACE AT THE HEAD CONDITION.
18. FASTENERS, INCLUDING NAILS, NUTS AND WASHERS, IN CONTACT WITH PRESERVATIVE - TREATED WOOD SHALL BE OF HOT-DIPPED ZINC COATED GALVANIZED STEEL OR STAINLESS STEEL.

TYPICAL WOOD FRAMING NOTES:

1. SEE THIS SHEET FOR TYPICAL NOTES, DETAILS, AND NAILING.
2. ONLY LOAD BEARING AND/OR SHEAR WALLS ARE SHOWN. SEE ARCHITECTURAL DRAWINGS FOR ALL OTHER PARTITIONS.
3. ELEVATIONS SHOWN ON PLANS ARE FROM FINISHED FIRST FLOOR; DATUM ELEVATION □0-0".
4. ALL EXTERIOR WALLS AND INTERIOR BEARING WALLS ARE 2□6 STUDS □ 16"OC TYPICAL, UNO.
5. ALL EXTERIOR STUD WALLS SHALL BE COMPLETELY SHEATHED WITH 15/32" APA RATED SHEATHING, EXPOSURE-1 (32/16) UNO, REGARDLESS SHEAR WALL LENGTH SHOWN ON PLAN.
6. INTERIOR STRUCTURAL SHEATHED WALLS (SHEAR WALL) ARE SHOWN ON PLAN ABOVE AND BELOW ANY OPENING AND ANY WALL ON THE SAME LINE OF SHEAR WALL SHALL BE SHEATHED WITH THE SAME PLYWOOD SHEATHING W/ 10d NAILS □ 6" & 12" O/C (EN, BN). BLOCK ALL PLYWOOD EDGES.
7. ALL STRUCTURAL WALL SHEATHING IS SPLICED ON 2" NOMINAL BLOCKING AT HORIZONTAL JOINTS, UNO.
8. STRUCTURAL FLOOR AND ROOF SHEATHING SHALL BE AS SPECIFIED BELOW. NOTE: 1/8" GAP SHALL BE PROVIDED BETWEEN ADJACENT PANELS. PANELS WITH GRADE STAMP INDICATION "SIZED FOR SPACING" MAY BE USED TO FACILITATE THIS RE□UIREMENT. SEE PLANS FOR RE□UIRED BOUNDARY AND EDGE NAILING NOT LISTED BELOW. FLOOR SHEATHING SHALL BE GLUED AND NAILED PER PLAN.

   (□- SHEATHING □ EXTERIOR DECKS SHALL BE EXTERIOR RATED PLYWOOD.)

   BN□BOUNDARY NAILING
   EN□EDGE NAILING
   FN□FIELD NAILING
9. SEE PLANS FOR LOCATION OF NOMINAL 2X FLAT BLOCKING AT ROOF AND FLOOR SHEATHING PANEL JOINTS. SEE THIS SHEET FOR PLY CLIP RE□UIREMENTS AT UNBLOCKED ROOF PANEL JOINTS. T&G FLOOR SHEATHING IS NOT RE□UIRED WHERE JOINTS ARE BLOCKED.
10. BRIDGING SHALL BE 2□3 NOMINAL, OR SIMPSON "NB" AND SHALL OCCUR AS SHOWN ON PLANS OR SHEET S0.02.
11. SAWN LUMBER GRADING SHALL BE PER "TIMBER SPECIFICATIONS" NOTED ON THESE PLANS.
12. (S) INDICATES METAL FRAMING CONNECTORS MANUFACTURED BY SIMPSON STRONG TIE COMPANY (CURRENT CATALOG) OR "USP" WITH E□UIVALENT ICC PUBLISHED VALUES AND SHALL BE INSTALLED PER SPECIFICATIONS, NO EXCEPTIONS.

NAILING SCHEDULE

(UNLESS OTHERWISE NOTED ON PLANS)

NAIL SPACING TO BE NOT LESS THAN RE□UIRED PENETRATION. EDGE AND END DISTANCES SHALL BE NOT LESS THAN HALF THIS SPACING. ALL SPACING AND EDGE AND END DISTANCES SHALL BE SUCH AS TO AVOID SPLITTING OF THE WOOD. HOLES FOR NAILS, WHERE NECESSARY TO PREVENT SPLITTING, SHALL BE BORED OF A DIAMETER SMALLER THAN THAT OF THE NAILS. COMMON OR BOX NAILS MAY BE USED FOR NAILING AT TYPICAL CONNECTIONS NOTED BELOW (U.N.O.). FOR ALL CONNECTIONS OTHERWISE NOTED OR DETAILED ON PLANS, COMMON NAILS SHALL BE USED (SEE SCHEDULE BELOW).

CONNECTION, NAIL TYPE	NAILING
JOISTS TO SILL OR GIRDER, TOENAIL	(3) 8d
BRIDGING TO JOIST, TOENAIL EACH END	(2) 8d
1" □6" SUBFLOOR OR LESS TO EACH JOIST, FACE NAIL	(2) 8d
WIDER THAN 1" □6" SUBFLOOR TO EACH JOIST, BLIND & FACE NAIL	(3) 8d
2" SUBFLOOR TO JOIST OR GIRDER, BLIND AND FACE NAIL	(2) 16d
SILL PLATE TO JOIST OR BLOCKING, FACE NAIL	16d □ 16" OC
TOP PLATE TO STUD, END NAIL	(2) 16d
STUD TO SILL PLATE	(4) 8d, TOENAIL OR (2) 16d, END NAIL
DOUBLE STUDS, FACE NAIL	16d □ 24" OC
DOUBLE TOP PLATES, FACE NAIL	16d □ 16"OC (COMMON)
TOP PLATES, LAPS, FACE NAIL	(8) 16d (UNO) (18) 16d □ SHEARWALL LOCATIONS
TOP PLATES AT INTERSECTIONS, FACE NAIL	(2) 16d
CONTINUOUS HEADER, TWO PIECES	16d □ 16" OC ALONG EACH EDGE
CEILING JOISTS TO PLATE, TOENAIL	(3) 8d
CONTINUOUS HEADER TO STUD, TOENAIL	(4) 8d
CEILING JOISTS, LAPS OVER PARTITIONS, FACE NAIL	(3) 16d
CEILING JOISTS TO PARALLEL RAFTERS, FACE NAIL	(3) 16d
RAFTER TO PLATE, TOENAIL	(3) 8d
1" BRACE TO EACH STUD & PLATE, FACE NAIL	(2) 8d
1":8" SHEATHING OR LESS TO EACH BEARING, FACE NAIL	(2) 8d
WIDER THAN 1":8" SHEATHING TO EACH BEARING, FACE NAIL	(3) 8d
BUILT-UP CORNER STUDS	16d □ 24" OC
BUILT-UP GIRDERS AND BEAMS	20d □ 32" OC AT TOP, BOTT & STGRD (2) 20d AT ENDS AND □ EA SPLICE (2) 16d □ EA BEARING

NAIL SCHEDULE (COMMON NAILS)		
SIZE	DIAMETER (IN)	LENGTH (IN)
8d	0.131	2 ½
10d	0.148	3
12d	0.148	3 1/4
16d	0.162	3 1/2
20d	0.192	4

SHORTENED 10d COMMON NAILS MAY BE USED TO FASTEN WOOD STRUCTURAL PANELS UNO. USE THE FOLLOWING MINIMUM LENGTHS: 10d □2 ¼" FOR 15/32" OR THINNER PANELS, 10d □2 ½" FOR 19/32" PANELS, AND FULL LENGTH FOR ⅝" OR THICKER PANELS.

COLD-FORMED STEEL FRAMING NOTES:

1. DESIGN, FABRICATION AND ERECTION OF COLD-FORMED STEEL FRAMING SHALL CONFORM TO THE SPECIFICATIONS AND STANDARD OF THE AMERICAN IRON AND STEEL INSTITUTE (AISI), AS CONTAINED IN THE "SPECIFICATION FOR THE DESIGN OF COLD-FORMED STEEL STRUCTURAL MEMBERS", LATEST EDITION, INCLUDING ALL APPLICABLE AMENDMENTS.
2. ALL COLD-FORMED STEEL FRAMING SHALL BE ERECTED PLUMB AND TRUE TO LINE. TEMPORARY BRACING SHALL BE INSTALLED AND LEFT IN PLACE UNTIL OTHER MEANS IS PROVIDED TO ADE□UATELY BRACE THE STRUCTURE.
3. COLD-FORMED STEEL GRADES:
   A. 18 GA (43 MILS) OR THINNER .....ASTM A1003 GRADE 33 (FY □33 KSI)
   B. 16 GA (54 MILS) AND THICKER .....ASTM A1003 GRADE 50 (FY □50 KSI)
4. ALL COLD-FORMED STEEL FRAMING SHALL BE BRACED AS RE□UIRED BY SECTION D3 OF THE AISI SPECIFICATION.
5. SUBMIT COLD-FORMED STEEL FRAMING SHOP DRAWINGS AND SPECIFICATIONS TO THE SEOR FOR REVIEW PRIOR TO FABRICATION.
6. COLD-FORMED STEEL STUDS AND TRACKS ARE TO BE ATTACHED WITH SHEET METAL SCREWS (SMS) WITH SIZES CALLED OUT ON THE DETAILS. PENETRATION OF SCREWS THROUGH JOINED MATERIAL SHOULD NOT BE LESS THAN 3 EXPOSED THREADS. SCREWS ARE TO BE INSTALLED AND TIGHTENED IN ACCORDANCE WITH SCREW MANUFACTURER'S RECOMMENDATIONS.

CONCRETE MASONRY NOTES:

1. CONCRETE MASONRY UNITS (CMU) SHALL DEVELOP THE FOLLOWING MINIMUM 28 DAY PRISM COMPRESSIVE STRENGTHS IN ACCORDANCE WITH THE BUILDING CODE:

MINIMUM 28 DAY COMPRESSIVE STRENGTH			
LOCATION	□□	TYPE S MORTAR PER ASTM C270	GROUT PER CBC 2103A.13
CMU U.N.O.	2500 □si	2500 □si	2500 □si

2. CONCRETE BLOCK SHALL CONFORM TO ASTM C90 MEDIUM WEIGHT. USE OF LIGHT WEIGHT BLOCK RE□UIRES PRIOR WRITTEN APPROVAL BY THE SEOR.
3. PRISM TEST SHALL BE PERFORMED FOR CMU WITH □□ OVER 2000 PSI FOR CBC 2105A.2
4. VERTICAL REINFORCING SHALL BE FULL HEIGHT OF WALL AND SHALL BE BRACED AT 6□8" MAXIMUM TO PREVENT MOVEMENT WHILE GROUTING.
5. HORIZONTAL REINFORCING SHALL BE IN BOND BEAM UNITS AND TIED SECURELY TO VERTICAL REINFORCING.
6. DOWELS, ANCHORS, AND OTHER EMBEDDED ITEMS SHALL BE TIED SECURELY IN PLACE TO PREVENT MOVEMENT WHILE GROUTING. WET SETTING OR STABBING IS NOT ALLOWED.
7. MAXIMUM GROUT LIFTS SHALL NOT EXCEED 8□0" AND CLEANOUTS AT THE BOTTOM OF ALL CELLS SHALL BE USED UNLESS THE LIFT IS 4□0" OR LESS. THE CLEANOUTS SHALL BE SEALED BEFORE GROUTING. GROUT FOR EACH POUR SHALL BE STOPPED 1 1/2" BELOW THE TOP OF A BLOCK COURSE EXCEPT AT THE FINAL COURSE. ALL GROUT SHALL BE THOROUGHLY CONSOLIDATED BY VIBRATING IMMEDIATELY AFTER PLACING. SHAKING OR RODDING REBAR IS NOT ALLOWED. FILL ALL CELLS WITH GROUT.
8. BLOCK SHALL BE PLACED IN RUNNING BOND AND SHALL BE 8":8":16" NOMINAL UNITS, UNO. WHERE BLOCK IS RE□UIRED TO BE PLACED IN STACK BOND (SEE ARCH), OPEN-ENDED UNITS (I.E., "SPEED BLOCK") SHALL BE USED.
9. THE CONTRACTOR IS RESPONSIBLE FOR DETERMINING THE SAFETY OF LIFT HEIGHT FOR OPEN ENDED OR FIELD MODIFIED BLOCKS.
10. LAYOUT OF MASONRY BLOCK UNITS SHALL BE RUNNING BOND, U.N.O. BLOCK MODULES/MORTAR JOINTS SHOWN ON THESE DRAWINGS ARE FOR PRESENTATION PURPOSES ONLY, AND NOT INTENDED TO SUPERCEDE ARCHITECTURAL DESIGN RE□UIREMENTS.
11. CMU WALL REINFORCEMENT SEE PLANS & ELEVATIONS
12. PROVIDE VERTICAL CONTROL JOINTS IN CMU WALLS AS SHOWN ON PLAN. UNLESS NOTED OTHERWISE VERTICAL CONTROL JOINTS SHALL OCCUR AT 25□0" OC MAXIMUM ALONG WALL LENGTH, AT FOUNDATION STEPS, FLOOR OR ROOF JOINTS, WALL HEIGHT CHANGES, AND 24" MINIMUM PAST ONE SIDE OF OPENINGS □6□0" WIDE, UNO ON PLANS.
13. WHEN THE AMBIENT TEMPERATURE FALLS BELOW 40°F, OR EXCEEDS 100°F, PROVISIONS OF TMS602 / ACI 530 / ASCE6. ARTICLE 1.8C OR ARTICLE 1.8D SHALL BE IMPLEMENTED.

ADDITIONAL NOTES PER LADBS:

1. CONTRACTORS RESPONSIBLE FOR THE CONSTRUCTION OF A WIND OR SEISMIC FORCE RESISTING SYSTEM/COMPONENT LISTED IN THE "STATEMENT OF SPECIAL INSPECTION" SHALL SUBMIT A WRITTEN STATEMENT OF RESPONSIBILITY TO THE LABOS INSPECTORS AND THE OWNER PRIOR TO THE COMMENCEMENT OF WORK ON SUCH SYSTEM OR COMPONENT PER SEC 1709.1.
2. CONTINUOUS SPECIAL INSPECTION BY A REGISTERED DEPUTY INSPECTOR IS RE□UIRED FOR FIELD WELDING, CONCRETE STRENGTH F'C □2500 PSI, HIGH STRENGTH BOLTING, SPRAYED-ON FIREPROOFING, ENGINEERED MASONRY, HIGH-LIFT GROUTING, PRE-STRESSED CONCRETE, HIGH LOAD DIAPHRAGMS AND SPECIAL MOMENT-RESISTING CONCRETE FRAMES.
3. FOUNDATION SILLS SHALL BE NATURALLY DURABLE OR PRESERVATIVE-TREATED WOOD.
4. A COPY OF THE LOS ANGELES RESEARCH REPORT AND/OR CONDITIONS OF LISTING SHALL BE MADE AVAILABLE AT THE JOB SITE.
5. POWER-DRIVEN FASTENERS SHALL NOT BE USED TO ANCHOR SILL PLATES EXCEPT AT INTERIOR NONBEARING WALLS NOT DESIGNED AS SHEAR WALLS.
6. EXTERIOR ANCHOR BOLTS AND POST BASES SHALL BE GALVANIZED AND EACH ANCHOR BOLTS SHALL HAVE AT LEAST TWO GALVANIZED NUTS ABOVE THE BASE PLATE.
7. THE TOP OF EXTERIOR PEDESTALS MUST BE SLOPED FOR POSITIVE DRAINAGE.
8. ALL MAIN FOOTING AND GRADE BEAM REINFORCEMENT STEEL SHALL BE BENT INTO THE INTERSECTING FOOTING AND FULLY DEVELOPED AROUND EACH CORNER AND INTERSECTION.
9. CONTINUOUS INSPECTION BY A LOS ANGELES CITY LICENSED DEPUTY INSPECTOR IS RE□UIRED FOR ALL STRUCTURAL CONNECTIONS, FOOTINGS, GRADE BEAMS AND RETAINING WALLS DURING INSTALLATION.
10. STRUCTURAL OBSERVATION BY THE ENGINEER OR ARCHITECT OF RECORD IS RE□UIRED IN ACCORDANCE WITH LA INFORMATION BULLETIN P/BC 2008-024.
11. FIELD WELDING TO BE DONE BY WELDERS CERTIFIED BY LADBS FOR STRUCTURAL STEEL, REINFORCING STEEL & LIGHT GAUGE STEEL. CONTINUOUS INSPECTION BY A DEPUTY INSPECTOR IS RE□UIRED.
12. SHOP WELDS MUST BE PERFORMED IN A LICENSED LADBS FABRICATOR'S SHOP.
13. LADBS LICENSED FABRICATOR IS RE□UIRED FOR STRUCTURAL STEEL.
14. GLUE-LAMINATED TIMBERS MUST BE FABRICATED IN A LADBS LICENSED SHOP. IDENTIFY GRADE SYMBOL AND LAMINATION SPECIES PER 2015 NDS SUPPLEMENT TABLE 5A.
15. ROOF DIAPHRAGM NAILING TO BE INSPECTED BEFORE COVERING. FACE GRAIN OF PLYWOOD SHALL BE PERPENDICULAR TO SUPPORTS. FLOOR SHALL HAVE TONGUE AND GROOVE OR BLOCKED PANEL EDGES. PLYWOOD SPANS SHALL CONFORM WITH TABLE 2304.8(1).
16. ALL DIAPHRAGM AND SHEAR WALL NAILING SHALL UTILIZE COMMON NAILS OR GALVANIZED BOX.
17. ALL BOLT HOLES SHALL BE DRILLED 1/32□TO 1/16" OVERSIZED.
18. CONSTRUCTION SHALL COMPLY WITH PART 3 OF TMS 602-13/ACI 530.1-13/ASCE 6-13.
   A. REINFORCEMENT SHALL BE SUPPORTED TO PREVENT DISPLACEMENTS BEYOND THE TOLERANCES PRIOR TO GROUTING. (3.4B OF TMS 602-13/ACI 530.1-13/ASCE 6-13)
   B. CLEANOUTS SHALL BE PROVIDED FOR ALL GROUT POURS OVER 5□4". (3.2 F OF TMS 602-13/ACI 530.1-13/ASCE 6-13)
   C. GROUT LIFT HEIGHT SHALL NOT EXCEED 12□8" WHEN THE MASONRY HAS CURED FOR 4-HRS., THE GROUT SLUMP IS MAINTAINED BETWEEN 10 AND 11IN., AND NO INTERMEDIATE REINFORCED BOND BEAMS ARE PLACED BETWEEN THE TOP AND BOTTOM OF THE POUR HEIGHT. OTHERWISE GROUT LIFT HEIGHT SHALL NOT EXCEED 5□4". (3.5 D OF TMS 602-13/ACI 530.1-13/ASCE 6-13)
   D. ALL CELLS AND SPACED CONTAINING REINFORCEMENT SHALL BE FILLED WITH GROUT.
19. PIPES AND CONDUITS EMBEDDED IN MASONRY SHALL NOT REDUCE THE RE□UIRED STRENGTH. (3.2.2)
20. JOINT REINFORCEMENT USED IN MASONRY EXPOSED TO EARTH OR WEATHER SHALL BE STAINLESS STEEL OR PROTECTED FROM CORROSION BY MILL GALVINAZED, HOT-DIP GALVANIZED, OR EPOXY COATING. (6.4.2 AND 6.4.3)

POST INSTALLED ANCHORS:

1. ANCHOR DIAMETER REFERS TO THE THREAD SIZE FOR THE WEDGE & SHELL CATEGORIES AND TO THE ANCHOR OUTSIDE DIAMETER FOR THE SLEEVE CATEGORY.
2. APPLY PROOF TEST LOADS TO WEDGE & SLEEVE ANCHORS WITHOUT REMOVING THE NUT IF POSSIBLE. IF NOT, REMOVE NUT & INSTALL A THREADED COUPLER TO THE SAME TIGHTNESS OF THE ORIGINAL NUT USING A TOR□UE WRENCH & APPLY LOAD.
3. FOR SLEEVE/SHELL INTERNALLY THREADED CATEGORIES, VERIFY THAT THE ANCHOR IS NOT PREVENTED FROM WITHDRAWING BY A BASEPLATE OR OTHER FIXTURES. IF RESTRAINT IS FOUND, LOOSEN AND SHIM OR REMOVE FIXTURE(S) PRIOR TO TESTING.
4. REACTION LOADS FROM TEST FIXTURES MAY BE APPLIED CLOSE TO THE ANCHOR BEING TESTED, PROVIDED THE ANCHOR IS NOT RESTRAINED FROM WITHDRAWING BY THE FIXTURE(S).
5. SHELL TYPE ANCHORS MUST BE TESTED AS FOLLOWS:
   VISUALLY INSPECT 25□ FOR FULL EXPANSION AS EVIDENCED BY THE LOCATION OF THE EXPANSION PLUG IN THE ANCHOR BODY. PLUG LOCATION OF A FULLY EXPANDED ANCHOR SHOULD BE AS RECOMMENDED BY THE MANUFACTURER, OR, IN THE ABSENCE OF SUCH RECOMMENDATION, AS DETERMINED ON THE JOB SITE FOLLOWING THE MANUFACTURER'S INSTALLATION INSTRUCTIONS, AND□PROOF LOAD 5□ AS INDICATED IN THE TABLE ABOVE, BUT NOT LESS THAN THREE ANCHORS PER DAY FOR EACH DIFFERENT PERSON OR CREW INSTALLING ANCHORS, OR□TEST 50□ OF THE INSTALLED ANCHORS PER 2624(d).
6. TEST E□UIPMENT IS TO BE CALIBATED BY AN APPROVED TESTING LABORATORY IN ACCORDANCE WITH STANDARD RECOGNIZED PROCEDURES.
7. TOR□UE TEST VALUES FOR SHELL TYPE ANCHORS ARE OMMITTED DUE TO LACK OF DATA. TOR□UE TESTING CAN OCCUR ON AN INDIVIDUAL BASIS WHEN TEST PROCEDURES ARE SUBMITTED AND APPROVED BY THE ENFORCEMENT AGENCY. TABULATED VALUES MAY BE FORTHCOMING ONCE THE ENFORCEMENT AGENCY HAS MORE DATA TO EVALUATE THE FEASIBLITY OF STANDARD TOR□UE VALUES.
8. THE FOLLOWING CRITERIA APPLY FOR THE ACCEPTANCE OF INSTALLED ANCHORS:
   A. HYDRAULIC RAM METHOD: THE ANCHOR SHOULD HAVE NO OBSERVABLE MOVEMENT AT THE APPLCABLE TEST LOAD. FOR WEDGE AND SLEEVE TYPE ANCHORS, A PRACTICAL WAY TO DETERMINE OBSERVABLE MOVEMENT IS THAT THE WASHER UNDER THE NUT BECOMES LOOSE.
   B. TOR□UE WRENCH METHOD: THE APPLICABLE TEST TOR□UE MUST BE REACHED WITHIN THE FOLLOWING LIMITS:
      WEDGE OR SLEEVE TYPE: ONE-HALF (1/2) TURN OF THE NUT.
      3/8 IN. SLEEVE ANCHOR ONLY: ONE-□UARTER (1/4) TURN OF THE NUT.
9. TESTING SHOULD OCCUR 24 HOURS MINIMUM AFTER INSTALLATION OF THE SUBJECT ANCHORS.
10. WHEN INSTALLING DRILLED-IN ANCHORS AND/OR POWDER DRIVEN PINS IN EXISTING NON-PRESTRESSED REINFORCED CONCRETE, USE CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE EXISTING REINFORCING BARS. WHEN INSTALLING THEM INTO EXISTING PRESTRESSED CONCRETE (PRE- OR POST- TENSIONED) LOCATE THE PRESTRESSED TENDONS BY USING A NON-DESTRUCTIVE METHOD PRIOR TO INSTALLATION. EXERCISE EXTREME CARE AND CAUTION TO AVOID CUTTING OR DAMAGING THE TENDONS DURING INSTALLATION. MAINTAIN A MINIMUM CLEARANCE OF ONE INCH BETWEEN THE REINFORCEMENT AND THE DRILLED-IN ANCHOR AND/OR PIN.
11. ALL TESTS SHALL BE PERFORMED IN THE PRESENCE OF THE SPECIAL INSPECTOR/INSPECTOR OF RECORD.
12. TEST LOADS:

HARDROCK OR LIGHTWEIGHT CONCRETE						
ANCHOR	WEDGE		SLEEVE		SHELL	
DIA (IN)	LOAD (LBS)	TOR□UE (FT-LBS)	LOAD (LBS)	TOR□UE (FT-LBS)	LOAD (LBS)	TOR□UE (FT-LBS)
1/4	800	10	400	4	1000	-
5/16	-	-	400	5	1400	-
3/8	1100	25	700	10	1800	-
1/2	2000	50	900	20	2700	-
5/8	2300	80	1100	45	3700	-
3/4	3700	150	1400	90	5400	-
1	5800	250	-	-	-	-

CONTRACTOR RESPONSIBILITY NOTE:

GENERAL:
1. EACH CONTRACTOR RESPONSIBLE FOR THE CONSTRUCTION OF A MAIN LATERAL-FORCE-RESISTING SYSTEM, DESIGNATED ON PLANS SHALL SUBMIT A WRITTEN STATEMENT OF RESPONSIBILITY TO DSA AND THE OWNER PRIOR TO THE COMMENCEMENT OF WORK ON THE SYSTEM OR COMPONENT. THE CONTRACTOR'S STATEMENT OF RESPONSIBILITY SHALL CONTAIN THE FOLLOWING:
   A. ACKNOWLEDGMENT OF AWARENESS OF THE SPECIAL RE□UIREMENTS.
   B. ACKNOWLEDGMENT THAT CONTROL WILL BE EXERCISED TO OBTAIN CONFORMANCE WITH THE CONSTRUCTION DOCUMENTS APPROVED BY THE BUILDING OFFICIAL.
   C. PROCEDURES FOR EXERCISING CONTROL WITHIN THE CONTRACTOR'S ORGANIZATION, THE METHOD AND FRE□UENCY OF REPORTING AND THE DISTRIBUTION OF THE REPORTS.
   D. IDENTIFICATION AND □UALIFICATIONS OF THE PERSON(S) EXERCISING SUCH CONTROL AND THEIR POSITION(S) IN THE ORGANIZATION.

VERTICA

STATEMENT OF SPECIAL INSPECTIONS:

1. THE OWNER SHALL EMPLOY ONE OR MORE SPECIAL INSPECTORS TO PROVIDE INSPECTIONS DURING CONSTRUCTION. THE SPECIAL INSPECTOR SHALL BE A □UALIFIED PERSON WHO SHALL DEMONSTRATE COMPETENCE, TO THE SATISFACTION OF THE BUILDING OFFICIAL, FOR INSPECTION OF THE PARTICULAR TYPE OF CONSTRUCTION OR OPERATION RE□UIRING SPECIAL INSPECTION.
2. SPECIAL INSPECTIONS ARE NOT RE□UIRED WHERE THE WORK IS DONE ON THE PREMISES OF A FABRICATOR REGISTERED AND APPROVED TO PERFORM SUCH WORK WITHOUT SPECIAL INSPECTION. APPROVED FABRICATORS MUST SUBMIT A CERTIFICATE OF COMPLIANCE FOR OFFSITE FABRICATIONS SUCH AS STRUCTURAL STEEL, PRECAST CONCRETE, ETC.
3. ALL INSPECTIONS SHALL BE PERFORMED BY INDEPENDENT SPECIAL INSPECTORS. JOB SITE VISITS BY THE STRUCTURAL ENGINEER OR BUILDING OFFICIAL DO NOT CONSTITUTE AND ARE NOT A SUBSTITUTE FOR INSPECTIONS BY A SPECIAL INSPECTOR.
4. ALL INSPECTION REPORTS SHALL BE SUBMITTED TO THE BUILDING OFFICIAL AND SEOR. THE FINAL REPORTS BY THE SPECIAL INSPECTOR(S) MUST CERTIFY THAT THE ENTIRE STRUCTURAL SYSTEM COMPLIES WITH THE APPROVED PLANS AND SPECIFICATIONS.
5. IT IS SOLELY THE CONTRACTOR'S RESPONSIBILITY TO SEE THAT THESE INSPECTIONS ARE PERFORMED.
6. WORK RE□UIRING SPECIAL INSPECTION SHALL BE INSPECTED BY THE SPECIAL INSPECTOR WHO IS PRESENT IN THE AREA WHERE THE WORK IS PERFORMED AND AT THE COMPLETION OF WORK. CONTINUOUS INSPECTION CONSISTS OF FULL-TIME INSPECTION□PERIODIC INSPECTION CONSISTS OF PART-TIME OR INTERMITTENT INSPECTION.
7. THE FOLLOWING SPECIAL INSPECTIONS ARE IN ADDITION TO INSPECTIONS BY THE BUILDING OFFICIAL. THIS LIST IS NOT INTENDED TO BE ALL INCLUSIVE.

TABLE 1705.2.1

RE□UIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	REFERENCED STANDARD[a]	CBC REFERENCE
1. MATERIAL VERIFICATION OF HIGH-STRENGTH BOLTS, NUTS AND WASHERS:				
A. IDENTIFICATION MARKINGS TO CONFORM TO ASTM STANDARDS SPECIFIED IN THE APPROVED CONSTRUCTION DOCUMENTS.	-	X	AISC 360, SECTION A3.3 AND APPLICABLE ASTM MATERIAL STANDARDS	-
B. MANUFACTURER'S CERTIFICATE OF COMPLIANCE RE□UIRED.	-	X	-	-
2. INSPECTION OF HIGH-STRENGTH BOLTING:				
A. SNUG-TIGHT JOINTS.	-	X	AISC 360, SECTION M2.5	-
B. PRETENSIONED AND SLIP-CRITICAL JOINTS USING TURN-OF-NUT WITH MATCH MARKING, TWIST-OFF BOLT OR DIRECT TENSION INDICATOR METHODS OF INSTALLATION.	-	X		
C. PRETENSIONED AND SLIP-CRITICAL JOINTS USING TURN-OF-NUT WITHOUT MATCH MARKING OR CALIBRATED WRENCH METHODS OF INSTALLATION.	X	-		
3. MATERIAL VERIFICATION OF STRUCTURAL STEEL AND COLD-FORMED STEEL DECK:				
A. FOR STRUCTURAL STEEL, IDENTIFICATION MARKINGS TO CONFORM TO AISC 360.	-	X	AISC 360, SECTION A3.1	2203.1
B. FOR OTHER STEEL. IDENTIFICATION MARKINGS TO CONFORM TO ASTM STANDARDS SPECIFIED IN THE APPROVED CONSTRUCTION DOCUMENTS.	-	X	APPLICABLE ASTM MATERIAL STANDARDS	-
C. MANUFACTURER'S CERTIFIED TEST REPORTS.	-	X	-	-
4. MATERIAL VERIFICATION OF WELD FILLER MATERIALS:				
A. IDENTIFICATION MARKINGS TO CONFORM TO AWS SPECIFICATION IN THE APPROVED CONSTRUCTION DOCUMENTS.	-	X	AISC 360, SECTION A3.5 AND APPLICABLE AWS A5 DOCUMENTS	-
B. MANUFACTURER'S CERTIFICATE OF COMPLIANCE RE□UIRED.	-	X	-	-
5. INSPECTION OF WELDING:				
A. STRUCTURAL STEEL AND COLD-FORMED STEEL DECK:				
1) COMPLETE AND PARTIAL JOINT PENETRATION GROOVE WELDS.	X	-	AWS D1.1, AWS D1.8	1705.2.1
2) MULTIPASS FILLET WELDS.	X	-		
3) SINGLE-PASS FILLET WELDS □5/16"	X	-		
4) PLUG AND SLOT WELDS.	X	-		
5) SINGLE-PASS FILLET WELDS □5/16"	-	X		
6) FLOOR AND ROOF DECK WELDS.	-	X	AWS D1.3	-
B. REINFORCING STEEL.				
1) VERIFICATION OF WELDABILITY OF REINFORCING STEEL OTHER THAN ASTM A 706.	-	X	AWS D1.4, ACI318: SECTION 26.6.4.1, 18.2.8, 25.5.7.4	-
2) REINFORCING STEEL RESISTING FLEXURAL AND AXIAL FORCES IN INTERMEDIATE AND SPECIAL MOMENT FRAMES, AND BOUNDARY ELEMENTS OF SPECIAL STRUCTURAL WALLS OF CONCRETE AND SHEAR REINFORCEMENT.	X	-		
3) SHEAR REINFORCEMENT.	X	-		
4) OTHER REINFORCING STEEL.	-	X		
6. INSPECTION OF STEEL FRAME JOINT DETAILS FOR COMPLIANCE.				
A. DETAILS SUCH AS BRACING AND STIFFENING.	-	X	-	1705.2.1
B. MEMBER LOCATIONS.	-	X		
C. APPLICATION OF JOINT DETAILS AT EACH CONNECTION.	-	X		

FOR SI: 1 INCH □25.4 MM
a. WHERE APPLICABLE, SEE ALSO SECTION 1705.12, SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE.

TABLE 1705.3

RE□UIRED VERIFICATION AND INSPECTION OF CONCRETE CONSTRUCTION

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	REFERENCED STANDARD[a]	CBC REFERENCE
1. INSPECT REINFORCEMENT, INCLUDING PRESTRESSING TENDONS, AND VERIFY PLACEMENT	-	X	ACI 318 CH. 20, 25.2, 25.3, 26.5.1-26.5.3	1908.4
2. REINFORCING BAR WELDING: a. VERIFY WELDABILITY OF REINFORCING BARS OTHER THAN ASTM A706□	-	X	AWS D1.4 ACI 318: 3.5.2	-
□ INSPECT SINGLE-PASS FILLET WELDS, MAXIMUM $\frac{5}{16}$"□		X		
□ INSPECT ALL OTHER WELDS.	X			
3. INSPECT ANCHORS CAST IN CONCRETE.	-	X	ACI 318: 17.8.2	-
4. INSPECT ANCHORS POST-INSTALLED IN HARDENED CONCRETE MEMBERS. a. ADHESIVE ANCHORS INSTALLED IN HORIZONTALLY OR UPWARDLY INCLINED ORIENTATIONS TO RESIST SUSTAINED TENSION LOADS.	X		ACI 318: 17.8.2.4	-
□ MECHANICAL ANCHORS AND ADHESIVE ANCHORS NOT DEFINED IN 4.a		X	ACI 318: 17.8.2	
5. VERIFY USE OF RE□UIRED DESIGN MIX.	-	X	ACI 318: CH 19, 26.4.3, 26.4.4	1904.1, 1904.2, 1908.2, 1908.3
6. PRIOR TO CONCRETE PLACEMENT, FRABRICATE SPECIMENS FOR STRENGTH TESTS, PERFORM SLUMP AND AIR CONTENT TEST, AND DETERMINE THE TEMPERATURE OF THE CONCRETE.	X	-	ASTM C172 ASTM C31 ACI 318: 26.4.5, 26.12	1908.10
7. INSPECTION OF CONCRETE AND SHOTCRETE PLACEMENT FOR PROPER APPLICATION TECHNI□UES.	X	-	ACI 318: 26.4.5	1908.6, 1908.7, 1908.8
8. VERIFY MAINTENANCE OF SPECIFIED CURING TEMPERATURE AND TECHNI□UES.	-	X	ACI 318: 26.4.7-26.4.9	1908.9
9. INSPECTION OF PRESTRESSED CONCRETE:				
A. APPLICATION OF PRESTRESSING FORCES.	X	-	ACI 318: 26.9.2.1	-
B. GROUTING OF BONDED PRESTRESSING TENDONS	X	-	ACI 318: 26.9.2.3	-
10. INSPECT ERECTION OF PRECAST CONCRETE MEMBERS.	-	X	ACI 318: CH. 26.8	-
11. VERIFY IN-SITU CONCRETE STRENGTH, PRIOR TO STRESSING OF TENDONS IN POST-TENSIONED CONCRETE AND PRIOR TO REMOVAL OF SHORES AND FORMS FROM BEAMS AND STRUCTURAL SLABS.	-	X	ACI 318: 26.10.2	-
12. INSPECT FORMWORK FOR SHAPE, LOCATION AND DIMENSIONS OF THE CONCRETE MEMBER BEING FORMED.	-	X	ACI 318: 26.10.1(□)	-

FOR SI: 1 INCH □25.4 MM
a. WHERE APPLICABLE, SEE ALSO SECTION 1705.12, SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE.
□. SPECIFIC RE□UIREMENTS FOR SPECIAL INSPECTIONS SHALL BE INCLUDED IN THE RESEARCH REPORT FOR THE ANCHOR ISSUED BY AN APPROVED SOURCE IN ACCORDANCE WITH 17.8.2 ACI 318, OR OTHER □UALIFICATION PROCEDURES. WHERE SPECIFIC RE□UIREMENTS ARE NOT PROVIDED, SPECIAL INSPECTION RE□UIREMENTS SHALL BE SPECIFIED BY THE REGISTERED DESIGN PROFESSIONAL AND SHALL BE APPROVED BY THE BUILDING OFFICIAL PRIOR TO THE COMMENCEMENT OF THE WORK.

TABLE 1705.6

RE□UIRED VERIFICATION AND INSPECTION OF SOILS

VERIFICATION AND INSPECTION TASK	CONTINUOUS DURING TASK LISTED	PERIODICALLY DURING TASK LISTED
1. VERIFY MATERIALS BELOW SHALLOW FOUNDATIONS ARE ADE□UATE TO ACHIEVE THE DESIGN BEARING CAPACITY.	-	X
2. VERIFY EXCAVATIONS ARE EXTENDED TO PROPER DEPTH AND HAVE REACHED PROPER MATERIAL.	-	X
3. PERFORM CLASSIFICATION AND TESTING OF COMPACTED FILL MATERIALS.	-	X
4. VERIFY USE OF PROPER MATERIALS, DENSITIES AND LIFT THICKNESSES DURING PLACEMENT AND COMPACTION OF COMPACTED FILL.	X	-
5. PRIOR TO PLACEMENT OF COMPACTED FILL, OBSERVE SUBGRADE AND VERIFY THAT SITE HAS BEE N PREPARED PROPERLY.	-	X

TABLE 1705A.7

RE□UIRED VERIFICATION AND INSPECTION OF DRIVEN DEEP FOUNDATION ELEMENTS

VERIFICATION AND INSPECTION TASK	CONTINUOUS DURING TASK LISTED	PERIODICALLY DURING TASK LISTED
1. VERIFY ELEMENT MATERIALS, SIZES AND LENGTHS COMPLY WITH THE RE□UIREMENTS.	X	-
2. DETERMINE CAPACITIES OF TEST ELEMENTS AND CONDUCT ADDITIONAL LOAD TESTS, AS RE□UIRED.	X	-
3. OBSERVE DRIVING OPERATIONS AND MAINTAIN COMPLETE AND ACCURATE RECORDS FOR EACH ELEMENT.	X	-
4. VERIFY PLACEMENT LOCATIONS AND PLUMBNESS, CONFIRM TYPE AND SIZE OF HAMMER, RECORD NUMBER OF BLOWS PER FOOT OF PENETRATION, DETERMINE RE□UIRED PENETRATIONS TO ACHIEVE DESIGN CAPACITY, RECORD TIP AND BUTT ELEVATIONS AND DOCUMENT ANY DAMAGE TO FOUNDATION ELEMENT.	X	-
5. FOR STEEL ELEMENTS, PERFORM ADDITIONAL INSPECTIONS IN ACCORDANCE WITH SECT ION 1704A.3.	-	-
6. FOR CONCRETE ELEMENTS AND CONCRETE-FILLED ELEMENTS, PERFORM ADDITIONAL INSPECTIONS IN ACCORDANCE WITH SECTION 1704AA.	-	-
7. FOR SPECIALTY ELEMENTS, PERFORM ADDITIONAL INSPECTIONS AS DETERMINED BY THE REGISTERED DESIGN PROFESSIONAL IN RESPONSIBLE CHARGE.	-	-

OFFICIAL RECORD

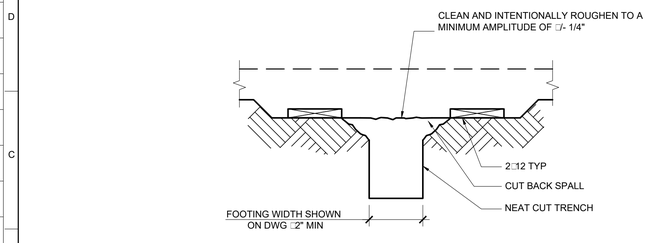
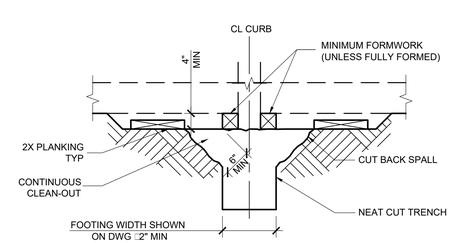
6 TYPICAL ISOLATED E□UIPMENT PAD
SCALE: N.T.S.



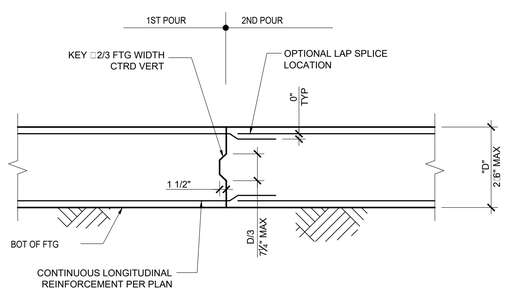
NOTES:
1. FOOTINGS POURED AGAINST EARTH ARE SUBJECT TO APPROVAL OF GEOTECHNICAL ENGINEER.
2. FOOTING WIDTHS SHALL NOT BE MORE THAN 4" WIDER THAN SHOWN ON PLAN.
3. FORMWORK NOT PERMITTED BELOW GRADE.
4. FOUNDATION CONCRETE MAY BE PLACED DIRECTLY INTO NEAT EXCAVATIONS PROVIDED THE FOUNDATION TRENCH WALLS ARE STABLE AS DETERMINED BY THE GEOTECHNICAL ENGINEER. THE 2□12 SHOWN IS MANDATORY TO ENSURE CLEAN EXCAVATIONS IMMEDIATELY PRIOR TO AND DURING THE PLACING OF CONCRETE.
5. STAKES NOT PERMITTED IN THE FOOTING AREA.

7 FOOTING POURED AGAINST EARTH
SCALE: N.T.S.



NOTES:
1. FOOTINGS POURED AGAINST EARTH ARE SUBJECT TO APPROVAL OF GEOTECH. ENGR.
2. FOOTING WIDTHS SHALL NOT BE MORE THAN 4" WIDER THAN SHOWN ON PLAN.
3. FORMWORK NOT PERMITTED BELOW GRADE UNLESS FULLY FORMED.
4. FOUNDATION CONCRETE MAY BE PLACED DIRECTLY INTO NEAT EXCAVATIONS PROVIDED THE FOUNDATION TRENCH WALLS ARE STABLE AS DETERMINED BY THE GEOTECHNICAL ENGINEER. THE MINIMUM FORMWORK SHOWN ON THE DRAWINGS IS MANDATORY TO ENSURE CLEAN EXCAVATIONS IMMEDIATELY PRIOR TO AND DURING THE PLACING OF CONCRETE.
5. CONT CLEAN-OUT STAKES NOT PERMITTED IN THE FTG AREA.
6. AFTER CONCRETE HAS SET, REMOVE LAITANCE AND SCUM.

8 FOOTING POURED AGAINST EARTH
SCALE: N.T.S.



NOTES:
1. PROVIDE ADE□UATE SUPPORT FOR LONGITUDINAL REINF WITHIN 6" OF JT USING FTG TIES, VERT DOWELS OR OTHER MEANS.
2. SECTIONS SHOWN ARE AT CENTER OF FTG IN LONGITUDINAL DIRECTION.

WALL ELEVATION

NOTES:
1. SEE PLANS FOR TYPICAL AND ADDITIONAL REINFORCEMENT.
2. FOR OPENINGS 36" OR LARGER IN WIDTH USE FULL HEIGHT JAMB BARS. EXTEND TO TOP OF WALL AT UPPER/SINGLE STORY, 48D MIN PAST FLOOR AND INTO FOOTING.
3. AT OPENINGS LESS THAN 36" IN WIDTH, EXTEND JAMB BARS 48D PAST EDGE OF OPENING.
4. FOR MINOR OPENINGS THAT DO NOT INTERRUPT TYPICAL REINF, ARE NO LARGER THAN 24" S□, AND ARE AT LEAST 24" FROM ADJACENT OPENINGS OR WALL EDGE, NO ADDITIONAL REINF IS RE□D UNO ON PLANS.
5. USE A TYPICAL LAP SPLICE UNO ON PLANS.
6. WHERE FULL EXTENSION IS NOT POSSIBLE, EXTEND BARS AS FAR AS POSSIBLE AND USE A STD HOOK.
7. EXTEND LINTEL AND SILL BARS 48D MINIMUM PAST EDGE OF OPENING.
8. AT FULL HEIGHT JAMB BARS, THE WEB AND SHELL MAY BE REMOVED TO FACILITATE INSTALLATION. THE CONTRACTOR SHALL ENSURE THAT GROUTING WILL NOT BE COMPROMISED IF THIS OPTION IS USED.

CONTROL LEGEND

1. ALL ITEMS INDICATED IN THIS LEGEND ARE NOT NECESSARILY USED ON THE DRAWINGS.
2. ALL CONDUIT, LINE VOLTAGE WIRING & DEVICES TO BE PROVIDED UNDER DIVISION 16

SYMBOL & ABBREVIATION	DESCRIPTION
(E)	ITEM TO BE FURNISHED AND INSTALLED UNDER ELECTRICAL DIVISION.
MS	MAGNETIC STARTER
NO	NORMALLY OPEN ELECTRICAL CONTACT
NC	NORMALLY CLOSED ELECTRICAL CONTACT
CR	ELECTRICAL COIL RELAY
OVL	OVERLOAD PROTECTION
PL	PILOT LIGHT
	ON – OFF SWITCH
H O A	HAND – OFF – AUTOMATIC SWITCH
DISC. S	DISCONNECT SWITCH
	ELECTRIC SWITCHING DEVICE
FS	FLOW SWITCH
TS	TEMPERATURE SWITCH
	FLOAT SWITCH
TD	TIME DELAY SWITCH
	SENSOR(TEMPERATURE, HUMIDITY ETC.)
P	PRESSURE SENSOR
SD.	SMOKE DETECTOR (SWITCH ACTIVATED BY)
OVL	SINGLE PHASE MOTOR W/BUILT-IN OVERLOAD PROTECTION
EM	ON EMERGENCY POWER
MCC MCC	MOTOR CONTROL CENTER
CP CP	CONTROL PANEL
NC.C.NO.	NORMALLY CLOSED. COMMON. NORMALLY OPEN
FMS	FACILITY MANAGEMENT SYSTEM
PC	PROGRAMMABLE CONTROLLER
AO, AI	ANALOG OUTPUT, ANALOG INPUT
DO, DI	DIGITAL OUTPUT, DIGITAL INPUT
	LINE VOLTAGE
	LOW VOLTAGE
	SLASHES INDICATE NO. OF WIRES
A	ACTUATOR FOR VALVE OR DAMPER
A	CONTROL AIR
CB	CIRCUIT BREAKER
U.P.S	UNINTERRUPTED POWER SUPPLY
U.O.N	UNLESS OTHERWISE NOTED

GENERAL NOTES

1. SEE ARCHITECTURAL REFLECTED CEILING PLANS FOR EXACT LOCATION OF DIFFUSERS, REGISTERS & ACCESS PANELS & OTHER CEILING MOUNTED DEVICES.
2. ARROWS AT CEILING DIFFUSERS INDICATE THE AIR THROW PATTERN.
3. INSTALLATION OF DUCTWORK AND PIPING SHALL BE COORDINATED WITH OTHER TRADES.
4. CONTRACTOR SHALL VISIT JOB SITE AND VERIFY CONDITIONS, LOCATIONS AND DIMENSIONS BEFORE STARTING ANY WORK.
5. DUCTS TO COMPLY WITH THE CURRENT C.M.C GUIDELINES.
6. A/C INSTALLER TO PROVIDE SHOP DRAWINGS FOR EXACT SIZES AND LOCATIONS OF EQUIPMENT BASES, FRAMED OPENINGS, SLEEVED OPENINGS AND EQUIPMENT SUPPORTS OR HANGERS.
7. A/C INSTALLER SHALL BALANCE AIR SYSTEM TO THE CFM CAPACITY AS INDICATED ON FLOOR PLAN.
8. LINED DUCT AND PLENUM SIZES SHOWN ARE NET INSIDE DIMENSIONS. INCREASE OUTSIDE DIMENSIONS TO COMPENSATE FOR LINER.
9. CONCEALED BUILDING SPACES USED AS RETURN AIR PLENUMS SHALL BE IN COMPLIANCE WITH CURRENT C.M.C REQUIREMENTS.
10. APPLIANCES DESIGNED TO BE IN FIXED POSITION SHALL BE SECURELY FASTENED IN PLACE PER SMACNA GUIDE LINES AND GOVERNING CODES.
11. POWER ON SITE SHALL BE VERIFIED BEFORE ORDERING EQUIPMENT.
12. PROVIDE IDENTIFICATION LABELS FOR ALL HVAC EQUIPMENT PER CODE & SPECIFICATIONS.

MECHANICAL LEGEND

ALL ITEMS INDICATED IN THIS LEGEND ARE NOT NECESSARILY USED ON THE DRAWINGS.

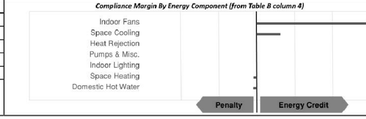
C. PRIORITY PLAN CHECK/ INSPECTION ITEMS (in order of highest to lowest TDV energy savings)

1st	Indoor Fans: Check envelope and mechanical
2nd	Space Cooling: Check envelope and mechanical
3rd	Heat Rejection: Check envelope and mechanical
4th	Pumps & Misc.: Check mechanical
5th	Indoor Lighting: Check lighting
6th	Space Heating: Check envelope and mechanical
7th	Domestic Hot Water: Check mechanical

Compliance Margin By Energy Component (from Table B column 4)



D. EXCEPTIONAL CONDITIONS
This project includes Domestic Hot Water in the analysis. Please verify that Domestic Hot Water is included in the design for the permitted scope of work.

E. HERS VERIFICATION
This Section Does Not Apply

ENVELOPE MANDATORY MEASURES: NONRESIDENTIAL — ENV-MM

Project Name	Date
Granada Hills Pool Renovation	*6/27/2018*

DESCRIPTION

Building Envelope Measures:

§110.8(a):	Installed insulating material shall have been certified by the manufacturer to comply with the California Quality Standards for insulating material, Title 20 Chapter 4, Article 3.
§110.8(c):	All Insulating Materials shall be installed in compliance with the flame spread rating and smoke density requirements of Sections 2602 and 707 of Title 24, Part 2.
§110.8(g):	Heated slab floors shall be insulated according to the requirements in Table 110.8-A.
§110.7(a):	All Exterior Joints and openings in the building that are observable sources of air leakage shall be caulked, gasketed, weatherstripped or otherwise sealed.
§110.6(a):	Manufactured fenestration products and exterior doors shall have air infiltration rates not exceeding 0.3 cfm/ft.² of window area, 0.3 cfm/ft.² of door area for residential doors, 0.3 cfm/ft.² of door area for nonresidential single doors (swinging and sliding), and 1.0 cfm/ft.² for nonresidential double doors (swinging).
§110.6(a):	Fenestration U-factor shall be rated in accordance with NFRC 100, or the applicable default U-factor.
§110.6(a) :	Fenestration SHGC shall be rated in accordance with NFRC 200, or NFRC 100 for site-built fenestration, or the applicable default SHGC.
§110.6(b):	Site Constructed Doors, Windows and Skylights shall be caulked between the unit and the building, and shall be weatherstripped (except for unframed glass doors and fire doors).
§120.7(a):	The opaque portions of the roof/ceiling that separates conditioned spaces from unconditioned spaces or ambient air shall meet the applicable U-Factor requirements as follows: **Metal Building-** The weighted average U-factor of the roof assembly shall not exceed 0.098. **Wood Framed and Others-** The weighted average U-factor of the roof assembly shall not exceed 0.075.
§120.7(b):	The opaque portions of walls that separate conditioned spaces from unconditioned spaces or ambient air shall meet the applicable U-factor as follows: **Metal Building-** The weighted average U-factor of the wall assembly shall not exceed 0.113. **Metal Framed-** The weighted average U-factor of the wall assembly shall not exceed 0.151. **Light Mass Walls-** A 6 inch or greater Hollow Core Concrete Masonry Unit shall have a U-factor not to exceed 0.440. **Heavy Mass Walls-** An 8 inch or greater Hollow Core Concrete Masonry Unit shall have a U-factor not to exceed 0.690. **Wood Framed and Others-** The weighted average U-factor of the wall assembly shall not exceed 0.110. **Spandrel Panels and Opaque Curtain Wall-** The weighted average U-factor of the spandrel panels and opaque curtain wall assembly shall not exceed 0.280. **Demising Walls-**. The opaque portions of framed demising walls shall meet the requirements of Item A or B below: A. Wood framed walls shall be insulated to meet a U-factor not greater than 0.099. B. Metal Framed walls shall be insulated to meet a U-factor not greater than 0.151.
§120.7(c):	The opaque portions of floors and soffits that separate conditioned spaces from unconditioned spaces or ambient air shall meet the applicable U-Factor requirements as follows: **Raised Mass Floors-** Shall have a minimum of 3 inches of lightweight concrete over a metal deck or the weighted average U-factor of the floor assembly shall not exceed 0.269. **Other Floors-**The weighted average U-factor of the floor assembly shall not exceed 0.071.

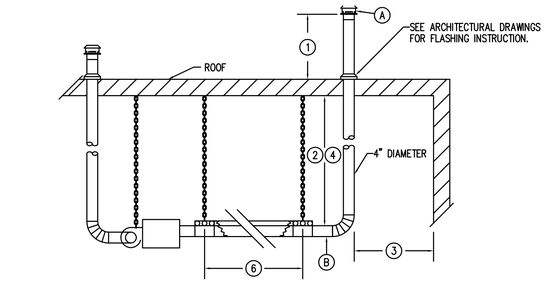
THRU-BOLT PERPENDICULAR TO WOOD MEMBER DETAILS

SCALE NONE | 8



1. 2'-0" MINIMUM ABOVE OR BEYOND THE HIGHEST STRUCTURE OR SURFACE WITHIN 10' OF THE VENT. PAY PARTICULAR ATTENTION TO SLOPED ROOF & THOSE WITH PARAPETS.
2. 15" MINIMUM.
3. 12" MINIMUM.
4. COMBUSTION AIR OR VENT PIPE SHALL BE PROVIDED & MUST NOT EXCEED AN EQUIVALENT OF 35 LINEAR FEET FOR 40 TO 125 MBTUH OR 40 LINEAR FEET FOR 130 TO 200 MBTUH. NO MORE THAN TWO 90° ELBOWS MAY BE USED. A 90° ELBOW IS EQUIVALENT TO 10 LINEAR FEET.
5. 20' OF RADIANT TUBE.
6. 10' TO 70' OF RADIANT TUBE.
7. A DILUTER IS FACTORY SUPPLIED INCREASING THE VENT SIZE FROM 4" TO 5". THE DILUTER IS 12" LONG.
- A. 4" ID VENT CAP FOR ROOF EXHAUST.
- B. 4" ID VENT PIPE CONNECTOR FOR SINGLE WALL PIPE–12" LONG. 4" ID VENT PIPE CONNECTOR FOR DOUBLE WALL PIPE–12" LONG.

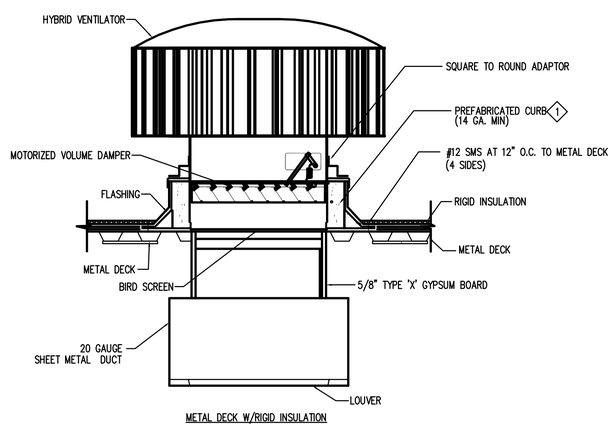
TYPICAL TOILET EXHAUST FAN INSTALLATION (TTEFI)

SCALE NONE | 5



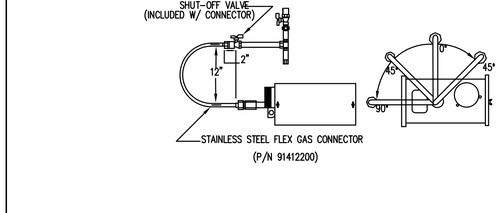
METAL DECK W/RIGID INSULATION

NOTE:
- SEE ARCH. DWG. FOR FLASHING & COUNTERFLASHING DETAILS

1 CONTRACTOR IS RESPONSIBLE TO FIELD MEASURE THE ROOF SLOPE AND ORDER THE TAPERED PITCHED CURB FROM MANUFACTURER.

HYBRID ROOF VENTILATOR (EDMONDS FAN) EF-6 TO EF-8

SCALE NONE | 6

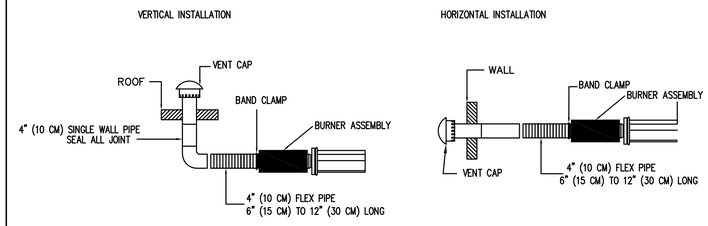


GAS PIPE WORK MUST BE INSTALLED AND TESTED IN ACCORDANCE WITH UNITED STATES ANSIZ223.1/NFPA54 LATEST ADDITION and CANADA–CNA/CSA–B149.1 AND B149.2
A) I NSTALL THE FLEX GAS CONNECTOR AS SHOWN. THE FLEX GAS CONNECTOR ACCOMMODATES EXPANSION OF THE HEATING SYSTEM AND ALLOWS FOR EASY INSTALLATION AND SERVICE OF THE BURNER.
B) SHUT–OFF VALVE MUST BE PARALLEL TO BURNER INLET. THE 2" (5CM) DISPLACEMENT SHOWN IS FOR THE COLD CONDITION. THIS DISPLACEMENT MAY REDUCE WHEN THE SYSTEM IS FIRED.

BUREAU OF ENGINEERING OFFICIAL RECORD

GAS CONNECTION

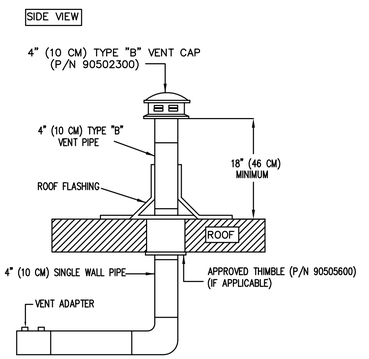
SCALE NONE | 1



A) REFER TO INSTALLATION, OPERATION AND SERVICE MANUAL FOR PROPER DESIGN.
B) FOR AN OUTSIDE AIR SUPPLY, A 4" (10 CM) O.D. SINGLE WALL PIPE MUST BE ATTACHED TO THE HEATER. THE DUCT MAY BE UP TO 45 FT. (13.7 M) MAXIMUM LENGTH OR 2 FT. (60 CM) MINIMUM LENGTH WITH NO MORE THAN 2 ELBOWS.
C) WHEN HEATER EXTENSION PACKAGES ARE USED, THEY DIRECTLY EFFECT MAXIMUM VENT LENGTH. REFER TO INSTALLATION, OPERATION AND SERVICE MANUAL FOR REQUIREMENTS.
D) THE OUTSIDE AIR TERMINAL MUST BE SECURELY FASTENED TO THE OUTSIDE WALL.
E) FOR THE OUTSIDE AIR TERMINAL, USE METALBESTOS #31267 (RG P/N 90502300), OR ACME#104, OR EQUIVALENT.

OUTSIDE COMBUSTION AIR SUPPLY

SCALE NONE | 2



A) REFER TO INSTALLATION, OPERATION AND SERVICE MANUAL FOR PROPER DESIGN.
B) TYPE "B" VENT MATERIALS MUST BE USED OUTDOORS.
C) AN INSULATING THIMBLE (P/N 90505600) IS REQUIRED TO PASS THROUGH COMBUSTIBLE STRUCTURES.
D) 4" (10 CM) O.D. VENT PIPE, MAXIMUM 45 FT.(13.7M) IN LENGTH MAY BE USED AS SHOWN ABOVE WITH AN APPROVED VENT CAP (P/N 90502300).NOTE: CONDENSATE MAY DEVELOP WHEN LONG VENT PIPES ARE USED. IT IS RECOMMENDED THAT THE PIPE LENGTH SHOULD BE LESS THAN 20' (6M).
E) WHEN HEATER EXTENSION PACKAGES ARE USED, THEY DIRECTLY EFFECT MAXIMUM VENT LENGTH. REFER TO INSTALLATION, OPERATION AND SERVICE MANUAL FOR REQUIREMENTS.

PLUMBING MATERIALS

1. WATER PIPING: TYPE "L" COPPER WITH WROUGHT COPPER FITTINGS, WITH LEAD FREE SOLDER.
2. WASTE AND VENT PIPING: SERVICE WEIGHT CAST IRON PIPE WITH STAINLESS STEEL ON–HUB COUPLINGS. VENT PIPING 2" AND SMALLER MAY BE SCHEDULE 40 GALVANIZED STEEL WITH THREADED FITTINGS.
3. GAS PIPING: SCHEDULE 40 BLACK STEEL WITH 150 POUND MALLEABLE IRON SCREWED FITTINGS FOR 2½" AND SMALLER. SCHEDULE 40 BLACK STEEL WITH WELDED FITTINGS FOR 3" AND LARGER.
4. CONDENSATE DRAIN PIPING: TYPE "M" COPPER WITH WROUGHT COPPER FITTINGS.

GENERAL NOTES

1. FOR EXACT LOCATION AND HEIGHT OF PLUMBING FIXTURES SEE ARCHITECTURAL PLANS AND ELEVATIONS.
2. COMPLY WITH ALL APPLICABLE CODES, PERTINENT REGULATIONS OF ALL AGENCIES HAVING JURISDICTION.
3. SEE CONTRACT SPECIFICATIONS FOR INSTALLATION, MATERIALS, TESTING, CLEANING AND MISCELLANEOUS GENERAL REQUIREMENTS.
4. CONTRACTOR TO COORDINATE ALL WORK WITH OTHER TRADES PRIOR INSTALLATION OF PIPING AND EQUIPMENT.
5. PENETRATIONS THROUGH RATED WALLS AND FLOORS TO BE SEALED WITH MATERIAL CAPABLE OF WITHSTANDING FLAMES AND HOT GASES WHEN SUBJECTED TO THE TESTING STANDARD REQUIREMENT ASTM–E–814 FOR FIRE STOPS.
6. INSTALL CLEAN OUTS AS REQUIRED BY THE 2016 UPC SECTION 707.0 AND 719.0
7. ALL BURRED ENDS OF DOMESTIC WATER PIPING AND TUBING SHALL BE REAMED TO THE FULL BORE OF THE PIPE OR TUBE AND ALL CHIPS SHALL BE REMOVED. TOOLS USED TO CUT OR REAM PIPE SHALL BE KEPT FREE OF OIL OR GREASE AND WHERE SUCH CONTAMINATION HAS OCCURRED THE ITEMS AFFECTED SHALL BE REWORKED AND RINSED.
8. ALL UTILITIES TO TERMINATE 5'–0" FROM BUILDING LINE. FOR CONTINUATION SEE CIVIL DRAWINGS.
9. STORM & OVERFLOW DRAIN PIPE SIZES BASED ON RAINFALL OF 2" PER HOUR.
10. NO CONCEALED SLIP JOINT CONNECTIONS WILL BE PERMITTED AT FIXTURES.
11. PIPE INSTALLED PIERCES OR SWEEPS DOWN THROUGH CONCRETE FOOTING SHALL BE DOUBLE WRAPPED WITH 1/8 THICK SHEET CLOSED CELL POLYETHYLENE.
12. FURNISH & INSTALL MANUFACTURED WATER HAMMER ARRESTOR AT ALL QUICK–CLOSING VALVES, OUTLETS AND DEVICES.
13. ANY DEVIATION FROM DWGS. THAT REQUIRE PENETRATION THROUGH SHEAR WALL SHALL BE SUBMITTED TO THE ARCHITECT FOR REVIEW. THE ADDITIONAL COST OF ANY REINFORCEMENT TO THE SHEAR WALLS AS A RESULT OF DEVIATIONS FROM THE PLUMBING DWGS. SHALL BE AT THE CONTRACTOR'S EXPENSE.
14. ALL EQUIPMENT ANCHORAGE SHALL BE DETAILED ON DRAWINGS AND SHALL CONFORM TO 2016 CBC SECTION 1632A AND TABLE 16 A–O.
15. HEIGHT OF FIXTURE SHALL BE VERIFIED WITH ARCHITECT, THRU PROJECT MANAGER, PRIOR TO INSTALLATION.
16. POTABLE WATER TO ALL HOSE BIBBS. HOSE BIBB SHALL BE PROVIDED WITH VACUUM BREAKER AND SHUTOFF VALVES.
17. PLUMBING MATERIAL AND INSTALLATION SHALL BE ACCORDANCE WITH TITLE 24, CAC PART 5 2016, CALIFORNIA PLUMBING CODE.
18. ALL VALVES, TRAP PRIMER, WATER HAMMER ARRESTOR AND COCKS SHALL BE LOCATED TO BE READILY ACCESSIBLE. WHERE VALVES ARE INSTALLED WITHIN, OR BEHIND WALLS, PARTITIONS OR CEILINGS OR CEILINGS, AN ACCESS PANEL SHALL BE INSTALLED.
19. TRAP PRIMERS SERVING MORE THAN ONE FIXTURE SHALL BE PROVIDE WITH A DISTRIBUTION UNIT AND A SEPARATED LINE SHALL BE PROVIDED TO EACH FIXTURE FROM THE TRAP PRIMER.
20. ALL EXISTING STORM DRAIN LINES SHALL BE CLEANED FOR PROPER FUNCTION.
21. REPLACE ALL EXISTING CLEAN OUT COVER AND CAP.
22. ALL SHUT OFF VALVE (SOV) INSIDE THE BUILDING SHOULD BE BALL VALVE.
23. BEFORE BEGINNING ANY WORK, CONTRACTOR SHALL THOROUGHLY EXAMINE (VERIFY) ALL EXISTING CONDITIONS, POINTS OF CONNECTIONS, SIZES, LOCATION AND AVAILABILITY OF EXISTING UTILITIES.
24. CONTRACTOR SHALL PROVIDE FINAL CONNECTIONS FOR ALL EQUIPMENT AND FIXTURES, INCLUDING TRAPS, TRIM, SHUTOFF VALVES, STOPS, APPROVED BACK FLOW PREVENTERS.
25. COORDINATE AND VERIFY EXACT LOCATION, SIZE, POINTS OF CONNECTION AND INVERT ELEVATIONS OF UTILITY SERVICE PIPING BEFORE TRENCHING OR INSTALLATION.
26. COORDINATE WITH ARCHITECTURAL DRAWINGS FOR WALL AND PARTITION CONSTRUCTION AND THICKNESS WHERE PLUMBING PIPING OR EQUIPMENT IS INDICATED.
27. THE LOCATION AND ELEVATION OF ALL PLUMBING PIPING SHALL BE VERIFIED AND COORDINATED WITH ALL OTHER TRADES, STRUCTURAL CONDITIONS AND BUILDING CONSTRUCTION, PRIOR TO START OF INSTALLATION.
28. ALL PLUMBING FIXTURES SHALL MEET THE FLOW REQUIREMENTS SPECIFIED IN THE LOS ANGELES PLUMBING CODE (LAPC 401.3)
29. a. ALL FIXTURES, EQUIPMENT, PIPING, AND MATERIALS SHALL BE LISTED.
    b. ALL FAUCETS IN PUBLIC RESTROOMS SHALL BE SELF–CLOSING OR SELF–CLOSING METERING FAUCETS.
    c. PUBLIC LAVATORIES SHALL HAVE CONTROLS TO LIMIT THE WATER TEMPERATURE TO 110°F.
    d. WATER PIPE AND FITTINGS WITH A LEAD CONTENT WHICH EXCEEDS 0.25% SHALL BE PROHIBITED IN SYSTEMS CONVEYING POTABLE WATER.
    e. SHOWERS SHALL BE INSTALLED WITH INDIVIDUAL TEMPERING VALVES.
    f. NEW PLUMBING FIXTURES AND FITTINGS SHALL NOT BE EXCEED THE MAXIMUM ALLOWABLE FLOW RATES SPECIFIED IN SECTION 5.303.3.

SH-2	SHOWER	*	2	*	1-1/2	3/4	3/4	*	*	WALL HUNG	REGULAR	ACORN 450 SERIES	1. FIXTURE: ACORN APEX SURFACE-MOUNTED SHOWER, 16 GAGE, TYPE 304 STAINLESS STEEL WITH SATIN FINISH. SHOWER HEAD IS SOLID BRASS, TRIPLE CHROME-PLATED AND INCLUDE BUILT-IN 1.6 GPM FLOW RESTRICTOR, SELF-CLEANING, ADJUSTABLE SPRAY PATTERN FROM A COARSE STREAM TO A FINE MIST.	
SS-1	SERVICE SINK	3	3	3	1-1/2	3/4	3/4	*	3	CORNER SINK	-	ACORN TERRAZO-WARE TCR-24" OR EQUAL	1. FIXTURE: 24" PRECAST TERRAZZO COMPOSED OF MARBLE CHIPS CAST IN PORTLAND CEMENT CORNER MOP SINK. ALL EXPOSED SURFACES SHALL BE GROUND AND SEALED. INCLUDED INTEGRAL DRAIN WITH STAINLESS STEEL STRAINER FOR 3" DRAIN. 2. FAUCET: T&S B-0655-01, WALL FAUCET WITH VACUUM BREAKER, 6"WRIST ACTION HANDLE, ADJ. INLETS WITH STOPS, WALL BRACE, 3/4" GARDEN HOSE THREAD OUTLET. 3. DRAIN: K-16 FLOOR MOP SINK REPLACEMENT DRAIN.	
DF-1	DRINKING FOUNTAIN	1	1	2	1-1/2	1/2	*	*	1-1/4 x 1-1/2	OUTDOOR WALL MOUNT HI-LOW	ADA	HAWS 1117LN OR EQUAL	1. FIXTURE: WALL MOUNTED, ONE PIECE 14 GAGE TYPE 304 STAINLESS STEEL DUAL HEIGHT (HIGH, LOW) DRINKING FOUNTAIN WITH ADJUSTABLE FLOW PUSH BUTTON ACTIVATED CARTRIDGE, INTEGRAL 1/4"THICK STAINLESS STEEL BACK PLATE AND 1-1/4"NPT TRAP. POLISHED CHROME-PLATED BRASS BUBBLER HEAD WITH INTEGRAL BASIN SHANK. 2. CARRIER: HAWS NO. 6717 WALL SUPPORT MOUNTING PLATE.	PROVIDE WATER FILTER SYSTEM, PROVIDE BOTTLE FILLER MURDOCK MODEL BF1S AND ACCESSORIES.
DF-2	DRINKING FOUNTAIN	1	1	2	1-1/2	1/2	*	*	1-1/4 x 1-1/2	OUTDOOR WALL MOUNT SINGLE	ADA	HAWS 1107L-BP7 OR EQUAL	1. FIXTURE: WALL MOUNTED, ONE PIECE 14 GAGE TYPE 304 STAINLESS STEEL SINGLE BUBBLER DRINKING FOUNTAIN WITH ADJUSTABLE FLOW PUSH BUTTON ACTIVATED CARTRIDGE, INTEGRAL 1/4"THICK STAINLESS STEEL BACK PLATE AND 1-1/4"NPT TRAP. POLISHED CHROME-PLATED BRASS BUBBLER HEAD WITH INTEGRAL BASIN SHANK. 3. CARRIER: HAWS NO. 6700 WALL SUPPORT MOUNTING PLATE.	
FD-1	FLOOR DRAIN	*	*	2	1-1/2	*	*	*	2			J.R. SMITH NO. 2005Y-A-U-P050	1. FLOOR DRAIN WITH DUCO CAST IRON BODY, FLASHING COLLAR, PROTECTOR CAP AND NICKEL BRONZE ADJUSTABLE STRAINER HEAD WITH SECURED SQUARE HOLE AND VANDAL PROOF ROUND GRATE. TRAP PRIMER CONNECTION.	-
FD-2	FLOOR DRAIN	*	*	4	1-1/2	*	*	*	4			J.R. SMITH NO. 2005Y-A-U-P050	1. FLOOR DRAIN WITH DUCO CAST IRON BODY, FLASHING COLLAR, PROTECTOR CAP AND NICKEL BRONZE ADJUSTABLE STRAINER HEAD WITH SECURED SQUARE HOLE AND VANDAL PROOF ROUND GRATE. TRAP PRIMER CONNECTION.	-
TP-1	TRAP PRIMER	*	*	*	*	1/2	*	*	*		ALL FLOOR DRAINS AND FLOOR SINK	MIFAB MR-500-NPB OR EQUAL	1. AUTOMATIC, MULTI-TRAP PRIMER, CAST BRONZE WITH ACCESS PANEL. OPERATED WITH PRESSURE DROP OF 3 PSI.	PROVIDE IN ACCESS PANEL.
TP-2	TRAP PRIMER	*	*	*	*	1/2	*	*	*		ALL FLOOR DRAINS @ REMOTE AREA	PPP INC PRIME-RITE MPB-500-12V OR EQUAL	1. PPP INC. PRIME RITE AUTOMATIC VALVE 1/2" IN AND OUT. MINI PRIME, BATTERY OPERATED TRAP PRIMER.	PROVIDE IN ACCESS PANEL.
WHA-1	WATER HAMER ARESTOR	*	*	*	*	*	*	*	*			J.R. SMITH, HYROTROLS OR PPP INC.		PROVIDE IN ACCESS PANEL.
FS-1	FLOOR SINK	1	*	3	1-1/2	*	*	*	3			J.R. SMITH NO. 3140Y OR ZURN Z-1901	1. FLOOR SINK WITH DOME BOTTOM STRAINER. FLASHING CLAMP IN MEMBRANE FLOORS, OPEN TOP AND TRAP PRIMER	
HB-1	HOSE BIBB	*	1	*	*	3/4 / 1	*	*	*	WALL FLANGE AND DOOR	TOILET ROOM /EXTERIOR	ACORN NO. 8151 OR EQUAL	1. RECESSED WALL HOSE BOX WITH 16 GAGE STAINLESS STEEL AND SATIN FINISHED WALL FLANGE. SCREWDRIVER STOP, VANDAL RESISTANT LOCK SHIELD BONNET AND REMOVABLE LOOSE KEY HANDLE. VACUUM BREAKER AND CHROME FINISH BRASS CASTING VALVE WITH ONE PIECE CONSTRUCTION BOX WITH VANDAL RESISTANT LOCKING COVER.	
HB-2	HOSE BIBB FOR EXTERIOR FLOOR INSTALLATION	*	1	*	*	1	*	*	*	GROUND HYDRANT	POOL DECK NEAR LIFT/ EXTERIOR	ACORN 8171-SSLF OR EQUAL	1. RECESSED HOSED BOX FROM 18 GAGE, TYPE 304 STAINLESS STEEL, WITH FOUR STAINLESS STEEL CLIPS FOR ANCHORING TO THE FLOOR, FOR FLUSH WITH FLOOR OVER ONE CUBIC FOOT OF PEA GRAVEL. VALVE AND STOP BODY IS CAST BRONZE WITH EXPOSED PARTS CHROME-PLATED. VALVE SHALL BE CARTRIDGE-OPERATED TYPE WITH VANDAL-RESISTANCE LOCKSHIELD BONNETS AND A REMOVABLE WHEEL HANDLE. PROVIDE VACUUM BREAKER.	PROVIDE SERVICE SHUT OFF VALVE.
EEW-1	EMERGENCY SHOWER & EYE WASHER (1)	*	6	*	*	1	*	*	INT				1. SEE SCHEDULE ON AQUATICS DRAWINGS.	PROVIDE MIXING VALVE.
S-1	COUNTER MOUNTED SINK	2	2	2	1-1/2	3/4	3/4	*	2	DROP-IN TYPE	-		1. SEE AQUATIC DWG. MR-6 FOR DETAILS.	
RD-1	ROOF DRAIN	*	*	*	*	*	*	*	*	-		JR SMITH 1010Y-ERC-CID OR EQUAL	1. DUCO CAST IRON BODY WITH COMBINED FLASHING CLAMP AND GRAVEL STOP WITH POLYETHYLENE DOME.	
RD-2	OVERFLOW DRAIN	*	*	*	*	*	*	*	*	-		JR SMITH 1080Y-ERC-CID OR EQUAL	1. DUCO CAST IRON BODY, FLASHING CLAMP AND GRAVEL STOP WITH POLYETHYLENE DOME, AND CAST IRON WATER DAM. TERMINATE ON A WALL AT MINIMUM 10" ABOVE FINISHED GRADE.	

(1) REFER TO AQUATICS DWGS FOR ADDITIONAL INFO.

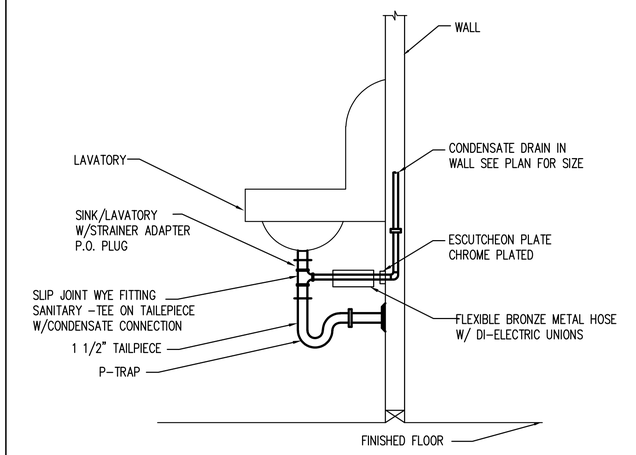
NOTE:

DRAIN PIPE SAME SIZE AS RELIEF VALVE

1. PROVIDE BY PLUMBING CONTRACTOR, SEE SCHDULE P0.12 FOR RECIRCULATING PUMPS WITH 365 DAYS PROGRAMMABLE TIMER. (TO MAINTAIN THE HOT WATER TEMPERATURE IN THE PIPING, SET THE LENGTH OF THE TIMING CYCLE AS REQUIRED.)
2. PROVIDE WITH DRAIN CONNECTION, VALVE & PLUG.
3. CONDENSATE TRAP WITH CD DRAIN PER MANUFACTURER'S INSTALLATION MANUAL

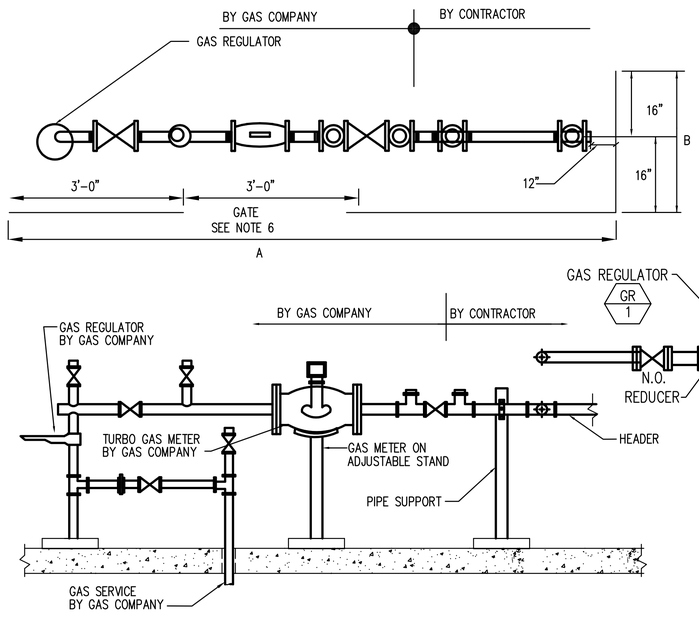
DOMESTIC WATER HEATER PIPING SCHEMATIC

SCALE NOT TO SCALE 3



CONDENSATE DRAIN CONNECT TO FIXTURE TAILPIECE

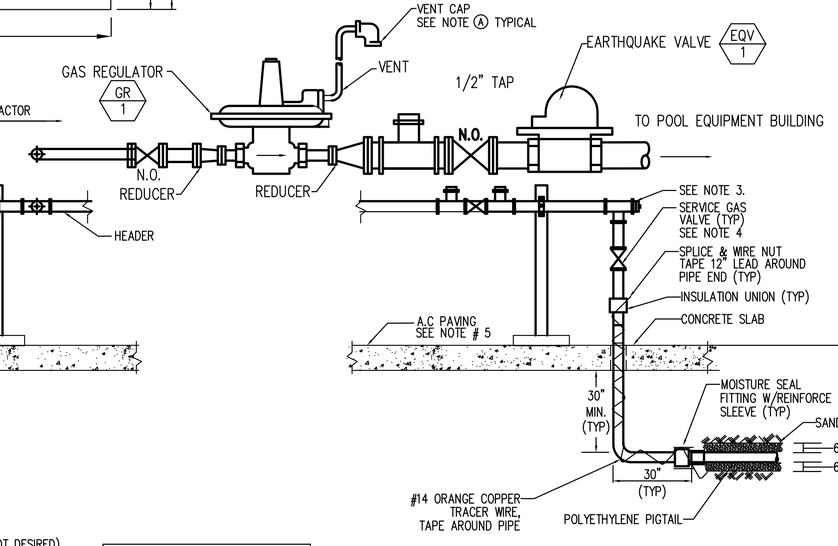
SCALE NOT TO SCALE 1

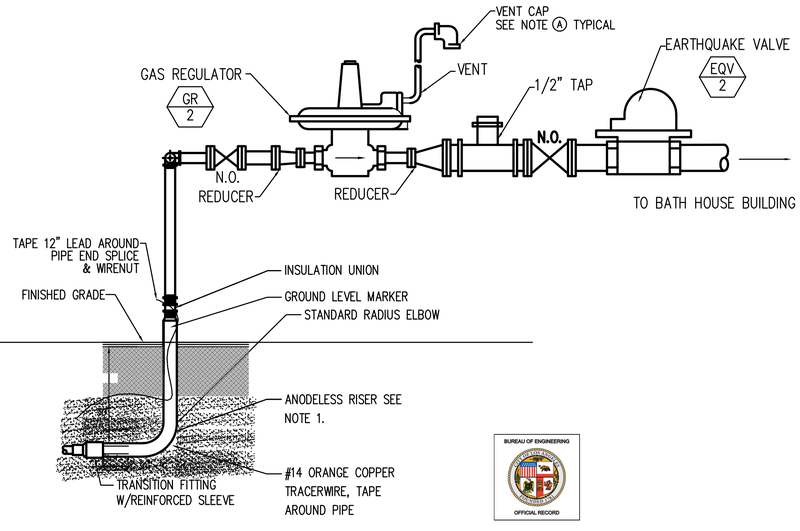


NOTES:

1. PRE-FABRICATED ANODELESS RISERS FOR 2" AND LARGER PIPE W/5'-0" EPOXY COATED STEEL MOUNTING . USE FOR METER & BUILDING RISERS
2. MAXIMUM GROUND LEVEL MARKER
3. INCREASE ENCLOSURE LENGTH TO ACCOMMODATE ANY ADDITIONAL BLDG LINE RISERS
4. SHOW SERVICE GAS VALVE IN EACH RISER IF THERE ARE MORE THAN ONE
5. SHOW ASPHALTIC PAVING OR DECOMPOSED GRANITE INSIDE THE ENCLOSURE. (CONCRETE IS NOT DESIRED)
6. NO LOCKING DEVICE SHOULD BE PROVIDED
7. INSPECT ALL PIPE FOR VISIBLE DEFECTS BEFORE AND DURING INSTALLATION

GAS METER ENCLOSURE (GUARD SHARK MODEL GS OR EQUAL)		
METER RANGE	400-1000 (CFH)	1001-25,000 (CFH)
A	9'-0"	12'-0"
B	3'-0"	4'-6"





NOTES:

Ⓐ SCREENED VENT CAP (ROCKWELL MODEL 137) WITH SCREEN FACING DOWNWARDS.

1. PRE-FABRICATED ANODELESS RISERS FOR 2" AND LARGER PIPE W/5'-0" EPOXY COATED STEEL CASING. USE FOR METER & BUILDING RISERS
2. ALL PE PIPING SMALL MEET OR EXCEED CURRENT "UPC" INSTALLATION STANDARD & BE LISTED WITH UPC
3. ALL PE PIPING SHALL BE LAID ON SAND BED NOT LESS THAN 6" DEEP. PE PIPING SHALL BE COVERED WITH SEND NO LESS THAN 6" THICK.
4. PROVIDE ENCLOSURE TO AVOID TAMPERING. ALSO, INSTALL STABILIZER BRACKET (UNISTURT OR EQUIVALENT) TO PLUMBING WITHIN 6" OF VALVE AND SECURE TO THE BUILDING.

GAS PRESSURE REGULATOR W/EARTHQUAKE VALVE

SCALE NOT TO SCALE 2

P.V. SYSTEM COMPONENTS

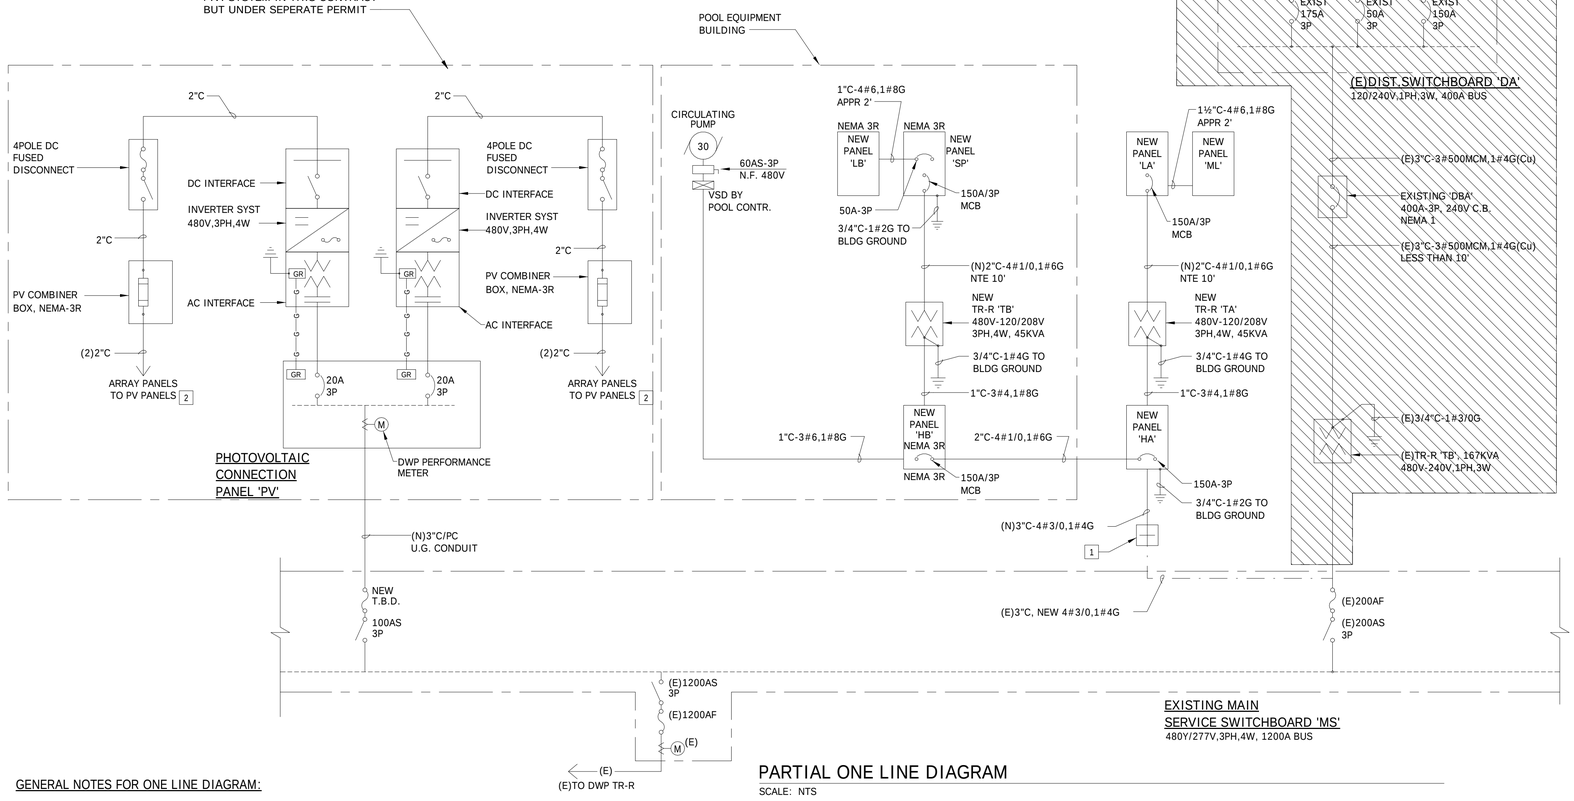
PROVIDE A DESIGN-BUILT FULLY ENGINEERED AND PERMITTED PHOTOVOLTAIC SYSTEMS WITH ALL THE COMPONENTS FOR A COMPLETE AND FULLY OPERABLE P.V. SYSTEM. COMPLY WITH CEC 2016, ART 690

BASIC COMPONENTS OF GRID-CONNECTED PV SYSTEMS WITHOUT BATTERIES ARE:

- SOLAR PHOTOVOLTAIC MODULES
- ARRAY MOUNTING RACKS
- GROUNDING EQUIPMENT
- COMBINER BOX
- SURGE PROTECTION (OFTEN PART OF THE COMBINER BOX)
- INVERTER
- METERS – SYSTEM METER AND KILOWATT-HOUR METER
- DISCONNECTS:
  - ARRAY DC DISCONNECT
  - INVERTER DC DISCONNECT
  - INVERTER AC DISCONNECT
  - EXTERIOR AC DISCONNECT
  - RAPID SHUT DOWN DISCONNECT

SCOPE OF WORK:

1. RENOVATION OF THE EXISTING BATHHOUSE
   a. NEW LIGHTING, CIRCUITING, CONTROLS
   b. NEW RECEPTACLE
   c. NEW POWER TO MISC. EQUIPMENT
2. NEW POOL EQUIPMENT ROOM.
3. NEW POOL DECK LIGHTING.
4. NEW PANELBOARDS, TRANSFORMERS, POWER DISTRIBUTION.
5. NEW FEEDER WIRES TO EXISTING PARK MAIN SWITCHBOARD.



PARTIAL ONE LINE DIAGRAM

SCALE: NTS

GENERAL NOTES FOR ONE LINE DIAGRAM:

1. ALL CONDUCTORS SHALL BE COPPER, THHN/THWN TYPE, RATED 75°C, 600V.
2. ALL TERMINAL LUGS ON ELECTRICAL EQUIPMENT AND CIRCUIT BREAKERS SHALL BE RATED FOR USE WITH 75°C WIRES.
3. ALL ELECTRICAL EQUIPMENT SHALL BE UL LISTED, OR LISTED BY CITY OF L.A. RECOGNIZED TESTING FACILITY OR APPROVED BY THE DEPARTMENT.
4. ELECTRICAL INSTALLATION SHALL BE IN ACCORDANCE WITH ANSI/NECA ELECTRICAL INSTALLATION STANDARDS.
5. FUSES SHALL BE PROVIDED WITH REJECTION TYPE FUSE HOLDERS.
6. NO PIPING, DUCTS OR EQUIPMENT FOREIGN TO ELECTRICAL EQUIPMENT SHALL BE PERMITTED TO BE LOCATED WITHIN THE DEDICATED SPACE ABOVE THE ELECTRICAL EQUIPMENT.
7. ELECTRICAL TESTING SHALL BE IN ACCORDANCE WITH NETA ELECTRICAL TESTING RECOMMENDATIONS.
8. ALL ELECTRICAL DESIGN, INSTALLATION AND EQUIPMENT SHALL CONFORM TO THE REQUIREMENTS OF CALIFORNIA ELECTRICAL CODE, 2016 EDITION, AND 2017 L.A. CITY ELECTRICAL CODE.
9. FIELD MARK ALL ELECTRICAL EQUIPMENT THAT ARE LIKELY TO REQUIRE EXAMINATION SERVICING WHILE ENERGIZED, WITH A SIGN TO WARN QUALIFIED PERSONS OF POTENTIAL ELECTRIC ARC FLASH HAZARD. COMPLY WITH CEC 2016 ART 110.16.

SPECIFIC NOTES:

1 LOCATE EXISTING U.G. CONDUIT TO THE OLD POOL SWBD 'DA'. INTERCEPT AND RE-ROUTE TO THE NEW PANEL 'HA'. PULL OUT OLD WIRES, PULL IN ALL NEW WIRES. PROVIDE PULL BOXES AS REQUIRED. SUBJECT TO FIELD COORDINATION.

2 PROVIDE RAPID SHUTDOWN DEVICE OF THE PV SYSTEM WITHIN 10' FROM PV ARRAY. COMPLY WITH 2016 CEC, ART 690-12

PLOTTED:4/15/2020 11:00:59 AM

1 SITE PLAN - ELECTRICAL
3/32" = 1'-0"

SPECIFIC NOTES:

1. NEW LIGHTING POLE BY MUSCO LIGHTING WITH 3 FLOOD LIGHTS FOR SPORT/COMPETITION EVENTS AND SECURITY/ACTIVITY LIGHTS AS INDICATED ON A SEPARATE BRACKET AS INDICATED. PROVIDE SEPARATE BRACKET FOR FUTURE SECURITY CAMERAS. COORDINATE IN FIELD. ADJUST AIMING AFTER DUSK TO OWNERS SATISFACTION. TYPICAL FOR ALL POLES. COORDINATE CAMERAS MOUNTING HEIGHT WITH CITY OF LA IT DEPARTMENT, PRIOR TO ORDERING.
2. VERIFY EXACT ROUTING IN FIELD. COORDINATE WITH POOL DECK STRUCTURAL ELEMENTS. REFER TO E3.1 FOR INVERTER LOCATIONS.
3. SECURITY LIGHTS TO BE CONTROLLED BY ASTRONOMICAL DIAL TIME CLOCK, ACTIVITY LIGHTS TO BE CONTROLLED BY SWITCHES IN THE OFFICE.
4. STUB OUT 1-1/2" CONDUIT WITH PULLCORD FROM LIGHTING POLE TO THE BUILDING FOR FUTURE SECURITY CAMERAS. MAX (2)90 DEGREE BENDS. COORDINATE WITH OWNER. SUBJECT TO FIELD VERIFICATION
5. PROTECT EXISTING ELECTRICAL U.G.P.B. DURING CONSTRUCTION. COORDINATE IN FIELD.
6. PROVIDE LOCKABLE WEATHERPROOF ENCLOSURE FOR ALL POOL DECK RECEPTACLES.
7. 3/4"C-1#8(Cu)GROUND TO BUILDING GROUND SYSTEM
8. PROVIDE RAPID SHUT DOWN DEVICE OF THE PV SYSTEM WITHIN 10' FROM PV ARRAY. COMPLY WITH 2016 CEC, ART 690.12
9. STUB OUT TO A GUTTER BELOW SECURITY PANEL COORDINATE IN FIELD. PULL IN CABLES AS REQURIED.
10. PROVIDE IN GROUND PULL BOX AT EACH POLE FOR THE LOW VOLTAGE CONDUITS, PULL BOX SHALL BE LA CITY APPROVED TYPE 3 PULL BOX FOR TERMINATION OF CCTV HOMERUNS. VERIFY EXACT LOCATION IN FIELD.

GENERAL SITE LIGHTING NOTE:

The outdoor lighting systems shall be designed and installed to comply with all of the following:

a. The minimum requirements in California Energy Code for Lighting Zones 1-4

b. Backlight, Uplight and Glare (BUG) ratings as defined in IESNA TM-15-11

c. Allowable BUG ratings not exceeding those shown in on Table 5.106.8.

1 DEMOLITION - ELECTRICAL
3/32" = 1'-0"

NORTH

DEMOLITION NOTES:

1. DISCONNECT POWER TO THE POOL SITE MAIN SWITCHBOARD. REMOVE THE SWITCHBOARD, DELIVER TO THE OWNER WHERE DIRECTED, OR PROPERLY DISPOSE OF PER OWNER'S REQUEST.
2. REMOVE ALL ELECTRICAL SWITCHGEAR IN THE PROJECT. PROPERLY DISPOSE OF AS REQUIRED.
3. REMOVE ALL LIGHTING POLES, FIXTURES ON THE POOL DECK. DELIVER TO THE OWNER WHERE DIRECTED, OR PROPERLY DISPOSE OF PER OWNER'S REQUEST. PULL OUT WIRES, REMOVE CONDUITS WHERE POSSIBLE.
4. REMOVE ALL OUTLETS AND CONDUIT AND WIRES TO SAME IN THE WALL SCHEDULED FOR DEMOLITION.
5. REMOVE ALL LIGHTING, SWITCHES AND CONDUIT AND WIRES TO SAME, U.N.O.
6. RETAIN EXISTING WALL LIGHTING OUTLET, CONDUITS AND SWITCH OUTLET FOR FUTURE LIGHTING. PULL OUT WIRES TO SOURCE. COORDINATE IN FIELD.
7. DISCONNECT POWER TO THE POOL EQUIPMENT. REMOVE ALL EXPOSED CONDUIT, PULL OUT WIRES.

2 LIGHTING - POOL EQUIPMENT BLDG
3/16" = 1'-0"

SPECIFIC NOTES:

1. BANK OF SWITCHES SHALL BE MOUNTED AT +48". VERIFY LOCATION IN FIELD. ENGRAVE ON COVER PLATE NAME OF THE LOAD OR ROOM CONTROLLED BY THE SWITCH, COORDINATE WITH OWNER.
2. PROVIDE HOT, NON-SWITCHED HOT WIRE. SEE GENERAL NOTE 5 ON THIS SHEET.
3. SWITCH TO CONTROL ACTIVITY LIGHTS. SEE PANEL SCHEDULE.
4. PROPOSED LOCATION FOR THE T-24 MANDATORY LIGHTING SHUT-OFF TIME CLOCK. COORDINATE IN FIELD.
5. BY-PASS OVERRIDE SWITCH FOR T-24 MANDATORY LIGHTING SHUT-OFF. VERIFY LOCATION IN FIELD.
6. TO CERTIFIED T-24 TIME CLOCK. VERIFY EXACT LOCATION IN FIELD.
7. COORDINATE WIRING OF THE SCORE BOARD IN FIELD, PRIOR TO ROUGHING-IN. VERIFY LOCATION IN FIELD
8. ALL CONDUITS IN THIS ROOM SHALL BE GRS.

GENERAL NOTES:

1. ALL EXPOSED CONDUITS IN MECHANICAL ROOMS WHERE SUBJECT TO CORROSIVE ENVIRONMENT SHALL BE GRS.
2. ALL CONDUITS IN CEILING SHALL BE RUN BETWEEN THE JOISTS, SUBJECT TO FIELD COORDINATION.
3. COORDINATE LOCATION OF ALL LIGHTING FIXTURES WITH THE CEILING STRUCTURE AND CONCRETE BEAMS LAYOUT. REFER TO ARCHITECTURAL RCP'S.
4. PROVIDE SELF CONTAINED EMERGENCY BATTERY PACK (90 MINUTES), IN ALL EMERGENCY FIXTURES AS INDICATED ON PLANS.
5. PROVIDE A TRUE NON SWITCHED HOT WIRE DIRECTLY FROM THE LIGHTING BRANCH CIRCUIT BREAKER TO EACH FIXTURE WITH SELF CONTAINED EMERGENCY BATTERY PACK. BY-PASS ALL TIME CLOCKS AND SWITCHES. CONNECT PER MANUFACTURERS INSTRUCTIONS.
6. ALL INTERIOR EXPOSED CONDUITS AND ALL EXTERIOR CONDUITS SHALL BE GRS CONDUITS.
7. ANY TIME A BUILDING OR A PORTION OF A BUILDING IS OCCUPIED, THE MEANS OF EGRESS SERVING THE OCCUPIED PORTION SHALL BE ILLUMINATED AT AN INTENSITY OF NOT LESS THAN 1-FOOT-CANDLE (11 LUX) AT THE WALKING SURFACE LEVEL.
8. COORDINATE LIGHTING OCCUPANCY SENSOR'S TIME DELAY WITH OWNER.
9. COORDINATE THE INSTALLATION OF ALL LIGHTING EQUIPMENT WITH THE PLANNING AND DEVELOPMENT AGENCY AND SCE Co. REBATE PROGRAM.
10. VERIFY TYPE OF CEILING IN ALL SPACES, AND PROVIDE MOUNTING HARDWARE ACCORDING TO THE CEILING TYPE. SUBJECT TO FIELD COORDIANTION.

3/16" = 1'-0"

NORTH

SPECIFIC NOTES:

1. PROVIDE NEW TELEPHONE TERMINAL CABINET 'TTC' 24"x24"x6"D WITH PLYWOOD BACKING. TERMINATE NEW CABLES AS REQUIRED, COORDINATE WITH TELEPHONE COMPANY AND THE OWNER. REFER TO SITE PLAN.
2. NOT USED.
3. NOT USED.
4. NOT USED.
5. NEW AUDIO J-BOX (V.L.) FOR CONNECTION TO NEW AMPLIFIER. PROVIDE NEW AMPLIFIER ATLAS/SOUND #A120. INSTALL AND WIRE PER MANUFACTURERS INSTRUCTIONS. COORDINATE EXACT LOCATION WITH OWNER. CONNECT ALL SPEAKERS, MICROPHONES AND OTHER PERIPHERAL DEVICES.
6. PROVIDE NEW LOUDSPEAKERS, ATLAS APF15T WITH SOUNOLIER VP410S BAFFLE AND VPA-APF ADAPTER, OR EQUAL. PROVIDE VANDALPROOF STEEL ENCLOSURE. SEE DETAIL '5' ON SHEET E5.1
7. PROVIDE NEW 3/4"PVC, PULL IN NEW CABLE, WEST PENN AQC-294 TO THE P.A. J-BOX IN OFFICE. CONNECT TO PA AMPLIFIER. SUBJECT TO FIELD COORDINATION.

SPECIFIC NOTES: (CONTINUED)

8. PROVIDE NEW MICROPHONE OUTLET, CANON XLR/SLR SERIES IN W.P. ENCLOSURE, OR EQUAL TO MATCH THE MICROPHONE. PULL IN NEW MIC. CABLE, WESTPENN AQC-290, TO THE P.A. J-BOX IN OFFICE. CONNECT TO PA AMPLIFIER. PROVIDE NEW MICROPHONE BOGEN #HD0100 WITH BASE #DS5 BY ATLAS/SOUND, PROVIDE MIC BASE ADAPTOR #MICCLIP BY ATLAS/SOUND
9. FOR POOL EQUIPMENT CIRCUITING REFER TO POOL DESIGNERS PLANS. ALL ELECTRICAL EQUIPMENT SHALL BE NEMA 3R
10. PROVIDE STEP DOWN TRANSFORMER FOR DOOR STRIKE. CONNECT PER MANUFACTURER'S INSTRUCTION. COORDINATE IN FIELD.
11. PROVIDE NEW 'FACP'. COORDINATE WITH CITY OF LA I.T. DEPARTMENT.
12. PROVIDE LOCKABLE WEATHERPROOF ENCLOSURE FOR ALL POOL DECK RECEPTACLES..
13. NOT USED.
14. NOT USED.
15. NOT USED.
16. CONNECT TO ELECTRICAL HAND DRYER (EHD) PER MANUFACTURERS INSTRUCTIONS. VERIFY EXACT LOCATION IN FIELD PRIOR TO ROUGHING-IN. SHOULD THE CONTRACTOR NEGLECT TO PERFORM SUCH COORDINATION AS REQUESTED, ALL RELOCATION WILL BE AT CONTRACTOR'S OWN EXPENSE.
17. ALL CONDUITS IN THIS ROOM SHALL BE GRS.
18. TRANSFORMER 'TB' SHALL BE FULLY ENCAPSULATED TYPE.

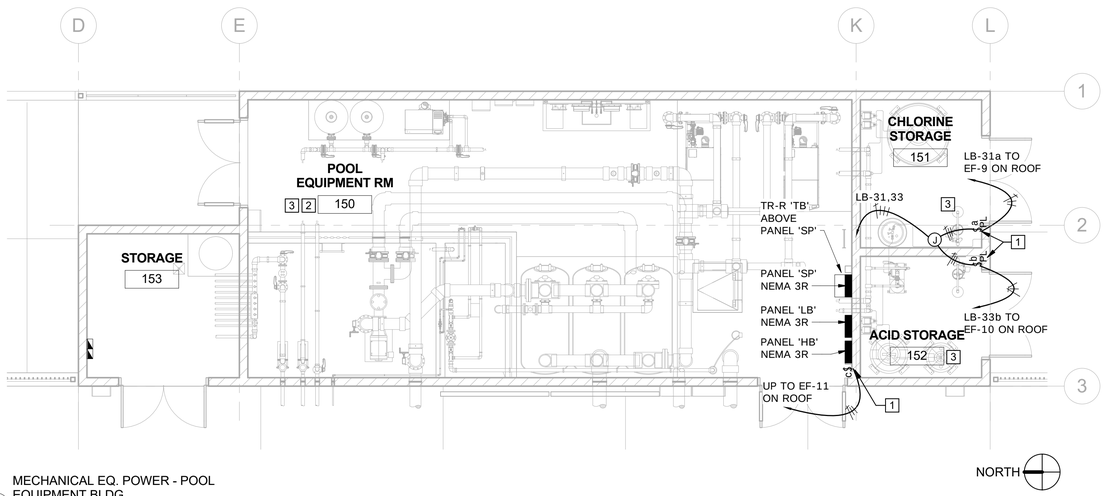
REVISION DATES (DESIGN STAGE ONLY)



2 MECHANICAL EQ. POWER - POOL EQUIPMENT BLDG
3/16" = 1'-0"

SPECIFIC NOTES:

1. PROVIDE TOGGLE SWITCH WITH PILOT LIGHT. ENGRAVE 'EXHAUST FAN'
2. FOR POOL EQUIPMENT CIRCUITING REFER TO AQUATIC DESIGN PLANS. ALL ELECTRICAL EQUIPMENT SHALLL BE NEMA 3R
3. ALL CONDUITS IN THIS ROOM SHALL BE GRS.
4. FOR GAS CONTROL AND WIRING DIAGRAM. REFER TO MECHANICAL PLANS.

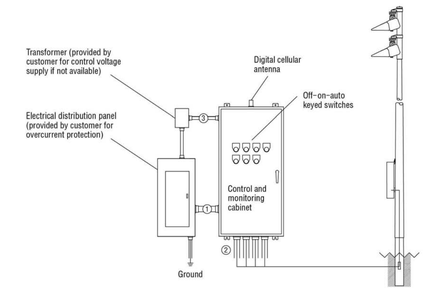
Control System Summary

Granada Hills Pool And Bathouse Replacement Project [City Of LA] / 196783 - 196783A
Service 1 - Page 2 of 4

Control-Link® Control and Monitoring System



Wire	Description	# of Wires	Typ. Wire Size (AWG)	Max. Wire Length (FT)	Wire from Musco	Notes
1	Line power to contactors, and equipment grounding conductor	Note A	Note B	27	No	A – E
2	Load power to lighting circuits, and equipment grounding conductor	Note A	Note B	N/A	No	A – D
3	Control power (dedicated, 20A)	3	12	N/A	No	C, D

R60-32-00_D

Notes:
A. See voltage and phasing per the notes on cover page.
B. Calculate per load and voltage drop.
C. All conduit diameters should be per code.
D. Refer to control and monitoring system installation instructions for more details on equipment information and the installation requirements.
E. Contact Musco if maximum wire length from circuit breaker to contactor exceeds value in chart.

IMPORTANT: Control wire (3) must be in separate conduit from line and load power wires (1, 2).

CERTIFICATE OF COMPLIANCE		NRCC-LTI-E
This document is used to demonstrate compliance with requirements in §110.9, §130.0, §130.1, §140.6, and §141.0(b)2 for indoor lighting scopes using the prescriptive path.		
Project Name: Granada Hills Pool and Bathhouse	Report Page:	Page 1 of 7
Project Address: 16730 Chatsworth St.	Date Prepared:	12/4/2018

A. GENERAL INFORMATION

01	Project Location (city)	Granada Hills	04	Total Conditioned Floor Area (ft²)	6,327
02	Climate Zone	9	05	Total Unconditioned Floor Area (ft²)	0
03	Occupancy Types Within Project (select all that apply):		06	# of Stories (Habitable Above Grade)	1

☑ Office ☐ Retail ☐ Warehouse ☐ Hotel/Motel ☐ School ☑ Support Areas
☐ Parking Garage ☐ High-Rise Residential ☐ Relocatable ☑ Other (write in):

B. PROJECT SCOPE

Table Instructions: Include any lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in §140.6 or §141.0(b)2 for alterations. WARNING: Changing the Calculation Method in this table will result in the deletion of data previously input. If you need to change the calculation method, please open a new form or use "Save As".

Scope of Work	Conditioned Spaces		Unconditioned Spaces	
01	02	03	04	05
My Project Consists of (check all that apply):	Calculation Method	Area (ft²)	Calculation Method	Area (ft²)
☑ New Lighting System	Area Category	6,327	Area Category	0
☐ Altered Lighting System				
Total Area of Work (ft²)	**6,327**		**0**	

C. COMPLIANCE RESULTS

Table Instructions: If any cell on this table says "DOES NOT COMPLY" or "COMPLIES with Exceptional Conditions" refer to Table D. for guidance.

Lighting in conditioned and unconditioned spaces must not be combined for compliance per §140.6(b)1.	Allowed Lighting Power per §140.6(b) (Watts)						Actual Lighting Power per §140.6(a) (Watts)					Compliance Results
	01	02	03	04	05		06	07	08	09		10

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. **The information provided on this Certificate of Compliance is true and correct.**
2. **I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)**
3. **The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.**
4. **The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.**
5. **I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.**

STATE OF CALIFORNIA
Outdoor Lighting
NRCC-LTO-E (Created 9/17) CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE		NRCC-LTO-E
This document is used to demonstrate compliance with requirements in §110.9, §130.0, §130.2, §140.7, and §141.0(b)2I for outdoor lighting scopes using the prescriptive path.		
Project Name: Granada Hills Pool and Bathhouse	Report Page:	Page 1 of 6
Project Address: 16730 Chatsworth St.	Date Prepared:	12/4/2018

A. GENERAL INFORMATION

01	Project Location (city)	Granada Hills	04	Total Illuminated Hardscape Area (ft²)	380
02	Climate Zone	9			
03	Outdoor Lighting Zone per Title 24, Part 1 §10-114 or as designated by Authority Having Jurisdiction (AHJ):				
☐ LZ-0: Very Low - Undeveloped Parkland		☐ LZ-2: Moderate - Rural Areas		☐ LZ-4: High - Must be reviewed by CA Energy Commission for Approval	
☐ LZ-1: Low - Developed Parkland		☑ LZ-3: Moderately High - Urban Areas			

B. PROJECT SCOPE

Table Instructions: Include any outdoor lighting systems that are within the scope of the permit application and are demonstrating compliance using the prescriptive path outlined in §140.7 or §141.0(b)2I for alterations.

My project consists of:

01	02
☑ New Lighting System	Must Comply with Allowances from §140.7.
☐ Altered Lighting System	Is your alteration increasing the connected lighting load (Watts)? ○ Yes ○ No

[1] *FOOTNOTES: % of Existing Luminaires Being Altered = (Sum Total of Luminaires Being Added or Altered / Existing Luminaires within the Scope of the Permit Application) x 100*

C. COMPLIANCE RESULTS

Table Instructions: If any cell on this table says "DOES NOT COMPLY" or "COMPLIES with Exceptional Conditions" refer to Table D. for guidance.

Calculation of Total Allowed Lighting Power (Watts) §140.7 or §141.0(b)2L												Compliance Results		
01		02		03		04		05		06		07		08	09

D. EXCEPTIONAL CONDITIONS

This table is auto-filled with uneditable comments because of selections made or data entered in tables throughout the form.

No exceptional conditions apply to this project.

E. ADDITIONAL REMARKS

This table includes remarks made by the permit applicant to the Authority Having Jurisdiction.

F. OUTDOOR LIGHTING FIXTURE SCHEDULE

Table Instructions: For new or altered lighting systems demonstrating compliance with §140.7 (ie Table I has expanded for input), include all luminaires being installed and any existing luminaires remaining or being moved within the spaces covered by the permit application in the Table below. For altered lighting systems using the Existing Power method per §141.0(b)2L (ie Table N has expanded for input), include only new luminaires being installed and replacement luminaires being installed as part of the project scope (ie, do not include existing luminaires remaining or existing luminaires being moved).

Designed Wattage:

01	02	03	04	05	06	07	08	09	10	
Name or Item Tag	Complete Luminaire Description	Watts per luminaire[1]	How Wattage is determined	Total number luminaires	Luminaire Status[2]	Excluded per §140.7(a)	Design Watts	Cutoff Req. > 150W §130.2(b)[3]	Field Inspector Pass	Field Inspector Fail
E	E - LED 6" Downlight - 23w	23	NA8 Default	2	New	☐	46		☐	☐
G	G - LED Facade Wall Sconce - 25w	25	NA8 Default	19	New	☐	475		☐	☐
K	K - LED Rope light - 2.2w/f	2.2	NA8 Default	94	New	☐	206.8		☐	☐
						Total Designed Watts:	727.8			

* NOTES: Selections with a * require a note in the space below explaining how compliance is achieved.
EX: Luminaire is lighting a statue; EXCEPTION 2 to §130.2(b).

G. CUTOFF REQUIREMENTS (BUG)

This Section Does Not Apply

H. OUTDOOR LIGHTING CONTROLS

STATE OF CALIFORNIA
Outdoor Lighting
NRCC-LTO-E (Created 9/17) CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE		NRCC-LTO-E
Project Name: Granada Hills Pool and Bathhouse	Report Page:	Page 3 of 6
Project Address: 16730 Chatsworth St.	Date Prepared:	12/4/2018

Table Instructions: Complete this table demonstrating compliance with controls requirements for all new or altered luminaires installed as part of the permit application. For alteration projects, luminaires which are existing to remain (ie untouched) and luminaires which are removed and reinstalled (wiring only) do not need to be included in this table even if they are within the spaces covered by the permit application.
*When an option having a * is selected, the notes section of this table must be completed. The lighting controls section of the Compliance Summary Table on the first page will show "DOES NOT COMPLY" if the notes are left blank. For each requirement in columns 02 through 07, do not leave the field blank, instead select NA or Exempt* from the dropdown list to indicate not applicable or an exemption.*

PLOTTED:4/15/2020 11:01:50 AM

GENERAL NOTES:

1. THE FOLLOWING GENERAL NOTES ARE APPLICABLE AS STATED BELOW, EXCEPT WHERE SPECIFICALLY INDICATED AND NOTED OTHERWISE ON THE DRAWINGS OR IN THE SPECIFICATIONS.
2. SINGLE LINE DIAGRAMS, ELEVATIONS, SCHEMATICS AND DETAILS SHOWN HEREIN ARE CONCEPTUAL AND ILLUSTRATE ONLY THE FUNCTIONAL RELATIONSHIPS BETWEEN SYSTEM(S) CONPONENTS AND THE DESIGN INTENT OF THE PROJECT.
3. REFERENCE EQUIPMENT SPECIFICATIONS FOR ADDITIONAL INFORMATION REGARDING EQUIPMENT AND MATERIALS USED ON PROJECT.
4. MINIMUM CONDUIT SIZE SHALL BE 3/4".
5. PENETRATION(S) TO ANY FIRE RATED ASSEMBLY SHALL BE FIRE STOPPED WITH APPROVED U.L. LISTED FIRE STOP MATERIAL. INSTALLATION AND APPLICATION OF FIRE STOP MATERIAL, PER MANUFACTURERS INSTRUCTIONS.
6. DEVICE LOCATIONS AS NOTED ON PLANS ARE NEW AND/OR EXISTING AND CONCEPTUAL. CONTRACTOR SHALL LOCATE DEVICES AS SITE CONDITIONS REQUIRE AND AS APPROVED BY THE OWNER/ENGINEER.
7. REFERENCE SPECIFICATIONS FOR ADDITIONAL SYSTEM REQUIREMENTS AND SCOPE OF WORK.
8. THE FIRE ALARM SYSTEM SHALL PASS TESTS REQUIRED BY LOCAL FIRE DEPARTMENTS, INCLUDING CHIEF'S REQULATION NO. 4 PROGRAM REQUIRED BY CITY OF LOS ANGELES DEPARTMENT OF FIRE.
9. PAINTING, PATCHING AND FINISHES FOR ALL DEVICES LOCATED IN EXISTING AREAS SHALL MATCH EXISTING FINISHES AND MUST BE APPROVED AND COORDINATED WITH THE OWNER/ENGINEER.
10. WORKMANSHIP AND MATERIALS WILL CONFORM TO MOST CURRENT UNIFORM BUILDING CODE (UBC) STANDARDS, SPECIFICATIONS AND DETAILS FOR CONTRUCTION AS FURNISHED BY THE CONTRACT DRAWINGS. WORKMANSHIP AND MATERIALS NOT IN CONFORMANCE WITH THE CONTRACT DRAWINGS AND SPECIFICATIONS ARE SUBJECT TO REMOVAL AND/OR REPALCEMENT AT CONTRACTOR'S EXPENSE.

FIRE ALARM SYSTEM NOTES:

1. FIRE ALARM SYSTEM SHALL COMPLY WITH NFPA 72 (1999 ED.)AND NFPA 101 STANDARDS, TITLE 24 AND ADA REQUIREMENTS, CALIFORNIA ELECTRICAL CODE AND CALIFORNIA EDUCATIONAL CODE.
2. ALL WIRING, INITIATING DEVICE AND ANNUNCIATOR PANEL SHALL BE SUPERVISED TO THE PRINCIPAL POINT OF ANNUNCIATION (F/A PANEL TO SUPERVISE THE ANNUNCIATOR PANEL, ALL CIRCUITS AND INITIATING DEVICES).
3. FIRE ALARM WIRING SHALL NOT BE INSTALLED SAME CONDUITS, RACE WAYS OR BOXES WITH ANY OTHER SYSTEMS, POWER OR SIGNAL. IN UNDERGROUND SIGNAL BOXES PROVIDE PHYSICAL SEPARATION BETWEEN F.A. WIRING AND OTHER SIGNAL SYSTEMS.
4. WIRING SHALL NOT BE LOOPED THROUGH DEVICES; WIRE MUST BE CUT FOR IN AND OUT AND SHALL BE TERMINATED ON THE TERMINAL BLOCKS INSIDE DEVICES.
5. POINT AND COMMON ANNUNCIATION AND T-TAPPING PROHIBITED. NO WIRE SPLICING IS ALLOWED.
6. ALL WIRING SHALL BE IN CONDUIT OR WIREMOLD MIN. SIZE 2100 U.N.O. CONDUIT FILL SHALL BE PER TABLE 3B OF CALIFORNIA ELECT. CODE.
7. ALL TERMINATION IN PULL BOXES AND TERMINAL CABINETS SHALL BE ON BOX MOUNTED TERMINAL BLOCKS.
8. THE FACP IS NOT TO BE USED AS A TERMINAL CABINET.
9. MINIMUM CONDUIT SIZE AT RISER SHALL BE 3/4" U.O.N. CONTRACTOR TO ADJUST SIZE FOR FIELD CONDITIONS (I.E. NO. OF BENDS ETC.) BUT SHALL NOT BE SMALLER THAN 3/4".
10. ALL FIRE ALARM WIRING MUST TEST FREE OF OPENS, SHORTS AND GROUNDS.
11. DEVICE LOCATIONS AS NOTED ON PLANS ARE CONCEPTUAL AND ILLUSTRATE ONLY THE FUNCTIONAL RELATIONSHIP BETWEEN COMPONENTS OF THE SYSTEM. CONTRACTOR SHALL LOCATE DEVICES AS SITE CONDITIONS REQUIRE AND AS APPROVED BY THE OWNER.
12. CONDUIT AND JUNCTION\BACK BOXES ARE NOT TO BE USED FOR UNRELATED WIRING.
13. PENETRATIONS TO FIRE-RATED ASSEMBLIES SHALL BE PER UL APPROVED THROUGH-PENETRATION FIRE-RESISTANT MATERIAL. REFER TO DRAWING FE3.3 DETAIL D. THROUGH-PENETRATION FIRE STOPPING FOR ALL FIRE RATED WALLS, FLOOR/CEILINGS AND ASSEMBLIES SHALL HAVE AN "F" OR "T" RATING PER THE CALIFORNIA BUILDING CODE AND STANDARDS.
14. AUDIO VISUAL DEVICES SHALL BE INSTALLED PER TITLE 24, SECTION 7204 REQUIREMENTS.
15. CONTRACTOR SHALL FIELD VERIFY ALL LOCATION(S) OF WATER FLOW AND TAMPER SWITCHES (TYPICAL).
16. FIRE ALARM CONTROL PANEL SHALL BE LOCKED AND SHALL BE ACCESSIBLE ONLY TO FIRE DEPT. PERSONNEL, AUTHORIZED MAINTENANCE PERSONNEL. FACP SHALL BE MARKED "FIRE ALARM CONTROL PANEL". FACP SHALL COMPLY WITH NFPA 72.
17. ANY DEVIATION FROM THESE PLANS NECESSARY DUE TO FIELD CONDITIONS MUST BE APPROVED BY FIRE ALARM SYSTEM ENGINEER AND DETAILED AND RECORDED ON FIELD "AS BUILT" DRAWINGS.
18. ANY FIELD CONDITION MISREPRESENTED IN THESE DRAWINGS SHALL BE BROUGHT TO THE ATTENTION OF THE FIRE SYSTEM ENGINEER.
19. FIRE ALARM SHALL BE AUDIBLE AT A SOUND LEVEL OF 15dB ABOVE AMBIENT NOISE LEVEL IN PUBLIC AREAS IN ACCORDANCE WITH NFPA 72 1999 EDITION SECTION 4-3.2.2.
20. ALL EQUIPMENT, I.E. AUTOMATIC DETECTION DEVICES, MANUAL PULL STATIONS, DUCT DETECTORS, ETC., SHALL BE INSTALLED AND LOCATED IN ACCORDANCE WITH LISTINGS AND APPLICABLE PROVISIONS OF THE TITLE 24, PARTS 2,3,4 & 9 STANDARDS. ALL EXTERIOR DEVICES SHALL BE LISTED FOR OUTDOOR USE AND MOUNTED IN APPROVED WEATHER PROOF BOXES AND IN ACCORDANCE WITH TITLE 19. CHAPTER 1.5, ARTICLE 1, SECTION 200.

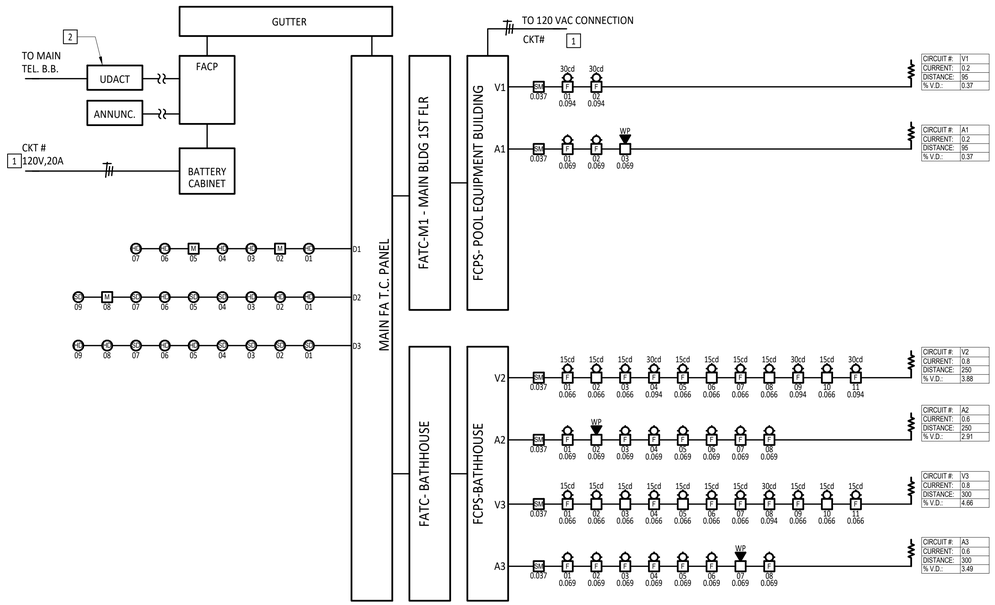
P	2 #14 THHN/THWN (BLUE+, BROWN -)	24VDC POWER

NOTES:

1. INITIATING DEVICE CIRCUITS SHALL BE WIRED CLASS "B" FOR WIRING STYLES REFER TO DETAILS 2 AND 6 ON SHEET FA-3.0
2. NOTIFICATION DEVICE CIRCUITS SHALL BE WIRED CLASS "B" FOR WIRING STYLES REFER TO DETAILS 2 AND 6 ON SHEET FA-3.0
3. ALL EST-3 VISUAL(STROBE) ARE SELF SYNCHRONIZED. NO ADDITIONAL SYNCHRONIZATION MODULE IS REQUIRED.
4. AUDIBLE NOTIFICATION CIRCUITS AND DEVICES SHALL BE PROGRAMMED FOR CODED OUTPUT AS CALIFORNIA MARCH CODE (TEMPORAL CODE 3).
5. SMOKE AND HEAT DETECTOR COVERAGE SHALL BE PER NFPA 72, CHAP 5 FOR TYPE OF CEILING AND FRAMING.
6. PROVIDE TVSS AT INTERIOR PULL BOX OR FATC WHERE CIRCUITS ENTER OR LEAVE BUILDING. SEE DETAIL S/FA3.3 FOR ADDITIONAL REQUIREMENTS.



FIRE ALARM RISER DIAGRAM

SCALE: NTS

SPECIFIC NOTES:

1. PROVIDE DEDICATED 20A-1P CIRCUIT BREAKER TO MATCH EXISTING. PROVIDE LOCK-ON DEVICE. LABEL 'FIRE ALARM CONTROL CIRCUIT' CONTRACTOR SHALL PROVIDE TVSS MODULE AT THE POWER SUPPLY.
2. C.S.F.M. APPROVED TELEPHONE DIALER PER SPECIFICATIONS

VOLTAGE DROP METHOD:

$$\frac{2 \times \text{DISTANCE} \times \text{AMPS} \times \text{OHMS}}{\text{VOLTS} \times 1000} \times 100 = \text{VD\%}$$

WIRE RESISTANCE = 1.98 /1000Ω
CIRCULAR MILLS = 12GA = 6530
VOLTAGE = 24-15% (UL 464) = 20.4 VOLTS

TIMING SYSTEM NOTES/EQUIPMENT

NOTE: THE CONTRACTOR SHALL SUPPLY AND INSTALL DECK PLATE BOXES, WALL PLATE BOXES, WALL PLATE JUNCTION BOXES, CONDUIT, WIRING, SCOREBOARD AND ALL TIMING EQUIPMENT AS SHOWN FOR THE 'COLORADO' TIME SYSTEM OR EQUAL.

TIMING SYSTEM

QTY	MODEL	DESCRIPTION
① 1	SPORTS TIMER	MULTI-SPORT TIMING/SCORING CONSOLE HARDWARE: MULTI-SPORT AQUATICS TIMING AND SCORING CONSOLE WITH CARRYING CASE. SPORT INSERTS TO INCLUDE SWIMMING, DIVING, WATER POLO AND PACE CLOCK SYSTEM TO INCLUDE 15" FULL LCD DISPLAY, CD-RW DRIVE, UNLIMITED RACE/MEET STORAGE, EXTERNAL MOUSE AND KEYBOARD PORT AND BACKUP RECHARGEABLE SYSTEM.
		SOFTWARE: SWIMMING, DIVING, WATER POLO AND PACE CLOCK SOFTWARE SHALL BE PROVIDED. SWIMMING SOFTWARE SHALL BE CAPABLE OF STORED LAP AND CUMULATIVE SPLITS. SPLIT INFORMATION SHALL BE POSTED TO SCOREBOARD IN LAP OR CUMULATIVE FORMAT. SOFTWARE SHALL BE CAPABLE OF TIMING UP TO 10 LANES OF COMPETITION MEARE AND FAR END. SOFTWARE SHALL HAVE TIMING CAPABILITY OF ONE TOUCHPAD WITH UP TO THREE BUTTON BACKUP AND RELAY TAKE-OFF PLATFORM. SWIMMING SOFTWARE SHALL OPERATE IN A POINT AND CLICK WINDOWS® ENVIRONMENT.
1	CABLE HARNESS	EIGHT-LANE ABOVE DECK TIMING HARNESS INCLUDES A EIGHT-LANE CABLE HARNESS AND ONE PUSHBUTTON PER LANE.
⑨ 8	TP-TBG	18"x22" TOUCHPAD, TOUCHPAD SHALL BE CONSTRUCTED OF STAINLESS STEEL TO PREVENT THE POSSIBILITY OF WARPING IN EXTREME HEAT.

TOUCHPAD CADDY

QTY	MODEL	DESCRIPTION
1	CART	TOUCHPAD CADDY FOR GUTTERHUNG TOUCHPADS. HOLDS UP TO TEN TOUCHPADS. SHALL ARRIVE ON SITE FULLY ASSEMBLED.

START SYSTEM

QTY	MODEL	DESCRIPTION
③ 1	HORN START	ELECTRONIC START SYSTEM WITH WIRELESS MICROPHONE, WIRED MICROPHONE, VOLUME CONTROLS FOR AUXILIARY SPEAKERS. 4 INDIVIDUAL LANE SPEAKERS, BUILT-IN EXTERNAL 360-DEGREE STROBE LIGHT WITH CAPABILITY TO ADD REMOTE EXTERNAL STROBE, AC POWER CAPABILITY FOR MEET OPERATION IN THE EVENT THE BATTERY SYSTEM FAILS, LED BATTERY LEVEL INDICATION LIGHT, ABILITY TO DISABLE RECALL FUNCTION.
8	LANE SPEAKER	INDIVIDUAL 6 WATT LANE SPEAKER FOR START SYSTEM
1	AUX. SPEAKER	40 WATT SPEAKER WITH 100' OF CABLE
1	BRACKET	BACKSTROKE FLAGPOLE MOUNTING BRACKET FOR START SYSTEM.
1	CABLE	THIRTY FOOT JUMPER CABLE

IN-DECK

QTY	MODEL	DESCRIPTION
② 8	LANE DECK PLATE	INDIVIDUAL LANE TITANIUM DECK PLATE. PLATE SHALL HAVE CONNECTIONS FOR (1) TOUCHPAD, (3) BACKUP BUTTON TIMING, RELAY TAKE-OFF PLATFORM AND INDIVIDUAL LANE SPEAKER. PLATES SHALL BE MOUNTED PERMANENTLY TO THE DECK ON 4"x4"x6" PVC JUNCTION BOXES (CARLON E989NNR).
④ 1	WALL PLATE	WALL PLATE, TIMING: WALL PLATE: 12"x12"x6" WALL BOX IN CONC. PEDESTAL, ONE (1) TOTAL. WALL BOX WITH WALL PLATE JUNCTION BOX 12"x12"x6" ONE (1) TOTAL.

WATER POLO

QTY	MODEL	DESCRIPTION
1	WATER POLO	WATER POLO PACKAGE TO INCLUDE HAND-HELD GAME CLOCK START/STOP/HORN SWITCH, HAND-HELD SHOT CLOCK START/STOP/RESET SWITCH AND ABOVE DECK SHOT CLOCK DATA CABLES

SCOREBOARD

QTY	MODEL	DESCRIPTION
⑤ 1	SCOREBOARD (1 / SP-13)	EIGHT-LINE OUTDOOR LED SCOREBOARD: EACH MODULE INCLUDES: EIGHT, 10-INCH LED DIGITS. (CHOICE OF RED OR AMBER DIGITS) BEAM MOUNTING HARDWARE
		SCOREBOARD FUNCTIONS: DISPLAY LANE, PLACE, AND TIME FOR LANES 1-6 ONE LINE TO DISPLAY HOME/GUEST SCORES ONE LINE TO DISPLAY LENGTHS/ RECORD TIME
		⑥ FOUR (4) DEDICATED 20 AMP CIRCUIT TO BE TERMINATED INTO SCOREBOARD LOAD CENTER
		⑦ MASTER ON/OFF SCOREBOARD SWITCH WITH PILOT LIGHT, W/ LOCKABLE ENCLOSURE.
		⑧ SCOREBOARD DATA CONNECTION BOX CONNECT TO TIMING/WALL BOX LOCATION W/ 1½" PVC CONDUIT.
1	ID PANEL	NON-ILLUMINATED FACILITY IDENTIFICATION PANEL WITH ARTWORK.

PACE CLOCK/WATER POLO SHOT CLOCK/REACTION TIMER

QTY	MODEL	DESCRIPTION
2	TIMER	MULTI-USE OUTDOOR TIMER WITH 7" OUTDOOR LED DIGITS
		PACE CLOCK FUNCTIONS: MULTI-SPORT TIMING/SCORING CONSOLE CAPABLE OF DOWNLOADING WORKOUTS FROM HY-TEK WORKOUT MANAGER. UNIT CAPABLE OF OPERATING AS A STAND-ALONE PACE CLOCK. FUNCTIONS INCLUDE COUNT UP, WORKOUT PROGRAM, TIME OF DAY.
		WATER POLO SHOT CLOCK FUNCTIONS: OPERATES IN CONJUNCTION WITH MULTI-SPORT TIMING/SCORING CONSOLE TO ACT AS A PORTABLE BATTERY-OPERATED WATER POLO SHOT CLOCK. CAN ALSO ACT AS STAND-ALONE SHOT CLOCK OPERATED BY SWITCHES ON THE SIDE OF THE UNIT.
		REACTION TIMER FUNCTIONS: OPTIMIZES START REACTION TIMES AND PERFECTS RELAY EXCHANGES WHEN USED IN CONJUNCTION WITH TOUCHPAD AND/OR RELAY JUDGING PLATFORM
RJP		RELAY JUDGING PLATFORM TO BE USED IN CONJUNCTION WITH MULTI-USE OUTDOOR TIMER

10'-1" TO 12'-4"	14"	11"	5'-Ø" TO 6'-Ø"	#5 @ 4" O.C. REAR FACE #4 @ 12" O.C. FRONT FACE	#4 @ 4" O.C. REAR FACE #4 @ 12" O.C. FRONT FACE	24"

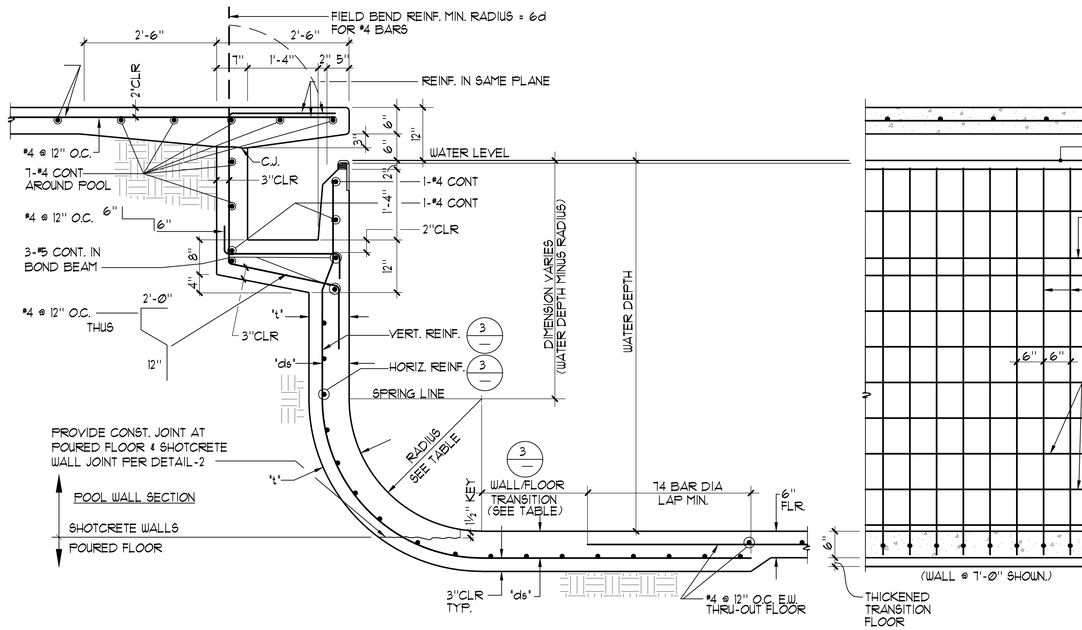
CONCRETE NOTES:

1. THE MINIMUM ULTIMATE COMPRESSIVE STRENGTH AT 28 DAYS
   POOL = 4,000 PSI
   SLAB-ON-GRADE = 4,000 PSI WITH WATER / CEMENT RATIO OF Ø.55
2. CONTINUOUS INSPECTION BY AN APPROVED INSPECTOR IS REQUIRED OF ALL CONCRETE PLACEMENT.
3. ALL CEMENT USED SHALL CONFORM TO A.S.T.M. C-150 TYPE II.
4. FINE AND COARSE AGGREGATE SHALL CONFORM TO A.S.T.M. C-33. MAXIMUM SIZE OF AGGREGATE TO BE 1".
5. CONCRETE MIX DESIGNS SHALL BE BASED UFON CBC SECTION 1904A2.
6. CONCRETE SHALL BE TESTED AND INSPECTED PER SECTION CBC 1705A.3 AND 1913A.1.
7. REMOVAL OF FORMS SHALL COMPLY WITH ACI-14, 26.11.
8. ALL REINFORCING SHALL BE ASTM A-615, GRADE 60, UNLESS OTHERWISE NOTED. LAPS SHALL BE T4 BAR DIA.

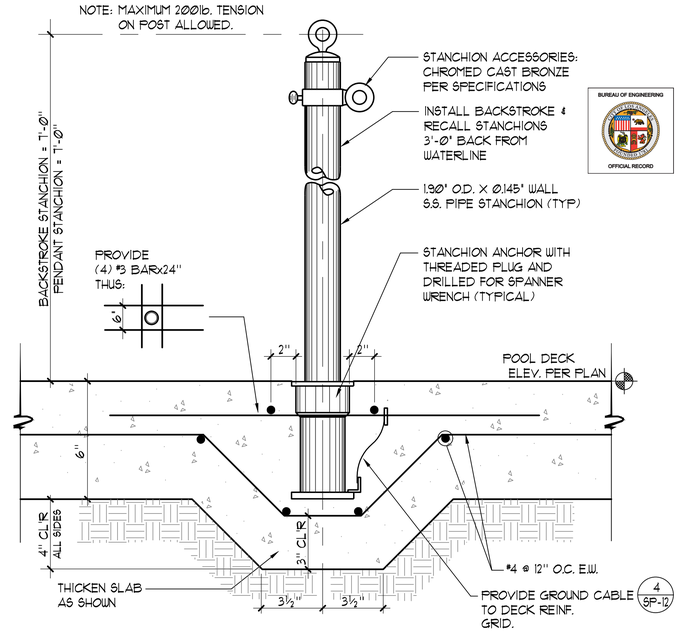
SHOTCRETE NOTES:

1. THE MINIMUM ULTIMATE COMPRESSIVE STRENGTH AT 28 DAYS POOL WALLS = 4,000 PSI.
2. CONTINUOUS INSPECTION BY AN APPROVED INSPECTOR IS REQUIRED OF ALL SHOTCRETE PLACEMENT.
3. ALL CEMENT USED SHALL CONFORM TO A.S.T.M. C-150 TYPE II.
4. FINE AND COARSE AGGREGATE SHALL CONFORM TO A.S.T.M. C-33. MAXIMUM SIZE OF AGGREGATE TO BE ⅜".
5. SHOTCRETE MIX DESIGNS SHALL BE PER CBC SECTION 1908A.2.
6. SHOTCRETE SHALL BE TESTED AND INSPECTED PER SECTIONS 1705A.3 AND 1908A.5.
7. ANCHOR BOLTS, ANCHORS, DOWELS, INSERTS, ETC. SHALL BE SECURELY TIED IN PLACE PRIOR TO PLACING OF SHOTCRETE.
8. ALL REINFORCEMENT WITHIN SHOTCRETE SHALL MAINTAIN MINIMUM 2" CLEAR NON-CONTACT SPLICES.
9. THE FILM OF LAITANCE WHICH FORMS ON THE SURFACE OF THE SHOTCRETE SHALL BE REMOVED WITHIN APPROXIMATELY TWO HOURS AFTER APPLICATION BY BRUSHING WITH A STIFF BROOM. IF THIS IS NOT REMOVED WITHIN TWO HOURS, IT SHALL BE REMOVED BY THOROUGH WIRE BRUSHING OR SAND BLASTING. CONSTRUCTION JOINTS OVER EIGHT HOURS OLD SHALL BE THOROUGHLY CLEANED WITH AIR AND WATER PRIOR TO RECEIVING SHOTCRETE.
10. ALL REINFORCING SHALL BE ASTM A-615, GRADE 60, UNLESS OTHERWISE NOTED. LAPS SHALL BE T4 BAR DIA.
11. ALL SHOTCRETE SHALL BE FINISHED WITH SMOOTH TROWELED FINISH SURFACE AND PREPARED TO RECEIVE WHITE EPOXY PAINT. ALL TILE TO BE RECESSED ¾" AND FINISHED FLUSH WITH SHOTCRETE SURFACE.

3 **REINFORCEMENT TABLE**



4 **POOL WALL 5'-1" TO 10'-0"** ¾"=1'-Ø"



5 **STANCHION POST/ANCHOR** 3"=1'-Ø"

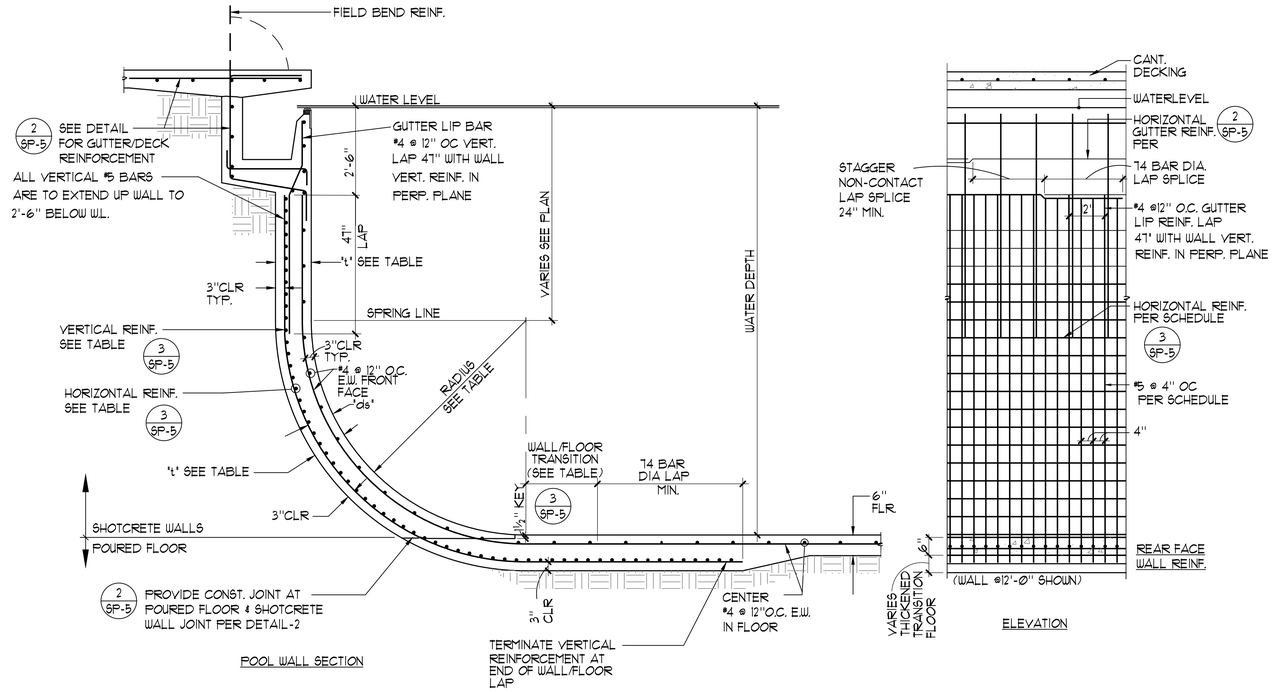
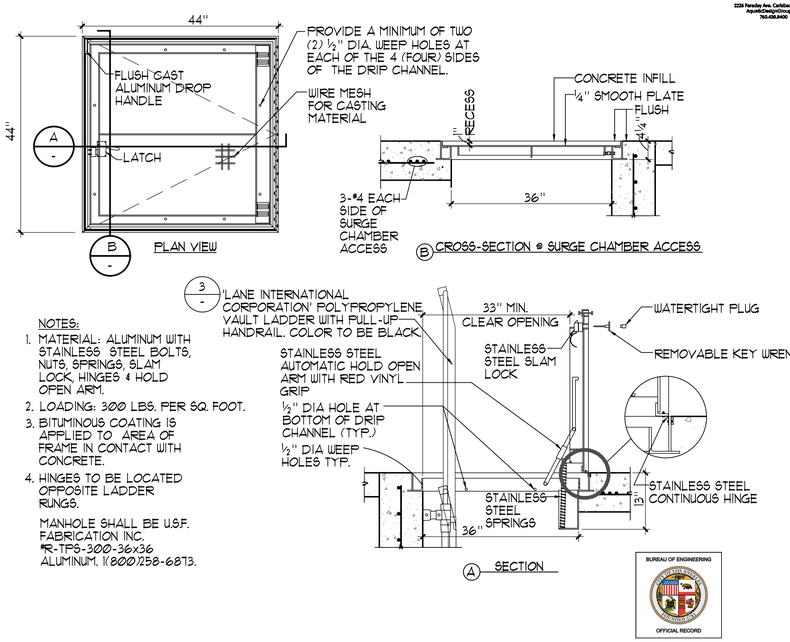
1 POOL WALL 10'-0" TO 12'-4"

½"=1'-Ø"



2 SURGE CHAMBER ACCESS COVER

¾"=1'-Ø"



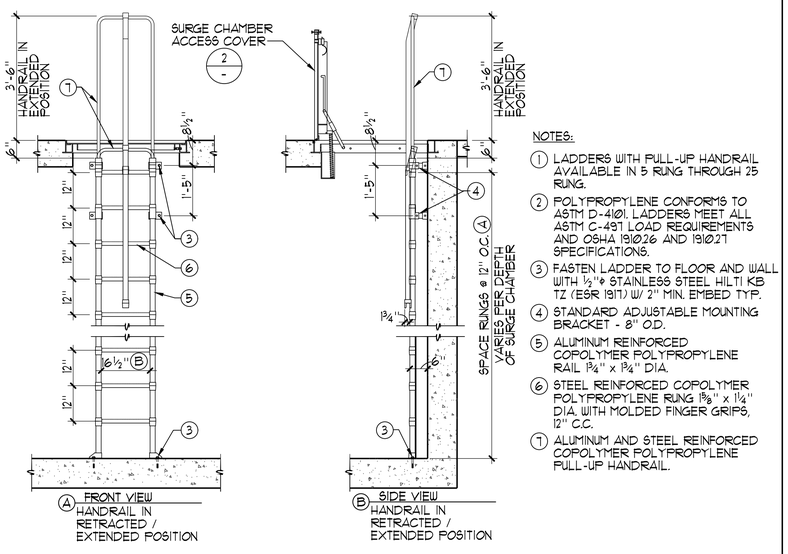
NOTES:
1. MATERIAL: ALUMINUM WITH STAINLESS STEEL BOLTS, NUTS, SPRINGS, SLAM LOCK, HINGES & HOLD OPEN ARM.
2. LOADING: 300 LBS. PER SQ. FOOT.
3. BITUMINOUS COATING IS APPLIED TO AREA OF FRAME IN CONTACT WITH CONCRETE.
4. HINGES TO BE LOCATED OPPOSITE LADDER RUNGS.

MANHOLE SHALL BE U.S.F. FABRICATION INC. RR-TFS-300-36x36 ALUMINUM. \(800)758-6873.

CONTRACTOR TO VERIFY:
- (A) OVERALL LADDER HEIGHT
- (B) LADDER WIDTH

3 SURGE CHAMBER ACCESS LADDER

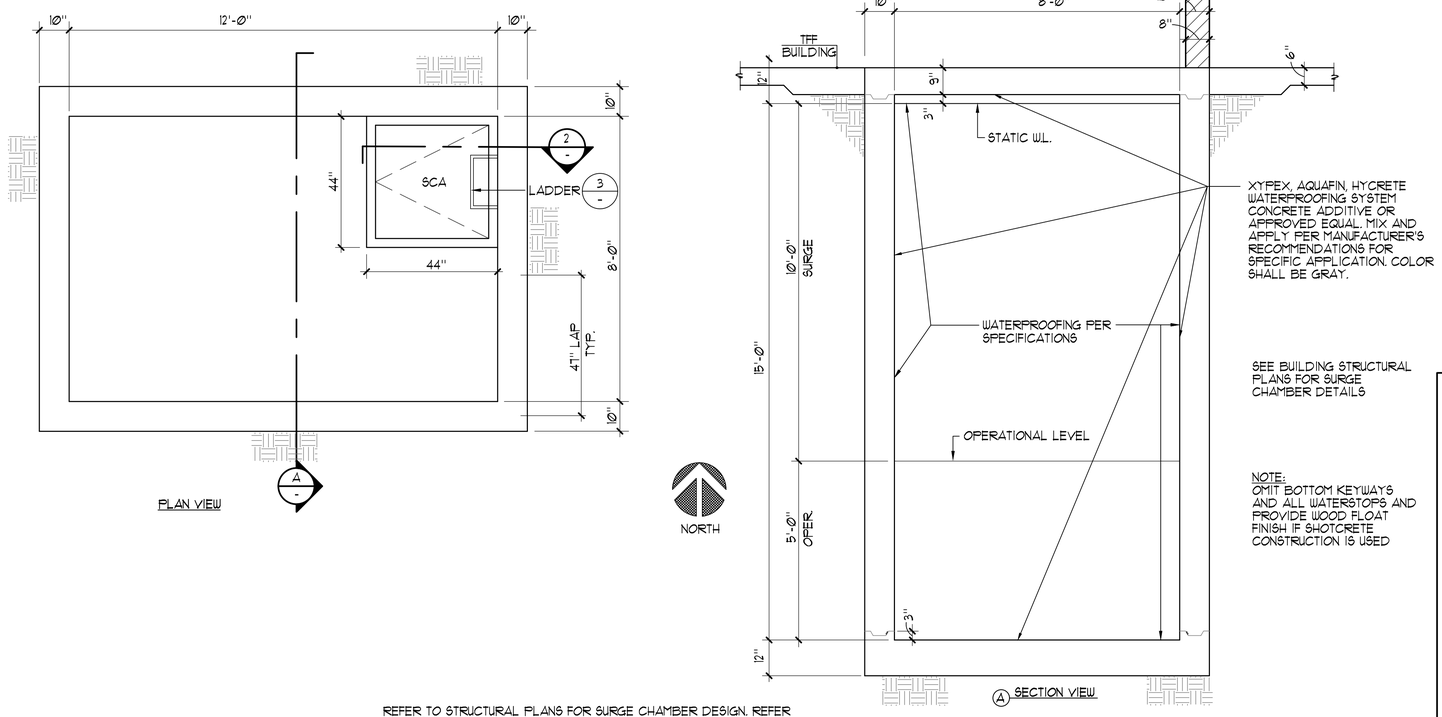
½" = 1'-Ø"



NOTES:
1. LADDERS WITH PULL-UP HANDRAIL AVAILABLE IN 5 RUNG THROUGH 25 RUNG.
2. POLYPROPYLENE CONFORMS TO ASTM D-4101. LADDERS MEET ALL ASTM C-497 LOAD REQUIREMENTS AND OSHA 1910.26 AND 1910.27 SPECIFICATIONS.
3. FASTEN LADDER TO FLOOR AND WALL WITH ½"ø STAINLESS STEEL HILTI KB TZ (ESR 1917) W/ 2" MIN. EMBED TYP.
4. STANDARD ADJUSTABLE MOUNTING BRACKET - 8" O.D.
5. ALUMINUM REINFORCED COPOLYMER POLYPROPYLENE RAIL 1¾" x 1¾" DIA.
6. STEEL REINFORCED COPOLYMER POLYPROPYLENE RUNG 1⅜" x 1¼" DIA. WITH MOLDED FINGER GRIPS, 12" C.C.
7. ALUMINUM AND STEEL REINFORCED COPOLYMER POLYPROPYLENE PULL-UP HANDRAIL.

4 SURGE CHAMBER

½"=1'-Ø"



REFER TO STRUCTURAL PLANS FOR SURGE CHAMBER DESIGN. REFER TO THIS DETAIL FOR OVERALL DIMENSIONS AND WATER LEVELS ONLY.

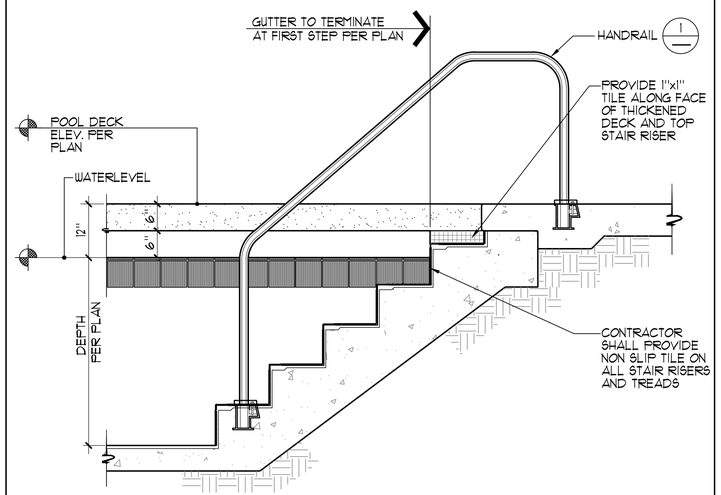
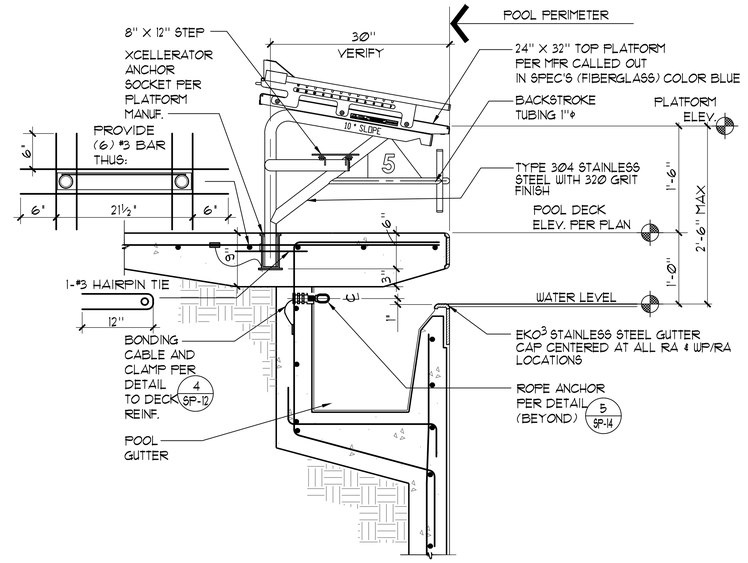
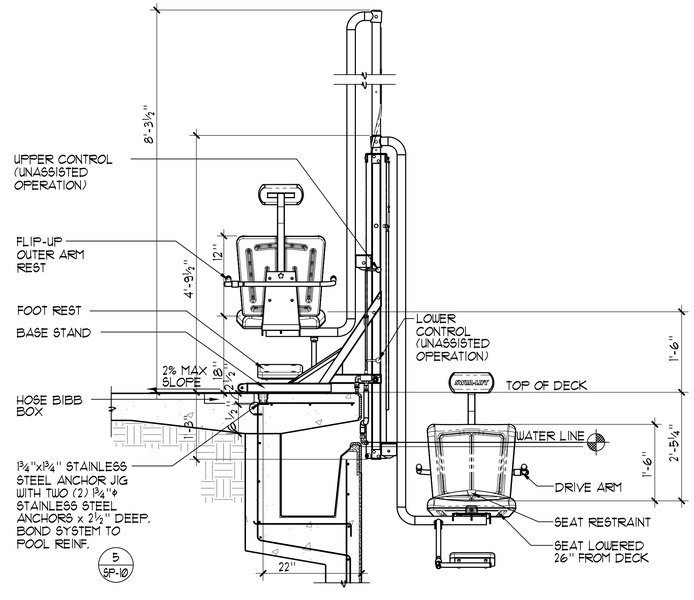
1 HANDRAIL DETAIL ¾"=1'-0"

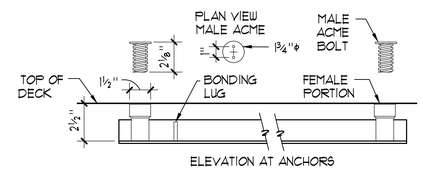


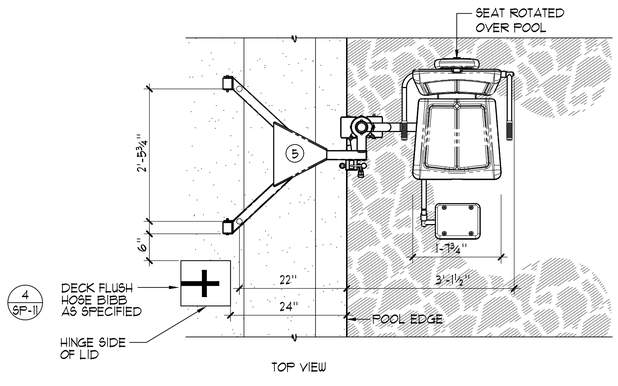
2 GUTTER EDGE AT STAIRS ¾"=1'-0"



3 RACING PLATFORM 1"=1'-0"







TOP VIEW

4 ACCESSIBLE LIFT ¾"=1'-0"

NOTES:

1. GALLATIN #27336 PROVIDE DOMESTIC WATER SOURCE IN FLUSH MOUNTED DECK BOX ADJACENT TO LIFT. (300 lb. CAPACITY MIN.)
2. CLEAR DECK SPACE SHALL BE PROVIDED PARALLEL TO THE WATER 36" WIDE x 48" MINIMUM FROM A LINE LOCATED 2" BEHIND THE REAR EDGE OF THE SEAT.
3. ACTUATOR HOSE TO BE BRAIDED STAINLESS STEEL HOSE. LENGTH AS NEEDED.
4. ACTUATOR HOSE TO BE ATTACHED TO LIFT FRAME WITH NYLON ZIP TIES. TRIM ANY EXCESS LENGTH FROM ZIP TIES.
5. GUSSET COVER PLATE TO BE ATTACHED REQUIRING A TOOL FOR REMOVAL.
6. POOL LIFT SHALL BE LOCATED WHERE THE WATER LEVEL IS AT LEAST 36" AND DOES NOT EXCEED 48" DEEP , UNLESS ENTIRE POOL IS GREATER THAT 48" DEEP. (CBC SECTION 11B-1009.2.1)
7. ON THE RAISED POSITION, THE CENTERLINE OF THE SEAT SHALL BE LOCATED OVER THE DECK AND 16" MINIMUM FROM THE EDGE OF THE POOL. THE DECK SURFACE BETWEEN THE CENTERLINE OF THE SEAT AND THE POOL EDGE SHALL HAVE A 2% MAX. SLOPE. (CBC SECTION 11B-1009.2.2)
8. CLEAR DECK SPACE SHALL BE PROVIDED ON SIDE OF SEAT OPPOSITE THE WATER PARALLEL TO THE WATER 36" WIDE x 48" MINIMUM FROM A LINE LOCATED 12" BEHIND THE REAR EDGE OF THE SEAT. THE CLEAR SPACE SHALL HAVE A 2% MAX. SLOPE. (CBC SECTION 11B-1009.2.3)
9. THE HEIGHT OF THE LIFT SEAT SHALL BE DESIGNED TO ALLOW A STOP AT 17" MIN. TO 19" MAX. MEASURED FROM THE DECK TO THE TOP OF THE SEAT SURFACE WHEN IN THE RAISED POSITION. (CBC SECTION 11B-1009.2.4)
10. THE SEAT SHALL BE RIGID AND 17" MIN. TO 19" MAX. WIDE. THE LIFT SEAT SHALL HAVE A BACK SUPPORT 12" MIN. TALL. (CBC SECTION 11B-1009.2.4)
11. FOOTRESTS SHALL BE PROVIDED, EXCEPT FOR SPA LIFTS, AND SHALL MOVE WITH THE SEAT. LIFT SHALL HAVE TWO ARMRESTS. THE ARMREST POSITIONED OPPOSITE THE WATER SHALL BE REMOVABLE OR SHALL FOLD CLEAR OF THE SEAT WHEN THE SEAT IS IN THE RAISED POSITION. (CBC SECTION 11B-1009.2.6)
12. THE LIFT SHALL BE CAPABLE OF UNASSISTED OPERATION FROM BOTH THE DECK AND WATER LEVELS. CONTROLS AND OPERATING MECHANISMS SHALL BE OPERABLE WITH ONE HAND AND SHALL BE UNOBSTRUCTED WHEN THE LIFT IS IN USE (CBC SECTION 11B-309.4). LIFT MUST BE STABLE AND NOT PERMIT UNINTENDED MOVEMENT WHEN A PERSON IS GETTING INTO OR OUT OF THE SEAT. (CBC SECTION 11B-1009.2.7)
13. THE LIFT SHALL BE DESIGNED SO THAT THE SEAT WILL SUBMERGE TO A WATER DEPTH OF 18" MIN. BELOW THE STATIONARY WATER LEVEL. (CBC SECTION 11B-1009.2.8)
14. LIFT SEAT MUST HAVE AN OCCUPANT RESTRAINT FOR USE BY THE OCCUPANT OF THE SEAT AND THE RESTRAINT MUST MEET THE STANDARDS FOR OPERABLE CONTROLS IN COMPLIANCE WITH CBC SECTION 11B-1009.2.4 AND SECTION 11B-309.

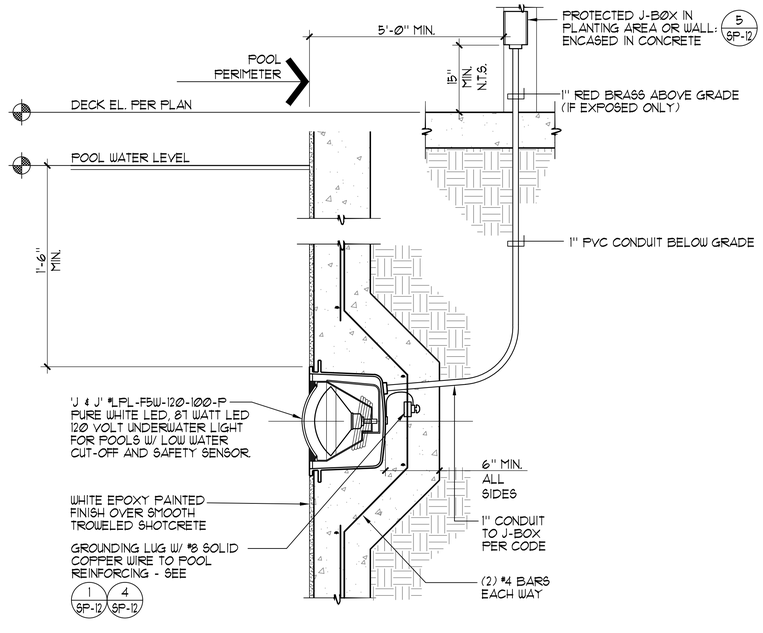
4 HOSE BIBB

½"=1"



UNDERWATER LIGHT NOTES:

1. ALL CONDUITS IN POOL LIGHTING SYSTEM TO BE A MINIMUM OF 1"ϕ.
2. CONDUCTORS TO POOL, J-BOXES SHALL BE MINIMUM 2-#8 & 1#8 (SEE UNDERWATER LIGHT PLAN) SOLID UNBROKEN TO MAIN PANEL ISOLATED GROUND BUSS. THIS BUSS IS TO BE CONNECTED WITH SOLID INSULATED #8 COPPER WIRE TO UFER & COLDWATER GROUNDING LUG ON GROUNDING BUSS. UPSIZE CONDUCTORS AS REQUIRED FOR HOMERUNS EXCEEDING 100'.
3. ALL BRASS POOL J-BOXES SHALL BE FLUSH MOUNTED IN WALLS. IF FLUSH MOUNTING IS NOT POSSIBLE THEN MOUNTING SHALL BE SURFACE MOUNTED AND CONCRETE ENCASED.
4. CONDUITS WHERE ALLOWED BY CODE SHALL BE P.V.C. (POLYVINYL CHLORIDE) FROM WET NICHES TO BRASS J-BOXES TO LIGHTING PANEL. ALL CONDUITS IN FREE AIR SPACE AND ALL RISERS SHALL BE RED BRASS TYPICAL. PVC CONDUITS SHALL BE SOLVENT WELDED WITH PURPLE PRIMER AND GRAY HEAVY BODIED GLUE.
5. LIGHTING CONTACTORS SHALL BE 'ALLEN-BRADLEY' #500 L± OR EQUAL MOUNTED IN A NEMA 12 HINGED COVER - LOCKABLE ENCLOSURE. CONTACTORS TO BE SWITCHED BY MOMENTARY SWITCH EQUAL TO 'HUBBELL' #1557 MOUNTED IN J-BOX IN MECHANICAL EQUIPMENT ROOM. REFER TO ELECTRICAL PLANS FOR LOCATION OF OWNER COORDINATED REMOTE UNDERWATER LIGHT SWITCH.
6. BRASS POOL J-BOXES SHALL BE 'HYDREL' #1119 ± W/ 1" HUBS OR EQUAL. (NO DIE CAST BOXES).
7. STRINGS SHALL BE PULLED IN ALL CONDUITS PRIOR TO PLACEMENT OF CONCRETE.
8. LOCAL, COUNTY OR CITY CODES SHALL BE ADHERED TO. SPECIFICATIONS TO BE IN ACCORDANCE WITH SECTION 680 OF LATEST N.E.C. BOOK.
9. PROVIDE PULL BOXES AS MAY BE REQUIRED FOR RUNS EXCEEDING 150 FT. OR DUE TO CHANGES IN GRADE OR DIRECTION.
10. CONTRACTOR SHALL TEST UNDERWATER POOL LIGHT GFIC CIRCUITS AND PROVIDE LETTER TO OWNER/DSA UPON SUCCESSFUL TEST.
11. SEAL CONDUIT OPENING IN LIGHT NICHE WITH SILICON CAULKING AFTER LIGHT IS INSTALLED.
12. PRIOR TO LIGHT INSTALLATION, PROVIDE MINIMUM 10 PSI PRESSURE TEST ON ALL POOL LIGHT CONDUITS FOR FOUR (4) HOURS OBSERVED BY INSPECTOR OF RECORD. MAINTAIN PRESSURE UNTIL ALL DECKS ARE POURED.

SIGNAGE NOTES AND SPECIFICATIONS:

① ⅛" THICK PAINTED ALUMINUM BACKER PANEL.

② SILKSCREENED COPY/GRAPHICS WITH SATIN CLEAR COAT.

③ ¼" THICK PAINTED ALUMINUM FACE PANEL WITH SILKSCREENED COPY/GRAPHICS. ATTACH TO ⅛" THICK PAINTED ALUMINUM BACKER PANEL USING 'VHB' TAPE AND SILICONE ADHESIVE.

④ 2" WIDE x ½" THICK PAINTED ALUMINUM SIGN FRAME ADHERED TO ⅛" THICK PAINTED ALUMINUM BACKER USING 'LORD9' ADHESIVE AS REQUIRED. VERTICAL SECTIONS OF FRAME TO BE RECTANGULAR TUBE. FILL AND SAND SEAM ALONG EDGE AND FACE PRIOR TO PAINTING.

NOTES:
1. COORDINATE SIGNAGE PLACEMENT AND COLOR SCHEME WITH ARCHITECT/OWNER PRIOR TO INSTALLATION.
2. CONTRACTOR TO PROVIDE SHOP DRAWINGS OF PROPOSED SIGNAGE FOR REVIEW.

REQUIRED SIGNAGE:

1. ALL SIGNS SHALL HAVE CLEARLY LEGIBLE LETTERS OR NUMBERS NOT LESS THAN 4 INCHES HIGH, UNLESS OTHERWISE NOTED; AFFIXED TO CMU WALL IN A LOCATION VISIBLE TO ALL POOL USERS.

1.A. POOL USER CAPACITY SIGN: A SIGN SHALL INDICATE THE MAXIMUM NUMBER OF POOL USERS PERMITTED FOR EACH POOL.

1.B. NO LIFEGUARD SIGN: WHERE NO LIFEGUARD SERVICE IS PROVIDED, A WARNING SIGN SHALL BE POSTED STATING, "WARNING: NO LIFEGUARD ON DUTY." THE SIGN ALSO SHALL STATE IN LETTERS AT LEAST 1 INCH HIGH, "CHILDREN UNDER THE AGE OF 14 SHALL NOT USE POOL WITHOUT A PARENT OR ADULT GUARDIAN IN ATTENDANCE."

1.C. ARTIFICIAL RESPIRATION AND CPR SIGN: AN ILLUSTRATED DIAGRAM WITH TEXT AT LEAST ¼ INCH HIGH OF ARTIFICIAL RESPIRATION AND CPR PROCEDURES SHALL BE POSTED.

1.D. EMERGENCY SIGN: THE EMERGENCY TELEPHONE NUMBER 911, THE NUMBER OF THE NEAREST EMERGENCY SERVICES AND THE NAME AND STREET ADDRESS OF THE POOL FACILITY SHALL BE POSTED.

1.E. KEEP CLOSED: A SIGN SHALL BE POSTED ON THE EXTERIOR SIDE OF GATES AND DOORS LEADING INTO THE POOL ENCLOSURE AREA STATING, "KEEP CLOSED."

1.F. DIARRHEA: A SIGN IN LETTERS AT LEAST 1 INCH HIGH AND IN A LANGUAGE OR DIAGRAM THAT IS CLEARLY STATED SHALL BE POSTED AT THE ENTRANCE AREA OF A PUBLIC POOL WHICH STATES THAT PERSONS HAVING CURRENTLY ACTIVE DIARRHEA OR WHO HAVE HAD ACTIVE DIARRHEA WITHIN THE PREVIOUS 14 DAYS SHALL NOT BE ALLOWED TO ENTER THE POOL WATER.

2. DIRECTION OF FLOW SIGNAGE AND LABELS.

2.A. THE DIRECTION OF FLOW FOR THE RECIRCULATION EQUIPMENT SHALL BE LABELED CLEARLY WITH DIRECTIONAL SYMBOLS SUCH AS ARROWS ON ALL PIPING IN THE EQUIPMENT AREA.

2.B. WHERE THE RECIRCULATION EQUIPMENT FOR MORE THAN ONE POOL IS LOCATED ON SITE, THE EQUIPMENT SHALL BE MARKED AS TO WHICH POOL THE SYSTEM SERVES.

2.C. VALVES AND PLUMBING LINES SHALL BE LABELED CLEARLY WITH THE SOURCE OR DESTINATION DESCRIPTIONS.

1 POOL SIGNAGE DETAIL ¾"=1'-0"

SL = SLOPE DIRECTION

WET PLAY DATA

SURFACE AREA	=	1,003 SQ. FT.
VOLUME	=	4,194 GAL.
30 MIN. TURNOVER	=	140 GPM

WET PLAY BALANCE TANK DATA

BOOSTER PUMP RATE	=	133 GPM
CIRCULATION PUMP RATE	=	140 GPM
TOTAL WATER FLOW	=	273 GPM
273 GPM x 3	=	819 GAL.
8'-0" x 10'-0" SURGE CHAMBER	=	4194 GAL.

∴ 4,194 GAL. > 819 GAL. OK

SPECIAL REQUIREMENTS FOR SPRAY GROUNDS (2016 CBC 3106B)

1. ALL PARTS OF THE SPRAY GROUND SHALL BE DESIGNED AND CONSTRUCTED SO THAT THERE ARE NO SAFETY HAZARDS.
2. WALKING SURFACE: A MINIMUM 4-FOOT WIDE WALKING SURFACE SHALL EXTEND AROUND THE PERIMETER OF THE SPLASH ZONE OF A SPRAY GROUND.
3. THE RECIRCULATION SYSTEM SHALL BE IN OPERATION AT ALL TIMES THAT THE SPRAY GROUND IS OPEN FOR USE AND SHALL HAVE A MINIMUM OF FOUR TURNOVER CYCLES PRIOR TO OPENING FOR PROPER DISINFECTION AND FILTRATION.
4. THERE SHALL BE NO STANDING WATER WITHIN THE SPLASH ZONE.
5. NOZZLES THAT SPRAY FROM THE GROUND LEVEL SHALL BE FLUSH WITH THE GROUND WITH OPENINGS NO GREATER THAN ½ INCH. SPRAY GROUND WATER FEATURES THAT EXTEND ABOVE THE GROUND MUST BE CLEARLY VISIBLE.
6. THE SPLASH ZONE SHALL BE SLOPED SO THAT ONLY WATER FROM THE SPRAY GROUND WATER FEATURE FLOWS BACK TO THE SURGE BASIN. AREAS ADJACENT TO THE SPLASH ZONE SHALL BE SLOPED AWAY FROM THE SPRAY GROUND TO DECK DRAINS OR OTHER SURFACE WATER DISPOSAL SYSTEMS.
7. ALL FOGGERS AND MISTERS THAT PRODUCE FINELY ATOMIZED MISTS SHALL BE SUPPLIED DIRECTLY FROM A POTABLE WATER SOURCE AND NOT FROM THE SURGE BASIN.
8. WHEN MULTIPLE PUMPS ARE USED THE CONTROL SYSTEMS FOR THE SPRAY GROUND WATER FEATURE PUMP AND RECIRCULATION SYSTEM PUMP SHALL BE ELECTRICALLY INTERCONNECTED SO THAT WHEN THE RECIRCULATION PUMP IS OFF THE SPRAY GROUND WATER FEATURE PUMP ALSO IS OFF.
9. THE SPRAY GROUND SHALL HAVE A SURGE BASIN OR TREATMENT TANK CONSTRUCTED OF MATERIALS WHICH ARE INERT, CORROSION RESISTANT, NONTOXIC AND WATERTIGHT INCLUDING MATERIALS SUCH AS CONCRETE, FIBERGLASS, HIGH DENSITY POLYETHYLENE, STAINLESS STEEL OR OTHER MATERIALS AS APPROVED BY THE ENFORCING AGENCY WHICH CAN WITHSTAND ALL ANTICIPATED LOADINGS UNDER FULL AND EMPTY CONDITIONS AS DETERMINED BY AN ENGINEER OR ARCHITECT WHO HAS EXPERIENCE WORKING ON PUBLIC POOLS.
10. THE TOTAL VOLUME OF THE SURGE BASIN SHALL BE AT LEAST 4,000 GALLONS OR A MINIMUM OF THREE TIMES THE GALLONS PER MINUTE FLOW RATE OF ALL THE SPRAY GROUND PUMPS AND THE RECIRCULATION PUMP COMBINED, WHICHEVER IS HIGHER.
11. THE TURNOVER TIME SHALL BE ONE-HALF HOUR OR LESS.
12. THE SUCTION INTAKE FOR THE SPRAY GROUND OR WATER FEATURE PUMP IN THE SURGE BASIN SHALL BE LOCATED ADJACENT TO THE RECIRCULATION RETURN LINE.
13. WHEN SEPARATE PUMPS ARE USED, THE SUCTION INTAKE FOR THE RECIRCULATION PUMP SHALL BE LOCATED IN THE LOWEST PORTION OF THE SURGE BASIN AND ON THE OPPOSITE SIDE FROM THE SUCTION INTAKE FOR THE SPRAY GROUND PUMP.
14. THE SURGE BASIN SHALL BE DESIGNED TO HAVE EASY ACCESS FOR CLEANING AND INSPECTION. THE BASIN SHALL HAVE AT LEAST ONE LADDER ACCESS AND SHALL HAVE AT LEAST ONE 3-FOOT BY 3-FOOT ACCESS OPENING. LIDS SHALL BE LOCKED OR REQUIRE A TOOL TO OPEN.
15. THE SURGE BASIN SHALL BE EQUIPPED WITH AN AUTOMATIC MAKE UP WATER FILL DEVICE THROUGH AN AIR GAP OR BE PROTECTED BY AN APPROVED BACKFLOW PREVENTION DEVICE IN ACCORDANCE WITH CHAPTER 6 OF THE CALIFORNIA PLUMBING CODE.
16. ULTRAVIOLET LIGHT DISINFECTION SHALL BE USED TO SUPPLEMENT DISINFECTION METHODS REQUIRED IN THIS CHAPTER UNLESS ANOTHER TREATMENT TREATMENT PROCESS IS PROVIDED THAT HAS BEEN DETERMINED BY A NATIONALLY RECOGNIZED TESTING LABORATORY TO BE CAPABLE OF PROVIDING AT LEAST THE EQUIVALENT LEVEL OF REDUCTION OF CRYPTOSPORIDIUM AS THE ULTRAVIOLET LIGHT DISINFECTION SYSTEM SPECIFIED IN THIS SECTION. THE ULTRAVIOLET DISINFECTION UNIT SHALL COMPLY WITH THE APPLICABLE REQUIREMENTS ESTABLISHED BY THE NSF/ANSI 50-2010 PERFORMANCE STANDARD EFFECTIVE AUGUST 2010.
17. AN ACCURATELY CALIBRATED ULTRAVIOLET LIGHT INTENSITY METER THAT HAS BEEN PROPERLY FILTERED TO RESTRICT ITS SENSITIVITY TO THE DISINFECTION SPECTRUM SHALL BE INSTALLED IN THE WALL OF THE DISINFECTION CHAMBER AT THE POINT OF GREATEST WATER DEPTH FROM THE LIGHT SOURCE.
18. THE ULTRAVIOLET LIGHT UNIT SHALL BE LOCATED ON THE RECIRCULATION SYSTEM AND SHALL BE INSTALLED TO PROVIDE TREATED WATER DIRECTLY TO THE SPRAY FEATURES.
19. THE ULTRAVIOLET LIGHT DISINFECTION SYSTEM MUST BE EQUIPPED WITH AN AUTOMATIC SHUTDOWN SYSTEM THAT INACTIVATES THE WATER FEATURE PUMP IF THE ULTRAVIOLET DOSAGE RATE DROPS BELOW 40 mJ/cm^2.
20. ARTIFICIAL LIGHTING SHALL BE PROVIDED AT ALL SPRAY GROUND PADS WHICH ARE USED AT NIGHT OR WHICH DO NOT HAVE ADEQUATE NATURAL LIGHTING SO THAT ALL PORTIONS OF THE SPRAY PAD AND DECK MAY BE SEEN EASILY. LIGHTING THAT MAY BE EXPOSED TO THE FEATURE POOL WATER SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATIONS AND THE CALIFORNIA ELECTRICAL CODE.
21. A MEANS OF DIVERTING RUNOFF FROM THE SPLASH ZONE SHALL BE INSTALLED ON THE SPRAY GROUND DRAINAGE PIPING BEFORE THE SURGE BASIN TO DIVERT WATER TO THE STORM DRAINAGE SYSTEM WHEN THE SPRAY GROUND IS NOT IN OPERATION.
22. A REMOVABLE AND CLEANABLE CATCH SCREEN OR BASKET SHALL BE INSTALLED ON THE SPRAY GROUND DRAINAGE SYSTEM BEFORE IT ENTERS THE RESERVOIR TO PREVENT LARGER DEBRIS FROM COLLECTING IN THE SURGE BASIN.
23. EACH SPRAY GROUND MUST BE PROVIDED WITH ONE OR MORE SIGNS STATING:

CAUTION:
WATER IS RECIRCULATED
DO NOT DRINK

4" LETTERING MUST BE PROVIDED. SIGNS MUST BE VISIBLE FROM ANY PART OF THE SPRAY GROUND.

SHEET O F SHEETS

PLOTTED: 6/26/2018 2:53:10 PM

EQUIPMENT LIST

1. SWIMMING POOL STRAINER: 'MER-MADE' F.O. SERIES FRP REDUCING BASKET STRAINER: ONE (1) 10"x8" STANDARD, WITH ACRYLIC LID AND TWO (2) STAINLESS STEEL STRAINERS EA. (150lbs.)
2. (1 MR-2) (3-4 MR-1) SWIMMING POOL CIRCULATION PUMP: 'PACO' #6015-T; 6"x8"x15" TYPE 'LC' END SUCTION CENTRIFUGAL PUMP; 1150 RPM 460V, 3PH; 30HP; RATED AT 1,215 GPM @ 60 FT. TDH; 85% EFFICIENT; PREMIUM EFFICIENCY TEFC MOTOR; EPOXY COAT ALL WET SURFACES. 'PACO', 'AURORA' OR EQUAL. (760 lbs.) PROVIDE 'PENTAIR ACCUDRIVE PUMP CONTROL SYSTEM VARIABLE SPEED DRIVE MODEL #AD300-46G3-N12FB WITH FULL BYPASS MODE AND 4-20mA FLOW METER KIT 91016-420KIT AND EXTENDED WARRANTY AD-EWW212 . COORDINATE MOUNTING LOCATION TO MAINTAIN DESIRED CLEARANCES, 460V 3PH. (122 lbs.)
3. (4 MR-2) (1 MR-6) (2 MR-1) SWIMMING POOL FILTERS: 'STARK' S63-96-10 AUTOMATIC FILTER CONTROL (AFC) FULLY AUTOMATIC HI-RATE PERMANENT MEDIA FILTER WITH 81 SQ. FT. OF FILTER AREA RATED AT 1,296 GPM AT 16 GPM/SQ. FT. COMPLETE WITH 10" FACE PIPING, 6" BACKWASH, SEISMIC ANCHORAGE. PROVIDE ALL UTILITIES, PIPING, VALVING, ETC. (9,800 lbs EA. TANK) 'STARK', OR EQUAL. PROVIDE SIGNET MK-515 FLOSENSOR WITH DIGITAL READ-OUT.
4. (5 MR-2) (1 MR-6) SWIMMING POOL HEATER: INDIRECT FIRED POOL HEATING PACKAGE SYSTEM; 'AQUA5' WITH SMARTTOUCH CONTROL CONDENSING MODULATING BOILER, TITANIUM HEAT EXCHANGER WITH CPVC CONNECTIONS, FACTORY ASSEMBLED SKID MOUNTED PACKAGE, CALIFORNIA CODE CONTROLS, 1 1/2" NATURAL GAS CONNECTION, 4" WATER CONNECTIONS, 6" DIAMETER AIR INLET AND 6" DIAMETER SIDEWALL VENT SIZE, PVC VENTED, 1,449,877 BTU PER HOUR INPUT, 91% EFFICIENT, 'LOCHINVAR' #AFN1500, WEIGHT = 3,500 lbs. EA. TWO (2) TOTAL.
5. (2 MR-2) (1 MR-6) WET PLAY CIRCULATION PUMP: 'PENTAIR' XFK-12 WHISPERFLO XF PUMP; 3,450 RPM, 3HP; 208V, 3PH; SELF PRIMING PUMP WITH INTEGRAL STRAINER RATED AT 155 GPM AT 60FT. TDH. ONE (1) TOTAL (58lbs). COMPLETE WITH TIME CLOCK SYSTEM. INTERCONNECT CIRCULATION PUMP WITH BOOSTER PUMPS TO ONLY ALLOW BOOSTER PUMP OPERATION WHEN CIRCULATION SYSTEM IS ON.
6. (2 MR-2) WET PLAY BOOSTER PUMP: 'PENTAIR' XFK-8 WHISPERFLO XF PUMP; 3450 RPM, 2HP; 208-230V/460V, 3PH; WITH INTEGRAL STRAINER RATED AT 135 GPM AT 50 FT. TDH. INTERCONNECT WITH WATER FEATURE CIRCULATION PUMP. (FIELD VERIFY MOTOR VOLTAGE PRIOR TO ORDERING.) (58lbs.) PROVIDE MOTOR STARTER/DISCONNECT.
7. (3 MR-2) (2 MR-6) WET PLAY FILTERS:'PENTAIR' TR100-C-3 HI-RATE PERMANENT MEDIA FILTERS WITH 9.82 SQ. FT. OF FILTER AREA; RATED AT 157 GPM AT 16 GPM/SQ. FT. COMPLETE WITH 3" MANIFOLD, 2" MULTIPORT BACKWASH AND SEISMIC ANCHORAGE. PROVIDE ALL UTILITIES, PIPING, VALVING, ETC. TWO (2) TANKS TOTAL. (1000lbs. EA. TANK)
8. (6 MR-2) (1 MR-6) WET PLAY HEATER: 'RAYPAK' MODEL #DIGITAL 331; 332,000 BTU INPUT, 3/4" NATURAL GAS CONNECTION, 2" WATER INFLUENT/EFFLUENT CONNECTIONS CUPRO NICKEL HEAT EXCHANGER ASME KIT AND 5" DIRECT AIR INTAKE AND 6" EXHAUST, IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS. ONE (1) TOTAL. (210lbs.) HEATER SHALL HAVE ELECTRONIC IGNITION AND EXTERNAL SHUT-OFF SWITCH WITHOUT ADJUSTING THERMOSTAT SETTING.
9. (1-2 MR-9) WET PLAY ULTRA VIOLET SYSTEM: 'AQUIONICS' MODEL # UV SWIM I-100+ 176 GPM; VALIDATED FOR OUTDOOR/CAPACITY, INCREASE TO 4" FLANGED CONNECTION IN-LINE UV. 1.3 KW AT 208V 1 PH WITH 15' CABLE. 3 - #10 WIRING WITH 20A EXTERNAL BREAKER. PROVIDE FLOOR MOUNTING. PROVIDE INSTALLATION AND PIPING PER MANUFACTURER'S RECOMMENDATIONS INCLUDING PIPING BYPASS, STRAINER AND VALVING. PROVIDE SPARE UV LAMP AT SITE AS BACK-UP.
10. (5 MR-3) (5 MR-4) (1 MR-6) WET PLAY WATER CHEMISTRY CONTROLLER: PROVIDE ONE (1) CHEMTROL PC5000 WITH FLOW CELL,ORP SENSOR, PPM SENSOR, PROVIDE ETHERNET CONNECTION AND COMMUNICATION SOFTWARE WITH AUTODIAL ALARM, 4-20mV OUTPUT WITH CORRESPONDING INPUT SENSORS AND OUTPUT CONNECTION INCLUDING TANK SENSORS, TRANSDUCERS, RELAYS,VFD CONTROL. ONE (1) TOTAL.
11. (5 MR-3) (3 MR-4) (1 MR-6) (1-2 MR-5) SWIMMING POOL WATER CHEMISTRY CONTROLLER: PROVIDE ETHERNET CONNECTION TO CHEMTROL PC1000 WITH FLOW CELL, ORP SENSOR, PPM SENSOR, FILTER CONTROL PANEL WITH GAUGES AND BACKWASH CONTROL SOLENOID VALVES AND MANUAL BACKWASH VALVE, COMMUNICATION SOFTWARE WITH AUTO DIAL ALARM 4-20 OUTPUT, CORRESPONDING INPUT SENSORS , OUTPUT CONNECTIONS, TANK SENSORS, TRANSDUCERS RELAYS VFD CONTROL (1) ONE 'IMPACT', 'WALLACE & TIERNAN' OR APPROVED EQUAL.
12. (1 MR-3) (4 MR-3) (1 MR-4) (1 MR-6) (6 MR-5) CHLORINE STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 500 GALLON #TC597IDC, DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED, OPERATING WEIGHT = (4,165lbs). COMPLIES WITH FED. REG #40CFR-264-193. SWIMMING POOL FEED PUMP SHALL BE 'THE SOLUTION' 22152 011728GPD, WET PLAY FEED PUMP SHALL BE 'STENNER' 85M-5, 50 GPD @25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION.
13. (2-4 MR-3) (1 MR-4) (1 MR-6) (6 MR-5) ACID STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 350 GALLON #TC 5256DC, DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED, OPERATING WEIGHT =(3,250lbs). WET PLAY FEED PUMP= 'STENNER' 45M-5, 50 GPD @ 25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION. SWIMMING POOL ACID FEED 'THE SOLUTION X2 #22152-02 WITH BOOSTER PUMP COMPLIES WITH FED. REG #40CFR-264-163. PROVIDE 60 GALLON 'CHEM-TAINER' VAPOR RECOVERY TANK # TC2342 DC; (500lbs.) ONE (1) TOTAL.
14. (1 MR-7) (4 MR-8) ELECTRICAL: PROVIDE ALL ELECTRICAL WIRING, CONDUIT, PANEL(S), STARTER/DISCONNECT INTERCONNECT(S) ETC. AS REQUIRED FOR PROPER EQUIPMENT INSTALLATION PER MANUFACTURERS RECOMMENDATIONS AND SHOP DRAWINGS. COORDINATE ALL WORK WITH OTHER TRADES AS REQUIRED. REFER TO ELEC. PLANS FOR ALL ADDITIONAL INFO.
15. (1 MR-8) (3 MR-8) PUMP PIT: 10'-0"x13'-10"x5'-0" DEEP. PROVIDE 1½" DIA. GALV. STEEL GUARDRAIL. PROVIDE FLOOR DRAIN TO WASTE. PROVIDE WATERPROOFING PER SPECIFICATIONS. ACCESS LADDER TO BE 'FIBERGRATE' DYNARAIL FRP OR EQUAL. PROVIDE 'HYDROMATIC' 5D/V33 1/3HP 120VAC SUMP PUMP W/ 1½" EFFLUENT PIPE CONNECTION WITH CHECK VALVE FROM PUMP PIT FLOOR AND AIR GAP TO BACKWASH PIT.
16. (6 MR-3) (2 MR-4) SWIMMING POOL FILL SYSTEM: 3" 'CLA-VAL' FILL SYSTEM TO INCLUDE 3" 'CLA-VAL' SOLENOID CONTROL VALVE #136-01BY, 3" DUCT IRON, EPOXY COATED BODY WITH CAST IRON DISC RETAINER AND DIAPHRAGM WASHER, BRONZE TRIM, FLANGED GLOBE PATTERN, 120V AT 60HZ. SOLENOID WIRING SHALL BE WIRED TO WATER CHEMISTRY CONTROLLER. PROVIDE 6" AIR GAP AT FILL POINT.
17. (2 MR-4) SIM. WET PLAY FILL SYSTEM: 1" 'CLA-VAL' FILL SYSTEM TO INCLUDE 1" 'CLA-VAL' SOLENOID CONTROL VALVE #136-01BY, 1" DUCT IRON, EPOXY COATED BODY WITH CAST IRON DISC RETAINER AND DIAPHRAGM WASHER, BRONZE TRIM, FLANGED GLOBE PATTERN, 120V AT 60HZ. SOLENOID WIRING SHALL BE WIRED TO WATER CHEMISTRY CONTROLLER. PROVIDE 2" AIR GAP AT FILL POINT.
18. (2 MR-8) EYEWASH/SHOWER: 'HAWS' MODEL #8310WC BARRIER FREE COMBINATION SHOWER AND EYE/FACE WASH WITH CORROSION RESISTANT PROTECTION. SEE MEP SHEETS FOR SUPPLY PIPING. TWO (2) TOTAL.
19. (5 MR-7) LIGHTING CONTACTOR PANEL: 'ALLEN BRADLEY' #500L, OR APPROVED EQUAL. PANEL SHALL BE MOUNTED IN A NEMA 12 HINGED COVER - LOCKABLE ENCLOSURE. CONTACTORS TO BE SWITCHED BY MOMENTARY SWITCH EQUAL TO 'HUBBELL' #1551 MOUNTED IN J-BOX IN MECHANICAL EQUIPMENT ROOM. REFER TO ELECTRICAL PLANS FOR LOCATION OF OWNER COORDINATED REMOTE UNDERWATER LIGHT SWITCH.
20. WET PLAY AUTOMATION: 'VORTEX' COMMAND CENTER INCLUDING SYSTEM CONTROLLER, PIT WALL MOUNTED WATER DISTRIBUTION MANIFOLDS WITH TEN (10) OUTLETS, SOLENOID VALVES. ONE (1) DYNAMIC BYPASS VALVE, ISOLATION VALVES, BOLLARD OPERATED ACTIVATION, COMPLETE. CONTRACTOR SHALL PROVIDE COMPLETE SHOP DRAWINGS FOR APPROVAL INCLUDING CIRCULATION PUMP, FEATURE PUMP AND ULTRAVIOLET ELECTRICAL INTERLOCKS. PROVIDE WINTER DRAIN POINTS ADJACENT TO EQUIPMENT AREA FOR ALL MANIFOLD LINES.
21. (6 MR-4) WET PLAY FLOWMETER: SIGNET # P51530-X0 FLOWSENSOR WITH SIGNET #5090 FLOW MONITOR, 3" LINE SIZE, NSF LISTED.
22. (1 MR-8) BACKWASH PIT: 10'-0"x4'-6"x5'-0" DEEP (1,685 GALLONS) WITH 8" DIA. P-TRAP OUTLET TO SEWER. PROVIDE WATERPROOFING PER SPECIFICATIONS. COORDINATE WITH STRUCTURAL AND PLUMBING PLANS.
23. (2 MR-6) POOL OPERATOR WORKSTATION DESK: 'TOTAL LAB SOLUTIONS' EPOXY COUNTERTOP WITH DROP-IN SINK AND TWO (2) END CABINETS. FURNISH WITH WALL MOUNTED TWO (2) FAUCETS 'BROEN BOSS' OR APPROVED EQUAL. SEE MEP PLANS FOR WATER SUPPLY PIPING.
24. (4 SP-6) SURGE CHAMBER: 8'-0"x12'-0"x9'-6" DEEP WITH ACCESS MANHOLE, RUNG LADDER.
25. 'BELL & GOSSET' 3DS-10B 10" FLANGED PROCCESS CONTROL VALVE EPOXY COATED
26. SWIMMING POOL FLOW METER SIGNET 5090 SELF POWERED WITH 10" PIPE SENSOR.
27. (6 MR-3) SURGE CHAMBER SUMP PUMP, 'HYDROMATIC' 5D/V33 1/3HP 120VAC 1½" EFFLUENT PIPE CONNECTION WITH CHECK VALVE FROM SURGE PIT FLOOR THROUGH SURGE CHAMBER LID AND AIR GAP TO BACKWASH PIT. PROVIDE ELECTRICAL CONNECTION WITH ON/OFF SWITCH (SEASONAL USE)

GENERAL NOTES

1. THE PIPING SYSTEM SHALL HAVE DIRECTION OF FLOW ARROWS INDICATED ON THE PIPES.
2. PUBLIC POOLS SHALL HAVE A FLOW DIAGRAM OF THE POOL'S PIPING SYSTEM WITH OPERATION INSTRUCTIONS.
3. THE FLOW DIAGRAM AND INSTRUCTIONS SHALL BE AVAILABLE ON THE PREMISES AT ALL TIME

LEGEND

HB	=	HOSE BIBB	PH	=	PIPE HANGER (5 MR-9)
FD	=	FLOOR DRAIN	PG/VG	=	VACUUM / PRESSURE GAUGE (3 MR-9)
FV	=	FLOAT VALVE			

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEM BRACING

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS SHALL BE BRACED TO COMPLY WITH THE FORCES AND DISPLACEMENTS PRESCRIBED IN ASCE 7-10 SECTION 13.3 AS DEFINED IN ASCE 7-10 SECTION 13.6.8, 13.6.7, 13.6.5.6, AND 2016 CBC, SECTIONS 1616A1.24, 1616A1.25, AND 1616A1.26.

THE BRACING AND ATTACHMENTS TO THE STRUCTURE SHALL BE DETAILED ON THE APPROVED DRAWINGS OR THEY SHALL COMPLY WITH ONE OF THE OSHPD PRE-APPROVALS (OPM #0052-13)

COPIES OF THE BRACING SYSTEM INSTALLATION GUIDE OR MANUAL SHALL BE AVAILABLE ON THE JOBSITE PRIOR TO THE START OF HANGING AND BRACING OF THE PIPE, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS.

THE STRUCTURAL ENGINEER OF RECORD SHALL VERIFY THE ADEQUACY OF THE STRUCTURE TO SUPPORT THE HANGER AND BRACE LOADS.

THREE PHASE MOTOR LOADS AT 460V

SWIMMING POOL CIRCULATION PUMP: 25 HP @ 460V = 34 AMPS

HEATER/GAS PIPING INSTALLATION NOTE

GAS FIRED POOL HEATER(S) INSTALLED ON A GAS SUPPLY SYSTEM UTILIZING A 2 PSI OR 5 PSI SUPPLY, GAS PRESSURE SHALL REQUIRE A REGULATOR TO REDUCE THE SUPPLY PRESSURE A PROPERLY SIZED AND INSTALLED LOCK-UP-TYPE HIGH GAS PRESSURE REGULATOR (HGPR) SHALL BE USED TO REDUCE THE GAS PRESSURE AT THE UNIT INLET TO A MINIMUM OF 4" TO A MAXIMUM OF 11" WATER COLUMN.

'LOCHINVAR' RECOMMENDS THAT ANY REQUIRED LINE LOCK-UP-TYPE HIGH GAS PRESSURE REGULATOR BE INSTALLED WITH A MINIMUM OF 8 FEET TO 10 FEET OF PIPE FROM ITS DISCHARGE TO THE UNIT'S GAS INLET. IF A STRAIGHT DISTANCE OF GAS PIPE IS NOT AVAILABLE THE ADDITION OF A VERTICAL 'U' IN THE GAS PIPING DOWN STREAM FROM THE 'HGPR' CAN BE USED TO ACHIEVE THE 8 FEET TO 10 FEET OF DISTANCE.

NOTE:
CONTRACTOR IS RESPONSIBLE FOR HEATER VENTING, EXHAUST DUCTING, FLUE TERMINUS AND PENETRATION(S) THROUGH BUILDING STRUCTURE.

EQUIPMENT LIST

1. SWIMMING POOL STRAINER: 'MER-MADE' F.O. SERIES FRP REDUCING BASKET STRAINER: ONE (1) 10"x8" STANDARD, WITH ACRYLIC LID AND TWO (2) STAINLESS STEEL STRAINERS EA. (150lbs.)
2. (1 MR-2) (3-4 MR-1) SWIMMING POOL CIRCULATION PUMP: 'PACO' #0115-T; 6"x8"x15" TYPE 'LC' END SUCTION CENTRIFUGAL PUMP; 1150 RPM 460V, 3PH; 30HP; RATED AT 1,215 GPM @ 60 FT. TDH; 85% EFFICIENT; PREMIUM EFFICIENCY TEFC MOTOR; EPOXY COAT ALL WET SURFACES. 'PACO', 'AURORA' OR EQUAL. (760 lbs.) PROVIDE 'PENTAIR ACCUDRIVE PUMP CONTROL SYSTEM VARIABLE SPEED DRIVE MODEL #AD300-46G3-N12FB WITH FULL BYPASS MODE AND 4-20mA FLOW METER KIT 910016-420KIT AND EXTENDED WARRANTY AD-EWW272 . COORDINATE MOUNTING LOCATION TO MAINTAIN DESIRED CLEARANCES, 460V 3PH. (122 lbs.)
3. (4 MR-2) (1 MR-6) (2 MR-1) SWIMMING POOL FILTERS: 'STARK' S63-96-10 AUTOMATIC FILTER CONTROL (AFC) FULLY AUTOMATIC HI-RATE PERMANENT MEDIA FILTER WITH 81 SQ. FT. OF FILTER AREA RATED AT 1296 GPM AT 16 GPM/SQ. FT. COMPLETE WITH 10" FACE PIPING, 6" BACKWASH, SEISMIC ANCHORAGE. PROVIDE ALL UTILITIES, PIPING, VALVING, ETC. (9,800 lbs EA. TANK) 'STARK', OR EQUAL. PROVIDE SIGNET MK-515 FLOSENSOR WITH DIGITAL READ-OUT.
4. (5 MR-2) (1 MR-1) SWIMMING POOL HEATER: INDIRECT FIRED POOL HEATING PACKAGE SYSTEM; 'AQUA-S' WITH SMARTTOUCH CONTROL CONDENSING MODULATING BOILER, TITANIUM HEAT EXCHANGER WITH CPVC CONNECTIONS, FACTORY ASSEMBLED SKID MOUNTED PACKAGE, CALIFORNIA CODE CONTROLS, 1 1/2" NATURAL GAS CONNECTION, 4" WATER CONNECTIONS, 6" DIAMETER AIR INLET AND 6" DIAMETER SIDEWALL VENT SIZE, PVC VENTED, 1,449,877 BTU PER HOUR INPUT, 91% EFFICIENT, 'LOCHINVAR' #APN1500, WEIGHT = 3,500 lbs. EA. TWO (2) TOTAL.
5. (2 MR-2) (1 MR-6) WET PLAY CIRCULATION PUMP: 'PENTAIR' XFK-12 WHISPERFLO XF PUMP; 3,450 RPM, 3HP; 208V, 3PH; SELF PRIMING PUMP WITH INTEGRAL STRAINER RATED AT 155 GPM AT 60FT. TDH. ONE (1) TOTAL (58lbs.) COMPLETE WITH TIME CLOCK SYSTEM. INTERCONNECT CIRCULATION PUMP WITH BOOSTER PUMPS TO ONLY ALLOW BOOSTER PUMP OPERATION WHEN CIRCULATION SYSTEM IS ON.
6. (2 MR-2) WET PLAY BOOSTER PUMP: 'PENTAIR' XFK-8 WHISPERFLO XF PUMP; 3450 RPM, 2HP; 208-230V/460V, 3PH; WITH INTEGRAL STRAINER RATED AT 135 GPM AT 50 FT. TDH. INTERCONNECT WITH WATER FEATURE CIRCULATION PUMP. (FIELD VERIFY MOTOR VOLTAGE PRIOR TO ORDERING.) (58lbs.) PROVIDE MOTOR STARTER/DISCONNECT.
7. (3 MR-2) (2 MR-6) WET PLAY FILTERS:'PENTAIR' TR100-C-3 HI-RATE PERMANENT MEDIA FILTERS WITH 9.82 SQ. FT. OF FILTER AREA; RATED AT 157 GPM AT 16 GPM/SQ. FT. COMPLETE WITH 3" MANIFOLD, 2" MULTIPORT BACKWASH AND SEISMIC ANCHORAGE. PROVIDE ALL UTILITIES, PIPING, VALVING, ETC. TWO (2) TANKS TOTAL. (1000lbs. EA. TANK)
8. (6 MR-2) (1 MR-6) WET PLAY HEATER: 'RAYPAK' MODEL #DIGITAL 331; 332,000 BTU INPUT, 3/4" NATURAL GAS CONNECTION, 2" WATER INFLUENT/EFFLUENT CONNECTIONS CUPRO NICKEL HEAT EXCHANGER ASME KIT AND 5" DIRECT AIR INTAKE AND 6" EXHAUST, IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS. ONE (1) TOTAL. (210lbs.) HEATER SHALL HAVE ELECTRONIC IGNITION AND EXTERNAL SHUT-OFF SWITCH WITHOUT ADJUSTING THERMOSTAT SETTING.
9. (1-2 MR-9) WET PLAY ULTRA VIOLET SYSTEM: 'AQUIONICS' MODEL # UV SWIM I-100+ 176 GPM; VALIDATED FOR OUTDOOR/CAPACITY, INCREASE TO 4" FLANGED CONNECTION IN-LINE UV. 1.3 KW AT 208V 1 PH WITH 15' CABLE. 3 - #10 WIRING WITH 20A EXTERNAL BREAKER. PROVIDE FLOOR MOUNTING. PROVIDE INSTALLATION AND PIPING PER MANUFACTURER'S RECOMMENDATIONS INCLUDING PIPING BYPASS, STRAINER AND VALVING. PROVIDE SPARE UV LAMP AT SITE AS BACK-UP.
10. (5 MR-3) (5 MR-4) (1 MR-6) WET PLAY WATER CHEMISTRY CONTROLLER: PROVIDE ONE (1) CHEMTROL PC5000 WITH FLOW CELL, ORP SENSOR, PPM SENSOR. PROVIDE ETHERNET CONNECTION AND COMMUNICATION SOFTWARE WITH AUTODIAL ALARM, 4-20mV OUTPUT WITH CORRESPONDING INPUT SENSORS AND OUTPUT CONNECTION INCLUDING TANK SENSORS, TRANSDUCERS, RELAYS, VFD CONTROL. ONE (1) TOTAL.
11. (5 MR-3) (3 MR-4) (1-2 MR-5) (1 MR-6) SWIMMING POOL WATER CHEMISTRY CONTROLLER: PROVIDE ETHERNET CONNECTION TO CHEMTROL PC1000 WITH FLOW CELL, ORP SENSOR, PPM SENSOR, FILTER CONTROL PANEL WITH GAUGES AND BACKWASH CONTROL SOLENOID VALVES AND MANUAL BACKWASH VALVE; COMMUNICATION SOFTWARE WITH AUTO DIAL ALARM 4-20 OUTPUT, CORRESPONDING INPUT SENSORS , OUTPUT CONNECTIONS, TANK SENSORS, TRANSDUCERS RELAYS VFD CONTROL (1) ONE 'IMPACT', 'WALLACE & TIERNAN' OR APPROVED EQUAL.
12. (1 MR-3) (4 MR-3) (1 MR-4) (1 MR-6) (6 MR-9) CHLORINE STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 500 GALLON #TC597-1DC, DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED, OPERATING WEIGHT = (4,165lbs.) COMPLIES WITH FED. REG #40CFR-264-193. SWIMMING POOL FEED PUMP SHALL BE THE SOLUTION' 22152 @11.72GPD. WET PLAY FEED PUMP SHALL BE 'STENNER' 85M-5, 50 GPD @25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION.
13. (2-4 MR-3) (1 MR-4) (1 MR-6) (6 MR-9) ACID STORAGE/FEED SYSTEM: PROVIDE 'CHEM-TAINER' 350 GALLON #TC 525-6DC, DUAL STORAGE/CONTAINMENT TANK WITH LID SEISMICALLY RESTRAINED, OPERATING WEIGHT =(3,250lbs.). WET PLAY FEED PUMP= 'STENNER' 45M-5, 50 GPD @ 25 PSI WITH FRP SHELF BRACKETS. HARD PIPE TO POINT OF INJECTION. SWIMMING POOL ACID FEED 'THE SOLUTION X2 #22152-02 WITH BOOSTER PUMP COMPLIES WITH FED. REG #40CFR-264-163. PROVIDE 60 GALLON 'CHEM-TAINER' VAPOR RECOVERY TANK # TC2342 DC; (500lbs.) ONE (1) TOTAL.
14. (1 MR-1) (4 MR-8) ELECTRICAL: PROVIDE ALL ELECTRICAL WIRING, CONDUIT, PANEL(S), STARTER/DISCONNECT, INTERCONNECT(S) ETC. AS REQUIRED FOR PROPER EQUIPMENT INSTALLATION PER MANUFACTURERS RECOMMENDATIONS AND SHOP DRAWINGS. COORDINATE ALL WORK WITH OTHER TRADES AS REQUIRED. REFER TO ELEC. PLANS FOR ALL ADDITIONAL INFO.
15. (1 MR-8) (3 MR-8) PUMP PIT: 10'-0"x13'-10"x5'-0" DEEP. PROVIDE 1½" DIA. GALV. STEEL GUARDRAIL. PROVIDE FLOOR DRAIN TO WASTE. PROVIDE WATERPROOFING PER SPECIFICATIONS. ACCESS LADDER TO BE 'FIBERGRATE' DYNARAIL FRP OR EQUAL. PROVIDE 'HYDROMATIC' SD/V33 1/3HP 120VAC SUMP PUMP W/ 1½" EFFLUENT PIPE CONNECTION WITH CHECK VALVE FROM PUMP PIT FLOOR AND AIR GAP TO BACKWASH PIT.
16. (6 MR-3) (2 MR-4) SWIMMING POOL FILL SYSTEM: 3" 'CLA-VAL' FILL SYSTEM TO INCLUDE 3" 'CLA-VAL' SOLENOID CONTROL VALVE #136-01BY, 3" DUCT IRON, EPOXY COATED BODY WITH CAST IRON DISC RETAINER AND DIAPHRAGM WASHER, BRONZE TRIM, FLANGED GLOBE PATTERN, 120V AT 60HZ, SOLENOID WIRING SHALL BE WIRED TO WATER CHEMISTRY CONTROLLER, PROVIDE 6" AIR GAP AT FILL POINT.
17. (2 MR-4) SIM. WET PLAY FILL SYSTEM: 1" 'CLA-VAL' FILL SYSTEM TO INCLUDE 1" 'CLA-VAL' SOLENOID CONTROL VALVE #136-01BY, 1" DUCT IRON, EPOXY COATED BODY WITH CAST IRON DISC RETAINER AND DIAPHRAGM WASHER, BRONZE TRIM, FLANGED GLOBE PATTERN, 120V AT 60HZ. SOLENOID WIRING SHALL BE WIRED TO WATER CHEMISTRY CONTROLLER. PROVIDE 2" AIR GAP AT FILL POINT.
18. (2 MR-8) EYEWASH/SHOWER: 'HAWS' MODEL #8310WC BARRIER FREE COMBINATION SHOWER AND EYE/FACE WASH WITH CORROSION RESISTANT PROTECTION. SEE MEP SHEETS FOR SUPPLY PIPING. TWO (2) TOTAL.
19. (5 MR-7) LIGHTING CONTACTOR PANEL: 'ALLEN BRADLEY' #500L, OR APPROVED EQUAL. PANEL SHALL BE MOUNTED IN A NEMA 12 HINGED COVER - LOCKABLE ENCLOSURE. CONTACTORS TO BE SWITCHED BY MOMENTARY SWITCH EQUAL TO 'HUBBELL' #1551 MOUNTED IN J-BOX IN MECHANICAL EQUIPMENT ROOM. REFER TO ELECTRICAL PLANS FOR LOCATION OF OWNER COORDINATED REMOTE UNDERWATER LIGHT SWITCH.
20. WET PLAY AUTOMATION: 'VORTEX' COMMAND CENTER INCLUDING SYSTEM CONTROLLER, PIT WALL MOUNTED WATER DISTRIBUTION MANIFOLDS, WITH TEN (10) OUTLETS, SOLENOID VALVES. ONE (1) DYNAMIC BYPASS VALVE, ISOLATION VALVES, BOLLARD OPERATED ACTIVATION, COMPLETE. CONTRACTOR SHALL PROVIDE COMPLETE SHOP DRAWINGS FOR APPROVAL INCLUDING CIRCULATION PUMP, FEATURE PUMP AND ULTRAVIOLET ELECTRICAL INTERLOCKS. PROVIDE WINTER DRAIN POINTS ADJACENT TO EQUIPMENT AREA FOR ALL MANIFOLD LINES.
21. (6 MR-4) WET PLAY FLOWMETER: SIGNET # P51530-X0 FLOWSENSOR WITH SIGNET #5090 FLOW MONITOR, 3" LINE SIZE, NSF LISTED.
22. (1 MR-8) BACKWASH PIT: 10'-0"x4'-6"x5'-0" DEEP (1,685 GALLONS) WITH 8" DIA. P-TRAP OUTLET TO SEWER. PROVIDE WATERPROOFING PER SPECIFICATIONS. COORDINATE WITH STRUCTURAL AND PLUMBING PLANS.
23. (2 MR-6) POOL OPERATOR WORKSTATION DESK: 'TOTAL LAB SOLUTIONS' EPOXY COUNTERTOP WITH DROP-IN SINK AND TWO (2) END CABINETS. FURNISH WITH WALL MOUNTED TWO (2) FAUCETS 'BROEN BOSS' OR APPROVED EQUAL. SEE MEP PLANS FOR WATER SUPPLY PIPING.
24. (4 SP-6) SURGE CHAMBER: 8'-0"x12'-0"x9'-6" DEEP WITH ACCESS MANHOLE, RUNG LADDER.
25. 'BELL & GOSSET' 3DS-10B 10" FLANGED PROCCESS CONTROL VALVE EPOXY COATED
26. SWIMMING POOL FLOW METER SIGNET 5090 SELF POWERED WITH 10" PIPE SENSOR.
27. (6 MR-3) SURGE CHAMBER SUMP PUMP, 'HYDROMATIC' SD/V33 1/3HP 120VAC 1½" EFFLUENT PIPE CONNECTION WITH CHECK VALVE FROM SURGE PIT FLOOR THROUGH SURGE CHAMBER LID AND AIR GAP TO BACKWASH PIT. PROVIDE ELECTRICAL CONNECTION WITH ON/OFF SWITCH (SEASONAL USE)

GENERAL NOTES

1. THE PIPING SYSTEM SHALL HAVE DIRECTION OF FLOW ARROWS INDICATED ON THE PIPES.
2. PUBLIC POOLS SHALL HAVE A FLOW DIAGRAM OF THE POOL'S PIPING SYSTEM WITH OPERATION INSTRUCTIONS.
3. THE FLOW DIAGRAM AND INSTRUCTIONS SHALL BE AVAILABLE ON THE PREMISES AT ALL TIME

FD	=	FLOOR DRAIN	PG/VG	=	VACUUM / PRESSURE GAUGE (3 MR-9)
FV	=	FLOAT VALVE			

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEM BRACING

PIPING, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS SHALL BE BRACED TO COMPLY WITH THE FORCES AND DISPLACEMENTS PRESCRIBED IN ASCE 7-10 SECTION 13.3 AS DEFINED IN ASCE 7-10 SECTION 13.6.8, 13.6.7, 13.6.5.6, AND 2016 CBC, SECTIONS 1616.A.1.24, 1616.A.1.25, AND 1616.A.1.26.

THE BRACING AND ATTACHMENTS TO THE STRUCTURE SHALL BE DETAILED ON THE APPROVED DRAWINGS OR THEY SHALL COMPLY WITH ONE OF THE OSHPD PRE-APPROVALS (OPM #0052-13)

COPIES OF THE BRACING SYSTEM INSTALLATION GUIDE OR MANUAL SHALL BE AVAILABLE ON THE JOBSITE PRIOR TO THE START OF HANGING AND BRACING OF THE PIPE, DUCTWORK, AND ELECTRICAL DISTRIBUTION SYSTEMS.

THE STRUCTURAL ENGINEER OF RECORD SHALL VERIFY THE ADEQUACY OF THE STRUCTURE TO SUPPORT THE HANGER AND BRACE LOADS.

THREE PHASE MOTOR LOADS AT 460V

SWIMMING POOL CIRCULATION PUMP: 25 HP @ 460V = 34 AMPS

HEATER/GAS PIPING INSTALLATION NOTE

GAS FIRED POOL HEATER(S) INSTALLED ON A GAS SUPPLY SYSTEM UTILIZING A 2 PSI OR 5 PSI SUPPLY, GAS PRESSURE SHALL REQUIRE A REGULATOR TO REDUCE THE SUPPLY PRESSURE. A PROPERLY SIZED AND INSTALLED LOCK-UP-TYPE HIGH GAS PRESSURE REGULATOR (HGPR) SHALL BE USED TO REDUCE THE GAS PRESSURE AT THE UNIT INLET TO A MINIMUM OF 4" TO A MAXIMUM OF 11" WATER COLUMN.

CHEMICAL CLASSIFICATION TABLE									
COMMON NAME	CHEMICAL NAME	% COMP.	CAS #	FORM	QUANT. STORED	QUANT. IN USE (OPEN/ CLOSED)	LOCATION (STORAGE & USE)	HAZ. CLASSES	JUSTIFICATION
SODIUM HYPOCHLORITE	SODIUM HYPOCHLORITE	12.5%	7681-52-9	LIQUID	500 GAL.	500 GAL.	MECH. ROOM	IRRITANT LIQUID	MSDS
MURIATIC ACID	HYDROCHLORIC ACID	25%	7647-01-0	LIQUID	150 GAL.	150 GAL.	CHEM. ROOM	CORROSIVE LIQUID	MSDS

QUANTITIES OF CHEMICALS DO NOT EXCEED THE QUANTITIES LISTED IN IBC TABLES 307.1 (1) AND 307.1 (2).

RATING EXPLANATION GUIDE					
RATING	HEALTH HAZARD	FLAMMABILITY HAZARD	REACTIVITY HAZARD	SPECIFIC HAZARD	
4	CAN BE LETHAL	EXTREMELY FLAMMABLE. IGNITES AT BELOW 73° F.	MAY EXPLODE AT NORMAL TEMPERATURES AND PRESSURES	OXIDIZER:	OX
				ACID:	ACID
3	CAN CAUSE SERIOUS OR PERMANENT INJURY	IGNITES AT ABOVE 73° F, BELOW 100° F.	MAY EXPLODE AT HIGH TEMPERATURES OR SHOCK	CORROSIVE:	COR
2	CAN CAUSE TEMPORARY INCAPACITATION OR RESIDUAL INJURY	IGNITES AT ABOVE 100° F, BELOW 200° F.	VIOLENT CHEMICAL CHANGE AT HIGH TEMPERATURES OR PRESSURES	ALKALI:	ALK
				USE NO WATER:	W
1	CAN CAUSE SIGNIFICANT IRRITATION	IGNITES AT ABOVE 200° F.	NORMALLY STABLE. HIGH TEMPERATURES MAKE UNSTABLE	RADIATION HAZARDS:	☢
0	NO HAZARD	WILL NOT BURN	STABLE	POLYMERIZES:	P

NOTES:

1. CONFIRM SIGNAGE WITH LOCAL FIRE MARSHALL AND/OR BUILDING CODES PRIOR TO INSTALLATION. SIGNS SHALL CONFORM TO NFPA 704.
2. SIGNS SHALL BE SIZES AND COLORS PER CODE MOUNTED AT +60" A.F.F. ON DOORS AT CHEMICAL ROOMS.

SHEET 0 OF SHEETS

PLOTTED:6/26/2018 2:53:10 PM

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

REVISION DATES: (DESIGN STAGE ONLY)

TTLB TEMPLATE REVISION DATE: 02/2013
SHEET ISSUE DATE: 12/01/19
FILE PATH: BIM 360://Granada Hills Pool Renovation/A_Granada-Hills_2017.rvt

GENERAL NOTES:

APPLICABLE BUILDING CODE

1. All construction and workmanship shall conform to the following codes.
2. 2017 Los Angeles City Building Code (LABC).
3. This pole and foundation standard has been designed for lateral loads on the completed structure as follows:
4. Wind – ASCE 7–10; Vult = 110 mph (Exposure C); Vasd = 85 mph (Exposure C); Risk Category = II.
5. Maximum total effective area (EPA) for luminaires per pole class:
   - LSS60B – 5.4 SQ.FT.
6. Seismic: S_S = 2.301, S_1 = 0.768, S_{DS} = 1.534, S_{D1} = 0.768, Risk Category = II; I = 1.0; Site Class = D; R = 1.5; Seismic Category = E; C_S = 0.410 Strength Level typical; Seismic Force Resisting System = Non–Building Structures, not similar to Buildings; Analysis Procedure = Equivalent Lateral Force Procedure.
7. Maximum weight per luminaire: LED 400 = 40 pounds.

GENERAL CONSTRUCTION

8. These notes shall be used in conjunction with the plans and any discrepancies shall be brought to the attention of the Engineer.
9. Contractor must check all dimensions, clearances and job conditions before starting work. Engineer shall be notified immediately of any discrepancies or possible deficiencies.
10. The drawings and specifications represent the finished structure. All bracing, temporary supports, shoring, etc., is the sole responsibility of the Contractor. Observation visits to the job site by the Engineer do not include inspection of construction procedures. The Contractor is soley responsible for all construction methods and for safety conditions at the worksite. These visits shall not be construed as continuous and detailed inspections.
11. Design, material, equipment, and products other than those described below or indicated on the drawings may be considered for use, provided prior approval is obtained from the City of Los Angeles.
12. Installation shall comply with all applicable L.A. city zoning ordinances and its provisions.
13. All changes in approved plans shall be made by addenda or change orders approved by City of Los Angeles.
14. All tests and inspections shall be performed by an independent lab approved by City of Los Angeles.
15. Plans shall be accompanied by a fully dimensioned plot plan showing all buildings and proposed pole locations.

LIGHT POLE FOUNDATIONS

(FOUNDATIONS MUST COMPLY WITH PRE–INSPECTION REPORT AS APPLICABLE)

16. Reference Geotechnical Report: Prepared by The Los Angeles Department of Public works, Bureau of Engineering, Geotechnical Engineering Division, Dated 08/22/17 W.O. E170517A; GED file No. 17–074, and supplemental report dated 10/25/2018.
17. Allowable vertical bearing capacity: 23 kips for 30 inches diameter pier.
18. Allowable lateral soil bearing pressure: LPile analysis.
19. Allowable design soil capacities must be verified by Geotechnical Engineer.
20. If soft or questionable soil conditions are encountered during excavations, contact the Department for instructions before proceeding with the work.
21. Soil formations that will require special design considerations or excavation procedures may exist. Pole foundations will need to be analyzed according to the soil conditions that exist.
22. The Contractor must familiarize himself with the complete soil investigation (if any) and borings and contact the Geotechnical Engineer (as necessary) to understand the soil conditions and the possibility of ground water pumping and excavation stabilization of bracing during then pier base installation and placement of concrete backfill.
23. All precast bases and concrete backfill must bear on and against firm undisturbed soil, as determined by a Geotechnical Engineer.
24. All excavations must be free of debris and loose soil prior to foundation installation, and placement of concrete backfill. Casing may be required if caving occurs. In such case, approval by a Geotechnical Engineer is required. Put plywood collar around hole to prevent falling dirt from filling hole.
25. All excavations must be dry or concrete shall be placed by the tremie method in accordance with ACI standard 336. Concrete placed by the tremie method shall have a minimum ultimate strength of 1,000 psi greater than required under "concrete backfill" below, and a maximum slump of 8 inches.
26. Excavations shall be covered, fenced securely or provided with equivalent protection for hazards.

CONCRETE (CAST-IN-PLACE)

27. Concrete pier foundations with steel reinforcement shall attain a minimum ultimate compressive strength at 28 day test of 3,000 psi. Batch plant inspection not required.Concrete shall attain a minimum compressive strength of 2,000 psi prior to steel pole installation.
28. Concrete: Classed 560–C–3250 designed for Fc = 2500 psi., continuous inspection is not required.
29. Slump shall not exceed 5 inches.
30. Use type II/V–Portland Cement or as recommended by the Geotechnical Engineer.
31. Concrete that will be exposed to sulfate–containing solutions or soils shall comply with the maximum water–cementitious ratios and minimum compressive strengths specified in ACI 318, Section 4.3.
32. Portland Cement ASTM C–150–07.
33. Aggregate ASTM C–33, use 1" maximum aggregate size. 3/8" max agg. size acceptable where pump mixes are used at unreinforced concrete backfill.
34. Place concrete immediately after completion of excavation and inspection by the Geotechnical Engineer and the L.A. City approved Inspector. No excavations shall be left unprotected or open overnight.
35. Concrete shall be placed in one continuous operation (no construction joint) with special equipment to prevent concrete from striking the sides of the excavation. Maximum freefall shall not exceed 5 ft.

© 1990, 2007, 2011 Musco Sports Lighting, LLC.
Patents issued and pending.

CONCRETE BACKFILL

36. Vibrate concrete full length.
37. All concrete reinforcing steel shall conform to ASTM A615, Grade 60

STEEL POLE

38. Steel pole sections conform to the 2017 LABC Chapter 22, and AISC 360–10.
39. All steel conforms ASTM specifications, as referenced on these drawings.
40. Minimum elongation in 2 inch gauge length = 18%, and the minimum elongation in 8 inch gauge length = 20%.
41. The fabricator shall provide mill tests or test data by a Los Angeles city approved testing agency showing conformance of the foregoing:
42. LONGITUDINAL WELDS:
    All longitudinal seam welding shall be done prior to cold welding.
    Weld type: Automatic high frequency resistance, automatic submerged arc or hybrid laser beam/gas metal arc welding procedure.
    Joint: Butt
    Penetration: 60% except 100% at female end of slip joint, detail H/MD1.
    Test: 60% pen. – Visual per AWS D1.1 article 8.15
    100% pen. – Visual per AWS D1.1 article 8.15
    Certified data on seam welding from shaft manufacturer shall include:
    1. Inspection frequency and procedures; I.E.; Visual, US, Radiographic, etc.
    2. Seam welding procedures; I.E.; percent penetration and method ERW, SAW, etc.
    3. Method and length of 100 percent penetration weld at female end of slip joint.
    Welding operator: AWS certified welding operator (CWO) and shall be done by City of L.A. B&S licensed fabricator.
    Welding inspector: AWS certified welding inspector (CWI) and approved by City of L.A. B&S deputy inspector in welding.
43. CIRCUMFERENTIAL WELDS
    Circumferential welds are not allowed. Shafts shall be fabricated from continuous rolled plates or coil.
44. All weldment conforms with AWS D1.1 specification for G.M.A.W. fillet utilizing E70S–X filler metal or S.A.W. fillet utilizing F7XX–EXX or F8XX–EXX filler metal. G.M.A.W. procedure conforms to AWS 5.18. S.A.W. procedure conforms to AWS 5.23
45. MANUFACTURERS SHAFT MARKINGS:
    The manufacturer shall inscribe a common I.D. number on each shaft comprising a particular factory pole assembly. (See also manufacturers gauge marks below).
    FIELD ASSEMBLY AND MANUFACTURERS GAUGE MARKS
    The pole manufacturer shall provide and the contractor shall follow the recommended pole assembly instruction general, the pole shall be assembled on the ground and the entire structure lifted into position on the previously installed foundation. Shafts shall be connected by slip splices only, welded splices shall not be used. The manufacturer shall shop assemble the entire pole and inscribe gauge marks across each slip joint to guide the field assembly. The contractor shall assemble the pole in the presence of the Special Inspector who shall verify that each slip splice attains a minimum overlap of 1.5 x larger shaft diameter.
46. GALVANIZING:
    Pole assembly, all hardware and accessories (except for non–ferrous items) shall be hot dip galvanized per ASTM A123. All fabrication shall be done before galvanizing. Minimum weight of galvanizing shall be 2.00 oz/sq. ft. Shafts shall be galvanized by single dipping only. Double dipping is not allowed.
47. SUBMITTAL:
    Manufacturing shall furnish the department with a galvanizing weight report showing conformance foregoing by the the thickness gauge. Method of measurement per ASTM E376.
48. All miscellaneous structural steel items conform to the Steel Construction Manual, 14th Edition, American Institute of Steel Construction.

PRECAST BASE

49. Precast pole base conforms to 2017 LABC, Chapter 19 and to Building Code Requirements for Reinforced Concrete, ACI 318–14.

TESTING AND INSPECTION

50. Testing and inspections in accordance with 2017 LABC.
51. Prior to pouring of concrete, the Geotechnical Engineer shall inspect and approve the footing excavations.
52. All compacted fill shall be placed under the supervision and approval of the Geotechnical Engineer.

STATEMENT OF SPECIAL INSPECTIONS*

ITEM	CONTINUOUS /PERIODIC	SCOPE
1. PIER FOUNDATIONS	CONTINUOUS	INSPECT INSTALLATION OF DRILLED PIER FOUNDATIONS. VERIFY DIAMETER, EMBEDMENT DEPTHS AS SCHEDULED, DEPTHS OF FILL, AND BEARING STRATA
2. CONCRETE MIX DESIGN	PERIODIC	REVIEW CONCRETE BATCH TICKETS AND VERIFY COMPLIANCE WITH APPROVED MIX DESIGN.
3. CONCRETE PLACEMENT	CONTINUOUS	INSPECT PLACEMENT OF CONCRETE FOR PROPER APPLICATION TECHNIQUES. VERIFY THAT CONCRETE CONVEYANCE AND DEPOSITING AVOIDS SEGREGATION OR CONTAMINATION. VERIFY THAT CONCRETE IS PROPERLY CONSOLIDATED.
4. SAMPLING AND TESTING OF CONCRETE	CONTINUOUS	AT THE TIME FRESH CONCRETE IS SAMPLED TO FABRICATE SPECIMENS FOR STRENGTH TESTS, PERFORM SLUMP AND AIR CONTENT TESTS, AND DETERMINE TEMPERATURE OF CONCRETE.
5. CRETEX PRECAST/ PRESTRESSED CONCRETE BASES	(PCI CERTIFIED)	FABRICATOR EXEMPT.** REFERENCE ICC ESR–3765
6. STRUCTURAL STEEL	(L.A. CITY APPROVED)	FABRICATOR EXEMPT.** REVIEW CERTIFIED MILL TESTS REPORTS AND IDENTIFICATION MARKINGS.

* The Special Inspector shall be a qualified person who shall demonstrate competence, to the satisfaction of the Building Official, for inspection of the particular type of construction or operation requiring special inspection.
**Special inspections shall not be required when the work is done on the premises of a fabricator registered and approved by the City to perform such work without special inspection.

SUBMITTALS

53. Prior to any pole fabrication, the contractor shall submit and obtain the department's approval of:
    1. All pole shaft certifications.
    2. All remaining certifications prior to shipping any poles to job site.

    The contractor shall furnish written certifications showing compliance with ASTM and the foregoing specification.

    CROSSARMS: ASTM A500, GR.B Min F_Y = 70 KSI
    CAP: ASTM A48 class 30, zinc die cast (alloy no. 3).

    FIXTURE MOUNTING SECTIONS: ASTM A513, F_Y = 38 KSI

    POLE SHAFTS: The manufacturer shall furnish certified mill reports and mechanical test results showing compliance with ASTM A595A or ASTM A572, Gr 55 or Gr 65. Each pole shaft and its mechanical and chemical data shall be traceable to its steel mill plate hea
    PRESTRESS STRANDS: ASTM A416, GR 270 (Low relaxation).

GENERAL

1. DEFINITIONS

The following terms as used in the Contract shall be defined and interpreted as follows:

ADDENDA

Written documents issued during the bidding period which modify, supersede, or supplement the original Contract Documents.

AGREEMENT

See "CONTRACT."

AS SHOWN, AS INDICATED, AND AS SPECIFIED

These words are understood to be followed by the words "in the Contract Documents."

BENEFICIAL USE

Use of a building, system, structure, or facility by the CITY.

BID

The offer of the Bidder submitted on the prescribed forms setting forth the price(s) for the Work.

BIDDING PERIOD

The time period allocated to the Bidder to enable preparation of a Bid or Proposal.

BIDDER

The person or persons, partnership, firm or corporation submitting a Bid or proposal for the Work defined in the Contract Documents.

BID GUARANTY

The cash, certified check or Bidders Surety Bond accompanying the Bid as a guaranty that the Bidder will enter into a contract with the RECREATION AND PARK COMMISSION for the performance of the Work.

BOARD OF RECREATION AND PARK COMMISSIONERS

The Board of Recreation and Park Commissioners, of the City of Los Angeles.

BOND

Bid bond, performance and payment bond or other instrument of security.

CHANGE ORDER

A written order to the CONTRACTOR signed by the GENERAL MANAGER directing an addition, deletion or revision in the Work, or an adjustment in the Contract Price or time which is issued after the effective date of the Contract and effects less modification than is effected by a Supplemental Agreement. A Change Order may or may not also be signed by the CONTRACTOR.

CITY

The CITY of Los Angeles, a municipal corporation.

CLAIM

A written demand or assertion by one of the parties seeking, as a matter of right, an interpretation of the Contract Documents, payment of money, extension of time or other relief. The party asserting the claim must set forth the facts and circumstances for which the other party is responsible.

CODE

Codes of the State of California as well as any other Federal or local law, statute, ordinance, rule or regulation.

CONTRACT

A binding agreement between the CITY and the CONTRACTOR for the Work described in the Contract Documents.

CONTRACT COMPLETION DATE

The date the CITY accepts the entire Work as being in compliance with the Contract Documents, and authorizes the final payment in accordance with the requirements set forth in Article 25, FINAL PAYMENT of the General Requirements.

CONTRACT DOCUMENTS

The following documents constitute a part of and comprise the Contract Documents: Agreement, Notice Inviting Bids or Proposals, Instruction to Bidders, Contractor's Bid or Proposal, Special and Supplementary Conditions, General Requirements, Geotechnical Baseline Report (if provided for the in the General Requirements), Federal and State Requirements, Standard and Reference Specifications, Standard Plans, Plans and Specifications, Soil Reports and Subsurface Investigation Reports, Summary of First Notice Replies, Addenda and Notice to Bidders issued prior to the opening of bids, Plan Clarifications, Request for Information, Supplemental Agreements and Change Orders issued after Contract award.

CONTRACTOR DEFAULT

See TERMINATION OF CONTRACT BY CITY (CONTRACTOR DEFAULT) Article of these General Conditions.

CONTRACT PRICE

The total amount of money for which the Contract is awarded.

CONTRACT UNIT PRICE

The amount stated in the Bid for a single unit of an item of Work.

CONTRACTOR

The person or persons, partnership, firm or corporation who enters into the Contract as stipulated in the Agreement awarded by the CITY. Prime Contractor and Contractor shall mean the same.

CONTRACTOR'S REPRESENTATIVE

The representative of the CONTRACTOR at the site who shall supervise and direct the construction and who is authorized to receive and fulfill instructions from the PROJECT MANAGER or INSPECTOR.

DAYS

Unless otherwise specifically stated, the term "days" will be understood to mean consecutive calendar days.

EASEMENT

Permission to access or utilize property not owned by the CITY.

EQUAL

See "OR EQUAL".

GENERAL CONDITIONS

Instructions to the CONTRACTOR setting forth its responsibilities and the CITY'S responsibilities for proper execution of the Work indicated herein.

GENERAL MANAGER

GENERAL MANAGER of the Department of Recreation and Parks, or an authorized representative.

GENERAL REQUIREMENTS

Instructions to the CONTRACTOR setting forth its responsibilities and the CITY'S responsibilities for proper execution of the administration and technical aspects of the project indicated herein.

GEOTECHNICAL DESIGN SUMMARY REPORT /GEOTECHNICAL BASELINE REPORT (GBR)

The report that sets forth the geotechnical interpretations regarding anticipated conditions for the design and construction of the project. This report establishes a geotechnical baseline that provides the basis for identification of changed site/ground conditions.

GEOTECHNICAL SITE ASSESSMENT

SEE AGEOTECHNICAL DESIGN SUMMARY REPORT.@

HOLIDAY

Those holidays and dates observed by the CITY. A list of such holiday dates is available from the RECREATION AND PARK COMMISSION Office.

IMMEDIATELY NOTIFY

The obligation to cause verbal notification of some condition or event as soon as possible upon discovery or knowledge of the condition or event and in all instances, no more than two (2) hours.

INSPECTOR

The Inspector of Public Works, the Director of the Bureau of Contract Administration, or an authorized representative(s) located at the Public Works Building, 1149 S. Broadway, 3rd Floor, Los Angeles, CA, 90015.

JOBSITE

The area upon or in which the CONTRACTOR'S operations are carried on and such other areas adjacent thereto as may be designated as such by the Contract Documents.

LAW

Any Federal, State or local law, statute, ordinance, rule, regulation or code.

LIQUIDATED DAMAGES

The amount the CONTRACTOR shall pay to the CITY, as determined by rates and amounts as fixed and agreed in the Contract Documents, due to the CONTRACTOR'S failure to complete the Work or submit the schedule within the time specified, or for non-compliance with other specified requirements.

MODIFICATIONS

Includes Change Orders and Supplemental Agreements. A modification may only be issued after the effective date of the Contract.

NON-CONFORMING WORK

Non-conforming Work is Work which does not conform in all respects to all requirements in the Contract Documents, including damaged Work and damaged materials, without respect to the causes or nature of such lack of conformity.

NOTICE OF AWARD

The written notice by the CITY to the successful Bidder stating that upon compliance by the successful Bidder of required conditions, the City will execute the Contract.

NOTICE TO BIDDERS

A notice included in the bidding documents that informs prospective bidders of the bidding procedures and the opportunity to submit a bid.

NOTICE TO CONTRACTOR

The written notice by the CITY to the CONTRACTOR which officially advises on direction and provides information pertinent to the Contract.

NOTICE TO PROCEED

The written notice by the CITY to the successful Bidder stating that the Work or portions of the Work may commence.

NOTICE TO WITHHOLD

The written notice by the CITY to the CONTRACTOR advising that certain payments shall be withheld due to unacceptable execution of the Work by the CONTRACTOR.

OR EQUAL

The product, equipment, or material which is proposed by the CONTRACTOR for use in the Work which in the sole judgment of the PROJECT MANAGER is equal to, better than and as suitable as the product or material specified in the Contract Documents as to function, performance, reliability, quality, and general configuration.

PARTIAL ACCEPTANCE

Any portion of the Work which has been completed in accordance with the plans and specifications and has been accepted in writing by the PROJECT MANAGER and the INSPECTOR on the "Statement of Partial Completion" form.

PLANS OR DRAWINGS

The drawings, profiles, cross sections, working drawings, and supplemental drawings, or reproductions thereof, issued or approved by the PROJECT MANAGER, which show the location, character, dimensions or details of the Work.

PROJECT

The Work and/or construction operations executed through the performance of this Contract.

PROJECT MANAGER

The authorized representative of the GENERAL MANAGER.

PROTEST

See definition of Claim.

REFERENCE SPECIFICATIONS

Those bulletins, standards, rules, methods of analysis or test, codes, and specifications of other agencies, PROJECT MANAGER societies, or industrial associations referred to in the Contract Documents. These refer to the latest edition, including amendments in effect and published at the time of advertising the project, adopted by the RECREATION AND PARK COMMISSION, if applicable, unless specifically referred to by edition, volume, or date.

RIGHTS OF ENTRY

Written permission from an owner of a facility or property to access the facility or property for a specific purpose.

RIGHT OF WAY

Rights of way, easements, or rights of entry for the Work will be provided by the CITY. The CONTRACTOR shall make arrangements, pay for, and assume all responsibility for acquiring, using, and disposing of additional work areas and facilities temporarily required in addition to those provided by the CITY. The

CONTRACTOR shall indemnify and hold the CITY harmless from all claims for damages caused by such actions.

SPECIAL PROVISIONS

Any provision which supplements or modifies the Specifications.

SPECIFICATIONS

The Contract Documents and revisions to it which were prepared to specifically describe the commercial, legal, technical and nontechnical requirements of the project. Specifications include but are not limited to Terms, Provisions, General Conditions, General Requirements, Special Provisions, Technical Specifications, Equipment Schedules, and all revisions made to the specifications in Addenda, Notice To Bidders, and Change Orders or Modifications, signed by the GENERAL MANAGER.

STANDARD PLANS

Details of standard structures, devices or instructions referred to on the plans or in the specifications by title or number issued by the CITY.

STANDARD SPECIFICATIONS

Documents, Materials and items specified in Article 5 of these General Conditions.

STARTUP

That stage of performance testing as defined in the specifications which use the actual process fluid, material, or medium for a specified number of days of continuous operation without major interruptions and prior to acceptance by the CITY.

SUBCONTRACTOR

A "Subcontractor" is a contractor who is licensed pursuant to California Business and Professions Code, Section 7000 *et.seq.* and who contracts directly with the prime CONTRACTOR. The Subcontractor performs some part of the Work of the Contract. A Subcontractor does not have any direct contract with the CITY related to the project.

SUB-SUBCONTRACTOR

A "Sub-subcontractor" is a Subcontractor, within the definition of that term, who has a contract with a Subcontractor and has no Contract with the City related to the project.

SUPERVISOR

The designated individual who is responsible for the proper execution or installation of some portion or portions of the Work. The SUPERVISOR reports directly or indirectly to the CONTRACTOR'S REPRESENTATIVE.

SUPPLEMENTAL AGREEMENT

A written amendment of the Contract Documents which modifies the Contract in price or scope by a percentage which is more than can be accomplished by a Change Order and signed by the CITY and the CONTRACTOR.

SUPPLIER

An individual, organization, or firm who is not required for the purposes of the Work to be licensed pursuant to California Business and Professions Code as a CONTRACTOR, Subcontractor, or Sub-subcontractor, within the meanings of those terms as defined herein above, who provides equipment and/or materials for the Work, to the CONTRACTOR, a Subcontractor, or a Sub-subcontractor, including that fabricated to a special design, but who does not perform labor at the site except for labor or labor supervision required by some manufacturers as part of their equipment installation for warranty or other purposes. The term "supplier" also includes fabricator, manufacturer, or vendor.

SURETY

Any individual, firm or corporation, bound with and for the CONTRACTOR for the acceptable performance, execution and completion of the Work, and for the satisfaction of all obligations incurred.

TERMS

Unless otherwise stated, the words "directed, required, permitted, ordered, instructed, designated, considered necessary, prescribed, approved, acceptable, satisfactory," or words of like meaning, refer to actions, statements, judgments, conclusions, and decisions within the responsibility of the PROJECT MANAGER or the INSPECTOR.

UNAVOIDABLE DELAY

Delay arising from causes beyond the control and without the fault or negligence of the CONTRACTOR and its Subcontractors at all tiers.

UTILITY

Tracks, overhead or underground wires, cables, pipeline, conduits, ducts, or structures, sewers, or storm drains owned, operated, or maintained in or across a public right of way, private easement, or jobsite.

VOLUME I

Are the items in the bid package entitled “CITY OF LOS ANGELES, CALIFORNIA, DEPARTMENT OF RECREATION AND PARKS INSTRUCTION TO BIDDERS, PROPOSAL, AFFIDAVIT AND BOND FOR…” inclusive.

VOLUME II

Are the items in the bid package entitled “CONTENTS GENERAL CONDITIONS”, “CONTENTS GENERAL REQUIREMENTS”, and any specifications and attachments inclusive.

WORK

Includes all material, labor, utility services, tools, expendable equipment, and all appliances, machinery, transportation, appurtenances and specified services necessary to perform and complete the Contract; and such additional items not specifically indicated or described that can be reasonably inferred as belonging to the item described or indicated and as required by good practice to provide a complete and satisfactory system or structure. As used herein, "provide" shall be understood to mean "furnish and install, complete in place."

WORKSITE

See "JOBSITE."

WORKDAY

Any day within the period between the start of the Contract time and the date provided in the Contract for completion or the date established in the Statement of Completion by the CITY acknowledging that all Work under the contract is complete, whichever occurs last, other than:

- Saturday,
- Sunday,
- any day designated as a holiday by the CITY, and,
- any other day designated as a holiday in a Master Labor Agreement entered into by the CONTRACTOR or on behalf of the CONTRACTOR as an eligible member of a Contractor's Association,
- any day the CONTRACTOR is prevented from working for cause as established by UNAVOIDABLE DELAY of these General Conditions; and,

- any day the Contractor is prevented from working during the first five (5) hours of the workday with at least sixty percent (60%) of the normal Work force from cause as established by an Unavoidable Delays of these General Conditions.

CONTRACT DOCUMENTS

2. SCOPE

A. The work to be performed under this Contract shall consist of furnishing all tools, equipment, materials, supplies and manufactured articles, and for furnishing all transportation, services, including fuel, power and water, and essential communications, and the performance of all labor, Work, or operations required for the fulfillment of the Contract, in strict accordance with the specifications, schedules, and drawings, all of which are made a part hereof, and including such detail sketches as may be furnished by the PROJECT MANAGER from time to time during the construction in explanation of said drawings. The items shall be complete and all Work, material, and services not expressly called for in the Specifications, or not shown on the drawings, which may be necessary for complete and proper construction to carry out the Contract in good faith shall be performed, furnished, and installed by the CONTRACTOR at no increase in cost to the CITY.

B. The Work required by the Contract shall be completed within **Five Hundred Forty-Nine (548)** calendar days of the date specified by the General Manager in the notice to proceed with the work. The Contract completion time shall consist of **Four Hundred Ninety-Nine (499)** calendar days for construction, and **Forty-Nine (49)** calendar days for maintenance.

3. AUTHORITY OF THE RECREATION AND PARK COMMISSION, PROJECT MANAGER, AND INSPECTOR

The GENERAL MANAGER, RECREATION AND PARKS has the final authority in all matters affecting the Work The CONTRACTOR shall promptly comply with instructions from the PROJECT MANAGER or the INSPECTOR.

On all questions relating to quantities, the acceptability of material, equipment, or Work, the execution, progress or sequence of Work, and the meaning of specifications or drawings, the decision of the PROJECT MANAGER is final and binding, and shall be precedent to any payment under the Contract, unless otherwise ordered by the BOARD OF RECREATION AND PARKS.

The PROJECT MANAGER is authorized to require performance of the Work consistent with the meaning of the plans and specifications and to approve necessary additive changes in Plans up to a maximum as authorized by the Recreation and Park Commission. The PROJECT MANAGER may initiate changes in Plans or scope of Work, regardless of cost, for submission to the RECREATION AND PARK COMMISSION for its approval.

The INSPECTOR is authorized to enforce compliance with Plans and Specifications, to determine the acceptability of materials and workmanship, administer requirements with respect to subcontracts, and to prepare and process progress payment estimates. In the event of a dispute between the CONTRACTOR and the INSPECTOR, the latter is authorized to reject materials or suspend the Work until any questions at issue can be referred to and decided by the RECREATION AND PARK COMMISSION or, in design matters, by the PROJECT MANAGER.

The INSPECTOR may sample and test all materials to be incorporated into the Work. The INSPECTOR may delegate this authority to sample materials and perform tests to the Department of General Services, Standards Division, or other approved agencies, the CONTRACTOR will pay for testing.

4. INTENT OF CONTRACT DOCUMENTS

The Contract Documents are complementary, and what is called for by one part shall be as binding as if called for by all. The intent of the Documents is to include all Work consistent therewith and reasonably inferable there from as being necessary for completion of the Contract. Materials or Work described in words that indicate the proper execution and a well known technical or trade designation shall be held to refer to such recognized standards.

It is understood and agreed that the written terms and provisions of the Contract Documents represent the entire and integrated agreement between the parties hereto and supersede all prior negotiations, representations, or agreements, either written or oral. The Contract Documents shall not be construed to create any contractual relationship of any kind between the PROJECT MANAGER or the INSPECTOR and the CONTRACTOR.

5. STANDARD SPECIFICATIONS

The applicable portions of the Standard Specifications for Public Works Construction (SSPWC) shall become part of these Contract Documents, and unless otherwise specified, all Work and materials shall conform to the Standard Specifications as modified by the corresponding issue of Standard Plan No. S-610 as amended or revised and adopted by the RECREATION AND PARK COMMISSION in effect on the date of advertising for bids.

6. INTERPRETATION OF PLANS AND SPECIFICATIONS

Every part of the Contract, as shown on the Plans and described in the Specifications, must be completed and finished. No deviations are to be made from the Plans or Specifications without previous written authorization from the PROJECT MANAGER.

In general, the Plans will show dimensions, positions and type of construction, and the Specifications will define materials, quantities, and if indicated, required methods of construction. Any Work called for on the Plans and not mentioned in the Specifications, or vice versa, shall be performed as though fully set forth in both. Work not particularly detailed, marked, or specified shall be the same as similar parts that are detailed, marked, or specified.

The Plans have been drawn to the indicated scales except where otherwise noted. Dimensions indicated by figures or numerals shall govern in all cases whether drawn to scale or not. Larger scale drawings shall take precedence over smaller scale drawings. Drawings shall not be scaled for dimensions.

The general character of the detailed Work is shown on the Contract drawings, but minor modifications may be made in larger scale drawings. The PROJECT MANAGER will furnish additional details, when needed, to more fully explain the Work, and the same shall be considered part of the Contract.

Where on any drawings, a portion of the Work is drawn out or detailed and the remainder is indicated in outline, the drawn out or detailed parts shall apply also to all other like portions of the Work. Where ornament or other detail is indicated by starting only, such detail shall be continued throughout the courses or parts in which it occurs and shall also apply to all other similar parts in the Work, unless otherwise indicated.

References made to other specifications and codes refer to the edition including amendments in effect and published at the time of advertising the project or issuing the permit, unless specifically referred to by edition, volume, or date as noted in the Contract Documents.

The CONTRACTOR shall furnish and install all equipment and materials required to complete installations whether or not the quantities are specifically shown, called out, or reflected in the Contract Drawings.

7. PRECEDENCE OF CONTRACT DOCUMENTS

In resolving inconsistencies or ambiguities among two (2) or more components of the Contract Documents, the highest precedence shall be given to Permits from the other agencies as may be required by law and decreasing order as follows:

1. Permits from other agencies as may be required by law
2. Agreement
3. Special Provisions
4. General Conditions
5. Specifications - Division 01: General Requirements
6. Specifications - Divisions 02 - 17
7. Geotechnical Site Assessment
8. Drawings
9. Standard Plans
10. Standard Specifications
11. Reference Specifications

12. Reference Drawings

Supplemental Agreements, Change Orders, PROJECT MANAGER'S written interpretations and clarifications, Notice to Bidders and Addenda, in the precedence listed, will take precedence over all other Contract Document components referenced therein. Figure dimensions on Drawings will take precedence over scaled dimensions.

Detailed Drawings, including Process and Instrumentation Drawings (P & ID's), will take precedence over general Drawings.

8. ACCURACY OF PLANS AND SPECIFICATIONS

Omissions from the Plans and Specifications shall not relieve the CONTRACTOR from the responsibility of furnishing, making, or installing all items required by law or usually furnished, made, or installed in a project of the scope and character indicated by the Plans and Specifications. If the CONTRACTOR is of the opinion that it will incur costs above and beyond what would reasonably be anticipated in meeting the above requirements, it shall inform the PROJECT MANAGER in writing within twenty (20) calendar days after discovering the omission and before starting the Work.

The Plans show conditions as they are supposed or believed by the PROJECT MANAGER to exist, but it is not intended or to be inferred that the conditions as shown thereon constitute a representation or warranty, expressed or implied, by the CITY or its officers, that such conditions are actually existent, nor shall the CITY, or any of its officers, be liable for any loss sustained by the CONTRACTOR as a result of any variance between conditions as shown on the Plans, and the actual conditions revealed during progress of the Work or otherwise, except as indicated in Article 53, Differing Site Conditions of these General Conditions.

9. EXAMINATION OF COVERED WORK

If any Work is covered without inspection, approval or consent of the INSPECTOR, and examination is required by the INSPECTOR, it shall be uncovered at the CONTRACTOR'S sole expense.

Examination of covered Work may be ordered by the PROJECT MANAGER and if so ordered, the Work shall be uncovered by the CONTRACTOR. If such Work is found to be in accordance with the Contract Documents, the CITY will issue a Change Order authorizing payment for the cost of examination and replacement. If such Work is found to be not in conformance with the Contract Documents, the CONTRACTOR shall correct the non-conforming Work and the cost of examination and correction of the non-conforming Work shall be borne solely by the CONTRACTOR.

10. UNNOTICED DEFECTS

Any non-conformity in the Work that is discovered before Contract Completion, or before final payment has been made, or during the guarantee period, shall be removed and replaced by the CONTRACTOR with Work which conforms to the provisions of the Contract Documents. Failure on the part of the PROJECT MANAGER or the INSPECTOR to condemn or reject non-conforming Work shall not constitute acceptance or implied acceptance of such Work.

11. BUILDING CODES AND REGULATIONS

The CONTRACTOR shall perform the Work in accordance with the requirements of the Los Angeles City Building Code and all other regulations, laws, and ordinances, even though such requirements are not specifically mentioned in the Specifications or shown on the drawings.

It is not the responsibility of the CONTRACTOR to make certain that the Contract Documents are in accordance with applicable laws, statutes, building codes and regulations. If the CONTRACTOR observes that any of the Contract Documents are at variance therewith in any respect, it shall promptly notify the PROJECT MANAGER in writing, and any necessary changes shall be accomplished by issuance of a Change Order.

If the CONTRACTOR performs any Work knowing it to be contrary to such laws, ordinances, rules and regulations, and without such notice to the PROJECT MANAGER, it shall assume full responsibility therefore and shall bear all costs attributable thereto.

12. LENGTH OF WORKDAY AND WORK WEEK

Eight (8) hours of labor shall constitute a calendar day's work for employees of the CONTRACTOR under this Contract. Said employees shall be paid not less than the prevailing wage rate for the first eight (8) hours work of each day.

A working day shall be Monday through Friday, and work shall be between 7:00 a.m. and 4:00 p.m., unless otherwise approved by the PROJECT MANAGER or the RECREATION AND PARK COMMISSION or revised by CITY Ordinance.

When work in excess of eight (8) hours per day, or forty (40) hours during any one (1) week is performed, wages for all hours over eight (8) hours in any day or over forty (40) hours during any one (1) week shall be paid at the prevailing wage rate, as provided in the California Code and the CITY's code requirements.

13. PAYMENT OF EMPLOYEES

The CONTRACTOR and each Subcontractor shall pay each employee engaged in Work on the project under this Contract in compliance with the Federal and State wage provisions indicated on the appropriate page of the Proposal (General Instruction and Information for Bidders), and LENGTH OF WORKDAY AND WORK WEEK of these General Conditions.

The certified payroll and the Statement of Compliance shall be submitted to the INSPECTOR by the CONTRACTOR and all Subcontractors performing Work on the project, regardless of dollar amount or type of contract.

If there is a difference between the Federal and State minimum wage rates for similar classifications of labor, the CONTRACTOR and its Subcontractors shall pay not less than the higher wage rate.

When the CONTRACTOR intends to use a craft or classification not shown on the general prevailing wage determinations, it will be required to pay the wage rate of that craft or classification most closely related to it as shown in the general prevailing wage determinations. In case of disagreement between the CONTRACTOR and the CITY, the INSPECTOR shall make the final determination as to the prevailing wages for the Work.

14. CONVICT-MADE MATERIALS

No materials manufactured or produced in a penal or correctional institution shall be incorporated in the project under this Contract.

15. SALES; BUSINESS OR USE TAX

Purchases of materials and equipment which will be incorporated or installed permanently in the Contract Work, or which will be used in the operation of the CONTRACTOR or Subcontractors, and not incorporated in the Contract Work, are not exempt from City of Los Angeles and California State Sales or Use Taxes as applicable. The CITY shall consider any required business taxes to be included in the overhead costs of the CONTRACTOR.

16. NONDISCRIMINATION IN EMPLOYMENT

The CONTRACTOR shall comply with all of the provisions of the Los Angeles Administrative Code, Mandatory Provision Pertaining to Nondiscrimination in Employment.

The CONTRACTOR shall submit Monthly Ethnic Composition of Work Force Reports to the INSPECTOR indicating the number of employees in the various work categories and ethnic groups and gender on forms furnished by the CITY. Failure to furnish the reports shall constitute grounds for the CITY to withhold the progress payment.

Nondiscrimination Clause: "The CONTRACTOR shall not discriminate during the performance of this Contract against any employee or applicant for employment because of employee's or applicant's race, religion, national origin, ancestry, sex, age, sexual orientation or physical handicap." The CONTRACTOR shall include in all subcontracts awarded under this Contract the same Nondiscrimination Clause.

If conflicts exist between these provisions and the Federal Rules and Regulations governing the same, the more stringent requirements shall prevail.

17. APPRENTICE UTILIZATION

Any Contract awarded hereunder will require the CONTRACTOR to comply with the provisions of the California Labor Code relating to apprentice employment and training; and will require the CONTRACTOR to assume full responsibility for compliance with said section with respect to all Apprenticing Occupations involved in the Project. (Compliance with said Apprentice Utilization provisions of the Labor Code is not required for Public Works Contracts involving less than $30,000 or less than twenty (20) Working days in duration).

18. LAWS AND REGULATIONS

The CONTRACTOR shall observe and comply with all Federal, State, and local laws, ordinances, codes, orders, and regulations which in any manner affect those engaged or employed on the Work, the materials used in the Work, or the conduct of the Work. If any discrepancy or inconsistency should be discovered in this Contract in relation to any such law, ordinance, code, order, or regulation, the CONTRACTOR shall report the same in writing to the PROJECT MANAGER. The CONTRACTOR shall indemnify and save harmless the CITY, and its officers, agents, and employees, against all claims or liability arising from violation of any such law, ordinance, code, order, or regulation, whether by itself or by its employees or subcontractors as stated in these Contract Documents. Any particular law or regulation specified or referred to elsewhere in these specifications shall not in any way limit the obligation of the CONTRACTOR to comply with all other provisions of Federal, State, and local laws and regulations.

19. PERMITS AND CONSTRUCTION EASEMENTS

The CONTRACTOR shall anticipate, obtain and pay for all permits, excluding the General Building Permit, necessary for performance of the Work.

The CONTRACTOR shall obtain and pay all costs incurred and submit to the PROJECT MANAGER copies of all permits required for the construction and installation of all Work called for on this project. All costs shall be included in the CONTRACTOR'S bid. The permit list to be obtained by the CONTRACTOR shall include, but not be limited to the following:

1. Night Work, hauling, overload, grading, excavation, demolition, foundation, and associated building permits.
2. Electrical permits.
3. Mechanical permits.
4. Plumbing permits.
5. South Coast Air Quality Management District permits.
6. Fire sprinkler permit.
7. All Federal, State, County and CITY issued permits.

Rights of ways, easements, or rights of entry for the Work will be provided by the CITY. The CONTRACTOR shall make arrangements, pay for, and assume all responsibility for acquiring, using, and disposing of Work areas and facilities temporarily required which are necessary in addition to those provided by the CITY. The CONTRACTOR shall indemnify and hold the CITY harmless for all claims for damages caused by such actions.

20. PARTIES EXCLUDED FROM THE WORK

Lists of individuals, firms and organizations which have been debarred, suspended or have voluntarily excluded themselves from Federal Procurement and Non Procurement Program is maintained by US General Services Administration. A copy can be obtained from Superintendent of Documents, US Government Printing Office, Washington, DC 20402, Tel: (202) 783-3238.

The CITY will not conduct business with an individual, firm or organization, and the CONTRACTOR shall not employ or otherwise utilize any Subcontractor, supplier or equipment vendor at any tier which is on the U.S. General Services Administration "List of Parties Excluded from Federal Procurement and Non Procurement Programs". The CONTRACTOR shall not utilize or otherwise employ any subcontractors or suppliers on the CITY's list of nonresponsible bidders maintained by the General Services Division of the Bureau of Contract Administration.

21. BUSINESS TAX REGISTRATION CERTIFICATES

The CONTRACTOR represents that it has, or will obtain upon award, the Business Tax Registration Certificate(s) required by the Los Angeles City Business Tax Ordinance. The CONTRACTOR shall maintain, or obtain as necessary, all such Certificates required of it under said Ordinance and shall not cause or allow any such Certificate to be revoked or suspended.

The CITY requires all firms that have business activity within the City of Los Angeles to pay CITY business taxes.

Payments for goods or services will be withheld unless proof of tax compliance is provided to the CITY. All firms and individuals that do business with the CITY will be required to provide a Business Tax Registration Certificate number or an exemption number as proof of compliance with Los Angeles City business tax requirements in order to receive payment for goods or services.

The Tax and Permit Division of the City Clerk's Office has the sole authority to determine whether a firm is covered by business tax requirements.

22. FINANCIAL LIABILITY

The CITY's liability under this Contract shall not exceed the CITY's appropriation to fund the Contract at the time of Contract award. However, if the CITY shall appropriate funds for any successive years, the CITY'S maximum liability shall not exceed the extent of such appropriation, subject to the terms and conditions of this Contract.

THE CONTRACTOR'S RESPONSIBILITIES

23. CONTRACTOR'S OBLIGATIONS

Only competent workers shall be employed on the Work. Any worker, at the journey level or above, employed on the Work shall have a current license or certificate as required for the type of Work being performed, issued by the Department of Building and Safety of the City of Los Angeles and any such other organization as required.

Any person or subcontractor employed who is found by the PROJECT MANAGER AND/OR INSPECTOR to be incompetent, disorderly or otherwise objectionable, or who fails or refuses to perform Work properly, acceptably and as directed shall be immediately removed from the Work by the CONTRACTOR and not be reemployed on the Work.

The CONTRACTOR, at its sole cost and expense, shall perform all labor and services and furnish all the materials, tools, and appliances, except as hereinafter otherwise definitely provided, necessary or proper for performing and completing the Work required, in the manner and within the time stipulated in these specifications. The CONTRACTOR shall furnish, erect, maintain, and remove the construction plant and such temporary works as may be required. If, at any time before the commencement or during the progress of the Work or any part of it, the CONTRACTOR'S methods or appliances appear to the PROJECT MANAGER or the INSPECTOR to be unsafe, inefficient, or inadequate for securing the safety of the workers, the quality of the Work required, or the rate of progress stipulated, the PROJECT MANAGER or the INSPECTOR may order the CONTRACTOR to increase their safety and efficiency or to improve their character, and the CONTRACTOR shall comply with such orders at its own expense. Neither the making of such demands by the PROJECT MANAGER nor the failure to make such demands shall relieve the CONTRACTOR of its obligation to secure the safe conduct of the Work, the quality of Work required, nor the rate of progress stipulated in the Contract. The CONTRACTOR shall be fully responsible for the safety, efficiency, and adequacy of its plant, appliances, and methods, and for any damage which may result from their failure or their improper construction, maintenance, or operation. All of the labor and materials shall be performed and furnished strictly pursuant to and in conformity with the Contract Documents, the lines and grades and other directions of the PROJECT MANAGER or the INSPECTOR as given from time to time during the progress of the Work under the terms of the Contract, and in accordance with working drawings to be furnished from time to time as provided herein. The CONTRACTOR shall complete the entire Work to the satisfaction of the PROJECT MANAGER and INSPECTOR and in accordance with the Specifications and drawings herein mentioned, at the prices fixed in the Contract.

Where articles or materials are especially manufactured or fabricated for delivery under these specifications, the CONTRACTOR shall at all times employ such workforce, plant, materials, and tools as will be sufficient to complete the performance of the Contract and every part thereof within the time limits stipulated herein. If the

CONTRACTOR fails to employ sufficient workforce, plant, materials, tools, or to maintain adequate progress, the PROJECT MANAGER may require an increase in progress at any point or points or a modification of plans and procedure in such a manner as to accelerate the Work. Failure to adequately staff the project shall be just cause for the CITY to terminate the Contract.

24. CONTRACTOR'S REPRESENTATIVE AT THE SITE

A technically qualified and English-speaking project representative shall be designated in writing as the CONTRACTOR'S representative at the job site, who shall supervise the Work and shall provide competent supervision of the Work until its completion. The CONTRACTOR'S project representative shall be assigned full time and exclusively to this project. Alternate representatives with qualifications equal to or better than the previous representative may be designated. The CONTRACTOR'S representatives shall have at least five (5) years of verifiable experience as the person primarily responsible for supervision of the Work on projects of the same or similar size and nature as this project. Within five (5) days after the Notice of Award the CONTRACTOR shall provide a statement to the PROJECT MANAGER with the following:

1. Identification and resume, showing the qualifications and experience of the CONTRACTOR'S representative and the alternate appointed to act in the place of the CONTRACTOR'S representative.
2. References of not less than two (2) previous projects on which the CONTRACTOR'S representative and the alternate had supervisory responsibility on a project of a similar nature and at least one-half or more of the cost of this project. Such references shall include names, addresses, and telephone numbers of owner representatives who worked on the project as well as project information such as project type, size, location and duration.

The PROJECT MANAGER reserves the right to disapprove any candidate named as the CONTRACTOR'S representative or alternate who fails to meet the provisions set forth herein. The PROJECT MANAGER reserve the right to remove, without any right to work on the project, either the CONTRACTOR'S representative or alternate, who in the sole opinion of the PROJECT MANAGER has demonstrated incompetence, lack of ability, or other unsuitability to perform supervision of the Work.

If the CONTRACTOR'S representative or alternate leave the employ of the CONTRACTOR, the CONTRACTOR will be required to replace the individual(s) and fulfill the requirements of this Article within fifteen (15) calendar days. In no event shall any Work proceed in the absence of an approved representative.

The CONTRACTOR'S representative or alternate shall have full authority to act on behalf of the CONTRACTOR, including, but not limited to final approval of Change Orders and Supplemental Agreements. All directions given by the PROJECT MANAGER to said representative or alternate shall be considered as having been given to the CONTRACTOR. Such instructions given by the PROJECT MANAGER to the CONTRACTOR'S representative or alternate will be confirmed in writing. All instructions and directions given by the PROJECT MANAGER or the INSPECTOR will be limited to matters properly falling within the PROJECT MANAGER'S or the INSPECTOR'S authority as specified in AUTHORITY OF THE RECREATION AND PARK COMMISSION, PROJECT MANAGER AND INSPECTOR of these General Conditions.

The CONTRACTOR'S representative or alternate shall be present at the site of the Work at all times while Work under the Contract is in progress. Failure to observe this requirement shall constitute suspension of the Work by the CONTRACTOR, until such time as said representative or alternate is again present at the site, and no payment will be allowed for any Work performed in the absence of said representative or alternate. Work performed in violation of these provisions shall be removed and reconstructed, re-fabricated, or reinstalled under the required supervision. No extensions of time will be granted, nor will additional payment be allowed for any costs to the CONTRACTOR for slowdown, delays, idled equipment, or any other costs incurred by the CONTRACTOR as the direct or indirect result of such suspension.

Whenever the Work is defined as being suspended under the provisions of this Article, any such suspension in excess of ten (10) calendar days shall constitute just cause for the CITY to terminate the Contract under the provisions of TERMINATION OF CONTRACT BY CITY (CONTRACTOR DEFAULT) of these General Conditions.

25. FAMILIARITY WITH PLANS AND SPECIFICATIONS

It shall be the responsibility of the CONTRACTOR to be thoroughly familiar with all details of the Project, including the Work of CONTRACTOR'S forces and all Subcontractors. The CONTRACTOR shall call the following to the attention of both the PROJECT MANAGER and the INSPECTOR in writing within twenty-four (24) hours of discovery, before any Work is performed:

1. Errors and omissions in the Plans and Specifications;
2. Work on the Plans or in the Specifications which, if so constructed, would result in a conflict or interference with other Work or the Work of other trades, including the location of fixtures and equipment;
3. Existing improvements visible at the job site, for which no existing disposition is made on the Plans or in the Specifications but which could reasonably be assumed to interfere with the satisfactory completion of the improvements contemplated by the Plans and Specifications.

Failure to notify shall constitute a waiver by the CONTRACTOR of any claim for delay or other damages occasioned by such defect. If the CONTRACTOR proceeds with the Work without instructions from the PROJECT MANAGER, the incorrect Work shall be removed and corrections made to comply with the PROJECT MANAGER'S instructions, at no cost to the CITY. The requirements of this Article are applicable to typographical errors in the Specifications and notational errors on the Plans where ambiguity or inadequate description exists.

26. JOB CONDITIONS

The CONTRACTOR shall visit the job site as soon as practicable after award of the Contract and ascertain all conditions affecting necessary procedure and sequencing of Work operations in the execution of the Work, including condition of available roads and streets, or clearances, restrictions and other limitations affecting transportation and ingress and egress to the job site. The CONTRACTOR shall determine the nature and types of Work to be performed and shall be responsible for all Work to be accomplished.

The CONTRACTOR shall enter the job site as noted in Article 4, SITE SECURITY of the General Requirements. The CONTRACTOR will be restricted to the immediate Work areas on the job site and shall in no case go beyond the Work limits noted on the drawings or as otherwise directed by the PROJECT MANAGER. The job site shall be enclosed with a temporary chain link fence and gates which shall be removed upon completion of the Work. The CONTRACTOR shall confine all operations of the contracted Work to the boundaries of the job site(s) and shall not interfere with CITY personnel and CITY operations or the Work of other contractors working on or near the site.

CONTRACTOR'S employee access to the job site by private vehicles is prohibited.

No vehicle is allowed in the facility or on the job site except delivery trucks and CONTRACTOR'S identified vehicles and equipment. It shall be the CONTRACTOR'S sole responsibility to arrange and pay for offsite employee parking and transportation, if necessary, so as not to affect the availability of public parking on the grounds of the facility or park site. The CONTRACTOR shall fully cooperate with all authorities on the job site and other contractors not related to the Work of this Contract who might be at the job site and shall comply with all regulations in force at the job site.

27. RESPONSIBILITY FOR SITE

The CONTRACTOR shall be in full charge of and be responsible for the job site and the construction Work of this Contract, subject to the directions of the PROJECT MANAGER or the INSPECTOR. Article 33, INTERFACE/COORDINATION REQUIREMENTS of the General Requirements describes interfaces with other contractors working on the job site. No other operations of any nature shall be performed except as specifically authorized in the Contract Documents or as authorized by the PROJECT MANAGER.

The CONTRACTOR shall exercise care not to damage improvements and adjacent land. The CONTRACTOR shall correct any damage caused within seventy-two (72) hours by restoring the land and improvements damaged to their original condition and shall indemnify and hold the CITY harmless for any such damage as specified in INDEMNIFICATION of these General Conditions.

28. WORKMANSHIP AND MATERIALS

All materials, parts and equipment furnished by the CONTRACTOR for the Work shall be new, high grade and free from defects. Materials and Work quality shall be subject to the INSPECTOR'S approval.

29. INJURY AND ILLNESS PREVENTION - SAFETY MEASURES

Safety is the responsibility of the CONTRACTOR. The CONTRACTOR shall observe and comply with the safety provisions of all applicable laws, building and construction codes, safety and health regulations of the California Code of Regulations, and with applicable CITY Safety Policies.

If a Work procedure or condition exists that is a violation of said safety standards, the PROJECT MANAGER or INSPECTOR may order the CONTRACTOR to comply with said safety provisions, and the CONTRACTOR shall comply with such orders at its own expense. If the CONTRACTOR fails to act promptly, the PROJECT MANAGER or INSPECTOR is authorized to suspend the Work. Failure of the PROJECT MANAGER or the INSPECTOR to make such demands shall not relieve the CONTRACTOR of its obligations to secure the safe conduct of the Work.

In the event of an emergency constituting an immediate hazard to the health or safety of the public or CITY employees, property, or licensee, the CITY may undertake, at the CONTRACTOR'S sole expense, without prior notice, all Work necessary to correct such hazardous conditions when it was caused by Work of the CONTRACTOR not being in accordance with the requirements of this Contract.

First aid facilities and supplies shall be kept and maintained by the CONTRACTOR at the site of the Work. The CONTRACTOR shall cause all persons within the construction area to wear protective helmets. In addition, all employees of the CONTRACTOR and its Subcontractors shall be provided with, and required to use, personal protective and life saving equipment set forth in California Construction Safety Orders and the OSHA Safety and Health Standards for Construction.

30. PROTECTION OF PERSONS AND PROPERTY AND RESTORATION OF EXISTING IMPROVEMENTS

The CONTRACTOR shall not destroy, remove, or otherwise disturb any existing survey monuments or reference points without authorization from the PROJECT MANAGER. No pavement breaking or excavation shall be started until all survey monuments or other reference points that will be disturbed by the construction operations have been properly referenced by the PROJECT MANAGER. It shall be the CONTRACTOR'S responsibility to notify the PROJECT MANAGER and the INSPECTOR of the time and location that Work will be done. Such notification shall be sufficiently in advance of construction so that there will be no delay due to waiting for survey points to be satisfactorily referenced for restoration. All survey monuments or reference points disturbed, without authorization by the PROJECT MANAGER, shall be accurately restored by the CITY at the CONTRACTOR'S sole expense after all street or roadway resurfacing has been completed.

All paved areas including asphaltic concrete beams cut or damaged as a result of construction shall be replaced with similar materials and of equal thickness to match the existing adjacent undisturbed areas, except where specific resurfacing requirements have been called for in the Contract Documents or in the requirements of the agency issuing the permit. All temporary and permanent pavement shall conform to the requirements of the affected pavement owner. All pavement which is subject to partial removal shall be neatly saw cut in straight lines.

In order to obtain a satisfactory junction with adjacent surfaces, the CONTRACTOR shall saw cut back and trim the edge so as to provide a clean, sound, vertical joint before permanent replacement of an excavated or damaged portion of pavement. Damaged edges of pavement along excavations and elsewhere shall be trimmed back by saw cutting in straight lines. All pavement restoration and other facilities restoration shall be constructed to finish grades compatible with adjacent undisturbed pavement.

Where sidewalks have been removed for purposes of construction, the CONTRACTOR shall place suitable temporary sidewalks, properly protected, promptly after backfilling and shall maintain them in satisfactory condition until the final restoration thereof has been made.

All utilities encountered along the line of the Work shall be maintained continuously in service during all the operations under the Contract, unless other arrangements satisfactory to the PROJECT MANAGER are made. Utilities shall include, but not be limited to, all above or below-ground conduit, pipes, ducts, cables, and appurtenances associated with oil, gas, water, steam, irrigation, process, sewer, storm drain, wastewater, air, electrical, power, instrumentation, communication, telephone, cable, TV, and lighting systems, whether or not owned by the CITY.

The CONTRACTOR shall protect all existing utilities and improvements not designated for removal. Necessary potholing shall be accomplished at the CONTRACTOR'S expense. The CONTRACTOR shall determine the exact locations and depths of all utilities indicated on the drawings. The CONTRACTOR shall make exploratory excavations of all utilities. All such exploratory excavations shall be performed as soon as practicable after award of the Contract and in any event, a sufficient time in advance of construction to avoid possible delays to the CONTRACTOR'S Work. When such exploratory excavations show the utility location as indicated on the drawings to be in error, the CONTRACTOR shall so notify the INSPECTOR and the PROJECT MANAGER. The CONTRACTOR should not rely upon plan designation of location of underground utilities. The number of exploratory excavations and extent of potholing required shall be that number which is sufficient to determine the alignment and grade of the utility. No costs shall be allowed for such Work except those included in the CONTRACTOR'S proposal.

Prior to any excavation in the vicinity of any existing underground facilities, the CONTRACTOR shall notify the INSPECTOR and the PROJECT MANAGER, and the respective authorities representing the owners or agencies responsible for such facilities, not less than three (3) working days, nor more than five (5) working days, of their intention to begin excavation. The CONTRACTOR shall make arrangements for and provide access such that a representative of said owners or agencies may be present during such Work.

Where the proper completion of the Work requires the temporary or permanent removal and/or relocation of an existing utility or other improvement which is shown on the drawings, the CONTRACTOR shall at its own expense, remove and, without unnecessary delay, temporarily replace or relocate such utility or improvement to a place and in a manner as directed by the PROJECT MANAGER, and the owner of the facility. In all cases of such temporary removal or relocation, restoration to former location shall be accomplished by the CONTRACTOR in a manner that will restore or replace the utility or improvement as nearly as possible to its former locations and to as good or better condition than found prior to removal. When utilities that are to be removed are encountered within the area of operations, the CONTRACTOR shall notify the PROJECT MANAGER not less than fifteen (15) days in advance for necessary measures to be taken to prevent interruption of service.

The CONTRACTOR shall notify the PROJECT MANAGER thirty (30) calendar days in advance of any proposed connection, and shall notify the PROJECT MANAGER and the INSPECTOR twenty-four (24) hours prior to the actual connection, to any existing utility.

Any utility or improvement which is damaged by the CONTRACTOR shall be immediately repaired at the CONTRACTOR'S expense, to a condition equal to, or better than, the condition it was in prior to such damage or temporary relocation. If the CONTRACTOR fails or refuses to promptly repair the utility or improvement, the CITY may perform the necessary Work at the CONTRACTOR'S expense and no time extension shall be allowed to the CONTRACTOR. The CONTRACTOR is not relieved of provisions of this Article even in the event such damage occurs after backfilling or is not discovered until after completion of backfilling.

All repairs to a damaged improvement shall be inspected and approved by the INSPECTOR and an authorized representative of the improvement owner before being concealed by backfill or other Work. In case of damage, which in the opinion of the PROJECT MANAGER or the INSPECTOR, threatens the safety of persons or property, the CONTRACTOR shall immediately make all repairs necessary for removal of the hazard. Should the CONTRACTOR fail to promptly take all necessary action, the CITY has the option to remove any hazard resulting

from damages caused by the CONTRACTOR at the CONTRACTOR'S expense without waiving any other rights the CITY may have, and no time extension will be allowed to the CONTRACTOR.

In the event that the CONTRACTOR damages any existing utilities that are not shown on the drawings or the locations of which are not made known to the CONTRACTOR prior to excavation, the CONTRACTOR shall immediately notify the INSPECTOR and take all measures necessary to prevent further damage. The CONTRACTOR shall then immediately make a written report to the PROJECT MANAGER and shall make repairs as directed by the PROJECT MANAGER. Payment for this extra Work will be made pursuant to the provisions contained in Article 27, PAYMENT FOR CHANGES AND EXTRA WORK of the General Requirements.

Notwithstanding that an existing utility or substructure is not shown on the original Plans and Specifications, if the existence and location thereof was made known to the CONTRACTOR prior to excavation, the utility or

substructure constitutes an existing known condition, and the CONTRACTOR is responsible for protecting the utility or substructure.

Damage to a utility known to the CONTRACTOR shall be repaired at the CONTRACTOR'S expense.

31. NON-CONFORMING WORK

Except as set forth in this Article, all non-conforming Work and materials, in place or not, shall be removed immediately from the site or corrected to conform to all requirements of the Contract Documents, by the CONTRACTOR, at the sole expense of the CONTRACTOR.

If the CONTRACTOR fails to remove, replace or correct any non-conforming Work or materials within seventy two (72) hours of discovery, the PROJECT MANAGER may cause such Work or materials to be removed and replaced. Such removal and replacement shall be at the sole expense of the CONTRACTOR and all such cost shall be deducted from any amounts that are due or may become due to the CONTRACTOR.

Failure of the INSPECTOR or the PROJECT MANAGER to notify the CONTRACTOR of any non-conforming Work shall not constitute acceptance of any non-conforming Work. The CONTRACTOR'S obligation to remove, replace or correct any non-conforming Work, whenever discovered, shall continue to the end of the guaranty-warranty period provided for in Article 16, GUARANTY-WARRANTY of the General Requirements. The CITY reserves and retains all rights and remedies at law against the CONTRACTOR and their Surety for correction of any and all latent defects discovered after the guaranty-warranty period.

The Contract Documents may be modified for the purpose of allowing non-conforming Work to become acceptable in lieu of the CONTRACTOR'S obligation to remove and replace all such non-conforming Work. Such modification shall be effective only upon the written agreement of the CONTRACTOR and the PROJECT MANAGER. Such written agreement shall be issued as a Change Order, which shall include all of the following provisions.

1. A statement that the Work as constructed is non-conforming Work.
2. The specifications by which the non-conforming Work will be made to conform to the requirements of the Contract Documents.
3. A statement that all modifications to the non-conforming Work shall be at the sole expense of the CONTRACTOR.
4. A statement that the CONTRACTOR waives and releases any and all claims against the CITY, including time and impacts, in any way whatsoever related to the non-conforming Work, the modification of such non-conforming Work, and the time to negotiate such a modification.
5. The amount representing the value of the Work specified in the Contract Documents less the value of the Work as constructed, as a credit to the CITY, which shall be deducted from the amount of the Contract.

No Work shall proceed which shall make the non-conforming Work more costly to correct nor to modify such non-conforming Work until the PROJECT MANAGER and the CONTRACTOR execute such a Change Order. The PROJECT MANAGER may grant permission, in response to a written request from the CONTRACTOR, to proceed with the Work before finalization of such a Change Order, if they find the request to be in the best interest of the CITY.

Any delays or impacts arising on the Work as a result of construction or delivery of non-conforming Work or materials shall be at the CONTRACTOR'S sole expense, regardless of whether the Work ultimately becomes the subject of a Change Order, and no time extension shall be allowed to the CONTRACTOR.

Acceptance by the INSPECTOR of such previous non-conforming Work, after execution of the Change Order, does not act to waive or otherwise negate the CONTRACTOR'S obligations to guarantee such Work as set forth in Article 16, GUARANTY-WARRANTY of the General Requirements.

Failure of the CONTRACTOR to comply with the requirements of this Article shall constitute default of the Contract by the CONTRACTOR and the CITY may terminate the Contract as provided for in TERMINATION OF CONTRACT BY CITY (CONTRACTOR DEFAULT).

32. SUBCONTRACTORS AND SUB-SUBCONTRACTORS (Revised as of 2/12/2016)

The Contractor shall perform on the site and with its own organization not less than thirty (30%) of the total Contract Price, unless a different percentage is designated on Schedule "A" SUBCONTRACTORS AND SUPPLIERS in the Instructions to Bidders, page 16. Any items designated "specialty items" in the Bid Proposal may be performed by subcontract and the amount of all such "specialty items" may be deducted from the Contract Price before computing the amount of Work required to be performed by the Contractor with its own organization. The dollar value included in the percentage performed by the Contractor shall include the value of labor, materials and equipment to be incorporated or used in the Work and directly purchased by the Contractor and shall not include the value of Work, including labor, materials and equipment, incorporated or used in the Work, performed or provided by Subcontractors.

Bidders must list all Subcontractors in the Bid, regardless of the dollar amount of the work to be performed, if the Bidder wishes to have the Subcontract amount credited toward meeting the MBE/WBE/SBE/EBE/DVBE/OBE levels of participation of the Project. Subcontractors added to the project following acceptance of the Bid and award of the Project will not be credited toward meeting the MBE/WBE/SBE/EBE/DVBE/OBE levels of participation for this Project.

Listed vendors and/or Suppliers will be limited to 60% of their listed dollar value toward achieving the anticipated MBE/WBE/SBE/EBE/DVBE/OBE levels of participation for this Project, unless the vendor and/or Supplier manufactures or substantially alters the materials/supplies.

The designated percentage of the total Contract Price the Contractor is to perform may not be reduced below that level by the addition of Subcontractor's added after Award of the Project.

The Inspector, acting on behalf of the Board of Recreation and Park Commissioners, will be responsible for approval of all Subcontractors, whether Bid-listed or not, and all Sub-subcontractors employed on the Project.

The Contractor must list in the original bid each Subcontractor who will perform Work or render services in an amount in excess of one-half of 1 percent of the Contractor's total Bid or $10,000.00, whichever is greater.

Subletting or Subcontracting of any portion of the Work in excess of one-half of 1 percent of the Contractor's original total Bid or $10,000.00, whichever is greater, for which no Subcontractor was designated in the original Bid shall only be permitted in cases of public emergency or necessity, and then only after a finding reduced to writing as a public record of the Inspector setting forth the facts constituting the emergency or necessity.

If the Contractor fails to specify a Subcontractor, or if the Contractor specifies more than one Subcontractor for the same portion of Work to be performed under the Contract in excess of one-half of 1 percent of the Contractor's total original Bid or $10,000.00, whichever is greater, the Contractor agrees that it is fully qualified to perform that portion of Work itself, and that it shall perform that portion itself.

The Contractor shall set forth in its Bid the following: The name, location of the place of business, telephone number, California State Contractor's License Number and dollar amount of each Subcontractor who will perform Work, labor, service, supply specifically fabricated materials or equipment in an amount in excess of one-half of 1 percent of the Contractor's total Bid, or $10,000.00, whichever is greater.

The Contractor shall list only one Subcontractor for each portion of Work as defined by the Contractor in its Bid.

Acceptance by the Board of Recreation and Park Commissioners of its Bid is dependent upon each Bid listed Subcontractor, and all subsequently approved additional Subcontractors, performing the dollar value of Work listed or approved. Any reduction, increase, or other change to any Subcontract amount without prior approval by Board of Recreation and Park Commissioners is considered an Unauthorized Subcontractor Substitution and is subject to a penalty of ten (10) percent of the Subcontract amount, whether Bid-listed or not. A Subcontract dollar value

increased or reduced as the result of a Change Order issued by the Engineer to add or delete from the original scope of Work shall not be subject to a penalty for an Unauthorized Subcontract Substitution.

Acceptance by the Board of Recreation and Park Commissioners of its Bid shall not entitle Subcontractors to recognition for any direct or contractual relationship with the City, nor shall it constitute approval of the use of any materials other than those specified.

The Contractor shall be responsible for all acts of all Subcontractors at all tiers. The Contractor shall coordinate all work performed by subcontractors in the interest of the City.

All Subcontractors who will be working on the Project shall be approved in writing by the Inspector prior to beginning Work, regardless of the dollar amount of Work to be performed, and whether or not they were listed in the original Bid.

Requests for approval of all Subcontractors, or request for substitution of a Subcontractor, shall be made in writing to the Inspector located at the Public Works Building, 1149 S. Broadway, 3rd Floor, Los Angeles, CA, 90015, and said request shall contain the following information for each Subcontractor:

1) Project Name
2) Project Work Order Number
3) Subcontractor's Name
4) Subcontractor's Address
5) Subcontractor's Phone Number
6) Subcontractor's Status (WBE, MBE, SBE, EBE, DVBE, OBE)
7) Subcontractor's State of California Contractor License Number
8) Subcontractor's City Business Tax Registration Certificate Number (BTRC)
9) Dollar amount of Subcontract work to be performed
10) Description of Subcontract work to be performed

Failure to provide any of the information listed will result in denial of approval until such time as the information is provided.

Failure to obtain approval of the Inspector prior to each Subcontractor performing Work on the Project may result in suspension of Work by that Subcontractor, removal of Work performed by unapproved Subcontractors, assessment of penalties, and possible sanctions against the Contractor.

Additional Subcontractors may be added after the time of original Bid. The value of Work to be performed by additional Subcontractors may not be greater than one-half of 1 percent of the Contractor's original total Bid or ten thousand dollars ($10,000.00), whichever is greater, unless the Subcontractor will be performing Work added by Change Order causing changes or deviations from the original Contract.

The Contractor shall provide the dollar amount of Work to be performed in all requests for additional Subcontractors. Failure to specify a dollar amount of Work to be performed will result in denial of additional Subcontractors until such time as the amount is provided.

Failure of the Contractor to request and obtain approval for a reduction in either a Bid-listed Subcontract amount or the Subcontract amount of a Subcontract added after the original Bid shall result in a penalty of ten percent of the Subcontract amount.

A Contractor whose Bid is accepted may not:

1) Substitute any person as Subcontractor in place of a Subcontractor listed in the original Bid, except that the Inspector, acting on behalf of the Board of Recreation and Park Commissioners, may consent to the substitution of another Subcontractor for one of the following situations:

A) When the Subcontractor listed in the original Bid or proposal after having had a reasonable opportunity to do so fails or refuses to execute a written contract, when that written contract, based upon the general terms, conditions, plans and specifications for the project involved or the terms of that Subcontractor's written bid, is presented to the subcontractor by the Contractor.

B) When the listed Subcontractor becomes bankrupt or insolvent.

C) When the listed Subcontractor fails or refuses to perform its subcontract.

D) When the listed Subcontractor fails or refuses to meet the bond requirements of the Contractor as set forth herein.

E) When the Contractor demonstrates to the Inspector's satisfaction that the name of the Subcontractor was listed as a result of an inadvertent clerical error.

F) When the listed Subcontractor is not licensed pursuant to the State of California Contractor's License Law.

G) When the listed Subcontractor refuses to obtain a City of Los Angeles Business Tax Receipt Certificate (BTRC).

H) When the Inspector concurs with the Contractor that the Work being performed by the listed Subcontractor is unsatisfactory and not in substantial accordance with the Contract Documents, or the listed Subcontractor is delaying or disrupting the progress of the work.

I) When the listed Subcontractor fails to submit an Affirmative Action Plan acceptable to the Inspector.

J) When the Board of Recreation and Park Commissioners determines that a listed Subcontractor is not a responsible contractor.

2) Permit a Subcontract to be voluntarily assigned or transferred or allow it to be performed by anyone other than the original Subcontractor listed in the original Bid, without the consent of the Inspector.

3) Other than in the performance of Change Orders causing changes or deviations from the original Contract, sublet or Subcontract any portion of the Work in excess of one half of 1 percent of the Contractor's total Bid as to which its original Bid did not designate a Subcontractor.

4) Reduce the dollar amount of a Bid-listed Subcontract without the written approval of the Inspector.

A request for substitution of any Subcontractor, whether Bid-listed or not, must be made in writing to the Inspector and must include letter(s) of explanation as to the reason for the requested substitution.

It is considered a substitution if anyone other than the Bid-listed and/or approved Subcontractor(s), including the Contractor, performs any portion of the Work designated to be performed by said Subcontractor.

Failure to obtain approval for a Subcontractor substitution may result in rejection of the affected Work, penalties assessed for failure to obtain approval, and possible sanctions by the City.

All substitutions of Subcontractors, whether MBE/WBE/SBE/EBE/DVBE/OBE or not, shall be approved in writing by the Board of Recreation and Park Commissioners prior to any Work being performed by the substituting Subcontractor.

The Contractor shall conduct a Business Inclusion Program Outreach prior to approval of any requested Subcontractor substitution, regardless of the status (MBE/WBE/SBE/EBE/DVBE/OBE) of the contractor being substituted for. For MBE/WBE/SBE/EBE/DVBE/OBE Subcontractor substitution requests, the Contractor shall comply with the Business Inclusion Program Outreach requirements of Pages 15-15R of the Instructions to Bidders (Volume I). The Business Inclusion Program Outreach for any requested Subcontractor substitution must be reviewed and approved by the Special Research and Investigation Section of the General Services Division of the Bureau of Contract Administration, whether the Subcontractor was Bid listed or approved after the Award of the Project.

There shall be no decrease in dollar value of Work to be performed by Subcontractors approved as a substitute for a Bid-listed Subcontractor without a change in scope of the Work to be performed by the originally Bid-listed Subcontractor. Written evidence of a change of scope must be provided by the Engineer prior to approval of a change in dollar value of a Bid-listed Subcontractor.

Prior to approval of the Contractor's request for substitution, the Inspector shall give notice in writing to the Subcontractor affected by the Contractor's request to substitute and of the reasons for the request. The notice shall be served by certified or registered mail to the last known address of the Subcontractor. The listed Subcontractor who has been so notified shall have five (5) Workdays within which to submit written objections to the substitution. Failure to file these written objections within five (5) Workdays of notification shall constitute the listed Subcontractor's consent to the substitution. Notification by the Inspector may be made by phone in lieu of written notification via certified or registered mail if agreed to by the listed Subcontractor and followed by written request. Upon notification by phone, the listed Subcontractor may file written objections within five (5) days of notification.

If written objections are filed, the Inspector shall give notice of at least five (5) Workdays to the listed Subcontractor of a hearing on the Contractor's request for substitution.

The Contractor, as a condition to assert a claim of Inadvertent Clerical Error in the listing of a Subcontractor, shall within two Workdays after the time of the original Bid opening by the Board of Recreation and Park Commissioners give written notice to the Inspector and the Board of Recreation and Park Commissioners and copies of such notice to both the Subcontractor he claims to have listed in error and the intended Subcontractor who had bid to the Contractor prior to Bid opening.

Written notice of an Inadvertent Clerical Error shall be forwarded within two (2) days after the time of the original Bid opening by every Contractor claiming such an error. Failure to submit such notice within the time prescribed shall make any such subsequent claim of Inadvertent Clerical Error invalid.

Any listed Subcontractor who has been notified by the Contractor of an Inadvertent Clerical Error shall be allowed six (6) Workdays from the time of the Bid opening to submit to the Inspector and to the Contractor written objection to the Contractor's claim of Inadvertent Clerical Error. Failure of such listed Subcontractor to file such written notice within the six (6) Workdays shall constitute agreement that an advertent clerical error was made.

The Inspector shall, in the absence of compelling reasons to the contrary, consent to the requested substitution based on an Inadvertent Clerical Error if:

1) The Contractor, the Subcontractor listed in error, and the intended Subcontractor each submit an affidavit to the Inspector along any additional information as the parties may wish to submit that an Inadvertent Clerical Error was in fact made, provided that the affidavits from each of the three parties are filed within eight (8) Workdays from the time of the original Bid opening, or

2) If such affidavits are filed by both the Contractor and the intended Subcontractor within eight days of the original Bid opening but the Subcontractor whom the Contractor claims to have listed in error does not submit within six (6) Workdays, to the Inspector and to the Contractor, written objection to the Contractor's claim of Inadvertent Clerical Error as provided in this article.

If such affidavits are filed by both the Contractor and the intended Subcontractor but the listed Subcontractor has, within six (6) Workdays from the time of the original Bid opening, submitted to the Inspector and to the Contractor written objection to the Contractor's claim of Inadvertent Clerical Error, the Inspector shall investigate the claims of all parties and schedule a public hearing before the Board of Recreation and Park Commissioners to determine the validity of such claims. Any determination shall be based on the facts contained in the declarations submitted under penalty of perjury by all three parties and supported by testimony given to the Board of Recreation and Park Commissioners. The Board of Recreation and Park Commissioners may, on its motion or that of any other party, admit testimony of other Contractors, any Bid registries or depositories, or any other party in possession of facts, which may have a bearing on the decision of the Board of Recreation and Park Commissioners. The findings of the Board of Recreation and Park Commissioners shall be final.

33. RESPONSIBILITY OF CONTRACTOR TO ACT IN EMERGENCY

In case of an emergency that threatens loss of or damage to property or injury to persons, the CONTRACTOR shall act, without instructions from the CITY, as the situation may warrant. The CONTRACTOR shall immediately inform the PROJECT MANAGER and the INSPECTOR of the emergency action taken. Any claim shall be submitted to the PROJECT MANAGER. If practical the amount of compensation, if any, shall be determined by agreement prior to the issuance of a Change Order. However, if the emergency is created or aggravated by the CONTRACTOR, it shall be liable for the resulting damages. If the CONTRACTOR fails to take the necessary action as required by such an emergency the CITY may assign another CONTRACTOR or use its own forces to perform the emergency Work at the CONTRACTOR'S sole expense.

34. ASSIGNMENT

The CONTRACTOR shall not assign, transfer, convey or otherwise dispose of this Contract or any of the proceeds there under unless written consent of the CITY has been obtained. No right under this Contract or claim for any proceeds due or to become due hereunder shall be asserted against the CITY, or persons acting for the CITY, by reason of any so-called assignment, transfer or conveyance of this Contract or any part thereof unless such assignment, transfer or conveyance has been authorized by the written consent of the CITY. The instrument of assignment, transfer or conveyance shall contain a clause subordinating the claim of the assignee, transfer or conveyor to all prior liens for services rendered or materials supplied for the execution of the Work.

35. INDEPENDENT CONTRACTOR

The CONTRACTOR represents that it is fully experienced and properly qualified to perform the class of Work required for the CONTRACT and that it is properly licensed, equipped, organized and financed to perform the Work. The CONTRACTOR shall be an independent contractor. The CONTRACTOR is not an agent of the CITY in the performance of the CONTRACT, and shall maintain complete control over its employees and its Subcontractors and Suppliers of any tier. Nothing contained in the CONTRACT or any Subcontract awarded by the CONTRACTOR shall create any relationship between any Subcontractor and the CITY. The CONTRACTOR shall perform the Work in accordance with its own methods, in compliance with the terms of the CONTRACT.

INDEMNIFICATION AND INSURANCE REQUIREMENTS

36. INDEMNIFICATION

Except for the active negligence or willful misconduct of the CITY, the CONTRACTOR undertakes and agrees to defend, indemnify and hold harmless, through legal counsel acceptable to the CITY, the CITY, and any and all of the CITY'S Boards, Officers, Agents, Employees, Assigns, and Successors in Interest from and against all suits and causes of action, claims, losses, demands and expenses, including, but not limited to, attorney's fees and cost

of litigation, damage or liability of any nature whatsoever, arising out of or related to the performance or nonperformance by CONTRACTOR or its Subcontractors, Sub-Subcontractors, or Suppliers, of any tier, of any portion of the construction of the Project, including but not limited to CONTRACTOR'S negligent acts, errors, omissions, breach of contract, breach of warranty (express or implied), or willful misconduct.

It is agreed that such defense and indemnity shall extend to the CITY'S PROJECT MANAGER, Architect/Engineer or other Design Consultant providing services under written agreement with the CITY covering any portion of the Project. Provided, however, that the Design Consultant shall be solely responsible for the enforcement of any request made by said Consultant for indemnification or defense by the CONTRACTOR. It is further provided that the CITY shall have no liability whatsoever for any failure of the CONTRACTOR to comply with any request from the Consultant for indemnity or defense.

It is further agreed that the defense and indemnity obligations of the CONTRACTOR under this Article shall not extend to the liability of the Design Consultant or its agents, employees or subconsultants, arising as a result of such indemnitee's own active negligence, errors or omissions or from (1) the preparation or approval of maps, Plans, opinions, reports, surveys, change orders, designs or Specifications, or (2) the giving of or failure to give directions or instructions by the indemnitee provided that such giving or failure to give is the primary cause of the dame or injury.

37. INSURANCE

A. GENERAL

During the term of this Contract and without limiting the CONTRACTOR's indemnification of the CITY, the CONTRACTOR shall provide and maintain at its own expense, insurance having the limits customarily carried and actually arranged by the CONTRACTOR but not less than the amounts and types listed on the Insurance Requirements Form in Volume 1 of these Contract Documents, covering its operations hereunder subject to the following conditions as they may variously apply:

1. ADDITIONAL INSURED/ADDITIONAL INTEREST/LOSS PAYEE

The CITY, it's Recreation and Park Commissions, Officers, Agents, Employees and Design Consultant shall be included as:

a. Additional Insureds in all required General Liability and property insurance and Additional Interests in all required Automobile Liability insurance.

b. Named Insureds in all required Owners and Contractors Protective Liability insurance policies.

c. Loss Payee As Its Interest May Appear in all required property, fidelity or Surety coverages.

d. Listing of other entities as additional insures may be required for specific projects due to their funding source (such as, Prop A funded projects require that Los Angeles County be listed as an additional insured).

The CITY and other interests listed above need not be named on Workers' Compensation/Employer's Liability, Professional Errors and Omissions and Second-party Legal Liability coverages (such as Garage Keepers' Legal).

2. INSURANCE APPROVAL

All insurance required hereunder shall conform to the CITY requirements established by Charter, ordinance or policy. Evidence of insurance shall be submitted to the Department's Risk Control Coordinator and approved by the City Attorney prior to commencement of any Work or tenancy under this Contract in accordance with the Los Angeles Administrative Code.

3. ALTERNATIVE PROGRAMS

Alternative Risk Financing mechanisms such as Risk Retention Groups, Risk Purchasing Groups, off-shore carriers and captive insurance programs are subject to review of their financial statements by the CITY before an approval can be granted by the City Attorney.

4. ADMITTED CARRIER/LICENSED CALIFORNIA BROKER

Insurance shall be obtained from brokers or carriers authorized to transact insurance business in California. Surplus lines insurance from carriers who are not admitted in California must be submitted through a California-licensed broker or agent.

Surplus lines coverage must also contain a Service of Suite provision whereby the underwriters will submit as necessary to any court of competent jurisdiction in California and agree that all matters arising there under will be determined in accordance with the law and practice of such court. It must further give the name and address of the underwriter's agent for service of process located within California or must nominate the California Insurance Commissioner as such agent.

5. PRIORITY OF COVERAGE

The CONTRACTOR's insurance shall not call on the CITY's program for contributions.

6. CANCELLATION/REDUCTION IN COVERAGE NOTICE

With respect to the interest of the CITY, if an insurance company elects to cancel insurance before the stated expiration date, or declines to renew in the case of a continuous policy, or materially reduces the coverage period by changing the retroactive date (if any), or the extended discovery period (if any), or reduces the stated limits other than by impairment of an aggregate limit, or materially reduces the scope of coverage which affects the CITY's interest, the company will provide the CITY at least thirty (30) calendar days prior written of such election. Notice will be made by receipted delivery addressed as follows: CITY ATTORNEY, INSURANCE AND BONDS, 1240 City Hall East, 200 NORTH MAIN STREET, LOS ANGELES, CA 90012-4168. It is understood, however, that such notice to the CITY shall not affect the company's right to give a lesser notice to the Named Insured in the event of nonpayment of premium. (L.A. Admin. Code Section 11.54).

7. ACCEPTABLE EVIDENCE

The appropriate CITY Special Endorsement forms, contained in Volume 1 of these Contract Documents, are the preferred form of evidence of insurance. Alternatively, the CONTRACTOR may submit two (2) certified copies of the policy or other evidence acceptable to the City Attorney containing language which complies with subparagraphs 1) through 6) above.

With respect to Professional Liability insurance, either a signed copy of the Policy Declarations Page or a letter from the CONTRACTOR's insurance broker certifying coverage, together with a thirty (30) day cancellation notice endorsement in favor of the CITY as specified in subparagraph 6) will satisfy this requirement.

8. SEPARATION OF INSUREDS

Except with respect to the insurance company's limits of liability, each liability insurance policy shall apply separately to each insured against whom a claim or suit is brought. The inclusion of any person or organization as an insured shall not affect any right which such person or organization would have as a claimant if not so included.

9. RENEWAL

Once the insurance has been approved by the CITY, evidence of renewal of an expiring policy may be submitted on a manually signed renewal endorsement or certificate form. If the policy or carrier has changed, however, new evidence as specified in paragraphs 1) through 8) above, must be submitted.

B. AGGREGATE LIMITS/REDUCTION IN COVERAGE

If any of the required insurance coverages contain aggregate limits, or apply to other operations or tenancy of the CONTRACTOR not related to this Contract, the CONTRACTOR shall give the CITY prompt, written notice of any incident, occurrence, claim, settlement or judgement against such insurance which in the CONTRACTOR's best judgement may diminish the protection such insurance affords the CITY. Further, the CONTRACTOR shall immediately take all reasonable and available steps to restore such aggregate limits or shall provide other insurance protection for such aggregate limits. The CITY may, at its option, specify a minimum acceptable aggregate for each line of coverage required.

The CONTRACTOR shall not make any substantial reductions in scope of coverage (e.g., elimination of contractual liability or reduction of discovery period) which may affect the CITY's protection without the CITY's prior written consent.

C. SELF-INSURANCE AND SELF-INSURED RETENTIONS

Self-insurance programs and self-insured retention in insurance policies are subject to separate approval by the CITY upon review of evidence of the CONTRACTOR's financial capacity to respond. Additionally, such programs or retention must provide the CITY with at least the same protection from liability and defense of suits as would be afforded by first-dollar insurance.

D. MODIFICATION OF COVERAGE

The CITY reserves the right at any time during the term of this Contract to change the amounts and types of insurance required hereunder by giving the CONTRACTOR ninety (90) calendar days advance written notice of such change. If such change should result in substantial additional cost to the CONTRACTOR, the CITY agrees to negotiate additional compensation.

E. FAILURE TO PROCURE INSURANCE

The required coverage and limits are subject to availability on the open market at reasonable cost as determined by the CITY. Non-availability or non-affordability must be documented by a letter from the CONTRACTOR'S insurance broker or agent indicating a good faith effort to procure the required insurance and showing, as a minimum, the names of the insurance carriers and the declinations or quotations received from each.

Within the foregoing constraints, the CONTRACTOR'S failure to procure or maintain required insurance or a self-insurance program during the entire term of this Contract shall constitute a material breach of this Contract under which the CITY may immediately suspend or terminate this Contract or, at its discretion, procure or renew such insurance to protect the CITY'S interests and pay any and all premiums in connection therewith, and recover all monies so paid from the CONTRACTOR.

F. UNDERLYING INSURANCE

The CONTRACTOR shall be responsible for requiring indemnification and insurance as it deems appropriate from its consultants, agents and Subcontractors, if any, to protect the CONTRACTOR's and the CITY'S interests, and for ensuring that such persons comply with any applicable insurance statutes. The CONTRACTOR is encouraged to seek professional advice in this regard.

G. WORKERS' COMPENSATION

By signing this Contract, the CONTRACTOR hereby certifies that it is aware of the provisions of Section 3700 *et seq.*, of the Labor Code which require every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and that it will comply with such provisions at all such times as they may apply during the performance of the Work pursuant to this Contract.

A waiver of subrogation in favor of the CITY will be required when Work is performed on CITY premises under hazardous conditions.

H. ALL RISK BUILDER'S RISK/INSTALLATION FLOATER

During the course of construction, the CONTRACTOR shall secure and maintain an All Risk Builder's Risk Insurance policy covering loss, damage or destruction of property, including materials in transit and stored on and off site, in an amount equal to the value of the construction and materials on hand.

An Installation Risk or "Floater" Policy, written to cover only specific types of equipment during construction, may be provided to cover damage to Work or high valued equipment or materials.

Coverage shall remain in force until the Work is completed and accepted by the CITY. Acceptable evidence of coverage shall be in the form of an endorsement to the policy which names the CITY as an additional named insured and as Loss Payee As Its Interest May Appear.

I. TYPICAL COVERAGES REQUIRED

The coverages required in A above shall be at least as broad as:

1. General Liability: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01).
2. Automobile Liability: Insurance Services Office Form Number CA 00 01 (Ed. 1/87) covering Automobile Liability, code 1 (any auto).
3. Professional Liability: If applicable, errors and omissions liability appropriate to the consultant's profession, with a discovery period of not less than twelve (12) months after completion of Work or termination of Contract.

J. TYPICAL LIMITS OF LIABILITY

Unless otherwise specified in Form Gen. 146/IR, the CONTRACTOR shall maintain limits no less than:

1. General Liability: $1,000,000 per occurrence for bodily injury, personal injury and property damage. If Commercial General Liability or other form with a general aggregate limit is used, either the general aggregate shall apply separately to this project/location or the general aggregate limit shall be twice the required occurrence limit.
2. Automobile Liability: $1,000,000 per accident for bodily injury and property damage, combined or equivalent in split limits.
3. Employer's Liability: $1,000,000 per accident for bodily injury or disease.
4. Professional Liability: $1,000,000 per occurrence.

K. CONTRACT BONDS

Before the execution of the Contract by the RECREATION AND PARK COMMISSION, the bidder shall file with the RECREATION AND PARK COMMISSION Surety bonds satisfactory to the RECREATION AND PARK COMMISSION in the amounts and for purposes noted below. Bonds shall be duly executed by a responsible corporate Surety, authorized to issue such bonds in the State of California and secured through an authorized agent with an office in California. Bonds shall be issued by a Surety who is listed in the latest revision of U.S. Department of Treasury Circular 570, is authorized to issue bonds in California, and whose bonding limitation shown in said circular is sufficient to provide bonds in the amount required by the Contract. The Bidder shall pay all bond premiums, costs, and incidentals. On Contracts estimated by the PROJECT MANAGER to be less than $2 million, bonds may be obtained from an insurance company with a Certificate of Authority from the California Insurance Commissioner authorizing the company to write Surety insurance within the State of California.

Each bond shall be signed by both the Bidder and the Surety, and the signature of the authorized agent of the Surety shall be notarized.

The Bidder shall provide two good and sufficient surety bonds. The "Payment Bond" (Material and Labor Bond) shall be for not less than one hundred percent (100%) of the Contract price, to satisfy claims of material suppliers and of mechanics and laborers employed by it on the Work. The bond shall be maintained by the CONTRACTOR in full force and effect until the Work is accepted by the RECREATION

AND PARK COMMISSION, and until all claims for materials and labor are paid, and shall otherwise comply with the California Civil Code.

The "Performance Bond" shall be for one hundred percent (100%) of the Contract price to guaranty faithful performance of all Work, within the time period prescribed, in a manner satisfactory to the RECREATION AND PARK COMMISSION, and that all materials and Workmanship will be free from original or developed defects, and comply with requirements and guaranty specified in Article 16, GUARANTY-WARRANTY of the General Requirements.

Should any Surety at any time be unsatisfactory to the RECREATION AND PARK COMMISSION, notice will be given the CONTRACTOR to that effect. No further payments shall be deemed due or will be made under the contract until a new Surety shall qualify and be accepted by the RECREATION AND PARK COMMISSION.

Changes in the Work, or extensions of time, made pursuant to the Contract, shall in no way release the CONTRACTOR or Surety from its obligations. Notice of such changes or extensions shall be waived by the Surety. In addition to the bonds detailed above, the CONTRACTOR shall provide a guarantee bond as detailed in Article 16, GUARANTY-WARRANTY of the General Requirements.

38. SERVICE OF NOTICE

The delivering of any notice, instruction, claim or protest, or other written communication, personally to the CONTRACTOR or the CONTRACTOR'S representative or to the PROJECT MANAGER, or to the City Clerk of the CITY shall constitute service therefore upon the CONTRACTOR, the PROJECT MANAGER, or the CITY, respectively.

The depositing of a post-paid (Registered Mail) wrapper directed to the official address of the CONTRACTOR, the PROJECT MANAGER, or the CITY in any post office, of any notice, instruction, claim or protest, or written communication, shall be deemed sufficient service thereof upon the CONTRACTOR, the PROJECT MANAGER, or the CITY, respectively, and the date of said service shall be the day following the date of postmark.

The official address of the CONTRACTOR shall be the address given in the accepted bid or such other address as the CONTRACTOR may subsequently designate in writing either to the PROJECT MANAGER or to the CITY. The official name and address of the PROJECT MANAGER and the CITY will be supplied to the CONTRACTOR after the award.

39. AGENT TO ACCEPT SERVICE

The CONTRACTOR shall maintain within Los Angeles County a duly authorized agent as identified in the Article entitled SERVICE OF NOTICE to accept service of legal process on its behalf, and shall keep the CITY advised of such agent's name and address during the duration of the CONTRACT and for three (3) years after the Final Payment, or as long as the CONTRACTOR has warranty obligations under Article 16, GUARANTY-WARRANTY of General Requirements, whichever period terminates later. In the event that no such duly authorized agent is on file with the CITY, the CONTRACTOR agrees that the Secretary of State of the State of California shall be the Contractor's agent for service of legal process.

PROGRESS OF WORK

40. TEMPORARY SUSPENSION OF WORK

If the Work of the Contract is suspended or delayed, the CONTRACTOR shall so notify the PROJECT MANAGER in writing within twenty-four (24) hours after the start thereof. If the CONTRACTOR is entitled to reimbursement for such suspension or delay, as specified hereinafter, the CONTRACTOR shall submit a completely detailed statement of the costs thereof, to the PROJECT MANAGER, within twenty (20) calendar days after the termination thereof. Failure to submit such statement of costs or notification within the time specified shall be deemed a waiver of any claims for delay or damages or both by the CONTRACTOR.

If the Work of the Contract is suspended or delayed through no fault of the CITY, all expenses and losses shall be borne by the CONTRACTOR.

If the Work of the Contract is suspended or delayed by an act of the CITY, or by failure of the CITY to furnish required information, and the CONTRACTOR thereby incurs expenses or sustains losses which could not have been avoided by the judicious handling of forces and equipment, and if by a diligent prosecution of the Work the CONTRACTOR could not have completed the Work before such suspension, the CONTRACTOR will be paid such amount as the RECREATION AND PARK COMMISSION may find to be a fair and reasonable compensation for such part of the CONTRACTOR'S actual loss. In no case shall any compensation be made to cover any loss other than actual cash paid for wages, rental of equipment, and materials used in protection of the Work, all of which must be supported by satisfactory written evidence. Such wages shall not include the wages or salary of any individual not necessary for protection of the Work. The CONTRACTOR shall not be entitled to any mark-up for overhead or profit on damages or for extended duration.

The CONTRACTOR shall maintain complete and accurate daily records of all costs due to delay, clearly distinguishing them from the costs of other portions of the Work, and shall submit a detailed written report of such costs to the PROJECT MANAGER within twenty (20) calendar days of incurring the delay. Failure to comply shall result in waiver by the CONTRACTOR to any claims for additional payment and schedule change. In addition, the CONTRACTOR shall submit evidence of any cause of delay specified herein if it has not already done so.

As soon as practicable, following receipt of such report and evidence, if required, the PROJECT MANAGER will determine the nature and extent of such costs and will, if the PROJECT MANAGER finds that payment is due, issue a Change Order therefore, subject to the provisions in Article 27, PAYMENT FOR CHANGES AND EXTRA WORK of the General Requirements. If the PROJECT MANAGER determines that payment is not due, the CONTRACTOR will be so advised in writing. Should the CONTRACTOR disagree with such finding, CONTRACTOR may submit a notice of protest to the PROJECT MANAGER as provided in CLAIMS AND PROTESTS in these General Conditions. The CONTRACTOR shall provide the PROJECT MANAGER with access to its daily cost records or certified copies thereof as requested. All such records shall be retained by the CONTRACTOR and open to inspection and audit by the CITY and the PROJECT MANAGER'S authorized representatives. Except for the additional compensation provided herein before, the CONTRACTOR shall have no claim for damage or compensation for any delay or hindrance whether or not contemplated by the Contract.

41. UNAVOIDABLE DELAY

Should the CONTRACTOR be obstructed or delayed or completion of the Work from causes beyond its control and without its fault or negligence, and solely due to acts of God, acts of government in its sovereign capacity, riots, insurrections, wars, fires, floods, earthquakes, tidal waves, epidemics, quarantine restrictions, industry-wide strikes, freight embargoes, or unusually severe weather, it shall be entitled to a noncompensable extension of time.

The CONTRACTOR shall only be entitled to a noncompensable extension of time for Unavoidable delay in the Work which negatively impacts the critical path of the approved project schedule, and causes the Work of the project to extend beyond the approved Contract Completion date.

The CONTRACTOR shall be entitled to a noncompensable time extension only if it notifies the PROJECT MANAGER immediately at the time the CONTRACTOR is prevented from proceeding with the Work and follows with written notification of the causes of the delay within five (5) calendar days from the beginning of any delay. Also, the CONTRACTOR shall notify the PROJECT MANAGER immediately at the end of the delay and follow up with written notification of the cessation of delay within five (5) calendar days from the end of the delay.

Any claim for a time extension shall be made in writing within twenty (20) calendar days after the conclusion of the delay. The PROJECT MANAGER shall ascertain the facts and the extent of the delay and extend the time for completing the Work if, in his/her judgement, the findings of fact justify such an extension. The PROJECT MANAGER'S decision shall be final and conclusive, subject only to appeal as provided by CLAIMS AND PROTESTS of these General Conditions.

42. ARCHAEOLOGICAL AND PALEONTOLOGICAL DISCOVERIES

If discovery is made of items of archaeological or paleontological interest, the CONTRACTOR shall immediately cease excavation in the area of discovery and shall not continue until ordered by the PROJECT MANAGER.

When resumed, excavation operations within the area of discovery shall be as directed by the PROJECT MANAGER.

Discoveries which may be encountered may include, but not be limited to, dwelling sites, stone implements or other artifacts, animal bones, human bones and fossils. The CONTRACTOR shall be entitled to an extension of time and compensation in accordance with the provision of TEMPORARY SUSPENSION OF WORK of these General Conditions.

43. OTHER CONTRACTS

The CITY may perform other Work related to the Project at the site by the CITY'S own forces, have other Work performed by utility owners or let other direct contracts therefore which shall contain General Conditions similar to these. If such other Work to be performed was not noted in the Contract Documents, written notice thereof will be given to the CONTRACTOR prior to starting any such other Work; and, if the CONTRACTOR believes that such performance will involve additional expense to the CONTRACTOR or requires additional time and the parties are unable to agree as the extent thereof, the CONTRACTOR may make a claim therefore as provided under CLAIMS AND PROTESTS of these General Conditions.

The CONTRACTOR shall afford each utility owner and other contractor who is a party to such a direct contract (or the CITY, if the CITY is performing the additional Work with the CITY'S employees) proper and safe access to the site and a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such Work, and shall properly connect and coordinate the Work with theirs. The CONTRACTOR shall do all cutting, fitting and patching of the Work that may be required to make its several parts come together properly and integrate with such other Work. The CONTRACTOR shall not endanger any Work of others by cutting, excavating or otherwise altering their Work and will only cut or alter their Work with the written consent of the PROJECT MANAGER and the others whose Work will be affected. The duties and responsibilities of the CONTRACTOR under this Article are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of the CONTRACTOR in said direct contracts between the CITY and such utility owners and other contractors.

If any part of the CONTRACTOR'S Work depends upon proper execution or results of the Work of any such other contractor or utility owner or the CITY, the CONTRACTOR shall inspect and promptly report to the PROJECT MANAGER in writing any delays, defects or deficiencies in such Work that renders it unavailable or unsuitable for such proper execution and results. The CONTRACTOR'S failure to do so will constitute an acceptance of the other Work as fit and proper for integration with the CONTRACTOR'S Work except for latent or nonapparent defects and deficiencies in the other Work.

44. TERMINATION OF CONTRACT BY CITY (CONTRACTOR NOT AT FAULT)

The CONTRACT may be terminated, in whole or in part, at any time, by the CITY, at its sole discretion, without cause and for the CITY'S convenience. Such termination will be accomplished by delivery of a notice of Termination to the CONTRACTOR, specifying the extent to which performance of the Work under the CONTRACT or portion of the CONTRACT shall be terminated and the date upon which such termination shall become effective.

After receipt of a Notice of Termination, except as otherwise directed by the CITY the CONTRACTOR shall:

1. Stop Work under the CONTRACT on the date and to the extent specified in the Notice of Termination.
2. Notify the CITY in writing of all outstanding orders, Subcontracts and contracts entered into by CONTRACTOR for performance of the Work, including the (i) name and address of the vendor, supplier or Subcontractor; (ii) a copy of the complete contract, order or Subcontract; (iii) an accounting of the Work performed and compensation earned by the vendor, supplier or Subcontractor, and (iv) such other information as the CITY may request to assist it in determining whether to terminate or accept assignment of the order, Subcontract or contract.
3. Upon written notice by CITY, terminate all Subcontracts, orders and contracts, of any tier, related to the performance of the Work that the CITY determines shall be terminated and not assigned.

4. Place no further orders or Subcontracts for Goods or services, except as may be necessary for completion of that portion of the Work that has not been terminated.

5. Settle outstanding liabilities and claims arising out of such termination of orders and Subcontracts, with the Acceptance of the CITY if required (which Acceptance shall be final for the purposes of this Article). Assign to the CITY in the manner, at the times, and to the extent directed by the CITY all of the rights, titles, and interests of the CONTRACTOR under such orders, contracts and Subcontracts so terminated.

6. Transfer title and deliver to the CITY in the manner, at the times and to the extent directed by it, the:

    a. Fabricated or unfabricated parts, Work in process, completed Work, supplies, and other Goods procured as a part of, or acquired in connection with the performance of the Work terminated; and

    b. Completed or partially completed plans, drawings, information and other items that would have been required (per the Technical Specifications) to be furnished to the CITY if the Contract had been completed.

7. Use its best efforts to sell the property of the types referred to above in the manner, at the times, to the extent, and at the price(s) directed or authorized by the CITY, providing that the:

    a. CONTRACTOR is not required to extend credit to any purchaser;

    b. CONTRACTOR may acquire any such property under the prescribed conditions; and/or proceeds of any such transfer or disposition are applied or otherwise credited to reduce payments made by the CITY to the CONTRACTOR under the CONTRACT.

8. Take any action that may be necessary, or that the CITY may direct, for the protection and preservation of the property related to the CONTRACT that is in the possession of the CONTRACTOR and in which the CITY has or may acquire an interest.

9. Complete performance of that portion of the Work that has not been terminated by the Notice of Termination, as applicable and in accordance with the CONTRACT.

After receipt of a Notice of Termination for the CITY's convenience, the CONTRACTOR shall submit its termination claim to the CITY requesting payment of such sums as are permitted under the terms of this Article, in the form and with the certification(s) prescribed by the CITY for Claims and Protests. Such Claim shall be submitted promptly but in no event later than six months from the effective date of termination, unless one or more extensions are granted in writing by the CITY upon written request by the CONTRACTOR during such six month period or authorized extension thereof. However, the CITY may receive and act upon any termination claim at any time after the six month period or any extension thereof, if it determines that the facts justify such action. Upon failure of the CONTRACTOR to submit its termination claim within the time specified, the CITY will determine the amount due the Contractor, if any, on the basis of information available, and will pay the CONTRACTOR the amount so determined. Such determination shall be final and binding and payment shall be in full settlement for the Work performed under the CONTRACT.

Subject to the provisions of this Article, the CONTRACTOR and the CITY may agree upon the total or partial amount to be paid to the CONTRACTOR by reason of the total of or partial termination pursuant to this Article. The agreed upon amount shall under no circumstances include any sum for lost profits on the terminated portion of the Work or for consequential damages, of any kind. If agreement is reached, the CONTRACT will be amended by Modification accordingly and the CONTRACTOR will be paid the agreed upon amount.

In the event of failure of the CONTRACTOR and the CITY to agree on the total amount to be paid the CONTRACTOR by reason of the termination of Work pursuant to this Article, the CITY will pay the CONTRACTOR the amounts determined by the City as follows, exclusive of any amounts agreed upon in accordance with the preceding Paragraph:

The CONTRACTOR'S actual cost for the Work properly performed by the CONTRACTOR as of the date of termination, including a 5% allowance for profit on such costs; plus, the reasonable cost of preserving and

protecting property; plus other reasonable costs incidental to the termination of the Work under the CONTRACT, including expense incurred to determine the amounts due; provided however, that the maximum payable or paid for any portion of the completed Work shall not exceed the values listed in the corresponding bid item of Schedule of Values.

The total sum to be payable or paid to the CONTRACTOR, exclusive of the settlement amounts described in the Paragraph immediately above, shall not exceed the total CONTRACT Price less the:

1. Payments made previously by CITY for the Work; plus
2. A prorated portion of the total CONTRACT Price for the terminated portion of the Work as determined by the PROJECT MANAGER.

Except for normal spoilage and to the extent that the CITY will have otherwise expressly assumed the risk of loss, the fair value (as determined by the CITY) of property that is destroyed, lost, stolen, or damaged (so as to become undeliverable to the CITY or other buyer as described above) shall be excluded from the amounts paid to the CONTRACTOR.

In arriving at the amount due the CONTRACTOR under this Article, a deduction shall be made for the following:

1. Any claim that the CITY may have against the CONTRACTOR in connection with the CONTRACT; and
2. The agreed upon price for and/or proceeds from the sale of Goods or other items acquired or sold by the CONTRACTOR that have not been otherwise recovered by or credited to the CITY.

Under such terms and conditions as it may prescribe and at its sole discretion, the CITY may make partial payments against costs incurred by the CONTRACTOR in connection with terminated portion of the CONTRACT whenever the CITY decides that the aggregate of such payments is within the amount to which the CONTRACTOR is entitled hereunder. If the total of such payments is in excess of the amount finally agreed upon or determined to be due under this Article, such excess shall be payable by the CONTRACTOR or to the CITY upon demand together with interest at a rate equal to that set forth in California Code of Civil Procedure, Section 685.010.

Under no circumstances shall the CONTRACTOR be entitled to anticipatory or unearned profits or consequential damages as a result of a termination of partial termination under this Article, or for any other termination by the CITY. The payment to the Contractor determined in accordance with this Article shall constitute the exclusive remedy of the CONTRACTOR for termination hereunder.

Anything contained in the CONTRACT to the contrary notwithstanding, a termination under this Article shall not waive any right or claim to damages that the CITY may have; the CITY may pursue any clause of action that it may have by law or under the CONTRACT; and shall not relieve CONTRACTOR of its warranty obligations with respect to any Work performed prior to such termination.

If the termination hereunder is only for a part of the Work, the Contract Price shall be reduced by the amount of the Contract Price applicable to the portion of the Work, which is terminated, including overhead and profit, on the basis of one or more of the following:

1. Unit prices stated in the CONTRACT or agreed upon by the CITY and the CONTRACTOR.
2. A lump sum determined by the PROJECT MANAGER, based on the estimate costs including overhead and profit of the terminated portions of the Work.

45. TERMINATION OF CONTRACT BY CITY (CONTRACTOR DEFAULT)

In the event of conduct by the CONTRACTOR which is determined by the PROJECT MANAGER or the to constitute default, the CITY may either suspend the Work under the provisions of TEMPORARY SUSPENSION OF WORK of these General Conditions or, upon ten (10) calendar days' written notice to the CONTRACTOR, terminate the Contract as provided herein. Default by the CONTRACTOR shall occur whenever it shall declare bankruptcy; become insolvent or assign its assets for the benefit of its creditors; fail to provide materials, equipment, or workmanship meeting the requirements of the Specifications; disregard or violate provisions of the

Contract Documents or the PROJECT MANAGER's instructions; fail to prosecute the Work according to the approved progress schedule; or fail to provide a qualified representative, competent workers or Subcontractors. Upon request, the RECREATION AND PARK COMMISSION will provide the CONTRACTOR a hearing by the RECREATION AND PARK COMMISSION to contest the recommendation of the PROJECT MANAGER as to default by the CONTRACTOR.

In the event the Contract is terminated pursuant to this Article, the CITY may take possession of the Work and of all materials, tools, equipment, and property of the CONTRACTOR, which have been provided in connection with the Work, and may complete the Work by whatever method or means the CITY may select. The unpaid balance of the Contract cost for completing the Contract Work shall be used to complete the Work in accordance with the Contract Documents. If cost of completing the Work exceeds the unpaid balance, the CONTRACTOR shall pay the excess amount to the CITY. If such cost is less than the unpaid balance, the CONTRACTOR shall not have claim to the difference except to such extent as may be necessary, in the opinion of the PROJECT MANAGER, to reimburse the CONTRACTOR or the CONTRACTOR'S sureties for any unpaid expense properly incurred for materials, tools, equipment, property, and labor devoted to the prosecution of the Work, or which the CITY shall have received the benefit. In computing such expenses, as it relates to equipment and property, the salvage value at completion of Work shall be deducted from the salvage value at the time the contract was terminated, and the difference shall be considered as an expense. If after termination for failure of the CONTRACTOR to fulfill contractual obligations (CONTRACTOR Default), it is determined by a Court of competent jurisdiction that the CONTRACTOR had not failed to fulfill contractual obligations, the termination shall be deemed to have been for the convenience of the CITY. In such an event, adjustment of the Contract price shall be made as provided in TERMINATION OF CONTRACT BY CITY (CONTRACTOR NOT AT FAULT) of these General Conditions.

46. PRE-FINAL INSPECTION

Approximately two weeks before completion of the Work, the contractor will schedule a Pre-final Inspection to be attended by the Bureau of Contract Administration Inspector, the Project Manager, the Contractor and invited parties associated with the Project. At this time, a list of items requiring correction or completion before the Final Inspection will be compiled. In addition, at this time the Contractor shall arrange for the delivery of manufacturers' data, manuals, and operating instructions and keys to the appropriate Department of Recreation and Parks personnel.

47. FINAL INSPECTION

Approximately seven (7) days prior to completion of the Work, the Contractor shall first notify the Bureau of Contract Administration Inspector and then the Project Manager that he desires a Final Inspection of the Project. During this inspection, which will be arranged as soon as possible, the Inspector, the Project Manager, the Contractor and other parties concerned with contractual requirements will compile a Final Inspection Correction List, incorporating all items of work and corrections required to complete the Project. This list must be completed within thirty (30) days of Final Inspection, or a new Final Inspection will be held and a new Final Inspection Correction List compiled.

48. PARTIAL ACCEPTANCE

The CITY shall have the right to utilize or place into service any item of equipment or other usable portion of the Work prior to completion of the entire project. Whenever the CITY plans to exercise said right, the CONTRACTOR will be notified in writing by the CITY, identifying the specific portion or portions of the Work to be so utilized or otherwise placed into service. Following inspection by the Bureau of Contract Administration's Final Inspector and establishment of a Final Inspection Correction List, a Statement of Partial Completion will be issued.

It shall be understood by the CONTRACTOR that until a Statement of Partial Completion is issued, all responsibility for care and maintenance of all items or portions of the Work to be placed in use shall be borne by the CONTRACTOR. Upon issuance of a Statement of Partial Completion, the CITY will accept responsibility for the protection and maintenance of all such items or portions of the Work described in the written notice, and it is further understood that the manufacturer's warranties of any affected equipment will commence not later than the date for commencement of the warranties indicated on the Statement of Partial Completion. However, the CONTRACTOR shall retain full responsibility for satisfactory operation of the total project and the CONTRACTOR'S guarantee period shall commence only after the final acceptance of the Contract by the

RECREATION AND PARK COMMISSION. Such guarantee of total systems operation shall include that portion or portions previously placed into beneficial use by the CITY.

The issuance of a Statement of Partial Completion for any part of the Work shall not relieve the CONTRACTOR of its obligation to promptly remedy any omissions and latent or unnoticed defects in the Work covered by the Statement of Partial Completion. The CITY shall have the right to restrict the CONTRACTOR'S use of the occupied portion of the Work but shall allow the CONTRACTOR reasonable access to complete or correct items required by the Contract Documents.

The CITY may, if the Work is progressing satisfactorily, release part of the retention on portions of the Work for which a Statement of Partial Completion has been issued, provided that the following conditions have been met:

1. Partial final inspection corrections have been completed to the satisfaction of the INSPECTOR;
2. The CONTRACTOR submits a written request for release of retention which includes a verifiable valuation of the identified portions of the Work covered by the Statement of Partial Completion;
3. Impacted Subcontractors, major suppliers and the CONTRACTOR's Surety all agree in writing to release of retention;
4. If any minor corrections remain which do not directly affect operations or maintenance then twice the values of the remaining cleanup items shall be retained on each request for release; and
5. The CONTRACTOR signs a Change Order which specifically states the value of the retention being released.

The PROJECT MANAGER shall issue a no-change-in-contract-cost Change Order reflecting the Work for which a Statement of Partial Completion has been issued and the amount of the retention to be released. This Change Order shall authorize reduction of the retention on the next payment.

49. FINAL ACCEPTANCE

When all Work has been completed on the entire project, the CONTRACTOR shall notify the INSPECTOR and the PROJECT MANAGER in writing and request a final inspection by the INSPECTOR. The inspection conducted by the Final Inspector will include the CONTRACTOR and major Subcontractors' representatives. The CONTRACTOR shall promptly and diligently correct all items on the Final Inspection Correction List. The correction list Work will be reinspected until all Work is complete. If deemed necessary by the PROJECT MANAGER, a deductive Change Order may be issued for twice the value of final correction list items remaining to be corrected to attain completion, and permit the acceptance of the Contract by the RECREATION AND PARK COMMISSION.

Final payment to the CONTRACTOR is made following action by the RECREATION AND PARK COMMISSION that formally adopts the recommendation of the PROJECT MANAGER to accept the Contract. Said action by the RECREATION AND PARK COMMISSION establishes the following:

1. The start date of the CONTRACTOR'S material and workmanship warranty/guarantee for the total project.
2. The start date of any equipment or material warranties for which the "warranty clock" had not started.

50. LIQUIDATED DAMAGES

Time is of the essence in completing the Work required by the Contract. If the CONTRACTOR fails or refuses to complete the Work or any part thereof within the time fixed by the terms of the Contract, or any approved extension thereof, the actual damage to the CITY due to the delay will be difficult or impossible to determine. In lieu thereof, the CONTRACTOR shall pay to the CITY, as fixed and agreed, liquidated damages for each calendar day of delay in completion, the sum of **$2,400.00 per day**. The CONTRACTOR shall be liable for the amount thereof. The CITY reserves the right, however, to terminate the CONTRACTOR's completing the Work, charging against the CONTRACTOR and its sureties any excess cost occasioned the CITY thereby, together with liquidated damages accruing until such time as the CITY may reasonably complete the Work.

Permitting the CONTRACTOR to continue and complete the Work, or any portion thereof, after the time fixed herein for completion, or after the expiration of any extensions of said time, shall in no way operate as a waiver on the part of the CITY of any of its rights under the Contract.

51. COMPENSATION FOR DELAY, DISRUPTION, AND UNANTICIPATED OVERHEAD

Notwithstanding anything to the contrary in the Contract Documents, CONTRACTOR agrees the provisions of this Article, set forth CONTRACTOR'S sole and exclusive rights to compensation for costs, expenses or damages, of any kind, arising from or relating to (i) delay, disruption, hindrance, interference, schedule compression, and the impact, ripple or cumulative effect thereof; or (ii) additional supervision, administration, excess, extended or extraordinary overhead, loss of productivity, or similar costs, expenses or damages incurred as a result of or related to extras, changes, additions or deletions in the Work, errors, omissions, conflicts or ambiguities in the Contract Documents, suspensions of the Work, acts or omissions of CITY or its representatives, agents, contractors or consultants, Differing Site Conditions, or other unforeseen circumstances, of any kind.

CONTRACTOR shall not be entitled to, and hereby conclusively waives, any right to recovery of compensation, costs, expenses or damages for delays, disruptions, hindrances or interferences (including without limitation interruption of schedules, extended, excess or extraordinary field and indirect overhead costs, loss of productivity and the impact, ripple or cumulative effect on other Work) that are the result of Unavoidable Delays or which are caused by the acts or omissions of CONTRACTOR or of its SUBCONTRACTORS, of any tier.

CONTRACTOR'S rights to recovery of compensation, costs, expenses and damages for delay, disruption, hindrance and interference (including without limitation interruption of schedules, extended, excess and extraordinary field and indirect overhead costs, loss of productivity and the impact, ripple or cumulative effect on other Work) that are the result of extras, changes, additions or deletions in the Work for which CONTRACTOR is entitled to an adjustment of the Contract Price as set forth in CHANGES AND EXTRA WORK of these General Conditions and shall constitute the sole, exclusive and complete compensation that the CITY is obligated to pay CONTRACTOR for all such costs, expenses and damages incurred by CONTRACTOR and its SUBCONTRACTORS, of every tier.

Time extension in calendar days will be granted only if delays are caused by unforeseen events beyond the control of both the CONTRACTOR and the City. Such delays will entitle the CONTRACTOR to an extension of time as provided herein, but the CONTRACTOR shall not be entitled to damages or additional payment due to such delays. War, government regulations, labor disputes, strikes (when not brought solely against the CONTRACTOR, its subcontractors or material suppliers), fires, floods, adverse weather necessitating cessation of work, other similar action of the elements, inability to obtain materials, equipment or labor, required "extra work", or other specific reasons as may be further described in the specifications may constitute such a delay.

No extension of time will be granted for a delay caused by the inability to obtain materials unless the CONTRACTOR furnishes to the Project Manager documentary proof of the inability to obtain such materials in a timely manner in accordance with the sequence of the CONTRACTOR'S operations and the approved construction schedule.

The amount of time given to the CONTRACTOR is limited to the amount of time the Project is directly impacted by the above described delays. Direct impact means no other project work can proceed.

The CONTRACTOR may be compensated for delays caused solely by the failure of the City to furnish necessary rights-of-way, failure to deliver materials shown in the CONTRACTOR Documents to be furnished by the City, or for the suspension of the work by the City for its own convenience or benefit. If compensable delays could not have been avoided by the judicious handling of forces, equipment or plant, there shall be paid to the CONTRACTOR such amount as the General Manager may find to be fair and reasonable compensation for such part of the CONTRACTOR'S actual loss as was unavoidable.

If the CONTRACTOR desires payment for a delay as specified above or an extension of time, it shall, within thirty (30) days after the beginning of the delay, file with the General Manager a written request and report as to the cause and extent of the delay. The request of payment or extension must be made at least fifteen (15) days before the specified completion date, so as to allow for appropriate investigation. Failure by the CONTRACTOR to

file these items within the times specified will be considered grounds for refusal by the City to consider such a request.

Any and all extensions of time granted under the Provisions of these Specifications shall not release the sureties on the bonds accompanying the Contract for the work required herein. The bonds shall remain in full force and effect until the discharge of the Contract.

CHANGES TO THE CONTRACT

52. CHANGES AND EXTRA WORK

The PROJECT MANAGER may, at any time, with or without notice to the Sureties, by written order designated or indicated to be a Change Order, order performance of extra work or make any change, addition or deletion in the Work, including but not limited to changes in the Specifications including Plans and Designs; in the time, method or manner of performance of the Work; in the CITY furnished facilities, equipment, materials, services, or site; or directing acceleration in the performance of the Work.

Upon receipt of such Change Order, the CONTRACTOR shall promptly proceed with the Work covered thereby, which shall be performed in accordance with the provisions of the Contract Documents except as otherwise specifically provided.

In the event that CONTRACTOR receives any written order or direction by the CITY, PROJECT MANAGER that is not so designated or indicated to be a Change Order, but which CONTRACTOR believes to constitute an extra, change, addition or deletion in the Work, then CONTRACTOR shall, prior to performance of any Work related thereto, give written confirmation notice to the PROJECT MANAGER confirming CONTRACTOR'S belief that such order or direction is believed to be a Change Order within one (1) working day of CONTRACTOR'S receipt of such order or direction.

CONTRACTOR conclusively waives any right to additional compensation, costs, expenses, damages or extension of time associated with an extra, change, addition or deletion to the Work that is performed by CONTRACTOR without either (i) a written order signed by the CITY, PROJECT MANAGER designated or indicated to be a Change Order and any change, addition or deletion, or (ii) a written confirmation notice issued by CONTRACTOR in accordance with the provisions of this Article.

Should a change be required and it is not feasible to delay construction of that portion of the Work until such time as a regular Change Order can be issued, and the estimated increase in Contract cost does not exceed the amount which can be authorized by the PROJECT MANAGER, an Emergency Change Authorization, in writing, will be issued in the field by the PROJECT MANAGER, and the CONTRACTOR shall then proceed with the Work without delay. Such Emergency Change Authorization shall be followed by a subsequent regular Change Order.

Except as provided in this Article, no order, Statement, or conduct of the PROJECT MANAGER shall be treated as a change under this Article or shall entitle the CONTRACTOR to an adjustment in the Contract Price or Contract Completion Date.

If any change under this Article causes an increase or decrease in the CONTRACTOR'S cost or the time required to perform any part of the Work under this Contract, whether or not said costs or time are specified by any order, the PROJECT MANAGER will make an adjustment to the Contract Price and modify the Contract in writing. Except for claims based on defective Specifications, no claim for any change under this Article shall be allowed for any costs incurred more than twenty (20) calendar days before the CONTRACTOR gives written notice as required. Except as otherwise provided in the Contract Documents, in the case of defective specifications for which the PROJECT MANAGER is responsible, the adjustment shall include any increased cost the CONTRACTOR reasonably incurred in attempting to comply with those defective specifications.

If the CONTRACTOR intends to assert a claim for an adjustment in the Contract Price under this Article, it must, within twenty (20) calendar days after receipt of a written Change Order or the furnishing of a written confirmation notice as hereinbefore specified, submit a written statement to the PROJECT MANAGER setting forth the general nature and monetary extent of such claim and all factual grounds therefor. The CONTRACTOR may include the statement of claim in the written notice as hereinbefore specified. Failure to comply with the twenty (20) calendar day notice requirement shall be deemed a waiver of claims by the CONTRACTOR.

No adjustment shall be made under this Article for any suspension, delay, interruption, change or any other cause, to the extent that an adjustment is provided for or excluded under any other provision of the Contract.

Recovery of compensation, costs, expenses or damages resulting from delay, disruption, hindrance, or interference in the performance of the Work (including without limitation interruption of schedules, extended, excess or extraordinary field overhead and indirect overhead costs, loss of productivity and the impact, ripple or cumulative effect on other Work), shall not be permitted, and all rights thereto are conclusively waived by CONTRACTOR, except to the extent allowed by COMPENSATION FOR DELAY, DISRUPTION AND UNANTICIPATE OVERHEAD of these General Conditions.

No claim by the CONTRACTOR shall be allowed if the claim is made after final payment under this Contract.

53. DIFFERING SITE CONDITIONS

The following provisions shall apply only in the event that there is not a Geotechnical Baseline Report for the Project. If a Geotechnical Baseline Report is so identified, then the provisions of this Article shall not apply and the CONTRACTOR'S rights arising from Differing Site Conditions shall be governed solely by the provisions of the General Requirements pertaining to the CONTRACTOR'S rights in the event of Differing Site Conditions.

Upon discovery and before further disturbance of any unforeseen conditions, the CONTRACTOR shall immediately notify the INSPECTOR and the PROJECT MANAGER, followed by a written notice to the PROJECT MANAGER within twenty-four (24) hours of subsurface or latent physical conditions at the site differing materially from those indicated in the Contract Documents; or unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inherent in the Work of the character provided for in this Contract; or materially differing from that represented in the Contract Documents which the CONTRACTOR believes may be hazardous waste, as defined in the California Health and Safety Code, that is required to be removed to a Class I, Class II or Class III disposal site in accordance with provisions of existing law.

The PROJECT MANAGER shall promptly investigate the conditions. If the PROJECT MANAGER finds that conditions materially differ and will cause an increase or decrease in the CONTRACTOR'S cost or the time required to perform any part of the Work under this contract, whether or not changed as a result of such conditions, the PROJECT MANAGER shall, make an adjustment in the Contract Price by Modification to the Contract in writing.

If the CONTRACTOR intends to seek an adjustment to the Contract Price or Contract Completion Date based upon this Article, it must, within twenty (20) calendar days after it first discovered or should have discovered in the exercise diligence and extreme care the existence of Differing Site Conditions, submit a written statement setting forth a detailed cost breakdown in the form required by Article 27, PAYMENT FOR CHANGES AND EXTRA WORK of the General Requirements, setting forth the basis of CONTRACTOR'S calculation of the costs saved or, detailed information demonstrating the effect on the CONTRACTOR'S schedule of performance in the same manner as required by the Contract Documents for obtaining approval of extensions of time, identification of the Escrow Bid Documents that formed the basis of the CONTRACTOR'S bid estimate to perform the Work affected by such conditions, and a complete and detailed explanation of the factual basis for the request.

Failure by CONTRACTOR to strictly comply with the requirements of this Article concerning the timing and content of any notice of Differing Site Conditions or of any request for adjustment in Contract Price or Contract Completion Date based on Differing Site Conditions shall be deemed waiver of any claim by the CONTRACTOR for increase in the Contract Price or extension of the Contract Completion Date by reason of such conditions.

CONTRACTOR'S right to compensation for (i) delay, disruption, hindrance, interference, schedule compression, and the impact, ripple or cumulative effect thereof; or (ii) additional supervision, administration, excess, extended or extraordinary overhead, loss of productivity, or similar costs, expenses or damages incurred as a result of or related to any Claim based on Differing Site Conditions shall be limited to such sums as are allowable under COMPENSATION FOR DELAY, DISRUPTION, AND UNANTICIPATED OVERHEAD of these General Conditions.

No claim by the CONTRACTOR for an adjustment hereunder be allowed if asserted after final payment under this Contract.

LEGAL REQUIREMENTS

54. CLAIMS AND PROTESTS

A Claim or Protest that involves an extra, change, addition or deletion to the Work as set forth in CHANGES AND EXTRA WORK of these General Conditions shall arise upon issuance of a final decision of the PROJECT MANAGER denying, in whole or in part, a request for adjustment in the Contract Price or Contract Completion Date; provided however, that failure to comply with the requirements of CHANGES AND EXTRA WORK of these General Conditions shall be conclusively deemed to constitute grounds to deny such Claim or Protest.

A Claim or Protest that does not involve an extra, change, addition or deletion to the may be asserted only if the CONTRACTOR shall immediately and prior to performing the Work affected thereby give written notice to the PROJECT MANAGER of such circumstances and of CONTRACTOR'S intention to file a Claim or Protest based thereon. Unless otherwise directed by the PROJECT MANAGER the CONTRACTOR shall proceed without delay to perform the Work and to conform to any order, instruction, or decision of the PROJECT MANAGER with respect thereto.

The CONTRACTOR shall, within twenty (20) calendar days after it first knew, or in the exercise of diligence and extreme care should have known, of the circumstances giving rise to the Claim or Protest, file a written Claim or Protest with the PROJECT MANAGER, stating in detail all objections, grounds and reasons therefore. The CONTRACTOR shall, upon instruction by the PROJECT MANAGER provide, within ten (10) days or such other time as agreed to between the PROJECT MANAGER, the INSPECTOR, and the CONTRACTOR, any and all documents, records or other materials identified by the PROJECT MANAGER as necessary for the resolution of the CONTRACTOR's Claim or Protest.

Claims or Protests seeking time extensions shall be accompanied by such documentation as is required by Article 18, CONTRACTOR'S CONSTRUCTION SCHEDULE AND REPORTS of the General Requirements. Claims or Protests seeking recovery of compensation or adjustments to the CONTRACT PRICE, whether or not based on extras, changes, additions or deletions to the Work, shall be in the form of Change Order Cost Quotations prepared in accordance with and subject to all of the requirements of Article 27, PAYMENT FOR CHANGES AND EXTRA WORK of the General Requirements, including without limitation the prohibition on use of total cost and modified total cost methodologies.

CONTRACTOR waives all rights to assert any claims or seek any relief in the form of extensions of time or recovery of additional compensation, costs, expenses, damages from the CITY that are not presented as a Claim or Protest in the manner specified and within the time stated herein. CONTRACTOR further hereby agrees that in the interest of avoiding the additional expense and potential inequity of piecemeal resolution of Claims or Protests, all decisions by PROJECT MANAGER shall be final and binding not only as to all matters asserted in the Claim or Protest, but also as to all matters (including without limitation all rights to extensions of time and recovery of extra compensation, costs, expenses and damages) not asserted in the Claim or Protest that were known to CONTRACTOR, or that could have been reasonably discovered by CONTRACTOR in the exercise of diligence and extreme care, at the time of submission of the Claim or Protest and that are in any way related to the subject matter of the Claim or Protest. All orders, instructions and decisions of the PROJECT MANAGER will be limited to matters properly falling within their respective authority as specified in AUTHORITY OF THE RECREATION AND PARK COMMISSION, PROJECT MANAGER AND INSPECTOR of these General Conditions.

The CONTRACTOR will be informed of the PROJECT MANAGER's decision within thirty (30) days after the CONTRACTOR last submits data pertinent to the protest previously mentioned. In the case of a Claim or Protest that involves an extra, change, addition or deletion to the Work as set forth in CHANGES AND EXTRA WORK of these General Conditions, if the Contractor accepts the decision of the PROJECT MANAGER, then the CONTRACTOR and CITY shall enter into a Change Order adjusting the Contract Price and Contract Completion Date in accordance with such decision. In the case of a Claim or Protest does not involve an extra, change, addition or deletion to the Work as set forth in CHANGES AND EXTRA WORK of these General Conditions and the CONTRACTOR accepts the decision of the PROJECT MANAGER, then the CONTRACTOR and CITY shall enter into a Modification of the Contract setting forth the terms of the decision and, if appropriate, its effect on the Contract Price or Contract Completion Date. If the CONTRACTOR does not accept the decision of the PROJECT

MANAGER, then further appeal of the PROJECT MANAGER's or the decision must be made to the RECREATION AND PARK COMMISSION in writing within twenty (20) calendar days after receipt of the PROJECT MANAGER's decision. The RECREATION AND PARK COMMISSION shall afford the CONTRACTOR an opportunity to be heard and to offer evidence in support of its appeal. All determinations of the RECREATION AND PARK COMMISSION with respect to Claims or Protests shall be final and binding.

In all matters concerning the validity, interpretation, performance, effect or otherwise of the Contract, the Federal regulations (if and to the extent expressly incorporated by reference in the Contract Documents), the laws of the State of California, and the Charter of the City of Los Angeles shall govern and be applicable. Pending final disposition of a protest, the CONTRACTOR shall proceed diligently with the performance of the Contract and in accordance with the previously mentioned decision.

Any Claim or Protest, including without limitation any Claim or Protest filed on behalf of or having its source in a claim by Subcontractor, Sub-Subcontractor, or Supplier, at any tier, which the CONTRACTOR chooses to make to the CITY, shall be accompanied by the certification language set forth below signed by a responsible managing officer of the CONTRACTOR'S organization, who has the authority to sign Subcontracts or Purchase Orders on behalf of the CONTRACTOR, and who has personally investigated and confirmed the truth and accuracy of the matters set forth in such certification. Submission of certification in accordance herewith is a condition precedent to the CITY's consideration of or decision on the Claim or Protest and to the filing and maintenance of any legal action or proceeding to enforce or recover monies under such Claim or Protest. Failure to submit such a certification along with the Claim or Protest, shall result in the Claim or Protest being returned to the CONTRACTOR without any decision and shall waive the CONTRACTOR's right to pursue the Claim or Protest either on its own behalf or on behalf of such Subcontractor or Supplier.

I hereby certify under penalty of perjury that I am a managing officer of (CONTRACTOR'S name) and that I have reviewed this Claim or Protest presented herewith on CONTRACTOR'S behalf and/or on behalf of (Subcontractor's/Supplier's name(s)) and that the following statements are true and correct:

1. The facts alleged in or that form the basis for the Claim or Protest are true and accurate; and,
2. CONTRACTOR does not know of any facts or circumstances, not alleged in the Claim or Protest, that by reason of their not being alleged render any fact or statement alleged in the Claim or Protest materially misleading; and,
3. CONTRACTOR has, with respect to any request for money or damages alleged in or that forms the basis for the Claim or Protest, reviewed the job cost records (including those maintained by CONTRACTOR and by any Subcontractor or Supplier, of any tier, that is asserting all or any portion of the Claim or Protest) and confirmed with mathematical certainty that the losses or damages suffered by CONTRACTOR and /or such Subcontractor or Supplier were in fact suffered in the amounts and for the reasons alleged in the Claim or Protest; and,
4. CONTRACTOR has, with respect to any request for extension of time or claim of delay, disruption, hindrance or interference alleged in or that forms the basis for the Claim or Protest, reviewed the job schedules (including those maintained by CONTRACTOR and by any Subcontractor or Supplier, of any tier, that is asserting all or any portion of the Claim or Protest) and confirmed on an event-by-event basis that the delays or disruption suffered by CONTRACTOR and /or such Subcontractor or Supplier were in fact experienced for the durations, in the manner, and with the consequent effects on the time and/or sequence of performance of the Work, as alleged in the Claim or Protest; and,
5. CONTRACTOR has not received payment from CITY for, nor has CONTRACTOR previously released CITY from, any portion of the Claim or Protest.

Signature: _____

Name:

Title: _____

Company: _____

Date: _____

No Claim or Protest by the CONTRACTOR shall be allowed if made after final payment under this Contract.

55. COMMENCEMENT OF STATUTE OF LIMITATIONS

Unless otherwise provided in this Contract, all claims, counterclaims, disputes and other matters in question between the CITY and the CONTRACTOR arising out of or relating to this Contract or the breach of it will be decided by a Court of competent jurisdiction. It is understood that this Contract is executed and to be performed within the City and County of Los Angeles.

Any applicable statute of limitations shall commence to run and any alleged cause of action by the CONTRACTOR against the CITY arising out of or related to the Project shall be deemed to have accrued in any and all events no later than 30 days after CONTRACTOR'S submittal of its last application for progress payment.

56. GOVERNING LAW

The terms and conditions of this Contract shall be construed and interpreted under, and all respective rights and duties shall be governed by, the laws of the State of California. Wherever applicable each provision of these Contract Documents shall be interpreted in such a manner as to be effective and valid under applicable law, but if any provision of these Contract Documents shall be prohibited by or invalid under applicable law, such provision shall be ineffective to the extent of such prohibition or invalidity, without invalidating the remainder of such provision or the remaining provisions of these Contract Documents.

57. VENUE

This Contract will be executed and performed within the City and County of Los Angeles, California.

58. NO WAIVER OF RIGHTS

Neither the inspection by the CITY, nor any order by the CITY for payment of money, nor any payment for or acceptance of the whole or any part of the Work by the CITY, nor any extension of time, nor any possession taken by the CITY, shall operate as a waiver of any provision of this Contract, or any power herein reserved to the CITY, or any right to damages herein provided, nor shall any waiver of any breach in this Contract be held to be a waiver of any other or subsequent breach.

59. ACCEPTANCE OF FINAL PAYMENT CONSTITUTES RELEASE

The acceptance by the CONTRACTOR of final payment shall release the CITY, the PROJECT MANAGER, the INSPECTOR, their officers, agents, representatives, or employees, as representatives of the CITY, from all claims and all liability to the CONTRACTOR for all things done or furnished in connection with the Work and every act of the CITY relating to or arising out of the Work.

60. PATENTS AND COPYRIGHTS

The CONTRACTOR shall include in its bid the patent fees or royalties on any patented article or process which may be furnished or used in the Work. The CONTRACTOR shall indemnify and hold the CITY harmless from any legal action that may be brought for infringement of patents. The CONTRACTOR'S attention is directed to "Notice of Patents, Data, and Copyright Regulations" of the Federal Labor Standards.

The CONTRACTOR shall bear all costs arising from the use of patented goods and /or processes used on and/or incorporated into the Work. When use of these goods and/or processes are judged to be an infringement and their use is banned, the Contractor, at its own expense, shall, with concurrence of the PROJECT MANAGER, do one of the following:

1. Secure for the CITY the right to continue using goods and/or processes by suspension of the injunction or by procuring a license(s);

2. replace said goods and/or processes with non-infringing goods and /or processes;

3. modify said goods and/or processes so that they become non-infringing; or

4. remove said goods and/or processes and refund the sum paid therefore without prejudice to any other rights of the CITY.

The preceding Subarticle shall not apply to any goods manufactured to the detailed design of the CITY contained in the Contract Documents.

61. PUBLIC RECORDS ACT

All records, documents, plans, specifications and all other information relating to the conduct of the CITY's business, including information submitted by the CONTRACTOR, shall become the exclusive property of the CITY and except as provided by law shall be deemed public records. Said information shall be subject to the provisions of the California Public Records Act (Government Code Sections 6250 *et seq.*).

Under no circumstances, will the CITY be responsible or liable to the CONTRACTOR, submitter or any other party for the disclosure of any records or information submitted to the CITY, regardless of whether such records or information are labeled "TRADE SECRET", "CONFIDENTIAL", or "PROPRIETARY" (or words to similar effect) and regardless of, whether the disclosure is required by law or a court order or occurs through inadvertence, mistake, or negligence on the part of the CITY or its officers, employees, and/or contractors.

The CITY will not advise as to the nature or content of documents entitled to protection from disclosure under the California Public Records Act", including interpretations of the Act or the definition of "Trade Secret". The submitting party shall be solely responsible for all determinations made under the Act, and where appropriate for clearly and prominently marking each and every page or sheet of information with "TRADE SECRET", "CONFIDENTIAL", or "PROPRIETARY". Each submitting party is advised to contact its own legal counsel concerning the California Public Records Act and its applicability to the submitting party's own circumstances.

In the event of litigation concerning the disclosure of any information submitted by the submitting party, the CITY's sole involvement will be as a stake holder, retaining the information until otherwise ordered by a court. The submitting party, at its sole expense and risk, shall be responsible for any and all fees and costs for prosecuting or defending any action concerning the information, and shall indemnify and hold the CITY harmless from all costs and expenses including attorneys' fees, in connection with such action.

B. REFERENCE STANDARDS

1. APPLICABLE PUBLICATIONS - Whenever in these Specifications references are made to published specifications, codes, standards, or other requirements, it shall be understood that wherever no date is specified, only the latest specifications, standards, or requirements of the respective issuing agencies which have been published as of the date that the Work is advertised for bids shall apply; except to the extent that said standards or requirements may be in conflict with applicable laws, ordinances or governing codes. No requirements set forth herein or shown on the Drawings shall be waived because of any provision of, or omission from, said standards or requirements.

2. SPECIALISTS' ASSIGNMENTS - In certain instances, specification text requires (or implies) that specific Work is to be assigned to specialists or expert entities, which must be engaged for the performance of that Work. Such assignments shall be recognized as special requirements over which the CONTRACTOR has no choice or option. These requirements shall not be interpreted so as to conflict with the enforcement of building codes and similar regulations governing the Work; also they are not intended to interfere with local union jurisdiction settlements and similar conventions. Such assignments are intended to establish which party or entity involved in a specific unit of Work is recognized as "expert" for the indicated construction processes or operations. Nevertheless, the final responsibility for fulfillment of the entire set of Contract requirements remains with the CONTRACTOR.

3. CODES AND SAFETY STANDARDS - Without limiting the generality of other requirements of the Specifications, Work specified herein shall conform to or exceed the applicable requirements of the following Codes and Safety Standards.

   a. Applicable Codes:

      - City of Los Angeles Building Code
      - City of Los Angeles Mechanical Code
      - City of Los Angeles Plumbing Code
      - City of Los Angeles Fire Code
      - City of Los Angeles Electrical Code

   b. References herein to "Building Code" shall mean City of Los Angeles Building Code. Similarly references to "Mechanical Code," "Plumbing Code," "Fire Code," and "Electric Code" shall mean City of Los Angeles Mechanical Code, City of Los Angeles Plumbing Code, City of Los Angeles Fire Code and City of Los Angeles Electric Code respectively.

   c. Applicable Safety Standards:

      - OSHA Regulations for Construction
      - OSHA Standards
      - Cal-OSHA

   d. References herein to "OSHA Regulations for Construction" shall mean Title 29, Part 1926, Construction Safety and Health Regulations, Code of Federal Regulations (OSHA), including all changes and amendments thereto.

   e. References herein to "OSHA Standards" shall mean Title 29, Part 1910, Occupational Safety and Health Standards, Code of Federal Regulations (OSHA), including all changes and amendments thereto.

f. References herein to "Cal-OSHA" shall mean State of California, Department of Industrial Relations, as amended to date, and all changes and amendments thereto which are effective as of the date of construction.

g. The latest edition of the codes as approved and adopted for use by the CITY as of the date of award shall apply to the Work herein, including all addenda, modifications, amendments, or other lawful changes thereto.

4. STANDARD SPECIFICATIONS - References in the Contract Documents to "Standard Specifications" shall mean the Standard Specifications for Public Works Construction (SSPWC), including all current supplements, addenda, and revisions thereof, except that the provisions therein for measurement and payment shall not apply.

5. STANDARD PLANS - References herein to "Standard Plans" shall mean the Standard Plans issued by the City of Los Angeles which drawings are hereby incorporated in and made a part of these Contract Documents, and copies of which are available for a fee.

6. CONFLICT BETWEEN CODES, SAFETY STANDARDS, REFERENCE STANDARDS, DRAWINGS AND OTHER CONTRACT DOCUMENTS - In case of conflict between codes, reference standards, drawings and other Contract Documents, the most stringent requirements shall govern. Conflicts shall be brought to the attention of the PROJECT MANAGER for clarification and directions prior to ordering or providing any materials or labor. The CONTRACTOR shall bid for the most stringent requirements.

CONTRACT DOCUMENTS

2. ISSUANCE OF PLANS AND SPECIFICATIONS

A. Unless otherwise provided in the Contract Documents, the PROJECT MANAGER will furnish to the CONTRACTOR TEN (10) sets each of the Plans, Specifications and, Geotechnical Report without charge. Additional sets desired by the CONTRACTOR or Subcontractors will be furnished upon request, but at the CONTRACTOR's expense.

B. Drawings, Specifications, Special Provisions, and copies thereof are the property of the CITY. They are not to be used on other work. Necessary bid documents will be available to prospective bidders. Bidders will be issued plans and specifications for a fee. This fee is stated in the "Notice Inviting Bids" of the Contract Documents.

C. Standard Plans for the CITY, which are noted on the drawings, are available for a fee. Also see the City of Los Angeles, Bureau of Engineering Web pages for Standard Plans at http://eng.lacity.org/techdocs/stdplans.

3. DIVISIONS OF SPECIFICATIONS

The specifications are arranged into the Construction Specifications Institute (CSI) sixteen (16) Division format with an additional Division 17 for Instrumentation and Controls (if applicable).

A. The organization of the Specifications into divisions, sections, parts, and paragraphs shall not control or limit the CONTRACTOR in dividing the Work among Subcontractors of any tier. The CONTRACTOR shall be solely responsible for all subcontract arrangements of Work regardless of the organization of the specifications.

B. Titles of Specification sections and paragraphs are for convenience of reference only, and do not form a part of the Specifications.

THE CONTRACTOR'S RESPONSIBILITIES

4. SITE SECURITY

A. In addition to the responsibilities specified in other Articles of these Requirements, and the General Conditions, the CONTRACTOR shall be responsible for the security of all its construction equipment, materials, tools, facilities, and vehicles (personal, private, or contractual) while performing the Work of this Contract. This requirement shall be effective twenty-four (24) hours per day for the duration of the Contract. CONTRACTOR shall familiarize themselves with the location of the job site and scan the premises by means necessary to protect the property, including but not limited to, provision of fencing, guards, security system or other means as necessary.

5. ENVIRONMENTAL CONTROL AND MITIGATION

A. CONTROL

1. Fugitive Dust and Smoke Control:

Comply with the requirements of Title 8, California Code of Regulations, concerning handling of asbestos dust.

a. Criteria for Fugitive Dust - Detailed descriptions and explanations of specific impact mitigation measures are contained in South Coast Air Quality Management District (SCAQMD) Rules and Regulations (Rule 403, Limitation on Fugitive Dust Emissions). Key features of mitigation options described are as follows:

i. Do not cause or allow emissions of fugitive dust from any transport, handling, construction or storage activity to remain visible in atmosphere beyond property line of the emission source.

ii. Take precautions to minimize fugitive dust emissions from operations involving demolition, excavation, grading, clearing of land and disposal of solid waste. Utilizes at least one Reasonably Available Control Measure (RACM) for each potential source of fugitive dust. Do not cause or allow particulate matter to exceed 50 mg/m^3 when determined as difference between upwind and downwind samples collected on high volume particulate matter samplers or other EPA approved equivalent method for PM-10 monitoring at the property line for a five hour period during the time of active operations.

iii. Take precautions to prevent visible particulate matter from being deposited upon public roadways as a direct result of their operations. Precautions include, removal of particulate matter from equipment before movement to paved streets or prompt removal of material from paved streets onto which such material has been deposited.

b. As a minimum - Use the following procedures and techniques:

i. Cover loads of materials, debris and soil transported from construction sites. Trim or remove loose material from loads before leaving Project.

ii. Daily or more frequently, if necessary, water down and sweep adjacent streets and sidewalks that have construction vehicles carrying debris and excavated materials.

iii. Establish regular cycles and locations for cleaning trucks that haul soil from site.

iv. Water down construction sites whenever required to suppress dust, particularly during handling of excavation soil or debris or during demolition.

v. If conveyors are used, cover all transfer points along conveyor system moving soil. Minimize drop height to the stockpile. Provide a sprinkler system that will apply water to soil before it drops to stockpile.

vi. Any adapted measures developed by SCAQMD on Best Available Control Measures (BACM) for Fugitive Dust and Rule 403 will be incorporated into the site operations for Fugitive Dust Control.

vii. Burning of wastes is prohibited. Remove scrap and waste material and dispose of in accordance with laws, codes, regulations, ordinances and permits.

viii. Use construction equipment designed and equipped to prevent or control air pollution in conformance with most restrictive regulations of EPA, State and local authorities. Maintain evidence of such design and equipment and make available for inspection by Authority or its designee.

ix. Establish and maintain records of routine maintenance program for internal combustion engine powered vehicles and equipment used on Project. Keep records available for inspection by Authority or its designee.

x. Comply with the requirements of Title 8, California Code of Regulations, concerning handling of asbestos dust.

xi. Implement Fugitive Dust Measures listed in tables 1 and 2 of SCAQMD Rule 403 and perform record keeping in accordance with Sections (e)(1) of said rule. Make records available to Authority or its designee for inspection.

2. Rubbish Control

a. Through all phases of construction, including suspension of Work and until final acceptance of the Project, keep the site of the Work and other areas used by it in a neat and clean condition, and free from an accumulation of rubbish and debris. Dispose of rubbish and waste materials of any nature occurring at the worksite and establish regular intervals of collection and disposal of such materials and waste. Keep CONTRACTOR haul roads free from dirt, rubbish, and unnecessary obstructions resulting from its operations. Take care to prevent spillage on haul routes. Remove such spillage immediately and clean the area. Confine equipment and material storage to areas approved by the PROJECT MANAGER. Dispose of rubbish and surplus materials off the construction site, at the CONTRACTOR's expense, in accordance with local codes and ordinances governing locations and methods of disposal, and in conformance with all applicable safety laws, and the requirements of the OSHA Safety and Health Standards for Construction. Include cleanup cost in the CONTRACTOR's Bid.

3. Sanitation

a. Fixed or portable chemical toilets shall be provided for the use of the CONTRACTOR's employees. These accommodations shall be maintained in a neat and sanitary condition. Toilets at construction job sites shall conform to the requirements of Title 8, California Code of Regulations.

b. Wastewater conveyance and disposal shall not be interrupted. Should the CONTRACTOR disrupt existing sewer facilities, sewage shall be conveyed in closed conduits and disposed of in a sanitary sewer system. Sewage shall not be permitted to flow in trenches or be covered by backfill. Establish a regular schedule for collection of sanitary and organic waste. Dispose of wastes and refuse from sanitary facilities provided by the CONTRACTOR or organic material wastes from any other source related to the CONTRACTOR's operations away from the site in a manner satisfactory to the INSPECTOR and in accordance with laws and regulations pertaining thereto. Dispose of such wastes at the CONTRACTOR's expense.

4. Chemicals

The following paragraph does not relieve the CONTRACTOR from its responsibility for obtaining prior approval from the PROJECT MANAGER for chemical usage when otherwise required.

a. Provide four (4) copies of the MSDS to the PROJECT MANAGER for all chemicals used during Project construction or furnished for Project operation, prior to bringing them on site, whether soil conditioning agents, lubricants, defoliant, soil sterilant, herbicide, pesticide, disinfectant, polymer, soil conditioning agents, lubricants, reactant, or of other classification, which shall show approval of either the U.S. Environmental Protection Agency or the U.S. Department of Agriculture. Use of all such chemicals and disposal of residues shall be in strict accordance with the printed instructions of the manufacturer.

5. Odor Control

a. The CONTRACTOR shall furnish all labor, materials, and equipment required and shall carry out effective measures wherever and as often as necessary to prevent the discharge of a nuisance odor from its operation into the atmosphere in such quantity as will violate the regulations of any legally constituted authority. During construction, the CONTRACTOR shall notify the PROJECT MANAGER and the INSPECTOR at least forty-eight (48) hours in advance when potential odor-causing activities are scheduled for construction.

6. Noise and Vibration - Comply with requirements of CITY noise ordinances and mitigation specified below.

a. Lighting – Shield worksite lighting to prevent disturbance to adjacent properties.

B. MITIGATION

1. General

a. The CONTRACTOR shall mitigate the adverse environmental impacts associated with the Work of the Contract. The CONTRACTOR shall indemnify and hold harmless the CITY from any and all fines, penalties or damages incurred by the CITY for violation of any environmental mitigation measures or permit caused by the CONTRACTOR's failure to comply with environmental mitigation measures of this Article. The measures that the CONTRACTOR shall take to mitigate environmental impacts include, but are not limited to the following:

b. The CONTRACTOR, a minimum of thirty (30) days prior to beginning Work on each new major activity, shall submit a written plan to the PROJECT MANAGER, detailing how the environmental impacts for the activity shall be mitigated. The plan shall include, at a minimum:

i. Anticipated site conditions;

ii. Equipment to be utilized;

iii. Means and methods of construction;

iv. Impacts likely to occur;

v. Mitigation methods to be employed.

2. Storm Water Pollution Control

a. Comply with the State General Construction Activity Storm Water Permit.

b. Minimum Water Quality Protection Requirements – The Contractor is required to meet the

following minimum standards of good housekeeping:

i. Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheet flow, swales, area drains, natural drainage, or wind.

ii. Stockpiles of earth and other construction-related materials must be protected from being transported from the site by wind or water.

iii. Fuels, oils, solvents, and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil nor the surface waters. All approved toxic storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.

iv. Excess or waste concrete may not be washed into the public way or any drainage system. Provisions shall be made to retain concrete wastes on-site until they can be appropriately disposed of or recycled.

v. Trash and construction-related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.

vi. Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must e stabilized so as to inhibit sediments from being deposited into the public ways. Accidental depositions must be swept immediately and my not be washed down by rain or by any other means.

c. Wet Weather Erosion Control Plan (WWECP) – Pursuant to Section 61.02 of the LAMC, whenever it appears that the construction site will have grading between October 1 and April 15, the Contractor shall submit a WWECP to the Project Manager for approval within 30 days after award of contract or get approval 30 days prior to the beginning of the rainy season, whichever is longer. Note: Guidance on preparing the WWECP can be found in the Development Best Management Practices Handbook – Part A, Construction Activities adopted by the Board of Public Works on August 2, 1999, as authorized by Section 64.72 of the Los Angeles Municipal Code. This handbook can be obtained at cost at the public/permit counters of the Bureau of Engineering.

d. The Contractor shall file a “Notice of Intent” (NOI) with the State Water Resources Control Board to comply with the California General Construction Activity Stormwater Permit (NPDES No. CAS000002) and prepare and implement a Stormwater Pollution Prevention Plan (SWPP). Whenever the CONTRACTOR is required to get any type of permit from the Department of Building and Safety (DBAS), the CONTRACTOR shall show a Waste Discharge Identification Number (WDID) to the DBAS as proof of submittal of the NOI. If the CONTRACTOR does not need any type of permit from the DBAS, the CONTRACTOR shall show the WDID to the PROJECT MANAGER.

3. Noise and Vibration

a. General

i. The Work specified in this Article consists of eliminating excessive noise and vibration generated by construction activities, complying with applicable noise regulations and specifications requirements, monitoring and reporting noise and vibration measurements.

ii. Use equipment with effective noise-suppression devices and employ other noise

control measures such as enclosures and noise barriers necessary to meet the noise limits specified and to protect the public. Schedule and conduct operations in a manor that will minimize, to the greatest extent feasible, the disturbance to the public in areas adjacent to the construction activities and to occupants of buildings in the vicinity of the construction activities.

iii. Noncompliance Corrective Action – If, at any time prior to or during the construction, complaints are received from the public, the PROJECT MANAGER shall direct the CONTRACTOR to undertake immediate corrective action through equipment modification, additional noise abatement equipment or a change in operating procedures.

b. Construction Vibration

i. Ground-borne vibrations from equipment may have the potential of causing an impact to the existing structure. The CONTRACTOR shall mitigate and/or repair any damage caused by vibration.

6. MOBILIZATION

A. GENERAL

Mobilization shall include, but not be limited to, the following items, all as required for the proper performance and completion of the work:

1. Obtaining all permits, insurance, and bonds.
2. Moving onto the job-site all CONTRACTOR's plant and equipment as required.
3. Erecting temporary buildings and other construction facilities.
4. Installing temporary construction power and wiring.
5. Establishing fire protection system for its temporary facilities.
6. Developing construction water supply.
7. Providing field office trailers for the CONTRACTOR AND INSPECTOR, complete with all specified furnishings and utility services, including telephones.
8. Providing connections to onsite sanitary facilities as specified.
9. Providing for potable water facilities as specified. This includes a means by which all on site contractor, subcontractor or supplier personnel can wash their hands with soap.
10. Arranging for and erection of CONTRACTOR's work and storage yards and sheds.
11. Submittal of all required Subcontractor insurance certificates and bonds.
12. Posting all CAL-OSHA required notices and establishment of safety programs.
13. Have the CONTRACTOR's representative at the job site full time.
14. Furnishing of Construction Schedule, Bid Breakdown and Submittal Schedules.

B. TEMPORARY CONSTRUCTION UTILITIES AND WORKSITE FACILITIES

The Contractor shall provide the following worksite facilities, as indicated below:

Yes (1) The Contractor shall provide adequate sanitary conveniences for use of persons employed on the work. These conveniences shall be properly secluded from public observation and maintained in a neat and sanitary condition in the manner and places required by the Project Manager. The use of these conveniences shall be strictly enforced, and they shall be maintained at all times until completion of the work, when they shall be removed from the premised and the area left clean and free from any nuisance. They shall also comply with all

applicable laws, ordinances and regulations pertaining to the public health and sanitation of dwelling and camps.

Wastewater shall not be interrupted. Should the Contractor disrupt existing sewer facilities, sewage shall be conveyed in closed conduits and disposed of in a sanitary sewer system. Sewage shall not be permitted to flow in trenches or be covered by backfill.

Yes (2) The Contractor shall provide the power and light needed for construction until permanent meter installation is completed. The Contractor shall make all necessary arrangements with the City Department of Water and Power; assume all costs; and make and remove all connections to power facilities as necessary for required tests.

Yes (3) The Contractor shall provide the water needed for construction until permanent meter installation is completed. The Contractor shall make all necessary arrangements with the City Department of Water and Power; assume all costs; and make and remove all connections to water facilities as necessary for required tests.

Yes (4) The Contractor shall provide the gas needed for construction until permanent meter installation is completed. The Contractor shall make all necessary arrangements with the Gas Company; assume all costs; and make and remove all connections to gas facilities as necessary for required tests.

Yes (5) The Contractor shall provide a temporary shed on the site for the safe storage of his material and equipment. The floor shall be weathertight with a wood floor above grade. The shed shall be removed upon completion of the work or by order of the General Manager.

Yes (6) The Contractor shall provide an office for the Inspector for the entire period of construction or until the General Manager orders its removal. The office, to be located as the General Manager directs, shall be weathertight and have not less than 100 square feet floor area; screened windows that open in opposite walls; a door with latch set and hasp for padlocking; a built in counter of sufficient size for a full set of job blue prints with a drawer for filing 9" x 12" folders; a stool and a plan rack for drawings; an electric heater, a 12" electric fan and electric lights.

Yes (7) The Contractor shall provide a job telephone for the use of City personnel only. The Contractor shall make all necessary arrangements with the telephone company; assume all costs and pay for all calls. The telephone is to be located so that it is easily accessible from the job office and provided with an outside extension bell.

Yes (8) The Contractor shall maintain temporary drainage to keep excavations, pits and trenches free of water accumulation, by pumping if necessary. The Contractor shall protect against damage caused by water backing up in sewers and drains.

Yes (9) The Contractor shall exercise every reasonable precautions to protect channels, storm drains and bodies of water from pollution; and shall conduct and schedule construction operations so as to minimize or avoid muddying and silting of said channels, drains and waters. Water pollution control work shall consist of constructing any facilities which may be required to prevent, control and abate water pollution.

The Project Manager, authorized representative of the General Manager, in charge of this project is:

Alex Ngo at (213) 825-4821

All correspondence should be addressed to the Project Manager at [Note new address as of 03/29/12]:

Department of Public Works, Bureau of Engineering
Recreation and Cultural Facilities Program
1149 S. Broadway, Suite 830
Los Angeles, California 90015

7. REMOVAL, CLEANUP, AND DEMOBILIZATION

A. Upon completion of the contracted Work, remove all CONTRACTOR tools, materials and other articles from the CITY's property. Should the CONTRACTOR fail to take prompt action to this end, the CITY at its option and without waiver of such other rights as it may have, on thirty (30) calendar days notice, may

treat them as abandoned property. Sweep floors broom clean, clean exterior and interior surfaces and windows and remove rubbish and debris resulting from the contracted Work and maintain the job site in a clean, orderly and safe condition at all times until completion of the physical Work and written Notice of Partial Acceptance. Failure to comply with this requirement shall be grounds for the CITY to assess clean-up costs in the amount of 5% of the mobilization cost.

8. RECORD DRAWINGS

A. Record Drawings are full size drawings (Plans) which are marked up during construction to delineate the actual in-place constructed conditions. Record Drawings shall be provided by the CONTRACTOR for this Project. Requirements for Record Drawings as specified elsewhere shall supplement the requirements specified herein.

B. Record Drawings shall include all changes in the plans including those issued as Change Orders, Plan Clarifications, Addenda, Notice to Bidders, responses to Requests for Information, Jobsite Memos, and any additional details needed for the construction of the Project but not shown on the plans. Substructures encountered while excavating that are left in place shall be located by survey, to the satisfaction of the PROJECT MANAGER, shown, and identified on the Record Drawings. Substructures, including but not limited to concrete structures, electrical conduit and duct banks, drains and sanitary sewer pipelines, process piping, water lines, etc, whose installed location differs from that shown on the original plans shall be precisely located by survey to the satisfaction of the PROJECT MANAGER and recorded on the as-built drawings before backfilling.

C. Mark Record Drawings with red ink or chemical fluid on one (1) set of full size prints to produce a record of the complete installation. Prepare additional drawings that may be required to indicate record conditions on 24" x 36" paper. Additions to Contract Drawings shall employ and use drafting standards, which are consistent with the drafting standards, used in the Contract Drawings.

D. Keep Record Drawings on the job and update during construction and make available for the PROJECT MANAGER'S inspection and copying at all times. The PROJECT MANAGER will review the Record Drawings before submittal of monthly payment requests. If in the opinion of the PROJECT MANAGER, the Record Drawings are not current, approval of the monthly payment may be withheld until the drawings are made current. Submit a signed certification with each monthly payment request stating that the Record Drawings are current and accurate as of the date of the payment request.

E. Where the plans are diagrammatic or lacking precise details, produce dimensioned full size sheets as the Record Drawings. For installations outside of structures, the locations shall be given by coordinates and elevations. Where substructures are encased in concrete, the outside dimensions of the encasement shall also be given.

F. In the case of those drawings which depict the detail requirements for equipment to be assembled and wired in the factory, the Record Drawings shall be updated by indicating those portions which are superseded by final Shop Drawings and by including appropriate reference information describing the Shop Drawings by manufacturer, drawing and revision numbers.

G. At the completion of the Work and after final inspection, copy the Record Drawing (as installed) data, using red ink, onto a new set of high quality prints provided by the CITY. Certify to the completeness and accuracy of the "as installed" information indicated on the prints with its signature. Then deliver as a submittal to the PROJECT MANAGER for review and approval both the field developed prints and the final signed prints as a condition precedent to the CITY'S release of any retained funds.

9. EXCAVATION SHORING, FORMS, AND FALSEWORK

A. Whenever Work under the Contract involves trench excavation five (5) feet or more in depth, or any kind of shoring, design and prepare plans for the required shoring, bracing, and sloping. In addition to the Division 2 specified requirements, submit plans and calculations to the PROJECT MANAGER in advance of excavation to ensure workers' protection from the hazard of caving ground during the excavation. If such plan varies from the shoring system standards established by the Cal-OSHA Construction Safety

Orders, the plan shall be prepared by a California registered civil or structural PROJECT MANAGER employed by the CONTRACTOR, and include all costs therefore in the price named in the Contract for completion of the Work as set forth in the Contract Documents. Nothing in this Article shall be deemed to allow the use of a shoring, sloping, or other protective system less effective than that required by the Construction Safety Orders. Nothing in this Article shall be construed to impose liability on the CITY, PROJECT MANAGER, INSPECTOR, or any of their officers, agents, representatives, or employees.

B. Secure approval, in advance, from authorities concerned for the use of any bridges proposed by it for public use. Temporary bridges shall be clearly posted as to load limit, with signs and posting conforming to current requirements set forth in the Traffic Manual published by the California Department of Transportation, covering "signs". This manual shall also apply to the street closures, barricades, detours, lights, and other safety devices required.

C. Comply fully with the requirements of the Cal-OSHA Construction Safety Orders, regarding the design of forms, false work, and shoring for concrete placement, and the inspection of same before placement of concrete. Where the Construction Safety Orders requires the services of a civil PROJECT MANAGER registered in the State of California to approve design calculations and Working Drawings of the false work or shoring system, to inspect such system prior to placement of concrete, employ a registered civil PROJECT MANAGER for these purposes, and all costs therefore shall be included in the price named in the Contract for completion of the Work as set forth in the Contract Documents.

D. No Work under this Article shall start until the PROJECT MANAGER has accepted the plans and the CONTRACTOR has obtained permits required and furnished a copy to the PROJECT MANAGER.

10. SUBMITTALS

A. Furnish a schedule and list of required submittals to the PROJECT MANAGER, in accordance to CONTRACTOR'S CONSTRUCTION SCHEDULE AND REPORTS of these General Requirements, including required submittals by Subcontractors.

B. Wherever called for in these specifications or on the plans, or where required by the PROJECT MANAGER, furnish to the PROJECT MANAGER for review 10 copies of each submittal. The term "submittal" as used herein shall be understood to include detail design calculations, design drawings, Shop Drawings, Working Drawings fabrication and installation drawings, erection drawings, lists, graphs, operating instructions, catalog sheets, data sheets, samples, and similar items. Unless otherwise required, Submit said submittals to the PROJECT MANAGER at a time sufficiently early (see paragraph F. below) to allow review of same by the PROJECT MANAGER and to accommodate the rate of construction progress required under the Contract without delaying the Contract Work and with due regard for the possibility of resubmittals. Submittals shall be in English.

C. Design or Shop Drawings or other submittal shall be accompanied by the standard "CONTRACTOR's SUBMITTAL TRANSMITTAL" form. A submittal not accompanied by such a form, or where all applicable items on the form are not completed, or are incorrectly completed, may be returned, at the PROJECT MANAGER'S discretion, for resubmittal.

D. Normally, a separate transmittal form shall be used for each specific item or class of material or equipment for which a submittal is required. Transmittal of a submittal of various items using a single transmittal form will be permitted only when the items taken together constitute a manufacturer's "package" or are so functionally related that expediency indicates a review of the group or package as a whole. A multiple-page submittal shall be collated into sets, and each set shall be stapled or bound, as appropriate, prior to transmittal to the PROJECT MANAGER.

E. Shop Drawings shall show in detail the size, sections, and dimensions of all the member(s); the arrangement and construction of all connections and joints; all holes, straps, and other fittings required for attaching Work; and other pertinent details. When required, PROJECT ENGINEERING computations

shall be submitted. Be responsible for delivering reviewed copies of Shop Drawings to all others whose Work is dependent thereon. Maintain at the site of the Project, a complete file of approved Shop Drawings and manufacturers' data for this Project, at all times.

F. Except as may otherwise be provided herein, the PROJECT MANAGER will make a reasonable attempt to return prints of each submittal to the CONTRACTOR, with its comments noted thereon, within 30 calendar days following their receipt by the PROJECT MANAGER. It is considered reasonable that the CONTRACTOR shall make a complete and acceptable submittal to the PROJECT MANAGER by the second submission of a submittal item. The CITY reserves the right to withhold moneys due the CONTRACTOR to cover additional costs of the PROJECT MANAGER's review beyond the third submittal. Submittal will be returned to the CONTRACTOR with one of three (3) markings:

G. If three (3) copies of a submittal are returned to the CONTRACTOR marked "NO EXCEPTIONS TAKEN/PROCEED," formal revision and resubmission of said submittal will not be required.

H. If three (3) copies of a submittal are returned to the CONTRACTOR marked "MAKE CORRECTIONS NOTED/PROCEED CONDITIONALLY," formal revision and resubmission of said submittal will not be required.

I. If one (1) copy of a submittal is returned to the CONTRACTOR marked "REJECTED-RESUBMIT/DO NOT PROCEED," revise said submittal and resubmit TEN (10) copies of said revised submittal to the PROJECT MANAGER.

J. Work for which Shop Drawings are required shall be performed in accordance with the reviewed and approved copies. Fabrication of an item shall not commence before the PROJECT MANAGER has reviewed the pertinent submittal and returned the copies to the CONTRACTOR marked either "NO EXCEPTIONS TAKEN/PROCEED," or "MAKE CORRECTIONS NOTED/PROCEED CONDITIONALLY." Revisions indicated on submittals shall be considered as changes necessary to meet the requirements of the Contract Documents and shall not be taken as the basis for claims for extra Work.

K. CONTRACTOR submittals shall be carefully reviewed by an authorized representative of the CONTRACTOR prior to submission to the PROJECT MANAGER. Each submittal shall be dated, signed, and certified by the CONTRACTOR as being correct and in strict conformance with the Contract Documents. No consideration for review by the PROJECT MANAGER of any CONTRACTOR submittal will be made for any items that have not been so certified by the CONTRACTOR. Non-certified submittals will be returned to the CONTRACTOR without action taken by the PROJECT MANAGER, and any delays caused thereby shall be the total responsibility of the CONTRACTOR.

L. The PROJECT MANAGER's review of CONTRACTOR submittal shall not relieve the CONTRACTOR of the entire responsibility for the correctness of details and dimensions and conformance to the specifications. Assume all responsibility and risk for any misfits due to any errors in the submittal. Any fabrication or other Work performed in advance of the receipt of accepted submittals shall be entirely at the CONTRACTOR's risk and expense. Be responsible for the dimensions and the design of adequate connections and details.

11. SUBSTITUTIONS AND "OR EQUAL" SUBMITTAL

A. Make "Or Equal" submittals within thirty (30) calendar days after issuance of Notice-to-Proceed. A request or submittal received after the specified period will be considered as NOT EQUAL to that so specified and will be processed as a substitution described hereinafter.

B. Clearly identify manufacturers' data submitted to the PROJECT MANAGER for review and acceptance each proposed substitute with the corresponding Contract Drawing detail and Specification section. If the PROJECT MANAGER decides to accept for use in the Project a material, process or article which is not the equal of that specified, make substitution in the manner described in Article 52 CHANGES AND

EXTRA WORK of the General Conditions, with a credit to the CITY for the difference in value.

C. The PROJECT MANAGER will determine whether the material offered is equivalent to that specified. Any revision to structures, piping, mechanical, electrical, instrumentation, or any other Work made necessary by such substitution must be approved by the PROJECT MANAGER, and the entire cost both direct and indirect of these revisions shall be borne by the CONTRACTOR.

D. Materials, processes, or articles may be requested as a substitution by the CONTRACTOR, in lieu of that specified, under the following conditions:

1. Submit in writing and in the manner described in SUBMITTAL of these General Requirements.

2. Submit thirty (30) calendar days before starting the Work, as established by the PROJECT MANAGER, so as not to cause any delay in completion of the Project. No other request will be considered after expiration of the period specified, except that in exceptional cases where it is determined to be in the best interest of the CITY, as approved by the PROJECT MANAGER.

3. Agree to pay for all PROJECT ENGINEERING and design services, if required, to make changes and adjustments in material and Work of trades directly or indirectly affected by the substitute, to the satisfaction of the PROJECT MANAGER, at no cost to the CITY.

4. All requests for substitution shall be made through the CONTRACTOR. Submissions by the CONTRACTOR shall imply the CONTRACTOR's approval of such substitution.

5. No requests for substitutions will be considered during the bidding period.

6. Furnish adequate data with each request for approval of a substitute to enable the PROJECT MANAGER to evaluate the proposed substitution.

MATERIALS, EQUIPMENT, AND APPLIANCES

12. SURVEYING

A. DEFINITIONS

1. CONTRACTOR's Surveyor - Shall be a registered (licensed) Land Surveyor or Registered Civil Engineer authorized to practice land surveying by the State of California in compliance with Business and Professions Code Section 8700, *et. Seq*. cited as the Land Surveyor's Act.

2. Construction Stakes - Durable markers that will maintain elevations, station, and offset for the duration of use as reference markers for construction.

3. Surveying - Described in Section 8726 of the Land Surveyor's Act.

4. Survey Manual - City of Los Angeles, Bureau of PROJECT ENGINEERING Manual, Part J – Survey.

B. SURVEY SERVICES

1. The CONTRACTOR's Surveyor shall comply with State Law and the latest edition of the Standard Specifications for Public Works Construction, "Green Book", and its supplement.

a. The contractor shall employ the Contractor's Surveyor.

b. All work shall utilize CCS 83, Zone 5, and NAVD 88 control systems.

c. CONTRACTOR's Surveyor to utilize horizontal & vertical control provided by PROJECT MANAGER and referenced on drawings.

d. Work shall conform to the lines, elevations, and grades shown on the plans.

e. CONTRACTOR's Surveyor shall notify the PROJECT MANAGER, in writing, of all material discrepancies between existing survey control and the current Work. Any material discrepancies shall be resolved prior to start of construction.

f. During progress of construction, CONTRACTOR's Surveyor to provide surveying services as necessary, or as requested by PROJECT MANAGER or INSPECTOR, to assure construction complies with Contract Documents.

g. CONTRACTOR's Surveyor shall fulfill duties of "PROJECT MANAGER" described in Standard Specifications for Public Works Section 2.9, Surveying, except that the City forces shall be notified 7 days prior to the CONTRACTOR disturbing any street centerline control monuments so they can be preserved by City forces.

2. Safety - CONTRACTOR's Surveyor shall conform to recommended safety standards for all Work, as set forth in the latest edition of Work Area Traffic Control Handbook (WATCH) adopted by the City of Los Angeles Board of Public Works. Compliance with the Confined Space Regulations in the California Code or Regulations, Title 8, Section 5157 of the Cal/OSHA Safety Orders is mandatory.

C. CONSTRUCTION SURVEYS:

1. Conform to Survey Manual Part J, Section J 600 of Bureau of PROJECT MANAGER.

2. CONTRACTOR's Surveyor - Provide all reference stakes and form checks necessary for construction and inspection of improvements. Document construction staking in survey field notes as described in Part C.4 in this Article. Staking may include, but is not limited to - removals, joins, rough grade, slope, utilities, storm drain, sewer, curb, walk, paving, wall, tunnels, building stakes and other staking necessary for construction and inspection.

3. Form Checks - CONTRACTOR's Surveyor to check forms where durable points may be disturbed, removed, or is impractical to be used to verify the design location. Record measured location in survey field notes as described in Part C.4 in this Article. Notify PROJECT MANAGER of all variations from plan locations.

4. Staking Interval and Offset Lines - Staking intervals shall be in accordance with Survey Manual, Figure J 615.225A. CONTRACTOR's Surveyor to set stake lines at an offset distance from the improvement to ensure proper grade, station and alignment.

5. Utility Stakes - CONTRACTOR's Surveyor shall provide stakes for utilities, public or private, which require location or relocation unless PROJECT MANAGER states otherwise.

13. SITE INVESTIGATION

A. Before beginning the Work, inspect related and appurtenant Work and report in writing to the PROJECT MANAGER conditions which will prevent proper completion of the Work. Except as provided for in Article 53, DIFFERING SITE CONDITIONS, of the General Conditions, failure to report any such conditions shall constitute acceptance of all site conditions, and required removal, repair, or replacement caused by unsuitable conditions shall be performed by the CONTRACTOR at its sole cost and expense without any adjustment in the Contract Price or extension of the Contract Completion Date.

14. INSPECTION OF THE WORK

A. Whenever the CONTRACTOR intends to carry on the Work of this Contract on a Saturday, Sunday, or holiday, or more than two eight (8) hours a day shifts on Monday through Friday, or any variation in the time of the workday as set forth in the GENERAL CONDITIONS, length of the workday and work week, notification shall be given to the INSPECTOR and the PROJECT MANAGER of such intention at least forty-eight (48) hours in advance so that inspection may be arranged. No Work shall be allowed during

these times without the approval of the INSPECTOR and no demolition will be permitted on Saturdays, Sundays, or holidays without the prior approval of the Board. All CITY inspection required by the CONTRACTOR on holidays, weekends and overtime for the sole convenience of the CONTRACTOR shall be accomplished at the sole expense of the CONTRACTOR by issuance of a deductive Change Order.

B. Conduct the Work under the general observation of the PROJECT MANAGER and be subject to inspection by the INSPECTOR to ensure compliance with the requirements of the Contract Documents. Such inspection may include mill, Plant, shop or field inspection, as required. The INSPECTOR shall be permitted access to all parts of the Work, including Plants where materials or equipment are manufactured or fabricated. Materials and articles furnished by the CONTRACTOR shall be subject to inspection, and no materials or articles shall be used in the Work until they have been inspected and accepted by the INSPECTOR.

C. Do not backfill, bury, cast concrete, hide or otherwise cover Work until it has been inspected by the INSPECTOR, and other Agencies from which a permit is required. Whenever the CONTRACTOR is ready to backfill, bury, cast in concrete, hide, or otherwise cover any Work under the Contract, notify the INSPECTOR not less than forty-eight (48) hours in advance to request inspection before beginning such Work of covering. Failure of the CONTRACTOR to notify the INSPECTOR at least forty-eight (48) hours in advance of such inspections will be cause for the INSPECTOR to require a sufficient delay in the progress of Work to allow time for such inspections and any remedial or corrective Work required, and costs of such delays, including its effect upon other portions of the Work, shall be borne by the CONTRACTOR. Work so covered in the absence of inspection shall be subject to uncovering at the sole expense of the CONTRACTOR. Where uninspected Work cannot be uncovered, such as in concrete cast over reinforcing steel, such Work shall be subject to demolition, removal, and reconstruction under proper inspection, and no additional payment will be allowed therefore.

D. The presence of the PROJECT MANAGER or the INSPECTOR, shall not relieve the CONTRACTOR of the responsibility for the proper execution of the Work in accordance with all requirements of the Contract Documents. Compliance is a duty of the CONTRACTOR, and said duty shall not be avoided by any act or omission on the part of the PROJECT MANAGER or the INSPECTOR. If the CONTRACTOR fails to replace any defective or damaged Work or material after reasonable notice, the INSPECTOR may cause such Work or materials to be replaced. The replacement shall be deducted from the amount to be paid to the CONTRACTOR, otherwise the CONTRACTOR shall pay the CITY if there remains insufficient or no amount to be paid by the CITY to the CONTRACTOR.

E. The INSPECTOR will have the right, at all times and places, to reject any articles or materials to be furnished hereunder which, in any respect, fail to meet the requirements of these specifications, regardless of whether the defects in such articles or materials are detected at the point of manufacture or after completion of the Work at the site. If the INSPECTOR, through an oversight or otherwise, has not rejected materials or Work which is defective or which is contrary to the specifications, such material, no matter in what stage or condition of manufacture, delivery, or erection, may be rejected by the INSPECTOR upon discovery. Promptly remove rejected articles or materials from the site of the Work after notification of rejection. Costs of removal and replacement of rejected articles or materials as specified herein shall be borne by the CONTRACTOR.

F. At the completion of Work, after completion of all corrections, a final inspection will be made by the INSPECTOR, the PROJECT MANAGER, and the CONTRACTOR, as applicable. The INSPECTOR will provide a Final Inspection Correction List itemizing all Work necessary to complete the Project satisfactorily.

15. SAMPLING, TESTING AND FABRICATION INSPECTION

A. GENERAL

1. Materials and fabricated articles furnished by the CONTRACTOR may be subject to inspection and testing and no materials or fabricated articles shall be incorporated into the Work until they have been accepted by the INSPECTOR. The CONTRACTOR shall ensure that all items requiring shop inspection are inspected at their source as required by the CONTRACT.

2. Fabrication may be subject to inspection by the INSPECTOR, to ensure strict compliance with the requirements of the Contract Documents. Such inspection may include mill, plant, shop or field inspection, as required. The PROJECT MANAGER or INSPECTOR shall be permitted access to all parts of the Work, including Plants where materials or equipment are manufactured or fabricated. When a third party inspector is approved, meetings may be scheduled with the PROJECT MANAGER or INSPECTOR at the manufacturing facility to review the progress of the Work and the inspection activities.

3. Fabricate items using Shop Drawings that have been submitted to the PROJECT MANAGER and approved in accordance with SUBMITTALS of the GENERAL REQUIREMENTS. Provide shop inspection on materials and/or equipment so designated on the CONTRACTOR's approved Shop Drawings.

4. Material which is subject to or requires shop inspection and arrives at the job site without inspection by the INSPECTOR will be rejected by the INSPECTOR and shall be removed from the job site by the CONTRACTOR at the CONTRACTOR's sole expense.

B. SAMPLES AND TEST SPECIMENS

1. CONTRACTOR shall obtain, perform and pay for all testing. Testing shall be performed at a certified laboratory approved by the PROJECT MANAGER.

2. Samples and test specimens required under these specifications shall be furnished, prepared for testing, and delivered, to the approved testing laboratory at no cost to the CITY.

3. In addition to any other inspection or quality assurance provisions that may be specified, the PROJECT MANAGER or the INSPECTOR shall have the right to independently select, test, and analyze, at the expense of the CITY, additional test specimens of any or all of the materials to be used. Whenever any portion of the Work fails to meet the requirements of the specifications as shown by the results of independent testing or investigation all costs of such independent inspection and investigation, and all costs of removal, correction, and reconstruction or repair of any such Work shall be borne solely by the CONTRACTOR.

4. When the manufacturer, fabricator, supplier, or subcontractor provides the results of tests from samples taken at the mill, factory, or warehouse, the PROJECT MANAGER or INSPECTOR will accept the test reports provided the following conditions are met:

   a. The Testing Agency was approved by the PROJECT MANAGER or INSPECTOR prior to performing the tests, and that all necessary certifications were valid at the time the tests were performed.

   b. The tests were performed in conformity with the specifications for the specified materials or items.

   c. The reports are made in the form of an affidavit specified hereinafter.

5. Whenever the approved independent testing laboratory or inspector takes samples of materials other than at the site, the deliveries to the site of materials represented by such samples shall be identified as specified for the specific material. The results of such tests shall be reported to the INSPECTOR in the form of affidavits attested to by the testing agency. Such affidavits shall furnish the following information with respect to the material sampled:

   a. Manufacturer's name and brand.

   b. Place of sampling.

c. Sufficient information to identify the lot, group, bin, or silo from which the samples were taken.

d. Amount of material in the lot sampled.

e. Statement that the material has passed the requirements.

f. Notarized signature and title of the person making the affidavit and the date of execution of the affidavit.

6. THIRD PARTY INSPECTION REQUIREMENTS

a. The proposed third party inspection and/or testing company must gain approval by the PROJECT MANAGER after award. Obtain this approval before producing any material or manufacturing any product or equipment. The approved inspection and/or testing agency shall not sublet or assign its Work to any other agency.

b. Comply with requirements as identified in the CONTRACT.

c. The Work and activities of the third party inspection and/or testing agency shall be monitored by the INSPECTOR during meetings to ensure compliance with the Contract Documents.

7. THIRD PARTY TESTING AND INSPECTION LABORATORY APPROVAL PROCEDURES

a. The PROJECT MANAGER will approve third party inspection and/or testing agencies/laboratories.

b. Requests for approval of a third party inspection agency and/or test laboratory shall be in writing from the CONTRACTOR to the PROJECT MANAGER.

c. The letter requesting approval of a third party test laboratory and/or private inspection agency shall contain all of the following information:

i. Complete title of Project.

ii. Project Work order number.

iii. Name of proposed testing laboratory or inspection agency.

iv. Address and telephone number of proposed testing laboratory/inspection agency.

v. Contact person at proposed testing laboratory/inspection agency.

d. The PROJECT MANAGER will notify the CONTRACTOR by letter if the testing laboratory/inspection agency has been approved.

16. GUARANTY/WARRANTY

A. The CONTRACTOR shall and does hereby warrant and guaranty that Work executed under this Contract will be free from defects of materials and workmanship for a period of one (1) year from the date of final acceptance of the Project by the Recreation and Park Commission, except certain specific items of Work, materials and equipment requiring a guaranty or warranty for a greater period of time as hereinafter specified. In the event, that portions of the Work are sufficiently complete to allow use or occupancy by the CITY in the manner and for the purposes intended prior to final completion and acceptance of the Project, the guarantee period for those portions will commence on the date shown on the Statement of Partial Completion.

B. The CONTRACTOR hereby agrees to indemnify and save harmless the CITY, and their officers, agents and employees against and from all claims and liability arising from damage and injury due to said defects. The CONTRACTOR shall repair or replace, at no cost to the CITY, any and all such defective Work and all other Work damaged thereby, which becomes defective during the term of the above-

mentioned guaranties and warranties.

C. Within thirty (30) calendar days prior to completion of all Work the CONTRACTOR shall submit to the PROJECT MANAGER original copies of all manufacturers guaranties covering all supplied and installed equipment and, where applicable, systems.

D. In addition to the requirements of Contract Bonds, of the General Conditions, it shall be understood that the Surety for the faithful performance bond, submitted in conformance with the terms of the Contract for this Project, is liable on its bond for all obligations of the CONTRACTOR including guaranty provisions.

E. The CONTRACTOR shall, within twenty-four (24) hours of notice from the PROJECT MANAGER of any Work not in accordance with the requirements of the Contract, or any defects in the Work, commence and prosecute with due diligence all work necessary to fulfill the terms of this Article and to complete the Work within a period of time as approved by the PROJECT MANAGER. In the event of failure by the CONTRACTOR and/or its surety to respond to the notice or to complete the Work required by this Article within the time specified, the CITY shall proceed to have such Work done at the CONTRACTOR's expense. The CONTRACTOR or its Surety shall promptly reimburse the CITY all direct and indirect cost associated with performing this Work.

17. STORAGE OF MATERIALS AND EQUIPMENT

A. Store and protect materials and equipment in accordance with the manufacturer's instructions, with seals and labels intact and legible. Exercise measures necessary to ensure preservation of the quality, quantity, and fitness of the materials or equipment and perform the manufacturers recommended maintenance of the material or equipment. Absorb any and all cost incurred to store, protect, and maintain the materials and equipment without modification to the Contract Amount.

B. Do not store construction materials in streets, roads, or highways for more than 5 days after unloading. Materials or equipment not installed or used in construction within 5 days after unloading shall be stored elsewhere by the Contractor at its expense unless authorized additional storage time.

C. Do not store construction equipment at the worksite before its actual use on the Work, nor after use for more than 5 days after it is no longer needed.

D. Excavated material, except that which is to be used as backfill in the adjacent trench within three days shall not be stored in public streets unless otherwise permitted. Remove excess material after placing backfill from the site immediately.

PROGRESS OF THE WORK

18. CONSTRUCTION SCHEDULE AND COMMENCEMENT OF WORK

A. After notification of award and prior to start of any work, the Contractor shall submit its Schedule of Values to the Project Manager for review and approval. Upon approval of the Schedule of Values, and prior to start of any contract work, other than mobilization, the Contractor shall submit its Baseline Schedule to the Project Manager for acceptance. The Baseline Schedule shall be based on the approved Schedule of Values. The approved Schedule of Values work items shall be the basis for the construction elements for the accepted Baseline Schedule and the Monthly Billing items. As a minimum the Baseline Schedule shall indicate the work plan of all specifications sections. The Baseline Schedule shall include, but is not limited to: all items noted on I.2.a. through I.2.f. and I.2.h. through I.2.o. The Baseline Schedule shall recognize the protection, removal, or relocation of utilities and how they affect construction. The Baseline Schedule shall also reflect completion of all work under the Contract within the specified time and in accordance with the Specifications.

Unless otherwise provided, the Contract time shall commence as indicated in the Notice-to-Proceed letter. The Work shall start within 10 days thereafter, and be diligently prosecuted to completion within the time provided in the Specifications or as modified through change order.

Upon acceptance of the Baseline Schedule by the Project Manager, the Contractor shall maintain a copy of the accepted schedule in the jobsite office, recording thereon progress of the work at the end of each

calendar week.

B. Methodology: The Baseline Schedule and all Updated Progress/Recovery Construction Schedules (UPRS) shall be in the form of a Critical Path Method schedule showing chronological relationship of all activities of the project. The principles and definitions of the terms used herein shall be as set forth in the Associated General Contractor's publication "As-Planned CPM Schedule - Handbook", latest edition. To the extent there are any conflicts between the Associated General Contractor's publication and the Specifications, the Specifications shall govern. The Contractor shall utilize Primavera Sure-Trak 3.0 or Microsoft Project 2000 as the computer program for formatting the Baseline Schedule, and subsequent updated schedules.

C. The Contractor shall have the right to complete the job in advance of the scheduled completion date and within the allowable days allotted for the project. In the event that the Contractor elects to finish the project in advance, a Change Order shall be issued to reflect reduced duration and revised completion date. The Contractor shall not be entitled to any additional compensation for early project completion.

D. A schedule showing the Work completed in less than the Contract Time, which has been accepted by Owner and amended by Change Order, shall be considered to have Project Float. The Project Float is the time between the scheduled completion of the Work and Contract Substantial Completion. Project Float is a resource available to both City and Contractor. No compensation shall be due to the Contractor for use of this float time by either party.

E. Float Ownership: Neither City nor Contractor owns float. The Project owns the float. As such, liability for delay of any Substantial Completion date rests with the party whose actions, last in time, actually cause delay to a Substantial Completion date.

F. The Contractor shall forward to the General Manager, along with the monthly Request for Payment, the Updated Schedule, referred to in Section B of this Article, indicating the progress of any part of the work not up to Baseline Schedule, stating the existing status, cause of delay, impact of change orders and approximate time of completion.

G. If the Contractor should fall behind the progress schedule by more than one month, the Contractor must provide the General Manager with an Updated Progress/Recovery Schedule (UPRS). Failure to comply with the full requirements of this Article shall be cause for withholding all future progress payments until full compliance. Failure to provide more than 2 consecutive Updated Schedules or UPRS shall constitute grounds for cancellation of the project.

H. The Department reserves the right to request a two-week "look ahead" schedules if the Department determines that the submitted UPRS does not reflect the as-built condition, manpower utilization or sequential progress necessary to fulfill the intent of the UPRS.

I. Network Details:

1. The Schedule shall include time-scaled network diagram, based on working days, as well as tabulations. It shall be constructed to show the order in which the Contractor proposed to carry out the Work, to indicate restrictions of access and to show availability of work areas, and availability and use of manpower, materials and equipment. The Contractor shall utilize the Schedule in planning, scheduling, coordinating, and performing the Work under the Contract (including activities of Subcontractors, equipment venders, and Suppliers). Provide the Project Manager with written confirmation of the concurrence of listed trade Subcontractors and Suppliers with the Schedule. Major trade Subcontractors and Suppliers shall approve the Schedule before they are submitted.

2. The Schedule shall provide the Project Manager and Inspector with a tool to monitor and follow the progress of all phases of the Work. The Schedule submitted to the Project Manager shall comply with all limits imposed by the scope of Work, and with all constraints, restraints or sequences included in the Contact. The degree of detail shall include factors to the satisfaction of the Project Manager, including, but not limited to:

a. Physical breakdown of the Project including estimated starting and completion dates of activities.

b. Float Time.

c. Contract milestones and completion dates, building occupancy date, constraints, restraints, sequences of Work shown in the Contract, the maintenance period and the final completion date. Durations shall be in calendar day.

d. Type of Work to be performed, and the sequences.

e. Purchases, submittals, submittal reviews, manufacturing, tests, delivery, and installation activities for all major materials and equipment.

f. Deliveries of City furnished equipment and/or materials in accordance with the dates or schedule windows of such items set forth in the Contractor furnished by the Project Manager, or items to be salvaged and delivered to the City.

g. Preparation, submittal and approval of Shop Drawings and material samples showing a thirty (30) day minimum time specified for the Project Manager's review of normal or routine submittals. A forty (40) day review time for all major submittals and the same time frame shall be allowed for at least one (1) re-submittal on all major submittals.

h. Impact of Change Orders issued to the Contract.

i. Approvals required by regulatory agencies or other third parties.

j. Plans for all subcontract Work.

k. Access to and availability of Work areas including all anticipated shutdowns.

l. Identification of linkage between preceding, concurrent and follow-on Sub- contractors and utilities that are shown on the Plans or called out in the Specifications.

m. Actual tests, submission of test reports, and approval of test results.

n. Training and classes required under the Contract.

o. Pre-Final and Final Inspection punch lists and final cleanup, allow time for preparation of the punch lists.

p. Clearly identify any manpower, material, or equipment restrictions, as well as any activity requiring unusual shift Work, specified overtime, or Work at times other than regular days or hours.

3. Durations of the labor, equipment, and materials required to perform each activity shall be based on a normal work day unless otherwise approved by the Project Manager.

4. Critical or near critical paths resulting from the use of manpower or equipment restraints shall be kept to a minimum. Near critical paths shall be defined as those paths having fifteen (15) working days or less of total float as shown on the accepted Baseline Schedule.

5. Time scale shall show a continuous flow of information from left to right. The critical path shall be clearly and graphically identified on the schedule.

J. SCHEDULE REPORTS

1. The Schedule submitted to the Project Manager shall include the time scaled network diagram. Network diagrams shall be based on early start and early finish dates of activities shown and any related calculations generated by the scheduling program which describes the events and activities depicted.

K. APPROVAL OF BASELINE SCHEDULE

1. Acceptance Process:

2. The Project Manager will accept or reject, in writing, the Contractor's submission within fourteen (14) days after receipt of required information. The Construction Schedule, once accepted, becomes the Baseline Schedule which shall be used for monitoring and evaluating all facets of Contract performance, including, but not limited to: payment progress, changes, and delays.

3. Revise the Schedule, periodically per B, F, G, and H of this Article.

L. REVISIONS TO ACCEPTED BASELINE SCHEDULE

1. No change to the accepted Baseline Schedule shall be made without the prior written approval of the Project Manager.

M. UPDATES TO ACCEPTED BASELINE SCHEDULE AND PROGRESS PAYMENTS

1. Updated Schedules or UPRS:

a. See Section F of this Article.

b. The Update Report shall show the activities or portions of activities completed during the reporting period and their total value as the basis for the Contractor's monthly request for payment. Payments made pursuant to Partial Payments of these General Requirements will be based on the total value of such activities completed or partially completed after verification by the Inspector. The report shall state the percentage of the Work actually complete as of the report date.

N. RESPONSIBILITY FOR COMPLETION

1. Whenever it becomes apparent from the Updated Schedule or UPRS that phasing, milestone, constraint, restraint, or Contract completion dates will not be met, the Contractor shall execute some or all of the following remedial actions:

a. Increase construction manpower in such quantities and crafts as necessary to eliminate the backlog of Work.

b. Increase the number of working hours per shift, shifts per working day, working days per week, the amount of construction equipment, or any combination of the foregoing to eliminate the backlog or Work. Contractor shall be responsible for all additional costs associated in having the Inspector present at the job site for all periods in excess of the basic work day.

c. Reschedule the Work in conformance with the Specification requirements.

2. Before implementing any of the above actions, the Contractor shall notify and obtain written approval from the Project Manager.

3. Under no circumstances will the addition of equipment or construction forces, increasing the working hours or any other method, manner, or procedure to return to the contractually required completion date be considered justification for a Change Order or be treated as acceleration where the need for a UPRS has been caused by the Contractor and/or its Subcontractors or Suppliers, at any tier.

4. The Project Manager may elect to withhold progress payments until the Contractor's progress indicates that the milestone date(s) and/or the Contract completion date will be met.

19. WORK BY CITY OR OTHERS

A. Be responsible for ascertaining the nature and extent of any simultaneous, collateral and essential work by others. The CITY, its employees and contractors, and others, shall have the right to operate within or adjacent to the worksite to perform such Work.

B. The CITY, the CONTRACTOR, and each of such employees, contractors and others, shall coordinate their operations and cooperate to hold interference to a minimum.

C. Include in its Bid all costs involved as a result of coordinating its Work with others. The CONTRACTOR shall not be entitled to additional compensation from the CITY for damages resulting from such simultaneous, collateral and essential Work. The CONTRACTOR's coordinating efforts shall include redeployment of his Work forces to other parts of the Work.

PAYMENT FOR WORK

20. PARTIAL PAYMENTS (Revised as of 02/12/16)

A. Unless otherwise prescribed by law, three (3) working days prior to the last work day of each month, or other such date mutually agreed upon by the CONTRACTOR and the INSPECTOR, the CONTRACTOR shall prepare and submit to the INSPECTOR, an estimate of the cumulative amount and value of acceptable Work performed by the CONTRACTOR at the jobsite up to that date. Said amount shall also include the value of all acceptable materials and equipment for the Contract that have been delivered and suitably stored but not yet used in the Work, subject to the requirements of PAYMENTS FOR MATERIALS OR EQUIPMENT DELIVERED AND STORED ON THE JOBSITE and PAYMENT FOR MATERIALS OR EQUIPMENT STORED OFF THE JOBSITE of these General Requirements.

B. Payments for undelivered, specifically manufactured equipment to be incorporated into the Work, excluding "off the shelf " or catalog items, will be made when all of the following conditions exist:

1. The equipment must be specifically designated in the Technical Specifications for partial payment prior to delivery.
2. The equipment to be specifically manufactured for the Project could neither be readily utilized on nor diverted to another job, and,
3. A fabrication period of more than six (6) months is anticipated,

C. Upon verification and approval by the INSPECTOR, such estimate shall be processed by the INSPECTOR in accordance with the provisions of the California Public Contracts Code.

D. The CITY may retain a portion of the amount otherwise due to the CONTRACTOR, as follows:

1. Retention of **five percent (5%)** will be held on the original Contract value on each approved payment claim until the amount paid of the original Contract equals fifty percent (50%). The CITY may then, at its sole discretion discontinue further retention on the original Contract value for all subsequently approved payment claims.
2. At any time during the course of the Contract, the CITY may, at its sole discretion, reinstate the **five percent (5%)** retention.
3. Additional deductions will be made from each monthly payment request for amounts due the CITY as follows:
    a. Equipment or materials furnished by the CITY.
    b. Services rendered to the CONTRACTOR by the CITY.
    c. Amounts due the CITY for liquidated damages or penalties under the terms of the Contract.
    d. Amounts required to be deducted by federal, state, or local governmental authority or other provisions of these Contract Documents.

E. From the balance thus determined will be deducted the amount of all previous payments, and the remainder shall constitute the monthly payment due the CONTRACTOR. Within thirty (30) calendar days after receipt of the INSPECTOR's recommendation by the Department of the monthly payment due the CONTRACTOR and subject to the deductions provided, herein, the CITY will pay the amount found due.

F. On lump-sum items the INSPECTOR's estimate of the monthly payment due the CONTRACTOR will not be required to be made by strict measurement, and an approximate estimate will suffice.

G. The monthly payments may be withheld or reduced, for the following reasons:

1. If the CONTRACTOR is not diligently or efficiently complying with the express intent of the Contract.
2. If there are unresolved Notices of Non-Compliance.
3. If Technical Manuals are not submitted.
4. If Record Drawings are not kept up-to-date.
5. If progress photographs are not submitted, and
6. If construction schedules are not submitted in accordance with these General Requirements.
7. The CONTRACTOR shall promptly submit the following in response to requests by the INSPECTOR:
8. Information and records necessary to determine the cost of the Work for purposes of estimating monthly payment.
9. Itemized statements, in a form satisfactory to the INSPECTOR, of the actual cost of all acceptable materials delivered by the CONTRACTOR to the site.

H. The making of any payment to the CONTRACTOR shall not relieve the CONTRACTOR from contractual obligations. These payments shall not be construed as the transfer of ownership of any equipment or materials to the CITY.

I. Responsibility of ownership shall remain with the CONTRACTOR who shall be obligated to store, protect, repair, replace, rebuild or otherwise restore any fully or partially completed Work or structure for which payment has been made. The CONTRACTOR shall replace any materials or equipment required to be provided under the Contract that may be damaged, lost, stolen, or otherwise degraded in any way prior to acceptance of the Work under the Contract.

J. At its own expense, the CONTRACTOR has the option, to substitute for any money being withheld by the CITY, securities equivalent to the amount being withheld. Securities eligible for such substitution are bank or savings and loans certificates of deposit or such securities eligible for investment pursuant to California Government Code. Any such security or securities so substituted for monies withheld, shall be owned by the CONTRACTOR who shall receive earned interest.

K. Such security shall, at the request and expense of the CONTRACTOR, be deposited with CITY or with a State or Federally Chartered Bank as the escrow agent who shall pay such monies to the CONTRACTOR upon notification by the CITY that payment can be made. Such notification will be given at the expiration of sixty (60) calendar days from the date of acceptance of the Work by the Board, or as prescribed by law, provided, however, that there will be a continued retention of necessary securities to cover such amounts as are required by law to be withheld by properly executed and filed notices to stop payment, or as may be authorized by the Contract to be further retained.

L. Any escrow agreement entered into pursuant to this provision shall contain as a minimum, the following provisions - the amount of securities to be deposited; the terms and conditions of conversion to cash in case of the default of the CONTRACTOR; and the termination of the escrow upon completion of the Contract and the other requirements as herein above provided.

21. PAYMENT FOR MOBILIZATION

A. General Mobilization

1. Payment for general mobilization shall be limited to those items of Work described in MOBILIZATION, of these General Requirements.
2. The CONTRACTOR shall submit to the PROJECT MANAGER for approval a breakdown of the amount established for mobilization. The payment for each item of mobilization will be made when

that item of mobilization has been completed and as specified below:

3. When the monthly partial payment estimate of the amount earned, not including the amount earned for mobilization, is five percent (5%) or more of the original Contract amount, the total amount earned for mobilization may be up to fifty percent (50%) of the Contract item price for mobilization or five percent (5%) of the original Contract amount, whichever is less will be included in the said estimate for payment.

4. When the monthly partial payment estimate of the amount earned, not including the amount earned for mobilization, is ten percent (10%) or more of the original Contract amount, the total amount earned for mobilization may be up to seventy-five (75%) of the Contract item price for mobilization or seven point five percent (7.5%) of the original Contract amount, whichever is less will be included in the said estimate for payment.

5. When the monthly partial payment estimate of the amount earned, not including the amount earned for mobilization, is twenty percent (20%) or more of the original Contract amount, the total amount earned for mobilization may be up to ninety-five percent (95%) of the Contract item price for mobilization or nine point five percent (9.5%) of the original Contract amount, whichever is less will be included in the said estimate for payment.

6. When the monthly partial payment estimate of the amount earned, not including the amount earned for mobilization, is fifty percent (50%) or more of the original Contract amount, the total amount earned for mobilization may be up to one hundred percent (100%) of the Contract item price for mobilization or ten percent (10%) of the original Contract amount, whichever is less will be included in the said estimate for payment.

7. After acceptance of the Contract by the BOARD, the amount, if any, of the Contract item price for mobilization in excess of ten percent (10%) of the original Contract amount will be included for payment in the final monthly payment.

8. The Contract lump sum price paid for mobilization shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the Work involved in mobilization as specified herein.

9. The adjustment provisions in PAYMENT FOR CHANGES AND EXTRA WORK of these General Requirements, and the retention of funds provisions of PARTIAL PAYMENTS of these General Requirements shall not apply to the Contract lump sum item for Mobilization.

10. When other Contract items are adjusted as provided in PAYMENT FOR CHANGES AND EXTRA WORK of these General Requirements, if the costs applicable to such item of Work include mobilization costs, such mobilization costs will be deemed to have been recovered by the CONTRACTOR by the payments made for mobilization and will be excluded from consideration in determining compensation under said Article.

11. When the Contract does not include a Contract pay item for mobilization as specified above, full compensation for any necessary mobilization required shall be considered as included in the prices paid for the various Contract items of Work involved and no additional compensation will be allowed.

22. PAY ITEM DEFINITIONS

This Article describes methods of measurement and payment for lump sum and unit priced items listed on the Schedule of Work and Prices, contained in the Contract Proposal.

A. The Contractor shall not take advantage of any apparent error or omission on the Drawings or Specifications, and the PROJECT MANAGER shall be permitted to make corrections and interpretations as may be deemed necessary for fulfillment of the intent of the Contract Documents.

B. All portions of the Work are either in an applicable allowance, lump sum, or unit price item listed on the schedule of Work and Prices. Work for which there is not a separate item will be considered incidental to

the contract and no additional compensation shall be allowed.

C. ALLOWANCES

1. Fixed allowances may have been allocated to the Schedule of Work and Prices for certain items of work. Requirements for each Allowance Item are specified below or a reference is given to the General Requirements article that describes the work. Allowance item work is to be performed only as directed by the PROJECT MANAGER. Unless otherwise noted, Allowances will be paid on a time and materials basis in accordance with Section C, PARTIAL PAYMENTS of these General Requirements.

2. If allowance items are not executed or are only partially executed or the allowance for any item is not expended or partially expended, then a deductive change order shall be issued for the amount that is not expended. If, however, these items are over expended then an appropriate change order shall be executed in accordance with, PAYMENT FOR CHANGES AND EXTRA WORK, of these General Requirements.

D. LUMP SUM ITEMS:

1. Payment of the lump sum items established in the contractor's Bid under the various line items in the Bid Form shall be full compensation for all labor, materials, and equipment required to furnish, install, construct, and test the Work covered under the lump sum bid item.

2. Payment for the lump sum items established in the Contractor's Bid shall also fully compensate the Contractor for any other work which is not specified or shown, but which is necessary to complete the Work.

3. Payments for Lump Sum Work other than Mobilization will be based upon physical progress for each activity in accordance with the breakdown of the Lump Sum prices agreed to in the Schedule of Values.

E. UNIT PRICE ITEMS:

1. Payment for all work shall be in accordance with the unit price bid items in the schedule of Work and Prices and shall be full compensation for all labor, materials, and equipment required to furnish, install, construct and test the Work covered under the unit price bid item. Work for which there is not a price schedule item will be considered incidental to the Work and no additional compensation shall be allowed.

2. Payment will be made only for the actual quantities of work performed in compliance with the Drawings and Specifications. The Contractor will receive reimbursement equal to the approved quantity times applicable unit price.

23. SCHEDULE OF VALUES

A. The Schedule of Values will be used as a basis for determining progress payments on a lump sum Contract or any designated lump sum bid item. The Schedule of Values shall be a schedule of cost loaded construction activities equal, in total, to the lump sum bid and shall be in such form and sufficient detail to correctly represent a reasonable apportionment of the lump sum. Prior to submitting an invoice for payment, the CONTRACTOR shall have submitted a detailed Schedule of Values and obtained approval from the PROJECT MANAGER.

B. Each lump sum bid item on the Schedule of Work and Prices as set forth in the Bid must be broken down separately. The breakdown of each lump sum bid item must cover the cost of construction required by the plans and specifications for that item. The sum of the values for the construction activities, within a bid item must equal the total amount bid for that item.

C. Each activity in the Schedule of Values shall delineate one construction activity. For example, the placement of concrete between construction joints, the construction of an electrical duct bank or pipeline between points A & B. The costing for each activity should include all costs for the labor and materials or

equipment required to complete the activity. For example, concrete construction activities should include all costs for the forming, placing of reinforcement, placing concrete and curing. The cost for pipeline construction activities should include materials, equipment and installation including pipeline supports or thrust blocks. The excavation and backfill for a pipeline or structure may be separate activities. No non-construction activity shall be cost loaded.

24. NOTICE TO WITHHOLD AND/OR STOP NOTICE

A. When a "Notice to Withhold" or "Stop Notice" is served upon the CITY, or the BOARD, pursuant to the lien statutes of the State of California, to withhold sufficient funds from payments to the CONTRACTOR in support of a claim resulting from default by the CONTRACTOR in payment for labor or materials used in prosecution of the Contract, the CITY shall withhold from payment due the CONTRACTOR an amount of money equal to the amount of the claim stated in the "Notice to Withhold" or "Stop Notice," and an additional amount equal to twenty-five percent (25%) of the amount of said claim, to defray the costs of litigation in the event of court action on the claim, for a total withholding of one and one quarter times the stated amount of the claim. At the discretion of the CITY, the CITY may allow the CONTRACTOR to file with the CITY the bond referred to in the Civil Code of the State of California after which said monies will not be withheld on account of such "Notice to Withhold" or "Stop Notice."

B. In the event the Contract is terminated for CONTRACTOR default, any funds due the CONTRACTOR and retained by the CITY in accordance with PARTIAL PAYMENTS of these General Requirements, shall become the property of the CITY to the extent necessary to repay to the CITY any excess in the Contract price above the cost of the Work completed at the time of termination. After issuance of notice to discontinue Work, no further payments will be made to the CONTRACTOR for the Work covered by the notice until completion of Work and final settlement has been made.

25. FINAL PAYMENT

A. Final payment to the CONTRACTOR is made following action by the BOARD that formally adopts the recommendation of the PROJECT MANAGER to accept the Contract.

B. After acceptance of the Work by the BOARD and not more than sixty (60) calendar days after filing Notice of Completion, the CITY will make final payment to the CONTRACTOR of the amount remaining after deducting all prior payments and all amounts to be kept or retained under the provisions of the Contract, including the following items:

1. Liquidated damages, as applicable;
2. Lien claims or Stop Notices filed on behalf of suppliers, Subcontractors, and labor performed in connection with the Project; except, that upon submittal of a Stop Notice Release Bond issued by an approved Surety Company executed in favor of the CONTRACTOR, the CITY will release such portion of the retainage funds to said CONTRACTOR that is being held solely to cover Stop Notice Claims.
3. No claim of the CONTRACTOR under this Article shall be allowed unless the CONTRACTOR has given the required written notice. Nor shall a claim by the CONTRACTOR for an equitable adjustment hereunder be allowed if asserted after final payment under this Contract.

26. CHANGE ORDER REQUESTS

A. The CONTRACTOR's quotations for preliminary change orders for extras, changes, additions, or deletions to the Work as described in Article 52 CHANGES AND EXTRA WORK of the General Conditions shall be submitted to the PROJECT MANAGER, in writing, on the Change Order Cost Quotation Form provided by the PROJECT MANAGER, and in conformance with the requirements of PAYMENT FOR CHANGES AND EXTRA WORK of these General Requirements. Examples of these forms are bound at the end of these General Requirements. The quotation shall be firm for a period of not less than sixty (60) calendar days from the date of receipt of the quotation by the PROJECT MANAGER. Submit its written cost quotation and Time Impact Analysis not later than two (2) weeks after being requested to provide such quotation, unless the PROJECT MANAGER allows more time. Delays in

submitting quotations beyond the two (2) weeks set forth herein, which cause a delay in the issuance of a Change Order or a delay to the completion date of the Project, shall not be cause for a claim or a time extension under the Contract.

B. The PROJECT MANAGER's request for quotation on a preliminary change shall not be considered authorization to proceed with the changed Work prior to the issuance of a formal Change Order, unless directed otherwise in writing by the PROJECT MANAGER, nor shall such request constitute justification for a delay to the existing Work or a time extension under the Contract.

27. PAYMENT FOR CHANGES AND EXTRA WORK

Payment to the CONTRACTOR, or credit to the CITY, for any extra, change addition or deletion to the Work under the Contract, or settlement of any claim under the Contract, covered by any Change Order, shall be determined by the methods set forth herein. The PROJECT MANAGER may change the plans and specifications, character of the Work, or quantity of Work provided the total arithmetic dollar value of all such changes, both additive and deductive, does not exceed twenty-five percent (25%) of the Contract price. Should it become necessary to exceed this limitation, the change shall be by written Supplemental Agreement between the CONTRACTOR and the CITY, which shall be executed by a Change Order.

A. LUMP SUM

A total sum for the changed Work may be mutually determined by the PROJECT MANAGER and the CONTRACTOR. The CONTRACTOR shall furnish a breakdown of the costs satisfactory to the PROJECT MANAGER, of the proposed lump sum, in complete accordance with C through J of this Article. Such lump sum costs shall be full and final compensation as described in D of this Article. All cost proposals for lump sum Change Orders shall be presented in accordance with C through J of this Article.

B. COST REIMBURSEMENT (TIME AND MATERIALS) WORK

The costs of all changed Work submitted under the cost reimbursement (time and materials) method shall be formulated in accordance with the provisions of C through J of this Article.

Additionally, if the method or amount of payment cannot be agreed upon prior to the beginning of the Work, the PROJECT MANAGER may issue a unilateral Change Order in the amount determined reasonable by the PROJECT MANAGER for the changed Work and direct the CONTRACTOR to proceed with the changed Work or the PROJECT MANAGER may direct in writing that the Work be done on a cost reimbursement (time and materials) basis, and the CONTRACTOR shall provide all labor, equipment, and materials necessary to complete the Work in a satisfactory manner and within a reasonable period of time. For Work performed, payment shall be made for the documented actual cost, in accordance with the following provisions.

1. Labor, up to and including general foremen, who are directly assigned to the changed Work. Employees identified as superintendents shall not be charged as labor on changed Work, but shall be covered under overhead costs. These costs shall include actual documented payroll costs including wages, payroll taxes as established by law (i.e., FICA, Federal and State Unemployment Taxes), fringe benefits as established by negotiated labor agreements, and any insurance costs (such as Worker's Compensation and General Liability Insurance but shall not include Automobile Liability Insurance, OCIP coverage, or any other insurance costs which are provided for in B.6 below which are currently assessed against labor costs. A detailed breakdown of the subcomponents of labor costs, by all crafts shall be submitted to the PROJECT MANAGER, by the CONTRACTOR and all SUBCONTRACTORS, for approval, as part of the documentation of labor costs, within forty-five (45) days after issuance of the Notice to Proceed. No other subcomponents of labor costs shall be considered, unless approved in writing by the PROJECT MANAGER.

2. Materials - The cost of materials used in performing the changed Work will be the cost, including sales tax, to the purchaser, whether CONTRACTOR, Subcontractor or other forces, from the supplier thereof, except as the following are applicable:

a. Cash or trade discounts available to the purchaser shall be credited to the CITY notwithstanding the fact that such discounts may not have been taken by the CONTRACTOR.

b. For materials secured by other than a direct purchase and direct billing to the purchaser, the cost will be deemed to be the price paid to the actual supplier as determined by the PROJECT MANAGER. Markup, except for actual costs incurred in the handling of such materials, will not be allowed.

c. Payment for materials from sources owned wholly or in part by the purchaser shall not exceed the price paid by the purchaser for similar materials from said sources on Contract items or the current wholesale price for such materials delivered to the job site, whichever price is lower.

d. If, in the opinion of the PROJECT MANAGER, the cost of materials is excessive, or the CONTRACTOR does not furnish satisfactory evidence of the cost of such materials, then the cost shall be deemed to be the lowest current wholesale price for the quantity concerned, delivered to the job site less cash or trade discount. The CITY reserves the right to furnish materials for the Work and no claim shall be made by the CONTRACTOR for costs and profit on such materials.

e. For the purposes of this Article, a "Supplier" is defined as any person or persons, firm or business, who supplies materials, of construction and/or permanent equipment, but who does not perform any portion of the Work of the Contract on site, for the CONTRACTOR, except that labor or labor supervision which may be required by some manufacturers as part of their equipment installation for warranty or other purposes.

3. EQUIPMENT COSTS, including ownership, lease or rental costs, as well as operating costs, for individual equipment units whose replacement value is in excess of $1,000. Transportation and set up costs shall be included, but only if the equipment is imported to the worksite solely to perform Work on the changed Work included in the Change Order and the CONTRACTOR can demonstrate that the changed Work cannot or could not be performed economically with equipment already at the site. Equipment costs shall be determined in accordance with the requirements set forth in H of this Article.

4. SUBCONTRACTOR COSTS, provided that such costs are direct costs to the CONTRACTOR for performing the changed Work as set forth in E of this Article.

5. BOND COSTS on the incremental change in the value of the Contract shall be determined and paid for as set forth in I.1 of this Article.

6. INSURANCE COSTS (other than labor insurance or OCIP coverage) shall be determined and paid for as set forth in I.2 of this Article.

C. GENERAL

1. It is the intent of the CITY to settle all Change Orders full and final at the time the Change Order is issued. Therefore, the following paragraph will be incorporated, in writing, on all Change Orders.

> "The compensation (time and cost) set forth in a Change Order comprises the total compensation due the CONTRACTOR, all Subcontractors, and all Suppliers, for the Work or change defined in the Change Order, including impact on unchanged Work. By signing the Change Order, the CONTRACTOR acknowledges and agrees on its behalf and on the behalf of all Subcontractors, and all Suppliers, that the stipulated compensation includes payment for all Work contained in the Change Order, plus all payment for the interruption of schedules, extended field overhead costs, delay, and all impact, ripple effect or cumulative impact on all other Work under this Contract. The signing of the Change Order indicates that the Change Order constitutes full mutual accord and satisfaction for the change, and that the time and/or cost under

the Change Order constitutes the total adjustment to price or time or performance owed the CONTRACTOR, all Subcontractors, and all Suppliers as a result of the change. The CONTRACTOR, on behalf of himself, all Subcontractors, and all Suppliers, agrees to waive all rights, without exception or reservation of any kind whatsoever, to file any further claim related to this Change Order. No further claim or request for adjustment of any type, excepting only bond and insurance cost as set forth in these General Requirements of the Contract Documents for any reasonably foreseeable cause shall arise out of or as a result of this Change Order or the impact of this Change Order on the remainder of the Work under this Contract."

2. Costs which shall not be paid in Change Orders under this Contract include, but are not limited to, interest costs of any type; claim preparation or filing costs; legal expenses; the costs of preparing or reviewing proposed Change Orders or Change Order proposals; lost revenue; lost profits; lost income or earnings; rescheduling costs; costs of idled equipment when such equipment is not at the site or has not yet been employed on the Work; lost earnings or interest on unpaid retainage; claims consulting costs; and the costs of corporate officer or staff visiting the site; any compensation due to the fluctuation of foreign currency conversion or exchange rates; loss of other business; changes in taxes or increased tax rates of any kind or any costs identified as unallowable under the provisions of the Federal Acquisition Regulations.

3. Extensions of time shall be based solely upon the effect of delays to the Work as a whole. Extensions of time shall not be granted for delays to the Work, unless the CONTRACTOR can clearly demonstrate, through analysis of the current updated schedule, that the delay to the Work as a whole arose or will arise from causes other than normal weather, beyond the control and without fault or negligence of the CONTRACTOR, or any Subcontractor, at any tier, and that such delays did or will, in fact, delay the progress of the Work as a whole. The CONTRACTOR shall not be entitled to a time extension unless it submits a Time Impact Analysis which is a calculation of the extent of the delay to the end date of the Work and which shows that the Work has been or will be extended beyond the current Contract completion date. A Time Impact Analysis is an estimating procedure which utilizes the networking techniques (fragnets) and a written analysis of the facts associated with the alleged delay to demonstrate the effect of the alleged delay on the critical path of the schedule. A "fragnet" is defined as a sequence of new activities and/or activity revisions that are proposed to be added to the existing current updated schedule to demonstrate (mathematically and graphically) the influence of the alleged delay on the end date of the Work and shall be the sole method for incorporating delays and impacts into the schedule. The objective of a Time Impact Analysis is to pinpoint, isolate, and quantify all time impact associated with a specific issue and determine its time relationship to past or current delays. Time extensions shall not be allowed for delays to parts of the Work that are not on the critical path of the currently approved monthly updated Project Schedule. Time extensions shall not be granted, nor delay damages of any kind whatsoever paid to the CONTRACTOR, until all available float, slack, or contingency time on the Project is used and the end date of the Work is moved beyond the current, adjusted Contract completion date.

4. The CONTRACTOR'S Cost Breakdowns submitted under the lump sum method described in paragraph A and its Change Order Quotations submitted under the cost reimbursement (time and materials) method described in paragraph B (including without limitation requests for cost reimbursement for delay, disruption, hindrance and interference associated with extras, changes, additions or deletions) shall be itemized in a manner that, with mathematical certainty and without reliance upon probabilities or inferences, segregates the direct, actual reimbursable costs associated with each individual extra, change, addition, deletion and (on an event-by-event basis) each individual delay or disruption event. Such Change Order Cost Quotations shall not be based, in whole or in part, upon any methodology (such as "total cost" or "modified total cost" methodologies) that purports to calculate the CONTRACTOR'S additional costs of performance of the extra, change, addition or deletion (including without limitation the additional costs of delay, disruption or other impact) based on the difference between CONTRACTOR'S total actual Project

or line item costs (with or without fee) and its original bid estimate for the Project or any original bid estimate line item. In connection with the foregoing, CONTRACTOR represents and warrants that it has the ability to generate and maintain complete and accurate cost accounting records that will reflect:

a. The actual costs incurred or saved for each individual item of extra work, change, addition, deletion (including without limitation any costs of associated delay, disruption, interference, hindrance and the cumulative impact of each extra, change, addition, deletion on other parts of the Work); and,

b. On an event-by-event basis, the effect of each delay or disruption that forms the basis of each request for extension of time, regardless of their scope, number, complexity, cumulative effect, or time of issuance or occurrence.

5. Except as provided in Article 51, COMPENSATION FOR DELAY, DISRUPTION, UNANTICIPATED OVERHEAD of the General Conditions, CONTRACTOR shall have no right to recovery of any compensation, costs, expenses or damages resulting from delay, disruption, interference, or hindrance in the performance of the Work (including without limitation interruption of schedules, excess or extraordinary extended field and indirect overhead costs, loss of productivity and the impact, ripple or cumulative effect on other Work).

6. CONTRACTOR waives any claim or rights and remedies based on abandonment, quantum merit, rescission or other similar legal theory by reason of any of the following circumstances, which the CONTRACTOR acknowledges and agrees are within the reasonable contemplation of the parties:

a. Extras, changes, additions and deletions to the Work after execution of the CONTRACT and issued from time to time throughout the period of construction, regardless of their scope, number, cumulative value, or complexity, to correct errors, omissions, conflicts, and ambiguities in the Contract Documents, or to implement discretionary changes the scope of Work requested by the CITY;

b. The issuance and performance of extras, changes, additions and deletions in a manner that is not in sequence with the as-built or as-planned progress of the Work;

c. Changes due to Differing Site Conditions;

d. Suspensions of the Work or parts thereof, or limitations on access to portions or all of the Work, for the convenience of CITY or in the interests of the Project;

e. Delay or disruption to the Work due to failure of the CITY, PROJECT MANAGER or INSPECTOR to timely perform any contractual obligation.

D. OVERHEAD COSTS

To the costs under Paragraphs C.1., C.2., and C.3., above, an added fixed fee to provide compensation for all overhead costs shall be allowed as established in Paragraph E.1 below. This overhead rate is not applicable to the costs under Paragraphs C.4. through C.6. above.

The overhead rates determined in Paragraphs 1 and 2 below shall be applied to all additive and deductive Change Orders, of this Article.

1. GENERAL AND ADMINISTRATIVE OVERHEAD RATE:

a. An allowance of eight percent (8%) for overhead costs will be allowed to the CONTRACTOR, only when CONTRACTOR uses its own organization to perform a part of the Work under the Change Order based upon the value of labor, material and construction equipment required to accomplish said part of the change Paragraphs C.1., C.2., and C.3.

b. An allowance of twelve percent (12%) for overhead costs will be allowed to the Subcontractors (at any tier), only when Subcontractors use their own organization to perform a part of the Work under the Change Order, based upon the value of labor,

material, and construction equipment required to accomplish said part of the change Paragraphs C.1., C.2.,and C.3.

c. Overhead percentages shall be considered to include all insurance costs other than specifically mentioned in this Article, all field and office supervisors and assistants, all onsite project administration, security costs, the cost of small tools and consumables, incidental job burdens, and all general home office expenses and no separate allowance will be made therefore. Assistants to field and office supervisors include all clerical, stenographic, and general office help. Incidental job burdens include, but are not necessarily limited to, office equipment and supplies, temporary toilets, telephone and conformance to OSHA requirements. Items such as, but not necessarily limited to, review and coordination, estimating, PROJECT MANAGER, scheduling, and expediting relative to Change Orders, and updating and furnishing Record Drawings to incorporate changes, are associated with field and office supervision and are considered to be included in the CONTRACTOR's overhead percentage set forth herein.

d. For those Change Orders with both additive and deductive costs, the overhead rate shall be determined by the net amount of the additive and deductive work.

E. SUBCONTRACTOR COSTS

1. Where Work under the Change Order is performed in whole or in part by a Subcontractor, at any tier, the cost of the Change Order shall include the cost to the Subcontractor. Subcontractor's costs shall be presented in strict accordance with A., B., and C., above, and D. through J. as applicable.

2. An additional fixed fee of six percent (6%) based upon the sum of the costs of all Subcontractors, at any tier, involved in the Work of the Change Order, shall be allowed to the CONTRACTOR for profit and General and Administrative Overhead Costs. An additional fixed fee of six percent (6%) shall be allowed to first tier Subcontractors for profit and General and Administrative Overhead costs for any Work involved in the Change Order that is performed by Sub-subcontractors. No additional fixed fee shall be allowed for Change Order Work performed by Subcontractors to Sub-subcontractors, at any tier.

F. PROFIT

To the costs of C.1., C.2., and C.3., above, plus applicable overhead costs from D.1.a. or D.2.b., if a SUBCONTRACTOR at any tier above, an added fixed fee for Profit shall be allowed as established herein.

1. An allowance of ten percent (10%) for Profit for the party performing the Work under the Change Order, shall be included on all Change Orders that are negotiated full and final in advance of any changed Work being performed.

2. An allowance of five percent (5%) for Profit for the party performing the Work under the Change Order shall be included on all Change Orders where any portion of the Work is performed before the Change Order is executed full and final by both the PROJECT MANAGER and the CONTRACTOR.

3. No added fixed fee for Profit shall be allowed for any cost other than those costs under C.1., C.2., and C.3., of this Article, if Subcontractor at any tier above. No fixed fee for profit shall be allowed on the costs of C.4., C.5., C.6., or F of this Article.

4. On Change Orders with both additive and deductive cost components, the profit allowance on net additive Change Orders shall be based on the Change Order amount after overhead rates have been added. The profit allowance shall be as set forth in Paragraphs 1 and 2 above as applicable. No profit allowance shall be included for net deductive Change Orders.

G. CITY FURNISHED MATERIALS AND EQUIPMENT

The CITY reserves the right to furnish such materials and equipment as it deems expedient, and the CONTRACTOR shall have no claim for profit or overhead on the cost of such materials and equipment.

H. EQUIPMENT COSTS

Full rental costs for rental or leased equipment shall not exceed the rates as set forth in the Rental Rate Blue Book (the Blue Book) published by Dataquest, Inc., Palo Alto, California, as adjusted to the regional area of the Work under this Contract. Owned equipment costs shall not exceed the rates listed in the Cost Reference Guide (the CRG) for Construction Equipment, published by Dataquest, Inc., Palo Alto, California. The most recent published edition in effect at the commencement of actual equipment use shall be used.

1. RENTED OR LEASED EQUIPMENT

a. For equipment rented or leased (including lease with purchase option) in arm's length transactions from outside vendors, the CONTRACTOR shall be paid the actual invoiced, rented or leased rates provided that the invoiced lease or rental rates do not exceed the rates set forth in the Blue Book. Arm's length rental or lease transactions are those in which the firm involved in rental or lease of such equipment is not associated with, owned by, have common management, directorship, facilities, or stockholders with the firm renting the equipment. Submittal by a CONTRACTOR of a rental or leased invoice from the lessor will be prima facie proof of compliance with the above. However, such invoices are not conclusive proof; if questioned, the burden of proof remains with the CONTRACTOR. In no event shall the leased equipment rate billed to the CITY be at rates exceeding those prescribed in the following table:

Actual Usage (Change Order & Contract Work Combined	Blue Book Payment Category
Less than 8 hours	Hourly Rate
8 or more hours but less than 7 days	Daily Rate
7 or more days but less than 30 days	Weekly Rate
30 calendar days or more	Monthly Rate

b. When in Use:

Actual equipment use time documented by the INSPECTOR or PROJECT MANAGER shall be the basis that the equipment was utilized on the changed Work and paid for under the Change Order. In addition to the lease or rental rate, equipment operating costs shall not exceed the estimated hourly operating rate as set forth in the Blue Book. The hours of operation shall be based upon actual equipment usage on the changed Work as recorded by the INSPECTOR or PROJECT MANAGER. For multiple shift Work sequences, the allowable equipment rate shall not exceed fifty percent (50%) of the base rate, for second or third shifts.

c. When Idle:

Idle equipment is equipment on site and necessary to perform the Work under the change but not in actual use due solely to the impact of the changed Work. Equipment operating costs due to idle time, documented by the INSPECTOR or PROJECT MANAGER, shall be paid at the rate determined in Paragraph I above. Idle time shall include a reasonable time allowance to and from the Project site.

2. OWNED AND OTHER EQUIPMENT

a. Equipment rates for owned equipment or equipment provided in other than arm's length transactions will not exceed the total hourly costs as set forth in the Cost Reference Guide.

Adjustments to the listed rates provided for under the section of the Cost Reference entitled "Cost and Production Formulas" shall not be allowed. Except as noted herein below, this equipment hourly rate plus the estimated operating cost per hour from the Cost Reference Guide will be paid for each hour the equipment actually performs Work on the changed Work. Daily records listing the equipment units and their respective operators, identification code, and actual usage on the Work under the Change Order, as certified at the end of each Work day (or work shift if the Work is being performed in multiple work shift sequence) by the INSPECTOR or PROJECT MANAGER shall be the record upon which actual equipment use shall be based. For multiple shift Work sequences, the allowable equipment rate shall not exceed the hourly depreciation and operating costs listed in the Cost Reference Guide, for second or third shifts. It is agreed that this rate shall represent payment in full for all the CONTRACTOR's direct costs.

b. When Idle:

Equipment necessary to be on the site to complete the Work, but not in actual use due solely to the impact of the changed Work, shall not exceed fifty percent (50%) of the hourly rates identified in the "Ownership" column under the heading "Hourly Operating and Overhaul Expenses" set forth in the Cost Reference Guide, provided that its presence and necessity on the site has been documented by the INSPECTOR or PROJECT MANAGER, and further provided that the equipment was idled solely by actions of the CITY. Idle equipment time will only be paid as a function of delays specifically directed or caused by the CITY's actions. In no event shall the idle time claimed in a day for a particular piece of equipment exceed the normal Work schedule established for the Project - usually eight (8) hours per day or forty (40) hours per week, and excluding Saturdays, Sundays, and holidays. For multiple shift Work sequence, the allowable idle equipment rate shall not exceed fifty percent (50%) of the hourly depreciation costs listed in the Cost Reference Guide, for second or third shifts. It is agreed that this rate shall represent payment in full for all the CONTRACTOR's direct costs.

3. EQUIPMENT HAULAGE AND SET UP COSTS

a. Documented and actual equipment haulage and set up costs shall be paid for, if applicable as set forth in C of this Article.

4. OTHER EQUIPMENT COST GUIDES

a. In the event that a piece of equipment used on a Change Order is not listed in the Blue Book or the CRG, costs may be derived from the Associated General CONTRACTOR's of America Equipment Ownership Guide, the Associated Equipment Dealers Guide, or the Equipment Rate Guide published by the U.S. Army Corps of PROJECT MANAGERs as adjusted appropriately for the type of Work and use and the regional area of the Work under this Contract.

I. BONDS AND INSURANCE COSTS

1. Bond premium adjustment, consequent upon the Change Orders issued by the PROJECT MANAGER, shall be paid at the time of completion of the Work and will not be included in individual Change Orders. Additional bond costs on the incremental value of all Change Orders issued under the Contract shall be paid for through issuance of a separate Change Order upon receipt, by the PROJECT MANAGER, or a fully paid invoice from the CONTRACTOR's and Subcontractor's sureties. No allowances for overhead or profit shall be included in such separate Change Order.

2. Insurance costs, other than insurance assessed on labor costs, consequent upon the Change Orders issued by the PROJECT MANAGER, shall be paid for by the PROJECT MANAGER at the time of completion of the Work and will not be included in individual Change Orders. Additional insurance costs on the incremental value of all Change Orders issued under the Contract shall be

paid through issuance of a separate Change Order upon receipt of a fully paid invoice from the CONTRACTOR's and Subcontractor's insurance carriers. On Contracts where the duration exceeds 365 calendar days from Notice to Proceed, the CONTRACTOR and its Subcontractors will be allowed to submit such fully paid invoices at the end of every year after issuance of the Notice to Proceed, and again at the end of the Project.

J. RECORDS

1. The CONTRACTOR's records shall make clear the distinction between the direct costs of Work paid for under the Change Order and the costs of the base scope Work under the Contract. Furnish the INSPECTOR with daily report sheets in duplicate of each day's cost reimbursement Work no later than the working day following execution of said Work. The daily report sheets shall itemize the materials and equipment used in the Work. The daily report sheets shall provide for identification and classification of workers; the hourly rates of pay and hours worked; and the size, type, identification number, and hours operated for each piece of equipment. The Daily Report sheets shall itemize the materials used in the Work.

2. Substantiate material charges by copies of vendor's invoices. Submit such invoices with the daily report sheets or, if not available at that time, submit with subsequent daily report sheets. Sign daily report sheets by the CONTRACTOR or his authorized agent and the INSPECTOR at the time of submittal.

3. On a weekly basis submit to the PROJECT MANAGER an approximate accounting of the Contract expended on the cost reimbursement Work to date and an estimate of the Impact to the time of performance of Work.

28. PRICE REDUCTION FOR DEFECTIVE COST OR PRICING DATA

A. If the PROJECT MANAGER determines that any price, including profit or fee, negotiated in connection with any Change Order under this contract, or any cost reimbursable under this Contract, was increased because:

1. The CONTRACTOR furnished cost or pricing data which was not accurate, complete, and current as certified in the CONTRACTOR's Certificate of Current cost or Pricing Data;

2. A Subcontractor or prospective Subcontractor furnished cost or pricing data was submitted in support of a subcontract cost estimate furnished by the CONTRACTOR but which was not accurate, complete, and current as of the date certified in the CONTRACTOR's Certificate of Current Cost or Pricing Data.

3. The CONTRACTOR or a Subcontractor or prospective Subcontractor, at any tier, furnished any data not within paragraph 1 or 2 above, which was not accurate as submitted;

then price shall be reduced accordingly and the Contract shall be modified in writing as may be necessary to reflect such reduction. However, any reduction in the Contract price due to defective subcontract data of a perspective Subcontractor, when the subcontract was not subsequently awarded to such Subcontractor, will be limited to the amount (plus applicable overhead and profit allowances) by which the actual subcontract or actual cost to the CONTRACTOR if there was no Subcontract, was less than the prospective subcontract cost estimate submitted by the CONTRACTOR; provided that the actual subcontract price was not affected by defective cost or pricing data.

B. The following certification from the CONTRACTOR is required to be provided on all Change Order quotations or requests for adjustment in excess of $10,000.

1. CERTIFICATION OF CURRENT COST AND PRICING DATA.

2. This is to certify that, to the best of my knowledge and belief, cost or pricing data submitted in writing, or specifically identified in writing if actual submission of the data is impracticable, to the

CITY in support of [CONTRACTOR is to insert appropriate identification such as Change Order quotation, proposal quotation, price adjustment, etc.] are accurate, complete, and current as of [CONTRACTOR to insert date].

29. PAYMENT FOR MATERIALS OR EQUIPMENT DELIVERED AND STORED ON THE JOB

A. Partial payment for materials or equipment delivered to the worksite and stored shall be subject to the following conditions:

1. Payment will not be made for any materials or equipment unless each individual piece of the material or equipment becomes a permanent part of the Work and has a value of more than $5,000.
2. The material or equipment is required by the specifications, and is specifically manufactured for the Project and could not readily be utilized or diverted to another job.
3. The CONTRACTOR shall provide secure storage facilities as required in STORAGE OF MATERIALS AND EQUIPMENT of these General Requirements.
4. No payment will be made for living or perishable Plant material, or for degradable materials such as rock, sand, cement, or for reinforcing steel, miscellaneous piping, off the shelf and catalog items, and similar items of construction, until they are incorporated into the Work.
5. The payment for the materials or equipment shall not exceed ninety-five percent (95%) of the invoice cost. The amount paid shall not exceed the total amount of the bid item less an amount estimated for installation.
6. Include cost loaded activities for the materials and equipment, for which payment will be requested, in the Schedule of Values. The CONTRACTOR shall provide all documentation necessary to establish the cost of the materials or equipment.
7. Suppliers, fabricators, or manufacturers who intend to furnish materials or equipment to the CITY must file a notice with the CITY in accordance with the State of California lien laws.
8. Each supplier, fabricator or manufacturer shall file a list, with the INSPECTOR, indicating the materials or equipment to be furnished to the Project. They shall also provide a notarized declaration from their company indicating the employees authorized to sign an unconditional release for the company. The persons signing the declaration and the unconditional release shall be identified by name and title.
9. Each request for payment shall include a notarized Unconditional Release, which conforms to the California Civil Code. The release shall be signed by an authorized employee identified in the corporate declaration. The request shall include the suppliers invoice for the materials or equipment.

10. Absorb costs incurred to meet the requirements of this Article without modification to the Contract amount.

30. PAYMENT FOR MATERIALS OR EQUIPMENT STORED OFF THE JOBSITE

A. Partial payment for materials or equipment stored off the jobsite shall be subject to the following conditions:

1. Payment will not be made for any materials or equipment unless each individual piece of the material or equipment becomes a permanent part of the Work and has a value of more than $5,000, unless otherwise approved by the city.

2. The materials or equipment is required by the specifications, and is specifically manufactured for the Project and could not readily be utilized or diverted to another job.

3. No payment will be made for living or perishable Plant material, or for degradable materials such as rock, sand, cement, or for reinforcing steel, miscellaneous piping, off the shelf and catalog items, or similar items, until they are incorporated into the Work.

4. Payment for the materials or equipment stored shall not exceed sixty percent (60%) of the invoice cost of the materials or equipment. Percent of the invoice paid shall be at the discretion of the CITY. The amount paid shall not exceed the total amount of the bid item less an amount estimated for installation.

5. Include cost loaded activities for the materials and equipment, for which payment will be requested, in the Schedule of Values. Provide documentation necessary to establish the cost of the materials or equipment.

6. Suppliers, fabricators, or manufacturers who intend to furnish materials or equipment to the CITY must file a notice with the CITY in accordance with the State of California lien laws.

7. Each supplier, fabricator or manufacturer shall file a list, with the INSPECTOR, indicating the materials or equipment to be furnished to the Project. They shall also provide a notarized declaration from their company indicating the employees authorized to sign an unconditional release for the company. The persons signing the declaration and the unconditional release shall be identified by name and title.

8. Each request for payment shall include a notarized Unconditional Release, which conforms to the California Civil Code. The release shall be signed by an authorized employee identified in the corporate declaration. The request shall include the suppliers invoice for the materials or equipment.

9. Store the materials and equipment as required in STORAGE OF MATERIALS AND EQUIPMENT of these General Requirements, in a bonded warehouse or facility approved by the INSPECTOR. The storage site shall be located within 50 miles of the geographic limits of the CITY. The materials and equipment shall be physically segregated from all other materials or equipment within the facility and shall be identified as being the "PROPERTY OF THE CITY OF LOS ANGELES". Exercise measures necessary to ensure preservation of the quality, quantity, and fitness of such materials or equipment and perform the manufacturers recommended maintenance of the materials or equipment. Inspect the materials and equipment, and submit a monthly written report to the INSPECTOR listing the equipment stored, results of their inspection, and the maintenance performed.

10. Grant the INSPECTOR and the PROJECT MANAGER access to the storage facility at any time and assist the INSPECTOR and the PROJECT MANAGER in conducting a full view, piece by piece, inventory of all such material or equipment.

11. Provide additional insurance necessary to insure the materials or equipment against loss of damage. The insurance provided shall be provided as stated in Article 37, INSURANCE of the General Conditions. The insurance shall cover the material or equipment, while stored at the

approved site, while in transit to the project site, while being off-loaded at the site and until the material or equipment is incorporated into the Work and the Contract is accepted by the BOARD.

12. Be responsible for damage to, defects therein, misfabrication thereof, or loss of the materials or equipment.

13. Be responsible for any resulting Project delays or consequential damages as if the CONTRACTOR were the owner of the material or equipment until it is incorporated in the Work and accepted by the CITY.

14. Absorb any and all cost incurred to meet the requirements of this Article without modification in the Contract amount.

15. Present the storage arrangements in writing and sign a Security Agreement, which shall be submitted to the INSPECTOR for approval by the CITY ATTORNEY. This agreement shall set forth the terms of ownership, storage and insurance necessary to insure the material or equipment against damage or loss.

31. PAYMENT FOR PERMITS

See PAYMENT FOR MOBILIZATION of these General Requirements.

32. AUDIT AND ACCESS TO RECORDS

A. Maintain books, records, documents and other evidence directly pertinent to performance of Work under this Contract in accordance with generally accepted accounting principles and practices consistently applied. Also maintain the financial information and data used by the CONTRACTOR in the preparation or support of cost submissions required for this Contract, or any Modifications or claims, and a copy of the cost summary submitted to the CITY. The CITY authorized representatives shall have access, at all times during normal business hours, to such books, records, documents and other evidence for the purpose of inspection, audit and copying. Provide proper facilities for such access and inspection.

B. Agree to make A through G of this Article applicable to this Contract and Modifications or claims affecting the Contract price. Agree to include A through G of this Article in all his contracts and all tier Subcontracts in excess of $5,000, and to make A through G of this Article applicable to Modifications and claims related to Project performance.

C. Audits conducted under this Article shall be in accordance with generally accepted auditing standards and established procedures and guidelines of the reviewing or audit agency.

D. Agree to the disclosure of information and reports resulting from access to records under A and B of this Article, to the CITY and affected agencies.

E. Records under A and B of this Article shall be maintained and made available during performance of Work under this Contract until final payment, or until settlement of all disputes, claims, or litigation, whichever occurs later. In addition, those records which relate to any portion of this Contract, to any Modification, to any dispute, to litigation, to the settlement of claims arising out of such performance, or to costs or items to which an audit exception has been taken, shall be maintained and made available until final payment or until final resolution of such dispute, litigation, claim or exception, whichever occurs later.

F. This right of access Article applies to financial records pertaining to this Contract and all Contract Modifications. In addition this right of access applies to all records pertaining to all contracts, contract modifications, and contract amendments:

1. To the extent the records pertain directly to Contract performance;

2. If there is any indication that fraud, gross abuse or corrupt practices may be involved; or

3. If the Contract is terminated for default or for convenience.

G. Access to records is not limited to the required retention periods. The authorized representatives designated in A of this Article shall have access to records at any reasonable time for as long as the

records are maintained.

H. Provided that CITY has made demand for access or audit pursuant to this Article, CONTRACTOR's compliance with provisions A through G of this Article shall be a condition precedent to maintenance of any legal action or proceeding by the CONTRACTOR against the CITY and to CONTRACTOR's right to Progress or Final Payment. Without limitation to the foregoing or to any other provisions for withholding set forth in the Contract Documents, CITY shall have the right, in its sole discretion and in addition to any right of withholding of retention, to further withhold from any payment to CONTRACTOR a sum of up to ten percent (10%) of the total amount set forth in CONTRACTOR's current, unpaid Application(s) for Payment, until CONTRACTOR has complied with any outstanding and unsatisfied request by CITY for audits under this Article. Upon CONTRACTOR's compliance with this Article, any monies withheld pursuant to this Paragraph solely due to CONTRACTOR's failure to permit an audit requested by CITY shall be released to CONTRACTOR.

I. CONTRACTOR hereby consents and agrees that any failure by CONTRACTOR to provide access to records as provided in A through G of this Article shall be specifically enforceable by issuance of a preliminary and/or permanent mandatory injunction by a court of competent jurisdiction based on affidavits submitted to such court, without the necessity of oral testimony, to compel CONTRACTOR to permit access and inspection of the records or to require delivery of the records to CITY for inspection.

MISCELLANEOUS

33. INTERFACE/COORDINATION REQUIREMENTS

A. Vehicular and pedestrian traffic adjacent to the laydown area and/or within the jobsite must be maintained. If an existing street in the CONTRACTOR's work area is to be demolished or obstructed, the CONTRACTOR shall be responsible for providing access through or around the effected area, including signs, barricades, and lights, as approved by the PROJECT MANAGER and any local agencies having jurisdiction over any public access areas. The CONTRACTOR shall follow WATCH standards and City of Los Angeles Department of Transportation Worksite Traffic Control Plans for all traffic, including a minimum traffic lane dimensions for vehicles and pedestrians.

B. The CONTRACTOR shall not park any vehicles, including concrete, hauling and delivery trucks, in any street at any time unless approved by the PROJECT MANAGER. Access must be maintained at all times for emergencies, sampling, equipment operations, maintenance and like items.

C. Before altering any vehicular or pedestrian access, the CONTRACTOR shall notify the PROJECT MANAGER thirty (30) days in advance on forms provided by the PROJECT MANAGER. The CONTRACTOR shall then request the alteration on forms provided by the PROJECT MANAGER. Requests shall include reasons for the alteration, times, boundary limits, special safety measures, proposed traffic rerouting with widths of such route, and a map detailing the above. Such requests shall be submitted to the PROJECT MANAGER not less than fifteen (15) days before the requested date of the access alteration. If any of the information changes, an additional fifteen (15) days may be required after the changes are brought to the attention of the PROJECT MANAGER. Approval when granted, will always be conditional. Final approval of the request, including date and time, will be given three (3) days in advance. The CITY retains the right to ticket and impound vehicles blocking traffic.

34. PROGRESS PHOTOGRAPHS

A. As directed by the PROJECT MANAGER, take a minimum of 4 views of each Project worksite location, at 14 days intervals during the entire period of Contract Work. Take the first photographs before start of construction operations at the jobsite. Take the final photographs when all Contract Work has been completed and accepted by the CITY regardless of time intervals since previous photographs were taken. View locations shall be as directed by the PROJECT MANAGER.

B. Provide 4, 8-inch by 10-inch color prints of each photograph on double weight glossy paper with each monthly progress report. Clearly label each print with the name of the job, view location, date of exposure and CONTRACTOR's name. Photographs and prints shall be of professional quality.

C. Submittal of progress photographs shall be a condition precedent to the making of the monthly payments.

35. COMMUNITY RELATIONS

A. The contractor shall cooperate with the City in conducting a public relations program for the project. The program will provide information to address concerns and complaints and to promote a positive project image. Contractor cooperation shall include the following:

1. The Project Manager shall attend public meetings, when requested by the PROJECT MANAGER.
2. Provide safe access for on-site community meetings and tours, on average twice per month per work site. Tours will be conducted by the PROJECT MANAGER and will be coordinated with the Contractor to limit interference with the work.
3. Do not provide any information directly to the public or news media without approval of the PROJECT MANAGER.

36. PROJECT CLOSEOUT

A. CLOSEOUT TIMETABLE

The CONTRACTOR shall establish dates for equipment testing and acceptance periods (as required under the Contract). Such dates shall be established not less than one week prior to beginning any of the foregoing items, to allow the CITY, the PROJECT MANAGER, and their authorized representatives sufficient time to schedule attendance at such activities.

B. FINAL SUBMITTALS

1. The CONTRACTOR, prior to requesting final payment, shall obtain and submit the following items to the PROJECT MANAGER.
    a. Written guarantees, where required.
    b. Technical manuals and instructions.
    c. Maintenance stock items; spare parts; special tools.
    d. Completed record drawings.
    e. Certificates of inspection and acceptance by local governing agencies having jurisdiction.
    f. Releases from all parties who are entitled to claims against the subject project, property, or improvement pursuant to the provisions of law.

C. FINAL CLEANUP

The CONTRACTOR shall perform all tasks specified in REMOVAL, CLEANUP, AND DEMOBILIZATION of these General Requirements.

D. MAINTENANCE AND GUARANTEE

1. The CONTRACTOR shall make all repairs and replacements promptly upon receipt of written order from the PROJECT MANAGER. If the CONTRACTOR fails to make such repairs or replacements promptly, the PROJECT MANAGER reserves the right to do the work and the CONTRACTOR and his surety shall be liable to the CITY for the cost thereof.
2. Replacement of earth fill or backfill, where it has settled below the required finish elevations, shall be considered as a part of such required repair work, and any repair or resurfacing constructed by the CONTRACTOR which becomes necessary by reason of such settlement shall likewise be considered as a part of such required repair work.

E. BOND

1. The CONTRACTOR shall provide a bond to guarantee performance of the provisions contained in Article 31 and Article 37 (Paragraph K) of the General Conditions, Article 24 of these General Requirements, Paragraph D of this Article.

III. SUPPLEMENTARY GENERAL REQUIREMENTS

GRANADA HILLS PARK
POOL AND BATHHOUSE REPLACEMENT
PROJECT

PREPARED BY:

BUREAU OF ENGINEERING - ARCHITECTURAL DIVISION
DEPARTMENT OF PUBLIC WORK
CITY OF LOS ANGELES

WORK ORDER NO: E170517F

ENGINEERING
CITY OF LOS ANGELES

THIS PAGE INTENTIONALLY LEFT BLANK

SUPPLEMENTARY GENERAL REQUIREMENTS

1.0 GENERAL SCOPE OF WORK:

A. Work in this Contract: All labor, material, and equipment necessary for construction of **the Granada Hills Park - Pool and Pool Building Replacement** as noted on the Contract Drawings and in these Specifications (Project Manual) and all other Contract Documents including but not limited to the GENERAL CONDITIONS, and GENERAL REQUIREMENTS.

B. Demolition of existing pool, pool deck, pool equipment building, utilities and other improvement elements as shown on Plan Sheets CD101, C400, L-0.20, L-0.30, L-1.01, L-1.02, A2.00, P2.00, PSD1.01, E-1.1.

C. Demolition, removal or modification of erosion control as shown on Plan Sheet C600 will be necessary to construct this project and must be included in contract price.

D. The Project Site will be excavated and re-compacted per the Geotechnical Report to permit construction of the pool and pool equipment building. This area boundary is approximately 160 feet southerly of Chatsworth Street property line and about 50 feet easterly of the existing concrete walkway edge that leads into the park from Petit Ave. This area must be excavated and re-compacted to conform to the Geotechnical Report and to allow construction of the project. This is to be included in the contract price.

1.1 CONTRACT DRAWINGS: In addition to provisions noted in the GENERAL CONDITIONS and the GENERAL REQUIREMENTS.

1.2 The following are in addition to GENERAL CONDITIONS and GENERAL REQUIREMENTS:

- This Supplementary General Requirements
- All Soils Report Approval Letters from the Department of Building and Safety for this project.
- All Soils Report Correction Letters from the Department of Building and Safety for this project.
- All Geotechnical and Supplementary Geotechnical Engineering Reports, Geotechnical Engineering Division for this project.
- Asbestos and Lead Survey Report for this project.
- Protection of Trees During Construction Guidelines (12-page Tree Care Manual)
- Project Specifications. See specifications set.
- Construction Document Sheets. See plans set.

1.3 **PRIME CONTRACTOR'S MINIMUM QUALIFICATIONS and EXPERIENCE:** The prime contractor that will actually construct the project must have adequate qualifications and experience in constructing public recreation facilities. In order for a bid to be considered eligible for this project, the prime contractor must have completed at least three (3) public recreation facilities of $5 million or greater each for government agencies in the past six (6) years. The facilities must be new construction and currently in operation. The bidder must complete and submit with the bid the "Prime Contractor's Minimum Qualifications – Experience with Public Recreation Facilities Construction" forms (pages GR-S3 through GR-S4), attached herewith. **Failure to submit the completed said forms with the bid or failure to meet the minimum qualifications of the Prime Contractor will result in the bid being non-responsive**.

1.4 **POOL CONTRACTOR'S MINIMUM QUALIFICATIONS and EXPERIENCE:** The specific contractor that will actually construct the lap pool and spray pad activity pool must have adequate qualifications and experience in constructing public swimming pools comparable to this project. In order for a bid to be considered eligible for this project, the pool contractor must have a C-53 license and must have completed in the last six (6) years at least five (5) public use pools for government agencies each with:

- A size of at least 50 meters in length and water surface area in excess of 6,000 square feet, **or** a size of at least 25 yards in length and water surface area in excess of 6,000 square feet
- Cast-in-place concrete construction or shortcrete construction
- Tile finish with painted finished or plastered finished concrete shell
- Perimeter overflow gutter in conjunction with a self-modulating surge and balance tank system

The pools must be all new construction including the pool shell and must be currently in operation for at least one

year. Only cast-in-place concrete or shortcrete built pools will be considered in assessing the required experience of the POOL CONTRACTOR. The bidder must complete and submit with the bid the "Pool Contractor's Minimum Qualifications – Experience with Public Swimming Pool Construction" forms (pages GR-S5 through GR-S6), attached herewith. **Failure to submit the completed said forms with the bid or failure to meet the minimum qualifications of the Pool Contractor will result in the bid being non-responsive**.

1.5 **QUALIFIED STORM WATER POLLUTION PREVENTION PLAN (SWPPP) DEVELOPER (QSD) and QUALIFIED SWPPP PRACTITIONER (QSP):** All qualifying bidding contractors shall have under their employment or contract the QSD that will be responsible for preparing, amending, and certifying the SWPPP for this project, and the QSP that will be responsible for performing the monitoring of the storm water and non-storm water visual observations, sampling, and analysis of the Best Management Practices (BMPs) required by the State of California Water Resources Control Board General Permit and the Section 01571 of the specifications. This form (page GR-S7) must provide valid names and certification numbers for the QSD and QSP at the time of bid to meet the minimum qualification for this project; however, submission of the form (pages GR-S7) does not in and of itself constitute qualification. **Failure to submit the completed said form with the bid will result in the bid being non-responsive**.

1.6 The following supplements modify the **"GENERAL REQUIREMENTS" (ATTACHMENT 'A')**

1. ADD Section **01116 "ELECTRONIC DOCUMENT CONTROL"**

2. ADD Section **01212 "FIXED CASH ALLOWANCE ITEMS"**

3. ADD Section **01353 "OPPORTUNITY TO PARTNER"**

4. SUBSTITUTE **Article 18 CONSTRUCTION SCHEDULE AND COMMENCEMENT OF WORK**" for Section **01321 "CONTRACTOR'S CONSTRUCTION SCHEDULE AND REPORTS"**

5. SUBSTITUTE **Article 10" SUBMITTALS"** for Section **01330 "SHOP DRAWINGS/SUBMITTALS"**

6. ADD **Section 01520 "CONSTRUCTION FACILITIES"** that will be used to substitute **Article 6 Mobilization**, Section B. Temporary Construction Utilities and Worksite Facilities, Note 6 in reference to field office trailers.

7. MODIFY the following items under **"MOBILIZATION"**

    a. ADD the following Note 15 under Item A. General: At least ten (10) days before the start of construction, the CONTRACTOR is required to notify, in writing, abutting property occupants of the proposed construction start date. A copy of said written notification shall be provided to the INSPECTOR.

8. ADD **Section 015723 "Stormwater Pollution Control Measures for Construction Activities,"** for project involves construction activity on more than one acre of disturbed soil.

PRIME CONTRACTOR'S MINIMUM QUALIFICATIONS -- EXPERIENCE with PUBLIC RECREATION FACILITIES CONSTRUCTION

FAILURE TO SUBMIT THIS FORM WITH THE BID OR FAILURE TO MEET THE MINIMUM QUALIFICATIONS OF THE PRIME CONTRACTOR OR FAILURE TO SUBMIT THIS FORM WITH THE BID WILL RESULT IN THE BID BEING NON-RESPONSIVE

The intent of this form is to solicit information to confirm if the prime contractor meets the minimum qualifications for the (Project Title). The prime contractor that will actually construct the project must have adequate qualifications and experience in constructing public recreation facilities. In order for a bid to be considered eligible for this project, the prime contractor must have completed at least three (3) public recreation facilities of $5 million or greater each for government agencies in the past six (6) years. The facilities must be new construction and are currently in operation. The bidder must complete and submit with the bid the "Prime Contractor's Minimum Qualifications – Experience with Public Recreation Facilities Construction" forms (pages GR-S3 through GR-S4), attached herewith. The forms (pages GR-S3 through GR-S4) will help to determine if the GENERAL CONTRACTOR meets the minimum qualification for this project; however, submission of the forms (pages GR-S3 through GR-S4) does not in and of itself constitute qualification.

The Bidder must submit information below on projects that the PRIME CONTRACTOR has completed.

POOL CONTRACTOR'S MINIMUM QUALIFICATIONS AND EXPERIENCE WITH PUBLIC SWIMMING POOLS CONSTRUCTION

FAILURE SUBMIT THIS FORM WITH THE BID OR FAILURE TO MEET THE MINIMUM QUALIFICATIONS OF THE POOL CONTRACTOR WILL RESULT IN THE BID BEING NON-RESPONSIVE

The intent of this form is to solicit information to confirm if the Pool Contractor meets the minimum qualifications as a pool builder for the Granada Hills Pool and Bathhouse Replacement project. The POOL CONTRACTOR that will actually construct the swimming pool must have completed in the last six (6) years at least five (5) public use recreation pools for government agencies with full perimeter deep trough gutter, surge tank, individual water surface area in excess of 6,000 square feet, and a depth of 12 feet or more. The pools must be all new construction including the pool shell and must be currently in operation for at least one year. These forms (pages GR-S2 through GR-S3) will help to determine if the POOL CONTRACTOR meets the minimum qualification for this project; however, submission of the forms (pages GR-S2 through GR-S3) does not in and of itself constitute qualification.

Submit the following information on projects that the POOL CONTRACTOR has completed.

PROJECT NO. 1

A. Project Information

1. **Project Name and Address** _____

SECTION 01116

ELECTRONIC DOCUMENT CONTROL

1.1 USE OF ELECTRONIC DOCUMENT CONTROL SYSTEM

A. The CONTRACTOR shall use a web based document control system to submit and receive all construction related documentation on this project. The system used is “e2020” and costs associated for the use of the software have been paid for by the City. The website address to be used will be provided by the PROJECT MANAGER after award of the contract. The CITY will provide training to the CONTRACTOR on the use of the system. The information to be generated, transmitted and tracked by the e2020 document control system shall include, but not be limited to the following:

1. Correspondence (including PROJECT MANAGER’s Communication).
2. Plan Clarifications.
3. Request for Information (RFI’s).
4. Shop Drawings.
5. Change Orders.
6. Allowance Orders.
7. Progress Photos.
8. Project Schedules.
9. Meeting Minutes.
10. Permits.
11. Partnering (Issue Resolution Ladder, Charter).

B. When large drawings or product samples are required to be submitted that cannot be submitted through e2020, the CONTRACTOR shall:

1. Upload a transmittal sheet for the submittal in e2020,
2. Submit six (6) full-size hard copies,
3. Submit one half-sized hard copy (not exceeding 11x17 inches),
4. Transmit electronic files to the PROJECT MANAGER in Adobe Acrobat (.PDF) format.

C. The CONTRACTOR shall be responsible for the installation of its own computer system, scanner, and the procurement of an Internet Service Provider (ISP) with a high speed broadband internet connection for its own and the PROJECT MANAGER/INSPECTOR site offices to access the document control system.

D. At the request of the PROJECT MANAGER, the CONTRACTOR must provide a hard copy of approved submittals to the INSPECTOR, at no additional cost to the CITY.

(END OF SECTION)

SECTION 01212
FIXED CASH ALLOWANCE ITEMS

1.1 THE REQUIREMENT

A. A fixed cash allowance has been allocated to each of the following items of the Bid Breakdown (see Bid Proposal). Requirements for each Fixed Cash Allowance Item are specified in the GENERAL REQUIREMENTS (GR) section referenced below. Overhead and Profit, at the rates listed below, shall be added to the actual invoiced amount.

Bid Item No.	Description	Overhead and Profit
1.	MOBILIZATION per GENERAL REQUIREMENT, Article 21 **$200,000**	0%
2.	ALLOWANCE FOR PERMIT per the GENERAL CONDITION Article 19 and GENERAL REQUIREMENTS Article 31. **$70,600**	0%

B. If these items are not executed, or are only partially executed, or the allowance for any item is not expended or partially expended, then a deductive Change Order shall be issued for the amount that is not expended. If, however, these items are over expended (with ENGINEER'S prior approval), then an appropriate Change Order shall be executed in accordance with the provisions of the GENERAL REQUIREMENTS Section 01254 –- CHANGE ORDERS, except for Overhead and Profit wherein the above listed rates shall apply.

C. The ENGINEER'S AND INSPECTOR'S field office supply allowance is to be used at the ENGINEER'S and/or INSPECTOR'S discretion to purchase office supplies and/or office equipment, perform repairs to field offices or equipment owned or leased by the City, pay field office utility bills, purchase reference documents, etc. The items covered by this allowance are in addition to those required to be furnished by the CONTRACTOR under GR Section 01721-Mobilization. The CONTRACTOR shall be reimbursed the actual invoice amount plus the markup allowed by Section A, above.

(END OF SECTION)

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01353
OPPORTUNITY TO PARTNER

1.1 THE REQUIREMENT

A. The successful bidder will have the opportunity to enter into a cooperative partnership agreement with the CITY for the contract. Participation in Partnering is highly encouraged. Partnering will create a framework for conflict resolution, improved communications, reduced litigation, and cost containment. During the partnering session, all parties will participate in developing an Issue Resolution Ladder, which will help establish and communicate the chain of command in each organization (See Attachment 01353–A1). Each level of the organization is expected to work cooperatively to resolve issues. However, if issues cannot be resolved in a timely manner or are beyond the authority granted that level, each party understands that the issue must be elevated to the next level.

B. The objective of this Partnering agreement would be effective completion of the Work on time and to achieve a standard of quality that would be a source of pride to both the CITY and the CONTRACTOR. Partnering is intended only to establish an environment of cooperation between the parties and will not affect the terms of this contract.

C. An initial partnering session of 8 hours is recommended to initiate the partnership agreement. All subsequent partnering sessions (of 4 hours each) shall be held quarterly unless it is deemed unnecessary by the PROJECT MANAGER. The meeting shall be held at a mutually agreed upon time and place. The cost of the partnering session shall exclude staff labor charges. No Overhead and Profit shall be added to the cost of the partnering session. If a third-party facilitator is used, a change order will be issued to the contractor to reimburse the contractor for the cost of the facilitator.

SECTION 01353

SECTION 01321

CONTRACTOR'S CONSTRUCTION SCHEDULE AND REPORTS

1. THE REQUIREMENT

A. Progress of the Work

1. It is expressly understood and agreed that the time of beginning, the rate of progress, and the time of completion of the Work are of the essence of this Contract. The Work shall be executed with such progress as required to prevent any delay to other CONTRACTORS that may be working on other contracts at the site, the Contract milestones, and the general completion of the Contract.

B. CONTRACTOR'S Construction Scheduler

1. The CONTRACTOR shall continuously employ or retain the services of a Construction Scheduler. The Construction Scheduler shall have at least five (5) years of verifiable experience as the person primarily responsible for preparing and maintaining detailed project schedules on projects of the same or similar size and nature as this project. The Construction Scheduler is required to attend all meetings pertaining to scheduling and progress of the Work. If the construction scheduler leaves employment of the CONTRACTOR, the CONTRACTOR must fulfill the requirements of B.2 a and b within thirty (30) days.

2. Within five (5) calendar days after the Notice of Award the CONTRACTOR shall provide a statement to the PROJECT MANAGER with the following:

a. Identification, qualifications, and experience of the CONTRACTOR’S Construction Scheduler and all other members of the CONTRACTOR’S scheduling staff.

b. References of not less than two (2) previous projects on which the CONTRACTOR’S Construction Scheduler has utilized CPM scheduling.

(As used in this Section only, "days" mean consecutive calendar days unless otherwise noted.)

3. The PROJECT MANAGER and the INSPECTOR reserve the right to disapprove any scheduling candidate or Scheduling System proposed for the project. The PROJECT MANAGER and the INSPECTOR reserve the right to remove, without rights to work on the project, any member of the CONTRACTOR’S scheduling staff, that is, in the PROJECT MANAGER’S or INSPECTOR’S opinion, incompetent in scheduling.

C. General

1. Schedule Methodology

a. The scheduling method to be used shall be a Critical Path Method schedule in the form of an activity on node Precedence Diagram Network (PDN) with capabilities of identifying the critical path. The principles and definitions of the terms used herein shall be as set forth in the Associated

General CONTRACTOR'S publication "CPM in Construction", latest edition. To the extent there are any conflicts between the Associated General CONTRACTOR'S publication and the Specifications, the Specifications shall govern.

2. Work Breakdown Structure

a. The CONTRACTOR shall submit to the PROJECT MANAGER for approval, at the Preconstruction Scheduling Conference, the following:

1) A Work breakdown structure.

2) The associated alphanumeric coding structure to implement the Work breakdown structure.

3) The activity identification system for labeling all Work activities.

The first code field shall designate the bid item. The second code field shall identify the type of activity. (Types of activities shall be defined as "submittal", "review/approval", "procurement/fabrication", "delivery", and "construction/installation" or "Change Order".) The third code field shall identify which Specification section the activity shall be paid under. The fourth code field shall identify who is responsible to perform the activity (i.e., CONTRACTOR, Subcontractor(s), Supplier, etc.). The fifth code field shall identify the area being worked in or the facility, if appropriate. The sixth code field shall identify the construction phase or project element (if phasing of Work or project elements are identified in the Contract.) All Change Orders and Notices of Non-Compliance shall be included as separate code fields.

3. Scheduling System

The CONTRACTOR shall use Primavera Project Management or Microsoft Project, latest version, and a hardware system commensurate with the size of the program. This shall be referred to as the Scheduling System. The system shall be capable of handling, processing, printing, and plotting data to satisfy all requirements of this Section.

D. Preconstruction Scheduling Conference

1. The PROJECT MANAGER will schedule and conduct a Preconstruction Scheduling Conference with the CONTRACTOR'S Project Manager and Construction Scheduler within seven (7) calendar days after Notice of Award, to commence development of the required project schedule. At this meeting, the requirements of this Section, as they apply to the Contract, will be reviewed with the CONTRACTOR. The CONTRACTOR shall be prepared to review and discuss methodology for the schedule and sequence of operations plus cost, manpower, and equipment loading methodology.

The Contractor shall include the effects of adverse weather in the construction schedule in terms of working days (wds). The number of wds, Monday through Friday excluding any day designated as a holiday by the City or in a Master Labor Agreement binding Contractor, of normal adverse weather per month is as follows: January-3 wds, February-2 wds, March-3 wds, April-1 wd, October-1 wd,

November-2 wds, December-2 wds. Unusually severe weather is defined as the number of working days over what is normal adverse weather, as defined in the previous sentence. For partial months, the aforementioned numbers shall be prorated and rounded to the nearest whole number. There shall be no extension of time for adverse weather unless the Contractor is prevented from working during the first five (5) hours of a workday with at least sixty percent (60%) of the normal work force on more days per month than listed above. Even if there is unusually severe weather, a non-compensable extension of time will not be granted unless the other conditions required by the General Conditions (GC) are met, negative impact to the critical path and delay beyond the current Contract Completion date in particular.

E. CONTRACTOR'S Detailed Project Schedule

1. Fifteen (15) calendar days after approval of the Preliminary Project Schedule, the CONTRACTOR shall provide to the PROJECT MANAGER an update on the progress in the development of the Project Schedule. The CONTRACTOR shall prepare and submit to the PROJECT MANAGER the Project Schedule within forty-five (45) calendar days after approval of the Preliminary Project Schedule.

2. The Detailed Project Schedule shall show the sequence and interdependence of activities required for complete performance of the Work, beginning with the date of the Notice to Proceed and concluding with the date of Final Completion of the Contract.

3. Pursuant to the float sharing requirements of the Contract, use of float suppression techniques such as preferential sequencing, special lead/lag logic restraints, extended activity times or imposed dates shall be cause for rejection of the Project Schedule and any revisions or updates. The use of float time disclosed or implied by the use of alternative float suppression techniques shall be shared as directed by the PROJECT MANAGER.

4. If the CONTRACTOR submits a Detailed Project Schedule showing completion of the Work more than thirty (30) calendar days in advance of the Contract completion date, the schedule shall show the time between the early completion date and the current Contract completion date as "project float". The CONTRACTOR agrees that the PROJECT MANAGER may, at no cost to the CITY, decrease the Contract duration by issuance of a Change Order which will change the appropriate Milestone Date(s) and the Contract completion date to the completion date reflected on the Project Schedule. Any approved schedule, revision, or update having an early completion date shall show the time between the early completion date and the current Contract completion date as "project float".

5. The PROJECT MANAGER will review and make comments on the Project Schedule. Meetings will be held between the PROJECT MANAGER, the CONTRACTOR, and all Subcontractors and Suppliers whom the CONTRACTOR may desire to invite or whom the PROJECT MANAGER may request be present.

6. Comments made by the PROJECT MANAGER on the Project Schedule, during review, will not relieve the CONTRACTOR from compliance with requirements of the Contract Documents. To the extent that there are any conflicts between the approved schedule and the requirements of the Contract Documents, the Contract Documents shall govern.

7. If requested by the PROJECT MANAGER at any time during the project, the CONTRACTOR shall provide highly detailed, a short-term schedule for specific crucial items (work-around, start-up, etc.) or for change order work that may change the schedule.

F. Network Details

1. The Project Schedule for the Contract shall include time-scaled network diagrams, based on calendar days, as well as computer tabulations. It shall be constructed to show the order in which the CONTRACTOR proposes to carry out the Work, to indicate restrictions of access and to show availability of Work areas, and availability and use of manpower, materials and equipment. The CONTRACTOR shall utilize the Project Schedule in planning, scheduling, coordinating, and performing the Work under the Contract (including all activities of Subcontractors, equipment vendors, and Suppliers). The CONTRACTOR will provide the PROJECT MANAGER with written confirmation of the concurrence of all major trade Subcontractors and Suppliers with the Project Schedule. (The term "major Subcontractors and Suppliers" as used in this Section, shall include any Subcontractor or Supplier with five (5) percent or more of the value of the Contract.) The logic shall be determined by which activity must be completed before a successor can start; maximum concurrent work; and manpower or equipment constraints which prevent concurrent work.

2. The Project Schedule shall provide the PROJECT MANAGER with a tool to monitor and follow the progress of all phases of the Work. The Project Schedule submitted to the PROJECT MANAGER shall comply with all limits imposed by the scope of Work, with all contractually specified intermediate milestone and completion dates, and with all constraints, restraints or sequences included in the Contract. The degree of detail shall include factors to the satisfaction of the PROJECT MANAGER, including, but not limited to:

a. Physical breakdown of the project.

b. Contract milestones and completion dates, substantial completion dates, constraints, restraints, sequences of Work shown in the Contract, the planned substantial completion date, and the final completion date.

c. Type of Work to be performed, the sequences, and the labor trades involved.

d. All purchases, submittals, submittal reviews, manufacturing, tests, delivery, and installation activities for all major materials and equipment, and a separate list of all major material items or items of equipment for which the CONTRACTOR intends to seek payment prior to installation.

e. Deliveries of CITY furnished equipment and/or materials in accordance with the dates or schedule windows of such items set forth in the Contract or furnished by the PROJECT MANAGER, or items to be salvaged and delivered to the CITY.

f. Preparation, submittal and approval of Shop and/or Working Drawings and material samples showing a [thirty (30) (for WW)][Twenty-one (21) (for MF)

day minimum time specified for the PROJECT MANAGER'S review of normal or routine submittals and a forty five (45) day review time for all major submittals, so identified in the technical specifications, and the same time frame shall be allowed for at least one (1) resubmittal on all major submittals so identified in the Contract Documents.

g. Approvals required by regulatory agencies or other third parties [notifications to utility companies, and request of services].

h. Planned activities for all subcontract Work, [concrete placement sequence, structural steel, plumbing, heat, ventilation, air conditioning, electrical, etc.].

i. Assignment of responsibility for performing specific activities,[notifications to utility companies and request of services].

j. Access to and availability of Work areas including all anticipated plant shutdowns, if applicable.

k. Identification of interfaces and dependencies with preceding, concurrent and follow-on CONTRACTORS and utilities as shown on the Plans or called out in the Specifications.

l. Resource loading for cost, manpower, material, and equipment.

m. Actual tests by the CONTRACTOR and the CITY, submission of test reports, and approval of test results.

n. All start up, testing, training, and assistance required under the Contract.

o. Planning for phased or total takeover by the CITY.

p. Punchlist and final cleanup.

q. Identification of any manpower, material, or equipment restrictions, as well as any activity requiring unusual shift work, such as two shifts, six (6) day weeks, specified overtime, or work at times other than regular days or hours, shall be clearly identified in the Project Schedule.

3. The activities included in the Project Schedule shall be analyzed in detail to determine activity durations in units of project working days. Durations shall be based on the labor, equipment, and materials required to perform each activity on a normal Workday basis. No on-site activity shall have a duration over fifteen (15) working days except non-construction activities such as submittals, submittal reviews, procurement and delivery of materials or equipment, and concrete curing. Only on-site construction activities will be shown in their resource loaded state to reflect cost, manpower, materials and equipment except for those activities specifically identified under 1.1F.2d of this Section. The manpower and equipment, by item designation, shall be shown for each construction activity for the network on a tabular listing, and in information furnished in accordance with O and P of this Section.

4. Critical or near critical paths resulting from the use of manpower or equipment restraints shall be kept to a minimum. Near critical paths shall be defined as those

paths having [fifteen (15) working days] [twenty one (21) calendar days] or less of total float at the time of initial submission. Restraints related to resource loading must be identified as “For resource loading only”.

5. The estimated cost to perform each work activity shall be noted for each activity in the network on a tabular listing. The sum of the costs assigned to all activities shall equal the Contract value. No activity costs shall be assigned to submittals or submittal reviews. The accepted cost loaded Project Schedule shall constitute the Schedule of Values in accordance with the SCHEDULE OF VALUES / CONTRACT PRICE BREAKDOWN of these GENERAL REQUIREMENTS, from which monthly progress payments will be made in accordance with the provisions of PARTIAL PAYMENTS in these GENERAL REQUIREMENTS. Acceptance of the Cost Loaded Schedule by the CITY does not relieve the CONTRACTOR’S responsibility to submit any cost information or data as requested by the PROJECT MANAGER for verification of cost.

6. The network diagram shall be prepared on (E) size sheets (28 inches by 40 inches), shall have a title block in the lower right-hand corner, and a timeline on each page. Exceptions to the size of the network sheets and the use of computer graphics to generate the networks shall be subject to the approval of the PROJECT MANAGER.

7. All networks shall be drafted time scaled to show a continuous flow of information from left to right. The primary path(s) of criticality shall be clearly and graphically identified on the network(s).

G. Detailed Project Schedule Reports

1. The Project Schedule submitted to the PROJECT MANAGER shall include the time scaled network diagram. Network diagrams shall be based on early start and early finish dates of activities shown. The network diagrams submitted to the PROJECT MANAGER shall also be accompanied by a computer-generated mathematical analysis for each activity included in the Project Schedule. Such mathematical analysis shall be submitted to the PROJECT MANAGER and shall include at a minimum, the following:

   a. A list of all activities sorted by Activity I.D. Number with predecessor and successor activity numbers and descriptions;

   b. Activity number and description.

   c. Activity code(s).

   d. Schedule and actual/remaining duration for each activity.

   e. Earliest start date (by calendar date).

   f. Earliest finish date (by calendar date).

   g. Actual start date (by calendar date).

   h. Actual finish date (by calendar date).

   i. Latest start date (by calendar date).

j. Latest finish date (by calendar date).

k. Float in work days.

l. Monetary value and cost-to-date of each activity.

m. Percentage of activity complete and remaining duration for incomplete activities.

n. Cumulative value of Work completed based on the CONTRACTOR'S reported portion of activities complete and accepted.

o. Imposed constraints and/or contractual milestones.

2. The following printed computer outputs shall be required as part of the Project Schedule submittal and each revision or update thereafter as a condition precedent to receipt of progress payments:

a. Activity listing sorted by I.D. number showing predecessor and successor activities in numerical order, with original and remaining duration, early start, early completion, late start, late completion and total float.

b. A sublisting of materials and equipment sorted by Specification Section number. The sublisting of materials and equipment shall include the following activities: preparation of Shop Drawings, submittal to the PROJECT MANAGER, review by the PROJECT MANAGER, and fabrication, testing, and/or delivery of material and equipment which shall be interfaced with the earliest start date that the material or equipment is to be installed on the project.

c. Activity sort(s) by organizational responsibility, including submittals to the PROJECT MANAGER for all major items or material and equipment, the number of shifts, crew sizes of each craft and construction equipment to accomplish the activity;

3. Outputs 1 and 2, above, shall show all activities, including restraints, for the duration of the project.

H. Approval Of Baseline Project Schedule

1. The Project Schedule network diagram and computer tabulations, the Cash Flow Projection, and the Manpower and Equipment Requirements Forecast shall be submitted to the PROJECT MANAGER for approval in the following quantities:

a. **Three (3)** sets of the Network Diagram and Master Bar Chart Summary Schedule.

b. Computer tabulations, Predecessor/Successor Report (three (3) copies, 8 1/2" x 11" in size).

c. Manpower Requirements Forecast (three (3) copies, 8 1/2" x 11" in size).

d. Cash Flow Projection (three (3) copies, 8 1/2" x 11" in size).

e. All required reports specified in F and G of this Section (three (3) copies).

f. Three (3) CD's with appropriate job title, data date, and date of submittal shall be labeled on them.

g. Written confirmation of concurrence of all major trade Subcontractors and Suppliers.

2. Approval Process:

a. The PROJECT MANAGER shall approve or disapprove, in writing, the CONTRACTOR'S submission within twenty one (21) calendar days after receipt of all required information. The Project Schedule, once approved, becomes the Baseline Record Schedule which shall be used for monitoring and evaluating all facets of Contract performance, including, but not limited to; progress, changes, and delays, and shall be referred to as the Record Schedule.

b. The CONTRACTOR, the CONTRACTOR'S Construction Scheduler, and those major trade Subcontractors and Suppliers, as required by the PROJECT MANAGER, shall be required to participate in all meetings necessary to reach mutual agreement and approval of the initial Project Schedule, the Manpower Requirements Forecast, and the Cash Flow Projection.

c. The CONTRACTOR shall revise the schedule, as required by the PROJECT MANAGER, to reflect project construction. If any of the required submissions are returned to the CONTRACTOR for corrections or revisions, they shall be resubmitted along with a new CD and a hard copy listing of each change (Claim Digger report) for approval within seven (7) calendar days after receipt. Resubmittals shall be as required in H.1 and H.2 of this Section. Review and response by the PROJECT MANAGER shall be given within **seven (7) calendar days** after receipt of each new submission.

d. Should the Baseline Project Schedule, submitted for approval, show variances from the requirements of the Contract, the CONTRACTOR shall make specific mention of such variations in the letter of transmittal, in order that, if accepted, proper adjustments to the Project Schedule can be made. Otherwise, the CONTRACTOR will not be relieved of the responsibility for executing the Work in strict accordance with the requirements of the Contract Documents.

e. Submittal and approval of the initial Detailed Project Schedule, the Manpower Requirements Forecast, the Cash Flow Projection, major trade Subcontractor and Supplier confirmation in writing, or CD(s), within the time prescribed, or revisions thereof within the required time, is a condition precedent to the issuance and payment of progress payments.

f. Failure of the CONTRACTOR to submit the Baseline Project Schedule, or any required resubmittals, in a timely, accurate manner and in accordance with the requirements of this Section will result in costs to the CITY which are difficult if not impossible to determine; therefore, the CONTRACTOR

shall pay the CITY liquidated damages in the amount of $300 per calendar day, for every work day the schedule submittal, revision, or resubmittal is late. This amount shall be subtracted from any monies due and shall be forfeited by the CONTRACTOR.

I. Revisions To Approved Baseline Project Schedule

1. The CONTRACTOR shall execute the Work in accordance with the approved Baseline Project Schedule. Out of sequence construction, defined as a change in the Project Schedule, requires prior approval of the PROJECT MANAGER as defined below.

2. Upon approval of a Time Impact Analysis the change shall be reflected in the next schedule submittal by the CONTRACTOR.

3. No change (except for resubmittals) to the approved Baseline Project Schedule or the Record Schedule shall be made without the prior written approval of the PROJECT MANAGER. If the CONTRACTOR desires to make a change to the approved Baseline Project Schedule, the CONTRACTOR shall request permission from the PROJECT MANAGER in writing, stating the reasons for the change as well as the specifics, such as revisions to activities, logic, durations, etc. The PROJECT MANAGER will provide a response within five (5) calendar days. Actual status and/or forecast dates for revised submittals shall be added without prior acceptance by the PROJECT MANAGER. They are still subject to review by the PROJECT MANAGER.

4. If the PROJECT MANAGER considers a schedule change to be of a major nature, the PROJECT MANAGER may require the CONTRACTOR to revise and submit for acceptance all of the affected portion(s) of the Project Schedule including an analysis to show the effect on the entire project. The proposed revision and analysis shall be submitted to the PROJECT MANAGER within fifteen (15) calendar days after the PROJECT MANAGER notifies the CONTRACTOR the revision is of a major nature. A change will be considered to be of a major nature if the time estimated for an activity or sequence of activities is varied from the original plan to the degree that there is reasonable doubt that the Contract completion date will be met, or if the change impacts the Work of other CONTRACTORS at the Jobsite. Changes to activities having adequate float shall be considered as minor changes, except that an accumulation of minor changes may be considered a major change when such changes affect the Contract completion date. (Activities having adequate float are activities which are not critical after the change is made.).

5. Only upon approval of a change by the PROJECT MANAGER shall it be reflected in the next schedule update submitted by the CONTRACTOR.

J. Updates To Approved Baseline Project Schedule And Progress Payments

1. Monthly Updates:

a. All updated or revised schedules shall be submitted in the same detail as the original submittal, unless modified in writing by the PROJECT MANAGER. Written confirmation of the major trade Subcontractors and Suppliers shall be required quarterly.

b. The initial updating shall be submitted within seven (7) calendar days after approval of the Baseline Project Schedule. The updating shall be cost loaded. Subsequent updates shall be submitted at the beginning of each month thereafter for the duration of the Contract. The data date shall be the first working day of the month unless otherwise directed by the PROJECT MANAGER. The Project Schedule and computer tabulations shall be reviewed by the CONTRACTOR'S Construction Scheduler at a joint update meeting with the PROJECT MANAGER and the INSPECTOR.

2. Monthly Updated Schedules:

a. The CONTRACTOR shall submit the Monthly Update Schedule to the PROJECT MANAGER each month, on a date assigned by the PROJECT MANAGER. The proposed update schedule prepared by the CONTRACTOR shall include all information available as of the cutoff date established by the PROJECT MANAGER. A detailed list of all proposed schedule changes (logic, duration, status, additions, and deletions) shall be submitted with the update (Claim Digger report). Prior to the monthly update review meeting, the CONTRACTOR shall obtain from his Subcontractors, Suppliers, and staff the necessary information as required to reflect progress to date. A proposed Monthly Update Schedule containing the information set forth below shall be available for review at the meeting.

1) For activities started and/or completed during the previous period: Actual start and actual completion dates, and number of shifts used to accomplish the activity.

2) For activities begun but not yet complete to date: Remaining duration of the Work, estimated percent complete, and estimated completion date. The schedule shall be calculated using remaining durations and progress override.

3) For activities not yet started: Estimated start dates, revised duration's, and estimated completion dates, as necessary.

4) For authorized Change Orders, including Emergency Change Orders, Time and Material Change Orders, and Unilateral Change Orders: Revised and original activities, number of shifts, crew sizes by craft, construction equipment required, cost, and durations, and status of all outstanding Notices of Non-Compliance, where required.

5) The monthly update of the Network Diagram shall be for the whole project. The previous month's activities shall be reported as they actually took place and designated as complete, if actually completed, on the network diagram update.

6) The electronic file of the submitted Network Diagrams and the related reports shall constitute a clear record of progress of the Work from Notice to Proceed to final completion.

7) The monthly submittal to the PROJECT MANAGER shall be accompanied by [three (3)] copies of the Schedule Narrative

Report. The Schedule Narrative Report shall describe the physical progress during the report period, Plans for continuing the Work during the forthcoming report period, actions planned to correct any negative float predictions, and an explanation of potential delays and/or problems and their estimated impact on performance and the overall project completion date. In addition, alternatives for possible schedule recovery to mitigate any potential delay and/or cost increases shall be included for consideration by the PROJECT MANAGER. The report shall follow the outline set forth below:

CONTRACTOR'S Schedule Narrative Report Outline:

- CONTRACTOR'S Transmittal Letter.
- Description of problem areas.
- Current and anticipated delays:
  -Cause of the delay.
  -Corrective action and schedule adjustments to correct the delay.
  -Impact of the delay on other activities, milestones, and completion dates.
- Changes in construction sequences.
- Pending items and status thereof:
  -Permits.
  -Change Orders.
  -Time extensions.
  -Non-Compliance Notices.
- Contract completion date(s) status:
  -Ahead of schedule and number of working days.
  -Behind schedule and number of working days.
- Other project or scheduling concerns including any plant shutdowns, duration of each shutdown, and analysis of any Work to be performed during the shutdown period.
- Include reviewed and updated Network Diagram and Reports.
- Include revised Cost Loading and Cash Flow Information of this Section.
- Include substantial revisions to manpower and equipment requirements

8) The CONTRACTOR shall provide to the PROJECT MANAGER, three (3) copies of the Network Diagram, three (3) printed copies of the Predecessor/Successor Report sorted by activity number, three (3) copies of the printed list of all changes made to the

previously approved Record Schedule, and three (3) copies of the Schedule Narrative Report. The data required to provide all other scheduling reports called for in of this Section shall be provided on a CD.

3. The CONTRACTOR'S Construction Scheduler and representatives from major subcontractors and suppliers (as requested by the PROJECT MANAGER shall attend the monthly update meetings with the above data prepared in advance for each meeting to provide, as of the end of the updating period, a complete and accurate report of the current procurement schedule (in accordance with the requirements of CONSTRUCTION STATUS REPORTS of the GENERAL REQUIREMENTS), construction progress, and a depiction of how the CONTRACTOR plans to continue the Work of the project to meet all Contract completion dates. All network changes and status dates agreed to during each update meeting shall be considered as acceptable by all parties unless written notice of exception is given by an objecting party within five (5) calendar days after the update meeting. For major network changes that cannot be agreed to during an update meeting, the CONTRACTOR shall submit, in writing, such revisions for the PROJECT MANAGER'S approval prior to inserting such changes into the network. Submissions may be in the form of marked-up networks, fragments, or schedule abstracts provided they are submitted with a letter of transmittal. The submission and approval procedures for this information shall follow the same timetable described in H.2 of this Section.

4. Predicated on the results of the PROJECT MANAGER'S review of monthly submissions of the updated Project Schedule or Record Schedule and accompanying reports, the CONTRACTOR may be required to revise the Project Schedule. Conditions under which a revision will be made are as follows:

   a. When a delay in the completion of any Work item or sequence of Work items results in an indicated extension of the project completion or interim milestone dates detailed herein by ten (10) working days.

   b. When delays in submittals or deliveries or Work stoppages are encountered which make replanning, rescheduling, or resequencing of the Work necessary.

   c. When the schedule does not represent the actual execution and progress of the project.

5. Required revisions of the Monthly Update Schedules are due within five (5) calendar days of notice by the PROJECT MANAGER that a revision is required. All revisions and additions to the Project Schedule are subject to the review of the PROJECT MANAGER. No changes (except resubmittal cycles) are to be implemented in the schedule by the CONTRACTOR without the prior approval of the PROJECT MANAGER. When the Monthly Schedule Update or its required revision is approved by the PROJECT MANAGER, it then becomes the Current Record Schedule. The Current Record Schedule will be used for the period from which it is approved until its successor is submitted and approved.

6. Three (3) copies each of the Schedule Narrative Report, the updated Project Schedule (networks, and computer computations), the Cash Flow Projection, the updated network diagram, and one (1) copy of the updated CD reflecting the status

of the project agreed to at the updating meeting, shall be submitted to the PROJECT MANAGER within five (5) calendar days after each updating meeting.

7. The update report shall show the activities or portions of activities completed during the reporting period and their total value as the basis for the CONTRACTOR'S request for partial payment. Payments made pursuant to PARTIAL PAYMENTS of these GENERAL REQUIREMENTS will be based on the total value of such activities completed or partially completed after verification by the INSPECTOR. The report shall state the percentage of the Work actually complete as of the report date. If the project is behind schedule, progress along other paths with negative float shall also be reported.

8. Failure of the CONTRACTOR to submit schedule updates in a timely, accurate manner and in accordance with the requirements of this Section will result in costs to the CITY which are difficult, if not impossible to determine; therefore, the CONTRACTOR shall pay the CITY liquidated damages in the amount of $100 per calendar day for every work day the submittal is late or not in full compliance with the requirements of this Section. This amount shall be deducted from any monies due, and forfeited by the CONTRACTOR. In addition to the liquidated damages, if the CONTRACTOR fails to submit any of the update deliverables, or to meet any of the other updating requirements, progress payments will be withheld until such time as the required update information is submitted.

K. Weekly Progress Reports

1. Once each week, on a day established by the PROJECT MANAGER, the CONTRACTOR shall submit:

   a. A progress schedule listing the activities completed and in progress for the previous week and the activities scheduled for the succeeding two (2) weeks. The activity designations shall be consistent with the activity designations in the Current Record Schedule. A bar chart shall be used to display the information in pictorial form. The appropriate schedule activity number shall be listed for each bar.

L. Cost Loading and Cash Flow

1. With the initial Project Schedule submittal, each monthly update, and each revision, the CONTRACTOR shall also submit a schedule of cost loading and cash flow to the PROJECT MANAGER. There shall be a strict correlation between the sum of individual activity costs and the total values indicated for bid items. That is, each individual activity within the Project Schedule shall employ a code, which in summary, attaches its cost, if any, to the appropriate bid items. The sum of activity costs within a specific code shall equal the cost of its corresponding bid items and approved Change Orders.

2. Expected payment requests for each month shall be included with proposed updates. The cash flow shall show the net payment requests for each month. The cumulative payment requests to date shall also be shown after deducting retainage and any other monies withheld. The cash flow shall be shown in tabular format and in graphic format.

3. The CONTRACTOR, at the Preconstruction Scheduling Conference, shall explain in detail the procedure to be used to develop the schedule activity cost loading and cash flow. This procedure is subject to the review and approval of the PROJECT MANAGER and the INSPECTOR. Receipt and approval of the Schedule Cost Loading and Cash Flow Summary is a condition precedent to the making of any payments under the Contract. Therefore, failure to submit an acceptable schedule cost loading and cash flow summary shall be cause for withholding any progress payments due or that may become due under this Contract, until such time as an acceptable cost loading and cash flow summary is received.

4. In accordance with the updating procedures, when an activity is deemed substantially complete by the PROJECT MANAGER, then such activity will no longer be treated as an activity affecting the critical path or successor activities on the project. The cost of correction of any punchlist items associated with substantially completed activities will be covered by amounts deemed by the PROJECT MANAGER and the INSPECTOR to be adequate to cover such costs.

M. Responsibility For Completion

1. Whenever it becomes apparent from the current monthly updated Project Schedule that phasing, milestone, constraint, restraint, or Contract completion dates will not be met, the CONTRACTOR shall submit a plan to recover the delay using some or all of the following remedial actions;

   a. Increase construction manpower in such quantities and crafts as necessary to eliminate the backlog of work and meet the current completion date.

   b. Increase the number of working hours per shift, shifts per working day, working days per week, the amount of construction equipment, or any combination thereof to eliminate the backlog of Work.

   c. Reschedule the Work in conformance with the Specification requirements.

2. Prior to implementing any of the above actions, the CONTRACTOR shall notify the PROJECT MANAGER and obtain approval from the PROJECT MANAGER. If such actions are approved, the Project Schedule revisions shall be incorporated by the CONTRACTOR into the Network Diagram before the next update.

3. Under no circumstances will the addition of equipment or construction forces, increasing the Working hours or any other method, manner, or procedure to return to the contractually required completion date be considered justification for a Change Order or be treated as acceleration where the need for a recovery schedule has been caused by the CONTRACTOR and/or its Subcontractors or Suppliers, at any tier.

4. The PROJECT MANAGER may elect to withhold progress payments until the CONTRACTOR'S progress indicates that the milestone date(s) and/or the Contract completion date will be met.

N. Schedule Time Extensions

1. When Change Orders or delays are experienced by the CONTRACTOR and a time extension is requested, the CONTRACTOR shall submit to the PROJECT

MANAGER, a written Time Impact Analysis illustrating the influence of all changes or all delays on the current project completion date. The Time Impact Analysis shall be based on an As Built Schedule Analysis approach. The As Built Schedule that will be created will incorporate all Actual Start and Finish dates, actual durations of activities, and actual sequences of construction. This Time Impact Analysis shall incorporate all delays (including CITY, CONTRACTOR, and Third Party delays without exception) in the time frame they occurred with actual logic ties. The As Built Schedule data shall be obtained from the most recent accepted Baseline or monthly schedule update as of the time the preliminary change order, Emergency Change Order, Unilateral Change Order, or Allowance Order was issued to the CONTRACTOR. The As Built Schedule shall be created as an early start schedule. The As Built Schedule shall use the original activity durations for all incomplete work and the actual logic driving all activities. All requests for time extensions shall be based upon an analysis of this As Built Schedule. The critical path will be established and all CITY caused delays on the critical path will be identified. The time extension will be based solely upon the cumulative duration of all CITY and Third Party caused delays (as set forth in UNAVOIDABLE DELAY of the GENERAL CONDITIONS) which are on the critical path. Any time extensions to the project Interim Milestone Dates shall be non-compensable time extensions only.

2. Time extensions will be granted only to the extent that equitable time adjustments for the activity or activities affected exceed the total or remaining float along the critical path of activities at the time of actual delay, or at the time the Preliminary Change Order, the Emergency Change Order, the Unilateral Change Order, or the Allowance Order was issued to the CONTRACTOR. Float or slack time is not for the exclusive use or benefit of the PROJECT MANAGER or the CONTRACTOR but is an expiring resource available to all parties as needed to meet Contract milestones and the Contract completion date. Time extensions shall not be granted nor delay damages paid until;

   A delay occurs which is beyond the control and without the fault or negligence of the CONTRACTOR and its Subcontractors or Suppliers, at any tier; and

   Which extends actual performance of the Work beyond the applicable current Contract completion date and the most recent date predicted for completion of the project on the approved schedule update current as of the time of the delay or as of the time of issuance of the Preliminary Change Order, the Emergency Change Order, the Unilateral Change Order, or the Allowance Order was issued to the CONTRACTOR.

3. Each Time Impact Analysis shall be submitted in triplicate, within fifteen (15) calendar days after a delay occurs, or issuance of the Preliminary Change Order, Emergency Change Order, Time and Materials Change Order, or Unilateral Change Order. If the CONTRACTOR does not submit a Time Impact Analysis for a specific Change Order or delay within the specified period of time, the CONTRACTOR shall be deemed to have irrevocably waived any rights to additional time and cost.

4. Since float time within the Project Schedule and the Record Schedule is jointly owned it is acknowledged and agreed by the CONTRACTOR that CITY caused delays on the project may be offset by CITY caused time savings (including, but not limited to: critical path submittals returned in less time than allowed for in the Contract, approval of substitution requests which result in a savings of time along

the critical path for the CONTRACTOR, etc.). In such an event the CONTRACTOR shall not be entitled to receive an extension of time or delay damages until all CITY caused time savings are exceeded and the Contract completion date is also exceeded.

5. Approval or rejection of each Time Impact Analysis by the PROJECT MANAGER shall be made within **thirty (30) calendar days** after receipt of each Time Impact Analysis, unless subsequent meetings and negotiations are necessary. Upon approval, a copy of a Time Impact Analysis signed by the PROJECT MANAGER shall be returned to the CONTRACTOR for incorporation into the schedule.

6. Upon mutual agreement by both parties, fragnets illustrating the influence of Change Orders and delays shall be incorporated into the Project Schedule or Record Schedule during the first update after agreement is reached.

7. In the event the CONTRACTOR does not agree with the decision of the PROJECT MANAGER regarding the impact of a change or delay, it shall be resolved in accordance with CLAIMS AND PROTESTS of the GENERAL CONDITIONS.

O. Manpower

1. The CONTRACTOR shall submit with the Project Schedule a histogram depicting total project manpower for its own forces and for each of its Subcontractors for each month. The histogram shall be based upon and shall be in substantive agreement with the number of shifts and crew sizes in the Project Schedule and shall be updated monthly and submitted with the Monthly progress report. The update shall show actual manpower for each month during the construction period to date and required manpower for both base scope and Change Order Work each month, necessary to complete all remaining activities to insure timely project completion.

P. Construction Equipment

1. The CONTRACTOR shall submit with the initial Project Schedule a tabular report listing each major piece of construction equipment for itself and each of its Subcontractors for each month. This major equipment is the equipment that is or will be used at the Worksite. Each major piece of the CONTRACTOR'S and the Subcontractor's equipment shall be separately described, identified, and numbered in the report. The tabular report shall be based upon and in substantive agreement with the number of shifts and crew sizes by craft in the Project Schedule and shall be updated monthly and submitted with the monthly progress report. The update shall show actual construction equipment for each month during the construction period to date and the required construction equipment for each month necessary to complete all remaining activities including the Change Order Work, on the early finish date.

Q. Submittal Of "As Built" Schedule

As a condition precedent to any release of retention, the last update to the Record Schedule submitted shall be identified by the CONTRACTOR as the "As Built Schedule". The "As Built Schedule" shall reflect the exact manner in which the project was actually constructed (including start and completion dates, activities, sequences, and logic) and shall be signed and certified by the CONTRACTOR'S

Project Manager and Construction Scheduler as being a true reflection of the way in which the project was actually constructed.

SECTION 01330
SHOP DRAWINGS / SUBMITTALS

1.1 THE REQUIREMENT

A. GENERAL

1. Shop Drawings and submittals shall be provided at the CONTRACTOR'S expense, when required by the Plans or Specifications, or requested by the PROJECT MANAGER. Shop drawings and submittals shall be submitted in accordance with General Requirements Section - 01116 Electronic Document Control. The CONTRACTOR shall furnish a schedule and list of all required shop drawings and submittals to the PROJECT MANAGER, in accordance to CONTRACTOR'S CONSTRUCTION SCHEDULE AND REPORTS of these GENERAL REQUIREMENTS, including required shop drawings and submittals by all Subcontractors. Submittals and Shop Drawings, including administrative submittals, may be required by any of the contract documents, including, but not limited to, the General Conditions, General Requirements, Standard Specifications for Public Works Construction ("Green Book") or the Caltrans Standard Specifications as determined by the PROJECT MANAGER.

2. CONTRACTOR'S shop drawings and submittals, including administrative submittals, required for performance of Contract Work, shall include, but are not limited to, the following:

a. Schedule of Values for Lump Sum items

b. Construction Schedules

c. Daily Construction Reports

d. Bridge Falsework Shop Drawings and Structural Calculations.

e. Manufacturer's Data and Specifications

f. Samples

g. Temporary Shoring Plans

h. Certificates of Compliance

i. Construction Photographs

j. Substitution Requests

k. Record Drawings and Record Project Manual

l. Operation & Maintenance Manuals

m. Stock Materials, Spare parts, tools

n. Material Testing Results

o. Daily Statements of time & materials Change Order
p. Copies of Notice-To-Correction or Notice of Non-Compliance from governing authorities.

q. Maintenance Logs and Maintenance Schedule.

r. Mix Designs (Asphalt Concrete, Portland Cement Concrete, grout, etc.)

s. Payment Requests

t. Notices of Materials to be Used (if Caltrans forms are required)

u. Storm Water Pollution Prevention Plan (SWPPP)

v. Solid Waste Resource Management Forms

w. Required Written Warranties/Guarantees.

x. Work Erection Sequences

3. Materials shall not be furnished or fabricated, nor any Work done for which Shop Drawings or submittals are required, before those Shop Drawings or submittals have been reviewed, as provided in this Section. Neither review nor approval of Shop Drawings or submittals by the PROJECT MANAGER shall relieve the CONTRACTORS from responsibility for errors, omissions, or deviations from the Contract Documents, unless such deviations were specifically called to the attention of the PROJECT MANAGER in the letter of transmittal. The CONTRACTOR shall be responsible for the correctness of the submittals and Shop Drawings, including shop fits, field connections, and results obtained by use of such drawings.

4. Unless noted elsewhere in the contract documents, the CONTRACTOR shall allow a minimum of thirty (30) working days for each review of Shop Drawings and submittals for temporary bridges, bridge falsework, or prestressing shop drawings. The CONTRACTOR shall allow a minimum of sixty (60) working days for review of bridge falsework drawings and/or prestressing shop drawings over railroads. For all other Shop Drawings and submittals, the CONTRACTOR shall allow a minimum of twenty (20) working days for each review, unless otherwise mutually agreed to by the CONTRACTOR and the PROJECT MANAGER. Review periods are not cumulative. The aforementioned time frames begin anew upon each submission of Shop Drawings and/or submittal whether it is the initial submission or a resubmission after review by the PROJECT MANAGER. Each set of Shop Drawings or submittals shall be accompanied by a letter of transmittal describing exactly what is being transmitted. The transmittal shall be cross-referenced to the Project Manual and/or Standard Specification Section Number and/or Bid Item Number as appropriate. The transmittal shall identify any deviations from the contract documents in any of the submittals or shop drawings.

5. In each Section of the Project Manual or for each Bid Item as appropriate, all required lists of material, product or equipment; manufacturer's data; and etc., shall be appropriately grouped and submitted to the CITY for review as one submittal. Piece meal submittals will not be acceptable. Any submittal with outstanding product data, manufacturer's specification or any required information shall deem to be incomplete and subject for rejection without any review. Subsequent submittal shall be considered as second submission. It is considered reasonable that the CONTRACTOR shall make a complete and acceptable submittal to the PROJECT MANAGER or Consultant by the second

submission of a submittal item. The CITY reserves the right to withhold moneys due to the CONTRACTOR to cover additional costs of the PROJECT MANAGER or Consultant's review beyond the second submittal. On the third submittal by CONTRACTOR, the CONTRACTOR will be charged $120 per hour of CITY'S or Consultant's review time and no additional Contract time shall be allowed.

6. CONTRACTOR shall appropriately package and label each submittal for transmittal and handling from CONTRACTOR to Consultant or PROJECT MANAGER using a preprinted standard transmittal form verifying that the CONTRACTOR has met the following CITY requirements:

Conformance in all respect to the Contract Document requirements.

Has reviewed and coordinated all aspects of each submitted item relative to manufacturer's product data, Specifications, etc.

Has verified with site conditions and all dimensions.

That all questions and/or comments prepared by the Consultant or PROJECT MANAGER have been reviewed and answered.

CONTRACTOR is not relieved from responsibilities for errors, omissions and any deviation in the required submittals as revealed resulting from the CITY'S or Consultant's review of such submittals.

CONTRACTOR shall add and sign the following paragraph on all submittals:

> "It is hereby certified that the **[equipment] [material] [color samples] [details]** shown and marked in this submittal is that proposed to be incorporated into the project; is in compliance with the Contract Drawings and Project Manual and can be installed in the allocated space,"

Failure to add the above written statement for compliance will result in return of submittals or shop drawings without review, and any delays caused thereby shall be the total responsibility of the CONTRACTOR.

7. Submittals and Shop Drawings will be returned to the CONTRACTOR with one of three (3) markings:

A. If copies of a submittal or shop drawing are returned to the contractor marked "NO EXCEPTIONS TAKEN/PROCEED," formal revision and resubmission of said submittal will not be required.

b. If copies of a submittal or shop drawing are returned to the CONTRACTOR marked "MAKE CORRECTIONS NOTED/PROCEED CONDITIONALLY" formal revision and resubmission of said submittal will not be required

c. If a submittal or shop drawing is returned to the CONTRACTOR marked "REJECTED-RESUBMIT/DO NOT PROCEED", the CONTRACTOR shall revise said submittal and shall resubmit all six copies of said revised submittal to the PROJECT MANAGER.

Revisions indicated on submittals shall be considered as changes necessary to meet the requirements of the Contract Documents and shall not be taken as the basis for claims for extra work.

The CONTRACTOR is advised that the CITY may delegate submittal review to third parties such as Consultants or Caltrans. The PROJECT MANAGER may require the CONTRACTOR to address the comments from third parties.

B. Shop Drawings

1. Shop Drawings shall be prepared in accordance with current modern engineering practice and shall be of a size and scale to clearly show all necessary details. Shop Drawings shall show in detail the size, sections, and dimensions of all the member(s); the arrangement and construction of all connections and joints; all holes, straps, and other fittings required for attaching work and other pertinent details. When required, engineering computations shall be submitted. The CONTRACTOR shall be responsible for delivering reviewed copies of shop Drawings to all others whose work is dependent thereon. The CONTRACTOR shall maintain at the site of the Project, at all times, a complete file of approved Shop Drawings and manufacturers' data for this Project.

2. Each Shop Drawing shall be submitted in accordance with GENERAL REQIREMENTS Section 01116 – ELECTRONIC DOCUMENT CONTROL.

3. Layout diagrams or schedules are required for pipelines utilizing pipe materials conforming to the indicated subsections. The diagrams or schedules shall be submitted for reference only, except curve layouts are required for approval.

4. The diagram shall be of a size and scale to show clearly all necessary details. Pipeline layouts, for reference only, may be submitted in tabulated form in increasing order of alignment stationing.

5. All Shop Drawings shall be provided with dimensions and measurements verified at the site as stated hereinbefore. If the CONTRACTOR decides to submit the dimensions and measurements at a later time, the CONTRACTOR must state the reason, for the PROJECT MANAGER'S approval, why the dimensions and measurements cannot be taken. If approval is granted, the CONTRACTOR shall re-submit the approved submittal with the final dimensions and measurements after the Works are completed. The CONTRACTOR is not relieved from the responsibilities of error and omission, or any problem that may arise during the fabrication or installation.

C. Submittals

1. Submittals shall consist of the appropriate combination of catalog sheets, material lists, manufacturer's brochures, technical bulletins, specifications, diagrams, certificates of compliance, or product samples, necessary to describe a system, product, or items. Submittals for systems shall be bound together and include all manufactured items for the system. Each Submittal shall be submitted in accordance with GENERAL REQIREMENTS Section 01116 – ELECTRONIC DOCUMENT CONTROL.

2. Submittals are required for irrigation systems, street lighting systems, and traffic signals, concrete mix designs, asphalt mix designs, and may be required for any product, manufactured item, or system. The CONTRACTOR is advised that multiple concrete and asphalt mix designs may be necessary if the Contract Documents require mix designs that comply with both “Green Book” and Caltrans specifications.

3. Certificates of Compliance for any item furnished according to Caltrans Standard Specifications shall comply with Caltrans Standard Specification 6-1.07, “Certificates of Compliance”.

(END OF SECTION)

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01520
CONSTRUCTION FACILITIES

1.1 THE REQUIREMENT

A. General

1. All facilities provided for CITY personnel shall be at suitable locations approved by the PROJECT MANAGER. Such facilities must be in a room, building, or trailer provided for this purpose with acceptable means of locking.

2. A Class "A" Field office, in accordance with the requirements herein, shall be provided at any offsite plant facility furnishing pipe subject to CITY inspection during manufacture. A Field Laboratory, in accordance with the requirements herein described, shall be provided at any offsite or project site. plant facility furnishing portland cement, concrete or asphalt paving material. A Modified Class "B" Field Office shall be provided for CITY Construction Management Staff as specified below in Paragraph 5. Any other facilities for CITY personnel shall be provided only when required by the Specifications.

3. Offices and laboratories at plants may be used concurrently by inspection personnel of other agencies provided such use does not seriously conflict with CITY personnel. The Modified Class "B" Field Office provided for City Construction Management Staff shall not be a shared facility.

4. All facilities shall conform to the applicable codes, ordinances, and regulations of the local jurisdiction, and of the State of California, and shall conform to current practice. The interior shall be paneled or suitably lined to provide a facility of good appearance.

5. The CONTRACTOR shall provide a Modified Class _"B"_ Field Office, in accordance with the requirements herein, at a location acceptable to the PROJECT MANAGER and the INSPECTOR. for use by CITY Construction Management staff

6. The CONTRACTOR shall provide janitorial and other maintenance services in all types of facilities provided. Such services shall include the supply of the appropriate paper products and dispensers. Trash receptacles shall be provide an emptied by the CONTRACTOR at weekly intervals or sooner as required. The trash shall be removed from the Project site.

7. All costs to furnish, maintain, service, and remove the specified facilities at the Project site shall be included in the price bid for such facilities. If no bid items provided in the proposal, costs shall be included in other items for which bids are entered.

8. The first Progress Payment will not be approved until all facilities are in place and fully comply with the Specifications.

B. Field Office Facilities

1. Class "A" Field Office

a. This office shall have a minimum floor space of 400 ft2, at least two doors, and window area of not less than 66 ft2). All doors and windows shall be provided with screens.

b. Furniture shall be provided as follows: two (2) plan tables, two (2) standard 1.5M (5 feet) long double-pedestal desks with a drawer suitable for holding files, two (2) chairs, one (1) drafting stool, and two (2) plan racks.

c. Electric power shall be provided to include a minimum of four (4) duplex convenience outlets. The office shall be illuminated at the tables and desk. An outdoor lighting fixture with a 300-watt bulb shall be installed

d. Heating and air conditioning of sufficient capacity shall be provided at no expense to the CITY. The CONTRACTOR shall provide drinking water within the office and integral sanitary facilities directly adjoining. Sanitary facilities shall include a toilet and wash basin with hot and cold running water.

e. Extended area, non-coin-operated telephone service shall be provided within the office area. The installation shall include sufficient extension cord to serve the plan table and desk.

2. Modified Class "B" Field Office for CITY Construction Management Staff

a. This office shall be the same as class "A" with integrated sanitary facilities. The office shall include the following:

i. Three cell phones (including all airtime and other charges) for use by City personnel during the construction period. Each cell phone is to be new and to include a desktop battery charger and an auto battery charger. Cell phones will be returned to the Contractor after substantial completion of the project and punchlist completion.

ii. A black-and-white photocopier capable of 11"x17" copies and scanning, including maintenance and repair service.

iii. The drinking water shall include hot and cold water, plus coffee service equipment.

iv. A fax machine (plain paper)

v. A second desk, a folding table, and four chairs in addition to the furniture listed above.

vi. Security satisfactory to the PROJECT MANAGER to include bars over the window(s) and a deadbolt door or padlock securing the door.

vii. One new laptop computer, one new tablet with a keyboard with access to e2020, and one printer with an Intel Pentium IV processor or approved equal, with internet access at the trailer, or other approved highspeed Internet access.

viii. One digital camera with minimum 5.0 mega pixels and 5x optical zoom capability. Rechargeable batteries and memory card, 1 gigabyte minimum

memory, which can be used with the camera, shall also be included

b. The CITY will not provide a location for the Modified Class "B" Field Office for CITY Construction Management staff. The CONTRACTOR is responsible for securing adequate space adjacent to the project site for the City's Modified Class "B" Field Office for CITY Construction Management staff. If the Contractor maintains a yard adjacent to the site, the City's Modified Class "B" Field Office for CITY Construction Management staff shall be provided within the CONTRACTOR's yard, and all security installed for the CONTRACTOR's field office (if any) shall be duplicated for the CITY's Field Office.

C. Field Laboratories

1. Offsite at Manufacturing Plant

a. Field laboratories shall conform to the requirements for a Class "C" Field Office specified hereinabove, except for the following:

1) Telephone service per that of a Class "A" office; Chair;
2) Work table: 1.2m by 3.Om (4 foot by 10 foot), 0.9m (3 feet) high;
3) Sieves per SSPWC Section 203-6; Scales and weights; Burner plate for heating samples;
4) Thermometer, with 90°C to 260°C (200°F to 400°F) degree range (Asphalt Plants only); and Air meter for all concrete in accordance with ASTM C231 of the type that indicates percentage of air directly (Precast Concrete Plants only).

b. These facilities shall be serviced and provided with necessary sanitary supplies.

c. These facilities shall be for the exclusive use of CITY personnel. However, a separate building need not be provided for this purpose if such facilities are located in a separate room in a building which includes other facilities.

D. Removal of Facilities

1. Field offices, laboratories, and bathhouse facilities at the Project site shall be removed upon completion of the Work. Buildings and equipment furnished by the CONTRACTOR at the Project site under the provisions of this Section are the property of the CONTRACTOR.

E. Basis of Payment

1. All costs incurred in furnishing, maintaining, servicing, and removing field offices, laboratories, or bathhouse facilities required at the Project site shall be included in the Bid item for furnishing such facilities. If such facilities are required by the Plans or Specifications and no bid item is provided in the proposal, the costs shall be included in other items for which bids are entered or in MOBILIZATION if a bid item is provided for laboratories at plants shall be borne by the planet owners. Payment for office facilities will be made as follows: twenty-five percent (25%) when completely installed, seventy-five (75%) prorated over the remainder of the

Contract duration.

(END OF SECTION)

SECTION 01 57 23
STORMWATER POLLUTION CONTROL MEASURES FOR CONSTRUCTION ACTIVITY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Stormwater pollution prevention control activities

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 33 4000 - Storm Drainage Utilities.

1.2 SUBMITTALS

A. For sites with over one acre of land disturbance Contractor shall provide a SWPPP plan.

1.3 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. Standard Specifications for Public Works Construction.

2. Regional Water Quality Control Board

B. The Contractor shall exercise every reasonable precaution to protect channels, storm drains, and bodies of water from pollution.

1. Conduct and schedule operations to minimize or avoid muddying and silting channels, drains, and waters.

2. As required, obtain permits for erosion and water pollution control from the appropriate jurisdictional agency before starting work. All costs for work required for compliance with this Section shall be included within the bid Prices.

3. Provide any necessary water pollution control devices to prevent, control, and abate water pollution, and implement good housekeeping pollution control measures to reduce the discharge of pollutants from work sites to the maximum extent practicable. These water pollution control devices include drains, gutters, slope protection blankets and retention basins and shall be constructed concurrently with other Work at the earliest practicable time.

4. Exercise care in preserving vegetation and protecting property, to avoid disturbing areas beyond the limits of the work. Promptly repair any damage caused by Contractor operations.

5. Comply with the specific requirements based on acreage of disturbed soil.

6. Penalties: Failure to comply with this Section may result in significant fines and possible imprisonment. The RWQCB or other prosecuting authority may assess fines of up to $32,500

per day for each violation. Should the City be fined or penalized as a result of the Contractor failing to comply with this Section, the Contractor shall reimburse the City for any and all fines, penalties and related costs.

7. Notification and Report: If pollution occurs in the work area for any reason or when the Contractor becomes aware of any violation of this Section, correct the problem and immediately notify the Inspector. In addition, submit a written report to the Engineer within seven (7) calendar days describing the incident and the corrective actions taken. If either the Inspector or Engineer is first to observe pollution or a violation, the Contractor shall also explain in the written report why the Work was inadequately monitored.

8. The provisions of this Section describe minimum compliance and do not preclude other more stringent stormwater pollution control measures that may be required in the Contract.

1.4 DEFINITIONS

A. Construction Activity: Includes clearing, grading, excavation, stockpiling, and reconstruction of existing facilities involving removal and replacement. Construction activity does not include routine maintenance such as, maintenance of original line and grade, hydraulic capacity, or original purpose of the facility.

B. LRP: Legally Responsible Person

C. PRD: Permit registration Document

D. QSD: Qualified SWPPP Developer

E. QSP: Qualified SWPPP Practitioner

F. RWQCB: Regional Water Quality Control Board

G. SMARTS: Stormwater Multiple Application Tracking System

H. SWPPP: Stormwater Pollution Prevention Plan

PART 2 – PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 PROJECTS HAVING MORE THAN ONE ACRE OF DISTRUBED SOIL

A. Projects with construction activity that will result in one acre or more of disturbed soil, or less than one acre but part of a larger common plan of development, the Contractor shall comply with the requirements included in Section 1 above, and the following requirements:

1. The Contractor shall comply with General Permit 2009-0009-DWQ for Discharges of Storm Water Associated with Construction Activities (General Permit). A copy of the General Permit may be downloaded from the California State Water Resources Control Board (SWRCB) website using the following link:

http://www.waterboards.ca.gov/waterissues/programs/stormwater/ construction.shtml.

2. The Contractor shall provide a SWPPP Developer (QSD) to prepare all PRDs, as defined in the General Permit. All PRDs must be uploaded to the RWQCB's General Permit web application called the SMARTS prior to commencement of construction activities. The SMARTS website link is:

   http://smarts.waterboards.ca.gov/ smarts/faces/SwSmartsLogin.jsp.

   The PRDs include the Notice of Intent, Risk Assessment, Post-Construction Calculations, Site Map, SWPPP, and the first annual fee. The Contractor shall calculate the estimated permit fee using the fee schedule on the RWQCB website which is based on the total disturbed area. The Contractor must submit the prepared SWPPP to the City for review and approval prior to uploading it to the SMARTS system. Upon City approval, the SWPPP shall be uploaded by the Contractor and certified by the City's LRP. At that time, the actual fee invoice will be provided by the City to the Contractor and the Contractor will submit payment to the State for the first annual fee. The Contractor is also responsible for all subsequent annual fees for this project.

3. The Contractor's QSD shall complete the Risk Level analysis as per the General Permit and insert the proper risk level. The Contractor shall comply with all visual monitoring, effluent water quality sampling, reporting, and record keeping requirements associated with this Risk Level, in accordance with the General Permit. For projects with Risk Level 2 or Risk Level 3, the Contractor must prepare and implement a Rain Event Action Plan, as described in the General Permit.

4. The Contractor shall provide a SWPPP Practitioner (QSP) to implement all SWPPP requirements at the project site and monitor the effectiveness of the SWPPP, in accordance with the General Permit.

5. The Contractor shall prepare the Annual Report required by the General Permit and submit it to the City for review and approval by August 1st of each year. The City's LRP will certify the Annual Report.

6. The Contractor shall provide and submit all reports and data necessary to complete the Notice of Termination at the Completion of the Work, in accordance with the General Permit.

DIVISION 01

DIVISION 02

EXISTING CONDITIONS

02 22 20
SITE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

A. This section covers all wrecking and demolition, together with the removal and disposal of items.

B. Related requirements:

1. Division 01 - General Requirements.

2. Section 31 1000 – Site Clearing

3. Section 32 0190 – Tree preservation

1.2 SUBMITTALS

A. Shop Drawings: Submit site plan indicating extent of site demolition.

B. Existing conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or videotape

2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

C. Contractor shall be responsible for obtaining all necessary permits, approvals and Construction Manager's authorization for disposal of material resulting from clearing and grubbing operations in areas not already specified in the contract documents.

1.3 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies:

1. Traffic Obstruction: Do not close, obstruct, or store material or equipment in streets, sidewalks, alleys or passageways without a permit in accordance with all local ordinances, regulations and codes.

B. Environmental Requirements:

1. Ground and Surface Water: After the existing buildings or structures have been removed, protect the resulting building excavation or open area from surface or ground water. Promptly remove any water which accumulates in the excavation or opening. The method of dewatering and the disposal of the water is subject to review by the City engineer.

C. Workmanship

1. Demolition Work: Execute in an orderly and careful manner with due consideration for neighbors and the public. Execute the work to insure adjacent properties and the public against damages incurred by falling debris or other causes.

2. Masonry: Demolish in small sections and brace and shore where necessary to avoid collapse of the structure.

3. Burning of Materials: Burn no materials or debris on the premises.

4. Dust control: Constantly sprinkle all rubbish and debris to lay down the dust.

5. Traffic: Conduct operations with minimum interference with roads, streets, driveways, alleys, sidewalks and other facilities.

B. Protection:

1. General Requirements: Protect persons and property in accordance with the General Conditions. Remove all temporary construction upon completion of the Project.

a. Temporary Barricade Fence on all sides of the property except where existing buildings are on the property line or where a sidewalk shed is specified, erect an 8 foot high fence built solid for its entire length and height, except for such openings as doors, necessary for the proper prosecution of the work.

b. Temporary protective fence: Provide before beginning any excavation or construction work at the site, erect a temporary protective fence around the excavation. Erect a 4 foot high fluorescent orange temporary protective fence secured to posts not more than 8 feet.

2. Existing structures and property: Take precautions to guard against movement or settlement of adjacent buildings or structures. Provide and place bracing or shoring as necessary or proper in connection therewith. Be responsible for safety and support of such buildings and structures. Be liable for any movement or settlement, any damage or injury caused thereby or resulting therefrom. If at any time safety of any adjacent buildings or structures appears to be endangered, cease operation, take precautions to support such buildings or structures and notify the Architect. Resume operations only after permission has been granted. If the Architect considers additional bracing or shoring necessary to safeguard, or prevent movement or settlement, install such bracing or shoring upon Architect's order. If the Contractor fails to comply promptly with such order, such bracing and shoring may be placed by the Owner at the Contractor's expense.

PART 2 - NOT USED

PART 3 EXECUTION

3.1 INSPECTION

A. Condition of Premises:

1. Accept the premises as found and clear the site as specified. The City assumes no responsibility for condition of buildings on site at time of proposal or continuation of

conditions thereafter. Assume risk regarding damage or loss, whether by reason of fire, theft, or other casualty or happening to specified buildings.

3.2 PREPARATION

A. Utilities:

1. Prior to disconnecting, removing, plugging or abandoning existing utilities serving the buildings being removed, notify all utility corporations, companies, individuals or local authorities concerned with the work.

3.3 DEMOLITION

A. Buildings and Other Items. Wreck, demolish, dismantle and completely remove all buildings, items, and obstructions as shown on the drawings or called out in these specifications. Remove any existing rubbish, trash and junk and leave the site clear of such materials. Remove all foundations completely. Remove all basement and cellar floors and other concrete slabs.

a. Dust Retention. In demolishing masonry walls, etc., keep work wet down thoroughly to prevent dust and dirt from rising. Provide necessary water, waterlines and connections for this purpose.

B. Walks and Drives: Where indicated on the drawings, remove pavement, curbs and sidewalks to full depth, take care to avoid damage to adjacent remaining pavement or sidewalks. Make cuts in such a manner that a clean vertical joint remains.

C. Utilities: Disconnect electrical service and/or cut off and cap gas, water and sewer services at the mains on the property or in the street as required by the responsible utility company, or local authority or relocate as shown on the drawings. Remove and cut off and plug or cap all utilities within the existing building areas, except those designated to remain. The Contractor shall coordinate the removal work with the relocation and/or new work being performed by all contractors.

3.4 CLEANING

A. Temporary Structures: Remove all temporary structures when they are no longer required.

B. Removal. Unless otherwise noted or specified to be relocated or stored, all materials are to be completely removed from the site by the Contractor. Do not store or permit debris to accumulate on the Site. If the Contractor fails to remove excess debris promptly, the City reserves the right to cause same to be removed at Contractor's expense.

C. Repair: Clean up, repair, or replace at no cost to the City, all property damaged by reason of required work, including restoring all disturbed areas, surfaced and unsurfaced, to their original condition on completion of the work. All patchwork shall match existing and be performed in a neat and workmanlike manner by craftsmen skilled in the trade involved. Painted surfaces shall be painted to match the adjacent areas. In newly graded areas take every precaution and temporary measures necessary, such as temporary seeding, to prevent damage from erosion of freshly graded areas. Where any settlement or washing may occur prior to acceptance of the work, repair and re-establish grades to the required elevations and slopes at no additional cost to the City. This applies to damage to the newly graded areas within the construction limits and damage to adjacent properties by eroded material.

END OF SECTION

SECTION 02 41 19
SELECTIVE DEMOLITION

PART 1: GENERAL

1.1 SCOPE

A. Clearing and removals as indicated on the drawings and specified herein including but not limited to the following:

1. Protection of existing elements and landscape to remain
2. Temporary partitions and barricades
3. Removal of items noted on plans
4. Stump Grinding

B. Provide the City with a fencing and tree protection plan, and temporary tree irrigation plan for approval prior to the start of demolition.

C. Related work specified elsewhere:
1. Grading
2. Planting Irrigation
3. Landscape Planting
4. Protection of Trees, see Appendix

1.2 REFERENCE STANDARDS

A. “Standard Specifications for Public Works Construction” latest edition and amendments thereof.

B. Industrial Safety Orders of the State of California, Division of Industrial Safety.

1.3 GENERAL PROVISIONS

A. Field conditions: Take into consideration as necessary work all obvious existing conditions and installations on the site as though they were completely shown or described. Accept the site of the work as it exists and clear obstructions to the work shown. Field verify actual locations and tag trees to be removed prior to City approval and actual removal of tree to avoid errors.

B. Examine the site and all conditions and limitations thereon and thereabouts. Take into account all such existing conditions and limitations whether or not the same are specifically shown or mentioned in any of the contract documents and include whatever is needed to complete the work in every part as shown, described, or reasonably required or implied to attain the completed condition contemplated by the contract.

C. Include the reworking of abutting surfaces as required to make new work join and match existing surfaces to remain.

D. Reference drawings may not accurately depict placement of utilities such as water, gas, waste, irrigation, vents, vaults and boxes, and electrical wire conduits on site. Contractor is responsible for any damage done to the existing utilities and damage shall be repaired at the Contractor’s expense. Contractor to notify the City 24 hours in advance to inspect and approve any repairs prior to backfilling.

E. Limits of the Work: The indicated items of demolition are not to be construed by the Contractor as a complete list of all the demolition work, but as a guide to the main areas of work involved. Other demolition shall be carried out by the Contractor, at the direction of the City where it is required to complete the project and carry out the intent of the Contract Documents.

1.4 PROTECTION

A. Barricades: Furnish and install a minimum 6' high construction fence to protect public and workmen. Fence shall enclose entire construction area and shall be left in place until removed by contractor after completion of construction.

B. Warning Signs: Adequate warning signs, lanterns, lighting, etc. for vehicular and personnel protection shall be provided and maintained during the period of work as required by applicable safety ordinances.

C. Utilities: preserve in operating condition, unless otherwise noted, all active utilities traversing project site. Repair damage to such utilities caused by work under this contract to satisfaction of owning utility company or agency.

D. Existing work to remain: Provide such forms of protection as may be necessary to prevent damage to existing work and items to remain.

1.5 SITE UTILIZATION

A. Confining of activities: Confine operations to areas indicated so as not to interfere with the functional operation of the street and vehicular traffic.

B. Traffic and site entry: Confine equipment and employee traffic pattern designated entry or exit gates as directed by the City.

C. Storage area: Equipment and materials shall be stored on the site or in a secured storage area as designated by the City. Do not store construction materials under canopies of existing trees to remain.

PART 2: PRODUCTS

2.1 MATERIALS

A. As necessary for the proper completion of this work.

PART 3: EXECUTION

3.1 GENERAL

A. Verify all items and extent of removal of all items indicated for removal with the City before processing.

B. Reduce or elevate grade of planters and all areas of site work where new construction and/or planting occurs as necessary to accommodate cobble mulch, mulch, topsoil, or turf grass. Meeting grade will be micro-area specific. All planting area grades must be approved by owner or owner representative.

C. Refer to Appendix, Protection of Trees.

3.2 METHODS

A. Within the limits of the construction area, on-site and off-site, clear and remove from the premises all trees specifically indicated for removal per plan, grass, brush, decayed vegetable matter, trunks, large roots, asphalt concrete and concrete pavements, concrete footings and slabs, base material and all other material indicated for removal on plans.

B. Refill depressions excavated below grade for the removal of objectionable materials with suitable materials compacted to a relative density of 90% or more in accordance with ASTM D1557-70.

C. Refill any depression within the park to re-establish a grade 3” below the top of planter, or other adjacent surface with suitable growing soil medium. Refill after soil settling and watering

as necessary to meet requirements. Turf areas will require backfill with suitable topsoil to grade prior to reseeding.

D. Concrete and bituminous surfacing to be removed shall be removed to the limits indicated or required, and shall be disposed of off the site. All cutting shall be done to a neat and even line with proper tools or a concrete cutting saw. Any concrete broken beyond the indicated limits shall be removed to the nearest joint or score line and then replaced with new concrete to match the existing at the Contractor's expense.

E. Crushed Concrete:

1. Break up and completely remove all existing concrete surfacing, curbs, gutters, walks and bituminous surfacing indicated to be removed. The Contractor shall haul the material and disposing of it off the site. Crushed materials may not be incorporated in fill areas.

F. Tree Removal:

1. Within working limits of this contract remove all trees indicated by symbol or noted on plans to be removed. Remove trees, together with the bulk of roots, to a minimum depth of 4' - 0" below existing grade and within a radius of 7'-0" beyond perimeter of trunk at ground line. Tree removal shall be the first work performed upon job start.

2. Tree trunk stumps will be completely removed or ground to a depth that stump and roots are a minimum of 12 inches (1 foot) below grade. If new planting is going to occur over ground stump, the conditions may require a deeper grinding or woody stump and root removal to a 24 inch (2 foot depth per the specification for Landscape Grading as necessary. Contractor must prepare planter or turf areas to meet new planting requirements throughout the project site.

   In turf areas, stumps must be removed or ground below the surface of the turf to allow soil backfill and proper reseeding of turf grass. As each stump is different, stump grinding should reduce the stump to 12 inches (1 foot) below turf finish grade. Any surface roots must also be removed to a depth of 12 inches (1 foot) to allow reseeding of turf grass.

2. Holes resulting from tree removal shall be filled and compacted with clean earth to the required density as specified for filling under sections "Grading". Filling shall not be done until holes have been approved by the City. Add to backfill until final soil level is achieved. Sunken areas will not be approved.

G. Protect bench marks, survey control points, existing light poles and signs, and existing utilities and/or structures from damage or displacement.

3.3 CLEAN-UP

A. Site: all debris resulting from the work of this section, together with all tools, equipment, and appliances used shall be completely removed from the site upon completion of the work.

END OF SECTION

SECTION 02 41 20
SELECTIVE BUILDING DEMOLITION

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Systematic removal of portions of buildings and structures.
   2. Salvage of existing items for reuse.
   3. Salvage of construction materials for recycling.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 REFERENCES

A. Definitions:
   1. Remove: Means to detach from existing construction and legally dispose off-site.
   2. Demolish: Means the same as “remove”.
   3. Dispose: Means to get rid of by throwing away; or by giving or selling to someone else.
   4. Reuse: Means to use again for the same function without re-processing.
   5. New-Life Reuse: Means to use again for a different function without re-processing.
   6. Remove and Salvage: Means to detach from existing construction, prepare for reuse or storage as applicable, and then deliver to the Owner.
   7. Remove and Reinstall: Means to detach from existing construction, prepare for reuse, and reinstall where indicated.
   8. Recycle: Means to detach from existing construction, break down into raw materials, and then process the materials to make new items.
   9. Existing-to-Remain: Means existing items that are not removed, reused, or recycled.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Demolition drawings are diagrammatic and show existing conditions with information developed from field surveys and to generally show the extent and type of demolition required. The Owner will maintain conditions existing at the time of inspection for bidding purposes as far as practicable.
   1. Make a detailed survey of existing conditions before beginning demolition, and report discrepancies or conflicts between Drawings and actual conditions in writing to the Architect for clarifications and instructions.
   2. Do not proceed, when such conflicts or discrepancies occur, before receipt of the Architect's instructions.

B. Pre-Demolition Conference: To review methods and procedures related to the work of this specification Section, conduct a pre-demolition conference at the project site.
   1. Inspect and discuss condition of construction to be selectively demolished.
   2. Review structural load limitations of existing structure.
   3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.

4. Review requirements of work that rely on substrates exposed by selective demolition operations.
5. Review areas where construction is existing-to-remain and requires protection.

1.04 SUBMITTALS

A. Informational Submittals:
1. Schedule of Selective Demolition Activities: Indicate the following.

a. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted.

b. Interruption of utility services. Indicate how long utility services will be interrupted.

c. Coordination for shutoff, capping, and continuation of utility services.

d. Use of elevator and stairs.

e. Locations of proposed dust- and noise-control temporary partitions and means of egress.

f. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed work.

g. Means of protecting existing-to-remain items in the path of waste removal.

2. Inventory: After selective demolition is complete, submit a list of items that have been removed and salvaged.
3. Pre-Demolition Photographs or Videos: Submit videos or photographs showing existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by selective demolition operations.

1.05 QUALITY ASSURANCE

A. Quality Standards: Comply with the safety requirements of both American National Standards Institute/ American Society of Safety Engineers publication ANSI/ASSE A10.6. “*Safety Requirements for Demolition Operations*” and National Fire Protection Association publication NFPA 241, “*Standard for Safeguarding Construction, Alteration, and Demolition Operations*”.

1.06 PROJECT CONDITIONS

A. Hazardous Materials: Hazardous materials may be encountered in the building or at the project site.
1. If materials suspected of containing hazardous materials are encountered, do not disturb; promptly notify the Architect and Owner.
2. The Owner removes asbestos containing materials (ACMs) under separate contract; Contractor removes all others. (e.g., lead-based/containing paint, etc.)

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 EXAMINATION

A. Oversight: Ensure adequate supervision practices are followed at the project site before demolition work begins and at all times during installation.

B. Survey: Engage a professional engineer to survey condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective demolition operations.
   1. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
   2. Provide means to have digital molds created to repair ornate items in case of loss (e.g., laser cloud point scan).
   3. Inventory and record the condition of items removed and reinstalled and removed and salvaged.
   4. When unforeseen mechanical, electrical, or structural elements are encountered that conflict with intended function or design, investigate and measure the nature and extent of conflict. Promptly submit written report to Architect.
   5. Perform surveys as the work progresses to detect hazards resulting from selective demolition activities.

3.02 PREPARATION

A. Site Protection: Protect existing-to-remain sitework against damage and soiling during demolition.
   1. Do not begin selective demolition work until temporary partitions, barricades, warning signs, and other forms of protection are installed.
   2. Protect trees, plants, utilities, and existing improvements that are not to be removed from injury or damage. Replace damaged landscaping, improvements, and utilities in kind.
   3. During demolition, provide safeguards for protection of the public, Contractor's employees, and existing improvements existing-to-remain, including warning signs and lights, barricades, and the like.
   4. Provide and maintain shoring, bracing, and structural supports required to preserve stability and prevent movement, settlement, or collapse of existing-to-remain construction and finishes; and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

B. Building Protection: Protect existing-to-remain building construction against damage and soiling during selective demolition.
   1. Do not begin selective demolition work until temporary building bracing, barricades, and other protection necessary to prevent injury to people and damage to adjacent existing-to-remain facilities.
   2. Do not allow water to enter existing-to-remain wall or roof insulation. Replace insulation when it is wetted.

C. Utilities, Services, and Building Systems Protection:
   1. Maintain existing-to-remain utility services and mechanical and electrical systems and protect them against damage during selective demolition operations.

2. Locate, identify, disconnect, and seal or cap off indicated utility services and mechanical and electrical systems serving areas indicated for demolition.

    a. Arrange with utility companies to shut off indicated utilities.

    b. If building systems or mechanical and electrical systems are indicated as removed, relocated, or abandoned, provide temporary services and systems that bypass demolition areas and maintain continuity of services and systems to other parts of building before proceeding with selective demolition.

    c. Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing.

3.03 DEMOLITION

A. General Demolition Requirements:

1. Coordinate demolition to assure the proper sequence, limits, methods, and time of performance. Schedule demolition to impose minimum of hardship on present facility operations and performance of the work.
2. Conduct selective demolition and debris-removal operations to ensure the least interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
3. Demolish and remove existing construction only as shown and to the extent required by new construction. Use methods necessary to complete the work within indicated or specified limitations.

    a. Maintain existing building structure (including structural floor and roof decking) and envelope (exterior skin and framing, excluding window assemblies and nonstructural roofing material) not shown as demolished; do not demolish existing construction beyond indicated limits.

    b. Maintain existing interior nonstructural elements (interior walls, doors, floor coverings, and ceiling systems) not shown as demolished.

    c. Do not demolish existing construction beyond indicated limits.
4. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage existing-to-remain construction or adjoining construction.
5. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces.
6. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces. Verify condition and contents of hidden space before starting cutting operations.
7. Do not use cutting torches until after work areas are cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
8. Temporarily cover existing-to-remain openings.
9. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
10. Do not remove any item in a manner that that results in any warranty or guarantee becoming void.

B. Special Techniques:

1. Removed and Salvaged Items:

    a. Clean salvaged items.

b. Pack or crate items after cleaning. Identify contents of containers.

c. Store items in a secure area or location until delivery to the Owner.

2. Removed and Reinstalled Items:

a. Clean and repair items to functional condition adequate for intended reuse. Paint equipment to match new equipment.

b. Pack or crate items after cleaning and repairing. Identify contents of containers.

c. Protect items from damage during transport and storage.

d. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.

3. Existing-to-Remain Items:

a. When permitted by the Architect, items may be removed to a suitable, protected storage location during selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.04 CORRECTION AND REPAIR

A. Damaged existing-to-remain work must be patched and repaired. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include
   1. written descriptions of non-conforming, damaged, and defective work;
   2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
   3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Do not correct, repair, or replace any item in a manner that that results in any warranty or guarantee becoming void.

D. Arrange and pay costs for removing and replacing work that cannot be corrected or repaired to the Architect’s acceptance.

3.05 CLEANING

A. Except for recycled, reused, salvaged, and reinstalled items and other existing-to-remain items on Owner's property, remove demolished materials from the project site and legally dispose off-site. Do not burn demolished materials.

B. Removed items not indicated for reuse, reinstallation, or salvage are the property of the Contractor and must be cleared from the project site.
   1. Continuously clean up and clear these items; do not allow them to accumulate in the building or at the project site.
   2. Material and equipment may not be viewed by prospective purchasers nor sold on the site.
   3. The Owner is not responsible for the condition, loss, or damage to removed items.

C. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

END OF SECTION

TAGDSC, ELMTF, CLSF3030

SECTION 02 82 13
ASBESTOS AND LEAD-BASED PAINT ABATEMENT

PART 1: GENERAL

1.1 PROJECT SITE

The project site is located at the Granada Hills Recreation Center, 16730 Chatsworth Street, Granada Hills, California. The project area consists of the Pool and associated decking, walls and fencing, Bathhouse, Pool Equipment Building and Spectator Seating area.

1.2 SCOPE OF WORK

A. The main goal for this project is the removal of asbestos-containing materials (ACMs), Lead-Based Paint (LBPs), and Lead-Containing Materials prior to the demolition and renovation activities.

B. All removal and disturbance of ACMs shall be performed by an asbestos abatement contractor, using 32-hour asbestos certified workers (Asbestos Worker trained as outlined in 40 CFR 763). Abatement contractor's workforce shall be supervised by experienced persons trained, knowledgeable and qualified in the techniques of asbestos abatement, handling and disposal of asbestos-containing and/or asbestos-contaminated materials, and the subsequent cleaning of contaminated areas, including, at a minimum, Competent Person/Contractor Supervisor training as outlined in 40 CFR 763.

C. All removal and disturbance of LBPs and lead-containing materials shall be performed by a state-licensed contractor, using California Department of Public Health (CDPH) certified workers with at least one CDPH-certified Supervisor. All removal and disturbance of lead-containing materials (not meeting the definition of lead-based) as defined in 8 CCR 1532.1, shall be performed by a state-licensed contractor, using lead-trained workers with certification of training meeting the requirements of 8 CCR 1532.1. Abatement contractor's workforce shall be supervised by experienced persons trained, knowledgeable and qualified in the techniques of lead abatement, handling and disposal of lead-containing and/or lead- contaminated materials, and the subsequent cleaning of contaminated areas.

D. When exposure monitoring of a particular lead-related task indicates that the permissible exposure limit (PEL) is or will be exceeded, the contractor shall use CDPH-certified lead workers to complete the task. Contractors performing work that disturbs any lead-containing material (LCM) must submit proof of negative exposure assessment (NEA) if personal protective equipment is not to be used.

E. For Cal/OSHA compliance purposes, all painted, varnished, and glazed surfaces identified in the survey report with lead concentrations less than 1.0 milligrams per square centimeter (mg/cm^2) will require that contractors performing activities that will disturb these surfaces/materials comply with the requirements of 8 CCR 1532.1.

F. Contractor shall furnish all labor, materials, services, insurance (specifically covering the handling and transportation of asbestos, lead, and other hazardous materials), and equipment which is specified, shown or reasonably implied for the removal, transport, and disposal of the hazardous materials identified in the following tables:

Table 1 – ACMs and ACCMs to be Abated

Building Material	Percent Asbestos	Comments
Asphaltic roofing material (roofing shingles)	10 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing on the Bathhouse. Approximately 5,800 square feet of roofing material. The asphaltic roofing is a non-friable ACM and was in good condition at the time of the survey. Pipes and penetrations observed on the roof were metal.
Roof penetration mastic	10% Chrysotile	Asbestos was detected on the mastic used at roof penetrations at vents, approximately 25 square feet. The roof penetration mastic is a non-friable ACM and was in good condition at the time of the survey.
Exterior stucco	0.2 – 0.49% Chrysotile (1,000-point count)	Located at the exterior northeast, northwest, southeast and southwest walls and the west entrance to the Bathhouse, approximately 1,100 square feet. The samples were further analyzed by 1,000-point count method. The exterior stucco is an ACCM and was in good condition at the time of the survey.
Grey rolled roofing	10 – 15% Chrysotile	Located on the roof of the Pool Equipment Building. Asbestos detected amongst multiple layers of roofing, approximately 850 square feet. The grey rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
Grey roof mastic	10% Chrysotile	Located at vent pad corners and roof penetrations on the Pool Equipment Building roof, approximately 10 square feet. The mastic is a non-friable ACM and was in good condition at the time of the survey.
Interior plaster walls	< 0.1 – 0.5% Chrysotile (1,000-point count)	Located on the interior beige, rough- finish plaster walls inside the Bathhouse, approximately 3,500 square feet. Metal pipes inside wall cavities and along the ceiling were observed to be uninsulated. Samples of interior plaster were analyzed further by 1,000-point count method. The beige interior plaster walls are an ACCM and were in good condition at the time of the survey.
Grey rolled roofing	15 – 20% Chrysotile	Asbestos was detected amongst multiple layers of roofing at the Spectator Shelter, approximately 600 square feet. The rolled roofing is a non-friable ACM and was in good condition at the time of the survey.
Roof patch mastic	5 – 10% Chrysotile	Located as patches on the roof of the Spectator Shelter, approximately 15 square feet. No roof penetrations were observed. The mastic is a non-friable ACM and was in good condition at the time of the survey.

Lead was detected above concentrations greater than 0.7 mg/cm^2 in the following areas. Table 2 is a listing of LBPs and LCMs that may be impacted by the planned renovation activities:

Table 2 – Lead-Containing Materials (LCMs) to be Removed

Building Component	Paint Color	Lead Content (mg/cm2)	Comments
Ceramic tile	Black	16.9 - 18	Ceramic tile located on the north and south pool walls as lane markers. They have been painted over with black paint. Approximately 14 square feet. The tiles are intact.
Ceramic sink	White	33.7	Located on the interior west wall of the Director's Office in the Bathhouse. One (1) sink in intact condition.
Ceramic wall tile	Tan	3.9	Located at the interior lower west wall in the Men's Restroom in the Bathhouse, by the urinals. Approximately 32 square feet. The tile is intact.
Ceramic urinals	White	2.8	Located at the southwest side of the Men's Restroom in the Bathhouse. Three (3) urinals. The urinals are intact. Ceramic sinks in the Men's and Women's Restrooms are negative for lead.
Ceramic toilets	White	2.8 – 3.2	Located in the Men's and Women's Restrooms in the Bathhouse, approximately seven (7) toilets total. The toilets are intact. The toilets and sinks in the Men's and Women's Staff Restrooms are negative for lead.
Ceramic sink	White	8.8	Located in the Utility Room next to the Women's Shower Hall in the Bathhouse. (One) 1 sink in intact condition.

LCMs impacted by the planned project shall require component removal. It is recommended that those LCMs that can be removed intact, be done so and that measures be taken to avoid the creation of lead dust during the abatement/removal of LCMs that have to be demolished (i.e. ceramic tiles).

G. The work includes the removal, transport, and disposal of the following:

1. All impacted hazardous materials identified in the tables and listed in Article 1.2.F, above.
2. All materials used for work area preparation.
3. All materials used for paint stabilization and cleaning of contaminated areas.
4. All discarded personnel protective equipment.
5. All other potentially contaminated materials.

H. Other items and responsibilities of work shall include:

1. As per agreement between Contractor and Owner.

2. The abatement contractor will coordinate with the General Contractor accessibility to the existing water supply for construction purposes.

3. The abatement contractor will coordinate with the General Contractor accessibility to the existing electrical power for construction purposes.

I. Damages caused to property features not associated with the buildings during the performance of abatement activities shall be repaired by Contractor (at no additional expense to Owner, unless other arrangements and approval have been provided by the Owner).

J. Listed quantities are for budgetary information and are not to be used for bidding purposes. The abatement contractor has the sole responsibility for confirming the location, quantity and degree of difficulty in removing the impacted identified materials.

K. All contractors providing bids for abatement of asbestos-containing, LBPs and LCMs (see Article F above) shall provide a cost break down of their bids to include labor (preparation time, abatement time and number of workers), materials (equipment to be used and material costs), and disposal and transportation costs as well as a final total.

L. The bidding contractors shall provide unit costs in their bids for the removal and disposal of ACMs (per square foot) and LBPs (per square foot or fixture) encountered during the demolition project. Contractor may provide actual quantities and values to be compared to the total allowance.

M. If during the renovation activities, additional suspect ACMs and/or LBPs are found that have not been previously sampled, the materials will need to be assumed asbestos and lead-containing and abated by applicable procedures (see Part 3, Execution). Abatement of assumed ACMs and LBPs can be avoided if the suspect materials are sampled and analyzed for asbestos and/or lead content, with the analytical results indicating no asbestos or lead detected.

1.3 WORK TO BE PERFORMED BY OTHERS

As per Project Specifications.

1.4 RESPONSIBILITIES OF OWNER

A. The Owner will provide daily oversight of and environmental monitoring surrounding the abatement/removal operations.

B. The abatement contractor shall coordinate with the Owner, project representatives, and/or General Contractor for the location of equipment storage, staging and waste storage locations.

1.5 REQUIRED LICENSURE

A. Contractor shall be licensed by the State of California, Contractors State License Board and be registered to perform asbestos related work with the Division of Occupational Safety and Health, Department of Industrial Relations, and at a minimum contractor shall hold the following license classifications:

1. C-22 – Asbestos Abatement Contractor

2. EPA Lead-Safe Certified Renovator

3. HAZ – Hazardous Substance Removal Certification

B. Transportation of Friable and Non-Friable Asbestos Containing Materials: Contractor shall itself be or have a subcontractor who is a registered hazardous waste transporter with the State of California, Department of Toxic Substances Control.

C. Subcontractors shall hold all licenses applicable to specified trade work.

1.6 PERMITS

A. As required by Cal/OSHA

B. As required by the South Coast Air Quality Management District.

C. As required by City of Los Angeles, as applicable.

1.7 NOTIFICATIONS

A. Contractor shall make all required written notifications to regulatory agencies including the following:

1. Cal/OSHA

2. SCAQMD

3. CDPH

1.8 INSURANCE REQUIREMENTS

Please refer to the General Conditions and General Requirements of the Project in Division 1.

1.9 BONDING REQUIREMENTS

Please refer to the General Conditions and General Requirements of the Project in Division 1.

1.10 PROJECT SCHEDULE

A. Project Start Date: Please refer to the Project Manual. Project Completion Date: Please refer to the Project Manual.

B. All work shall be performed as per agreement between Contractor and Owner.

C. For the purposes of this Work Plan "submittal due date" shall mean the day on which submittals required by Article 1.12 shall be received by the Construction Manager, "start work" shall mean the day Contractor arrives on the project site, and "completion date" shall mean the day Contractor leaves the project site including final clearance testing and demobilization.

D. Contractor to indicate the number and duration of shifts required to perform abatement monitoring as part of the bid document. Costs associated with hazardous materials abatement monitoring, beyond those pertaining to the project duration indicated in the Contractor’s Bid, shall be deducted from Contractor’s Contract Amount.

1.11 APPLICABLE REGULATIONS

A. Contractor shall perform all work in compliance with the most recent edition of all applicable federal, state, and local regulations, standards and codes governing asbestos abatement, transport, and disposal of asbestos containing/contaminated materials, lead-based/containing surface coatings and contaminated materials.

1. Requirements include obtaining permits, licenses, inspections, releases and similar documentation, as well as payments, statements and similar requirements associated with codes, regulations, and standards.

B. Regulations, Standards, and Codes (General):

1. General applicability of federal, state, and local regulations, standards and codes governing hazardous materials abatement, demolition, transport, and disposal, except to the extent that more explicit or more stringent requirements are written directly into the contract documents, all applicable regulations, standards, and codes have the same force and effect and are made a part of the contract documents as if copied directly into the contract documents, or as if published copies are bound herewith.

C. Contractor Responsibility: The Contractor shall assume full responsibility and liability for the compliance with all applicable federal, state, and local regulations pertaining to work practices, transport, disposal, and protection of workers, visitors to the site, and persons occupying areas adjacent to the site.

1. The contractor is responsible for providing training, medical examinations and maintaining training/medical records of personnel as required by the applicable federal, state, and local regulations, including personal air monitoring for all work practices.

2. The Contractor shall hold the Owner and Project Environmental Consultant harmless for failure to comply with any applicable hazardous materials abatement, transport, disposal, safety, health or other regulation on the part of himself, his employees, or his subcontractors.

1.12 SUBMITTALS

A. No later than 10 days prior to commencement of work, Contractor shall submit (two copies) to the Owner Representative and/or Project Environmental Consultant documentation that includes, without limitation, the following:

1. Current Copies of licenses and registrations required by Article 1.5 Required Licensure (include copies of subcontractor’s licenses).

2. Copies of written notification to the following regulatory agencies:

a. Cal/OSHA

b. SCAQMD

c. City of Los Angeles Permits (if applicable)

d. CDPH

3. Current proof of insurance coverage required by Article 1.8 Insurance Requirements (include proof of insurance for subcontractors).

4. Current proof that required permits, site location and arrangements for transport and disposal of asbestos and lead waste materials have been made.

5. Current proof of legal right to use patented equipment or processes.

6. Current Manufacturer's certification that HEPA vacuums, differential pressure air filtration devices and other local exhaust ventilation equipment conform to ANSI Z9.2-79 and have been permitted by the SCAQMD.

7. Current documentation showing that Contractor's employees, including foreman, supervisor, and any other company personnel or agents who may be exposed to airborne asbestos fibers or who may be responsible for any aspects of asbestos abatement activities, have received training as required by 29 CFR 1926.1101 and 8 CCR 1529.

8. Current documentation showing that Contractor's employees, including foreman, supervisor, and any other company personnel or agents who may be exposed to airborne lead dust or who may be responsible for any aspects of lead abatement activities, have received training as required by 29 CFR 1926.62 and 8 CCR 1532.1.

9. Current documentation from Physician (signed by an M.D.) showing that all employees or agents who may be exposed to airborne asbestos fibers, and/or lead dust, in excess of background levels have received medical monitoring to determine whether they are physically capable of working while wearing the respirator required without suffering adverse health effects. The Contractor must be aware of and provide information to the examining physician about unusual conditions in the workplace environment (e.g. high temperatures, humidity, chemical contaminants) that may impact on the employee's ability to perform work activities.

10. Current documentation of respirator fit-testing for all Contractor employees and agents who must enter the work area. This fit-testing shall be conducted annually and in accordance with procedures as required by 29 CFR 1910.134 and 8 CCR 5144.

11. An emergency preparedness plan as required by Article 1.15 - Emergency Planning.

12. Master schedule, showing phasing, number of shifts, time for air clearances, tear down and manpower loading to be utilized for the duration of the project.

13. A site-specific work plan based on scope of work. Include a diagram showing containment set-up, decontamination unit(s), locations of negative air machines and exhaust placement.

14. The name, address and telephone number of the transporter and disposal facility must be provided to Owner.

B. During abatement activities, Contractor shall submit to the Owner Representative and/or Project Environmental Consultant documentation that includes, without limitation, the following:

1. Copies of the work area entry/exit log book. Log book must record name, affiliation, time in, and time out for each entry into the work area.

2. Copies of logs documenting filter changes on respirators, HEPA vacuums, differential pressure air filtration devices, water filtration device, and other engineering controls.

3. Copies of Safety Data Sheets (SDS) for solvents, encapsulants, wetting agents, replacement materials, and other substances brought by Contractor to the Project Site. SDSs shall be available the first day that subject materials/substances are present on the project site.

4. Results of all required OSHA compliance air monitoring. Results shall be available prior to the start of the following shift and within 24 hours of completion of the last shift.

5. Copies of all accident/incident reports where injury or damage has occurred on or to the Owner's property.

6. Copies of daily logs indicating location(s) worked, type of materials removed, quantity of materials removed and number of personnel conducting the aforementioned activities.

7. Copies of all transport manifests, trip tickets and disposal receipts for all asbestos, lead and universal waste materials removed from the work area shall be provided. Copies shall be provided to the City Project Inspector per General Requirements in Division 1.

8. Abatement contractor is responsible for profiling all waste streams that contain lead prior to transport and disposal. Results must be submitted to the Owner Representative and/or Environmental Consultant for verification of prior to disposal. See Section 3.3 and 3.4 of this specification.

1.13 NOTICES

A. Post in the clean room area of the worker decontamination enclosure a list containing the names, and telephone numbers of Owner, Construction Manager, Abatement Contractor, and Project Environmental Consultant.

B. Post in the clean room area of the worker decontamination enclosure a list of all persons authorized to enter the work area.

C. Additional postings shall include:

1. Visitor Entry and Exit Log
2. Employee Daily Sign in Log
3. Entry and Exit Procedures
4. Emergency Procedures
5. Copies of permits required in Article 1.6 of this document and copies of notifications required in Article 1.7 of this document.
6. As required by the Department of Labor.

1.14 SITE USE AND SECURITY

A. Confine operations at the site to the areas permitted under the Contract. Portions of the site beyond which areas on which work is indicated are not to be disturbed.

B. The work area shall be restricted only to authorized, trained and protected personnel, including Contractor, Contractor's employees, and Owner employees, Owner, Construction Manager, Project Environmental Consultant, State and Local Inspectors.

C. Entry into the work area by unauthorized individuals shall be reported immediately to the Project Environmental Consultant.

D. Contractor shall be responsible for Project site security during abatement operations in order to protect work efforts and equipment.

1.15 EMERGENCY PLANNING

A. Emergency planning and procedures shall be developed by Contractor prior to abatement initiation.

B. Emergency procedures shall be in written form and prominently posted. Contractor shall ensure that all persons entering the work area read these procedures and understand the Project site layout, location of emergency exits and emergency procedures.

C. Emergency planning shall include considerations of fire, explosion, electrical hazards, slips, trips and falls, confined spaces, park emergencies and heat related injury. Written procedures shall be developed and employee training in procedures shall be provided by Contractor.

D. Employees shall be trained in evacuation procedures in the event of work place emergencies.

1. For non-life-threatening situations, employees injured or otherwise incapacitated shall decontaminate following normal procedures with assistance from fellow workers, if necessary, before exiting the work place to obtain proper medical treatment.
2. For life-threatening injury or illness, worker decontamination shall take least priority. After measures to stabilize the injured worker, remove him from the work place and secure proper medical treatment.
3. Telephone numbers of all emergency response personnel and map to closest hospital shall be prominently posted in the clean and equipment rooms.

1.16 FIRE PROTECTION

A. All plastic, spray-on strippable coatings, and structural materials used in the asbestos abatement process shall be UL-approved and certified as fire retardant or noncombustible.

B. Wood shall be pressure impregnable and certified as fire retardant.

C. Safety Data Sheets (SDS) for fire retardant materials shall be made available upon request.

D. All combustible rubbish and debris, including properly bagged asbestos shall be properly disposed of at the end of each working day.

E. A minimum of one (1) 4A/60BC dry-chemical extinguisher shall be maintained at each of the following locations:

1. At each corner of the work area. Where no clear corners exist, four (4) extinguishers shall be placed around the exterior wall of the work area so that they are approximately 25 percent of the total distance apart.

a. Exception: Where the total contained work, area is less than 1,000 square feet, two (2) 4A/60BC extinguishers shall be provided. All extinguishers shall be clearly identified with red tape.

2. Contractor shall ensure that on site personnel are aware of the location and proper use of all extinguishers and other fire/life safety equipment.

F. All existing fire detection, alarm systems, connections and standpipes shall remain in place, active and unobstructed. Any alteration to this equipment must be approved by the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Generally, Contractor shall carefully adhere to the following:

1. All plastic, spray-on strippable coatings and structural materials used shall be UL-certified as fire retardant or non-combustible.

2. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and brand name (where applicable).

3. Fire-retardant polyethylene sheeting utilized for worker decontamination and construction/containment barriers shall be a minimum of six-mil in thickness.

4. Disposal bags shall be of six-mil polyethylene, pre-printed with labels as required by EPA regulation 40 CFR 61.152 (b) (I) (iv) or applicable Cal/OSHA requirements.

5. Stick-on labels as per EPA or Cal/OSHA requirements for disposal drums.

6. Warning signs as required by Cal/OSHA shall be utilized.

7. Disposal drums shall be 55-gallon DOT A1A (DOT 17H) with locking ring tops and will meet the requirements of 49 CFR 172-178.

B. Removal and Encapsulation:

1. Surfactant (wetting agent) shall be a 50/50 mixture of polyethylene ether and polyethylene ester, or equivalent, mixed in proportion of 1 fluid ounce to 5 gallons.

2. The encapsulating agent to be applied shall adhere to the substrate surfaces from which asbestos-containing material has been stripped.

3. The encapsulating agent shall not be flammable and should not be solvent-based or utilize a vehicle (the liquid in which the solid parts of the encapsulant are suspended) consisting of hydrocarbon.

4. If utilized, mastic removal solvents shall NOT be or create a RCRA waste and shall be of the low odor variety.

2.2 EQUIPMENT

A. General

1. A sufficient quantity of HEPA vacuums and/or differential pressure air filtration devices equipped with HEPA filtration and operated in accordance with ANSI Z9.2-79 (local exhaust ventilation requirements) and EPA guidance document EPA 560/5-83-002 Guidance for Controlling Friable Asbestos Containing Materials in Buildings. To calculate total air flow requirement:

$$\text{Total ft}^3\text{/minute} = \frac{\text{Volume of work area (in cubic feet (ft}^3\text{)}}{\text{15 minutes}}$$

To calculate the number of units needed for the abatement:

$$\text{Number of units needed} = \frac{\text{Total ft}^3\text{/minute}}{\text{Capacity of unit in ft}^3\text{/minute}}$$

2. At a minimum, full-face powered air-purifying respirators (PAPRs) with HEPA P-100 cartridges shall be utilized during all friable/Class I asbestos removal and for all removal of lead-containing paints/substances involving abrasive removal techniques.

3. At a minimum, half-face air-purifying respirators with HEPA P-100 cartridges shall be utilized during all ceramic tile or lead-containing paint removal/impact except abrasive removal, or for the removal of all non- friable/Class II asbestos removal.

4. Respirators shall be furnished to the abatement workers by Contractor. The respirators shall have been tested and approved by National Institute of Occupational Safety and Health (NIOSH) for use in asbestos atmospheres.

5. Full body disposable protective clothing, including head, body, and foot coverings shall be furnished to visitors in sizes adequate to accommodate movement without tearing.

6. Additional safety equipment as supplied in accordance with 8 CCR 1514, (e.g. hard hats meeting the requirements of 8 CCR 1515, eye protection meeting the requirements of 8 CCR 1516, safety shoes meeting the requirements of 8 CCR 1517, hand protection meeting the requirements of 8 CCR 1520, hearing protection meeting the requirements of 8 CCR 1521 and body protection meeting the requirements of 8 CCR 1522), as necessary, shall be furnished to all workers and authorized visitors.

7. Non-skid foot wear shall be furnished to all abatement workers. Disposable clothing shall be adequately sealed to the footwear to prevent body contamination.

8. Furnish a sufficient supply of disposable mops, rags, and sponges for work area decontamination.

9. Fall protection, including harnesses and lanyards complying with Cal/OSHA requirements shall be supplied by the Contractor for workers engaged in abatement activities on scaffolding and/or roofs.

B. Removal:

1. A sufficient supply of scaffolds, ladders, lifts and hand tools (e.g., scrapers, wire cutters, brushes, utility knives, wire saws, etc.) shall be furnished as needed.

2. Rubber dustpans and rubber squeegees shall be furnished for cleanup. Under no circumstances shall brooms be used for the cleanup of asbestos debris.

3. Brushes utilized for removing loose asbestos-containing material shall have nylon or fiber bristles, not metal.

4. A sufficient supply of HEPA filtered vacuum systems shall be furnished during cleanup.

C. Encapsulation: Encapsulants shall be sprayed using airless spray equipment or hand pressurized sprayer.

D. Enclosure: Hand tools equipped with HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports if there is any need to disturb asbestos containing materials during this process. As an alternative, asbestos material may be partially removed following controlled removal procedures approved by the Project Environmental Consultant.

PART 3 - EXECUTION

3.1 CLASS II ASBESTOS REMOVAL WORK (INTERIOR) – INCLUDING SPOT ABATEMENT

The following procedure shall be utilized for all removal of non-friable/Class II ACM and ACCM from all impacted surfaces, as applicable.

A. Contractor shall coordinate all items of work with the Project Environmental Consultant.

B. Contractor shall shut down and lock out all heating, cooling, and air conditioning systems (HVAC) components that are in supply or pass through the work area. In the event that there is any impact to the HVAC system (such as an air intake), the HVAC system shall remain off during the project.

C. Contractor shall shut down and lock out electric power to all Work Areas. Contractor shall provide temporary power and lighting sources, insure safe installation of temporary power sources and equipment by compliance with all applicable electrical code requirements and Cal/OSHA requirements for temporary electrical systems. Protect each circuit with a Ground Fault Circuit Interrupter (GFCI) of proper size located in the temporary panel.

D. Install worker decontamination unit described in Article 3.5 or as agreed upon with Project Environmental Consultant.

E. Post warning signs meeting the specifications of 8 CCR 1529, 8 CCR 5208, and 29 CFR 1926.1101, at any location and approaches to a location where airborne concentration of asbestos fibers may exceed ambient background levels. Signs shall be posted at a distance sufficiently far enough away from a work area to permit a person to read the sign and take necessary protective measures to avoid exposure.

F. Asbestos Handlers shall don personnel protective equipment as required in Article 2.2 - Equipment.

G. Pre-clean all vertical and horizontal surfaces within the work area using HEPA-filtered vacuum and/or wet cleaning techniques, as appropriate. Contractor shall not use any methods that would raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters and shall not disturb asbestos-containing materials during the pre-cleaning phase.

H. Seal off all windows, doorways, elevator openings, corridor entrances, drains, ducts, grills, grates, diffusers, skylights and any other openings between the Work Area and uncontaminated areas outside of the Work Area with two layers six-mil fire retardant

polyethylene sheeting and tape as critical barriers.

I. Cover floors in the area of wall removal with fire retardant polyethylene sheeting.

1. A single layer of six-mil (minimum) sheeting. Additional layers of sheeting shall be utilized as a drop cloth to aid in cleanup of bulk materials.

2. Containment plastic shall be sized to minimize seams. If the floor area necessitates seams, those on successive layers of sheeting shall be staggered to reduce the potential for water to penetrate to the flooring material. A distance of at least 6 feet between seams is sufficient. Do not locate any seams at wall/floor joints.

3. Sheeting shall be installed in a fashion so as to prevent slippage between successive layers of material.

J. Cover all immovable items (plumbing, etc.) and/or construct walls in the Work Area with fire retardant polyethylene sheeting. Walls that will be demolished do not necessarily need protection (check with Project Environmental Consultant). Walls shall be decontaminated using HEPA vacuums and wet cleaning techniques. Walls with mortar joints (e.g., tile) are considered porous. These walls must be sealed by critical barriers.

1. Walls shall be covered with two layers six-mil fire-retardant polyethylene sheeting (sealed airtight with duct tape).

2. Plastic shall be sized to minimize seams. Seams shall be staggered and separated by a distance of at least six feet.

3. Wall sheeting shall overlap floor sheeting by at least 12 inches beyond the wall/floor joint to provide a better seal against water damage and for negative pressure if the wall is not being demolished.

4. Wall sheeting shall be secured adequately to prevent it from falling away from the walls. This will require additional support/attachment when Negative Pressure Ventilation Systems are utilized.

5. Fire exits shall be clearly labeled as required by Regulations.

K. Install the minimum number of 2' x 3' clear view windows that will provide visual access to ALL areas of the enclosure.

L. Install and initiate operation of negative pressure air filtration differential as required in Article 2.2 - Equipment. Negative pressure differential shall be at a minimum of -0.02" of water column at all times during asbestos removal operations.

M. Install and maintain a manometer equipped with a strip chart recorder. Manometer shall be capable of detecting at least 0.02" of water column.

N. The Contractor shall carry out all asbestos removal activities in a manner that will minimize pulverizing, breaking or creation of dust.

O. Keep the ACMs/ACCMs being removed wet throughout removal operations. In the event that visible dust is generated during the abatement process, also mist the air within containment periodically to reduce airborne asbestos fiber concentrations.

P. Once all removal activities have been completed, clean-up of the work areas shall be conducted in accordance with Article 3.4 - Clean-Up.

Q. Encapsulate entire work area with a penetrating and/or lock-down type encapsulant following acceptance of clean-up activities.

R. Dispose of all asbestos containing/contaminated waste; debris shall be kept wet at all times and be bagged while wet in accordance with Article 3.6 - Disposal Procedures.

1. ACCM waste is to be placed in unlabeled, clear plastic bags or wrapped in unlabeled plastic sheeting for disposal.

S. For small areas of wall plaster that require abatement, the following procedures shall be

used for the set-up and use of *Mini Containments*:

1. The mini containment shall be equipped with a HEPA filter equipped vacuum or a HEPA ventilation system to maintain negative pressure within the mini containment. Negative pressure must be maintained during the removal process.
2. All exposed ACMs/ACCMs within the mini containment must be encapsulated.
3. Tools and equipment used in the mini containment must be wet wiped until no visible residue remains. Wet wiped tools and equipment must be passed through the mini containment door in a sealed, leakproof container. The leakproof container must be opened only inside another mini containment or decontamination unit.
4. After the removal of the ACMs/ACCMs, encapsulation or enclosure is complete, the interior of the mini containment must be cleaned using HEPA filter equipped vacuuming, wet wiped, or both; or apply an encapsulant to the interior of the mini containment.
5. Before the mini containment is removed, a visual inspection of the interior and abated surfaces must be performed. If debris or material is still present, the interior of the mini containment must be recleaned.
6. Once the visual inspection is completed, the mini containment can be removed by sealing the door and collapsing the containment using a HEPA filter equipped vacuum or tearing down the mini containment after clearance air sampling indicated the fiber level is within the acceptable levels.

3.2 CLASS II ASBESTOS REMOVAL WORK (EXTERIOR)

The following procedure shall be utilized for all removal of non-friable/Class II asbestos-containing roofing products, including asphaltic roof membranes, flashings, and related mastics, and exterior stucco.

A. Contractor shall coordinate all items of work with the Project Environmental Consultant.

B. Contractor shall shut down and lock out all heating, cooling, and air conditioning system (HVAC) components that are in supply or pass through the work area. In the event that there is any impact to the HVAC system (such as a fresh air intake), the HVAC system shall remain off during the project.

C. Contractor shall shut down and lock out electric power to all Work Areas. Contractor shall provide temporary power and lighting sources, ensure safe installation of temporary power sources and equipment by compliance with all applicable electrical code requirements and Cal/OSHA requirements for temporary electrical systems. Protect each circuit with a Ground Fault Circuit Interrupter (GFCI) of proper size located in the temporary panel.

D. Contractor shall establish a regulated area around the perimeter of the designated work area. At a minimum, the regulated area shall consist of barrier tape and delineators at sufficient distance from the work area so that roofing debris does not fall outside of the regulated area based on current conditions at the site. The barrier tape may contain appropriate wording such as “DANGER ASBESTOS”. Appropriate signage and a worker decontamination unit shall be included, and part of the regulated area (see below).

E. Install worker decontamination unit described in Article 3.5 or as agreed upon with Project Environmental Consultant. If installation cannot occur on the roof, installation shall occur as close to the roof access as possible, with polyethylene sheeting laid-down between the decontamination unit and the roof access.

F. Post warning signs meeting the specifications of 8 CCR 1529, 8 CCR 5208, and 29 CFR 1926.1101, at any location and approaches to a location where airborne concentration of asbestos fibers may exceed ambient background levels. Signs shall be posted at a distance sufficiently far enough away from a work area to permit a person to read the sign and take necessary protective measures to avoid exposure (generally, at roof

accesses, or at least twenty feet from removal, if on roof).

G. Asbestos Handlers shall don personnel protective equipment as required in Article 2.2.A. Double-suiting is recommended if decontamination unit is not on roof or close by.

H. Pre-clean all vertical and horizontal surfaces within the work area using HEPA-filtered vacuum and/or wet cleaning techniques, as appropriate. Generally, this will include organic material or debris on the roof, roof- mounted duct work and equipment only; there is no need to pre-clean surfaces to be removed. Contractor shall not use methods that would raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters and shall not disturb asbestos-containing materials during the pre-cleaning phase.

I. Seal off all windows, doorways, drains, ducts, skylights, roof penetrations, and any other openings between the Work Area and uncontaminated areas outside of the Work Area with six-mil fire retardant polyethylene sheeting and tape. Walls with mortar joints (e.g., tile) are considered porous. Openings through these walls must be sealed by critical barriers.

J. Place 6-mil plastic sheeting at the base of building underneath the work area and fasten to the building wall with tape to catch any roofing material debris that may fall from the roof during abatement. At a minimum, plastic sheeting shall be placed 10 feet out from the work area but must remain inside the regulated area. The regulated area and plastic sheeting may need to be extended based on site conditions at the time of abatement. Roofing material abatement shall not take place when wind speeds exceed 15 miles an hour.

K. The Contractor shall carry out all asbestos removal activities in a manner that will minimize pulverizing, breaking or creation of dust. Generally, manual removal methods will be preferred, although larger systems, such as mechanical shears for cutting membranes into strips, are acceptable, as long as they are equipped with proper shrouding and HEPA-filtration equipment. Remove asbestos-cement piping at joints if possible. Keep any breakage to a minimum.

L. Keep the ACMs/ACCMs being removed wet throughout removal operations. In the event that visible dust is generated during the abatement process, also mist the air within regulated area periodically to reduce airborne asbestos fiber concentrations.

1. Bags of asbestos waste shall not be dropped or thrown from the roof, but carefully lowered to the ground.

M. Once all removal activities have been completed, clean-up of the work areas shall be conducted in accordance with Article 3.4 - Clean-Up.

N. Encapsulate entire work area with a penetrating and/or lock-down type encapsulant following acceptance of clean-up activities.

O. Dispose of all asbestos containing/contaminated waste in accordance with Article 3.6 - Disposal Procedures.

P. Mini Containments may be used for abatement of small areas of exterior stucco. See Item 3.2, S above for installation, use, clean-up and removal of mini containments.

3.3 LBP/LEAD-CONTAINING SURFACE COATING IMPACTS – REMOVAL/DEMOLITION

This section applies to the removal of lead-based paints and/or the demolition of components coated with lead-based or lead-containing surface coatings, including lead-based paints, ceramic tiles with leaded glazing, lead-containing plumbing fixtures, and other such materials.

A. Post warning signs meeting the specifications of 8 CCR 1532.1 and 29 CFR 1926.62 at any location and approaches to a location where airborne concentrations of lead dust may exceed ambient background levels. Signs shall be posted at a distance sufficiently far enough away from a work area to permit a person to read the sign and take necessary protective measures to avoid exposure. Barrier tape shall be utilized in

conjunction with signs for exterior removal activities, to delineate the extent of regulated work areas.

B. Prepare appropriate fall protection systems in accordance with the requirements of Title 8 California Code of Regulations, Sections 1669, 1670, 1724 and anchoring guidance from Title 8 California Code of Regulations, Section 3283 (where applicable).

C. Install worker decontamination unit described in Article 3.5 or as agreed upon with Project Environmental Consultant.

D. Lead-containing material handlers involved in removal procedures shall wear disposable Tyvek suits, including gloves, hood and footwear. Minimum respiratory protective equipment shall be half-face air-purifying respirators equipped with P100 filters.

1. For exterior lead work, it is recommended that workers wear two (2) disposable Tyvek suits. Upon exiting the work area, the handlers shall HEPA vacuum all visible debris from the outer suit, dispose of it as lead- contaminated waste, and proceed through the decontamination unit for full decontamination.

E. Isolate work area by installing critical barriers or curtained doorways across all openings where airborne lead dust migration may cause secondary lead contamination (for work where components will be removed relatively intact, such as doors, downspouts, and wood trim, drop cloths will suffice). Establish regulated areas with delineators, barrier tape and lead signage for exterior work areas.

F. Cover floors in each work area with fire retardant polyethylene sheeting (do not cover floors where flooring finishes, such as ceramic flooring, for example, are to be removed).

1. A single layer of six-mil (minimum) sheeting.

2. Containment plastic shall be sized to minimize seams.

3. Where multiple layers of floor poly are utilized, sheeting shall be installed in a fashion so as to prevent slippage between successive layers of material.

G. Cover all immovable items and/or construct walls in the Work Area with fire retardant polyethylene sheeting. Walls that will be demolished do not necessarily need protection (check with Project Environmental Consultant).

1. Walls shall be covered with six-mil fire-retardant polyethylene sheeting (sealed airtight with duct tape).

2. Plastic shall be sized to minimize seams.

3. Wall sheeting shall overlap floor sheeting by at least 12 inches beyond the wall/floor joint to provide a better seal for negative pressure.

4. Wall sheeting shall be secured adequately to prevent it from falling away from the walls. This may require additional support/attachment when Negative Pressure Ventilation Systems area utilized.

5. Fire exits shall be clearly labeled with red tape or equivalent.

H. Where manual demolition is employed for lead removal, such as ceramic tile demolition (for example), periodically mist the work area and materials to be impacted to maintain a wet condition and avoid the creation of airborne dust, which may carry lead.

I. The Contractor shall carry out all impacts to lead-based surface coatings in a manner that will minimize pulverizing, breaking, abrading, or in any other way impacting lead-containing paints and generating airborne lead-containing dust.

J. Once all removal activities have been completed, clean-up of the work areas shall be conducted in accordance with Article 3.4 - Clean-Up.

K. Dispose of all lead-containing/contaminated waste in accordance with Article 3.6 - Disposal Procedures.

3.4 CLEAN-UP PROCEDURES

A. Remove and containerize all visible accumulations of ACMs, LBPs, and asbestos/lead-contaminated debris utilizing rubber dust pans and rubber squeegees to move material around. Do not use metal shovels to pick up or move accumulated waste within contained work areas.

Asbestos-containing/contaminated waste shall be placed in leak tight disposal bags. Disposal bags shall be doubled six-mil polyethylene, pre-printed with labels as required by EPA regulation 40 CFR 61.152 (b) (I) (iv), Cal/OSHA (Title 8 CCR Sections 1529 and 5208), SCAQMD Rule 1403, and if applicable Title 22 CCR Section 66504.

Lead-containing wastes shall be containerized in 55-gallon steel drums with labels as required by 8 CCR 1532.1 and 22 CCR 66504.

All other hazardous wastes shall be containerized as appropriate and disposed of in a manner that satisfies the requirements for waste characterization and disposal in accordance with the requirements of Title 22 of the California Code of Regulations, Sections 66243, et seq., and Sections 25157.8, et al, of the California Health and Safety Code.

B. Whether cleaning an asbestos work area or a lead work area (or both), wet clean all surfaces in the work area utilizing rags, mops and sponges, and clean all horizontal surfaces within each work area with a HEPA-vacuum, as appropriate.

C. Remove the cleaned layer of polyethylene sheeting from floors and walls, as applicable. Windows, doors, HVAC system vents and all other openings (critical barriers, if employed) shall remain sealed. Dispose of as asbestos- contaminated or lead-contaminated as appropriate to the work area in question.

D. After gross cleaning of the work area, HEPA-vacuum and wet clean all objects and surfaces in the work area are completed, remove all containerized waste from the work area.

E. Decontaminate all tools and equipment and remove at the appropriate time in the cleaning sequence.

F. Project Environmental Consultant will inspect the work area for visible residue. If any accumulation of residue is observed, it will be assumed to be asbestos and/or lead, as appropriate to the work area, and a second settling period and cleaning cycle repeated at no additional cost to Owner.

G. Following the satisfactory completion of clearance air monitoring or clearance wipe testing, the remaining barriers may be removed and prepared for proper disposal. A final visual inspection by Project Environmental Consultant will be performed. Unsatisfactory conditions may require additional cleaning and air monitoring/wipe sampling, at no additional cost to Owner.

3.5 WORKER DECONTAMINATION SYSTEMS

A. Worker decontamination enclosure systems shall be provided at all locations where workers will enter or exit the work area. At a minimum, one three- stage system at a single location is preferred. Each work area where negative pressure enclosure is the selected method of engineering controls shall have a worker decontamination unit.

B. Worker decontamination enclosure systems constructed at the Project site shall utilize six-mil, fire-retardant polyethylene sheeting, or other approved materials for privacy.

C. Personnel Decontamination Units shall not be located inside the work area(s) unless specifically authorized by the Project Environmental Consultant.

D. Alternate methods of providing Decontamination facilities may be submitted to the Project Environmental Consultant for approval. Do not proceed with any such method(s) without the written authorization.

E. The worker decontamination enclosure system shall consist of at least a cleansing station in accordance with the requirements of 8 CCR 1527 and 8 CCR 1529, equipped with adequate water, towels and cleansing agents to accommodate the entire crew and

visitors.

3.6 DISPOSAL PROCEDURES

A. All friable asbestos waste shall be disposed of as Hazardous, Friable Asbestos Waste.

All non-friable asbestos waste shall be disposed of as Non-Hazardous, Non- Friable Asbestos Waste.

All ACCM waste shall be disposed of as non-regulated waste (construction debris) unless co-mingled with friable or non-friable asbestos waste, see above.

Contractor is responsible for characterization of lead waste prior to waste being transported off site. All waste characterization samples must be taken under the supervision of the Project Environmental Consultant. Characterization sample results must be submitted to the Owner and/or

Project Environmental Consultant for review prior to waste being transported off site. Refer to Section 1.12.B.8 of this specification.

All asbestos-containing waste shall be placed and stored in clear, sealed, leak-tight and appropriately labeled containers, in accordance with 8 CCR 1529 and SCAQMD Rule 1403.

All ACM waste shall be stored in a locking metal storage bin or in an enclosed, lockable location approved by the Owner and/or Environmental Consultant. The interior of the waste storage location shall be lined with two

(2) layers of 6-mil plastic sheeting on walls, floors, and ceiling. Signage in accordance with SCAQMD Rule 1403 shall be affixed to the entry and sides of the asbestos waste storage location. Signage in accordance with 8 CCR 1529 shall be placed as described above for lead waste storage locations. The waste storage location shall remain locked when not in use. Wastes generated during abatement shall be stored in the waste location at the end of the work shift until finally transported to an appropriate landfill for disposal.

Friable and non-friable asbestos waste shall not be co-mingled but stored separately.

B. All lead wastes shall be either disposed of as construction debris (if STLC/TCLP results allow) or lead-containing waste (with attendant RCRA codes, if STLC/TCLP results so require).

C. All hazardous wastes (including non-hazardous asbestos wastes) must be disposed of by a certified waste hauler approved by the Owner.

D. Arrange for proper disposal of any generated hazardous waste stream through an Owner-approved waste disposal facility.

E. Obtain the EPA Hazardous Waste Generator Identification Number and State of California Hazardous Waste Tax Identification Number from the Owner.

F. All hazardous waste manifests, non-hazardous material data forms and bills of lading shall be delivered to the Project Environmental Consultant. Record keeping format shall utilize a chain of custody form which includes the names and addresses of the Generator (Owner), Contractor, Waste Hauler, pickup site, disposal site, the estimated quantity of the asbestos waste and the type of containers used. The form shall be signed by the Generator, Contractor, Waste Hauler and the Disposal Site Operator, as the responsibility for the material changes hands.

3.7 REESTABLISHMENT OF THE WORK AREAS

A. Reestablishment of the work area shall only occur following the completion of clean-up procedures and after clearance air monitoring has been performed and documented to the satisfaction of the Owner Representative or Project Environmental Consultant.

B. Contractor and Owner Representative or Project Environmental Consultant shall visually inspect the work area for any remaining visible residue. Evidence of contamination will necessitate additional cleaning and air monitoring requirements at no additional cost to

Owner, until approved by Project Environmental Consultant.

C. Upon approval by Owner Representative or Project Environmental Consultant, the Contractor shall remove remaining fire-retardant polyethylene sheeting, critical barriers, and decontamination unit.

D. Repair all areas of damage that occurred as a result of abatement activities at no additional cost to Owner, unless other arrangements and written approval have been provided by the Owner.

3.8 ENVIRONMENTAL MONITORING

Stop Work Order Due to Inefficiencies:

If, at any time, the Owner Representative or Project Environmental Consultant decides work practices are violating Specifications, or, Federal or local regulations to extent of potential endangerment of building users, workers, Owner Representative, employees or public, he/she will immediately notify Contractor (followed up in writing) that operations shall cease until corrective action is taken by Contractor. Contractor shall take such corrective action before proceeding with work. Loss or damage due to Stop Work Order(s) shall be Contractor's responsibility. A Stop Work Order, issued by Owner's Representative or Project Environmental Consultant shall become effective immediately.

A. Air monitoring may be carried out by the Project Environmental Consultant on behalf of the Owner to verify that the building beyond the contamination area and the outside environment remains uncontaminated.

B. Area Air Monitoring: The Project Environmental Consultant will conduct in- progress air monitoring daily to determine area airborne contaminant concentrations within the confines of the work area.

Environmental Air Sampling: Ambient air samples are taken and analyzed to indicate fiber migration from containment to the environment. Should any environmental sample outside work areas exceed the base line of 0.01 f/cc of air, all work will immediately halt except for corrective work. The Project Environmental Consultant shall determine the source of the high fiber count and notify the contractor with directions for the corrective action.

C. Clearance Air/Wipe Monitoring:

1. Following the completion of final clean-up operations, notify the Owner Representative and/or Project Environmental Consultant that work areas are ready for final inspection and clearance air monitoring (asbestos).

2. Project Environmental Consultant will then sample the air in the interior work area for airborne fiber concentrations.

3. Phase Contrast Microscopy (PCM): In each homogeneous work area after completion of all cleaning work, a minimum number of samples will be collected and analyzed in accordance with the NIOSH 7400 Methodology.

   a. Release Criteria: Decontamination of the work site is complete when each sample analyzed reveals airborne asbestos fiber concentrations are at or below 0.010 f/cc.

   b. If these conditions are not met, then the decontamination is incomplete, and the cleaning procedures noted in Article 3.4 above shall be repeated. The area shall be re-tested at no additional cost to Owner until satisfactory levels are obtained.

4. For work associated with LBPs, wipe sampling shall be performed within the controlled work areas following completion of all lead-related impact and decontamination efforts.

   a. Release Criteria: Decontamination of the work site is complete when each of at least two samples per work area are analyzed and reveal lead concentrations below those set forth in 17 CCR 35001, et. seq. Generally, this shall be 40 micrograms of lead per square foot for interior

horizontal surfaces and 400 micrograms of lead per square foot of area on exterior surfaces.

b. If these conditions are not met then the decontamination is incomplete and the cleaning procedures noted in Article 3.5 above shall be repeated. The area shall be re-tested at no additional cost to Owner until satisfactory levels are obtained.

3.9 OSHA PERSONNEL AIR MONITORING

A. Air monitoring required by OSHA is the responsibility of the contractor. The contractor is responsible for providing daily OSHA compliance monitoring as per 29 CFR 1926.1101, 8 CCR 1529 for asbestos and 29 CFR 1926.62 and 8 CCR 1532.1 for lead.

1. At minimum, Contractor shall conduct representative (25% of crew) breathing zone personal air monitoring of its employees twice each shift (asbestos only) and repeated daily or until a "negative exposure assessment", as derived in accordance with 29 CFR 1926.1101 (f)(2)(iii) and 8 CCR 1529 for asbestos, and 8 CCR 1532.1 for lead.

2. Monitoring shall be conducted by a qualified air professional experienced and knowledgeable about the methods of air monitoring and in accordance with 29 CFR 1926.1101, 8 CCR 1529 and 8 CCR 1532.1.

3. Monitoring results and appropriate laboratory analysis work shall be submitted to the Owner Representative or Project Environmental Consultant within 24 hours of when the samples were collected.

3.10 ALTERNATIVE PROCEDURES

A. If specified procedures cannot be utilized, a request shall be made in writing to Project Environmental Consultant providing details of the problem encountered and recommended alternatives.

B. The removal of all “other” hazardous materials shall be handled as an alternative procedure. Contractor shall submit a work plan for the removal, handling, and disposal of all “other” hazardous materials, including but not limited to suspect ACMs not previously sampled (see Article 1.2.M), suspect LBP not previously sampled, fluorescent light ballasts and tubes, mercury switches, refrigerants, batteries, and radioactive smoke detector sources. Work described in said work plan(s) shall not commence until the work plan has been accepted and approved, in writing, by Project Environmental Consultant and Owner Representative.

C. Alternative procedures shall provide equivalent or greater protection than procedures that are replaced.

D. Any alternative procedure must be approved in writing by the Project Environmental Consultant and the Owner Representative prior to the implementation of the procedure.

END OF SECTION

DIVISION 03

CONCRETE

SECTION 03 10 00
CONCRETE FORMWORK

PART 1 - GENERAL

1.01 SUMMARY

A. Provide the finish work of this Section as indicated on drawings and specified herein and needed for a complete proper installation.

B. Provide and secure formwork, ties, shoring, bracing, anchorage and blockouts.

C. Related Requirements: The General Provisions of the Contract Documents affecting the work of this Section includes but not necessarily limited to General Conditions, Supplementary Conditions and Sections of Division 1 of the Project Manual.

1.02 RELATED WORK

A. Site work.

B. Reinforcing.

C. Cast-in-place concrete.

D. Masonry

1.03 QUALITY ASSURANCE

A. Construct and erect formwork in accordance with ACI 318, 347 and as required indicated on Structural Drawings.

B. Design forms and falsework to adequately support live and dead loads, including equipment, concrete drops, pressures of foundations, etc.

1.04 CODES AND STANDARDS

A. Title 24, Part 2, C.C.R., 2013 C.B.C.

B. Follow recommendations of ACI 318 and 347.

1.05 ARCHITECT REVIEW

Architect will review for general architectural applications only. Design of formwork for structural stability and sufficiency is the sole responsibility of the workers and contractors.

PART 2 - PRODUCTS

2.01 EARTHEN FORMS

A. Provide earthen forms as indicated on drawings only for footings where the soil is firm and stable and the concrete will not be exposed, and as approved or directed. Cut earthen forms square, neat and accurate to size. Clean bottoms of excavations.

2.02 WOOD FORMS

A. Provide APA Plyform of B-B Class I exterior, high density overlaid one side for forms, sound, undamaged, and clean, 5/8 inch thick minimum.

2.03 LUMBER

A. Provide douglas fir, construction grade lumber for forming, studding and bracing.

2.04 ACCESSORIES

A. Provide nails, spikes, lag bolts, through bolts and anchorages required, of sufficient strength, length and character to maintain formwork during pouring operations.

B. Use snap-off, removable, or adjustable type metal ties. All metal is to be hot-dip galvanized. Provide standard metal form clamp assembly spreader type, leaving no metal within 1 inch of concrete exposed face. Leave inner tie rod within concrete when forms are removed.

C. Provide colorless mineral oil type form coating, non-grain raising and non-staining type, Noxcrete's Non-Crete Form Coating, Arcal Chemical's Arcalo 80, Industrial Synthetic's Synthex, or other approved.

D. Rigid foam plastic fillets may be used for chamfered corners.

2.05 FORMED CONSTRUCTION JOINTS

A. Provide galvanized steel or extruded plastic tongue and groove type, with knock-out holes at 6 inches on centers.

2.06 DOVETAIL ANCHOR SLOTS

A. Provide minimum 24 gage galvanized steel foam filled type, with release tape sealed slots, bent tab anchors, securable to formwork.

2.07 COLD JOINTS

A. Provide standard metal keyed dividers for cold joints, subject to approval.

2.08 ANCHORS AND HANGERS

A. Use anchors which do not leave exposed metal at surface.

PART 3 - EXECUTION

3.01 INSPECTION

A. Prior to commencing work, inspect the work of others and verify that such work has been properly completed and installed to allow for proper installation of all materials and methods required of this section.

3.02 FORMING

A. Earthen forms: Foundation concrete may be placed directly into neat excavations provided the foundation trench walls are stable as determined by the architect and Geotechnical Engineer, subject to the approval of the Division of the State Architect. In such case, the minimum formwork shown on the drawings is mandatory to insure clean excavations immediately prior to and curing the placing of concrete. Trench earthen forms at least two inches wider than footing widths shown on drawings. Construct wood edge strips at each side of trench at top to secure reinforcing and prevent trench from caving. Form sides of footings where earth caves. Tamp form and clean all debris and loose materials in earthen forms before depositing concrete.

B. Design forms and shoring to resist all anticipated loads.

C. Verify accuracy of lines, levels, and centers.

D. Construct formwork and appurtenances to meet design and code requirements. Construct of sound materials, of correct shape and dimensions, mortar tight and of sufficient strength to prevent sagging, buckling, movement and failures. Provide adequate shores of wood or metal to safely carry imposed loads and adjustable to prevent displacements during the work.

E. Align joints and make them watertight.

F. Set reinforcing accurately and ensure secure placement.

G. Maintain tolerances of ACI 347, within 1/8 inch in 10 feet.

H. Assist in setting and placing blockouts and sleeves for materials and products to be embedded in and passing through concrete. Comply with CCR Title 24 Section 1906.3.

I. Provide ports and openings to facilitate inspection and cleaning.

J. Chamfer all corners 1 inch unless shown otherwise.

K. Set screeds and establish levels for tops of concrete for finish surfaces. Shape surfaces as indicated on drawings.

L. Screed supports for concrete over waterproof membranes or vapor barriers should be of a cradle, pad, or base type which will not puncture membrane.

M. Wet formwork prior to placing concrete and keep wet during concrete curing process.

3.03 FORM REMOVAL

A. Do not remove formwork, shoring and bracing until such time as masonry and concrete has gained sufficient strength to carry its own weight, and construction and design loads which are liable to be imposed upon it. Verify strengths by compressive strength test results. Loosen forms carefully. Do not wedge pry bars, hammers or other tools against masonry and concrete surfaces. Comply with Section 1906.2, Title 24.

B. The following are minimum times for forms and shoring to remain in place prior to removal:

1. Footings and grade beams - 1 days.

2. Walls and columns - 2 days.

3. Beam sides - 3days.

4. Beam and slab soffits – 3 days.

C. Cut nails and form ties off flush and leave all surfaces smooth and clean.

D. Forms shall not be removed from concrete that is still “green”, i.e. the concrete is still moist.

END OF SECTION 03 10 00

SECTION 03 15 13
WATERSTOPS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Hydrophillic strip waterstops. (swelling waterstops)
   2. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and shop drawings.

PART 2 - PRODUCTS

2.01 HYDROPHILLIC STRIP WATERSTOPS (SWELLING WATERSTOPS)

A. Description: Waterstops made from strips of rubber modified with a hydrophilic agent (e.g., bentonite) that swell in the presence of moisture to effectively seal construction joints.

B. Applications: Used for sealing cold joints in concrete, to prevent water migration through construction joints below grade, and at shotcrete lift joints.

C. Products: Provide one of the following, or equal.
   1. “Waterstop-RX” manufactured by CETCO.
   2. “Adcor ES” manufactured by GCP Applied Technologies.
   3. “Hydro-Flex HF302” manufactured by Henry Co.
   4. “Superstop” manufactured by Tremco, Inc.

D. Requisite Properties:
   1. Size: At least one inch by 1-1/2 inches.
   2. Cross-Section Shape: Rectangle.

2.02 ACCESSORIES

A. Primer and Adhesive: Supplied, required, recommended, or accepted by the manufacturer for actual products and in-service conditions applicable to the project.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer's requirements or recommendations and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed waterstops and adjacent items.
   3. Install waterstops using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Set items true to line, to required levels and lines, and plumb, level, and square, without warp or rack, with flush well-fitted joints, and in alignment with adjacent construction.
   5. Perform drilling and fitting as required or necessary for an accurate fit and complete installation.
   6. Securely attach waterstops in place to supporting construction.
   7. Installed waterstops must be warrantable. Do not install, correct, or replace waterstops in a manner that results in any warranty or guarantee becoming void.

B. Installation Tolerances: Install waterstops to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.
   3. Replace soiled items that cannot be cleaned to the same condition as new.

D. Protection:
   1. Protect installed waterstops in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

©AWCWEST 18E22 All rights reserved.
TAGDSC, ELMTA, CLSA1010, CLSA2010

SECTION 03 20 00
CONCRETE REINFORCEMENT

PART 1 - GENERAL

1.01 SUMMARY

A. Provide reinforcing steel bars, welded wire fabric, support chairs, bolsters, bar supports and spacers as indicated on the drawings as specified herein and needed for a complete and proper installation.

B. Related Requirements: The General Provisions of the Contract Documents affecting the work of this Section to include but not necessarily limited to the General Conditions, Supplementary Conditions and Sections of Division 1 of the Project Manual.

1.02 RELATED WORK

A. Site Concrete.

B. Formwork.

C. Cast-in-place concrete.

D. Concrete Unit Masonry.

1.03 QUALITY ASSURANCE

A. Perform reinforcing work in strict conformance with CRSI unless specified otherwise or required otherwise by local code jurisdiction.

1.04 CODES AND STANDARDS

A. Title 24, Part 2, C.C.R., 2013 C.B.C., Chapter 19A and applicable Sections.

B. In addition to CRSI specifications, follow ACI 315 and 318, AWS welding codes and qualifications, and ASTM A185, A305, A615, and A706.

C. Testing of bars in accordance with Title 24, Part 2, C.C.R., 2013 C.B.C. Section 1903A and 1913A.2.

1.05. TESTING

A. Where samples are taken from bundles as delivered from the mill, with the bundles identified as to heat number, and provided the mill analyses accompany the report, then one tensile test and one bend test shall be made from a specimen from each 10 tons or fraction, of each size of reinforcing steel.

B. Where positive identification of the heat number cannot be made or where random samples are to be taken, then one series of tests shall be made from each 2-1/2 tons or fraction, of each size of reinforcing steel.

C. Comply with Title 24, Part 2, C.C.R., 2013 C.B.C., Chapter 17A & Section 1913A.2.

D. Comply with Section 01 25 43 of Division 1.

1.06 STORAGE

A. Do not allow reinforcing materials to have direct contact with the ground. Cover materials adequately to prevent rusting, and contact with materials or construction injurious to proper bonding.

PART 2 - PRODUCTS

2.01 REINFORCING BARS

A. Deformed billet steel bars, ASTM A615, plain finish, see drawings for grade. ASTM A706 for bars to be welded, and elsewhere as defined on drawings.

2.02 WELDED WIRE FABRIC

A. Provide plain type, ASTM A185, in coiled rolls, or flat sheets, plain finished, void of rust, dust, scale, paint, grease and other coatings, conforming to UBC Standard 19-1.

2.03 ACCESSORIES

A. Provide minimum 16 gage galvanized annealed tie wires, and chairs, bolsters, bar supports, and spacers sized and shaped for strength and support of reinforcing. Plastic accessories may be acceptable if approved by Architect prior to use.

2.04 FABRICATION AND MANUFACTURE

A. Fabricate in accordance with details shown.

B. Accurately bend, cut and place bars as shown on drawings. Bend bars cold; heating of bars is not permissible. Do not bend or straighten bars in any manner that will injure materials. Comply with Title 24, Section 1907A.2 and 3.

C. Welding: All welded reinforcing steel shall be A.S.T.M. A706. Perform welding, where shown or approved, by the direct electric arc process in accordance with AWS D1.4 using 90 series low hydrogen electrodes. Preheat 6 inches each side of joint. Protect joints from drafts during cooling process; accelerated cooling is prohibited. Do not tack weld bars. Clean metal surfaces to be welded of all loose scale and foreign materials. Clean welds each time electrode is changed and chip burned edges before placing welds. When wire brushed, completed welds must exhibit uniform section, smooth welded metal, feather edges without undercuts or overlays, freedom from porosity and clinkers, and good fusion and penetration into the base metal. Cut out welds or parts of welds found defective, with chisel, and replace with proper welding. Comply to Title 24, Section 1903A.7.

1. Employ only experienced AWS certified welding operators.

2. Prequalification of welds are to be in accordance with code and carbon equivalent of reinforcing not exceeding 0.75.

PART 3 - EXECUTION

3.01 INSPECTION

A. Prior to commencing work of this section, inspect work of others and verify that such work has been properly completed and installed to allow for proper installation of all materials and methods required of this section. Inspection of welding shall be done by a special inspector approved by D.S.A., services retained and paid for by the Owner.

3.02 INSTALLATION

A. Fabricate reinforcing in accordance with ACI 315. Locate reinforcing splices not shown on drawings, at mid span. Where shown or required, weld reinforcing bars in accordance with AWS D1.4 (1989).

B. Place reinforcing supported and secured against displacement. Do not deviate from true alignment.

C. Ensure that reinforcing used is clean, free of scale, dirt, dust, rust and other matter.

D. Provide a minimum splice for bars noted as "cont.", typical wall reinforcing, no splices in concrete column reinforcing. Provide a standard lap of 48 bar diameters in masonry and 36 bar diameters in concrete, and in no case less than 24 inches. Wire all laps and splices in welded wire mesh and provide side and end laps of at least 8 inches.

1. Spacing - minimum center-to-center distance between parallel reinforcing bars is to be in compliance with that shown on drawings, or in the absence of such information on drawings, the clear spacing is to be 1-1/2 bar diameter, but in no case less than 1-1/2 inch, nor 1-1/3 times the maximum size of aggregate.

2. Where possible, stagger splices of adjacent bars.

E. Only splice reinforcing where shown or noted. Splices at other locations must be approved by the Architect or Structural Engineer. Provide continuous reinforcement between splice locations in vertical walls. No splices of vertical wall reinforcing may occur except at foundations, unless specifically approved by the Architect or Structural Engineer..

1. Securely tie reinforcing with 16 gage tie wire at all splices and intersections, and as may be directed.

2. Point ends of wire ties away from forms.

F. Stagger splices in adjacent horizontal wall reinforcing bars a minimum of 4 feet.

G. Provide dowels in footings and/or grade beams the same size and number as vertical wall or column reinforcing. Provide a minimum dowel protection equal to standard lap splices unless noted otherwise.

1. Secure tie dowels in place before depositing concrete. Install No. 3 bars for securing dowels where no other reinforcement is provided.

H. Provide the minimum coverage of reinforcing by concrete:

Below grade (unformed)	3 inches clear
Below grade (formed)	2 inches clear
Walls	2 inch clear
Columns, beams	2-1/2 inches clear

3.03 CORRECTION DURING CONCRETING

A. Maintain capable steel workers during placement of concrete for properly resetting reinforcement displaced by runways, workers, or other causes.

3.04 DEFECTIVE WORK

A. The following reinforcing work will be considered defective and may be ordered by Owner to be removed and replaced at no additional expense to Owner.

1. Bars with kinks or bends not shown on drawings.

2. Bars injured due to bending or straightening.

3. Bars heated for bending.

4. Reinforcement not placed in accordance with drawings or specifications.

5. Rusty or oily reinforcement.

6. Re-bent bars.

3.05 INSPECTIONS

A. 48 hours prior to pouring concrete, notify the architect, structural engineer and D.S.A. that reinforcing is ready for inspection. Secure approvals by testing laboratory and inspector before concrete operations are commenced.

END OF SECTION 03 20 00

SECTION 03 30 00
CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 SUMMARY

A. General Provisions apply to this section.

B. Section Includes:
   1. Cast-in-place concrete placement and finishing.

C. Related Sections:
   1. Section 30 10 00: Concrete Forms and Accessories.
   2. Section 03 20 00: Concrete Reinforcement.

1.02 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating locations of cast-in-place concrete Work and accessory items such as vapor barriers. Include details and locations of reinforcing, embedded items, and interfacing with other Work.

B. Product Data:
   1. Mix Design: Submit a concrete mix design for each mix that will be provided for the Work. Include water/ cement ratio, size of coarse aggregate and amount of any admixture. Predict minimum compressive strength, maximum slump and air content percentage.
   2. Manufacturer of ready-mixed concrete shall deliver to the ior a certificate with each mixer truck. Certificate shall bear the signature of representative of the testing laboratory, and shall state quantity of cement, water, fine and coarse aggregate and admixtures.

C. Material Samples: Submit Samples illustrating concrete finishes, minimum 12 inches x 12 inches in size.

D. Certificates: Submit a notarized certificate that each of following conforms to standards indicated:
   1. Aggregates – ASTM Standards C33
   2. Admixtures - ASTM Standards C260
   3. Curing materials - ASTM Standards C171

1.03 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement.

B. American Concrete Institute (ACI) Publication:
   1. ACI 211 - Recommended Practice for Selecting Proportions of Concrete.
   2. ACI 304 - Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete.
   3. ACI 305 - Recommended Practice for Hot Weather Concreting.

4. ACI 306 - Recommended Practice for Cold Weather Concreting.
5. ACI 308 - Recommended Practice for Curing Concrete.
6. ACI 309 - Recommended Practice for Consolidation of Concrete.

C. American Society for Testing and Materials (ASTM) Standards:
1. ASTM A 185 - Welded Steel Wire Fabric For Concrete Reinforcement.
2. ASTM C 31 - Making and Curing Concrete Test Specimens in the Field.
3. ASTM C 33 - Concrete Aggregates.
4. ASTM C 39 - Compressive Strength of Cylindrical Concrete Specimens.
5. ASTM C 88 - Soundness of Aggregates by use of Sulphate or Magnesium Sulphate.
6. ASTM C 94 - Ready-Mixed Concrete.
7. ASTM C 143 - Slump of Hydraulic Cement Concrete.
8. ASTM C 150 - Portland Cement.
9. ASTM C 171 - Sheet Materials for Curing Concrete.
10. ASTM C 172 - Sampling Freshly Mixed Concrete.
11. ASTM C 173 - Air Content of Freshly Mixed Concrete by the Volumetric Method.
12. ASTM C 227 - Potential Alkali Reactivity of Cement-Aggregate Combinations (Mortar-Bar Method).
13. ASTM C 231 - Air Content of Freshly Mixed Concrete by the Pressure Method.
14. ASTM C 260 - Air-Entraining Admixtures for Concrete.
15. ASTM C 289 - Potential Reactivity of Aggregates (Chemical Method).
16. ASTM D 1751 - Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types).

D. Continuous inspection shall be provided at the batch plant and for transit-mixed concrete to run check sieve analysis of aggregate, check moisture content of fine aggregate, check design of mix, check cement being used with test reports, check loading of mixer trucks, and certify to quantities of materials placed in each mixer truck.

E. Inspection shall be performed by a representative of a testing laboratory selected by the Owner. Owner will pay for inspection costs. Notify the laboratory 24 hours in advance of time concrete is to be mixed. Notify the laboratory of postponement or cancellation of mixing within at least 24 hours of scheduling time.

F. Continuous batch plant inspection requirement may be waived in accordance with CBC section 1929 A. 5. Waiver shall be in writing, including DSA approval.

G. Strength Test of Concrete: Refer to Section 01 45 23: Testing and Inspection.

1.04 DELIVERY, STORAGE AND HANDLING

A. Mixing and Placing Concrete: Refer to Section 01 45 23: Testing and Inspection.

B. Ready-mix concrete shall be mixed and delivered in accordance with ASTM C 94 and CBC Standard 19-3 and 19-4. Each batch of concrete delivered to the Project site shall be accompanied by a time slip bearing departure time and signature of batch plant supervisor. Concrete shall be placed within 90 minutes after start of mixing.

C. Store cement and aggregate materials so as to prevent their deterioration or intrusion by foreign matter. Deteriorated or contaminated materials shall not be furnished.

1.05 JOB CONDITIONS

A. Cold Weather Requirements:
1. Adequate equipment shall be provided for heating concrete materials and protecting concrete during freezing or near-freezing weather. Surfaces, in which concrete is to come in contact with, shall be free from frost or ice. No frozen materials or materials containing ice shall be furnished.
2. When placing concrete during freezing or near-freezing weather the mix shall have a temperature of at least 50 degrees F., but not more than 90 degrees F. when cement is added. Concrete shall be maintained at a temperature of at least 50 degrees F. for at least 72 hours after placing or until it has thoroughly hydrated. When necessary, concrete materials shall be heated before mixing. Special precautions shall be provided for protection of transit-mixed concrete.

B. Hot Weather Requirements:
1. During hot weather, proper attention shall be provided for ingredients, production methods, handling, placing, protection and curing, to prevent excessive concrete temperatures or water evaporation which could impair required strength or durability.

PART 2 - PRODUCTS

2.01 GENERAL

A. Ready-Mixed Concrete: Mix and deliver in accordance with requirements of CBC Chapter 1905A.

B. Strength of Concrete: Concrete, unless otherwise indicated or specified, shall be provided with a minimum ultimate 28-day strength of 3000 psi (f'c). For high-early-strength concrete, age for reaching the f'c shall be as indicated on Drawings.

2.02 MATERIALS

A. Cement: ASTM C 150. Furnished cement shall be as selected and reviewed for concrete proportioning.

B. Aggregates: Aggregates shall conform to ASTM C 33 and C 227 except as modified herein. Any suitable individual grading of coarse aggregate may be furnished, provided Grading of Combined Aggregate indicated in following table is obtained. Refer to Section 01 45 23: Testing and Inspection.

GRADING OF COMBINED AGGREGATE			
Sieve Sumber or Size in inches	**1-1/2" Maximum**	**1" Maximum**	**3/4" Maximum**
Passing a 2"	------	------	------
Passing a 1-1/2"	95-100	------	------
Passing a 1"	70-90	90-100	------
Passing a 3/4"	50-80	70-95	90-100
Passing a 3/8"	40-60	45-70	55-75
Passing a No. 4	35-55	35-55	40-60
Passing a No. 8	25-40	27-45	30-46
Passing a No. 16	16-34	20-38	23-40
Passing a No. 30	12-25	12-27	13-28
Passing a No. 50	2-12	5-15	5-15
Passing a No. 100	0-3	0-5	0-5

C. Water: Water shall be potable and free from deleterious matter.

D. Admixtures: CBC Chapter 19A, Section 1903A.6, Type A or D.

E. Expansion Joint Fillers: Preformed strips, non-extruding and resilient bituminous type, of thickness indicated, conforming to ASTM D 1751.

F. Curing Paper and Liquid Curing Compounds:

1. Curing Paper: A standard brand conforming to ASTM C 171, Type 1 - Regular, Kure-N-Seal.
2. Liquid Curing Compounds: A standard brand, clear liquid conforming to ASTM C 309, Master Builders, Grace, Antihydro.

G. Abrasive Aggregate: Norton Alundum, Union Carbide Carborundum, or equal, graded #12 through #30 sizes, color as selected by Architect.

H. Underlayment: Latex underlayment for filling low spots in concrete shall be Tile-Tex by Flintkote Co., Webtex #60 or Fixallatex by Dowman Products Co.

I. Vapor Barrier: ASTM D 21O3, polyethylene sheeting, clear, 10 mils minimum thickness, impact strength greater than 70 grams per mil, 10 feet minimum width. Provide minimum 2-inch wide waterproof plastic self-adhering tape for sealing edges and ends of sheeting.

1. Moisture barrier is required where an interior area is scheduled to receive moisture sensitive floor finishes.

J. Stair Strips and Nosing:

1. Fabricated from 6063-T5 extruded aluminum, mill finish. Anti-slip filler shall contain at least 60 percent virgin grain aluminum oxide abrasive. Binder shall be fully cured resilient type epoxy, with binder-to-filler ratio of 13 percent. The epoxy-abrasive filler shall extend over the curved front edge of the nosing and shall be securely bonded to the extruded aluminum base.
2. Manufactured by Wooster Products Inc. American Safety Tread Co. Inc., or equal.

3. Nosing and strips for concrete casting shall be provided with Sure-Hold anchors, chevron shaped continuous full length of nosing or strip.
4. Nosings and anchors for attachment to hydrated concrete stairs and wood stairs shall be similar to those specified below, except they shall be provided with countersunk holes for screws and fasteners.
5. Colors: As selected by Architect to contrast with stair color. Colors shall extend uniformly through the filler.
6. Strip and Nosing Types:

    a. Nosings for sloped riser steel pan stairs: Type WP4J, 4-1/16 inches wide, 3/8 inch thick.
    b. Nosings for new concrete stairs: Type WP4C, 4-1/16 inches wide, 3/8 inch thick, nose projects down 1/4 inch.
    c. Nosings for square edged steel pan stairs: Type WP4SP, 4-1/16 inches wide, 3/8 inch thick nose.
    d. Strips for recessing into concrete stairs: Type WP1A, except 2-1/4 inches wide, 3/8 inch thick. American Safety Tread Co., Type 24, or equal.
    e. Strips for adhering to existing or hydrated concrete: Flex-Tred anti-safety strips, minimum 2-1/4 inches wide. Cut from rolls and round corners.
    f. Strips for anchoring into wood or stone: American Safety Tread Co., Type 24H, or equal, with holes for fasteners, 2-1/4 inches wide.

PART 3 - EXECUTION

3.01 GENERAL

A. Time of Placing: Do not place concrete until reinforcement, conduits, outlet boxes, anchors, hangers, sleeves, bolts, and other embedded materials are securely fastened in place. Contact the IOR at least 24 hours before placing concrete; do not place concrete until inspected by the IOR.

B. Pouring Record: A record shall be kept on the Project site of time and date of placing concrete in each portion of structure. Such record shall be maintained on the Project site until Substantial Completion and shall be available for examination by the Architect and DSA.

3.02 PREPARATION

A. Moisture Barrier: Before installation of screeds and slab reinforcement, install a moisture barrier under slabs on grade. Place membrane in as large sheets as possible, lapped 12 inches at sides and ends, with top lap placed in the direction of the spreading of concrete. Extend membrane and lap at least 4 inches onto adjoining wall surfaces and seal with pressure-sensitive tape.

1. Install moisture barrier on minimum 2-inch bed of sand, unless otherwise indicated, over gravel base as indicated on the Drawings.
2. Patch punctures and tears in moisture barrier.

B. Reglets and Rebates:

1. Form reglets and rebates in concrete to receive flashing, frames and other equipment as detailed and required. Coordinate dimensions and locations required with other related Work.
2. If concrete slabs on grade adjoin a wall or other perpendicular concrete surface, form a reglet in wall to receive and carry horizontal concrete Work. Reglet shall be full thickness of the slab and shall be 3/4 inch wide, unless otherwise indicated. Requirement does not apply to exterior walks, unless specifically indicated.

C. Anchor Slots: Dove-tail anchor slots at concrete walls to receive masonry veneer shall be set vertically in forms, 24 inches maximum on centers measured horizontally. Anchor slots shall be No. 24 gage galvanized sheet steel with removable fiber filler to prevent seepage of cement in slot.

D. Screeds: Install screeds accurately and maintain at required grade or slab elevations after steel reinforcement has been installed, but before starting to place concrete. Install screeds adjacent to walls and in parallel rows not to exceed 8 feet on centers.

3.03 INSTALLATION

A. Conveying and Placing:
1. Concrete shall be placed only under direct observation of the IOR. Do not place concrete outside of regular working hours, unless the IOR has been notified at least 48 hours in advance.
2. Concrete shall be conveyed from mixer to location of final placement by methods, which will prevent separation or loss of materials.
3. Concrete shall be placed as nearly as practicable to its final position to avoid segregation due to re-handling or flowing. No concrete that has partially hydrated or has been contaminated by foreign materials shall be placed, nor shall re-tempered concrete or concrete which has been remixed after initial set be placed.
4. In placing concrete in thin sections, provide openings in forms, elephant trunks, tremies or other recognized devices, to prevent segregation and accumulation of partially hydrated concrete on forms or metal reinforcement above level of concrete being placed. Such devices shall be installed so that concrete will be dropped vertically. Unconfined vertical drop of concrete from end of such devices to final placement surface shall not exceed 6 feet.
5. Concrete shall be placed as a continuous operation until placing of panel or section is completed. Top surfaces of vertically formed lifts shall be level.
6. Concrete shall be thoroughly consolidated during placement, and shall be worked around reinforcement and embedded fixtures with mechanical vibrators.
7. Where conditions make consolidation difficult, or where reinforcement is congested, batches of mortar containing same proportions of cement, sand, and water as provided in the concrete, shall first be deposited in the forms to a depth of at least one inch.

B. Compaction and Screeding:
1. Tamp freshly placed concrete with a heavy tamper until at least 3/8 inch of mortar is brought to surface. Concrete shall then be tamped with a light tamper and screeded with a heavy straightedge until depressions and irregularities are

eliminated, and surface is true to finish grades or elevations. Remove excess water and debris.

2. Where slabs are to receive separate cement finish or mortar setting bed, continued tamping to raise mortar to surface is not performed. Laitance shall be removed by brushing with a stiff brush or by light sandblasting to expose clean top surface of coarse aggregate.

C. Floating and Troweling:
   1. When concrete has hydrated sufficiently, it shall be floated to a compact and smooth surface. After floating, wait until concrete has reached proper consistency before troweling. Top surfaces shall receive at least 2 troweling operations with steel hand trowel. Prior to and during final troweling, apply a fine mist of water frequently with an atomizing type fog sprayer. Omit troweling for slabs to receive a separate cement finish.
   2. For interior finish slabs, final troweling shall provide a hard, impervious, and non-slip surfaces, free from defects and blemishes. Finished surface shall be within a tolerance of 1/8 inch in 10 feet. Avoid burnishing. Do not add cement or sand to absorb excess moisture.
      a. Floor of Walk-In Refrigerator: Finish as specified above, to a smooth finish.
      b. At gymnasium locker room floors shall be given a fine broom finish. After floating, and while the surface is still plastic, provide a fine textured finish by drawing a fine fiber bristle broom uniformly over the surface in one direction only. Floors sloped for drainage should be brushed in the direction of flow.
   3. Exterior Paving and Cement Walks: Finish as specified above, except surface shall be given a non-slip broom finish to match Sample reviewed by the Architect.
   4. Vertical concrete surfaces shall be finished smooth and free from marks or other surface defects.

D. Curing:
   1. Concrete shall be maintained above 50 degrees F., and in a moist condition for 7 days after placing, except that high early strength concrete shall be maintained in a moist condition for 3 days.
   2. Before applying curing paper, interior floor treated with colored hardener shall be given a heavy protective coat of colored wax left unpolished, and then immediately covered with paper. If wax is not applied within two hours after final troweling, concrete shall be sprayed with a fine water mist and maintained continuously moist until wax is applied, unless spraying is not recommended by hardener manufacturer. After other Work such as plastering and painting has been completed, curing paper shall be removed and waxed floors cleaned of protective wax coating.
   3. Forms containing concrete, top of concrete between forms, and exposed concrete surfaces after removal of forms shall be maintained in a thoroughly wet condition for at least 7 consecutive days after placing.
   4. If weather is hot or surface has dried out, spray surface of concrete slabs and paving with fine mist of water, starting not later than 2 hours after final troweling and continuing until sunset. Surface of finish shall be kept continuously wet until curing medium has been installed.

5. Immediately after finishing, roof slabs and monolithic floor finish to receive resilient floor covering shall be uniformly and completely coated with liquid curing compound.
    a. Install compound in a manner and quantity sufficient to produce a uniform continuous thin film of water-impervious membrane. Compound shall be installed in accordance with manufacturer's directions.
    b. Protect adjoining surfaces from damage during installation. If curing compound is not applied immediately, cover finished concrete with wet burlap or curing paper and keep concrete surface wet for a period not to exceed thirty hours following finishing of concrete. At end of that time, burlap or paper shall be removed and curing compound installed as specified above.
6. Immediately after finishing, monolithic floor slabs not scheduled to receive resilient floor covering shall be covered with curing paper. Paper shall be lapped 3 inches at joints and sealed with waterproof sealer. Edges shall be cemented to finish. Repair or replace paper damaged during construction operations.
7. Within 24 hours after finishing, exterior slabs and paving, and interior slabs to receive cement topping or mortar setting beds, shall be covered with sand to a depth of 2 inches and kept thoroughly wet for 7 days.
    a. Instead of sand covering, exterior walks and paving where no other surface treatment is specified, may be cured with clear liquid curing compound immediately installed in accordance with manufacturer's directions.

E. Filling, Leveling and Patching:
1. Concrete slabs exhibiting high or low spots and indicated to receive resilient floor covering or soft floor covering, shall have surfaces repaired. High spots shall be honed, or ground with power-driven machines to required tolerances. Low spots shall be filled with latex underlayment, installed in strict accordance with manufacturer's written recommendations.
2. Holes resulting from form ties or sleeve nuts shall be solidly packed, through exterior walls, by pressure grouting with cement grout, as specified. Grouted holes on exposed surfaces shall be screeded flush and finished to match adjoining surfaces.

F. Cement Base: Cement base shall be of the height, thickness, and shape detailed. Base shall be reinforced with one inch mesh, 18 gage, zinc-coated wire fabric. Base finish mixture shall be one part Portland cement, 2 parts of fine aggregate and one part pea gravel. Colored cement base shall include a chemically inert mineral oxide pigment in the mix.

3.04 FINISHING

A. Soda and Acid Wash: Concrete surfaces to receive plaster, paint or other finish, and which have been formed by oil coated forms, shall be scrubbed with a solution of 1-1/2 pounds of caustic soda to one gallon of water. Surfaces where smooth wood or waste molds have been furnished shall be scrubbed with a solution of 20 percent muriatic acid. Wash with clean water after scrubbing.

B. Sacking: Exposed concrete curbs, walls, and other surfaces shall be sacked by an application of Portland cement grout, floated, and rubbed. Sacking shall not be

performed until patching and filling of holes has been completed. Entire sacking operation for any continuous area shall be started and completed within the same day.

1. Mix one part Portland cement and 1-1/2 parts fine sand with sufficient water to produce a grout having consistency of thick paint. Wet surface of concrete sufficiently to prevent absorption of water from grout. Apply grout uniformly with a brush or spray gun, then immediately float surface with a cork or other suitable float, scouring wall vigorously.
2. While grout is still plastic, finish surface with a sponge-rubber float, removing excess grout. Allow surface to dry thoroughly, then rub vigorously with dry burlap to completely remove dried grout. No visible film or grout shall remain after rubbing with burlap.

C. Sandblasting: Exterior concrete surfaces to receive stucco dash coat finish, where plywood or other smooth forms have been furnished, shall be uniformly sand-blasted with sharp quartz sand under sufficient air pressure to remove dirt, form oil and other foreign materials, and roughen surface to provide a proper bond. Such surfaces shall be thoroughly washed with clean water after sandblasting.

D. Abrasive: Concrete stair treads, landings, ramps and steps on interior and exterior of buildings, and interior exposed concrete floors in shop buildings shall receive an abrasive finish. Abrasive grains in amount of 30 pounds per 100 square feet shall be evenly installed by dust-on method and embedded into surface during first troweling operation. Additional abrasive grains, in amount of 30 pounds per 100 square feet, shall then be evenly installed and embedded into surface during final troweling operation.

E. Floor Hardener: Exposed interior concrete floors throughout shall be treated with floor hardener, as specified. Install hardener after surface of concrete has reached the point where no excess moisture is present, but while it is still plastic. Hardener shall be installed as follows:

1. Colored Hardener: Install at rate of 40 pounds per 100 square feet of surface for initial application.
2. Gray (natural) Hardener: Install at rate of 20 pounds per 100 square feet of surface for initial application.
3. Hardener shall be evenly distributed and thoroughly floated into surface mortar with a wood float. An additional 20 pounds of hardener, colored or gray, specified as above, shall be installed over each 100 square feet, and troweled to an even surface having uniform color and texture.

F. Cement Grout and Dry-Pack Concrete: Cement grout shall be mixed at the Project site and shall be composed of one volume of Portland cement and 2-1/2 volumes of fine aggregate. Materials shall be mixed dry with sufficient water added to make mixture flow under its own weight. When grout is used as a dry pack concrete, add sufficient water to provide a stiff mixture, which can be molded into a sphere.

G. Broom Finish: Exterior stair treads and landings shall be provided with a non-slip broom finish in addition to abrasive finish specified.

H. Abrasive Stair Nosing: Nosing shall be installed according to manufacturers written recommendations.

3.05 EXPANSION AND CONSTRUCTION JOINTS

A. Construction Joints: Details and proposed location of construction joints shall be as indicated on the Drawings, located to least impair strength of structure, in accordance with the following:
   1. Thoroughly clean contact surface by sand blasting entire surface not earlier than 5 days after initial placement.
   2. A mix containing same proportion of sand and cement provided in concrete plus a maximum of 50 percent of coarse aggregate shall be placed to a depth of at least one inch on horizontal joints. Vertical joints shall be wetted and coated with a neat cement grout immediately before placing of new concrete.
   3. Should contact surface become coated with earth, sawdust, or deleterious material of any kind after being cleaned, entire surface shall be re-cleaned before applying mix.

B. Expansion Joints: Provide expansion joints where indicated in walks and exterior slabs. Space approximately 20 feet apart, unless otherwise indicated. Joints shall extend entirely through slab with joint filler in one piece for width of walk or slab. Joint filler shall be 3/8 inch thick, unless otherwise indicated.

C. Tooled Joints: Slabs, walks and paving shall be marked into areas as indicated with markings made with a V-grooving tool. Marks shall be round-edged, free from burrs or obstructions, with clean cut angles and shall be straight and true. Walks, if not indicated, shall be marked off into rectangles of not more than 12 square feet and shall have a center marking where more than 5 feet wide.

3.06 TESTING

A. Molded Cylinder Tests:
   1. Owner Consultant will prepare cylinders. Each cylinder shall be dated, given a number, point in structure from which sample was obtained, mix design number, mix design strength and result of accompanying slump test noted.
   2. Separate tests of molded concrete cylinders obtained at same place and time shall be made at age of 3 days, 7 days, and 28 days. A strength test shall be the average of the compressive strength of 2 cylinders, obtained from the same sample of concrete and tested at 28 days or at test age designated for determination of f'c.
   3. Test cylinders shall be prepared at the Project site and stored in testing laboratory in accordance with ASTM C 31, and tested in accordance with ASTM C 39.

B. Core Test: At request of the Architect, cores of hardened concrete shall be cut from portions of hydrated structures for testing, in accordance with CBC and ASTM C 42.
   1. Provide 4 inch diameter cores at representative places throughout the structure as designated by the Architect.
   2. In general, provide sufficient cores to represent concrete placed with at least one core for each 4,000 square feet of building area, and at least 3 cores total for each Project.
   3. Where cores have been removed, fill voids with drypack, and patch the finish to match the adjacent existing surfaces.

C. Concrete Consistency: Measure consistency according to ASTM C 143. Test twice each day or partial day's run of the mixer.

D. Adjustment of Mix: If the strength of any grade of concrete for any portion of Work, as indicated by molded test cylinders, fall below minimum 28 days compressive strength specified or indicated, adjust mix design for remaining portion of construction so that resulting concrete meets minimum strength requirements.

E. Defective Concrete:

1. Should strength of any grade of concrete, for any portion of Work indicated by tests of molded cylinders and core tests, fall below minimum 28 days strength specified or indicated, concrete will be deemed defective Work and shall be replaced or adequately strengthened in a manner acceptable to the Architect and DSA.
2. Concrete Work that is not formed as indicated, is not true within 1/250 of span, not true to intended alignment, not plumb or level where so intended, not true to intended grades and levels, contains sawdust shavings, wood or embedded debris, or does not fully conform to Contract provisions, shall be deemed to be defective Work and shall be removed and replaced.

F. Concrete for Equipment Pads, Mechanical and Electrical Work: Unless otherwise indicated, strength shall be 3,000 psi concrete. Exposed concrete shall be provided with a hand trowel finish with radius corners and edges. Form and place concrete where necessary as described in Section 30 10 00: Concrete Forms and Accessories, and reinforced as described in Section 03 20 00: Concrete Reinforcement. Calcium chloride shall not be furnished in any concrete mix provided for the installation of underground electrical conduits. For concrete encasement of more than one conduit, furnish 3/4 inch to 1 inch aggregate as specified for concrete mix.

3.07 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.08 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION 03 30 00

SECTION 03 3290
JOINTS IN CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete pavement joints.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 03 3740 – Concrete Repair

3. Section 32 1313 – Site Concrete Work

1.2 SUBMITTALS

A. Submittals shall be made in accordance with the General Requirements.

B. The following submittals and specific information shall be provided.

1. Waterstops: Prior to use of the material required under this contract, qualification samples shall be submitted. Such samples shall consist of extruded or molded sections of each size or shape to be used. The material sample shall be representative of the material to be furnished under this contract. The balance of the material to be used under this contract shall not be produced until after the City Engineer has reviewed and approved the qualification samples.

2. Joint Sealant: Prior to ordering the sealant material, the Contractor shall submit to the City Engineer for review and approval, data to show compliance with the requirements of the Contract Documents. Certified test reports from the sealant manufacturer on the actual batch of material being supplied indicating compliance with the above requirements shall be furnished the City Engineer before the sealant is used on the job.

3. Shipping Certification: The Contractor shall provide written certification from the manufacturer as an integral part of the shipping form, to show that all of the material shipped to this project meets or exceeds the physical property requirements of the Contract Documents. Supplier certificates are not acceptable.

4. The Contractor shall submit placement shop drawings showing the location and type of all joints for each structure.

1.3 QUALITY ASSURANCE

A. Comply with the reference standards of the General Requirements

B. Comply with the current provisions of the following Codes and Standards, as applicable:

1. Federal Specifications:

TT-S-0227E(3) Sealing Compound, elastomeric type, Multi-component for Caulking, Sealing, and Glazing Buildings and Other Structures).

2. Commercial Standards:

ASTM C 920 Specification for Elastomeric Joint Sealants.

ASTM D 624 Test Method for Rubber Property -- Tear Resistance.

ASTM D 638 Test Method for Tensile Properties of Plastics.

ASTM D 746 Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.

ASTM D 747 Test Method for Apparent Bending Modulus of Plastics by Means of a Cantilever Beam.

ASTM D 1751 Premolded Joint Filler

ASTM D 1752 Specification for Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.

ASTM D 2240 Test Method for Rubber Property -- Durometer Hardness.

C. Waterstop manufacturer shall demonstrate five years (minimum) continuous, successful experience in production of waterstops.

D. Waterstop Inspection: It is required that all waterstop field joints shall be subject to inspection, and no such work shall be scheduled or started without having made prior arrangements with the INSPECTOR to provide for the required inspections. Not less than 24 hours notice shall be provided to the INSPECTOR for scheduling such inspections.

E. All field joints in waterstops shall be free of misalignment, bubbles, inadequate bond, porosity, cracks, offsets, and other defects which would reduce the potential resistance of the material to water pressure at any point. All defective joints shall be replaced with material which shall pass said inspection, and all faulty material shall be removed from the site and disposed of by the Contractor at its own expense.

F. The following waterstop defects represent a partial list of defects which shall be grounds for rejection:

1. Offsets at joints greater than 1/16-inch or 15 percent of material thickness, at any point, whichever is less.

2. Exterior crack at joint, due to incomplete bond, which is deeper than 1/16-inch or 15 percent of material thickness, at any point, whichever is less.

3. Any combination of offset or exterior crack which will result in a net reduction in the cross section of the waterstop in excess of 1/16-inch or 15 percent of material thickness at any point, whichever is less.

4. Misalignment of joint which result in misalignment of the waterstop in excess of 1/2-inch in 10 feet.

5. Porosity in the welded joint as evidenced by visual inspection.

6. Bubbles or inadequate bonding.

G. Waterstop Samples: Prior to use of the waterstop material in the field, a sample of a fabricated metered cross and a tee constructed of each size or shape of material to be used shall be submitted to the City Engineer for approval. These samples shall be fabricated so that the material and workmanship represent in all respects the fittings to be furnished under this contract. Field samples of fabricated fittings (crosses, tees, etc.) will be selected at random by the Inspector for testing. When tested, they shall have a tensile strength across the joints equal to at least 600 psi.

H. Construction Joint Sealant: The Contractor shall prepare adhesion and cohesion test specimens as specified herein, at intervals of 5 working days while sealants are being installed.

I. The sealant material shall show no signs of adhesive or cohesive failure when tested in accordance with the following procedure in laboratory and field tests:

1. Sealant specimen shall be prepared between 2 concrete blocks (1 inch by 2-inch by 3-inch). Spacing between the blocks shall be 1/2-inch. Coated spacers (2-inch by 1-1/2-inch by 1/2-inch) shall be used to insure sealant cross-sections of 1/2-inch by 2 inches with a width of 1/2-inch.

2. Sealant shall be cast and cured according to manufacturer's recommendations except that curing period shall not exceed 24 hours.

3. Following curing period, the gap between blocks shall be widened to one inch. Spacers shall be used to maintain this gap for 24 hours prior to inspection for failure.

J. Store waterstops under tarps to protect from oil, dirt, and sunlight

1.4 GUARANTEE

A. The Contractor shall provide a 5-year written guarantee of the entire sealant installation against faulty and/or incompatible materials and workmanship, together with a statement that it agrees to repair or replace, to the satisfaction of the City, at no additional cost to the CITY, any such defective areas which become evident within said 5-year guarantee period.

1.5 DEFFINITIONS

A. Construction Joints: When fresh concrete is placed against a hardened concrete surface, the joint between the two pours is called a construction joint. Unless otherwise specified, all joints in water bearing members shall be provided with a waterstop and sealant groove of the shape specified and as shown on the plans.

B. Contraction Joints: Contraction joints are similar to construction joints except that the fresh concrete shall not bond to the hardened surface of the first pour, which shall be coated with a bond breaker. The slab reinforcement shall be stopped 4-1/2 inches from the joint, unless noted otherwise; which is provided with a sleeve-type dowel, to allow shrinkage of the concrete of the second pour. Waterstop and sealant groove shall also be provided.

C. Expansion Joints: To allow the concrete to expand freely, a space is provided between the two pours, the joint shall be formed as shown on the plans. This space is obtained by placing a filler joint material against the first pour, which acts as a form for the second pour. Unless otherwise specified, all expansion joints in water bearing members shall be provided with an approved type waterstop.

Premolded expansion joint material shall be installed with the edge at the indicated distance below or back from finished concrete surface, and shall have a slightly tapered, dressed, and oiled wood strip secured to or placed at the edge thereof during concrete placement, which shall later be removed to form space for sealing material. The space so formed shall be filled with a joint sealant material as specified in the Paragraph in Part 2 entitled "Joint Sealant." In order to keep the two elements in line the joint shall be provided with a sleeve-type dowel as shown.

D. Control Joints (Weakened Plane): The function of the control joint is to provide a weaker plane in the concrete, where shrinkage cracks will probably occur. A groove, of the shape and dimensions as shown on the plans, is formed or saw-cut in the concrete and shall be filled with a joint sealant material as specified in the Paragraph in Part 2 entitled "Joint Sealant."

PART 2 - PRODUCTS

2.1 PVC WATERSTOPS

A. General: Waterstops shall be extruded from an elastomeric polyvinyl chloride compound containing the plasticizers, resins, stabilizers, and other materials necessary to meet the requirements of these Specifications. No reclaimed or scrap material shall be used. The CONTRACTOR shall obtain from the waterstop manufacturer and shall furnish to the ENGINEER for review, current test reports and a written certification of the manufacturer that the material to be shipped to the job meets the physical requirements as outlined in the U.S. Army Corps of Engineers Specification CRD-C572 and those listed herein.

B. Flatstrip and Center-Bulb Waterstops: Flatstrip and center-bulb waterstops shall be as detailed and as manufactured by: [Kirkhill Rubber Co., Brea, California; Greenstreak, St. Louis, MO, Water Seals, Inc., Chicago, Illinois; Progress Unlimited, Inc., New York, New York]; or an approved equal; provided, that at no place shall the thickness of flat strip waterstops, including the center bulb type, be less than 3/8-inch.

C. Multi-Rib Waterstops: Multi-rib waterstops, where required, shall be as detailed and as manufactured by [Water Seals, Inc., Chicago, Illinois; Progress Unlimited, Inc., New York, New York; Greenstreak, St. Louis, MO], or an approved equal. Prefabricated joint fittings shall be used at all intersections of the ribbed-type waterstops.

D. Other Types of Waterstops: When other types of waterstops, not listed above are required and shown, they shall be subjected to the same requirements as those listed herein.

E. Waterstop Testing Requirements: When tested in accordance with the specified test standards, the waterstop material shall meet or exceed the following requirements:

Physical Property, Sheet Material	Value	ASTM Std.
Tensile Strength-min (psi)	1750	D 638, Type IV
Ultimate Elongation-min (percent)	350	D 638, Type IV
Low Temp Brittleness-max (degrees F)	-35	D 746
Stiffness in Flexure-min (psi)	400	D 7

Accelerated Extraction (CRD-C572)		
Tensile Strength-min (psi)	1500	D 638, Type IV
Ultimate Elongation-min (percent)	300	D 638, Type IV
Effect of Alkalies (CRD-C572)		
Change in Weight (percent)	+0.25/-0.10	------
Change in Durometer, Shore A	+5	D 2240
Finish Waterstop		
Tensile Strength-min (psi)	1400	D 638, Type IV
Ultimate Elongation-min (percent)	280	D 638, Type IV

F. Accessories

1. Provide factory made waterstop fabrications for all changes of direction, intersections, and transitions leaving only straight butt joint splices for the field.

2. Provide hog rings or grommets spaced at 12 inches on center along length of waterstop.

3. Provide Teflon coated thermostatically controlled waterstop splicing irons for field butt splices.B.

2.2 JOINT SEALENT

A. Joint sealant shall be polyurethane polymer designed for bonding to concrete which is continuously submerged in water.

B. Joint sealant material shall meet the following requirements:

Work Life	45 - 90 minutes
Time to Reach 20 Shore "A" Hardness (at 77 degrees F, 200 gr quantity)	24 hours, maximum
Ultimate Hardness	30 - 40 Shore "A"
Tensile Strength	250 psi, minimum
Ultimate Elongation	400 percent, minimum
Tear Resistance (Die C ASTM D 624)	75 pounds per inch of thickness, minimum
Color	Light Gray

C. All polyurethane sealants for waterstop joints in concrete shall conform to the following requirements:

1. Sealant shall be 2-part polyurethane with the physical properties of the cured sealant conforming to or exceeding the requirements of ASTM C 920 or Federal Specification TT-S-00227 E(3) for 2-part material, as applicable.

2. For vertical joints and overhead horizontal joints, only "non-sag" compounds shall be used; all such compounds shall conform to the requirements of ASTM C 920 Class B, or Federal Specification TT-S-0027 E(3), Type II.

3. For plane horizontal joints, the self-leveling compounds which meet the requirements of ASTM C 920 Class A, or Federal Specification TT-S-0027 E(3), Type I shall be used. For joints subject to either pedestrian or vehicular traffic, a compound providing non-tracking characteristics, and having a Shore "A" hardness range of 25 to 35, shall be used.

4. Primer materials, if recommended by the sealant manufacturer, shall conform to the printed recommendations of the sealant manufacturer.

5. All sealants, wherever shown, or required hereunder shall be [Rubbercalk 2101-I or 270 as manufactured by Products Research Company; GS 102 or GS 1102 as manufactured by General Sealants Corp]; or an approved equal. For sanitary structures mastic/sealant material shall be [Ram Nek Sealant by Henry Co.; Sika Flex 1A, Sikadur 51 NS by Sika Corp].

6. Sealants for non-waterstop joints in concrete shall conform to the requirements of Section 07 9000, "Joint Sealants". Mastic joint sealer shall be a material that does not contain evaporating solvents; that will tenaciously adhere to concrete surfaces; that will remain permanently resilient and pliable; that will not be affected by continuous presence of water and will not in any way contaminate potable water; and that will effectively seal the joints against moisture infiltration even when the joints are subject to movement due to expansion and contraction. The sealer shall be composed of special asphalts or similar materials blended with lubricating and plasticizing agents to form a tough, durable mastic substance containing no volatile oils or lubricants and shall be capable of meeting the test requirements set forth hereinafter, if testing is required by the City Engineer.

2.3 PREFORMED JOINT FILLER

A. Preformed joint filler material shall be of the preformed non-extruding type joint filler constructed of cellular neoprene sponge rubber or polyurethane of firm texture. Bituminous fiber type will not be permitted. All non-extruding and resilient-type preformed expansion joint fillers shall conform to the requirements and tests set forth in ASTM D 1752 for Type I, except as otherwise specified herein.

B. Unless otherwise noted, preformed joint filler shall be a non-extruding, resilient, bituminous type conforming to the requirements of ASTM D 1751.

2.4 BACKING ROD

A. Backing rod shall be an extruded closed-cell, polyethylene foam rod. The material shall be compatible with the joint sealant material used and shall have a tensile strength of not less than 40 psi and a compression deflection of approximately 25 percent at 8 psi. The rod shall be 1/8-inch larger in diameter than the joint width except that a one-inch diameter rod shall be used for a 3/4-inch wide joint.

2.5 BOND BREAKER

A. Bond breaker shall be [Super Bond Breaker as manufactured by Burke Company, San Mateo, California; Hunt Process 225-TU as manufactured by Hunt Process Co., Santa Fe Springs, California; Select Cure CRB as manufactured by Select Products Co., Upland, California]; or an approved equal. It shall contain a fugitive dye so that areas of application will be readily distinguishable

PART 3 – EXECUTION

3.1 GENERAL

A. Unless otherwise shown, waterstops of the type specified herein shall be embedded in the concrete across joints as shown. All waterstops shall be fully continuous for the extent of the joint. Splices

necessary to provide such continuity shall be accomplished in conformance to printed instructions of manufacturer of the waterstops. The Contractor shall take suitable precautions and means to support and protect the waterstops during the progress of the work and shall repair or replace at its own expense any waterstops damaged during the progress of the work. All waterstops shall be stored so as to permit free circulation of air around the waterstop material.

B. When any waterstop is installed in the concrete on one side of a joint, while the other half or portion of the waterstop remains exposed to the atmosphere for more than 2 days, suitable precautions shall be taken to shade and protect the exposed waterstop from direct rays of the sun during the entire exposure and until the exposed portion of the waterstop is embedded in concrete.

3.2 SPLICES IN WATERSTOPS

A. Splices in waterstops shall be performed by heat sealing the adjacent waterstop sections in accordance with the manufacturer's printed recommendations and the following requirements:.

1. The material not be damaged by heat sealing.
2. The splices have a tensile strength of not less than 60 percent of the unspliced materials tensile strength.
3. The continuity of the waterstop ribs and of its tubular center axis be maintained.

B. Butt joints of the ends of two identical waterstop sections may be made while the material is in the forms.

C. All joints with waterstops involving more than 2 ends to be jointed together, and all joints which involve an angle cut, alignment change, or the joining of 2 dissimilar waterstop sections shall be prefabricated by the Contractor prior to placement in the forms, allowing not less than 24-inch long strips of waterstop material beyond the joint. Upon being inspected and approved, such prefabricated waterstop joint assemblies shall be installed in the forms and the ends of the 24-inch strips shall be butt welded to the straight run portions of waterstop in place in the forms.

3.2 JOINT CONSTRUCTION

A. Setting Waterstops:

1. In order to eliminate faulty installation that may result in joint leakage, particular care shall be taken of the correct positioning of the waterstops during installation. Adequate provisions must be made to support the waterstops during the progress of the WORK and to insure the proper embedment in the concrete. The symmetrical halves of the waterstops shall be equally divided between the concrete pours at the joints. The center axis of the waterstops shall be coincident with the joint openings. Maximum density and imperviousness of the concrete shall be insured by thoroughly working it in the vicinity of all joints

2. In placing flat-strip waterstops in the forms, means shall be provided to prevent them from being folded over by the concrete as it is placed. Unless otherwise shown, all waterstops shall be held in place with light wire ties on 12-inch centers which shall be passed through the edge of the waterstop and tied to the curtain of reinforcing steel. Horizontal waterstops, with their flat face in a vertical plane, shall be held in place with continuous supports to which the top edge of the waterstop shall be tacked. In placing concrete around horizontal waterstops, with their flat face in a horizontal plane, concrete shall be worked under the waterstops by hand so as to avoid the formation of air and rock pockets.

3. Adequate means shall be provided for anchoring the waterstop in concrete. Waterstops shall be positioned so that they are equally embedded in the concrete on each side of the joint.

B. Joint Location:

1. Construction joints, and other types of joints, shall be provided where shown. When not shown, construction joints shall be provided at 10 foot maximum spacing for all concrete construction, subject to the approval of the City Engineer, unless noted otherwise. The location of all joints, of any type, shall be submitted for acceptance by the City Engineer.

C. Joint Preparation:

1. Special care shall be used in preparing concrete surfaces at joints where bonding between two sections of concrete is required. Unless otherwise shown, such bonding will be required at all horizontal joints in walls. Surfaces shall be prepared in accordance with the requirements of Section [03300] [03310], "Cast-in-Place Concrete." Except on horizontal wall construction joints, wall to slab joints or where otherwise shown or specified, at all joints where waterstops are required, the joint face of the first pour shall be coated with a bond breaker as specified herein.

D. Construction Joint Sealant:

1. Construction joints in water-bearing floor slabs, and elsewhere as shown, shall be provided with tapered grooves which will be filled with construction joint sealant. The material used for forming the tapered grooves shall be left in the grooves until just before the grooves are cleaned and filled with joint sealant. After removing the forms from the grooves, all laitance and fins shall be removed, and the grooves shall be sand-blasted. The grooves shall be allowed to become thoroughly dry, after which they shall be blown out; immediately thereafter, they shall be primed and filled with the construction joint sealant. The primer used shall be supplied by the same manufacturer supplying the sealant. No sealant will be permitted to be used without a primer. Care shall be used to completely fill the sealant grooves. Areas designated to receive a sealant filler shall be thoroughly cleaned, as outlined for the tapered grooves, prior to application of the sealant.

2. Sealant application shall be in accordance with the manufacturer's printed instructions. The surfaces of the groove for the sealant shall not be coated. Concrete next to waterstops shall be placed in accordance with the requirements of Section 03 30 00 Cast-in-Place Concrete.

3. The primer and sealant shall be placed strictly in accordance with the printed recommendations of the manufacturer, taking special care to properly mix the sealant prior to application. All sealant shall cure at least 7 days before the structure is filled with water.

4. All sealant shall be installed by a competent waterproofing specialty contractor who has a successful record of performance in similar installations. Before work is commenced, the crew doing the work shall be instructed as to the proper method of application by a representative of the sealant manufacturer.

5. Thorough, uniform mixing of 2-part, catalyst-cured materials is essential; special care shall be taken to properly mix the sealer before its application. Before any sealer is placed, the Contractor shall arrange to have the crew doing the work carefully instructed as to the proper method of mixing and application by a representative of the sealant manufacturer.

6. Any joint sealant which after the manufacturer's recommended curing time for the job conditions of the work hereunder, fails to fully and properly cure shall be completely removed; the groove shall be thoroughly sandblasted to remove all traces of the uncured or partially cured sealant and primer, and shall be re-sealed with the specified joint sealant. All costs of such removal, joint treatment, re-sealing, and appurtenant work shall be at the expense of the Contractor.

END OF SECTION

SECTION 03 35 10
CONCRETE FLATWORK FINISHING AND CURING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Finishing flatwork after strike off, including leveling, floating, troweling; and other concrete finishing methods, including finishing tolerance classifications.
   2. Evaporation reducers.
   3. Wet covering curing materials.
   4. Curing compounds.
   5. Preventative (day-of-pour) MVECS.
   6. Floor protection materials.
   7. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 03 54 16 for underlayment; and for definition of the term “underlayment”.
   2. Section 09 05 16 for corrective (remedial) MVECS; and for definitions of the terms “substrate”, “penetrant”, “overlay”, “covering”, and “overburden”.

1.02 RELATED DOCUMENTS

A. This specification
   1. supplements the requirements of Section 03 30 00; and
   2. supersedes any leveling, floating, troweling, and other concrete finishing requirements contained in Section 03 30 00, including finishing tolerances.

1.03 SECTION REQUIREMENTS

A. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

1.04 ALTERNATES

A. With input from the preventative (day-of-pour) MVECS manufacturer, preventative MVECS specified in this specification section may be considered for certain concrete curing applications in lieu of curing compounds; and possibly in lieu of corrective (remedial) MVECS products specified in Section 09 05 16.

1.05 REFERENCES

A. Abbreviations and Acronyms:
   1. ACI: American Concrete Institute.
   2. F(f): Floor Flatness.

3. F(l): Floor Levelness.
4. HVFAC: High-Volume Fly Ash Concrete.
5. MLV: Minimum Local Value.
6. MVECS: Moisture Vapor Emission Control System.
7. MVER: Moisture Vapor Emission Rate.
8. pH: Potential of Hydrogen (a measure of acidity or alkalinity).
9. RH: Relative Humidity.
10. SOV: Specified Overall Value.
11. VDR: Vapor Diffusion Retarder.

B. Definitions:
1. Manufacturer: Means the evaporation reducer, surface retarder, slip-resistive aggregate, curing material, curing compound, MVECS, or accessory manufacturer, as the context admits, unless otherwise indicated.
2. Flatwork: Means all concrete work along a horizontal plane, including indoor floors and decks, concrete stairs, and outdoor patios, sidewalks, and driveways. Flatwork excludes vertical structures like walls or bridges.
3. General Concrete Terms:

    a. Freshly-Mixed Concrete: Means a homogenous mixture of blended hydraulic cement, aggregates, and water, with or without admixtures, fibers, or other cementitious materials.

    b. Newly-Placed Concrete: Means freshly-mixed concrete that is deposited (placed), distributed (spread), screeded (struck-off), and consolidated (tamped) in the place where it hardens, but not yet floated, troweled, or otherwise finished. (aged up to approximately one hour after placement)

    c. Newly-Finished Concrete: Means newly-placed concrete, the surface of which has deliberate floating, troweling, and other finishing actions performed during a period promptly after strike off and after bleed water, glaze, or sheen has disappeared and the concrete is hard enough to resist surface damage, but before initial set; and whose surface is damp but not wet. (aged approximately one to 4 hours)

    d. Cured Concrete: Means newly-finished concrete, the surface of which has had deliberate actions taken between final finishing and the termination of curing to reduce loss of water from the flatwork surface; and control concrete temperature.

        1) Initially-Cured Concrete (Beginning Curing): Means newly-finished concrete before initial set when bleed water is evaporating too rapidly to keep the surface wet. (aged approximately one to 4 hours)

        2) Newly-Cured Concrete (Intermediate Curing): Means newly-finished concrete during a period following initial set, but before final set. (aged approximately 4 to 8 hours)

        3) Recently-Cured Concrete (Final Curing): Means newly-finished concrete during a period following final set. (aged approximately 8 hours to 14 days)

    e. Hardened Concrete: Means recently-cured concrete that has sufficient strength to serve its purpose or resist breaking under stipulated loading (approximately 7 to 28 days or older), and that has not been exposed to weathering or contaminates.

    f. Newly-Aged Concrete: Means hardened concrete aged more than 28 days whose surfaces have been exposed to weathering, including abrasion, liquid penetration, freeze/thaw cycles, and salts or other contaminates.

g. Existing Concrete: Means concrete that was placed, finished, cured, hardened, and weathered prior to the start of the project that is indicated as remaining, and which may also require cleaning, resurfacing, rehabilitation, or strengthening.

4. Concrete Finishing Terms:

   a. Smooth: Means having a continuous even surface free from irregularities, roughness, projections, bumps, points or ridges.

   b. Surface Defect: Means surface voids, aggregate transparency, color variation, spalling, cracking, offsets, and similar cavities or irregularities.

   c. Trowel Pattern: Means a flatwork surface feature produced by troweling that is seen but cannot be felt.

   d. Trowel Mark: Means a flatwork surface defect produced by troweling that is both seen and felt.

5. Concrete Curing Terms:

   a. Water Curing: Means curing flatwork by flooding with water (ponding or immersion), continuously spraying with water, or fog mist-spraying to replace evaporating water. Adding water to the surface does not mean adding water that is worked into the concrete mix, which may increase the surface concrete water-cement ratio and weaken it.

   b. Wet Covering Curing: Means curing flatwork with coverings, including earth, sand, sawdust, straw, hay, canvas, hessian or jute burlap, or natural cellulose fabric, which are kept continuously wet to replace water evaporating from flatwork.

   c. Sheet Curing: Means curing flatwork with water retaining coverings, including waterproof paper or plastic film, which prevent water from evaporating from flatwork.

   d. Curing Compounds: Means curing flatwork with liquid membrane-forming resinous materials that prevent water from evaporating from flatwork.

1.06 ADMINISTRATIVE REQUIREMENTS

A. General Coordination:

1. Though wet covering curing methods are generally recommended and preferred for curing concrete (to minimize the risk of potential flatwork failures), the Contractor controls the means and methods for flatwork finishing and curing.
2. Contractor shall perform or arrange and pay costs for all remedial work necessary to correct or improve all deficient conditions and all failures directly or indirectly caused by concrete curing means and methods, without limitation, including delays, schedule disruptions, corrections, repairs, and replacement.
3. Proposed substitution requests and submittals that change the generic chemistry of specified concrete finishing and curing materials are prohibited and returned to the Contractor without review or responsive action, except to record non-conformance with this requirement.
4. Specified coverage rates are minimum. If manufacturer’s recommended coverage rates differ from specified rates, then

   a. consult the manufacturer’s representative and obtain manufacturer-recommended rates printed on manufacturer’s letterhead;

   b. assume the manufacturer-recommended coverage rates govern; and

c. promptly submit an RFI to the Architect for resolution; include manufacturer-recommended coverage rates with the RFI.

B. Concrete Mix Design Coordination: Coordinate concrete finishing methods and curing materials with factors of the approved concrete mix design that affect concrete bleeding, including the presence of water-reducing admixtures, air-entraining agents, and fly ash, especially HVFAC

C. VDR Coordination:
1. Coordinate finishing methods and curing materials with the selected below-grade VDRs, and with the location of the VDR within each flatwork assembly.
2. Do not double steel trowel interior flatwork installed over VDRs.
3. When curing compounds are selected by the Contractor for use in curing concrete, with the assistance of both the VDR and curing compound manufacturers, coordinate the selection of the correct curing compounds to match selected VDRs.

D. Concrete Finishing Coordination:
1. Coordinate finishing with forecast and actual weather conditions measured at the project site, including factors that affect surface setting such as high wind velocity, low RH, rising air temperature, and exposure to direct sunlight. Wherever practicable, make arrangements to block wind and shade newly-placed concrete from direct sunlight.
2. Coordinate concrete finishing with penetrant, overlay, and covering material preparation, application, and installation requirements indicated in other specification sections. Finish concrete in conformance with tolerances and surface finishes required, recommended, or accepted by all penetrant, overlay, and covering material suppliers and manufacturers.
3. Without limitation, either perform or arrange and pay costs for performing all remedial work necessary to correct or remove, dispose of, and replace defective flatwork, the surface finish and tolerances of which do not conform to the penetrant, overlay, and covering manufacturers' surface finish and tolerance requirements.

E. Concrete Curing Coordination:
1. Coordinate flatwork curing to ensure selected curing materials and methods result in flatwork that conforms to the penetrant, overlay, and covering manufacturers' MVER, pH, RH, and warranty requirements.
2. Coordinate finishing with both forecast and actual weather conditions measured at the project site, including factors that affect surface setting such as high wind velocity, low RH, rising air temperature, and exposure to direct sunlight. Wherever practicable, make arrangements to block wind and to shade newly-placed concrete from direct sunlight.
3. If liquid membrane-forming curing compounds are selected for use in curing concrete flatwork, then with assistance from both the VDR. curing compound, and finish flooring manufacturers, coordinate selection of the correct curing compounds with selected VDR and finish flooring materials and flooring installation materials based on current product formulations.

    a. Verify chemical and adhesive compatibility of selected concrete curing compounds and installed MVECS with selected finish flooring materials and flooring installation materials, including all primers, adhesives, and sealants, based on current product formulations.

    b. Contractor assumes responsibility for all subsequent flatwork conditions, floor finish issues, and substrate failures brought about or attributable to curing compound use, including MVER failure.
4. Perform or arrange and pay costs for performing all remedial work necessary to correct and improve

    a. defective flatwork, including those areas that exceed the MVER, pH, and RH limits required, recommended, or accepted by the penetrant, overlay, and covering manufacturers; and

b. penetrant, overlay, and covering failures resulting from selected concrete curing methods; and coordination of, or failure to coordinate, the chemical and adhesive compatibility of selected curing compounds with all subsequent penetrants, overlays, and covering materials, including primers, adhesives, and sealants, and other installation materials.

F. Preinstallation Meeting:

1. Hold a meeting after submittal approval and at least 10 business days before beginning installation.

   a. VDR manufacturer's representative and installer must attend meeting.

   b. Concrete finishers and the evaporation reducer, curing compound, and MVECS manufacturer's representatives and MVECS installers must attend the meeting.

   c. Tiling, flooring, and concrete sealer manufacturers' representatives and installers must attend the meeting.

2. During the meeting, review the Contract Documents, submittals, project conditions, and installation sequence and methods, including special details and conditions that might affect installation.

   a. Review, discuss, and complete the National Ready Mixed Concrete Association and American Society of Concrete Contractors publication NRMC/ASCC, "*Checklist for the Concrete Pre-Construction Conference*" during the course of the pre-installation meeting. (available from www.nrcma.org or www.ascconline.org)

   b. Discuss the use (or not) of maturity testing for this project, including development of the maturity calibration curve and the equipment requirements and sensor placement for measuring in-place concrete maturity.

3. Identify and discuss adverse or unfavorable conditions detrimental to protecting stored materials or to installation; or to the quality, durability, appearance, or performance of installed flatwork. Resolve each condition.
4. Finalize construction schedule.
5. Record significant discussions and distribute meeting minutes. Do not begin installation until disagreements are successfully resolved to the satisfaction of all parties.

G. Sequencing:

1. When drilling for RH probes specified in Section 09 05 16 is inadvisable (such as when floor heating elements, water tubing, or other items are installed), provide wet concrete RH meter accessories for installation prior to placing concrete.
2. Begin concrete finishing operations promptly after strike off, though refrain from troweling until after bleed water, glaze, or sheen has disappeared. (if troweling is begun while bleed water is still visible, surface defects are likely, and delamination is possible)
3. Both wet coverings saturated with water and sheet curing materials may be used only after the concrete has hardened enough to prevent surface damage, including both marks and patterns. Depending upon environmental conditions at the project site, initial curing may be necessary when utilizing wet covering and sheet curing.

H. Scheduling:

1. Saw Cutting: Newly-cured concrete contraction joints must be cut during a period within the first one or 2 hours of finishing, or as soon as the concrete has hardened sufficiently to prevent aggregates from being dislodged by the saw blade, and before final set. (aged approximately 4 to 8 hours)

2. Minimum Concrete Curing Period: Allow sufficient time in the construction schedule to permit concrete flatwork to cure undisturbed for at least the following time periods, at ambient temperatures above 40 deg. F.

    a. ASTM C 150 Type I Cement (used when the special properties specified for any other types are not required): At least 7 consecutive days.

    b. ASTM C 150 Type II Cement (general use; used when moderate sulfate resistance or moderate heat of hydration is required): At least 10 consecutive days.

    c. ASTM C 150 Type III Cement (high early-strength): At least 3 consecutive days.

    d. ASTM C 150 Type IV (low heat of hydration) or Type V (high sulfate resistance) Cement: At least 14 consecutive days.

1.07 SUBMITTALS

A. Action Submittals: Submit the following for responsive action (formal review and approval).
   1. Product Data: Submit manufacturer's product data, specifications, and all other information necessary to show conformance to the Contract Documents, excluding material safety data sheets (MSDSs), which are returned to the Contractor without review or responsive action.

B. Informational Submittals: Submit the following for information (informal review: responsive action not expected or required, except to record non-conformance with submittal requirements).
   1. Manufacturer's Instructions: Submit manufacturer-prepared published instructions for proper installation of furnished concrete sealers.

      a. If manufacturer's instructions are unavailable or do not apply to specific project conditions, then consult the manufacturer's representative and obtain project-specific supplemental instructions printed on manufacturer's letterhead.

      b. Promptly distribute supplemental instructions to the Architect, who may have comments that lead to contract modifications or minor changes in the work.
   2. Qualification Statements: Submit written descriptions confirming experience specified in QUALITY ASSURANCE article below.

1.08 QUALITY ASSURANCE

A. Regulatory Requirements:
   1. Portland cement concrete paving must be stable, firm, and slip resistant and must conform to California Building Code Sections 11B-302 and 11B-403.

B. Qualifications:
   1. Manufacturer: Company or individuals must have at least 10 years' experience manufacturing concrete sealers installed on at least 200 previous projects similar to this project in size, material, design, and complexity.
   2. Concrete Finishers: Company or individuals must have at least 5 years' experience finishing and curing concrete for at least 30 previous projects similar to this project in size, material, design, and complexity. Individuals performing flatwork finishing and curing must be ACI-certified Flatwork Technicians and Finishers and current in their certification.
   3. Supervisors: Individuals must have at least 7 years' experience finishing and curing concrete for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading concrete finishers.

Supervisors must be ACI-certified Flatwork Technicians and Finishers and current in their certification.

1.09 HANDLING

A. Receiving: Inspect all deliveries for deteriorated, damaged, and defective items.
   1. Reject items that are not packaged in a manner that prevents damage; or that exhibit deterioration or damage or have damaged or open packaging or containers.
   2. Reject items that are not transported, delivered, or protected in conformance with manufacturer-recommended transport, delivery, and receiving requirements.
   3. Unload and store only inspected and accepted items.

B. Storage: Store unloaded items indoors as shipped, upright in their original packaging or containers, within dry, well-ventilated, broom-cleaned and enclosed storage areas.
   1. Furnish adequate dunnage and bracing during storage.
   2. Prevent stored items from contacting the floor and from deterioration and damage.
   3. Do not leave items uncovered where they might be exposed to weather or become wet; or exposed to heat or sudden changes in temperature or relative humidity; or other sources of deterioration and damage, including dust and other airborne contaminants.

C. Handling: Handle items in conformance with manufacturer’s instructions and other requirements and recommendations, and in a manner that that prevents damage.
   1. Avoid damage to packaging and containers, and contamination of contents.
   2. Rotate inventory; do not use items the shelf life of which is expired.

D. Damaged Item Replacement: Promptly remove and replace deteriorated, damaged, or defective [coating]s with undamaged new [coating]s that do not exhibit deterioration, damage, or defects.

E. Packaging Waste Management: Do not burn or bury construction waste at the project site. Remove and legally dispose of all construction waste away from the project site.

1.10 PROJECT CONDITIONS

A. Ambient Conditions: Install evaporation reducers and curing compounds only when ambient temperature, RH, and other environmental conditions fall within ranges required, recommended, or accepted by the manufacturer.
   1. Do not install evaporation reducers and curing compounds during rain or snow, fog or mist; or when rain or snow is predicted within 24 hours of installation.
   2. Proceed only when there is no threat of impending precipitation, and both current and forecasted weather conditions conform to those required, recommended, or accepted by the manufacturer.

1.11 WARRANTY

A. Manufacturer Warranty: Furnish to the Owner a written manufacturer warranty for products, components, and accessories against all patent and latent defects, and incipient and catastrophic failure for 5 years.

PART 2 - PRODUCTS

2.01 EVAPORATION REDUCERS (EVAPORATION RETARDANTS)

A. Description: VOC-compliant water-based polymer liquid that forms a thin continuous film when applied to fresh concrete, which controls the flatwork surface conditions until finishing operations cause the thin film to completely dissipate.
   1. Evaporation reducers are not curing compounds. Concrete treated with evaporation reducers must be cured.
   2. Evaporation reducers are not surface retarders.

B. Applications: Used on surfaces of newly-placed concrete to temporarily reduce rapid moisture loss from flatwork due to any of the following conditions and applications.
   1. High temperature.
   2. Low humidity.
   3. High wind.
   4. Direct sunlight.
   5. Indoor applications heated in winter.
   6. Low water-cement ratio concrete applications.
   7. Concrete mixes indicated as containing either super plasticizers or silica fume.

C. Restrictions: Do not apply evaporation reducers during final troweling operations. (slab discoloration may occur)

D. Products: Provide one of the following, or equal.
   1. “Confilm” manufactured by BASF Building Systems.
   2. “AquaFilm J74RTU” manufactured by Dayton Superior.
   3. “EUCOBAR” manufactured by The Euclid Chemical Co.
   4. “E-CON” manufactured by L&M Construction Chemicals, Inc.

2.02 WET COVERING CURING MATERIALS

A. Description: Inorganic fabric curing materials designed to be hydrated and to inhibit moisture loss during the curing process of concrete.

B. Application: May be used for curing of concrete flatwork surfaces where appearance of the slab surface is of primary visual importance; and for other concrete flatwork surfaces indicated as exposed-in-service (i.e., exposed sealed or polished concrete).
   1. Concrete must not be stained by either clean or soiled covering materials.
   2. Concrete must not be cross-contaminated through re-use.

C. Wet Covering Curing Materials: When the permitted use of wet covering curing materials is selected to cure concrete flatwork, provide one of the following, or equal.
   1. Water: As specified above for water curing.
   2. Single Use (Disposable) Wet Curing Blankets:

      a. Description: Single-use curing blankets conforming to AASHTO M 171 and ASTM C 171, consisting of a natural color cellulose fiber layer with at least a 3 mil thick impervious, reflective coating applied to one side; perforated for flatwork, non-perforated for vertical applications.

b. Products: “UltraCure DOT” heavy-duty wet curing blanket manufactured by McTech Group, Inc., or equal.

2.03 CURING COMPOUNDS

A. Description: Liquids containing film-forming polymers used to seal the surface of newly-finished concrete and prevent rapid moisture loss.

B. Application: When the permitted use of curing compounds is selected to cure flatwork, temporary (chemically dissipating) curing compounds are recommended and preferred.

C. Restrictions: Liquid membrane-forming curing compounds are not recommended where moisture-sensitive finish flooring is installed. Concrete curing compounds may not be used to cure flatwork indicated as receiving penetrants, overlays, or coverings without prior written acceptance from the manufacturer based on actual in-service conditions.
   1. When temporary curing compounds are used to cure flatwork, then mechanical abrasion, including planing and grinding, must be provided before beginning installation of any penetrant or overlay, including substrate preparation, to achieve complete removal of any film left behind that does not dissipate. If mechanical abrasion methods do not adequately remove curing compounds, , then shot blasting, bead blasting, and abrasive blasting must be utilized to achieve complete curing compound removal.
   2. When permanent curing compounds are used to cure flatwork, then shot blasting, bead blasting, and abrasive blasting down to a level below curing compound penetration must be provided before beginning application of any penetrant or overlay, including substrate preparation, to achieve complete curing compound removal.

D. Temporary Curing Compounds (Chemically Dissipating Compounds):
   1. Description: Resin-based liquid membrane-forming curing compound conforming to ASTM C 309, Type 1-D (clear or translucent with fugitive dye that loses its coloring during proper usage), Class A (no restrictions) or Class B (resin).
   2. Restrictions: Temporary curing compounds must be completely removed before beginning floor covering installation
   3. Products: “KUREZ DR-100” manufactured by The Euclid Chemical Co., or equal.

E. Permanent Curing Compounds (Non-Dissipating Compounds):
   1. Description: Water-based curing compound conforming to ASTM C 1315, and must be specially formulated and warrantied for proper concrete curing and chemical and adhesive compatibility with all covering adhesives and materials.
   2. Restrictions: Use only where floor coverings are indicated.
   3. Products: “FloorBond 710” manufactured by Floor Seal Technology, Inc., or equal.

F. Combination Curing Compounds: Cure & seal; cure & harden; cure, seal, & harden; cure, seal, harden & dustproofing; and other combination curing compounds are prohibited.

G. Requisite Properties:
   1. Water Retention Rate: Maximum water loss may not exceed 0.40 kilograms per square meter in 72 hours, when tested in conformance with ASTM C 156.
   2. Maximum VOC Content: Not more than 60 grams per liter.

2.04 PREVENTATIVE (DAY-OF-POUR) MVECS

A. Description: Resin-based compound conforming to ASTM C 1315 and specially formulated for proper concrete curing; reducing moisture vapor emission levels to a specific and measurable

rate; reducing shrinkage cracking; and chemical and adhesive compatibility with all floor covering adhesives and materials.

B. Application: With input from the preventative MVECS manufacturer, day-of-pour preventative MVECS may be considered for certain curing applications in lieu of curing compounds; and possibly in lieu of corrective (remedial) MVECS products specified in Section 09 05 16.

C. Restrictions: When substrates receiving day-of-pour preventative MVECS subsequently demonstrate during testing MVER and pH exceeding the limits required, recommended, or accepted by the penetrant, overlay, and covering manufacturers' published limits, preventative MVECS manufacturer must apply to those areas the corrective (remedial) MVECS products specified in Section 09 05 16 at no additional expense to the Contractor or Owner.

D. Products: "VaporSeal 309" manufactured by Floor Seal Technology, Inc., or equal.

E. Requisite Properties:
   1. Minimum Water Retention Rate: Maximum water loss of not more than 0.40 kilograms per square meter in 72 hours, when tested in conformance with ASTM C 156.
   2. Maximum VOC Material Content: Not more than 100 grams per liter.

2.05 FLOOR PROTECTION MATERIALS

A. Description: Disposable natural-color cellulose fabric consisting of a softer bottom layer (to help prevent surface scratches) and a harder top layer (to help shield against contaminants and potential impact hazards); and designed specifically to help protect flatwork and flooring during construction.

B. Application: Install where needed to protect slabs, stone, hardwood, terrazzo, and other flooring from surface contamination, abrasions, scratches, potential impact hazards, and other harmful occurrences.

C. Restrictions: At least 2 times per day, once before lunch and once before the end of the day, surface protection must be checked for holes or tears and repaired.
   1. Surface-contaminated areas must be replaced with new surface protection covering.
   2. 100-percent contact between the surface protection and protected surfaces must be ensured.
   3. Nails, screws, and other small sharp items must be removed from both surface protection and wheels of lifts and other wheeled construction aids.

D. Product: "EZcover" manufactured by McTech Group, Inc., or equal.

2.06 ACCESSORIES

A. Screed Stakes: Prohibited. Screeding system may not puncture the below grade VDRs.

B. Wet Concrete RH Meter Accessories:
   1. Description: Disposable plastic tubes for measuring humidity in concrete.
   2. Manufacturer: Provide accessories manufactured by Vaisala Inc., or equal.
   3. Products: Provide all of the following parts for wet concrete installations.

      a. Plastic Tube Set: Vaisala Part No. 19266HM, or equal.

      b. Plastic Flange Set: Vaisala Part No. 26529HM, or equal.

      c. Long Rubber Plug Set: Vaisala Part No. 26530HM, or equal.

C. Saw Blades:
   1. Description: Diamond blades for early-entry dry-cut saws.
   2. Products: “Soff-Cut” manufactured by Husqvarna Construction Products, or equal.

D. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Oversight: Ensure an adequate number of supervisors are present and proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Verification: Verify formwork, VDRs, and items penetrating flatwork are installed.

C. Evaluation and Assessment:
   1. Identify project conditions that do not conform to the manufacturer’s instructions and other requirements and recommendations.
   2. Perform or arrange and pay costs for all remedial work necessary to correct or improve deficient conditions, without limitation, before the installer begins work.

3.02 FINISHING

A. General:
   1. Comply with ACI 302.1R recommendations for screeding, floating, re-straightening, and finishing flatwork, including the proper use of a highway straightedge where applicable.
   2. Protect concrete from rapid moisture loss before and during finishing operations.
      a. Apply evaporation reducer as needed prior to beginning finishing operations, and periodically during finishing.
      b. Do not apply water to the slab surface during finishing operations.
   3. Finish flatwork to produce uniform surface appearance throughout the area involved and adjacent areas with the same finish.
   4. Compacting and Floating:
      a. Use continuous screeds spaced or located to produce specified substrate tolerances. Bring substrates to proper level and strike-off with a straightedge.
      b. Remove excess water and laitance.
      c. Compact and consolidate to embed coarse aggregates.
      d. Float and test surfaces with a 10-foot straightedge and eliminate high and low spots.
      e. Use methods and tools necessary to produce proper finishes and tolerances.
   5. Concrete Placed over Metal Decking:
      a. Use adjustable screeds at all screeded points and adjust to compensate for deck, beam, and girder deflection; and for deflection occurring during concrete placement.

b. Do not use steel closures at metal deck edges as screeds.

c. Continuously monitor screeds and substrates during concrete placement and finishing and adjust concrete floor thickness as required to obtain level floors conforming to specified tolerances.

B. Rough Finishes
1. Basic Finishing: Screed and bullfloat flatwork surface.
2. Scratch Finishing: Beginning with a basic finish, roughen the flatwork surface with stiff brushes, brooms, or rakes to produce a 1/4-inch surface profile in one direction before final set.
3. Float Finishing:

a. Beginning with a basic finish, consolidate flatwork surfaces using power-driven floats; or by hand floating if areas are too small or inaccessible by power-driven floats.

b. Re-straighten, cut down high spots, and fill low spots.

c. Repeat float passes and re-straightening actions until flatwork is left with a uniform, smooth, granular texture.

C. Textured Finishes:
1. Broom Finishing:

a. Beginning with a float finish, lightly steel trowel to remove irregularities.

b. Roughen flatwork by drawing at least a 24-inch-wide fiber bristle broom (for medium broom finish) or steel bristle broom (for heavy broom finish), across the flatwork surface perpendicular to the main direction of traffic.

c. Produce even texture from edge to edge; slightly lap adjacent strokes to produce a uniform pattern.

d. Obtain the Architect’s approval for proposed texture before final application.

D. Smooth Finishes:
1. Light Steel Trowel Finishing (requires at least one pass):

a. Beginning with a float finish, consolidate flatwork surface by hand troweling.

b. Continue trowel passes and re-straightening actions until flatwork surfaces are free of trowel marks, are uniform in texture and appearance, and fall within specified flatness tolerances.

c. Grind smooth all surface defects that might telegraph through applied floor coverings.

d. Steel trowel to a hard, dense finish.
2. Normal Steel Trowel Finishing (requires at least 2 passes):

a. Beginning with a light trowel finish, continue hand troweling until a ringing sound is produced as the trowel is moved over the surface.

b. Continue trowel passes and re-straightening actions until flatwork surfaces are free of trowel marks, are uniform in texture and appearance, and fall within specified surface plane tolerances.

c. Grind smooth all surface defects that might telegraph through applied floor coverings.

d. Steel trowel to a hard, dense finish.

3. Hard Steel Trowel Finishing (requires at least 3 passes):

    a. Beginning with a normal trowel finish, continue hand troweling until a ringing sound is produced as the trowel is moved over the surface.

    b. Continue trowel passes and re-straightening actions until flatwork surfaces are free of trowel marks, are uniform in texture and appearance, and fall within specified surface plane tolerances.

    c. Grind smooth all surface defects that might telegraph through applied floor coverings.

    d. Steel trowel to a hard, dense finish.

4. Restrictions:

    a. Do not hard trowel air entrained concrete.

    b. Do not hard trowel exterior concrete.

    c. Do not normal or hard steel trowel interior slabs on grade having an underslab vapor retarder.

3.03 TOLERANCES

A. General:

1. Flatwork must conform to the tolerance classifications indicated below, when measured with an optical or laser level.
2. When floor flatness is measured with a straightedge, flatwork must be measured in conformance with ASTM E 1486 between 16 and 72 hours after final troweling using a 10-foot straightedge placed anywhere on the slab in any direction and allowing it to rest on 2 high spots.
3. When flatwork is not sloped, floor flatness and levelness must be measured in conformance with ASTM E 1155 between 16 and 72 hours after completion of final troweling.

    a. Specified flatness values apply to both slabs on grade and elevated slabs.

    b. Specified levelness values apply only to slabs-on-grade and to elevated slabs when the slab remains supported in its as-cast position and there is no camber present.

    c. Specified levelness values do not apply to inclined or cambered slabs.

B. Conventional Tolerance Classifications:

1. Bullfloat Tolerance:

    a. Description: True plane with not more than 5/16-inch in 10 feet variation.

    b. Flatness: SOV between F(f) 13 and F(f) 20, with MLV at least F(f) 13.

    c. Levelness: SOV at least F(l) 15 with MLV at least F(l) 10.

2. Straightedge Tolerance (Conventional):

    a. Description: True plane with not more than 1/4-inch in 10 feet variation.

    b. Flatness: SOV between F(f) 21 and F(f) 25, with MLV at least F(f) 17.

c. Levelness: SOV at least F(l) 17 with MLV at least F(l) 11.

C. Traditionally Flat Tolerance Classifications:

1. Moderately Flat Tolerance (Good):

a. Description True plane with not more than 3/16-inch in 10 feet variation.

b. Flatness: SOV at least F(f) 38, with MLV at least F(f) 26.

c. Levelness: SOV at least F(l) 25 with MLV at least F(l) 17.

2. Flat Tolerance:

a. Description: True plane with not more than 1/8-inch in 10 feet variation.

b. Flatness: SOV at least F(f) 50, with MLV at least F(f) 34.

c. Levelness: SOV at least F(l) 30 with MLV at least F(l) 20.

D. Exceptional Flat Tolerance Classifications: Not used.

3.04 CURING

A. General:

1. Protect newly-finished concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 requirements for cold-weather protection, and with ACI 301 requirements for hot-weather protection during curing.

a. Cold Weather Requirements: When flatwork is subjected to freezing temperatures within 24 hours after placement, or when flatwork is subjected to a period of 3 or more successive days within 7 days after placement where average daily outdoor temperature drops below 40 deg. F, flatwork must be protected from freezing. After placing concrete, maintain air temperature adjacent to flatwork to at least 50 deg. F for at least 7 days; or at least 70 deg. F for at least 3 days, and then at least 40 deg. F for at least 4 more days.

b. Hot Weather Requirements: When hot weather conditions may cause an evaporation rate exceeding 0.2 pounds of water per square foot per hour, cure flatwork for at least the first 24 hours by water curing, fogging and sprinkling absorbent coverings, or wet covering curing methods.

2. Comply with ACI 308.1 requirements for concrete curing, utilizing one or more of the methods indicated below that do not mottle, discolor, or stain the concrete.
3. Begin curing concrete promptly after free water has disappeared from flatwork surfaces after finishing.
4. Comply with ACI 308R requirements for preventing flatwork from becoming dry during curing.

B. Wet Covering Curing:

1. Promptly after troweling or finishing, and as soon as can be done without marring concrete surfaces, thoroughly wet concrete and cover with a moisture-retaining sheet membrane cover.

a. Lay sheet membrane in widest practicable width, with sides and ends lapped at least 12 inches, and extended 18 inches beyond area of concrete to be cured.

b. Seal laps and seams with pressure-sensitive waterproof tape or adhesive.

c. Maintain a film of water under the cover through the curing period by rolling back and rewetting.

d. Immediately repair any holes, tears or other damage to sheet membrane during the curing period.

2. Leave sheet membrane in place as temporary protection for as long as possible.

C. Curing Compounds: Either before or after bleed water has disappeared, at the discretion of the curing compound or MVES manufacturer, keep concrete flatwork surfaces continuously moist during the curing period by one of the following curing methods.

1. Promptly after troweling or finishing, and as soon as it can be accomplished without marring or damaging concrete finish, mist concrete surfaces with water and apply curing compound uniformly in one continuous operation in conformance with its manufacturer instructions.

   a. When the curing compound manufacturer recommends a coverage range, either use heavier application rate or consult with Architect and manufacturer for appropriate coverage rate based upon intended use.

   b. Do not exceed manufacturer's recommended coverage rate.

2. Maintain continuity of coating and repair damage during curing period.

   a. Examine application at regular intervals to verify compound film is intact.

   b. If damaged, moisten the concrete and apply additional compound.

   c. Recoat areas subjected to heavy rainfall within three hours after initial application.

3. Special Techniques:

   a. Uniformly apply 2 coats in a continuous operation with second coat at right angle to first coat. Total coverage for two coats may not exceed 200 square feet per gallon of undiluted compound, unless otherwise recommended by the manufacturer's written instructions.

   b. The compound shall form a uniform, continuous film that will not crack or peel. Immediately apply an additional coat of compound to areas where film is defective.

   c. Recoat concrete surfaces subjected to rainfall within 3 hours after the curing compound application.

   d. Maintain compound on the concrete surface throughout the curing period and immediately repair any damage.

3.05 FIELD QUALITY CONTROL

A. Tests and Inspections: Specified in Section 03 30 00.

3.06 CORRECTION AND REPAIR

A. Non-conforming and defective work must be brought into conformance with the Contract Documents. Correct and repair as necessary, without limitation, including arranging all correction and repair work and paying all correction and repair costs, until accepted in writing by the Architect.

B. Corrective and repair work must be performed in conformance with a correction and repair plan submitted to and accepted in writing by the Architect before correction or repair work begins. At a minimum, correction and repair plans must include

1. written descriptions of non-conforming, damaged, and defective work;

2. supporting sketches, diagrams, photographs, and other visual depictions of non-conforming, damaged, and defective work; and
3. similar written descriptions and visual depictions of Contractor-proposed corrections and repairs.

C. Arrange and pay costs for removing and replacing work that cannot be corrected or repaired to the Architect's acceptance.

3.07 CLEANING

A. Waste Management: After completing the work of this specification section, leave work areas free from debris, waste, scrap, equipment, tools, and other items.

3.08 PROTECTION

A. Protect flatwork in place from soiling, deterioration, and damage until Substantial Completion, including
   1. heavy construction traffic;
   2. hard-wheeled traffic;
   3. impact and abrasion;
   4. imposed loads (i.e., cranes, concrete trucks);
   5. stains from grease, oil, chemicals, paint, plaster, clay, soil, and other sources;
   6. rubber tire marks;
   7. deicers;
   8. freezing;
   9. fireproofing applications specified in Division 07;
   10. chemicals, fluids, and other items present during testing of fire suppression systems specified in Division 21; and
   11. re-wetting after initial drying, including from rain, wash water, and spillage by other trades and other sources.

B. Petroleum stains cannot be removed from concrete.
   1. Hydraulic powered equipment must be diapered to avoid concrete staining.
   2. Other vehicle parking on flatwork is prohibited.

C. Do not store anything on or adjacent to or against installed flatwork unless it is protected from damage. Use of pipe-cutting machines on flatwork is prohibited.

D. Remove protection when it's no longer needed and before Substantial Completion.

SECTION 03 54 16
HYDRAULIC CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Hydraulic cement underlayment.
   2. Repair material.
   3. Surface preparation.
   4. Installation materials.
   5. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 03 35 10 for concrete flatwork finishing and curing; and for preventative MVER products.
   2. Section 09 05 16 for preparation of concrete slabs for finish flooring; and for remedial MVER products.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing cement underlayment for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience installing cement underlayment for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading cement underlayment installers.

B. Submittals: Submit product data and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Cement underlayment Manufacturer: Provide products manufactured by one of the following, or equal.
   1. ARDEX Group.
   2. Custom Building Products.
   3. Floor Seal Technology, Inc.
   4. LATICRETE International, Inc.
   5. Mapei Corp.

2.02 HYDRAULIC CEMENT UNDERLAYMENT

A. Description: Portland-cement-based, non-structural, engineered cementitious material specifically designed for use as interior flooring cement underlayment.

B. Application: Installed over subfloors to help achieve specified floor flatness values; and to smooth and correct surface irregularities prior to flooring installation.

C. Self-Leveling Products:
   1. Pourable Grade Cement underlayment Applications (0 to 1-1/4 inches thick): “ARDEX V-1200” self- leveling, no-troweling cement underlayment manufactured by ARDEX Engineered Cements, or equal. Primer is required.
   2. Thick Cement underlayment Applications (1/16- to 1/4-inch thick): “ARDEX K 55 MICROTEC” microfiber reinforced, self-leveling cement underlayment manufactured by ARDEX Engineered Cements, or equal. Primer is required.
   3. Thicker Cement underlayment Applications (1/4-inch to 5 inches thick): “ARDEX K 15” self-leveling polymer-modified cement underlayment manufactured by ARDEX Engineered Cements, or equal. Primer is required.

      a. For cement underlayment application thickness between 1/4-inch and 1-1/2 inches thick, apply neat.

      b. For cement underlayment application thickness between 1-1/2 and 5 inches thick, apply with aggregate.

D. Trowel Grade Products:
   1. Patching and Cement underlayment Applications (0 to 1/16-inch thick): “ARDEX SD-F Feather Finish” self-drying, finishing cement underlayment manufactured by ARDEX Engineered Cements, or equal. Primer is typically not required.
   2. Non-Structural Flatwork Repair: “ARDEX CP” Portland cement-based concrete patch and fill for indoor and outdoor concrete flatwork manufactured by ARDEX Engineered Cements, or equal.

2.03 REPAIR MATERIALS

A. Description: Trowel-grade cementitious products used for non-structural repair indoor and outdoor concrete flatwork.

B. Product: “ARDEX CP” manufactured by ARDEX Engineered Cements, or equal, unless another type is explicitly indicated or otherwise supplied, required, recommended, or accepted by the manufacturer

2.04 SURFACE PREPARATION

A. Substrate Testing and Surface Preparation: Perform testing and corrective work and prepare substrates in conformance with the requirements of Section 09 05 16.

B. Concrete Surface Profiling: Provide ICRI concrete surface profile CSP 3 to CSP 5 (light to medium shotblast between 10 and 40 mils), unless otherwise explicitly required, recommended, or accepted in writing by the covering manufacturer. Conform to the requirements of Section 09 05 16.

2.05 INSTALLATION MATERIALS

A. Primers:
   1. Standard Absorbent Concrete, Gypsum, and Other Porous Substrates (in Specialized Applications): “ARDEX P 51” manufactured by ARDEX Engineered Cements, or equal.
      a. Two applications of primer must be applied over gypsum cement underlayment.
      b. Two applications of primer may be required over absorbent concrete cement underlayment.
   2. Wood, Cutback Residue, Metal, and Other Non-Porous Substrates: “ARDEX P 82 ULTRA PRIME” manufactured by ARDEX Engineered Cements, or equal.

B. Additive: “ARDEX E 25” resilient emulsion manufactured by ARDEX Engineered Cements, or equal, for use over cutback and other adhesive residues on concrete subfloors only; over metal; and as part of mesh-reinforced wood subfloor systems.

C. Crack Repair Compound: “ARDEX ARDIFIX” 100-percent solids, 2-part polyurethane repair compound manufactured by ARDEX Engineered Cements, or equal, for repair of non-moving joints and cracks.

D. Joint Filler: “ARDEX ARDISEAL Rapid Plus” 2-part, self-leveling, semi-rigid polyurea joint filling compound manufactured by ARDEX Engineered Cements, or equal, for repair of all moving joints.

E. Sand: Washed masonry or plaster sand, 1/8-inch diameter and smaller.

F. Aggregate: Well-graded washed gravel, 1/8- to 1/4-inch diameter or larger, supplied, required, recommended, or accepted by the manufacturer for proposed thicknesses.

G. Mix Water: Provide fresh, clean, clear, potable water from a domestic source. Water must conform to ASTM C 1602 and be free of oil, grease, waxy films, curing compounds, release agents, and other deleterious materials, including salts, acids, alkalis, organic materials, detergents, and other matter that might negatively affect cement underlayment quality, durability, or performance.

2.06 ACCESSORIES

A. Perimeter Isolation Strips: Supplied, required, recommended, or accepted by the manufacturer.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the

quality of installation or the durability, appearance, or performance of installed and adjacent items.

3. Protect work areas, surfaces, in-place construction, and installed and adjacent items against soiling and damage.
4. Prepare surfaces as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
5. Install cement underlayment using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.

B. Special Techniques:

1. Thickness: Install screeds as required, recommended, or accepted by manufacturer to meet the following.

    a. Set screeds with a laser level so the minimum cement underlayment thickness is at least 1/8 inch.

    b. Where cement underlayment covers only a small area, grind, chisel, and undercut floor and deck slabs as necessary to ensure a minimum cement underlayment thickness of at least 1/8 inch.
2. Place cement underlayment in one continuous operation, without cold joints, to produce uniform, level surfaces.

    a. Screed cement underlayment to levels and tolerances required, recommended, or accepted by the finish flooring manufacturer.

    b. Feather edges to match adjacent floor elevations.
3. Cure cement underlayment in conformance with the manufacturer's instructions. Protect cement underlayment to prevent contamination during application and curing processes.

C. Correction and Repair:

1. Correct deficiencies that do not conform to the Contract Documents.
2. Repair non-conforming, damaged, and defective work.
3. Remove and replace cement underlayment areas that evidence lack of bond with substrate, including areas that emit a “hollow” sound when tapped.
4. Installed cement underlayment must be warrantable. Do not install, correct, or replace cement underlayment in a manner that is un-warrantable by the manufacturer or that results in any warranty or guarantee becoming void.

RSTLNE, TAGDSC, ELMTB, CLSB1010

DIVISION 04

MASONRY

SECTION 04 01 20
MASONRY RESTORATION AND CLEANING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Pressure injection of epoxy resin and cleaning of existing masonry and stone work.
   2. Repointing and caulking of cracks.
   3. Removal of plant growth.
   4. Supplementary components and accessories necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data, shop drawings, and samples.

B. Field Samples: Include field samples (post-submittal, *in situ* visual mockups) as part of the work of this specification section.
   1. Revise and repeat field samples and reviews, including bearing all associated costs, until acceptance by the Architect.
   2. After field samples are accepted in writing by the Architect, promptly protect them for reference until Substantial Completion.
   3. Approved field samples may remain part of the work after being properly identified for future reference.

C. Warranties:
   1. Manufacturer's Warranty: All masonry products must be covered by a 10-year manufacturer-prepared published warranty.

D. Maintenance Materials: Before Final Completion, deliver to the Owner masonry cleaning agents, materials, equipment, tools, accessories and instructions; and extra stock materials to replace materials worn or damaged as a result of normal occupancy.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Sika Corporation.
   2. Fosroc Inc.
   3. The Euclid Chemical Company.

2.02 MATERIALS

A. Epoxy Resin Adhesive:
   1. New material within the shelf life recommended by manufacturer.
   2. Two-part material made from 100 percent solids of modified epoxy resin containing suitable viscosity control agents and accelerators.

3. Mix components in ratio recommended by product manufacturer.
4. Material shall not contain butyl glycidyl ether or asbestos.
5. Epoxy resin adhesive shall be approved by the United States Department of Agriculture.

B. Materials for Masonry Restoration: Provide products manufactured by one of the following, or equal.
1. Sikadur 35, Hi-Mod LV, by Sika Corporation.
2. Nitobond LV, by Fosroc Inc.
3. Euco #452 LV System, by the Euclid Chemical Company.

C. Materials for Cleaning Masonry:
1. Acid Solution: Clean, stain free, commercial hydrochloric (muriatic) acid mixed with potable water:

a. Use 10 parts water for dark colored brick.

b. Use 15 parts water for light colored brick.

D. Mortar: ASTM C387, Type N or M, using gray or white cement, commercially prepared type.

E. Hydrated Lime: ASTM C207.

F. Quicklime: ASTM C5, non-hydraulic type.

G. Sand (for sandblasting): Quartz type, sharp edged.

H. Masonry Anchors:
1. DA 213 Seismic as fabricated by DUR-O-WAL, or equal, when brick is removed and installed.
2. Masonry anchors shall be D 5300 series for brick veneer around wood framing when brick is left in place.

2.03 ACCESSORIES

A. Accessories: Provide accessories and other similar secondary items supplied, required, recommended, or accepted by the manufacturer for a complete installation.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
1. Examine project conditions and field-verify measurements and other conditions affecting the work of this specification section.
2. Verify that in-place construction conforms to the manufacturer’s requirements and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
3. Protect work areas, work surfaces, in-place construction, and installed and adjacent items against damage and soiling.
4. Prepare surfaces as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not cause, contribute or lead to, or result in any specified or other warranty becoming void.
5. Install masonry using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.

a. Set masonry true to line; plumb, level, and square without warp or rack; with flush, well-fitted joints; and in alignment with adjacent construction.

b. Securely attach masonry in place to supporting construction.

c. Provide dissimilar metal protection specified in Section 05 50 00.

6. Completed work must match approved mockups, as accepted by the Architect.

B. Correction and Repair:

1. Correct deficiencies that do not conform to the Contract Documents.

a. Repair non-conforming, deficient, deteriorated, damaged, defective, malfunctioning, or unsafe work; and work that does not perform or operate safely, properly, or as otherwise specified.

b. Replace soiled items that cannot be satisfactorily cleaned.

c. Remove and replace items that are wet; or moisture- or mold-damaged.

2. Installed items must be warrantable. Do not install, correct, repair, or replace any item, material, component, or accessory in a manner that is un-warrantable by the manufacturer; or that leads to or results in any other specified or other warranty or guarantee becoming void.

C. Protection:

1. Protect installed items in place from deterioration, staining, and damage until Substantial Completion.
2. Do not store anything on or adjacent to or against installed masonry unless they are adequately protected from damage, as accepted in writing by the manufacturer's representative. Do not use installed masonry surfaces as work surfaces.
3. Remove protection when it's no longer needed and before Substantial Completion.

END OF SECTION

SECTION 04 22 00
CONCRETE MASONRY UNIT

PART 1 - GENERAL

1.1 SUMMARY

A. Provisions of the General and Supplementary Conditions and Division 01 apply to this section.

B. Section Includes:

1. Concrete masonry units.

2. Reinforcing steel.

3. Mortar, grout and grouting.

4. Bolts, anchors, hardware, metal frames, and other insert items.

C. Related Sections:

1. Section 01 45 23: Testing and Inspection

2. Section 30 10 00: Concrete Forms and Accessories..

3. Section 03 20 00: Concrete Reinforcement.

4. Section 03 30 00: Cast-In-Place Concrete.

1.2 SUBMITTALS

A. Mix Design: Submit grouting mix design.

B. Product Data: Submit manufacturer's Product Data for assembly components, materials, and accessories.

C. Samples: Submit Samples for each type of required masonry unit, including reinforcement and accessories.

1.3 QUALITY ASSURANCE

A. Perform the Work in accordance with CBC, Chapter 21A. Refer to Section 01 45 23: Testing and Inspection.

B. Comply with requirements of TMS 602/ACI 530.1/ASCE 6.

C. Concrete Masonry Units: Sample and test in accordance with ASTM C 140.

1. Notify the testing laboratory a minimum of 45 days in advance of installing concrete unit masonry, to allow for testing of the units for compression, shrinkage, and absorption. Absorption test requires 40 days.

2. The retained material testing laboratory shall receive five concrete masonry units per test from masonry unit manufacturer, as designed or specified by the Architect, and shall perform and send required test results to the Architect and IOR.

D. Portland Cement: Obtain sample and test in accordance with ASTM C 150.

E. Mortar: Obtain sample and test in accordance with ASTM C 780.

F. Grout: Obtain sample and test in accordance with ASTM C 404.

G. Compressive Tests: Obtain sample and test to verify compliance with the following minimum values:

1. Mortar: At least 800 psi at 7 days and 1,800 psi at 28 days.

2. Grout: At least 1,200 psi at 7 days and 2,000 psi at 28 days.

3. Do not test 28-day specimen when 7-day tests exceed 28-day requirements.

H. Inspection During Installation: IOR will continuously observe the installation of reinforced masonry.

I. The Owner will be responsible for the costs of original tests and inspection.

J. If core testing is required by DSA, masonry removed by coring operations shall be replaced to match adjoining Work. Core testing shall conform with CBC, Chapter 21A.

1.4 DELIVERY, STORAGE AND HANDLING

A. Store units above grade on level platforms to allow air circulation under stacked units.

B. Cover and protect against wetting before installation.

C. Handle units on pallets or flat bed barrows. Free discharge from conveyor units or transportation in mortar trays is not permitted.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Concrete Unit Masonry: Modular medium weight conforming to ASTM C 90, hollow load-bearing concrete unit masonry.

1. Provide open-end units at walls to be grouted.

2. Provide closed-end units at walls and at openings where ends will be exposed in finish Work; provide bond beam blocks where horizontal reinforcing is indicated.

3. Provide special shapes and accessory units at locations indicated on Drawings.

4. Except as otherwise specified, provide units in standard gray color.

5. Masonry unit shall have been cured for a minimum of 28 days.

6. Masonry unit shall have maximum linear shrinkage or 0.065 percent from saturated to oven dry.

B. Portland Cement: ASTM C 150, Type II, from one source.

C. Mortar: ASTM C 270.

D. Grout: ASTM C 476.

E. Hydrated Lime: ASTM C 207, Type S.

F. Admixture for Grout: Grout Aid Type 2, complying with DSA requirements; as manufactured by Sika Chemical Corp. Refer to Section 01 45 23: Testing and Inspection.

G. Water: Potable and fresh.

H. Cleaning Materials: Shure Klean No. 600 detergent by ProSoCo.

I. Miscellaneous Materials: As required to complete the Work.

J. Sampling and Testing of Mortar: Refer to Section 01 45 23: Testing and Inspection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Discard units with cracked faces, chipped surfaces, or other defects not complying with requirements of ASTM C 216.

3.2 MORTAR AND GROUT MIXING

A. Mortar: Dry, loose volumes. Mix proportions shall be verified by material testing laboratory.

1. Portland Cement: 1 part.

2. Hydrated lime: 1/4 to 1/2 part.

3. Mortar sand: 2-1/4 to 3 parts.

4. Water: to provide required consistency.

5. Mixing time for Silotec Mortar System shall be in accordance with Silotec Mortar System recommendations instead of those indicated in Section 01 45 23: Testing and Inspection.

B. Grout: Shall provide a minimum strength of 2000 psi unless noted otherwise. Grout strengths in excess of more than 2000 psi shall be verified by a material testing laboratory.

1. Fine Grout: Portland Cement 1 part; sand 2 ¼ to 3 parts; water to attain a slump of 8 to 10 inches.

2. Coarse Grout: Portland Cement 1 part; pea gravel 2 ¼ to 3 parts; water to attain a slump of 8 to 10 inches.

C. Measurements: Proportion by accurate volume measurements. Measure in calibrated devices that can be checked at any time.

1. Add water for workable consistency.

2. Shovel measurements are not permitted.

D. Mixing: Place sand, cement, and water in mixer in that order, while mixer is running; mix for 3 minutes, add lime, and admixture (for grout), and continue mixing until a uniform mass is provided, but in no case less than 10 minutes.

1. Equipment for mixing and handling mortar and grout shall be acceptable to DSA.

2. Batches of less than one sack of cement, and fractional sack batches are not permitted.

E. Re-tempering Time Limit: Re-temper on mortar boards, for at least 3 minutes, but not more than 10 minutes when required, by adding water into a basin formed by mortar, and installing mortar into it. Dashing, or pouring of water over mortar is not permitted.

1. Do not re-temper mortar which has become hard or non-plastic.

2. Discard mortar, which has not been installed within one hour after original mixing.

3. Ready-Mix Grout: Grout batched off the Project site and delivered by mixer truck shall be subject to same procedures and controls as prescribed by DSA building code requirements. Refer to Section 01 45 23: Testing and Inspection.

3.3 INSTALLATION OF MASONRY UNITS

A. Workmanship: Install masonry plumb and true to line with straight level joints of uniform thickness. Maintain masonry clean during and after installation.

1. Lay-out and incorporate embedded hardware items.

2. Assist other trades with built-in items, which require cutting and fitting of masonry.

3. Cut block units with a diamond saw or carborundum wheel. Trowel or chisel cutting is not permitted.

4. Keep cavities clear of droppings and debris. Remove promptly.

B. Reinforcing Steel: Install as indicated on Drawings. Except as otherwise indicated, install reinforcement in accordance with standards of Concrete Reinforcing Steel Institute and to requirements specified in Section 03200: Concrete Reinforcement. Do not splice vertical reinforcing except where indicated on the Drawings.

C. Shoring: Provide temporary shoring for lintels with sufficient strength to carry load without deflecting. Remove temporary shoring 28 days after masonry has been installed.

D. Block Installation: Clean dirt and dust from surfaces before installation. Do not wet masonry units except in very dry weather.

1. Foundation preparation: Sandblast tops of concrete starting surfaces, wash-off by high pressure water jet, and slurry coat surfaces with neat cement grout for bond to masonry.

2. Install masonry with mortar to required joint thickness. Install blocks with 3/8-inch mortar bed on entire horizontal surface. Fill head joints solid, install tightly to adjoining units. Provide 3/8-inch joint thickness.

a. Hold racking to a minimum.

b. No toothing is permitted.

c. If it becomes necessary to move a unit after it has been installed, remove the unit, discard the mortar, and install the unit in fresh mortar.

3. Anchor Bolts: Provide one-inch minimum grout space around protruding bolts.

4. Bond: Unless otherwise indicated, install units in common running bond.

5. Finish Joint Treatment: Unless otherwise indicated, cut both interior and exterior joints flush, and tool slightly concave to a dense, uniform surface.

6. Grouting: Unless noted otherwise on Drawings, completely fill cells with grout.

E. Steel Door Frames:

1. Locate doorframes accurately, install plumb, "Ram-set" or "Rawlplug" to floor surface and brace in position before start of masonry installation.

a. Frames are specified to be furnished with adjustable anchors.

b. Fill interior of frames solid with mortar or grout as walls are constructed.

2. Provide temporary wood spreaders from jamb to jamb and from head to floor to ensure that jambs do not bow-in, distort from a straight line, or deflect from superimposed loads during construction.

3.4 LOW-LIFT GROUTING FOR HOLLOW MASONRY UNITS

A. After mortar joints have set, cores are cleaned of mortar and debris, and reinforcing is installed and inspected, grout cells in 2 feet maximum lifts, providing specified pea gravel grout mix. Refer to Section 01 45 23: Testing and Inspection.

B. Grouted walls shall be solid and without voids.

C. Grout may be installed by pump, tremie or bucket, using hoppers to avoid spilling on exposed surfaces.

D. Place an initial 2 feet high lift around, thoroughly compact, then place balance of each lift, compacting again through total lift, with hardwood spading sticks or pencil vibrators.

E. Stop grout pours 1-1/2 inches below top of each lift.

F. Remove and discard spilled grout from upper units before grout can harden.

G. Bracing: Adequately brace walls against wind and other forces during and after construction.

H. Re-puddle top of grout after initial set.

3.5 HIGH-LIFT GROUTING OPTION FOR HOLLOW MASONRY UNITS

A. High-lift grouting method is permitted provided following qualifications and requirements are met. High-lift grouting shall apply only to cell sizes available with 8 inch and wider block units. This method is subject to approval of DSA.

B. Provide bond beam units, inverted for start course, and omit alternate blocks or cut openings in alternate face shell on bottom course for cleanouts.

C. Remove projecting mortar fins. Wash out every cell thoroughly using a water jet, which has sufficient force to remove mortar from the interior of the cells, and from reinforcing steel.

D. Plug each cleanout by setting a "soap" in mortar into opening and securely bracing it in place to prevent displacement. If masonry is not exposed in finish Work, cleanouts may be formed.

E. Grouting:

1. Grout masonry cells solid, free from voids.

2. Do not install grout until masonry has set a minimum of 3 days in warm weather (50 degrees to 85 degrees F.) or 5 days in cool, damp weather (35 degrees to 50 degrees F.).

3. Pump grout into grout cell space as rapidly as practical. Discard grout not in place within one hour after water was first added to batch.

4. Install grout with maximum slump without segregation. Place in a continuous pour, in maximum lifts of 4 feet, with approximately 20 minutes elapsed time between any 2 successive lifts.

F. Consolidating:

1. Consolidate and reconsolidate grout using 3/4 inch lightweight flexible cable vibrators.

2. First consolidation shall be performed to bottom of lift immediately after placement, and in case of subsequent lifts, through previously placed lift.

3. Top lift shall be reconsolidated no sooner than 30 minutes after grout has been installed.

4. Vibrating of reinforcing steel is not permitted.

G. Bracing: Adequately brace walls against wind and other forces during and after construction.

3.6 CURING

A. Remove efflorescence, stains, debris, excess grout, and foreign matter.

B. During curing, or for any other purpose, do not saturate masonry with water.

C. For low-humidity conditions, dampen the wall surface with a very light fog spray continuously for 3 days to cure mortar in joints.

3.7 PARGE COAT

A. Apply parge coat to the earth side of surfaces that are to receive waterproofing.

B. A Portland cement and sand mix (1:3.5 by volume), or Type M or S mortar may be used for the parge coat.

C. Parging should be applied to damp (not saturated) concrete masonry in two ¼" (6mm) thick layers. The first coat should be roughened when partially set, hardened for 24 hours, and then moistened before second coat is applied. The second coat should be trowelled to a smooth, dense surface.

D. The parge coat should be beveled at the top to form a wash, and thickened at the bottom to form a cove between the base of the wall and the top of footing.

3.8 CLEANING

A. At completion of masonry Work, remove misplaced mortar, grout or other foreign substances, and clean surfaces which will be exposed in finish Work with specified cleaner, or with clean water and stiff fiber brushes.

B. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.9 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

DIVISION 05

METALS

SECTION 05 05 12
HOT-DIP GALVANIZING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Hot-dip galvanizing.
   2. Surface preparation.
   3. Repair materials.
   4. Supplementary components and accessories normally furnished or necessary for complete galvanizing, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 05 50 00 for galvanized item design standards.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Galvanizer: Company or individuals must have at least 5 years' experience galvanizing items for at least 30 previous projects similar to this project in size, material, design, and complexity.
   2. Supervisors: Individuals must have at least 7 years' experience galvanizing items for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading galvanizers.

B. Submittals: Galvanizing schedule, galvanizing certificates, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 HOT-DIP GALVANIZING

A. Description: Zinc galvanic coatings applied in the shop or factory.

B. Application: Applied to iron and steel items
   1. in concrete or masonry installations;
   2. at exterior locations completely or partially exposed to weather, humidity, moisture, or precipitation, except where high performance coatings are indicated; and
   3. elsewhere, where indicated.

C. Materials:
   1. Zinc: ASTM B 6, HG (High Grade) or better (at least 99.95 percent pure zinc).
   2. Bath Composition: ASTM A 123.

D. Accessories: Provide accessories and secondary items normally furnished or necessary for complete galvanizing; or supplied, required, recommended, or accepted by the fabricator or galvanizer for actual in-service conditions applicable to the project.

2.02 SURFACE PREPARATION:

A. Remove oils, organic materials, mill primers, paints, crayon marks, grease- or oil-based marks, and similar materials from metal surfaces prior to starting galvanizing operations. Where permanent identification of a galvanized item is required, provide stamped or seep stencil markings.

B. Blast-clean and flux (recommended method of processing high strength steels for galvanizing to avoid hydrogen embrittlement); or pre-clean with alkaline cleaner, and then acid pickle and flux.

2.03 FINISHES

A. Exposed Natural Finish Items: Furnish galvanized items with a bright regular spangle (recognized, faceted, metallic surface appearance) finish.

B. Painted Finish Items: Furnish galvanized items with a minimized spangle (good surface for paint application when minimal spangle show-through is desired).

2.04 REPAIR MATERIALS

A. Galvanizing Repair Solder:
   1. Description: Lead-free, high zinc content solder formulated specifically for repairs to zinc coatings.
   2. Applications: Used for

      a. shop repair or restoration of small defects in the surfaces of freshly galvanized items directly out of the kettle;

      b. field repair or restoration of damaged zinc coatings caused by welding, brazing, cutting with an oxy-acetylene torch, and similar activities.

      c. field repair or restoration of zinc coatings on exposed-in-service HDG surfaces indicated as retaining a natural zinc finish, when accepted in writing by the Architect, and
   3. Products: Provide one of the following, or equal.

      a. “All-State Galvover” manufactured by ESAB.

      b. “Galvanite” manufactured by Kapp Alloy & Wire, Inc.

      c. “Zaclon Alloy Repair Rod” manufactured by Zaclon, Inc.

B. Cold Galvanizing Repair Compound:
   1. Description: At least 95-percent pure zinc and epoxy resin-based galvanizing repair material.
   2. Applications: Used for the repair or restoration of damaged zinc coatings on exposed-in-service HDG surfaces indicated as retaining a natural zinc finish.
   3. Restrictions: May be used to repair damaged zinc coatings on exposed-in-service HDG surfaces only after accepted in writing by the Architect,
   4. Products: Provide one of the following, or equal.

      a. “Devcon Z” manufactured by ITW Devcon.

      b. “Zinc Clad Cold Galvanizing” manufactured by The Sherwin Williams Co.

      c. “ZRC Galvilite” manufactured by ZRC Worldwide.

C. Galvanizing Repair Paint:

1. Description: Zinc-rich organic primer conforming to SSPC-Paint 20 Type II (Organic) zinc-rich primers and AISC requirements for Class B surface slip coefficient rating (minimum mean slip coefficient of at least 0.50).
2. Applications: Used for the repair or restoration of damaged zinc coatings on concealed -in-service HDG surfaces indicated as receiving a painted finish.
3. Product: Provide one of the following, or equal.

    a. “Carbozinc 859, Color 0300” (green) manufactured by the Carboline Co.

    b. “Amercoat 68HS” (reddish-gray) manufactured by PPG Industries, Inc.

    c. “Tneme-Zinc Series 90-97” (reddish-gray) manufactured by the Tnemec Co.
4. Requisite Properties:

    a. Thickness: Apply to a DFT of at least 3 plus or minus 0.5 mils per coat, when measured in conformance with SSPC-PA 2. Provide at least 2 coats.

    b. Color: Reddish-gray or other standard color furnished by the primer manufacturer.
5. Performance Requirements:

    a. Zinc Dust Pigment: ASTM D 520 Type III composition classification (maximum 0.002 percent lead).

    b. Minimum Dry Film Adhesion: At least 800 psi pull, when tested in conformance with ASTM D 4541.

    c. Minimum Humidity Resistance: No blistering, cracking, rusting, or film delamination after at least 1,000 hours exposure, when tested in conformance with ASTM D 4585.

    d. Minimum Salt Spray Resistance: No blistering, cracking, rusting, or film delamination nor more than 1/32-inch rust creep at scribe after at least 10,000 hours exposure, when tested in conformance with ASTM B 117.

2.05 SOURCE QUALITY CONTROL

A. Tests and Inspections:

1. Perform thickness testing and inspection of zinc coatings in conformance with the guidelines outlined in AGA publication “*The Inspection of Products Hot-Dip Galvanized after Fabrication*” and ASTM A 123.
2. Determine whether zinc coating thicknesses conform to specified minimum thicknesses by taking measurements using a magnetic, electromagnetic, or eddy-current gauge in conformance with ASTM E 376.
3. Record results on galvanizing schedule.
4. Re-galvanize non-conforming work.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:

1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.

B. Galvanizing: Galvanize items in conformance with ASTM A 123. Plug vent holes with silicone sealant after galvanizing.
   1. Coating Thickness: Produce a continuous and fully-adhering zinc coating that is reasonably smooth.
   2. Coating Appearance: Galvanized items must be smooth and free from uncoated areas, pits, craters, blisters, flux deposits, dross inclusions, and other types of projections that would interfere with the intended use of the articles, or similar defects.

C. Special Techniques: Galvanize castings; rolled, pressed, and forged items; and hardware items, including bolts, nuts, washers, and similar threaded fasteners, in conformance with ASTM A 153.
   1. Coating Thickness: Zinc coating must have uniform thickness. Coating thickness must conform to the minimum thickness requirements indicated in ASTM A 153 Table 1, based on the material category and thickness of material each item belongs.
   2. Coating Appearance: Galvanized items must be smooth and free from uncoated areas, pits, craters, blisters, flux deposits, dross inclusions, and other types of projections that would interfere with the intended use of the articles, or similar defects.

D. Quenching Painted Finish Items:
   1. Do not water-quench galvanized items painted after galvanizing (doing so may leave residue on surfaces that cause paint adhesion problems or require added surface preparation prior to painting).
   2. Do not chromate-quench galvanized items painted after galvanizing (hexavalent chromium is often used as a wet-storage stain inhibitor; chromate interferes with paint adhesion).
   3. Do not phosphate-quench galvanized items coated with a zinc-rich paint after galvanizing (doing so reduces the electrical conductivity of the paint).

E. Quenching Natural Finish Items (zinc finish without added paint or other coatings): If required to prevent wet storage stain, quench freshly-galvanized steel in a passivating solution.

F. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged, and defective work.

G. Protection:
   1. Protect installed galvanizing in place from soiling, deterioration, and damage until Substantial Completion.
   2. Remove protection when it’s no longer needed and before Substantial Completion.

SECTION 05 05 13
SHOP-APPLIED STEEL PRIMER

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shop-applied steel primer.
   2. Repair materials.
   3. Surface preparation.
   4. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
   1. Section 09 91 00 for painting steel surfaces installed in SSPC Environmental Zones 0 and 1A, including field-applied primers and spot primers.
   2. Section 09 97 13 for high performance steel coatings applied to steel surfaces installed in SSPC Environmental Zones 1B, 2A, and 2B.

1.02 SECTION REQUIREMENTS

A. Qualifications:
   1. Installer: Company or individuals must have at least 5 years' experience installing primer for at least 30 previous projects similar to this project in size, material, design, and complexity. Only a company certified by the AISC as having a current P3-Sophisticated Painting Endorsement (SPE) certification may apply shop primers.
   2. Supervisors: Individuals must have at least 7 years' experience installing primer for at least 30 previous projects similar to this project in size, material, design, and complexity, including at least 2 years' supervisory experience directing and leading primer installers.

B. Submittals: Submit product data, primer schedule, and written descriptions of specified qualifications.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Carboline Co.
   2. PPG Industries, Inc.
   3. Tnemec Co.

2.02 SHOP APPLIED STEEL PRIMER

A. Acrylic Primer:
   1. Description: Hydrophobic acrylic dry-fall high performance coating primer
   2. Application: Applied to interior exposed-in-service steel surfaces.

3. Product: “Uni-Bond DF Series 115” manufactured by the Tnemec Co., or equal.
4. Requisite Properties:

    a. Minimum Thickness: Between 2.0 and 3.5 mils DFT per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.

    b. Color: Match Tnemec color 10-1009, “Gray”.
5. Performance Requirements:

    a. Minimum Dry Film Adhesion: At least a 5B rating, when tested in conformance with ASTM D 3359.

    b. Minimum Humidity Resistance: No blistering, cracking, rusting, or delaminating of film after at least 500 hours exposure, when tested in conformance with ASTM D 4585.

    c. Minimum Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film and no rust creep at scribe after at least 500 hours exposure, when tested in conformance with ASTM B 117.

    d. Minimum Slip Coefficient Rating: At least 0.50 (AISC Class B surface), when tested in conformance with ASTM A 490.

B. Zinc-Rich Primer:
1. Description: Zinc-rich high-performance coating primer.
2. Application: Applied exterior exposed-in-service steel surfaces.
3. Product: “Tneme-Zinc Series 90-97” manufactured by the Tnemec Co., or equal.
4. Requisite Properties:

    a. Minimum Thickness: Between 2.0 and 3.5 mils DFT per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.

    b. Color: Reddish-gray or other standard color.

    c. Zinc Dust Pigment: ASTM D 520 Type III composition classification (not more than 0.002 percent lead).
5. Performance Requirements:

    a. Minimum Dry Film Adhesion: At least 800 pounds per square inch pull, when tested in conformance with ASTM D 4541.

    b. Minimum Humidity Resistance: No blistering, cracking, rusting, or delaminating of film after at least 1,000 hours exposure, when tested in conformance with ASTM D 4585.

    c. Minimum Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film, and not more than 1/32-inch rust creep at scribe after at least 10,000 hours exposure, when tested in conformance with ASTM B 117.

    d. Minimum Slip Coefficient Rating: At least 0.50 (AISC Class B surface), when tested in conformance with ASTM A 490.

2.03 REPAIR MATERIALS

A. Acrylic Spot Primer:

1. Description: Hydrophobic acrylic dry-fall high performance coating primer
2. Application: Applied to interior exposed-in-service steel surfaces.
3. Product: “Uni-Bond DF Series 115” manufactured by the Tnemec Co., or equal.
4. Requisite Properties:

    a. Minimum Thickness: Between 2.0 and 3.5 mils DFT per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.

    b. Color: Match Tnemec color 00WH, “Tnemec White”.
5. Performance Requirements:

    a. Minimum Dry Film Adhesion: At least a 5B rating, when tested in conformance with ASTM D 3359.

    b. Minimum Humidity Resistance: No blistering, cracking, rusting, or delaminating of film after at least 500 hours exposure, when tested in conformance with ASTM D 4585.

    c. Minimum Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film and no rust creep at scribe after at least 500 hours exposure, when tested in conformance with ASTM B 117.

    d. Minimum Slip Coefficient Rating: At least 0.50 (AISC Class B surface), when tested in conformance with ASTM A 490.

B. Zinc-Rich Spot Primer:
1. Description: Zinc-rich aromatic urethane organic primer.
2. Application: Field-applied to repair damaged shop-applied zinc-rich primer.
3. Product: “Hydro-Zinc 94-H20” manufactured by the Tnemec Co., or equal.
4. Requisite Properties:

    a. Minimum Thickness: Between 2.5 and 3.5 mils DFT per coat, when measured in conformance with SSPC paint application standard SSPC-PA2, “*Measurement of Dry Coating Thickness with Magnetic Gages*”.

    b. Color: Greenish-gray or other standard color.

    c. Zinc Dust Pigment: ASTM D 520 Type III composition classification (not more than 0.002 percent lead).
5. Performance Requirements:

    a. Minimum Dry Film Adhesion: At least 800 pounds per square inch pull, when tested in conformance with ASTM D 4541.

    b. Minimum Humidity Resistance: No blistering, cracking, rusting, or delaminating of film after at least 1,000 hours exposure, when tested in conformance with ASTM D 4585.

    c. Minimum Salt Spray Resistance: No blistering, cracking, rusting, or delaminating of film, and not more than 1/32-inch rust creep at scribe after at least 10,000 hours exposure, when tested in conformance with ASTM B 117.

    d. Minimum Slip Coefficient Rating: At least 0.50 (AISC Class B surface), when tested in conformance with ASTM A 490.

C. Other Spot Primers: Provide spot primer identical to shop-applied primer originally used to prime surfaces.

2.04 SURFACE PREPARATION

A. Concealed and Interior Exposures:
   1. Application: Applied to steel items installed in SSPC Environmental Zones 0 and 1A (concealed and interior service conditions not subject to wetting).
   2. Surface Preparation: Prepare surfaces in conformance with manufacturer-prepared published and supplemental instructions, and SSPC surface preparation standard SSPC-SP3, "*Power Tool Cleaning*".

B. Exterior Moderate Exposures:
   1. Application: Applied to steel items installed in SSPC Environmental Zones 1B and 2A (moderate exterior service conditions).
   2. Surface Preparation: Prepare surfaces in conformance with manufacturer-prepared published and supplemental instructions, and SSPC surface preparation standard SSPC-SP6/NACE 3, "*Commercial Blast Cleaning*" to a minimum surface profile of at least 1.5 mils, when measured in conformance with ASTM D 4417 Method B (Surface Profile Depth Micrometer).

C. Exterior Severe Exposures and Immersion Service:
   1. Application: Applied to steel items installed in SSPC Environmental Zone 2B (severe exterior service conditions), Zone 2C (fresh water immersion conditions), and Zone 2D (salt water immersion conditions).
   2. Surface Preparation: Prepare surfaces in conformance with manufacturer-prepared published and supplemental instructions, and SSPC surface preparation standard SSPC-SP10/NACE 2, "*Near-White Blast Cleaning*" to a minimum surface profile of at least 2.0 mils, when measured in conformance with ASTM D 4417 Method B (Surface Profile Depth Micrometer).

D. Unknown or Incompatible Primers:
   1. Application: Use when unknown shop- or factory-applied primers are discovered; or when high-performance steel primers are chemically or adhesively incompatible with shop- or factory-applied primers.
   2. Surface Preparation: Apply specified spot primer as a full prime coat on all surfaces as a tie-coat for subsequent intermediate and top coats.

2.05 ACCESSORIES

A. Flash Rust Inhibitor/Salt Remover:
   1. Description: Blast and wash down-water additive that prevents flash rusting of wet abrasive and water-blasted ferrous metal surfaces; and of dry-blasted surfaces in a pressurized wash down.
   2. Product: "HoldTight 102" manufactured by HoldTight Solutions Inc., or equal.

B. Other Accessories: Provide accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed before the installer begins work and at all times during installation.
   2. Verify surfaces conform to the manufacturer's requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability or performance of installed and adjacent items.
   3. Prepare surfaces as required, recommended, or accepted by the manufacturer without limitation; and in a manner that does not result in any warranty or guarantee becoming void.
   4. Install primer using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.

B. Special Techniques:
   1. To avoid surface contaminant pick-up, promptly prime prepared surfaces as soon as practicable after and within the same day as surface preparation.
   2. Clean and prepare damaged primed surfaces in conformance with manufacturer's published instructions and SSPC surface preparation standard SSPC-SP11 "*Power Tool Cleaning to Bare Metal*".
   3. Sand smooth and re-clean.
   4. Spot-prime bare metal surfaces with specified primer applied to a total spot primer DFT of at least 5 mils.
   5. Overlap undamaged primer areas with spot primer at least 2 inches.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged, and defective work.
   3. Re-prime damaged items that cannot be repaired to the same condition as new.
   4. Installed primer must be warrantable. Do not install, correct, or replace primer in a manner that is un-warrantable by the manufacturer or that results in any warranty or guarantee becoming void.

D. Protection:
   1. Protect installed primer from deterioration and damage until coating or covering primed surfaces.
   2. Remove protection when it's no longer needed and before coating or covering primed surfaces.

SECTION 05 05 23
METAL FASTENINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Fastening materials.
2. Cast-in-place anchors.
3. Post-installed anchors.
4. Non-structural mechanical fasteners.
5. Site tests and inspections.
6. Supplementary components and accessories normally furnished or necessary for a complete installation, whether or not such items are indicated on the Drawings or included in the Specifications.

B. Related Requirements:
1. Section 06 10 53 for metal fastenings used to fasten wood items together and to join wood items to other materials.
2. Additional fastening requirements specific to a work result are specified within the applicable specification sections.

1.02 SECTION REQUIREMENTS

A. Submittals: Submit product data and samples.

PART 2 - PRODUCTS

2.01 FASTENER MATERIALS

A. Soldering Materials:
1. HDG Sheet Metal Solder and Flux: 50-percent tin solder conforming to ASTM B 32 Grade Sn50 and used with a non-corrosive flux.
2. Stainless Steel Sheet Metal Solder and Flux: 60-percent tin solder conforming to ASTM B 32 Grade Sn60 and used with an acid flux.

B. Welding Materials:
1. Electrodes: Provide electrodes appropriate for the type and grade of metal being welded and the conditions of installation, use, and service. Welding rods and bare electrodes must conform to AWS specifications based on

a. physical properties of weld metal;

b. type of coating on electrode;

c. welding position of electrode; and

d. type of welding current used with electrode.

2. Filler Metal: Provide filler metal and electrode type and alloy recommended or accepted by the producer of the metal being welded, and as required for strength, corrosion resistance, and compatibility with fabricated items under the conditions of installation and service.

C. Uncoated Carbon Steel Fastener Material:
1. Screws: Manufactured from carbon steel wire rods and uncoated coarse round wire conforming to ASTM A 510, Grades 1018 to 1022.
2. Bolts: ASTM A 307, Grade A.
3. Nuts and Flat Washers: ASTM A 563, Grade C3.

D. Uncoated Stainless Steel Fastener Material:
1. Description: Austenitic stainless-steel screws, bolts, and studs conforming to ASTM F 593 and nuts conforming to ASTM F 594 requirements for Alloy Group 1 (304 Series) or Alloy Group 2 (316 Series).
2. Performance Requirements:

a. Type 304: No sign of surface red rust after at least 1,000 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

b. Type 316: No sign of surface red rust after at least 1,500 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

E. Uncoated Nonferrous Metal Fastener Material:
1. Copper, brass, bronze, nickel, aluminum, and titanium nuts conforming to ASTM F 467 and commercial wrought bolts, hex cap screws, and studs conforming to ASTM F 468.
2. Provide alloy and temper suitable for the intended use and in-service loads, environmental exposure, and other conditions as required, recommended, or accepted by the manufacturer.

F. Uncoated Bi-Metal Fastener Material:
1. Description: Fasteners having a fused stainless steel head and shank and hardened steel drill point.
2. Product: “Bi-Flex” fasteners manufactured by Elco Construction Products, or equal.
3. Performance Requirements: No sign of surface red rust after at least 800 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

G. Coated and Plated Fastener Material:
1. Corrosion protective fastener coatings and platings must be deposited in conformance with the following.

a. Phosphate/Oil and Phosphate/Organic Coatings: ASTM F 1137.

b. Electrodeposited Coatings on Threaded Fasteners: ASTM F 1941.
2. To verify the prevention of internal hydrogen embrittlement (IHE) in steel fasteners during surface preparation, pretreatment, and plating or coating, all plating or coating processes must be periodically audited in conformance with ASTM F 1940. New or revised plating or coating processes must also be qualified by ASTM F 1940.
3. Plated fasteners with a hardness value of Rockwell 32 and higher must be baked promptly after plating at between 375 and 400 deg. F for at least 3 to 24 hours (depending on plating type and thickness) to neutralize hydrogen embrittlement. Baking must occur before chromating, and before application of subsequent coatings.

H. HDG Steel Fastener Material:

1. Description: HDG carbon steel fasteners having zinc coating conforming to

    a. ASTM A 153 minimum coating weight requirements for Class C materials (fasteners over 3⁄8-inch diameter and similar articles; washers 3⁄16-inch and 1⁄4-inch thick) or Class D materials (fasteners 3⁄8-inch diameter and under, rivets, nails, and similar articles; washers under 3⁄16-inch thick); and

    b. ASTM F 2329 for coating of threaded fasteners and washers.
2. Performance Requirements: No sign of surface red rust after at least 32 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

I. Zinc-Plated Steel Fastener Material:
1. Description: Carbon steel fasteners having electrodeposited zinc coating conforming to ASTM B 633, thickness Class Fe/Zn 5, Type I finish.(as-plated without supplementary treatment)
2. Requisite Properties:

    a. Sacrificial Coating: 5- to 8-micron (0.0002- to 0.0003-inch) electrolytically-deposited zinc plating.

    b. Passivate: None.
3. Performance Requirements: No sign of surface red rust after at least 32 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

J. Clear Chromate Finish Zinc-Plated Steel Fastener Material:
1. Description: Carbon steel fasteners having electrodeposited zinc coating conforming to ASTM B 633, Thickness Class Fe/Zn 8, Type III supplementary finish. (clear chromate conversion coating)
2. Requisite Properties:

    a. Sacrificial Coating: 8- to 12-micron (0.0003- to 0.0005-inch) electrolytically deposited zinc plating.

    b. Passivate: Restriction of Hazardous Substances Directive (RoHS)-compliant clear trivalent chromate conversion coating. Hexavalent chromium conversion coatings are prohibited.
3. Performance Requirements: No sign of surface red rust after at least 48 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

K. Pigmented Chromate Finish Zinc-Plated Steel Fastener Material:
1. Description: Carbon steel fasteners having electrodeposited zinc coating conforming to ASTM B 633, Thickness Class Fe/Zn 25, Type II supplementary finish (color chromate conversion coating).
2. Requisite Properties:

    a. Sacrificial Coating: At least a 25-micron (0.00098-inch) electrolytically deposited zinc plating.

    b. Passivate: Restriction of Hazardous Substances Directive (RoHS)-compliant trivalent chromate conversion coating having a green dye added to the clear tri-chrome bath or applied following the clear dip. Hexavalent chromium conversion coatings are prohibited.

3. Performance Requirements: No sign of surface red rust after at least 48 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

L. Phosphate Coated Steel Fastener Material:
1. Description: Carbon steel fasteners having corrosion-resistant zinc phosphate coating applied by the immersion bath method.
2. Performance Requirements: No sign of surface red rust after at least 240 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

M. Polymer-Coated Steel Fastener Material:
1. Description: Carbon steel fasteners having a fluoropolymer or Xylan coating that provides barrier protection against galvanic action.
2. Barrier Coating: At least a 25-micron (0.00098-inch) electrolytically deposited zinc plating.
3. Performance Requirements: No sign of surface red rust after at least 500 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

N. Baked Inorganic-Coated Steel Fastener Material (e.g., Geomet, Dacromet, or equal):
1. Description: Carbon steel fasteners having a VOC-compliant, water-based, non-chrome (NC), nickel-, cadmium-, lead-, barium-, and mercury-free dispersion coating conforming to ASTM F 1136 containing metal oxides, metallic zinc, and aluminum flakes that becomes inorganic after curing.
2. Barrier Coating: At least an 8-micron (0.00098-inch) dip-spin and convection oven-cured coating.
3. Performance Requirements: No sign of surface red rust after at least 500 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

O. Duplex Coated Anti-Corrosive Steel Fastener Material:
1. Description: Carbon steel fasteners having a 2-coat finish that combines the sacrificial protection of steel base metal with the barrier protection of a polymer topcoat.
2. Requisite Properties:

    a. Basecoat: Inorganic zinc-rich coating.

    b. Topcoat: Aluminum-rich, thermosetting epoxy resin (e.g., Magnigard, or equal); polyester resin (e.g., Climaseal, or equal); or fluoropolymer resin (e.g., Stalgard, FluoroKote#1, or equal).
3. Performance Requirements: No sign of surface red rust after at least 800 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

P. 3-Coat Anti-Corrosive Steel Fastener Material:
1. Description: Carbon steel fasteners having a 3-coat finish that combines the sacrificial protection of steel base metal with the barrier protection of a polymer topcoat.
2. Requisite Properties:

    a. Basecoat: Mechanically deposited zinc-alloy coating (coating is applied by mechanically tumbling zinc and tin powder with the base metal and non-metallic impact beads).

    b. Intermediate Coat: Chromate conversion coating.

    c. Topcoat: Aluminum-filled thermosetting polyester resin.

3. Performance Requirements: No sign of surface red rust after at least 800 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

Q. Ceramic-Coated Anti-Corrosive Steel Fastener Material:
1. Description: Carbon steel fasteners having 3-coat finish that provides electrolytic corrosion protection by combining the sacrificial protection of zinc with the barrier protection of a ceramic topcoat, and having a current evaluation report from the ICC-ES demonstrating code compliance.
2. Application: Use ceramic-coated anti-corrosive steel fasteners

a. with pressure treated wood, including alkaline copper quaternary (ACQ), ammoniacal copper arsenate (ACA), chromated copper arsenate (CCA), ammoniacal copper zinc arsenate (ACZA), copper azole (CBA-A and CA-B), copper citrate (CC), and disodium octaborate tetrahydrate (DOT);

b. when attaching to exotic hardwood lumber base material;

c. with composite lumber; and

d. when attaching cement board, high-density exterior sheathing, and tile backer board to framing members at exterior walls, at high-moisture interior walls, and in high-corrosion environments.

3. Product: “Grabber” screws manufactured by Grabber Construction Products, or equal.
4. Requisite Properties:

a. Basecoat An 8- to 10-micron (0.0003- to 0.0004-inch) mechanically deposited zinc-alloy coating.

b. Intermediate Coat: Chromate conversion coating.

c. Topcoat: Corrosion-resistant baked ceramic surface coating.

5. Performance Requirements: No sign of surface red rust after at least 1,000 hours of ASTM B 117 salt spray test performed on screws after being driven through and removed from sheet metal panels.

2.02 CAST-IN-PLACE ANCHORS

A. Description: Threaded steel anchor bolts (anchor rods) with hot-dip zinc coating conforming to ASTM F 1554 Grade 36 or weldable Grade 55, having Class 2A threads before zinc coating (non-headed anchor bolts, either bent or straight, having properties conforming to ASTM A 36, tensile strength of between 58 and 80 ksi, and intended for structural anchorage purposes) with hex-head nuts and flat washers conforming to ASTM A 563 chemical requirements for Grade A nuts.

B. Requisite Properties:
1. Size: Provide bolt or stud sizes required by engineering calculations for type of use indicated (between 1/4-inch and 4 inches).
2. Coating: Hot-dip galvanize anchors, nuts, and washers in conformance with ASTM A 153 minimum zinc coating weight requirements for Class C materials.

2.03 POST-INSTALLED ANCHORS

A. Description: ICC-ES-approved anchors conforming to California Building Code Category 1, Seismic Zones A-F.

B. Manufacturer: Provide products manufactured by Hilti, Inc., or equal.

C. Torque-Controlled Expansion Anchors:
   1. Description: Anchors actuated by tightening a bolt or nut. Expansion anchors installed in concrete must further conform to the requirements of ACI 355.2, Commercial Item Description A-A-1923A Type 4, and ACI-318 Appendix D.
   2. Product: “KB-TZ SS304” manufactured by Hilti, Inc. (ICC-ES Report ESR-1917), or equal.
   3. Performance Requirements: Expansion anchors must be rated to sustain without failure a load equal to at least 4 times the design load when installed in concrete; and at least 6 times the design load when installed in unit masonry, when tested in conformance with ASTM E 488.

D. Displacement-Controlled Expansion Anchors (Drop-In Anchors): Prohibited.

E. Power-Actuated Fasteners:
   1. Description: Provide powder-actuated, pneumatic, or gas-powered direct fastening system for driving fasteners into concrete, CMU, and steel.
   2. Restrictions:

      a. Power actuated-fasteners may not be used in concrete for sustained tension loads or for brace applications unless explicitly designed for seismic loading; except when used for support of acoustical tile or lay-in panel suspended ceiling applications and distributed systems where the service load on any individual fastener 90 pounds or less.

      b. Power actuated fasteners may not be used in CMU unless explicitly designed for seismic loading.

      c. Power actuated-fasteners may not be used in steel for sustained tension loads or for brace applications unless explicitly designed for seismic loading; except where the service load on any individual fastener is 250 pounds or less.

2.04 MECHANICAL FASTENERS

A. Manufacturers: Provide products manufactured by one of the following, or equal.
   1. Elco. (ICC-ES Report No. ESR-3332)
   2. Grabber Construction Products. (ICC-ES Report No. ESR-5280)
   3. Hilti, Inc. (ICC-ES Report No. ESR-2196)
   4. ITW Buildex. (ICC-ES Report No. ESR-3270)
   5. PrimeSource Building Products, Inc. (ICC-ES Report No. ESR-1408)

B. Screw Fasteners:
   1. Application: Used for attaching to cold-formed or lightgage steel framing.

      a. Fastening Together Cold-Formed or Lightgage Steel Members: ASTM C 1513.

      b. Fastening Gypsum Panel Products, Metal Plaster Bases, Cementitious Backing Board and Cement Board to Cold-Formed Metal Framing: ASTM C 954.

      c. Fastening Gypsum Panel Products and Metal Plaster Bases to Lightgage Metal Framing: ASTM C 1002, Type S.

      d. Fastening Gypsum Panel Products and Metal Plaster Bases to Lightgage Metal Framing: ASTM C 1002, Type G.
   2. Requisite Properties:

a. Length: Screw fasteners must penetrate through metal framing with not less than 3 exposed threads below the substrate.

b. Head Style:

1) Provide wafer head screws when fastening together metal framing members and when fastening metal plaster bases to metal framing.

2) Provide bugle head screws when fastening gypsum panels to metal framing.

3) Provide hex washer head screws with ethylene propylene diene monomer (EPDM) bonded sealing washers when fastening sheet metal panels, siding, roofing, flashings and similar items to metal framing. Provide exposed fastener heads with factory-applied coating matching prefinished roof or wall panel color.

4) Fasteners not indicated to be overlaid either with gypsum panels or other substrates or finish materials may have hex washer, pan, pancake, modified truss, or pan framing head types.

c. Drive Style: #2 Phillips drive.

d. Point Style:

1) Attaching Cement Board: Hi-Lo type point.

2) Attaching Sheet Metal and Lightgage Metal Framing (Up to 30 mils and Thinner): Self-piercing point.

3) Attaching Sheet Metal and Cold-Formed Metal Framing (At Least 33 mils and Thicker): For normal, single-thickness material and multiple material thickness combined for total of between

a) 0.035- and 0.110-inch thick: Provide #2 self-drilling point.

b) 0.100- and 0.220-inch thick: Provide #3 self-drilling point.

c) 0.175- and 0.250-inch thick: Provide #4 self-drilling point.

d) 0.250- and 0.375-inch thick: Provide #5 self-drilling point.

C. Bolts and Nuts:

1. Description: Regular bolts with hex-head nuts and flat washers.
2. Requisite Properties:

a. Fastener Size: Unless otherwise indicated, provide at least 3/4-10 coarse thread bolts or studs in lengths required to provide a minimum thread engagement equal to the thread diameter, with at least one clear thread plus the thread lead (start) above the nut face, and at least one clear thread plus the thread run out beneath the nut face after tightening. Assume one washer will be used under the rotating part (generally the nut) and allow for this when selecting the bolt length.

b. Fastener Head Type: Hexagon-head with both the strength and type of steel used in bolt manufacture indicated on the head of the bolt by a raised mark conforming to ASTM bolt designation standards.

2.05 ACCESSORIES

A. Expansion Shields: Die cast zinc alloy or zinc-coated steel single or double expansion shields manufactured for type of screw fastener indicated, specified, or selected. Lead or zinc and lead expansion shields are prohibited.

B. Concrete Patching Mortar: Provide one of the following, or equal.
   1. “EMACO S66 CI” manufactured by BASF.
   2. “SikaRepair 223” manufactured by Sika Corp.

C. Other Accessories: Provide other accessories and secondary items normally furnished or necessary for a complete installation; or supplied, required, recommended, or accepted by the manufacturer for actual in-service conditions applicable to the project.

PART 3 - EXECUTION

3.01 INSTALLATION REQUIREMENTS

A. General:
   1. Ensure proper supervision practices are followed at the project site before the installer begins work and at all times during installation.
   2. Verify in-place supporting and adjacent construction conforms to the manufacturer’s requirements or recommendations, and satisfies all other conditions that might affect the quality of installation or the durability, appearance, or performance of installed and adjacent items.
   3. Install fastenings using materials and methods required, recommended, or accepted by the manufacturer, along with manufacturer-recommended accessories and techniques.
   4. Fasten work tightly to prevent rattle or vibration except where expansion-contraction tolerances are required.

B. Site Tests and Inspections:
   1. General: Include site tests and inspections as part of the work of this specification section. The Owner’s testing and inspection agency performs tests and inspections.
   2. Required Tests: Perform static tension load tests in conformance with ASTM E 488, “*Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements*” on at least 10 percent of each installed anchor diameter or as indicated on the Drawings.

C. Correction and Repair:
   1. Correct deficiencies that do not conform to the Contract Documents.
   2. Repair non-conforming, damaged and defective work.

D. Screw Fastener Special Techniques:
   1. Maintain bit engagement until fastener is completely driven and fastener stops rotating.
   2. Install screws flush with surface; do not countersink or over-drive screw fasteners.

E. Post-Installed Anchor Special Techniques:
   1. Examination: Inspect substrates to verify conditions of access, interference, and existing materials.

      a. Using non-destructive methods, verify locations of reinforcement and post-tensioning tendons in drill locations.

      b. Use care and caution to avoid cutting or damaging reinforcement.

c. Unless otherwise indicated, maintain a clearance of at least 1 inch between tendon sheaths and anchors or dowels.

2. Layout:

a. Locations and Spacing: Indicated on the Drawings.

b. Edge Distance: At least 10 nominal bolt diameters when installed in concrete.

3. Drilling and Preparing Holes:

a. Holes may not be drilled in concrete or into grouted CMU until at least 7 days after concrete is cast or grout is placed; and until concrete or grout achieves its specified design compressive strength.

b. Unless otherwise indicated, holes must be drilled using the manufacturer's recommended drill type, bit, and setting.

c. Hole diameters must conform to manufacturer's instructions; hole depth as indicated on the Drawings.

d. Abandon over-drilled holes and fill with specified patching mortar.

e. Abandon drilled holes and fill with specified patching mortar when hole deviates more than 5 degrees, measured from a line normal to the concrete surface.

f. Promptly notify Architect if concrete reinforcing bars or post-tensioning tendons are encountered during drilling.

g. Dust and other contaminants must be completely removed from holes by blowing with compressed air or other effective methods.

F. Expansion Anchor Special Techniques:

1. Install anchors into pre-drilled and properly-prepared holes in conformance with the manufacturer's installation instructions.
2. Expansion anchor embedment may not be less than required by the manufacturer.

a. Embedment length excludes thickness of finish coverings and other overlays.

b. When installed overhead into concrete slabs through metal decking, embedment must extend within a zone between 1-1/2 inches above top of flute and 3/4-inch below top of concrete.

3. Tighten anchors to the manufacturer-recommended installation torque values.

G. Interface with Adjacent Items: Provide materials, components, and accessories normally furnished or necessary to securely attach fastenings to supporting construction.

H. Installation Tolerances: Install fastenings to an allowable tolerance variation of not more than 1/4-inch from true position and not more than 1/8-inch and from plumb, level, and alignment.

SECTION 05 12 00
STRUCTURAL STEEL

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Structural steel.

B. Architecturally exposed structural steel.

1.2 RELATED SECTIONS (IF SECTION IS NOT AVAILABLE, SEE CONSTRUCTION PLAN)

A. Section 01 45 23 Testing and Inspection.

B. Section 03 30 00 - Cast-In-Place Concrete.

C. Section 04 22 00 - Concrete Unit Masonry.

D. Section 05 30 00 - Metal Decking

E. Section 05 50 00 - Metal Fabrication

F. Section 07 81 00 - Cementitious Fireproofing

G. Section 09 90 00 - Paints and Coatings

1.4 SYSTEM DESCRIPTION

A. Regulatory Requirements:

1. Structural steel shall conform to CBC requirements, except that steel manufactured by acid Bessemer process is not permitted for structural purposes.

1.5 SUBMITTALS

A. Shop Drawings:

1. Submit Shop Drawings, including complete details and schedules for fabrication and shop assembly of members, and details, schedules, procedures and diagrams showing the sequence of erection. Fully detail minor connections and fastenings not shown or specified in the Contract Documents to meet required conditions using similar detailing as shown in the Contract Documents. Include a fully detailed, well controlled sequence

and technique plan for shop and field welding that minimizes locked in stresses and distortion; submit sequence and technique plan for review by the Architect.

a. Include details of cuts, connections, camber, and holes in accordance with Figure 4.5 of AWS D1.1-02 or AISC Section J1.8, weld position plan and other pertinent data. Indicate welds by standard AWS symbols, and show size, length and type of each weld.

b. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed for Work specified in other section.

d. Submit a list of steel items to be galvanized.

B. Product Data:

1. Submit copies of fabricator's specifications and installation instructions for the following products. Include laboratory test reports and other data required demonstrating compliance with these Specifications:

a. Structural steel, each type; including certified copies of mill reports covering chemical and physical properties.

b. Welding electrodes.

c. Welding gas.

d. Unfinished bolts and nuts.

e. Structural steel primer paint.

f. High-strength bolts, including nuts and washers.

C. Manufacturer's Mill Certificate:

1. Submit, certifying that products meet or exceed specified requirements.

D. Mill Test Reports:

1. Submit manufacturer's certificates, indicating structural yield and tensile strength, destructive and non-destructive test analysis.

E. Charpy-V-Notch (CVN) Impact Test: Submit certified copies of Charpy-V-Notch (CVN) Impact Test by the manufacturer for applicable steel members and components.

F. Submit certified copies of tests by manufacturer for fine grain practice. Structural steel base material, as described above, shall be manufactured using fully killed fine grain practice having grain size number 5 or better as determined by ASTM E 112.

G. Weld Procedures: Submit weld procedures for all welding on project to Owner's testing laboratory for approval. After approval by testing laboratory, submit to

Architect for record. Weld procedures shall be qualified as described in AWS D1.5, Section 5.12 or 5.13 for self-shielded FCAW, Weld procedures shall indicate joints details and tolerances, preheat and interpass temperature, post-heat treatment, single or multiple stringer passes, peening of stringer passes for groove welds except for the first and the last pass, electrode type and size, welding current, polarity and amperes and root treatment. The welding variables for each stringer pass shall be recorded and averaged, from these averages the weld heat input shall be calculated. Submit the manufacturer's product data sheet for all welding material used.

H. Welder's Certificates: Field welders shall be Project certified in accordance with AWS D1. 1-02. Shop welders shall be Project certified for FCAWS in accordance with AWS D1. 1-02.

I. Test Reports: Submit reports of tests conducted on shop and field welded and bolted connections. Include data on type of test conducted and test results.

J. Welding Material Certification: Comply with FEMA 353, Part I, Section 1.4.6.3. Submit to Owner's testing laboratory.

1.6 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement, except as otherwise indicated:

1. American Institute of Steel Construction (AISC) "Code of Standard Practice for Steel Buildings and Bridges, latest edition.

2. Perform welding in accordance with AWS Standards, AWS D1.1, and California Building Code latest edition.

3. Welding for Moment Frames:

a. Heavy Sections: Comply with AISC Seismic Provision

b. Lamellar Tearing: Comply with AISC Seismic Provision

c. Column Webs at Continuity Plates: AISC Seismic Provision

d. Column Webs at Doubler Plates: AISC Seismic Provision

e. Web Access Hole: AISC Seismic Provision

B. Shop fabrication shall be inspected in accordance with CBC.

C. Erect mock-up panel of fabricated structural steel meeting Architecturally Exposed Structural Steel tolerances for exposed areas. Approval by Architect is required. Mock-up to remain for comparison but may not be left as part of the work.

1.7 DELIVERY, STORAGE AND HANDLING

A. Store structural steel above grade on platforms, skids or other supports.

B. Protect steel from corrosion.

C. Store welding electrodes in accordance with AWS D 12.1.

D. Store other materials in a weather-tight and dry place until installed into the Work.

PART 2 - PRODUCTS

2.1 GENERAL

A. Stock Materials: Provide exact materials, sections, shapes, thickness, sizes, weights, and details of construction indicated on Drawings. Changes because of material stock or shop practices will be considered if net area of shape or section is not reduced thereby, if material and structural properties are at least equivalent, and if overall dimensions are not exceeded.

2.2 MATERIALS

A. Structural Steel: All wide flange shapes shall conform to ASTM A 992 grade 50. Other steel shall conform to ASTM A36.

B. Unfinished Threaded Fasteners: ASTM A 307, Grade A, regular low carbon bolts and nuts.

C. High-Strength Threaded Fasteners: ASTM A 325, ASTM A490 or ASTM F1852 quenched and tempered, steel bolts, nuts and washers.

D. Primer: Lead-free metal primer.

E. Steel Pipe: ASTM A 53.

F. Structural Tubing:

1. Hot-formed, ASTM A 501.

2. Cold-formed, ASTM A 500, Grade B.

G. Galvanizing: ASTM A 123.

H. Welding Electrodes: Provide electrodes recommended by manufacturer for seismic connections.

1. Comply with AISC Seismic Provision

I. Shear stud connectors: ASTM A108, Grade 1015 forged steel, headed, uncoated, granular flux filled shear connector or anchor studs by Nelson Stud Welding Division of TRW, Lorain, OH, or equal.

J. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of **7,000** psi at 7 days; of consistency suitable for application and a 30 minute working time.

2.3 FABRICATION

A. Cleaning and Straightening Materials: Materials being fabricated shall be thoroughly cleaned of scale and rust, and straightened before fabrication. Cleaning and

straightening methods shall not damage material. After punching or fabrication of component parts of a member, twists or bends shall be removed before parts are assembled.

B. Cutting, Punching, Drilling and Tapping: Unless otherwise indicated or specified, structural steel fabricator shall perform the cutting, punching, drilling and tapping of Work so that Work of other trades will properly connect to steel Work.

C. Milling: Compression joints depending on contact bearing shall be furnished with bearing surfaces prepared to a common plane by milling.

D. Use of Burning Torch: Oxygen cutting of members shall be performed by machine. Gouges greater than 3/16 inch that remain from cutting shall be removed by grinding. Reentrant corners shall be shaped notch free to a radius of at least 1/2 inch. Gas cutting of holes for bolts or rivets is not permitted.

E. Galvanizing: After fabrication, items indicated or specified to be galvanized shall be galvanized in largest practical sizes. Fabrication includes operations of shearing, punching, bending, forming, assembling or welding. Galvanized items shall be free from projections, barbs, or icicles resulting from the galvanizing process.

F. Welding:

1. Type of steel furnished in welded structures shall provide chemical properties suitable for welding as determined by chemical analysis. Welds shall conform to the requirements of CBC Chapter 17. Conform to AWS D1.1, and CBC Chapter 22.

2. Materials and workmanship shall conform to the requirements specified herein and to CBC requirements, modified as follows:

    a. No welded splices shall be permitted except those indicated on Drawings unless specifically reviewed by the Architect.

    b. Drawings will designate joints in which it is important that welding sequence and technique be controlled to minimize shrinkage stresses and distortion.

3. Welding shall be performed in accordance with requirements of the AWS Structural Welding Code.

    a. Welded Joint Details: comply with AISC Seismic Provision

4. Architecturally Exposed Structural Steel: Verify that weld sizes, fabrication sequence, and equipment used for Architecturally Exposed Structural Steel will limit distortions to allowable tolerances. Prevent surface bleeding of back-side welding on exposed steel surfaces. Grind smooth exposed fillet welds ½ inch (13 mm) and larger. Grind flush butt welds. Dress exposed welds.

5. Remove erection bolts on welded, Architecturally Exposed Structural Steel; fill holes with plug welds; and grind smooth at exposed surfaces.

G. Shop Finish:

1. Notify the IOR when Work is ready to receive shop prime coat. Work shall be inspected by the IOR before installation of primer.

2. Structural steel and fittings, except galvanized items, which will be exposed when building is completed, shall receive a coat of primer.

3. The primer specified shall be spray applied, filling joints and corners and covering surfaces with a smooth unbroken film. The minimum dry film thickness of the primer shall be 2.0 mils.

4. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete or high strength bolted.

H. Comply with fabrication tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for structural steel.

I Fabricate Architecturally Exposed Structural Steel with exposed surfaces smooth, square, and free of surfaces blemishes, including pitting, rust and scale seam marks, roller marks, rolled trade names, and roughness.

1. Remove blemishes by filling, grinding, or by welding and grinding, prior to cleaning, treating and shop priming.

2. Comply with fabrication requirements, including tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for Architecturally Exposed Structural Steel.

J. Architecturally Exposed Structural Steel: use special care in unloading, handling and erecting the steel to avoid marking or distorting the steel members. Minimize damage to any shop paint when temporary braces or erection clips are used. Avoid unsightly surfaces upon removal. Grind smooth tack welds and holes filled with weld metal or body solder. Plan and execute all operations in such a manner that the close fit and neat appearance of the structure will not be impaired.

K. Reduced Beam Sections (RBS's): Fabrication of RBS's as defined in AISC Seismic Provision
